other cases on the same level of civilization, as for instance the Sannians or the Antians of Madagascari, the pagan Arabs attached great importance to a knowledge of the relations of kinship and descent, and the practical needs of the community themselves of warriors under the early caliphs gave it an added interest owing to the fact that the genealogical lists served at the same time as an army roll. In addition to the practical importance of the study there was the interest taken by philologists in genealogical allusions occurring in poetry and the malice they with which the *ash'raf* regarded the countless petty jealousies between the tribes. Of the works of the early genealogists, whose *asnam* was given c. 330 by al-Dhahli, *Hayman*, II. 63, is a nothing is extant; and the monograph on the Ansar by 'Abd Allah b. Muhammad b. 'Uthman is known to us only from the quotations given by Ibn Sa'd. Sa'uban on Ibn Sa'd, II. 1, c. 17. The work of the early authorities was overshadowed by the zeal and industry with which Muhammad b. al-Sa'd al-Kalbi and his son Hisham collected genealogical material: the efforts of these scholars were directed by a genuine interest in their subject, and it was for the very reason of their scientific qualities that they became exposed to spiteful calumnies as the part of the theological circles in authority. Hisham even had the courage to collect carefully the accounts about the idols of the ancient Arabs, though as a good Muslim he *asnam* his book 'the overthrow of the *asnam*'.

The study of the life of the prophet and his successors and of genealogy created an interest in the life of the state as such. During the first two centuries however the activity of the Arabs in this field also remained confined to isolated details. As early as the Umayyad period Abu al-Husayn was at Kufa the history of the great conquests and at his own times from the point of view of the opposition of the 'Umayyads to the rulers residing at Damascus. The *Fakhri* continues as monograph by him, which was partly preserved to us in numerous long extracts found in 'Tabari' these take us right into the midst of events by means of the accounts of eye-witnesses. He does not seem to aim at selection and arrangement: yet a careful disposition of parts and a definite point of view are very apparent. He is chiefly interested in the reigns of the *Umayyads* and especially the 'Ahl al-Bayt against the Umayyad dynasty the fall of which he survived to witness (see Wellhausen, *Das arabische Reich* and *Umayyad*, p. 11, cf. seq.). Sa'ad more fruitful was the activity of al-Mada'ini, a convinced partisan of the 'Abbasids who wrote the early history of that family and dealt more particularly with their rise to Khuzistan and their victory. Owing to the influence of Tabari the later historical outlook is dominated chiefly by al-Mada'ini and Sa'ad b. Umar of Kufa (q.v.) who wrote two monographs on the events of the Arabs after the death of Muhammad and on the conquests. The influence of Sa'ad must be described as well-nigh disastrous owing to the fact that he wrote history without paying heed to chronology and started facts from the point of view of an official propaganda dominated by local patriotism and party feeling: his language while bearing no comparison with the simple stern of Abu al-Husayn, made an even deeper impression on the

masses through the vivid colouring he gave to his style.

The tradition of Medina regarded historical facts with greater objectivity than that of 'Iraq, and its chief representative, Muhammad b. Ishak and al-Waqidi, who extended the field of their studies from the life of the prophet to the deeds of his successors, were much more reliable than the authors of 'Iraq especially in the matter of chronology. It is possible that they also had access to the Syrian tradition which we only know in the form in which it is reflected by Christian Spanish chronicles like the *Crónica* of Isidore of Hispalis. The same reliable tradition forms the basis of the two works of Baladhuri, his *Book of the conquests* and his great genealogy.

The idea of a chronological collection of events, for which the school of Medina had prepared the way, seems to have developed under Persian influence. The plan of a complete series of annals of the empire. At any rate the first author to undertake such a work was a Persian, Muhammad b. Qasbi al-Farisi, who also achieved great distinction as a theologian through his famous commentary on the *Koran* and as a writer on jurisprudence. His work is intended to embrace the entire history of the world from the creation in his own time, and for the period after the Hijra it is arranged according to years. It is true that Tabari's critical faculties are not at the highest. But it is for this very reason that we owe to him the preservation of the oldest historical tradition which he draws together conscientiously without any attempt at combination: on the other hand he tries to make allowances for many a lapse such as the preference for the unreliable Sa'ad. His sources become smaller the nearer he approaches his own time; it is only in exceptional cases such as in the history of the slave war that he once more possesses excellent sources of information. Owing to the fact that Baghdad is the centre of his outlook he surveys only a small part of the Muslim world, and the Maghrib is altogether outside his horizon. The works of al-Mada'ini and al-Waqidi therefore form a welcome supplement to his annals. The former is a typical child of the world-wide Muslim civilisation in its prime. From his native city Baghdad he travelled through the whole Eastern part of the empire of the caliphs, extending his journey to far as India, China and Japan; after returning to Iraq of Zahir and Umar he resided in Syria and Egypt where he died. His enthusiasm for later generations had no appreciation for the wide sphere of his interests, and we thus possess only two abstracts made by himself of his great historical and geographical work. The works of the immediate successors al-Waqidi were nearly as extensive; he moreover had the advantage of possessing a detailed knowledge of the Maghrib. In spite of the Shiite tendencies hereditary in his family he treated the history of the 'Abbasids with praiseworthy objectivity on the basis of many old sources which are not extant in any other form: it is provided by a comparison of universal history which deals not only like the work of Tabari with the Islamic, but also Persian and ancient Arabic tradition, but caters for the whole world so far as it was known at the time, from China to the North and from the peoples of the North to the negroes.

Later geographers however preferred the method of Tabari. Soon after his death the Spanish Arab geographers, his work by a history of the Maghrib, and continued it down to the year 320 (932). Not long afterwards the work of the Seville geographer, Ibn al-Balkhi, published a Persian abridgement which established Tabari's authority in his own country. All the later writers on universal history, especially Ibn al-Athir and Ibn Khaldun, base their works on Tabari, contenting themselves in most cases with abridging the materials furnished by him to the literary requirements of their age.

The decline of the caliphate and the formation of territorial states throughout the empire had the result of subdividing the interest in the common fate of Islam to the events happening in the several countries. Spain was the first province to gain political independence; but the writing of history did not begin there to any extent until the 11th century with al-Hadidi and Ibn al-Khatib. This is probably due to the fact that the long distance from the centre of civilisation retarded the development. During the later period it was the policy of political separation into petty states which, in spite of the fact that the Christian danger continually kept the religious and national sentiment alive, prevented any enthusiastic interest in national affairs. Spanish historical writing which abounds in the works of the above-mentioned Ibn al-Din and al-Maqqari, thus never got far beyond the biographical stage. Conditions in Egypt and North Africa were much more favourable. The vigorous impulse was given to history by the powerful personality of al-Fakhri, the first independent governor of the Nile province, and during the whole period from 'Abd al-Hakam's history of the conquest of Mahdi's *Asfar* and again down to Ibn Khaldun's *Asfar al-Andalus*, able writers have never been wanting to treat of the vicissitudes of this country. History similarly flourished at the many petty courts of the Maghrib, though it only rarely got beyond a very limited range of outlook. It is only in the works of Ibn Sa'id and Ibn Khaldun whose personal experiences brought into contact with some important events — Ibn Sa'id witnessed the rise of the Egyptian Mamluks, Ibn Khaldun the disasters of the Muslim world at the hands of Timur, — that the small dynastic interests take a secondary place; in Ibn Sa'id's work they are overshadowed by the common fate of all North Africa, in that of Ibn Khaldun by a philosophical theory of growth and decay in the life of the state. — Cp. F. Wattensohl, *Die Geschichtschreiber der Araber und ihre Werke* (Stutt. vol. xxviii. and 1888) of the *Abhandlungen der Kgl. Gesellschaft der Wissenschaften zu Göttingen*, 1882; M. J. de Goeje, *et Tabari in the Encyclopædia Orientalis*.

The beginnings of geography are closely connected with those of history. Descriptions of the Arabian peninsula are found already in the sections of historical tradition such as 'Abd Allah b. 'Abbas (quoted by Ibn Kh., p. 5 et seq.) and Wajidi (see Sayf, *Sharh al-mawdu'at al-mughniya*, p. 16, 18). The interest in geography was further stimulated by the great conquests and by practical administrative needs. The earliest exact description of the land of the caliphate is the work of a postmaster-general, Ibn al-Balkhi, and takes the form of an official route

book with a detailed statement of the stages, the postal relays and the taxes of each province. At Baghdad, which owed its prosperity to the free place of international trade, there also arose an interest in foreign countries and animals, which found its earliest expression in a naive delight in tales of the marvellous, such as probably formed the subject of the last book of countries by al-Balkhi. The book of his contemporary al-Muhammadi b. Ali Muslim al-Buhārī on the history and organisation of the Roman empire and on the neighbouring barbarians, such as the Avars, Bulgars, Khazars etc. was possibly more systematic; it seems to be the source of a somewhat description of the countries on the Danube and north of the Caucasus preserved by al-Balkhi and later by al-Balkhi and in several Persian works (see Maqrizi, *Khawassat al-Asrar*, p. xxxij). The book for a scientific outlook which in astronomy was supplied by the *Almagest* was furnished in geography by the *Geographia* of Ptolemy, an Arabic translation of this work existed as early as the time of the philosopher al-Kindi, it is only preserved however in an abridgement composed by al-Kindi in 228 (843). On the basis of these sources a pupil of al-Kindi, Ahmad b. Sulaym al-Balkhi, wrote the first systematic geography in the form of an atlas, the brief descriptions of which were later expanded by al-Balkhi and Ibn al-Hakam. A great deal of new geographical material was furnished by voyages undertaken partly from a scientific interest and partly for practical purposes. The travels of inquiry undertaken by al-Balkhi and their results have already been mentioned. Half a century later the many adventures of observation and the roughness of treatment was rivalled by al-Balkhi, though Ibn al-Balkhi, who was beyond the frontiers of the Muslim world. A valuable extension of the horizon of the Arab world was brought about by contacts to the states of the North such as that of Ahmad b. Fadlān who was sent to Russia by the caliph al-Mu'tasim in 309 (921), and the mission of the Spanish Jew Ibrahim b. Baruh to Germany and the German countries undertaken on behalf of the caliph of Cordova in 305 (917) of Umar b. 'Umar. The description of the adventures of al-Balkhi, Rega to India and China, written were addressed not so much to the scientific curiosity of scholars as to the delight of the masses in the marvellous; they are well characterised by al-Balkhi in his *Asfar al-Andalus*, i. 191 et seq. See books like the still recent work of Al-Balkhi at Seel, which was based on the materials of two centuries and that of the captain al-Rindman, as well as the works used by al-Balkhi (*Asfar al-Andalus*, i. 191 et seq., 192 et seq.) contain in addition to many exaggerations a good deal of valuable information on the Far East. Works of this type were completely overshadowed by the Persian Berhān's book on India, the author of which is one of the most thorough observers and explorers of the Arabic world. At a later period interest in geography was continually revived by the pilgrimages to Mecca, which not only created handbooks for pilgrims written for the edification and the practical assistance of the people, but was also responsible for works on a higher literary level, like those of the Ishaq of Granada in

the 11th century and of the Moroccan tin-
dards in the 12th century, the latter in
accordance with the custom of his time did not
hesitate to use the work of his predecessors rather
more freely than our conventions would permit,
yet his interesting descriptions of India, China,
Asia Minor, the coasts of the Black Sea, Con-
stantinople and the Negro countries are entirely
his own. Many other books of travel were written
in the period after the Hajjah, especially in the
Maghrib, but all these works, among which we
will only mention those by 'Ayyash, were them-
selves in long-winded descriptions of unimportant
personal experiences, and particularly in tales of
adventures of wanderers whom the authors met in the
various towns. The only noteworthy achievement
in the field of systematic geography are found in
the works of the Maghribi al-Bakri and al-Hidhal.
The geography of Yiflat since a Greek slave, the
geography of the prince and the Abu
'I-Fida'. — Cp. Reichenow, *Introduction générale à
Géographie d'Al-Bakri*, 1881, 1. Paris 1881; F.
Wüstenfeld, *Die Literatur der Erdkunde*,
1871, 1. Strassburg, 2. Zeitschr. f. vergl. Erdkunde,
1. Magdeburg, 1871; M. J. de Goeje, *Geographische
beschrijving van de Arabische Geographie*, in *Tijds-
chrift van het Koninklijk Genootschap*, 1874,
p. 100 et seq.; P. Schwan, *Die ältere geographische
Literatur der Araber*, in Meunier's *Geogr. Zeitschr.*,
1887, part 3.

The fact that the Arabs turned the subject
round to adopt their language, which created among
the new Muslims the need for a scientific method
which would facilitate and deepen the study of
Arabic, the need was felt the more, because it
was necessary to become familiar not only with
the Arabic used in every-day life, but also with
the language of the Koran and in devotion and
public prayer, and with the classical language of
poetry which was required for the interpretation of
public society. As in the case of Chinese, India,
Aegyria, Abyssinia and Japan (cp. v. d. Gabelentz,
Sprachenk., 2. ed., p. 24) it was the contrast
between the written language and popular speech
which first suggested grammatical observations
among the Arabs. The art of reciting the
Koran which was cultivated down to a late
period as a separate branch of study, though it
soon degenerated into a mechanical office per-
formed by unlearned readers, probably gave the
first impulse to a close observation of the various
sounds and their formation; the systematic devel-
opment of these observations seems to have been
influenced by the model of the Indian *Pratish-
khasa*. The fundamental conceptions of gram-
matical reasoning however were borrowed from
Aristotelian logic (cp. most recently Beihorn,
Artenlehre d. d. Arab. Grammatik, in *Festschrift
für Wilhelm Thomsen* für Klumpke, Copen-
hagen, 1894, p. 1 et seq.) which had already been
eagerly studied under the Saracens at the Syro-
Patrian school of Gundishapur (q. v.) whence it
reached the Arabs at an early date. The channel
by which certain notions and concepts belonging
to Sanskrit grammar only, were transmitted to the
Arabs has not yet been elucidated (see F. Steu-
erman's *Zeitschr. f. Vergleich. Sprachl.*, 1893, p. 104). The beginnings of Arabic
philology suffered from the prejudice against
the study of the schoolmaster (cp. al-Buhārī,
Hadith, 1. 132, 10 et seq.) but as early as the 11th

century its representatives had risen to a
social status which well bore comparison with
that of the humanists of the renaissance. Tril-
lami calls the poet Abu 'Al-Aswad al-Dhali the
first grammarian with what justification it is im-
possible to say. The earliest representatives of
this branch of learning who appear in a some-
what clearer light are 'Abd al-Dhahab al-Dhahabi
and 'Abd 'Amer b. al-'Ala, the former of whom
had a reputation as a reader of the Quran while
the latter devoted himself to the collection of old
poems. The work initiated by these two men,
whose pure Arab descent does not seem to have
been questioned, was continued by 'Abd al-
'Ala, the Arab Qasbi, are not regarded as genuine
Arabs, and his pupil the Persian Shahrastani (Sh-
ahrastani). The former created the system of prosody
and collected some of Arabic vocabulary in
his *Kitab al-'Ala*, which was arranged not ac-
cording to the order of the syllables, but from
the point of view of the physiology of speech.
The latter gave to his 'book' the first systematic
exposition of grammar, in a form which in spite
of its clumsiness, came to be regarded as the clas-
sical standard for all times; later generations re-
wrote it a countless number of times in order
to make it more intelligible, but added practi-
cally nothing of an essential nature. al-'Aswad
first gained for the new science the recognition
of the upper classes at the court of Hama, though
he was probably denounced there as a collector
of poetry rather than as a grammarian. The prin-
ciple achievement due to him are his numerous
autographs on various fields of lexicography.
These founders of the school of Bagdad found
rivals at Kufa, the second capital of Iraq, in a
school of scholars concerning whose activity we
are unfortunately only scantily informed owing
to the fact that they are overshadowed in the
later tradition by the Bagdadi al-Buhārī, to whom
Shahrastani often refers to contrastively as 'the
Kufan'. It is regarded as the founder of this school.
His pupil al-Khalil wrote the earliest exact treatise
on the grammatical mistakes of the people
thereby creating a branch of literature in which
we owe a great deal of valuable information on
the early history of the Arabic language. From
the 11th (12th) century onwards the controversy
was gradually reconciled at Baghdad, the centre
of all intellectual activity. It was there apparently
that the linguistic theories of the old masters
were developed on a philosophical basis espe-
cially by Ibn Jinni (who is regarded as the first
representative of the so-called 'great etymology';
see Gabelentz in *Zeitschr. f. Vergleich. Sprachl.*,
1894, 1. 132, 10 et seq.), and that the science of
Poetics first appeared by the Kufan Khalil
put in systematic form by Abu 'Ala al-Dhahabi.
From that time onwards the study of philology
spread over the whole Muslim world, and was
introduced into Spain by al-Khalil, the later philo-
logists however in spite of their large number
hardly produced any original ideas. We owe
them countless manuals of which only a few,
like Zamakhshari's brilliantly written *Miftah*,
rise beyond the level of schoolcraft, and particu-
larly a number of most valuable lexicographical
collections, such as the *Maqamat* of Ibn Duraid,
unfortunately still inaccessible, the *Saghat* of Ibn
Duraid, the *Maqamat* of the Spaniard Ibn Duraid,
the *Maqamat* of Ibn Duraid, the *Maqamat* of

introduced with its commentary by Mustafa T-Zabidi. — Cf. H. Flügel *Die geschichtliche Entwicklung der Araber unter den Seldschuken*. First part, Leipzig 1862, 11th ed. Halle, 1890; *Monatsschrift*, vol. II, 89, 90.

We have seen that those branches of knowledge, although proceeding from the vital interests of the Arab nation were cultivated principally by non-Arabs; the field of theology too, though with the national literature even more rapidly in spite of the great part it played in the intellectual life of Islam. The *Kitāb al-Fihrist*, as has already been pointed out, was on the whole the product of the first two centuries of Islam and reflects the intellectual struggles of that period. History and legendary narrative branched off from it at an early date, and though as the evidential material of the schools of Fikh was gradually withdrawn from the influences of actual life. In spite of the fact as early as the 11th century the antiquity of each tradition was to be established with scrupulous care by means of an uninterrupted chain of authorities, the material continued to grow like an acacia-wood; it was therefore a literary achievement of great magnitude which al-Bukhārī performed in digesting and arranging it for the first time according to the systematic order of the sciences of Fikh, while his predecessors had contented themselves with assigning to each tradition a place in the *Ṣaḥīḥ* under the name of the last transmitter. Five other collections achieved canonical authority side by side with al-Bukhārī's, but only that of Muslim was to the end able to maintain its position permanently. In the succeeding centuries down to the present day unlimited industry has been at work on the field of Hadith, but it spent its efforts in mere compilations, partly for sectional purposes especially in the collections of 40 traditions, such as were produced by almost every noteworthy theologian, and partly in the work of combining the canonical books for the purposes of scholarly study. In the end the heretical side of tradition reached a stage when it bordered closely upon *asās*, or *hollerei*: Ibn Hibbān the compiler of the latest work on tradition which was distinguished by a novel arrangement of the material, was also the author of an odd book, the *Kawāḍir al-ḥikmah*. The activity of scholars was concentrated partly on the collection of authorities which, in the case of the great biographical collections, bordered upon history, and partly on the criticism and sifting of the traditional material. Muḥammad al-Yaqūbī who edited the *Ṣaḥīḥ* of Bukhārī in the 10th (xiv.) century was assisted in his work by Ibn al-Jāzī, the greatest philologist of the time; already the founders of the schools of Fikh, such as Aḥmad's pupil Ibn Ḥanbal, had studied the special vocabulary characteristic of the language of the tradition: the latter subject was finally dealt with in an authoritative manner in the excellent *Al-ḥaṣṣa* of Ibn al-ʿAdīb Maḥd al-Dīn, the brother of the historian. Cf. I. Goldschmidt, *Über die Entwicklung der Fikhs* (*Musammāt. Stud.* II: Halle, 1890, p. 1—24).

Beginning as a branch of tradition the exegesis of the Korān soon became a separate science. 'Alī al-Dīn al-Dīnār (d. 7.) a cousin of the prophet who appears as the principal authority for a countless number of traditions, is also re-

puted to be the author of a still extant commentary on the Korān (printed 1864, 1865; Bonn 1902). The Korān then became the subject of philological study, and the special linguistic exegesis was developed in numerous books on the *Qifāḥ al-lughah*, some of which are preserved. An author as early as Abū 'Ubayd wrote a book on the excellence of the Korān as a whole and of certain Suras and verses in particular. (Cf. Abū 'Ubayd, *Ḥikmah al-ʿArab*, *Ḥikmah al-ʿArab*, 11th ed. 1864, 1865, 1866, 1867, 1868, 1869, 1870, 1871, 1872, 1873, 1874, 1875, 1876, 1877, 1878, 1879, 1880, 1881, 1882, 1883, 1884, 1885, 1886, 1887, 1888, 1889, 1890, 1891, 1892, 1893, 1894, 1895, 1896, 1897, 1898, 1899, 1900, 1901, 1902, 1903, 1904, 1905, 1906, 1907, 1908, 1909, 1910, 1911, 1912, 1913, 1914, 1915, 1916, 1917, 1918, 1919, 1920, 1921, 1922, 1923, 1924, 1925, 1926, 1927, 1928, 1929, 1930, 1931, 1932, 1933, 1934, 1935, 1936, 1937, 1938, 1939, 1940, 1941, 1942, 1943, 1944, 1945, 1946, 1947, 1948, 1949, 1950, 1951, 1952, 1953, 1954, 1955, 1956, 1957, 1958, 1959, 1960, 1961, 1962, 1963, 1964, 1965, 1966, 1967, 1968, 1969, 1970, 1971, 1972, 1973, 1974, 1975, 1976, 1977, 1978, 1979, 1980, 1981, 1982, 1983, 1984, 1985, 1986, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, city' afford a kind of encyclopaedic survey of the sciences of all nations and religions known to their time. The thought of the Arabs and Persians, however, is borrowed from Indian fables and just as the latter aimed a means of selling the truth to a ruler in a way unobtrusive of under other circumstances, so they require to apply a new teaching militant to human society ~~the~~ positive religion. Their philosophy of nature however ends almost entirely in psychology. The soul is the real being of man which has developed on a mystical path of ascent from the lower natural orders through the ascent stage to an increasingly higher grade of perfection. The freedom of faith gained no influence on ~~the~~ activity of the professional philosophers and theologians, but their treatises were eagerly read by ~~the~~ educated and many even adopted their doctrines. The Aristotelian philosophy on the other hand was always confined to certain circles of the elite, and did not flourish except under the protection of princes, such as was afforded to al-Farabi at the court of Salf al-Dawla, and to Ibn Sina by the great petty ruler of his Persian home. In the latter country Ibn Sina exercised a profound influence not only through his medical writings but also through his psychology and logic, and his influence on the Christian West was still more powerful, at a time when he was unacknowledged by Muslim orthodoxy. In the West as well as in the East of the Muslim world philosophy was the privilege of isolated thinkers, who could gain no influence on the masses; they lived on the contrary to them in obscurity apart from the exceptional cases in which such men were invited to the court of some intelligent ruler, as happened to Ibn ~~the~~, a follower of al-Farabi who lived at Samarra at the court of the Almoravid 'Alī. It thus came about that the Andalusian philosophers have been of greater importance for Jewish and Christian scholarship than for their own fellow-believers. Only Ibn al-Tufail deserves special prominence as the creator of a new literary form, the philosophical novel. The ~~the~~ related from the elements through the stage of organic nature to God had already been described by Ibn Sina in the allegorical character of the ideal man Hayy b. Yaqdān. Ibn al-Tufail borrows this character, in order to describe in his example the development of a thinker growing up far from all human intercourse on a lonely island. He creates for himself the conditions of material existence, and in his mature years is led by the contemplation of nature to the vision of God. He then meets a philosopher who has risen beyond the limitations of human society, and the two resolved to communicate his pure knowledge to the people; soon however he realises the vanity of this undertaking, as the people is ripe only for Muhammad's allegories, and together with his friend he returns to his lonely island. Better times seemed to have arisen for philosophy with the rise of the Almohades who gave public recognition to the theories of al-Akbari and al-Ghazali whose concessions to philosophy had and thus been rejected in the West as heretical. Under the reign of Yūsuf Ibn al-Muẓaffar and the Rāḡid for a time enjoyed the favour of the court, though the latter had to go into exile in his old age, the Rāḡid did not reject the state as such, as he appreciated its civilising influence; but his

doctrine of the eternity of the material world, of the necessity of a causal action between elements, and of the destination of the particular just that in sharp opposition to theology without any hope of reconciliation. It was only among the rulers that a certain amount of interest in philosophy was still displayed, though merely in the purpose of giving a more certain assurance of the higher value of mysticism. When towards the middle of the xiii. century A.D. the emperor Frederick II. put a number of philosophical questions before the Muslim scholars of Corda, the Almohade Abū al-Walīd answered the duty of replying to them on Ibn Sina's, the founder of a mystical order. He undertook to do so in the style of a pedantic schoolmaster, he enumerated the views of ancient and recent philosophers. He allows us to divine the secret, that God is the reality of all things, but the only thing to be learned from his replies is the fact that Ibn Sina had read books, of which he believed the emperor Frederick to have no knowledge whatsoever. (F. J. de Boer, *Gesch. der Philosophie im Islam*, Stuttgart 1901, p. 177 ff. seq.). The last chapter of Jalāl, Ibn Khaldūn, has already been pointed out, based his system on history, as the events of which he envisaged an ordered law (F. J. de Boer, *loc. cit.*, p. 1. Göttingen, *Die Islamische und die jüdische Philosophie*, in F. Hünneberg, *Die Kultur der Gegenwart*, part I, vol. 5 (Berlin-Leipzig, 1909), p. 45-77).

The Mongols in the East and the Barbours in the West destroyed the ~~the~~ of Muslim civilisation, and their devastating influence is more apparent in the ~~the~~ of literature than in any other. It is true that the literary output was enormous even after the xiv. (xiii.) century, but no new ideas and no new forms had made their appearance. The greatest variety and the most rapid rate of production are the two most coveted titles to fame. To the untiring industry of men like al-Buhārī, al-Masʿūdī, al-Zuhārī, and Abū al-Faḍl al-Isfahānī we owe scores of invaluable information in consequence of the fact that many documents of the literary past of their civilisation which are irretrievably lost to us, were still accessible to them; but from the point of view of the history of literature as such they are of no account.

ARABI PASHA, leader of the Egyptian Nationalist party. — Ahmad 'Arabi al-Masri (= al-Masri, 'Arabi al-Masri'), as he called himself with pride, was the son of a fellah of Lower Egypt. He entered the army and rose to the rank of colonel and commander of the 4th regiment. He took a subordinate part in the officers' revolt of 1879 under Ismail, and later in the great military revolt of 1882-1883 he headed the movement which is known to history by his name.

The occasion which first gave 'Arabi political prominence arose out of the difficult relations which for a long time had been existing between the Egyptian and the Turkish-Ottoman officers favoured by the Turkish Pasha in authority. The conflict took an acute form and led in January 1881 to a conspiracy lodged by 'Ali Fakhri, the commander of the 1st regiment, and 'Arabi against the minister of war 'Osman Pasha. The military proceeded, in spite of the fact that the conspirators were perfectly justified and even attempted secretly to arrest the two colonels in order to have them court-martialed: this led to a mutiny of the troops who liberated the colonels and demanded the Khedive's dismissal of the war minister. 'Arabi was forced to give way and the desire of the mutinous troops appointed Mahmud Pasha Sarr al-Bakli minister of war. The army now became an exponent of national aspirations, and it was by mere chance that 'Arabi, by no means a great personality and an unpractical theorist, found himself at the head of the movement. In the summer of 1882 another change occurred in the ministry of war and in September 'Arabi and his regiment were removed to Cairo. This led to new disturbances which found expression in a second great military demonstration in front of the 'Abdi palace (9 September). The Khedive was forced to change the ministry and to summon the chamber of notables. In answer to this summons 'Arabi and his compromised colleagues left Cairo with their regiments in the beginning of October. 'Arabi, a popular hero, had a triumphant progress through the city which he left after delivering a stirring speech. The position of the government however was thereby strengthened by his absence, as the actual power still remained exclusively in his hands. It was therefore resolved to give him a place in the government, and on 4 January 1883 he was appointed under-secretary of state in the ministry of war. Attempts at intervention on the part of the Powers and the struggle about the rights of the chamber with regard to the budget led, on 9 February, to the formation of a new ministry under Mahmud Sarr, who enjoyed the confidence of the Nationalist party, and gave 'Arabi a place in his cabinet as minister of war. On 11 April a Turkish-Ottoman conspiracy against 'Arabi was discovered and the officers implicated were sentenced to death and exile to the Sudan. According to English sources however the alleged

conspiracy was entirely the product of 'Arabi's fears; and the latter while actually according to this view it is explained by his fear of punishment after the first mutiny. Once stated on his downward career, fear is supposed to have led him further and further. However this may be, the confirmation of the Khedive by the Turkish officers on the part of the Khedive led to a conflict between the latter and the ministry who summoned the Khedive without consulting the Khedive. The latter now put the matter in the hands of the Sultan of Turkey, and Great Britain and France organized a naval demonstration at Alexandria (20 May), as they refused to treat with the ministry in power and feared for the safety of the foreign residents. The ministry was forced to resign 26 May; on the 28th however 'Arabi at any rate was re-appointed minister of war in response to a very general demand.

The feverish excitement created by the high-handed action of the Powers and especially by the naval demonstration found a sudden outlet at Alexandria on 12 June. A quite ordinary street brawl developed into a sanguinary riot with a pronounced anti-foreign and anti-Christian tendency: 57 Europeans and 140 Egyptians were killed. 'Arabi was perfectly innocent of complicity in these events which created a terrible panic among Europeans and caused them to leave Egypt in large numbers. Alexandria, where the Khedive resided during the summer, became henceforward the centre of gravity of the situation. As the relations to the Powers became more and more strained and a European or Turkish intervention was bound to ensue, 'Arabi began to organize the defense of the country. Great Britain protested against the attempted strangling of the British legation at Alexandria, an ultimatum was presented, and on 11 July, after the French vessels had left the harbour, the bombardment of Alexandria, which had been notified to all the Powers beforehand, took place. The troops quitted the town, which now fell into the hands of the police and was burned. These events were headed by a certain Sulaiman Dawud Bey Sami, who pretended to act on 'Arabi's orders, though the latter succeeded in his trial in proving his innocence. After the fall of Alexandria the Khedive fell into the hands of the English. 'Arabi as the only legitimate representative of the government organised the resistance on 2 August by proclaiming himself the Sultan's representative and called the Khedive a traitor. In reply he was declared a rebel by the Khedive on the 9, and by the Sultan on the 15 August. On 13 September 'Arabi was defeated at al-Tell al-Kelbi by the British troops who had landed in Egypt under Lord Wolseley; 'Arabi fled, but on the 15th he fell into the hands of the English at Cairo. In the ensuing trial he was sentenced to death, but the sentence was commuted to one of exile, and he was sent to Cyprus, whence he received permission to return in 1901.

Views on 'Arabi and the Egyptian revolution will differ according to the political position of the critic. English, French and Arabic sources contradict each other in all important particulars. It is a fact that the misgovernment under Ismail had brought the country to the verge of bankruptcy. The attempts at reorganization seemed to deliver Egypt entirely into European and Turkish

damage caused by these acts provincial, and the popular superstition, which regards them as heralds of death, seems to be very old. In the Koran (surc 34, 1) Solomon is shown to be dead by a rapids of the earth which gorged his staff, and in North Africa people will say: 'when a person is going to die, then comes the snake knowing it well'.

ARAPA or **ASAPAT**, a hill famous as a place of pilgrimage with an adjoining plain of the same name, 6 hours to the East of Mecca. It is a hill of granite of moderate dimensions reaching a relative height of 150—200 feet. On the East broad steps of stone lead to the top; on the West steep three is a platform containing the pulpit from which a *khutba* (sermon) is usually delivered on the afternoon of the 9. *Umu 'l-Hidra* (the day of 'Amra). On the top there stand formerly a *Kutba* named after *Umu Salama* (the Umu 'l-Hidra, cf. de Gasse p. 173) which was destroyed by the Wahabites. According to 'Abd Bey plaza Muslims may not penetrate beyond the platform. The hill is usually called *Ubeid al-Rahim* (hill of mercy). Another name is said to have been *Har*, but it is doubtful whether this appellation really referred to the hill. *Wüstenh.* regards it as the name of a shrine or perhaps of the only worshipped on the spot in the pre-Islamic period. Pictures of the hill are found in *Atliq* and *Barton*; see *Bibliography*. — The plain of 'Aras spreads southwards from the hill of 'Aras and is bounded on the West by the lofty mountain-chain of *Jabal*. It is covered by a low growth of various plants, and is filled with life only on one day of the year (*Umu 'l-Hidra*) when the pilgrims pitch their camp for the celebration of the prescribed *wuḥḥ*. Cf. the pictures in *Burckhardt* and especially in *Snouck Hurgronje*, *Bilder aus Arabien*, xii—xvi. The *wuḥḥ* in festival assembly takes place on the afternoon of the day mentioned and lasts until after sunset. The pilgrims present express their religious fervour by loud shouts of *Subhān*, by prayers and recitation of the Koran.

The origin of the name 'Aras is unknown. The legendary explanation is that Adam and Eve who had been separated from each other after their expulsion from *paradise*, met again at this spot and recognised one another (*Ar'afsa*); Arabic authors also mention other etymologies of a similar nature.

W. of Tangiers and 23 miles N. W. of Fez (Fez), under 35° 13' N. Lat. and 6° 22' W. Long. (Paris).

Larache is built on the slopes of a hill overlooking the left bank of the *Wad Lakhman* the spot where the river joins the ocean. The town is surrounded by an old masonry wall, which is adapted on the land side by the *Kasba* and towards the sea by a fortress. It offers little that is of interest. "The streets are dirty, the atmosphere common-place, the *Maghaz* only a heap of rubble. The only really picturesque spot is the square of the *Sūq* containing both the *ḥammam* and the market, which is surrounded on its four sides by white arcades (*ḥanṣa*). *Le Maroc des Français* (2 ed. p. 100). The surroundings contain groves of orange and olive-trees, pomegranates and even vineyards which give the place a certain importance from the economic point of view owing to its short distance from Fez and the fertility of the *Wad Lakhman* valley, the marshes of which support numerous herds. The harbour serves as port of transit for merchandise destined for Fez, and for the export of the produce of the *Ujda* (*Ujda*) and the *Sibara*, particularly wool which is sent to England, France and Germany. In 1901 the imports reached 5,000,000 and the exports 2,500,000 francs. Unfortunately the official deposits of the *Wad Lakhman* have formed a sand-bank which makes the harbour inaccessible for vessels of large tonnage, and even renders the landing dangerous during half of the year. The population is about 5000, including 1000 Jews and about 200 Europeans, two thirds of whom are Spaniards. There is a Spanish Catholic mission directed by the *Franciscans*, a Protestant mission and a school of the *Assistance Israélite*.

Larache has taken the place of the Roman colony *Lixus*, which in its turn had replaced the Lybian-Punic town of *Lix*. Both of these towns were situated at a distance of about an hour to the N. E. of *Larache*; there also is still marked by ruins called *'Squand* by the natives. — The old town is not mentioned by any Arabic author prior to the 11th century. It was probably founded by the *Harber* tribe of the *Beni 'Arif* who, by reason of the vineyards abounding in the district, gave it the name of *el-'Arif* (mist) *Arif*. The *Almoravid* sultan *Yakub al-Mansur* built here a fortress to command the mouth of the *Wad Lakhman*. In 1490 it was taken by the Andalusian Christians who massacred the male inhabitants and carried off the women as slaves. The town however recovered again and was frequently visited by merchants from Genoa and Venice who brought linen, silk and glass and exported wool, leather and cotton.

The situation of *Larache* near the straits of *Gibraltar* could not fail to excite the covetousness of the Christian powers. An unsuccessful attempt at occupation was made by the Portuguese after they had taken possession of *Arila*. They succeeded in 1477 in gaining possession of an island at the mouth of the river, but had to retire soon afterwards, as the natives obstructed the channel by means of tree trunks. For the protection of the town against fresh attacks the king of Fez erected in *Larache* a *Kasba* large enough to hold 600 horse-soldiers and 300 horsemen. The Spaniards were more successful than the Portuguese. After various fruitless negotiations undertaken by Philip II who declared that *Larache* was worth

more than all Africa they succeeded in 1500 in obtaining the cession of the town. It was yielded up to them by Muhammad al-Malik al-Ma'mun for the price of their support against his rival al-Faraj. On 23 November 1510 the Marquis de Salazar-German took possession of Laracha in the name of Philip II king of Spain. The Spanish occupation lasted 70 years. Large sums were spent by them on fortifying the town and on the construction of a Franciscan convent; they were however almost completely hedged in the town by the Muslims and gained no advantage from their possession. In 1550 Muley Ismail, resolved to 'purge the sea-board' of all Christians, marched against Laracha at the head of an army of 16,000 men reinforced by bands of volunteers of the faith. After a siege lasting 3 months the town was forced to surrender. Some of the officers and the ecclesiastics were sent back to Europe, but the rest of the garrison were carried off as prisoners in contravention of the terms of the capitulation, and set to work at the building of Maguina. The Muslims and the tribes of the hill furnished the inhabitants. Henceforward Laracha remained in the possession of the Moroccans, though on various occasions it became the object of armed demonstrations on the part of Christian powers. In 1765 the French attempted to destroy a number of pirate ships which had taken refuge in the harbour, but they suffered a serious defeat and lost 450 men. No greater success attended the enterprise of the Austrian admiral Haidendorf who attempted in 1830 to set fire to the remains of the Moroccan fleet moored under the walls of the town; he was forced to retire with considerable losses. During the war between Spain and Morocco in 1860 Laracha was bombarded by the Spanish fleet, but owing to a great mist, which made the shooting of the squadron very uncertain, little damage was inflicted.

ARAKĀN, the southwestern division of the province of Burma in further India conquered by the British in 1824. The present capital is Akyab, the name of the former capital is Myingun (English spelling Myingun). The number of inhabitants 876,102 (1901) of whom 162,754 are Mohammedans.

ARAL (lake), great lake in Central Asia (Russian 'Аральское море' i.e. 'sea of Aral') which according to the most recent calculations (1900-1902) covers an area of 36,140 square miles (without the islands); it receives the two chief rivers of Russian Turkestan, the Amu-Darya (q. v.) and the Sir-Darya (q. v.). The ancients do not seem to have known lake Aral, though a vague notion of its existence may be the foundation of the contradictory accounts about the Central Asiatic Mitois (it is conjectured that the name of the sea of Arav was transferred to lake Aral, but on the name Tanaï=Don was transferred

to the Sir-Darya) and about the Mithras of the Orus' (Chinese limit, *paius* *Araxia*; in Armenian *Mercedinus* *paius* *Arax*). Old Chinese notices (from the 11 century A. D. onwards) only refer to *paius* *Araxia* (lake) to a 'Northern Sea' or 'Western Sea' as existing in the district of lake Aral. It is similarly uncertain whether the lake (limb) mentioned by the Byzantine ambassador Zonarchos (565 A. D.) may be identified with lake Aral.

More accurate accounts are found in the Arabic geographers. It is possible that lake Aral is mentioned by an author as early as the 8th century under the name of lake (Araxia) of Kharid (q. v. *Amu-Darya*). It is described by the Route (end of the 11th = beginning of the 12th century) who does not however mention its name; according to him the lake which receives the Amu-Darya had a circumference of 80 parasangs (approximately) and the later authors give the figure as 100. Near the mouth of the Sir (according to the Russian two days' journey from the 'New Village', Amu al-Karya al-haditha, Pers. 1864 new, Turk. *Yeni-Kent*) the stream of which is fed by the water of Dikhet (about 14 miles S. W. of the modern Kazalish) the coast-line of the 11th century seems to have differed but little from that of the present day. This applies similarly, it seems, to the Southern coast. The earliest notice of a journey of two days from Ak-dahat (opposite Gurgandj or modern Kunya-Urgent, at a distance of a parasang from what was then the right bank of the Amu) to Kharid, thence a day's journey and two postal stages (Aras, at two parasangs each) to Paratagh (written both *Paratagh* and *Paratagh*) and from there another day's journey to the coast of the lake. It is impossible to say whether the *Aras* was the Chir-Ik (the *Aras*), which are now almost completely dried up, were at that time connected with lake Aral; it is certain that no connection existed between lake Aral and the Sir-Darya; travellers who wished to go from Kh-irum to the Pecheg country had (according to Qattib) to take the route from Gurgandj to the 'mountain of Kh-irum' (the Chir) and thence through the water desert; the lake of Kh-irum was on the right of this route. Al-Bakri and the later geographers correctly describe the lake of Kh-irum (Aras) as a salt-water lake without any outlet to the sea; Bakri's story (who calls the lake after the town of Kh-irum) is obviously erroneous; it erroneously assumes a connection between lake Aral and the Caspian Sea. In the 11th century (beginning of the 12th century) and the works dependent on this source (including that of Ibn-Battuta, died 1301-1302-1303) the name 'lake of Kh-irum' (Aras) is used after the well-known town on the lower Sir; it had also by side with 'lake of Kh-irum'.

For the period from the 11th (12th) to the 13th century we possess no accounts of lake Aral which are not borrowed from the written sources of earlier times. Ibn-Battuta (1301-1302-1303) goes as far as to state that the 'lake of Kh-irum' mentioned in the books of the ancients no longer existed in his time. The Amu-Darya was at that period generally regarded as a tributary of the Caspian Sea; according to some sources even the Sir no longer joined lake Aral. The merchant Badi al-Din al-Rumi (quoted by the geographer Ibn-Battuta)

Allah al-Ghannî states as early as the 10th (Xth) century that the Sir 'changes its direction' at a distance of three days' journey below Ghazni, according to Hishîr Abûn the river joined the Amûr in the Kâfir-Nâmah it is stated that the Sir joins no other river but loses itself in the sands of the desert. In the case of the Amûr these geographical statements can be verified by means of accounts respecting historical events in the lower course of the river (cp. *Asiatic Researches*); for the Sir no such accounts are in our possession. Already Abû al-Ghannî calls lake Aral 'the sea of the Sir' (Sir-Tâgh); he does not seem to have been aware of the statement that the Sir at one time did not reach the lake. According to the same author the Amûr did not find its way back to lake Aral until about the year 980 (372-373); it is uncertain whether the very obscure words in the travels of the Englishman Jeikins (p. 14, 1556) refer to lake Aral. The word 'Aral' (Turk., 'island', in this case probably designation of the delta island) is found for the first time in Abû al-Ghannî or the name of the 'place where the river opened into the lake' later it gave its name to the lake joining the Kirghiz Aral-Tâgh). In the 16th (XVI.) century the lake island Aral was an independent state with capital Kungur; it was at first allied with China and the reign of Muhammad Nâsir Khan (1521-1547 = 930-950).

The earliest Russian source mentioning Lake Aral is the so-called ~~1697~~ map (beginning of 18th century) where it is called the "Mark-hizet sea" (inner sea) and is obviously connected with the Caspian. The lake bears the ~~name~~ Russian name in the map accompanying "Where Russia is Richer" (first edition in 1687). In Russian documents the name "Aralskoe more" occurs for the first time in 1697. In Western European maps this name is found as early as 1723 (in de Vitae), though the first Russian traveler who visited Central Asia in 1727, claims to have brought the first account of the lake to Europe and thereby to have created a great sensation in London. The first scientific survey and description of the lake is due to the expedition of Rumohr and Pospelov (1847-1848). The assumption that the area of the lake has decreased considerably within historical times (which theory cannot be reconciled with the historical accounts referred to above) stems from the fact that in advance of the coast-line was observed in 1847; during 1848 but twenty ~~years~~ however a constant rise of the water level has been observed in the case of Lake Aral as well as in that of the other lakes of Turkestan; everywhere the water has again ~~reached~~ the coast-line of 1847 and in many case considerably advanced beyond it. It would appear that a periodical rise and fall of the level of the lake must also be assumed for the preceding centuries; the scientific theory of a regular desiccation of the inland countries (Persia, Turkestan etc.) has altogether been robbed of its foundation by this study of the Aral's geography.

Hedberg's Phy: The lake has been ex-
plored in ~~the~~ years 1900-1902 by L. Öng
under the auspices of the Imp. Russ. Geogr.
Soc. - section Turkestan; see the reports in the
"Izvestiya" of the section in question, vol. III,
Tashkent 1903 (with which cf. the collection

of the historical accounts concerning the lake by Haeckel, *Ibid.*, vol. IV., and the review in the *Wittol des Seminars für Naturgeschichte, Marburg*, 1894, p. 226; and in the periodical *Landes-Anzeiger*—1901. An exhaustive monograph on Lake Aini in Russian by the same author appeared in 1904 (also with German title: *Der deutsche Flußlauf über physikalisch-geographischen Abzugspfad*).

ARAR. 5-1504A.

ARARAT (Turkish *Aghnadagh*, *Berdzhanik*, Armen. *Արարատ*; Pers. *Kerd*), *Kerd* (variant of *Nord*), the most important elevation of the Armenian highlands. The Ararat *Mount* is situated between 44° and 45° E. Long. (Greenwich) and under 36°30' N. Lat.; it rises almost without the intervention of any foot-hills from the step-plateau of the Araxes, which it abuts on a white curve stretching from N. E. to S. W.; only towards the West certain ridges (called *Sinak*; cf. *Ararat*, *Passage* in 1841) form a connection with the Ab- and Naugadagh. The Ararat group has a circumference of 20 miles and covers an area of 457 sq. miles. It culminates in two peaks, the great Ararat (16,757 feet) in the N. W. and the little Ararat (11,822 feet) in the S. E.; the two peaks are connected by a narrow ridge of flat round shape and a length of 8-9 miles which forms the main Southern Bulagh; after a spring situated about 5 miles below it, a pass leads across this ridge. The absolute height of the Ararat exceeds that of any European mountain, and by its relative height of 14,180 feet it surpasses most of the famous peaks of the other continents. It is owing to the fact that the Araxes valley at Aylagh has a height of 2598 feet only the Ararat towers above its surroundings to a much greater extent than the Alpine heights of the Himalayas or the South American Andes. Viewed from the North this unique mountain affords what is perhaps the additional landscape picture in the world.

The great Argat (Ujelat al-Barr) has the shape of a slightly rounded cone; the peak forms an almost circular plateau with a circumference of 150-200 paces sloping down steeply in all directions, fields of snow and glaciers descend from it to a depth of 3050 feet. The N. E. slope of the great Argat is traversed from top to bottom by a deep depression (the valley of St. James), the uppermost part of which forms a semi hollow closed in by perpendicular walls of rock; the lower part was a steady desert was once inhabited (village of Argat, 3645 feet, and monastery of St. James). The little Argat (Ujelat al-Hawr) (15) has the beautiful shape of a regular pointed cone. All the elevations throughout Eastern Armenia are volcanic and this applies also to the Argat group. The most terrible earthquakes of the last centuries was that of 20. June 1840 which ~~destroyed~~ a vast mountain side; 1881 latter destroyed a bishopric community, the ancient Argat (old Armen. Akart; cp. Hollachmann, *Lebensroman, Freytagshagen* vol. 104. 395) with ~~exactly~~ all its inhabitants, almost 6000, as well as the small monastery of St. James situated almost a mile higher up with 100 monks, and the spring of St. James.

The whole Anson district suffers from an extreme lack of water; in spite of the large number

the capital of the mountainous province of Regio (corresponding to the modern province of Málaga), it played a part in history during the rebellion of the renegade Omar b. Hafsa (with his chief fortress, Roldano), and later as a frontier fortress of the kingdom of Granada, until it was taken in 1431 by the Grand Master of the order of Calatrava.

ARCHITECTURE. The principal forms of Islamic religious buildings (Syro-Egyptian schools).

Mosquea. — The mosque dates from the first beginnings of Islam. The simplicity of the worship allowed of a very simple ground-plan which received a fixed form during the early centuries of the Islam: a large rectangular court (sahn) surrounded by arcades (ribwa) the flat roof (sajf) of which rests on arches (ihs) supported by columns (sawf) of stone (sajfir) or pillars (ruks) of brick (lils). The origin of this ground-plan has been traced to various older types of buildings (ancient Egyptian temple, old Persian palace, Greek agora, Christian basilica); but owing to the fact that the oldest monuments have either disappeared or been subjected to later alterations, an appropriate solution of the problem can only be expected from excavations and from a close examination of the mosques representing the earliest mosques. The most recent excavations in Samarra show that Mesopotamia as being the residence of the Abbasid caliphs plays an important part side by side with Arabia and Syria.

Like the church the mosque has its orientation. It is directed towards Mecca (Mekka, direction towards Mekka), whether the Muslims face the prayer according to the Koranic ordinance. The absolute orientation of a mosque therefore depends on its geographical position. In Syria it is directed to the South, in Cairo to the East, or rather East-South-East. On the side containing the Mihrab the arcade is widened in order to hold the audience of the faithful: it therefore allows of a larger number of worshippers than the other three arcades. It is called *al-mad al-shah*, 'the original arcade', in the vulgar language *al-mad al-shah* or simply *mad*. This sanctuary is frequently divided into two parts by means of a screen of gilded woodwork, called *al-mad al-shah*. On the side nearest the court it contains the platform (al-mad) for the officials of the mosque who repeat the words of the imam (mudallif). The prayer niche (al-mad, al-mad) which indicates the direction of Mecca opens out from the background of the sanctuary; in its side is found the pulpit (al-mad), from which the imam and the preacher (al-mad) deliver sermon and prayer.

This arrangement exhibits obvious points of resemblance to that of the oldest churches. The court surrounded by arcades with a water basin (al-mad) in its centre suggests the atrium which also was surrounded by arcades and contained a basin for ablutions. The sanctuary corresponds to the main part of a church; the screen is a kind

of choir-screen the *al-mad* a kind of apse or a smaller *al-mad*. The mihrab (al-mad, al-mad) locally, perhaps an imitation of the bell-tower, which contains galleries for the call to prayer (al-mad) he omits the outward and visible sign of a mosque. Like the original bell-tower it has an arched place and rises sometimes from a corner and sometimes from a side of the building. These resemblances are easily explained. The Muslim conquerors appropriated the motifs more advanced art which they found among the vanquished, and in the first place transformed a large number of churches into mosques. This was the case e.g. with two famous basilicas, the great mosque of Damascus, and the mosque of Aqsa at Jerusalem, which borrow their Christian origin at the first glance.

Style and methods of construction change from generation to generation, especially as regards the choice of material, the gates, the lanterns and minarets, the profile of the arches in the interior, and the ornamentation. But the ground-plan of the mosque remains the same down to the time of the Ottoman conquest.

The original *al-mad* of the mosque is *al-mad*, 'place of prostration'. The Koran knows no other expression, and the older writers apply it to all mosques irrespective of size. But towards the tenth century of the Islam the advance of civilization and architecture produced a distinction between two kinds of mosques. The great mosque, in which the assembly of the faithful (al-mad) meets for the Friday service (al-mad) receives the name *al-mad al-shah*, *al-mad al-shah* or *al-mad al-shah*, and we speak with the shortened form *al-mad*, 'the great mosque'. From that time the expression *al-mad al-shah* only mosques of the second rank, the number of which gradually became less and less. Only the great mosques of Mecca, Medina and Jerusalem (al-mad) are still called *al-mad* owing to the fact that tradition following the Koran places them that name which has become popular.

This development in the use of the expression can be followed in the authors it is also reflected in the inscriptions which contain accurate official and dated documents. The great mosque of Aqsa (the Temple built at Cairo in 975 (370) still bears the name of *al-mad* in the distinctive inscription. But the mosque of the Sultan al-Mu'izz at Cairo, erected two centuries later in 1255 (652), is called *al-mad* in the three parts of the document concerning its foundation.

Mosquea. — The Fatimid caliph while spreading the Shiite doctrine in Egypt and Syria, effected no change in the ground-plan of the mosque. It is found in its old form especially in the mosques which they built at Cairo. But the development of religious ideas and the political situation created in the Muslim East by the Mongol invasion and the dismemberment of the Baghdad caliphate, led as early as the Fatimid period to an orthodox or Sunni reaction which was directed especially against the 'Alid or Shiite sect and dynasty. This religious (Ash'arite) and political (Sunni) reaction produced a number of reforms in all the fields of life. One of the most important was the development of the *al-mad*. The *al-mad* first arose in Shari'ah in the beginning of the 14th century of the Islam; in its original form it was simply a private school of religious

scholar A. N. Levtchenko, suggests and just according to the Sennar site list in the 11. (12.) century it was turned into a public institution by the Seljuk sultans of Baghdad, who had become the most powerful vassals of the Abbasid caliphate and the official protectors of Sennar and Antakya; it now became the object of the Muslims to train on this of officials for all branches of the administration. It thus developed into a powerful centre of religious and political propaganda, a school of official Sannism and, in a way, a government institution. In this form the madrasa was introduced by Sennar rulers in the 12. (13.) century, especially by Nur al-Din and Syria and by Salih al-Din (Saladin) into Egypt.

Differing from the previous in nature, object and history, the museum is also distinct from it in its architectural features. At the time when it was transplanted into Egypt by Sa'id al-Din its ground-plan had already assumed a fixed form: a small rectangular court without a roof (*ḥaṣṣ* or *ḥaṣṣa*) surrounded by four high walls and four halls (*ḥudūd*); the latter form together a Greek cross and open into the court by means of a lobby each (*ḥaḥ*); the anterior angles of the building contain dwelling-houses for the officials and servants of the institution. This geometrical ground-plan with its fourfold division is excellently adapted to the fourfold audience consisting of the schools of the four principal branches (*ḥanāfi, shāfi, maliki, hanbalī*). Each one establishes itself in one of the four ḥudūd as is shown by the inscriptions of the audience of Sultan Ḥasan built at Cairo in 764 (1363). The ground-plan in question seems to have its origin in Syria. It is found already in the ḥan of 'Asadid, a remarkable Syrian monument of much greater age than the Syrian-Egyptian audience. Like the plan of the mosque it contains *ḥudūd* of various origin. The ḥaṣṣ is encircled in the Persian style (*ḥaṣṣ-i ḥaṣṣ*), but the four ḥudūd are arranged round a central court exactly the geometrical ground-plan of some Persian and Syrian churches with *ḥaṣṣ* ones, with which the ḥan also corresponds in some other architectural details.

As in the case of the mosque the style and method of construction of the ~~mosque~~ changed from generation to generation. Towards the end of the 14th century the Hindus have learnt to use ~~bricks~~ (bricks) of bricks (size) in the Indian and Byzantine style (its circular layers of bricks placed on end). The most recent great raised madrasa at Calcutta was built by Sultan Barha in 788 (1386). Later the walls are replaced by flat walls (inf.) ~~the~~ walls (decorated) and by ceilings, ~~and~~ with many-coloured ornament of which hardly ~~any~~ ~~one~~ deep needy of architectural art. The only raised element which ~~remains~~ ~~is~~ ~~the~~ arch of ~~their~~ ~~stone~~ ~~covering~~ the entrance in the front ~~from~~ ~~the~~ ~~east~~. In spite of all these changes ground-plan and arrangement of the madrasa remains unaltered down to ~~the~~ ~~present~~ ~~phase~~ of the Ottoman conquest.

The Soviet reaction created various institu-
tions akin to the *narodny*, particularly the *zhen-
otdel* or school of (Soviet) mothers, but as
these institutions did not possess the same poli-
tical importance they only played a subordinate
part and did not develop a separate architectural
style: being mere symbols of the *narodny* they

discovered the growth-plan of this type of building. The mosque retained its character of a government institution with political aims during the reign of the Ayyubids, who had as far as architecture of Muslim structures. Its first success was the destruction of the famous school, the Bayt al-Hikm, a kind of ecclesiastical academy in which the sciences, inherited from the Persians and ancient Greeks ~~from~~ taught. The Shiites were however not the only force against which Saladin had to fight, as the crusades had raised up another enemy in the Latin Kingdom of Jerusalem. Saladin abated not his enmities who were hand-capped by the feudal system and by political decentralization, but only been able to weaken it without accomplishing its destruction. This was finally effected by Bahā' al-Dīn the ruler of the Ayyubid feudal kingdom he founded the Mamluk empire, a centralized state governed by a regular army and governed by means of a bureaucratic hierarchy. With the help of this powerful lever he destroyed at one blow the Latin Kingdom and the remnants of the Assassins, the last bulwark of the Shiite luxury in Syria. He conferred upon his subjects a religious education accessible to the Muslim people by assembling at Cairo the remains of the caliphate of Baghdad destroyed by Batāghān in 1258. Thus re-establishing for his own purposes the doctrine of spiritual and temporal power he restored the continuity interrupted by the Mongol invasion and completed the work planned by the great Sultans of the preceding century.

Thus an end was put to the struggle; the warlike spirit of Samaria, fanned into flame by the holy war, had spent itself and turned to good works and contemplative study. No longer having a fighting part to play, the monks necessarily lost its old character and became assimilated to the mosque. At this stage all great mosques are obliged to the Friday mosque. The *mosque khatt*, more spacious than the other large Moslem shrines as a sanctuary and contains pulpit and mihrab. A minaret usually gives to the mosque the outward appearance of a mosque. Meanwhile however the mosque has acquired such importance that, far from being absorbed entirely in the mosque, it threatens to upplant the latter altogether. While the number of great mosques both in the classical geographical districts decreases continually, the number of mosques with a complicated ground-plan continues to increase down to the Moslem conquest.

This development is reflected in linguistic usage. The *masāḥif* intended for worship retained the name *masāḥif* or *ʿaḥādith*; later they were simply called *qurʾān* like the great mosque. Maḥmūd, who wrote his topography of Cairo early in the 11th century, applies this name to most of the Maḥmūdī mosques. Linguists from 830 (1427) onwards attest that this was the official usage. The word *masāḥif* thus shared the fate of the old word *maḥall* and was to be confined to institutions of minor importance. In Egypt at the present day it means no more than a secular school, a very large building connected with the old is called *qurʾān*.

The original mosque, *mesquita*, is thus split into two classes, the great mosque (*mesquita*) and the small mosque (*mesquita*). The mosque simultaneously develops on the one hand into the *mesquita*, on the other into a secular school. Both kinds of

ground finally became identical as far as their purpose is concerned, though not in their architectural ground-plan. The latter remained distinct down to the time of the Ottoman conquest, which led to the disappearance of the ground-plan of the madrasa. The Ottomans go on building an increasing number of *ghazis* in Egypt and Syria in the style of the great mosques as modified under the influence of the Turkish school with the type of minaret derived from the church of St. Sophia (Constantinople).

Madrasas.—The Sasanian reaction which introduced *madrasas* from Persia into Egypt, received in the course of its development an admixture of elements which, though of very ancient origin, had been foreign as early as Islam. One of the most important of the elements thus assimilated is *ibadan*, an oriental monastic system of Persian origin with mystical tendency. The architectural monument of Islam is the *khanaqah* or *khawakish* (Persian *khana-kash*) which first appears in Syria and was introduced into Egypt by Badī al-Dīn, the founder of the first Egyptian *khanaqah*. In the latter country *khawakish* soon became almost equivalent to *ribat*, an Arabic word denoting a fortress military station, which has completely lost its original character and been transformed into a *madrasa*.

Ribat and *khawakish* flourished under the Ayyubids and later under the Mamluks, but without creating a separate architectural form. The madrasas sometimes imitated the plan of the great mosque (monastery of the Four *Shahids* at Cairo, 730 = 1333), and sometimes that of the madrasa (monastery of Sultan Nāṣir II at Cairo, 704 = 1303). In the two prototypes the *madrasa* is furnished with all the elements required for the cult, such as minaret, sanctuary, pulpit and mihrab. It is only the subsidiary buildings adapted for the monastic life with their long rows of cells which give a peculiar character to these monuments. Interesting remains of this type still exist, especially at Cairo where the madrasa of Sultan Ināl (898 = 1494) affords the most perfect example.

At the time of the Ottoman conquest *ribat* and *khawakish* were supplanted by the *madrasa*, the Turkish-Persian derivative monastery (*maktaba*, *maktab*), the architectural arrangement of which was also influenced by the school of Constantinople (hall with cupolas). Finally the most notable the *madrasa*, a word which in the Muslim East and West denotes a cell or hospital, and secondarily a monastery; in Egypt it is generally used for a small mosque, a prayer house or a hospital.

Striking-fountains and schools.—Side by side with these three chief types, mosque, madrasa and monastery, we find two subordinate forms of buildings, known as *ṣayyida* and *ṣayyid*. *Ṣayyida* means, *well*, the expression *ṣayyida* is applied to any good water, to the holy well as well as the spring of *ṣayyida*; it is used especially of fountains serving the *ṣayyida* good, the use of which is free to all. In the East water is most precious; according to a tradition going back to Muhammad the offering of a drink of water is one of the most meritorious forms of almsgiving. Thus while *ṣayyida* originally denotes any charitable foundation, it is the public striking-fountain which is regarded as the *ṣayyida* for excellence.

In the architecture of Syria and Egypt the *madrasa* surely stands by itself. It is based on the ground floor in the centre of a courtyard, a madrasa as a courtyard, and is characterized by its two large rectangular windows placed corner-wise which are decorated with charming sculptures and closed in by flat bronze grates. Near the *madrasa* is found the elementary school (*ṣayyida* or *ṣayyid*), made conspicuous from afar by its elegant loggia which opens out towards both façades by means of *ṣayyida* on an small column. This graceful type of the *madrasa* continued to exist down to the Ottoman conquest. After this period the *madrasa* is erected by itself, at *ṣayyida* in connection with the *madrasa*, and later quite independently. The style continues to degenerate down to our own times; at the present day the striking-fountain exhibits all the features of the perverted taste of the modern Turkish style.

Monumental tombs.—For the dead of the lower classes a grave is sufficient. Those of the highest classes are content with a grave requiring a mausoleum. From the earliest times to which it can be traced the Syro-Egyptian mausoleum has its own style, a style based on a square base with a vaulted roof. This type may possibly be a remote reminiscence of the ancient Egyptian *serapiada*. It is more directly connected with a Christian type, the *ṣayyida* (mausoleum) of which some traces are preserved in Syria. The problem of erecting a cupola on a square base, executed in a rough way in the case of the ancient Syrian *ṣayyida*, finds in Muslim architecture the most perfect solution in which the thought of the successive inventors of the Persian and Byzantine are combined. The space of transition from the square to the circle is occupied either by plants covered with *ṣayyida*, or by *ṣayyida* made as first of bricks and later of stone, or by *ṣayyida* and *ṣayyida* of stone. The original need, the purpose, the section of the square of transition of the tympanum and of the cupola, the ornamentation and in fact all the elements of which the style is composed change from generation to generation; but the general ground plan remains unchanged down to the Ottoman conquest.

The classical word for mausoleum is *ṣayyida*. But owing to the fact that the *ṣayyida* is so much conspicuous in architecture, the name of the latter, *ṣayyida*, is extended to the whole monument. In the authors and in the Syro-Egyptian inscriptions both expressions used interchangeably denote the entire mausoleum, i.e. the building enclosing the grave. The grave is called *ṣayyida* or *ṣayyida* or *ṣayyida*, an Arabic word of Aramaic origin.

In many cases the mausoleum stands quite isolated as a cemetery, but frequently several are placed together in an enclosure (*ṣayyida*) without however forming an organic whole. The mausoleum of some great person is often found in the corner of some sacred building founded by the person in question. For culture and *ṣayyida*—former slaves who had risen to power but could never be sure of their fate on the morrow—were wont like the great Italian condottieri of the Renaissance to provide for their tombs early in life.

The composition of the monumental tomb with a mausoleum building creates three main types of combinations: the mausoleum-madrasa, the mausoleum-madrasa and the mausoleum-madrasa. We may mention at Cairo: the

(1870) at from 8000 to 9000, by Sumak at 10,000. They include a number of "Sindhar" (Harnes), the word-shipping. The town is remarkable for the dyeing and manufacture of dyed shahs and of beautiful carpets with blue and yellow square patterns. In Isfahan, the main use of the material for the tents used by the Persian court were woven at Ardakan. The town is the centre of a district of the same name which contains 27 villages and townships.

ANDASHIR, old Persian: Astakshir, Greek: Ἀστιάκις, well-known name of Persians living. Muslim tradition has certain knowledge only of the later Sassanid kings of that name, viz. Andashir I (326-343), Andashir II (379-383) and Andashir III (628-649). [See further: KANDAM.]

ARDASHIR KHURRA, ~~son~~ of a district w
Yakia. (See 17012810.)

ARDIBEHISHT, name of the second month in the Persian calendar the year of which is counted from the reign of Yezdegerd, the last Sassanid king (i. e. A. D. 632). This was in use used by most of the Arabic astronomers. ~~It is~~ On the extreme simplicity each ~~year~~ has 365 days - 12 months of 30 days each + 5 intercalary days - Ardibehist - i. e. the ~~month~~ the 3^d day of any Persian month; a ~~lunar~~ ~~month~~ was therefore in operation between Ardibehist ~~and~~ (name of the 4th month) and Ardibehisht, which denote the day of the month. (E. STAHLER.)

ARDILIAN, province to Western Persia, situated between Adzhardhan to the North, Laristan to the South and Tebriz to the East, with an area of ca. 24,730 square miles. It is occupied by the chains of the Zagros, a range of mountains to the Western border of Tebriz; the climate is severe and only a few valleys are capable of cultivation; for the rest the district is remarkable for its extensive forest (especially oak). A number of important rivers have their rise in Ardilan, flow to the North the Kizil Kien flowing into the Caspian Sea; the central part of the province contains the headwaters of the Myzda (the chief of which are the Sghrman-Rod and the Ghar-Rod), the South those of the Kerkhan. The inhabitants are almost exclusively Kurds, hence the district is also called Persian Kurdistan or ~~land of the~~ Kurds, the name Ardilan which does not occur in medieval authorities, dates from modern times. The capital of the province is Sghar (called also Sghur or Semia) which was built as late as the sixteenth century. It is the residence of the chief of the Kurds who bears the title of wali and governs the province almost as an independent ~~state~~. A distinction is occasionally made between Ardilan in the narrower sense, comprising of the North Western part of the country with the capital Sghar, and the district of Kirmanshah (with a capital of the same name) in the South West, and the district

Catholics, ~~Katholics~~) in the South East Up,

ARDISTAN, a Persian town which in the Arabic Middle Ages belonged to the province of al-Bilad al-Medina. It was said to have been the native place of the famous king Ardashir I. Anatharshir (reigned 531-579). Ardistan, the modern name of which is Ardahan (also Ardous), is situated to the North of Vardz at a height of 5,575 feet, under 53½° N. Lat. and 94½° E. Long. (Gromweil). To the N. E. in the direction of Zuhra are the *Arda* *Shahr* *remains* (the temple etc.).

ARDISH (old Armenian Ardush, old town in Armenia, now in ruins, situated on the N. E. shore of the lake of Wan under 39° 30' Lat. and 43° 20' E. Long. Now as well as in antiquity the continuation of the lake of Wan to the North West takes its name from this town. In the Middle Ages the entire lake of Wan was called by the Arabic lake **El Ardish**, as appears e. g. from the Persian geographer **Al-Hindawi** (wrote about 740 = 1340). From the 3rd century onwards **Ardish** usually shares the history of the Muslim principality of **Akkad** (q. v. and the lit. literature); the town was destroyed by **Sh. Gungor** in 1609, see the account of the **Al-Akhar** **Deschamps** to the **Tour de Suse**, 4th series, t. III, p. 317 et seq. There is evidence for the existence of the town in antiquity: it is called in Greek **Ἀρδύση**, **Ἀρδύση**, and in cuneiform inscriptions **Arduš** (i. this **Thopelcian**, **Zettler**, **Journal Asiatique** t. 69, note 6). Owing to the fact that the lake of Wan gradually advances more and more to the North, the ruins of **Ardish** have been surrounded by water since the middle of last century, it is only occasionally when the level of the lake is very low, that they appear on the dry ground (e. g. in 1886). To the N. W. of **Ardish**, at a distance of about 1½ hours from the lake, there is a small town called **New Ardish** or **Aganah**, which contains a small Turkish garrison; it is much frequented as a postal stage on the route from **Wah** to **Erzerum**.

[illegible]

ARDJISH-DAGH (Mount, Arduin-Dagh),
the Aragon of the mountains, the most important
of a number of volcanic peaks in Cappadocia to

the South of the Hays: rising to a height of 11,480 feet it represents the highest elevation of Asia Minor. The Arghish-Dagh is situated at a distance of about 2½ miles from Kouskya almost in the centre of a trachytic district which, extending from W.-S.W. to E.-N.E., forms an irregularly drawn-out oval with an area of about 150 square miles. The mass is characterized by a number of ridges which (unlike it) is all directions. The chief mountain — the beautiful shape of a pyramid: the summit is clothed with three abrupt peaks covered with perpetual snow; hence the name 'white mountain' (Arabic: 'Ayyār Dagh, from *ayyār* = 'white, shining'). Many smaller cones and volcanic formations surround the chief mountain. To the N.E. protrudes a 'dike' running with three peaks to a height of about 1,500 feet; the town of Tashkent is situated at the north-western base of this elevation. The Arghish-Dagh was active as a volcano down to historical times, though only to a limited extent. It has been extinct since antiquity, but traces of its former activity are clearly seen in the gigantic masses of debris on the slopes of the mountain. The only extant geographical name of the Middle Ages which mentions the mountain — under the name of Arghish — is the Persian geographer (written about 740 = 1340). In modern times the first record of the Arghish-Dagh was made by W. Hamilton in 1837; he was followed in 1849 by P. v. Tschibatcheff and 40 years later by H. P. Tuxen, probably the greatest authority on the whole mountain and the author of a detailed description.

'ARAB', plural of the Arabic word 'arab' (literally 'Arab'). As a geographical term this word, or more frequently the singular 'arab', is used as a name of the vast stretches covered with dunes, which form about one sixth of the area of the Sahara (p. 4). In the Arabic dialects they are called *qaf* or *qaf*. The most important of these *qaf* of sand is the Libyan *qaf* between the Egyptian coast and Tibesti, — the oasis of the Faggar country between the Hamada of Timgad, the Hamada d'Hammou, the Tassili and the Hamada of Murzuk, — the Maghreb stretching to the North and East of the western Sahara etc. In a narrower sense the word 'arab' is applied to the sand zone stretching diagonally through the Algerian Sahara from the Hamada al-Hammou in the N.W. to the West Sahara in the W. This enormous mass of dunes is divided into two groups: the eastern 'arab' which is much better known owing to the large number of explorers who have visited it (Ducroyer, May, Lacroix,

Plancher d'Alger and particularly Flourens), and the western 'arab' traversed by Colapier, Colapier and Plancher. The former extends from the Hoggar and southern Algeria and Tunis to the neighbourhood of the Hamada of Timgad, from which it is separated by rocky heights called al-Bigh (the cliffs); the latter is situated to the S. and N.E. of the Garama. Its boundaries are clearly indicated to the N.E. by the depression of the West Maghreb, to the W. the West Sahara forms the border. A chain of rocky mountains in its centre, towards the N.E., by rows of dunes, stretches between the two 'arab' from the West to the North to the plateau of the Tademait to the South.

The configuration of the 'arab' corresponds to that of all the dunes consisting of dunes. It is a mass of sand-hills with very narrow ridges called *qaf* (pl. of *qaf*, 'arab'), the average height of which is about 125 feet, though occasionally they reach 250 and even 775 feet. The hills stretch in parallel rows separated by depressions (see from sand, which are called *qaf* (lit. dunes) in the West and *qaf* (sand dunes) in the East). These rows form natural roads the use of which is indispensable in traversing the 'arab'.

The 'arab' is not wanting in natural resources as would appear at first sight. Water is not lacking: it is found under the ground, usually at little depth. In some parts of the eastern 'arab' it is found with a depth of less than 35 feet under the ground. In other parts it collects in depressions in the sand. Such is e.g. the basin of 'Ain el-Baig' in the heart of the eastern 'arab' which has a depth of 15 feet and a circumference of 1625 feet. These subterranean stores of water are connected with wells buried under the sand. Thus the *qaf* descending from the plateau of Timgad, from the Hamada of Timgad and from the Tademait lose themselves in the eastern 'arab', while the wells rising on the coast of Algiers, on the hills of the Kafi and the *qaf* 'Ain el-Baig' disappear in the western 'arab'. The presence of water quenches the growth of some plants which stretch out their roots to collect the water filtering through the sand (*qaf*, *qaf*, etc.). The dunes are therefore visited by the inhabitants of the Sahara, as the scanty vegetation is sufficient to provide pasture for their herds. The 'arab' is however unsuitable for permanent settlements and offers no more than a temporary place of passage.

Long before European travellers reached the Sahara, the following account of the 'arab' was given by Ibn Khaldun. To the South-East and the South, he writes, the Maghreb is bordered by a barrier of dunes which forms a line of separation between the country of the Berbers and that of the Arabs. In the Arab this barrier is called 'arab'. It begins from the shore of the Atlantic Ocean and extends eastwards in a straight line as far as the Nile. Its breadth at the narrowest part is 3 days' journey, it is intersected by a stony plateau called by the Arabs al-Qadada which begins this side of the Zab and reaches as far as the West Maghreb. In some years the Berbers, western of the *qaf*, extend their wanderings as far as the southern border of the 'arab'; the southern border is called by the Arabs al-Qadada, who possess pasture-land formerly belonging to the Berbers.

ARESHGUL, *ash to en*, no longer in existence, formerly situated at the mouth of the Tafna, opposite the island of Rasgha, the island *dyas* of the ancients. The latter is situated at a distance of $1\frac{1}{2}$ mile from the Algerian coast under $33^{\circ} 19' 28''$ N. Lat. and $3^{\circ} 48' 53''$ W. Long. (Paris), it measures about 2000 feet in length and 650 feet in breadth and reaches in its northern part a height of 105 feet. The canal is very deep, except in the S. W. where it is easily accessible.

Areshgul took the place of the Portus Syphac which served as harbor to Siga, the capital of the kingdom of Siga. The latter town was situated $2\frac{1}{2}$ miles further inland on the left bank of the Tafna at a place bearing the Berber name of Takhel (the castle). Our accounts of the history of Areshgul are confused and contradictory. There is no doubt however that the town was in existence as early as the second century of the Hijra. It belonged to the island kingdom of the Maghrib of which it fell to the share of 'Abd al-Muhammad b. Sulaiman, a brother of 'Uthman I, who died in 907-908. During the fourth century of the Hijra the possession of Areshgul was disputed between the representatives of the Fatimids in the Maghrib and the Consulate of Spain. In the course of these struggles the island chiefs were driven from the town but retained possession of the island where they resisted an attack of the Spanish fleet in 320 (933-934). During the same period, in the year 338 (949-950), Areshgul was sacked and the inhabitants transported to Spain.

The town however continued to exist and even attained to a certain degree of prosperity. It was situated on the Tafna at a distance of two miles from the sea, but accessible to vessels of small tonnage. At the end of the 17. century of the Hijra it is mentioned by Ibn Hawkal as a 'small town' surrounded by fertile fields. It had a harbor protected by the island of Rasgha which was visited by ships for the purpose of taking in water, as the island possessed cisterns and fresh-water springs. (*Mon Khaldun*, transl. by de Siam, *Touaregs*, 1842, p. 217). Al-Bahr mentions the same fact and adds some details about the buildings of the town. It possessed a mosque with seven arched and a simple built minaret, two baths one of which dated from antiquity, and was surrounded by a wall eight spans thick containing three gates (*al-Makur, al-Makur* p. 53; transl. by de Siam, *Description de l'Afrique*

p. 184-185). The history of Rasgha during the succeeding centuries is very obscure. Nothing is known except that the town was destroyed in the course of the struggles between the Fatimids and the Almohads. It subsequently recovered and remained more important owing to the proximity of Tlemcen to which it served as harbor. Spanish texts of the 16. century mention the town under the name of Rissal. Charles V intended at one time to attack it by main force, but a treaty concluded in 1536 with the Sarghul prelates 'Abd al-Bahr he secured the right to build a fort or in any case to place a garrison in the town for the purpose of keeping the Turks away from the mouth of the Tafna. It does not appear however that this right was ever exercised. Towards the end of the 17. century Areshgul was completely in ruins and the island, called *Yala de los Almoravides* by Diego Suarez, had been abandoned by its inhabitants. (1) the buildings erected in the past nothing remained but a tower of circular bricks on the left bank of the Tafna.

The mouth of this river afforded the only communication between Tlemcen and the sea. It was for the purpose of opening up a route of access to Tlemcen and at the same time cutting off 'Abd al-Kadir's communications with the coast that Marshal Clauzel sent a detachment of troops to occupy the island of Rasgha (30 October 1833). In the following February a camp was established near the mouth of the river. The treaty of the Tafna confirmed Areshgul as 'Abd al-Kadir, but left the island in the possession of France. In modern times a lighthouse has been erected on the island and a village has sprung up on the coast. But the traffic from and to Tlemcen has been directed further to the west owing to the building of the harbor of Nemmes, and the mouth of the Tafna is no longer used. The village of Rasgha consists merely of a few huts inhabited by Spaniards. Its development depends on the realization of the plans for the construction of a military harbor, which have been drawn up on several occasions, though their execution appears to have been postponed indefinitely.

ARGEL, Spanish name of Algiers [see *ALGER*].

ARCHANA or **ARCHANA MA'ADIN** (*Ma'adin*), town situated half-way between Fez on the Middle-Sea in the N. and Bizetech in the S., under $33^{\circ} 10'$ N. Lat. and 40° E. Long. (Greenw.), which was the name of Ma'adin (mines) in the 16. century found in the N. W. of it. It is situated on the 'Ab-Dagh, a steep hill about 5250 feet in height; the number of inhabitants according to Ibn al-Bahr was about 3500 in 1837; the greater half of these were Greeks and Armenians, the rest Turk; for the greater part they subsisted by labour in the mines, which are reached from the town after a hard march over steep and difficult country. The mountain containing the principal mines, called *Maghara* ('the cave'), is situated to the East of Ma'adin, a settlement of

about 4000 inhabitants. The copper produced by Arghuna Ma'alin supplies a great part of the East with the metal. In *conform* (incongruous) *Saghu* appears as Arghuna, in *Arghuna* literature as Argon: in *Hasjid al-Din's* history of the Mongols (ed. *Quatremere*) p. 333 it is called Arghant.

ARGHUN, fourth prince (Alghun) of Ghazni (683—690=1284—1291), born some time between 1250 and 1255 (his father Algha was born in 1234, his eldest son Ghazan in 1271). His mother Algha entrusted to him the administration of the province of Khwarezm. Summoned to his court in the spring of 1283 he received the news of the latter's death before completing his journey, and had to render homage to his uncle Tektash (or Ahmad) in Afghanistan. In the following spring (1283) he returned to Khwarezm; in 1284 he revolted against Ahmad, but was defeated by the latter's general Alimshah, to whom he was forced to surrender in the fortress of Kalki. He was brought to his uncle's camp, but liberated there by the Emir Bakht; the troops of Ahmad were driven over to Arghun and Bakht, and Ahmad himself was surrendered to his nephew, at whose command he was assassinated on 26th November 1283 (10th August 1284). On the following day Arghun celebrated his accession to the throne, his coronation by the great Khan Shubutai arrived in the spring of 1286. Kalki to whom Arghun owed his throne remained chief minister until 1289, in which year both he and his wife Syah al-Din were deprived of their offices and executed. During the following years the administration was in the hands of the minister Sa'd al-Din, who was hated by the Muslims as a Jew and unpopular with the Mongol grandees; during Arghun's last illness, a few days before his death, he was deprived of his office and his life by his enemies. Arghun like his predecessor was distinguished for his religious toleration. He was favourably inclined towards the Christians, but Buddhist monks are said to have possessed the greatest influence with him. The negotiations with Kompanz powers (the kings of France and England and the Pope) for the purpose of undertaking a combined action against Egypt, which had been started during the reign of Algha, were continued by Arghun; the Persian public archives contain a letter from Arghun addressed to Philippe le Bel (discovered and edited by Abel Rémusat, translated by J. Schmidt) but no action in this direction was taken during Arghun's reign, perhaps because his strokes were engaged in other work. The fall of the all-powerful Bakht was followed by an insurrection in Khwarezm; the movement was headed by the Emir Khatib and received assistance from Central Asia; it was not quelled during his reign of Arghun. The attempt undertaken by Mangghu-Timur (Khan of the Golden Horde) in 1290 to enter Iran through

the gate of Herat, was however frustrated without difficulty. Arghun is said to have started the building of towns; the first plan of the new tower later founded by his son Ghazan and Tadjik (Shahab al-Din near Herat and Balkh) are said to be due to him. He is said to have died on 7th Rabi' 1 690 (10th March 1291); he was buried in the mountains of Ghazni (north of Sahistiyah), where a mausoleum was erected later (under Ghazan). — Ep. D'Olehan, *Historia de Mongols* iv. 1 et seq.; Hammer-Purgstall, *Geschichte der Mongolen* i. 359 et seq.; Howorth, *History of the Mongols* iii. 312 et seq.

(W. H. D. R. S.)

ARGHUN DYNASTY OF SIN. The early history of the Arghuns has been given under the history of Afghanistan. The attempt of Shah-Nasir Beg and his son Shah Beg (sometimes called Shah Shodh) to found an independent state with its capital at Kandahar, though apparently successful at first, broke down before Shah's persistent attacks and after his final capture of Kandahar in 949 (1532) Shah Beg retired quietly to the high lands of Ghil and Mustang. It seems probable that Shah Beg had engaged to aid to molest him there, and Shah encouraged his invasion of Sin. Shah Beg had already no far back as 884 (1479) occupied these highlands, and had in 890 (1485) invaded the plain of Kachhi by way of the Hindu Pass and taken Sert (Sih) from Ghil Nandah, but a loss afterwards. After his death Shah Beg who had already conducted the first expedition under his father, was driven out of Kandahar by Balak in 913 (1507) and taking back on Ghil and Mustang was introduced by Shah Beg Gulabkhan to the chiefs of the local Baluch tribes, and formed an alliance with them for the invasion of Sin; but when Kandahar was recovered he gave up the project for the time, but gradually spread his influence. His force, consisting of Arghuns of his own tribe and Tarkhans who were able to them, was not very large, and he supplemented it when he could from local sources. Between 917 and 920 (1511—1514) he attacked the tribes who had established themselves in Herat, etc. parts of the Kachhi plain and the hills north of it, and got occupied by Balak, and took from them the forts of Sert and Chappar.

Various tribes joined in the conspiracy against him, among them Baluch tribes who were now pressing down into the plains and spreading over Northern Sin and Baluch.

In 919 (1513) Shah Beg's eldest son Husain (sometimes called Husan) fled to Balak's Court, where he was well treated and joined in Balak's expedition into India. In 927 (1520) Shah Beg advanced into the plains and soon succeeded in overthrowing the former Afghan Pasha who had succeeded Ghaz Nandah. We now find a force of Baluch under the Ghil, and it seems probable that rival tribes fought on the two sides. Husain was now with his father, and pushed on rapidly to Thatta in Southern Sin, while Shah Beg planted garrisons in Ghil, Sert, Pichpur, (Gandhar) and Baghlan (now known as Bahli). Some years before a pretender to the Sin kingdom had obtained the support of Mughal Shah II of Ghalbur and Ghil Pasha asked for the assistance of Shah Beg. The invader had asked upon Thatta, the capital of Southern Sin, and had been driven out with the help of an Arghun force, and it is probable

that he had become so much independent of them and was now anxious to free himself. He expelled the adherents of Shah Husain and was crowned and anointed. A treaty was made by which he was surrendered to Shah Beg and he was to remain under the dominion of Shah Beg. Shah Beg was very severe. Shah Husain's murder was one of the pretenses. Shah Beg was absent in Kandahar (1527) and Shah Husain took Sind. The next year he was defeated and slain and Shah Beg was killed and put an end to the dynasty. His last loss of Kandahar followed and he now made Blakhar an island of the sea.

There was a strong power, almost independent in these days, and well situated for the trading of the north and other countries of the North India, and also abounding a large number of the invasion of India was sent. Shah Beg is supposed to have annexed the Indian possessions of 42 villages in peace, and also the Khawaja chief of Gadhwa. He died (1530) (1524) and Shah Husain who succeeded him, probably by arrangement with Akbar, proceeded to attack the kingdom of Multan.

The Langahs who now ruled the kingdom were a Rajput race, well known in the Punjab, and had formed an independent kingdom, after the break up of the Delhi Sultanate. At this time Mahmud was reigning and was supported by a large body of Pathans, Afghans and Gonds who had settled in his country. Shah Husain Afghani had invited himself opposed by the Langahs, who were before starting for Multan made an expedition against the Afghans and Maghazis of Kachhi by way of Cote and Lahor (Barany, in the *Journal of the Asiatic Soc.* 1892, p. 353 reads Maghazis for Maghazis). On his expedition against Multan (1533) he met and defeated a large force of Langahs and Pathans near Bheri, and then advanced on Multan. Mahmud Shah of the land of a mixed race of Afghans and Pathans and Afghans advanced to meet him on the Salahi, but died suddenly, some say from poison. Confusion followed his death. Multan was taken by Shah Husain Afghani. An agreement was made to in the name of the infant Husain Langah to cede all the country south of the Salahi to the Afghans. The treaty by which however led to a further invasion on his part. He besieged Multan for more than a year and finally took it by assault, when a general massacre followed. The place was plundered, but Shah Husain made no attempt to hold it permanently, probably from the Afghans who was now emperor of Delhi. The whole of Sind however remained under his rule throughout his life, i.e. till 1561 (1554). He engaged in minor wars, but was unsuccessful in his own kingdom. His emperor Humayun, his successor, claimed his help when he had been defeated and driven out of Northern India by Sher Shah Sur. Humayun spent altogether two years and a half in Sind and the neighboring parts of the Rajputana desert. Shah Husain tampered not wishing to be drawn into war with Sher Shah. Humayun then tried

to force him to fight in Blakhar, but was unable to effect anything. Finally he agreed to cede to Kandahar by the Helmand River. These events occupied the years 1547-1550 (1540-1541). Two years after Kandahar Humayun's brother came as a refugee to Blakhar after losing Kandahar, and Shah Husain gave him his daughter in marriage. Several years afterwards Kandahar was blinded, came to Blakhar again on his way to Mecca and was hospitably entertained by Shah Husain. His wife, Shah Husain's daughter accompanied him on his pilgrimage. Shah Husain's later years were distracted by plots and intrigues. The Afghans were little more than an army of occupation and had little hold on the country. As Shah Husain had no son, the rival heads of the army Sultan Mahmud Ghalib and Mirza Ismail Turbat were candidates for the throne, and immediately upon the death of Shah Husain hostilities broke out, but the dangerous position of Sind from the Afghan empire on the north and the Portuguese on the coast induced them to make peace and divide the country. Mirza Ismail Turbat went with 1000 soldiers to Thatta, and Sultan Mahmud Turbat with 1000 soldiers to Blakhar. The Afghan elements were an altogether satisfied and broke out in rebellion against Mirza Ismail on one occasion. Mirza Ismail Turbat fled to the Empire in 1558 (1572). The Turbat rule continued in Lower Sind for some time longer. Mirza Ismail was succeeded by his son Muhammad Pasha in 1565 (1565) and he by his grandson Lakh Beg in 1591 (1584). He neglected to pay his respects to the emperor Akbar in his grandfather had done, and the result was the invasion of Sind by the imperial army and final extinction of the Turbat-Afghan rule in 1601 (1591).

(AL LAMBIKATIA DABAT)

ARAB is SA'D AL-KUTUB AL-KUTUB, Arabic historian; nothing is known about him except that he occupied the post of secretary to the Unshaykh al-Jaham II (1350-1366 = 1351-1366) at Cordoba, during whose reign he wrote an abridgement of al-Jaham's great chronicle. The chief value of this work lies in the fact that the author added a history of Spain and North Africa on which Tabari himself possessed no information. The portion of the work devoted to this subject was made known by Dozy in his edition of the *Adhyan al-Hayat al-Aghlabi* (on Adhyan, especially, Introduction p. 47-53); the rest as far as it is contained in the unique MS (Cairo 1354, op. Tabari's catalogue, III, 184-185) was published by de Goeje in 1897 (*Arab. Tabari's manuscript* *qasidat* M. J. de Goeje, Leiden, Brill). It is uncertain whether Arab was also the author of other, especially medical and chronological, works as was maintained by Steinschneider (*Zeitschrift für Mathematik und Physik* 1866, XI, 135 et seq.; for the opposite view see *Europ. Zeitschrift der Deutsch. Morgenl. Gesellsch.* XI, 395

et seq. and *La salubrité de Carthage de Pausanias* 903, London 1873, prefaced).

Wadell, *Historical & critical* II. 2, p. 43 et seq., where further bibliographical details about 'Arif are given; Steinschneider, *Feder. Bibliothek.* III. 4284, p. 670 et seq.; Pons Delgado, *Estudio bibliográfico* III. 47, p. 111.

'ARIF (Arif) al-'Ustath, 'the who knows' and by virtue of his superior knowledge directs the affairs of the tribe (Caldwell, *Abdullatun* and *arab. Philologie* I. 31-32); supervisor, administrator; also corporal, decario. Cp. *Surp. Muscat*, inf. voc.

'ARIF HIKMET BEY Şahîh al-Jalim, from 1202-1270 (1846-1854) and Turkish poet 'Arif Hikmet Bey was born in 1201 (1786), the name of his father being Ibrahim 'Ismet Bey. He was successively the titles of Mulla of Jerusalem, Cairo and Medina, and in 1222 (1836-1842) was appointed Şahî of Constantinople. He formerly discharged the offices of Naib al-Ashraf and of Naib-Ashraf of Anatolia, and later of Rumelia, until he became Şahîh al-Islam, the *Şahîh* in 1273 (1859). His *divân* which was lithographed in 1283 (1867) contains Arabic and Persian as well as Turkish poems. According to Gibb he is the last representative of the old school of Turkish literature.

Bibliography: *Libb. & History of Ottoman poets* IV. 350 et seq.

'ARIF PASHA, Turkish statesman, son of Şehîd Pasha, born in Constantinople in 1246 (1830-1831). He was educated privately and having acquired a knowledge of French, started on his official career in 1261 (1843); in 1263 (1847) he became first secretary of the Turkish legation in Vienna. After having been temporarily recalled to Constantinople he acted as first secretary to 'Ali Pasha at the Vienna conference in 1271 (1855) and at the Paris congress in 1272 (1856). Later he was first dragoman of the Sardinian Court and discharged successfully a number of various high posts: thus he was Under-Secretary of State in the Foreign Office, ambassador in Vienna, Minister of the Exterior in 1291 (1874), Minister of Education in the same year, ambassador in Paris in 1293 (1876) he was made a senator and for the second time Minister of the Exterior, in 1294 (1877) he was again ambassador in Paris, in 1296 (1879) High Velâd and President of the Council of State; for a time he lost the favour of the Sultan, but in 1297 (1880) he was made Minister of the Exterior for a third time, and in 1303 (1886) once more President of the Council of State; he died in 1312 (1895-1896). Şahî calls him an upright, cultured, unimpaired and sincere man.

(P. Giesse.)

AL-'ARISH, is 'the 'Arab of Egypt', the Heliopolis of the ancients, town on the Mediterranean coast situated in a fertile oasis surrounded by sand, on the frontier between Palestine and Egypt. The name is found as early as the first centuries of our era in the form of Laris. According to the ordinary view which is presupposed e.g. in the well-known anecdote about Amir b. al-'As' expedition to Egypt, the town belonged to Egypt. The inhabitants, according to Vajavitz,

belonged to the Ishma'îlîm (the Hebrew speaks of two principal conquests in the town and refers to its wealth of gold). It was at al-'Arish that King Baldwin I died in 1118. Vajavitz states that the town contained a great market and many fairs, and that merchants of such agents there. Al-'Arish was occupied by the Persians in 1799; in the following year a French army camped in the town, by which the Persians were forced to evacuate Egypt.

ARISTOTELIS, ARISTOTELIS, ARISTOTELIS, i. e. before the rise of Islam the figure of Aristotle was familiar to the legend as well as to the learned tradition of the East. Legend knew him as a teacher of the paternal friend or close counsellor of King Alexander (Alexander the Great). The learned tradition contained both biographical and dogmatical elements; in addition to this there existed, both in Persia and Syria, translations, the contents and explanations of Porphyry's *Isagoge* and of some Aristotelian writings, principally Aristotle's *Categories*, *Metaphysics*, *Analytics* etc.). It may be said down as a general rule that Arabic translations of these and other works of Aristotle are derived indirectly through the medium of Persian and especially Syriac versions.

Like the West in the early Middle Ages, the East knew Aristotle at first chiefly as a logician (*Arif al-Manzûm*). In the other sciences he was supposed to be in complete agreement with Pythagoras, Socrates, Plato etc.; originally was claimed for him only in logic. In the early period however the *Isagoge* was known only as far as the categorical figures of the Prior Analytics. The Syriac version of Basilios Perna edited by Land shows to what extent the logical tradition of the period was shaped by Neoplatonic influences.

The early development of Arabic linguistic speculation was decisively influenced by the grammatical and logical categories of the *Isagoge*, though not without an admixture of elements derived from Stoicism. It is the source particularly of the doctrine of the three parts of speech: *ism*, *fi'l* (also *fi'l* or *fi'l*) and *harf*. The notable logic and grammar and especially metaphysics in the field of Physics which influenced medieval circles, the beginnings of philosophical speculation in Islam, so far as they rested on Greek thought at all, were dependent on Aristotle, but on the *Isagoge* (grammar and metaphysics) which he took to Plato, Pythagoras, Hermes and the Stoics. When Aristotle gradually came to be known he met with sharp opposition. In theological circles he was assimilated especially for his doctrine of the eternity of the world; and whereas the philosophers (al-Kharr, al-Farabi) followed the Neoplatonists in emphasizing the agreement between Plato and Aristotle, the theologians drew attention to the points of difference between the two (thus also Joh. Philoponus as against Proclus and Simplicius). Followers of the various theological schools therefore attacked Aristotle e.g. the Shafite Mulla b. al-Jahiz (a contemporary of al-Nazzam, died 845), the Mu'tazilite Abi Hashim of Basra (died 933) and al-Ash'ari (873-935).

3. The accounts of the life of the philosopher are generally inaccurate. The Arabic historians (already at-Ve'khi) confuse e.g. Aristotle's father with the Neo-Pythagorean Nikomachos of Gerasa. Hamaïn (the *Ishtak* (died 873) and M. El-Nawarî (died 895) give practically nothing but details of a legendary career. The biographical tradition as the other hand is best represented by al-Nadīm al-Muhajirī, Ibn al-Kifī and Ibn Abi Usayb'a, whose account go back to three principal sources. Firstly they use a biography with numerous and catalogues of writings by Ptolemaios Chennos (the Arabic *al-ghāzī* is to be derived from the corruption of this name into *ghāz*) in which they had access as it seems, in a translation or revised version attributed by Ishāq b. Hunayn to his *Talīf al-ghāzī*. Secondly they adduce details not derived from Ptolemaios which, though handed down through different channels, go back ultimately to the *psē* of an anonymous *psē* writer. The accounts based on this *psē*, which are widely diffused in Arabic literature, differ from Ptolemaios in the following points (among others): they give only the name of the father of the philosopher, without mentioning that of his mother; his descent is not traced back to Asklepias; he is said to have entered the school of Plato at the age of 17 etc. The tradition of this second *psē* is characterised most significantly by the fact that according to it Aristotle does not reside at the Hellenistic court as Alexander tutor, but the prince is made to go to Athens to see the philosopher; this is undoubtedly an oriental perversion of the original. A third source, from which al-Mubarradī derived an account of the philosopher's youth after his 8th year, is to be sought in a Neo-Platonist biography, the original of which cannot yet be identified with certainty.

4. The Arabic catalogue of Aristotle's writings which is given according to Ptolemaios (known by Ibn al-Kifī and Ibn Abi Usayb'a), contains about 200 titles. Catalogues differing from this have reference either to the philosophical system of the Arabs, or perhaps (like that of al-Nadīm) to the works found in some particular library. The following is an exposition of the Arabic tradition.

According to legend (*Fihrist*, ed. Flügel, p. 243) Aristotle appeared to al-Ma'mūn in a dream and entered into the fundamental agreement of reason with the religious law and common sense. Al-Ma'mūn hardly required an assurance of this nature in order to feel justified in furthering zealously the activity of the translators who had begun their work under al-Ma'mūn. Nor was this activity continued as Aristotle chose. At first the Christian Syrian physicians, who almost alone noted as translators during the 8-10. century, were by a means created in collecting their materials, though from the time of Ishāq b. Hunayn (died 820-21) onwards their activity was on the whole restricted to Aristotelian and pseudo-Aristotelian writings together with their abridgements, paraphrases and commentaries.

The writings of Aristotle — whose number is usually given as 28 — were divided into a group: three treatises of Logic, Physics, Metaphysics and Ethics. Porphyry's *Introduction* was put in front of the logical treatises, probably because it was generally thought to be Aristotelian. The logical *Organon* consisted of the *Categories* (*al-Mafāṭīḥ*),

the *Terministic* (*al-Mabāḥiṭ* or *al-Talīf*), the *Analytics* (*al-Balagh*), the *Sophistics* (*al-Balagh* or *al-Balagh*), the *Topics* (*al-Balagh*) and the *Second Analytics* (*al-Balagh*) to which were added the *Rhetoric* (*al-Balagh*) and the *Poetics* (*al-Balagh*). In order to complete the number eight required by neo-Pythagorean and neo-Platonist example. All these treatises were translated and studied in various ways. — Of the treatises on natural sciences the following were translated etc. the *Physics* (*al-Balagh* al-*psē* or *Sam' al-Balagh*) the *De Caelo* (*al-Balagh* or *Sam' al-Balagh*), the *De Generatione* (*al-Balagh* or *Sam' al-Balagh*), the *Meteorology* (*al-Balagh* al-*psē*), the *De Anima* (*al-Balagh* or *Sam' al-Balagh*), the *De Sensu* (*al-Balagh* or *Sam' al-Balagh*) and the *Historia Animalium* (*al-Balagh*), in order to complete the canonical eight were interpolated a *Metaphysics* (not to be traced) and a *Rhetoric* (that of Nicolaus) in which either the *Historia Animalium* was omitted or the two psychological treatises counted as one. These followed the *Metaphysics* (ed. *al-Balagh* or *Sam' al-Balagh*), the *Metaphysics* (*al-Balagh*) and in order to complete the number twenty, a spurious *Poetics* (see below) a *Mechanics* (*al-Balagh*) or similar works.

Thus nearly all the didactic treatises (*sharḥ* and *tafsīr*) of Aristotle were accessible to the Arabs. The unimpaired fact is the absence of the *Analytics*, the place of which was taken by Plato's *Republic* or *Laws*, unless pseudo-epigraphic treatises were preferred.

A compendium of Aristotle's philosophy by Nicolaus Damascenus which had already been known by Syrian was also current among the Arabs.

5. We are able to distinguish between genuine and pseudo-Aristotelian elements in the Arabic tradition. The Arabs themselves, especially in the earliest period, were quite unable to draw this distinction. Their study followed closely the neo-Platonist commentaries, and since the period of Aristotle of the later period, the Arabic frequently preferred the explanations given by the neo-Platonist Porphyry and Themistius to those of Alexander of Aphrodisias. Under these circumstances it is not surprising that many strange and heterogeneous things came to be connected with the name of Aristotle, probably the most far-reaching in its influence was the so-called *Zāwaj*, an abridged paraphrase of the *Sam' al-Balagh* of Plotinus which was accepted as genuine by al-Kharrā and al-Fārabi. We may further mention a compendium of the *recepta* or *recepta* of Aristotle (*al-Balagh* or *Sam' al-Balagh*) the *Book of the Apology*, a dialogue on the immortality of the soul which is an imitative imitation of Plato's *Phaedrus*; the *recepta* or *recepta* (*Sam' al-Balagh*), a work of miscellaneous contents dealing e.g. with polygamy and dietetics; further various epistles mostly addressed to Alexander; and many other treatises. For further information — especially on magical and astrological works — cp. the writings of Steinschneider.

6. The so-called Aristotelianism of Islam from the time of al-Kindī onwards their philosophy on a more or less purified tradition. The Muslim community however rejected this philosophy as heretical, inasmuch as it conflicted with three important elements of their faith, the doctrine of the creation of the world, of a special providence

family; and when the Fatimid in the battle of Badr gained possession of the sword al-Murshid, an heirloom of the Makshūmīyah family, he recognized it and asked the prophet for it. As Medina he took part in all the important battles of the believers, but does not appear to have played any further part in the history of Muhammad. Sa'd ibn al-Ash'ath seems to have been a particularly intimate friend of him; at any rate he is related that Sa'd should perform the prayer for the dead at his burial. He died in 34 or 35 = 674-675, over 80 years old. He left a slave-girl he had a son 'Uthman, the ancestor of a widely diffused family, a branch of which lived in Syria.

For the chronology of the period during which Muhammad lived in the house of al-Arkam becomes important in cases where it was desired to determine the order of the early conversions and the high place of honour in Islam which depended on it. Among the later believers not only the person of al-Arkam, but also his house attached on the hill *Ḥaṭṭ* was an object of great veneration. It is frequently mentioned as 'house of al-Arkam' at 'house of al-Ḥaṭṭ' and down to the time of the caliph Mansūr it remained in the possession of the descendants of al-Arkam who had turned it into a kind of family foundation. Mansūr forced the Arkamids to sell it to him for his own family; it was inhabited for a time by al-Ḥadramī the *ḥafṣ* of Ḥadramūt al-Raḥḥī, whence it is also called 'house of al-Ḥadramī'. The building which is regarded as the house of al-Arkam has been restored or rebuilt on several occasions, a fact which is alluded to in inscriptions found there. It is still visited by Meccan pilgrims.

ARKAM, [see ARKAM.]

ARMENIA, country in Western Asia.

1. GEOGRAPHICAL SKETCH.

The name Armenia in its wider sense denotes, now as already in antiquity, roughly speaking, the central and highest part of the mountain zone of Western Asia, that is to say the great mountainous country bounded by Asia Minor in the West, the plateau of Afghanistan and the northern shore of the Caspian Sea in the South-East and East, the coast of the Persian (Persian) Gulf, the Indian and the Caspian — from which it is separated by a line formed by the Kur and the Rioni — in the North and North-East and in the South by the plain of North-Western Mesopotamia (country on the upper Tigris, Euphrates) with its continuation in Assyria. It includes therefore the most stretch of country situated between 37°—49° E. Long. (Armenia) and 37°—41° N. Lat. Only in one direction is antiquity was the whole region in question a united kingdom under a single ruler, viz. in the 1. century B. C., in the time of Tigranes the Great, yet the name Armenia has since then become accepted as a geographical term. Viewed from a purely geographical standpoint the wild and rugged mountainous region

by the lake of Van in the North and the Assyrian plain in the South (the Gordians of the ancient, modern Hittites and Hittites) must also be regarded as belonging to Armenia. But in all other respects the territory, from of old the domain of numerous tribes, has always been the frontier land between the Semites in the South and the Aryan Armenians in the North, being incessantly connected as a loose border province with the states formed by both, and frequently leading a separate existence as an independent territory.

From the geographical point of view the whole region just described as Armenia, the area of which may be roughly estimated at 150,000 square miles, forms a natural unit, the physical features of which are plainly distinct from those of the neighbouring countries. The geological foundation of the country is made up of an archaic (old crystalline) kernel and considerable plutonic and volcanic sections and deposits. Numerous recent volcanic eruptions have changed the original plastic form of the surface in a decisive manner, and at the present stage the relief of the greater part of Armenia exhibits a variety of small plateaus alternating with superimposed larger and smaller mountain chains, stretching from South-East to North-West, all of which are characterised by the complete absence of *glaciers*. Plateaus yielding abundant pasture lie between the mountain ranges, their height varies 2600—6500 feet above the level of the sea (plateaus of *Ararat* and *Erzurum* 6100 feet; *Kar* 5830 feet; depression of the *Mutad-Su* near *Mus* 4550 feet; *Ararat* 4225 feet; *Ararat* 3295 feet), the average height is 5200—5830 feet. As throughout Western Asia the formation of the higher chains which reach the genuine Alpine region is due to the intrusion of trachyte and porphyry. Volcanic activity is similarly responsible for the remarkable cone-shaped mountains most of which are extinct. A whole system of such extinct volcanoes extends from the great *Ararat* mostly in a north-westerly direction round the lake of *Gök-Su* towards the coast of the Black Sea. Among them are the highest elevations of the country: the twin group of the great and little *Ararat* (7 v.) and the *Alagat* (13585 feet), an almost isolated mountain in the North of the latter. Further we may mention the *Sevan-Lagh* in the North of the lake of *Van* with a height of about 12550 feet, the name of this mountain seems to have been known already to *Herodotus* (1. 4. 1. 102), p. 198, v., which *ep. Zeller* of *Strabo*, *Polih. II. 6. 1. 102*; *Manassé* in *Le Strange, The Lands of the Eastern Caucasus*, p. 183) still in *Küh-Sipān*. Of somewhat lower height are the *Blind-Dagh* (11960 feet, 7 v.) to the South of *Erzurum*, and the *Khori-Dagh* (11540) and *Ma-Dagh* (11440) situated between *Bayazid* and the *Sipān-Dagh*.

Armenia is the home of great rivers which descend in all directions, foremost among which are the *Euphrates* and *Tigris*; the last of these is formed by the union of *Arax* head-waters, the *Kar-Su* in the West (or rather South) and the *Mutad-Su* in the East (or rather South) both of which rise in the interior of the highlands near *Erzurum* and *Bayazid*; the *Tigris* descends from the southern chain of *Ararat* mountains, the so-called *Armenian Taurus*. The system of the

Euphrates and Tigris drains the country in the direction of the Persian Gulf, towards the Caspian. Now the same function is performed by the Araxes (Arak, al-Rak, etc.), starting in the Taurus range which crosses itself in the Near Araxes and the Great Araxes. Armenia is already separated from the Caucasus itself by the Taurus range, the valley of the Arax which receives the waters of North-eastern Armenia, together with its tributaries running parallel to it further North, the small Euphrat which joins the Black Sea.

In a wide measure it is the fact that of Trans and Armenia which is characterised by the prevalence of plateaus, alternating with valleys we would expect to find a large number of seasonal lakes. This however is not the case, obviously owing to the fact that great rivers break through the mountains at many points, thereby creating no more way of escape for the water-courses. The most important lakes are the lake of Wan (Sirtu lake) to the south of Van, and others also like of Khilg and Arghish to the south of the lake of Van. In the mountains (Taurus) first mentioned among Muslim geographers by al-Buhārī (ca. 740-800) under the name of Gok-tash-teng — 'the blue lake'. The origin of these two large Araxes lakes, neither of which possesses any outlet, is partly due to glacial factors apart from these two there are only a few other small lakes.

Owing to the high situation of the country the climate of Armenia is springy, generally, dry, warm and cold, a marked contrast to the hot regions in the lower Euphrates and the temperate districts in the South shore of the highlands. The winter lasts on an average about five months and comparatively very hot summer lasts hardly more than two months and is so dry that no forest is possible without artificial irrigation. It is owing to the great distance that in Eastern Armenia the line of permanent snow begins as high as 15,000 feet, that only the great Ararat and the Alagöz are almost covered with snow and are in the mountains situated further South in the direction of Kurdistan the region of permanent snow begins at a height of 10,000 feet only. The highlands which are said never to be without snow in summer are all the other Araxes peaks of Eastern Armenia. It is worthy of notice that the climate of the Araxes valley quite different climate conditions, being considerably less much more favourable temperature.

Language

At the earlier period of which we have any definite historical knowledge Armenia was inhabited by a race of non-Semitic and non-Aryan origin whose precise ethnology and linguistic position is still a matter for discussion. In their own inscriptions which are written in cuneiform characters they were called themselves *Hayas* (Hayas) while in the Assyrian inscriptions they are referred to as *Uru-Arasu* (people of the country). *Uru-Arasu* — the biblical Ararat. The people which emigrated into Armenia towards the 12th century B. C. founded a powerful kingdom the centre of which was the lake of Wan. After an existence lasting barely 250 years it fell a victim to the Kimmerians (Scythians) which dominated Western Asia in the middle of the 7th century. During and after their invasions the Arayan population

succeeded in occupying the country formerly ruled by the Urartians. Its foreign customs these new inhabitants were called Armenians — a name the origin and meaning of which has not yet been explained. It first occurs in Assyrian inscriptions in the time of Ashurbanipal (626-605 B.C.) where the country received the appellation of Armenia. The name however was never accepted by the native population who set up in the present day the designation *Hayk* is used for the people and *Hayk* is Hayastan for the country.

Except perhaps during the time of Tigranes II, the Arsacids, the Armenians have never played a leading part in Western Asia. To a great extent this was due to the political disruption of the country which, favoured by the geographical conditions, the feudal system found in unparalleled development. The rulers of the country were a large number of noble families, and the king possessed only a shadow of power. To this must be added the fact that Armenia always had great and powerful enemies in neighbours beyond its frontiers. Thus it came about that Uru-Arasu was a vassal state of Assyria and after the fall of Ninurad we find the country subject to the Medes and later to the Persians who governed it by means of satraps. During the troubled times following the death of Alexander the Great there arose between the real rulers of the country though at first acknowledging the nominal suzerainty of the Seleucid king. Even the appearance without the reality of power was lost after the unsuccessful war of Antiochus III against Rome: after the battle of Magnesia (190 B.C.) two native generals of this king, Artaxias and Zariadra, shook off the Seleucid rule, assumed the title of king and formed two independent states: Great Armenia or Armenia proper and Little Armenia (Sophene, Armenia and some neighbouring districts). A few decades later Great Armenia came under the suzerainty of the Arsacids which however was only acknowledged in name and not actually reached. In the 1st century B.C. Tigranes the Great, descendant of Artaxias, shook off the Parthian yoke, declared the absolute rule of Zariadra in Little Armenia and ruled by, here and there, as a single kingdom under his rule. It was under Tigranes that the name Armenia received a definite meaning as a geographical term; and it was retained as such by the Armenians in the succeeding centuries although the terminology of the time of Tigranes became less and less applicable to the political conditions of the later period.

After acquiring a certain political importance under Tigranes the Great Armenia was gradually forced into the position of a buffer state between two rival world powers, in the first place between Rome and the Parthians. The internal confusion which reigned in Armenia after the death of Tigranes continually provided both powers with an occasion for intervention and for changes of frontier. About the year 10 of our era a descendant of the Arsacids, Artabanus III, secured the throne which was maintained in the possession of this branch of the Parthian ruling family for more than four centuries. Down to the year 226 A.D. in which the Sassanid rule succeeded that of the Parthians the Armenians of Armenia were able to rely on the support of their neighbouring kingdom in every struggle against the Romans.

the numerous enemy. Armenia continued to be an apple of discord between the New Persian empire and the Romans. A brief order to put a stop to the eternal quarrel in a manner acceptable to both parties was the only success of the diplomacy of the Byzantine rulers. In the division which took place in 387 the larger Eastern part of Armenia (about four-fifths of the whole) passed under Persian rule, the smaller Western part to the Roman. Here Arsak II continued to rule until his death in 390, whereupon the country received a Roman prince as governor. The Persian part, called by Western Persians, retained its native rulers for some time. But after the dethronement of the last Arsacid Artabazd (428-429) the country was administered by a Persian Warden of the Marches (Marchant) who had his residence at Tigris-Arsh (Arsh). In the division of 387 Armenia had suffered considerable loss of territory, as many districts were separated from both parts and directly incorporated into the Roman or Persian empire.

The part played by Armenia remained unchanged when Byzantine emperors began to influence in the West. According to the Armenian historian Sebeos who is our most important source for the time from the middle of the 5th to that of the 7th century, the Persian rule never succeeded in putting a firm foothold in Armenia. The Armenian nation enters (Sebeos), made use of every opportunity that offered itself to shake off the yoke of the fire worshippers, and during the continual struggles with the Persian Marzban they frequently invoked the assistance of their Byzantine coreligionists. This led to endless frontier disputes and sometimes to serious warfare. The solidarity of interests between Byzantium and Armenia was suddenly destroyed by the decisions of the Council of Chalcedon in 451 which the Armenians refused to accept. The Greek emperor (Justinian) took actively in the attempt to reestablish religious concord, with the result that the Armenians who were utterly averse to these negotiations were driven into arms and were in alliance with the Persians under whom they enjoyed much greater freedom in spite of occasional religious persecutions. A short peaceful period began for Armenia with the reign of the emperor Maurice (582-602) and that of the Shahin Shahrvar II (602-628).

In the succeeding period internal discord continued to trouble both Armenians and warlike incursions on the part of the neighboring powers were frequently necessary. The peace of the country suffered especially through the constant disputes between the numerous native petty rulers who owing to their conflicting attitudes were unable to gain the confidence either of the Byzantines or the Persians. Dissension against the overlord power was ripe everywhere. In Greek Armenia the great distance from the central seat of government favored the rise of rebellious movements. Persians before the Arab invasion was practically in a state of anarchy, a condition which was explained by Theodore, the energetic ruler of the Sassanids, for the execution of his own power the fear of which was the sword of Agathos in the lake of War.

Another constant source of danger threatening the peace of the country was the approximation of the Shahin Shahrvar II to the North-Eastern frontier

of Armenia, whence they made frequent incursions into the adjoining Armenian territory.

It was in this sorry condition — decimated by continual warfare, torn in places by discord within, divided by foreign powers — that Armenia had to meet the powerful Muslim attack. Under the circumstances it was to be expected that the resistance to this attack would on the whole be feeble and badly directed.

In the history of the Arab conquest of Armenia many details are still obscure and uncertain, as Arabic, Armenian and Greek sources frequently contradict each other. By far the most important source for the period is the Armenian account of the husband Smbok who tells the story of the remarkable events as an eyewitness; a valuable supplement to his work is furnished by that of the geographer Ptolemy which is the only authentic document available for the years 662-770. Among Arabic authors al-Beladhorî occupies the foremost place, his account is based entirely on the narrative of inhabitants of Armenia.

After the death of Heraclius in 641 the Arabs who had made themselves masters of Syria and defeated the Persians began to make repeated incursions into Armenia. In order to wrest the country from the Byzantines. The first establishment against South-Western Armenia was undertaken by 'Ubayd b. Ghafar, the conqueror of Mesopotamia, as early as the end of the year 637 to the beginning of the year 640-641; he penetrated as far as the city of Ani (p. 126, 127). Tahir (i. 2504) and Tahir (i. 2506) agree in giving this date, though they differ considerably as to the details. A second invasion of the Arabs took place in 641 according to the account of Tahir (i. 2506) which is followed by the al-Akhbar. In this invasion two of which were commanded by 'Ubayd b. Ghafar and Salim b. 'Abd al-Rahman invaded the regions on the North-Eastern frontier of Armenia, but meeting with reverses on all sides they were soon obliged to evacuate the country. The short raid into Armenian territory undertaken by Salim b. 'Abd al-Rahman in 645 from Adharbaidjan similarly led to no lasting result. Cf. Ya'qubi (ii. 110, 111), al-Beladhorî, p. 126, 127, Tahir i. 2504, Tahir i. 2506.

According to the accounts of the al-Akhbar (esp. especially Ya'qubi, p. 126, 127, al-Beladhorî, p. 127 et seq., Tahir i. 2504 et seq., 2506 et seq., al-Akhbar, ii. 110 et seq.) and geographers the great invasion of Armenia which brought the country for the first time under the effective rule of the Arabs took place during the campaigns of 'Uthman towards the end of 645-646. A general who had already distinguished himself in the wars in Syria and Mesopotamia, the above-mentioned 'Uthman b. 'Abd al-Rahman, was charged by Mu'awiya, the governor of Syria, with the conquest of Armenia. He advanced against Theodosiopolis, the capital of Greek Armenia (Armenia, Karin, Arab. Khabula, modern Erzurum) and occupied the town after a short siege. A large Byzantine army led by Khosrow and Alan bravely which met him on the banks of the Euphrates was decisively defeated. He then turned to the East to the direction of the lake of Van and received the submission of the local rulers of Ahlat (p. 127) and Moke. Arslan on the North-Eastern shore of the lake of Van similarly surrendered to the Arabs, 'Uthman and

proceeded to the siege of Uzun, the centre of Permanentia, which also capitulated after a few days. With the town of Tiflis he concluded a treaty of peace and protection under the condition that it acknowledged the sovereignty of the Arabs and undertook to pay the gross tax (*ghizya*). During the same time Saladin b. Bahl with his Turkish army captured Arta (Athalia) and took possession of its capital Bardha'a.

Armenian tradition as has already been pointed out differs from that of the Arabs both as regards the date and in many points of detail. Complete agreement exists only between Sebeos and Ishak in their account of the direction taken by the great Arab invasion, as appears from a comparison of the routes of advance given by the two.

According to the Armenian historians an Arab army which entered Armenia in 633, reached the district of Alaral, took the capital Dvin and led the country by some route taking with 35000 prisoners in the following year. Muslim again invaded Armenia, this time from Adharbadzhan. They devastated Ararat and advanced as far as Georgia, but upon receiving a severe defeat at the hands of the prince Theodosius (Khatun) they decided to retire. Soon afterwards the emperor appointed Theodosius commander of the Armenian troops, and Armenia which once remained inimical to Arab invasions several years later more acknowledged the overlordship of Byzantium. In 653 there expired a three years truce between Constantine III and the Arabs and the outbreak of fresh hostilities was expected in Armenia. In order to avert a threatened invasion Theodosius concluded the country reluctantly and concluded a treaty with Mas'awiya, the conditions of which were financially favourable to the Armenians, as in the first instance it only obliged them to acknowledge the suzerainty of the Muslims. In the same year the emperor appeared in Armenia with an enormous army, strong, and most of the policy makers of the country immediately went over to his side. Without much difficulty he once more brought the whole of Armenia and Georgia into his power. But Constantine left the country after spending the winter in Uzun (654) than an Arab army made its appearance and occupied the districts of the Northern shores of the lake of Van. With the assistance of these Arab forces Theodosius forced the Greeks to retire from the country, whereupon Mas'awiya appointed him ruler of Armenia, Georgia and Athalia. The attempts of the Greeks to re-conquer the lost provinces by means of an army commanded by Maritimos proved entirely unsuccessful. In 655 the Arabs extended their sway over the whole of Armenia, even the Greek Armenian capital Karin (Kalkedon) was forced to admit them. Of few years afterwards however the Muslims found themselves obliged to give up their doubtful possession for the time being. At the outbreak of the first civil war between Mas'awiya and 'Ali (36 = 657) the former was in need of the army of occupation stationed in Armenia, and the country being denuded of troops was once more fell into the hands of its former masters, the Byzantines.

It appears from this account that, according to the narrative of Sebeos, all the events which the Arabs with the first great expe-

dition of Habb in the years 22-25 did not take place until after the expiry of the three years truce and the latter date fits in with the account given in the *Chronographia* of Theophanes. The Arabic historians do not mention the fact that subsequently to the first invasion during Umar's reign Armenia once more became subjected to the Byzantine rule, nor do they refer to the events which took place in the country in connection with Mas'awiya's rebellion to the throne. The fact that Theodosius Khatun submitted voluntarily to Mas'awiya is attested not only by Sebeos but also by Theophanes, but it would be intelligible if the country had definitely passed into the possession of the Arabs as a result of the first invasion. Under these circumstances it seems to be best to follow Christian who, in the *Zelbstkritik für römische Politik* (II. 173 ff. seq.), analyses the points of difference between the Arabic and the Armenian sources, and to give greater credence to the contemporary account of Sebeos than to the tradition of the Arabs. A. Müller in his *Der Islam im Abend und Osten* (II. 239-261) also follows Sebeos. A different view is taken by H. Thomsen in *Zelbstkritik für römische Politik* (II. 22 ff.), according to whom the accounts of the first great Arab invasion given by the Armenian and the Arabic historians agree both as to chronology and as to the events.

Constantine III made the prince Mas'awiya governor of Armenia. Theodosius Khatun seems to have died in 656. But the Byzantine rule was again of short duration. After his accession to the throne (41 = 661) Mas'awiya addressed a letter to the inhabitants of Armenia in which he announced them once more to acknowledge the suzerainty of the Muslims and to pay taxes: the petty rulers of Armenia did not dare to resist this demand. According to the Armenian sources members of the most powerful families among them (especially the Mamikonians, Bagratonians) administered the country under the early Umayyad down to the reign of 'Abd al-Malik. The latter ever to some extent by the Arabic historians according to whom Armenia had Muslim governors ever since the conquest under Habb, of the list of governors for the same time (Ishak to the 'Abbasid al-Muwaffiq quoted from Yaqut, Hisham, and Tabari in *Umayyad. Gesch.* II. p. 177-182).

In spite of the devastating wars the first century of Arab rule was for Armenia a time of national and literary progress. Yet Muslim authority which failed to strike deep roots in the country under the Umayyads was even less successful in the 'Abbasid period when the oppressive rule of the Arab governors was felt. Seditions, movements and demonstrations were frequent. The greatest and most dangerous revolt against the Arabs occurred under the caliph al-Mutawakkil who sent his best general, the Turk Bogha 'the Elder', with a strong army to cope with it. But the rebellion was not quelled without obstinate resistance and much bloodshed (237-238 = 851-852). Nearly all the well-known cities were at that time taken prisoner. Mas'awiya did not change his hostile policy against Armenia, until he required his troops for a war against the Byzantines, and in order to prevent the outbreak of another great revolt which the latter was organizing. He sent the captive Nahavast free

and in 247 (361) appointed the Bagratid Ashot (Araha Ashot) who had rendered great services to the Arab cause, chief ruler of Armenia. For 25 years Ashot used assistance of prince and during this time gained the sympathies of all his subjects, including the ~~majority~~ the majority, to such an extent that, at the request of the latter, the caliph al-Mu'tasim confirmed again him the title of king in 273 (386). The emperor humoured him in the same way and at the same time concluded a treaty of alliance with him. Ashot's friendly relations with the caliph were never interrupted and he regularly paid the taxes which were obligatory upon him even after his elevation to the royal dignity. But it was only in his own possessions that he was free to act according to his pleasure: the position of the nobles in the country of his reign also was one of almost complete independence.

Ashot who died in 277-280 was succeeded by his son Smbat I (Araha Smbat) who in spite of his heroic qualities was no match for his two external enemies, the Seljuks and the Sassanids. He fought unsuccessfully against the former, but the intervention of the caliph al-Mu'tasim which took place soon afterwards (285-290) terminated the Sassanid rule and freed the Armenian provinces from the foreign yoke. Yet Smbat could do nothing to prevent the aggression of the Arab governor of Adilshahidjan, a member of the Turkish dynasty of the Sassanids called Aghin, who continually extended his frontiers to the West and North and whose power continually threatened Armenia. Aghin died in 283 (391) and under his brother and successor, the cunning Vahak, Ashot found all worse. Vahak succeeded in gaining the alliance of the family of the Assyrians who after the death of Ashot I had become the most powerful tribe of the Bagratids. Gagik the lord of Waspurakan, who at that time was the head of the family was ~~married~~ married by Vahak with the title of king, a distinction which Smbat al-Mukhtash received in 306 (399). During the years following when Vahak the member of Vahak dominated Armenia, at last he beheaded Smbat who had been abandoned by the nobles in the fortress of Kapan. In 313 the Armenian king surrendered to the enemy who, after keeping him in prison for a whole year had him executed under cruel tortures (314).

After the death of Smbat I Armenia was given over to anarchy. But his courageous son Agha II the Iron (315-328), succeeded with the help of Byzantine troops in maintaining his authority, and thereby initiated the support of the kings of Iberia (Georgia) and Abkhazia (see the art. *Abkhazia*) he cleared the land of the Arabs. Allied with the Greeks he resolved his highest degree of power ever attained by the Bagratids. The title of Ekatichkhil conferred upon him by al-Mu'tasim in 322 gave official recognition to his claim of sovereignty over the small Christian principalities of Waspurakan, Iberia and Abkhazia, though it is true that these dependences on the Bagratid was never effective. His successor Agha II and his son Smbat II ruled quite independently of the Muslim sphere of power over the greater part of Central and Northern Armenia: in the latter region their family, however, had already been obliged to considerably by Smbat. In Southern Armenia the Assyrians who also have the title of kings ruled

almost independently over a considerably smaller territory (Waspurakan with the capital Van). In addition to these comparatively large kingdoms there existed a number of smaller principalities most of which paid no more than a nominal tribute to the Bagratids, many were also, especially in the South, more independent and powerful Arab colonies. The history of the Bagratids therefore is not in any degree identical with that of the whole of Armenia, a fact which must be emphasized as regards the treatment of the subject in many old and recent works — but in accordance with its importance it justifies the greatest prominence at the time of the native sources.

Throughout the rule of Ashot II and during the greater part of that of Agha (328-352) the emperor and the caliph were almost continually at war. Ashot III (352-377) made the small fortress of Ani the official capital of the country and he and his son Smbat II turned it by means of beautiful buildings into a pearl of the East. (See Art.)

Smbat II (377-388) and his brother Gagik I (388-400) ruled with energy and good fortune, but their selfish domestic policy controlled them almost continually with the neighbouring Christian principalities, at the same time there were constant disputes with the Muslim emirs of South Armenia. In 388 one of the latter, Mardan, was severely defeated near Aghaj by Mardan, the warlike ruler of Talysh and lord of the greater part of Iberia. After the death of Gagik I the succession was disputed between the rightful heir Johannes and the more capable Agha IV, the conclusion was made by the intervention of the Emperor and the incursions of the Seljuks which then began for the first time. These circumstances appeared to the emperor Basilus II (975-1025) to offer a favourable opportunity for regaining his authority in the East. By annexing parts of the country and by deposing some of the native rulers he succeeded in extending his power in Armenia. In 1021 Serakhsh, the last of the Assyrians, influenced by fear of the threatened Turkish invasion, yielded up his domains (Waspurakan) to the Kourou river; the Muslim emirs of the region round the lake of Van (Mankat, Manashket, Aghin, Ardich) also became vassals of the Byzantine empire and the possessions of the Bagratids were now surrounded on all sides by Greek subjects. King Johannes also was forced to accept the town of Ani as his share of the Byzantine, and Basilus actively proceeded to secure the new Eastern frontier by means of strong fortifications. In the quarrel between Johannes and Agha the latter was ultimately successful owing to the support of Byzantine troops. After the death of Agha IV (1025) the emperor Michael IV made the attempt to make Armenia definitely a part of his empire. An army sent by him was already engaged in the siege of Ani when it was forced to return by the Paphlagonian catastrophe (1041). The Armenian nobles now proclaimed the 17 year old Gagik II king (1041-1045). But on August 10 Constantine IX recovered his position on the throne thus he occupied Ani and at last put an end to the rule of the Bagratids (1045). Gagik II was compensated by extensive lands in Cappadocia. The covetous Greek clerics now took possession of the wealthy Armenian bishoprics,

alloys and emporia. The results in which the orthodox Monophysites exposed the Armenians lost no bounds and the resentment of the latter provoked by this treatment afforded an explanation of the actions of the Seljuks.

The acquisition of new territory imposed on the Byzantines the heavy task of defending a much more extensive and more dangerous frontier than hitherto. For a time the attacks of the Seljuk hordes which began in 1042 and were repeated several times were stopped by the admirable system of fortifications initiated and excellently armed by Basilus. But the Seljuks developed a new life and new energy under Alp Arslan. The latter started from Ray in 1064 (1064) subdued Armenia and Georgia and conquered all the important towns of Eastern Armenia such as Nakhchivan, Kars, then took the residence of a branch of the Bagratids, and especially the valiantly defended Ani [q. v.]. In order to stem the tide of the Turkish power which was continually growing and gaining strength from concentration, the emperor Romanus IV set out in the spring of 1071 (1071) with an enormous army of 100,000 men, and regained possession of the highly important frontier fortress of Manzikert which had been lost in 1069. But the divisions of his army sent against Ahlat were pushed back by the Seljuks into Manzikert. A great decisive battle took place near Manzikert in which Alp Arslan inflicted upon his enemy an overwhelming defeat; the emperor himself was taken prisoner (Weil, *Gesch. der Christen*, II, 114, 115; Müller, *Islam*, II, 19; Güter quoted by Kramacher, *Synonyma Literaturgesch.*, p. 1010). This defeat was the first Turkish blow received by Byzantium at the hands of the Turkish hordes, and it signified the end of the great Eastern empire. The East of Asia Minor, Armenia, and Cappadocia, that is to say the countries representing the real source of strength of the empire, were irretrievably lost to the Turks.

The terrible systematic devastation of the country by the Seljuks put an end to the national life and the civilization of the Armenians in their own home. During these troubled times many Armenians emigrated to the West in order to escape the oppression of the savage invaders. The idea, a vision difficult to realize from the outside, appeared to them a suitable place in which to settle, and to found a national state that was to be independent of Byzantium. Ruben (Ruben), a near kinsman of the last Bagratid (Ghik II who had been killed in 1079 during an intervention in Cappadocia) openly broke away from the Byzantine empire and in 1080 received the homage of his subjects as ruler of the country. This revival of Armenian supremacy in the old Little Armenia lasted almost 300 years and the weaker successors of Ruben gradually conquered the whole of Cilicia. Their relations with Byzantium were always strained; on the other hand they formed a close alliance with the crusading states and organized their country on the model of the latter with their semi-French feudal institutions. At first an independent principality, their state was raised to the rank of a kingdom by Isaac II (1198) as a reward for services of friendship rendered to the crusaders under Barbarossa. The new kingdom found itself threatened by stronger neighbours both in the North and

the East thus on the one side by the Seljuk kingdom of Rüm, on the other by the Mongol empire. The Seljuks not only deprived the descendants of Ruben of large portions of their territory but also forced them to acknowledge their vassalage, until the Mongol invasion of Asia Minor put an end to their rule. Little Armenia henceforward was no more than a fiefdom under the overlordship of the Mongol sultans (Ilkhans), and owing to its geographical situation it suffered perpetually under the state of rivalry existing between the Ilkhans and the Mamluks of Egypt; in the raids of latter the country was terribly devastated especially during and after the time of the Sultan Balban (particularly in the years 1266, 1273 and 1275). In 1342 the male line of the descendants of Ruben died out with the accession of Isaac IV. Their kingdom now passed to the descendants of Yeghüsa who were related to them by marriage. The new king tried to maintain their position against the attacks of the Mamluks by attaching themselves to the Mongols and relying on the assistance of the European West. Slowly and one by one they lost their towns: in 1375 (1375) VI was forced to surrender his last stronghold to the Sultan al-Bukhār al-Ashraf. The ill-starred last king of Armenia went to Paris where he died in captivity in 1395.

During the time of Seljuk supremacy Armenia like Adharbaidjan and Mesopotamia was divided into several administrative districts, varying in size, each of which was governed by an emir; from the very beginning the latter occupied a position of considerable independence.

Compared with the other petty Seljuk states which arose in Armenia and the kingdom of Ahlat (Ahlat) in the South West founded by Subuktigin al-Kutbi [q. v.] in 1093 (1093) after the expulsion of the Ghaznawids was the whole the most secure in its tenure of power. The Subuktiginids gradually extended their territories to the North and North East until they reached the shores of Bagras: the shores of the lake of Van and the country as far as Khut and Salmas as well as Mugh and the district of Samsun were included in their dominions, though the districts in the North frequently suffered from the devastating raids of the Georgians. In spite of the fact that this principality of Ahlat, the population of which was preponderantly Armenian, included hardly a 100,000 the whole of Armenia, its rulers assumed the proud title of *Armenian King* of the Armenians. Cf. on this title v. Barukian in *Lehmann-Haupt, Mittheilungen zur alt. Gesch. Armeniens*, p. 139.

When the family of the Subuktiginids became extinct (1181 = 1185) the recent throners passed into the possession of the Mamluk Bey-Timur (1181 = 1197), who after a period of dynastic disputes was succeeded by his son. A few years afterwards the Ayyubids took possession of the country (1204 = 1207). The Sultan al-Malik al-Ahli [q. v.] under whose scepter practically the whole kingdom of his brother Saladin was united, made his son al-Ashraf ruler of Ahlat. After the latter's death (1210 = 1210) he was succeeded by his brother al-Ashraf (cp. the art. Armenia). The Georgians who since the end of the 12th century had made repeated incursions into Armenia and in 1210 besieged the capital Ahlat unsuccessfully.

fully, were forced by al-Ashraf to renounce a power under terms unfavourable to them. Both al-Ashraf and al-Ashraf ruled under the supremacy of their father al-Ashraf; it was not until after the death of the latter (613 = 1215) that al-Ashraf became completely independent. After this date his dominions were considerably enlarged and included the whole Northern half of the countries under Ayyubid rule, i.e. Khalek, Mesopotamia and Northern Syria with Damascus. As lords of Khalek these Ayyubids followed the Saljuqid tradition and assumed the title of Shih Armenian.

The last Ayyubid ruler was al-Muqallad Qutub; in 642 (1244) the capital had been taken several times the kingdom of Khalek finally succumbed to the attack of the Mongols. Hulagu obtained possession of the whole of Armenia, Kurdistan, Tekh and Mesopotamia. The most prominent of the Ukhshu as the rulers of the house of Hulagu was usually called, was Qutub (642—703 = 1245—1305); he succeeded in reorganising the empire which had fallen into the wildest confusion soon after Hulagu's death (663 = 1265), but his success was only temporary; after the death of the Ukhshu Abu Said (726—736 = 1305—1335) under whom the weakness of the state had already become very apparent there followed a period of absolute chaos.

It was during this period that the Turks (Turkoman) became a preponderating and ruling element in the population of Armenia which apart from them consisted of native Christians and Kurdish nomads. The Turkish element was greatly strengthened by the arrival of two fresh waves of Turkomans who had crossed the Tigris from Turkey in 688 (1288) and the fourth Ukhshu, Ashraf (688—691 = 1288—1291) and found a new home on the upper Euphrates and Tigris where the terrible devastations of the Mongols had left enough vacant country for new settlers. After 688 (1288) as their standards these border were called 'Black' and 'White' Lamps. Their power grew step by step and immediately before the invasion of Timur the greater part of Mesopotamia and Western Armenia (especially the districts of Wan, Haryak, Bitlis, Arshakun) was in their possession; the power of the Kara-Koyunlu originally had its main centre in Mesopotamia, while the Ak-Koyunlu who at first had occupied the district of Arshakun only made themselves rulers of Western Armenia and North West of Mesopotamia. The small Christian and Muslim principalities still existing in Armenia had to pay tribute to the Turkomans and frequently were exposed to oppressive treatment at their hands.

Such was the condition of Western Asia at the time when the second and last large wave of the Turko-Mongol migration under Timur advanced against it and overran the country with his devastating fury. The Ak-Koyunlu from the first aided with Timur while the Kara-Koyunlu took the field with the Ottomans and Mamluks. During the whole summer and autumn of 758 (1356) and the spring of 759 (1357) the Mongols swept through the provinces of Armenia and Georgia in all directions laying waste everything; the larger towns like Wan and Tiflis suffered particularly. In the year 771 (1359) the invincibility of the Kara-Koyunlu provided Timur with

a pretext for a second expedition against Armenia which again brought terrible devastations to its towns. Five years later Timur appeared in Armenia for a third time; in the spring of 796 (1394) after taking Bagdad and ravaging the Far East he divided his army in three divisions, crossed the mountains under considerable difficulties and penetrated as far as the eastern Armenian plateau of Bagwand where they found pasture, cp. Tournefort, *Serap*, p. 36.

The great Khan of the Mongols and the emperor of the Ottomans disputed for the throne broke out among his sons and successors. This state of affairs offered a favourable opportunity to Kara Khan the leader of the Kara-Koyunlu for regaining at the expense of the Ak-Koyunlu the position of power which had been greatly curtailed by Timur. Armenia thus became again the scene of all the ravages of war. In the continued struggle between the two Turkoman tribes which now caused the Ak-Koyunlu led by Kara Yulak proved the weaker side; they were defeated in the battles of 805 (1405) and 813 (1410) and especially in a decisive encounter near Kafar al-Khar on the Euphrates (above Bagdad) in the year 821 (1418). The Kara-Koyunlu were now able to kill and plunder in Armenia and Georgia to their heart's content.

Notwithstanding the intervention of Timur descendants on behalf of the 'White Lamps' the Kara-Koyunlu maintained their predominance for the space of fifty years. It was not until the year 871 (1467) that a grandson of Kara Yulak, Uzun Hasan i.e. Hasan the Tall 857—882 = 1453—1477, was successful in military operations against them and finally broke their power. Uzun Hasan who had succeeded to his leadership of the Kara-Koyunlu after the death of his brother (1437) was killed in a decisive encounter. For several decades after this date the Ak-Koyunlu play the more prominent part in the history of Armenia (cp. above p. 223). Uzun Hasan obtained possession of all the districts formerly ruled by the Kara-Koyunlu, and on the death of his power he was master actually of Armenia and Afghanistan also of the two 'Black' and 'White' Lamps.

With the death of Uzun Hasan the power founded by him began to decline. The disputes about the succession which broke out among his descendants favoured the rise of the Seld (Kafir) Ismail whose power in the beginning was confined to Afghani and the surrounding country. Gradually he succeeded in uniting with his kingdom the whole of the formerly ruled by Uzun Hasan which at this time had become split up into three smaller states. But the union of these territories was not of long duration. Quarrels soon broke out between the Seld and his Turkish neighbour and in 1513 the former invaded Asia Minor. Sultan Selim I now advanced against Ismail with a strong army (1514); by way of Sin and Tiflis he reached the Urmi lake to the East of which near Chaldrai (p. 22) he gained an overwhelming victory over the Persians (25. August). The sovereignty over Mesopotamia and Western Armenia now passed to the Turks in whose possession it has remained ever since.

It is worthy of note that the rapid passing of Armenia from Persian to Turkish rule was

shared to a considerable extent by the attitude of the indigenous Kurdish chiefs of the country. The interior troubles of Armenia and the dynastic wars which went on incessantly during the last centuries had attracted a continually increasing number of Kurds whose chiefs (begs) exercised complete local autonomy in many parts of the country. Owing to the decay of the power of the Ak-Koyunlu their authority increased continually. From the very beginning the Kurdish chiefs had offered a determined opposition to the attempts of the Persians to establish order and to put an end to lawlessness; they preferred themselves to swear allegiance to the Turkish Sultan and received as a reward the confirmation of their wonted privileges. Since this time large districts of Armenia have been subjected to the arbitrary rule of the Kurdish begs, and the authority of the Porte has never been of much account in the parts in question. During the 19. century and after the Turks attempted on various occasions to restrain the power of the Kurdish chiefs by the use of gradually Oriental despotism methods, hoping thereby to bring the Armenian provinces under the direct authority of the Sultan, but the success of these attempts has so far been very insignificant.

Shah 'Abbas I. the Great, the re-organizer of Muslim Persia (1598-1629 = 1578-1628) once more began the struggle against the Ottomans which had been at rest for some decades; in 1612 (1023) he defeated them at Sulyk near Tabriz afterwards the latter town as well as Persia (1604) and Kermān capitulated. The war was interrupted for a short time by the peace of Ashun (1627 = 1618) but broke out again more than 20 years later. The districts of Armenia and Georgia bordering on Persia passed under Turkish rule.

During the tyrannical rule of Shah Soltān (1637-1651 = 1618-1641), the successor of 'Abbas I., most of the Armenian possessions of Persia were once more lost to the Turks who inflicted on their common enemy a severe defeat on the plain of Chaldiran already famous as the scene of the decisive battle of 1514. In 1635 the Porte once more obtained possession of Kermān, and, by the help of a traitor, of the highly important strategical centre of Kizwan. It was not until after the death of Sultan Murad IV (1640) that the Persians succeeded in recapturing the two last-mentioned places.

Georgia, the neighbour of Persia to the North, had been reduced to the position of a vassal state by Nader Shah in 1735. After the death of this ruler in 1747 the Georgian prince Heraclius (Irakli) II shook off the foreign yoke and extended his own domination over the Azerbaidjan territory between the Kar and the Araxes. He imposed tribute on the khans of Ghanza (Georgia) and Erivan belonging to Persia, but was unsuccessful in his attempts to bring the semi-independent towns which he besieged in 1779 under his immediate control. An intervention of the Shah was now to be expected which meant for Georgia the humiliation of Persia eternally and feasible concessions to Islam; under these circumstances Heraclius in 1783 placed his country under the protection of Russia. His successor George XII was completely under Russian influence, and in 1801 left a will by which Georgia

was given to the Czar. Persians in 1810 = 1206) it had been temporarily subjected by the Persian king Agha Muhammad (cf. above p. 180). Russia at once entered upon its administration; it thus for the first time became possessed of Armenian territory, and as it thereby threatened Asiatic Turkey and Persia, tension was with both states could not be avoided. In 1829 the Russians conquered Georgia which received the name of Ilikhetipol in honour of their emperor. Kars-Georgi surrendered to them voluntarily in 1837. All their efforts to gain possession of Erivan by siege or main force (17 Nov. 1845) failed unhappily. The war between Russia and Persia continued until British intervention brought about the peace of Gulistan in 1828. By the provisions of this peace the frontier between Persia, Transcaucasia and Persia was determined in its main points; the dividing line followed the southern bank of the Araxes, turning to the North West above Nakhchivan and Kizwan. (cf. on the regulation of the frontier K. Hittler, *Reichsarchiv*, 12. Bd. 1. 2. 1873) But the fact that the details of the frontier had been left undetermined in this treaty, gave rise to lengthy negotiations until in the end to a second war. Hostilities were opened in July 1845 by the Persian Sultan 'Abbas Mirza who sent a successful raid into Russian territory; nearly the whole country as far as the gates of Tiflis fell into the hands of the Persians. The hostilities began once more in the spring of 1847 and General Farkvitch now succeeded in securing the upper hand for the Russian arms.

In the spring of 1848 a treaty was concluded at Turkmenchik which modified the peace of 1828 so much as was that all the events in the North of the Araxes particularly Ardabil and the Persian khans of Nakhchivan and Kizwan as well as Kermān passed under Russian rule. From this time onwards the column of the Araxes served as the genuine boundary line between these great powers in the district of Kizwan which dominates the extensive plateau on the left bank of the Araxes, once the home of a large population, Russia gained an extremely important base for operations against Persia and Turkey. As a central point between Iran and the Georgian capital Tiflis, Kizwan had been all the previous centuries of trade, but under its new sovereign the commerce of the town declined to a vast extent. The territorial division created by the peace of Turkmenchik is of considerable political importance owing to the fact that by it the classical soil of Armenian Church history, the country which has the religious sentiment of the Armenians to the most attractive in all the East, passed under the rule of a Christian monarch. Another point worth mentioning is the provision included upon by Russia in the treaty as well as in that with the Turks a year later, whereby all the Christians were given the right to emigrate. This stipulation has gone more to weaken Persia than the cession of entire provinces; most of the Armenian subjects of the Shah made use of the permission thus gained; the inhabitants of entire villages began to emigrate and whole districts became depopulated in the hands of the Persian authorities. Most of the emigrants were given new settlements in the Armenian district of Kars-Georgi. After this date the peace between Russia and Persia has not been seriously disturbed.

Immediately after the hostilities against the Persians and the subsequent regulation of the frontier had been completed the Russian-Declared war upon the Turks; on the 14th September a peace was signed at Adrianople which reconstituted the frontier in Russia's favour in such a way that the latter country gained possession of a portion of Armenian territory containing the important fortresses of Akhalkalaki and Akhaltsk.

In the frontier ~~between~~ Persia and its Turkish neighbour, especially Turkish Armenia, relations became more and more strained owing to continual quarrels and disputes. In 1841 hostilities arose led to the outbreak of open war between Akhmed Mirza and the Turkish governor of Erzerum. The treaty of peace eventually agreed upon by both governments left the frontier unchanged (cp. on this war R. Wilm, *Erzerum*, p. 172). During the two following decades the political situation between the two great Asiatic powers again tended to become more and more critical and they ~~came~~ about to refer the old frontier dispute to the arbitration of the sword, when the influence of ~~England~~ and Great Britain succeeded at ~~last~~ just in time in bringing about a settlement by means of a treaty concluded at Erzurum in 1847. According to the provisions of this treaty commissions of these two European powers as well as of the states adjacent were to regulate and fix the long line of frontier between Turkey and Persia. After immense difficulties the commission stipulated succeeded in completing its task in 1852. Turkey however refused to ratify the treaty; it was not until 1858 that the Berlin Congress (article 66) obliged the Porte to yield ~~the~~ the Armenian district of Khosrow (halfway between Wan and the Urmia lake); this decision was carried out by Turkey.

Differences arising out of the question of the 'Holy places' brought about a new war between ~~Russia~~ and Turkey, the so-called Crimean war (1853-1856) and Armenia was once more subjected to all the sufferings of a campaign. After the conclusion of peace it enjoyed a rest of only twenty years. For in 1877 another war broke out between Russia and Turkey owing to the refusal of the Porte to accept the reforms proposed to it in the interests of its Christian subjects. This war was ended by the preliminary peace of San Stefano.

The provisions of this treaty ~~were~~ subjected to a minute revision by the Berlin Congress (opened on 13th July 1878). Article 19 obliged the Porte to cede to Russia the Armenian districts of Ardahan, Kars and Batumi as well as the country situated between the old Russian-Turkish frontier (altogether about 10,000 sq. miles). The new boundary line was accurately determined (cp. *Petersburg Courier*, *Official*, 1878, p. 321 with map). Article 60 on the other hand returned to Turkey the valley of Aghajpord (Tymuk-Kel) and Nagash which ~~was~~ become Russian according to article 24 of the peace of San Stefano. The possession of Khosrow, as has already been mentioned, ~~was~~ reverted to Persia.

The reforms in Turkish Armenia rested upon by the Berlin Congress have had the worst possible results for the native Christians; the situation in the country gradually became unbearable until the hidden fire broke out in open flame in the year 1894. Flooded and barbarous mis-

crees on a large scale occurred in many towns, thus in 1894 in Samsat. In 1895 in almost all the larger towns, particularly in Trnopolis, Iliava and Buedjik. In 1896 in Kharpout, Nizad and Wan. During these disturbances thousands of villages were burned down, hundreds of churches were devastated, plundered and spoiled in their interiors. There followed a few quieter years. But in 1904 fresh ~~miscreants~~ occurred in the vilayets of Wan and Haidz, and the social conditions of the country still contain enough of combustible material to make the outbreak of new disturbances possible at any moment in the interest of a country which has suffered much it is in its deeply hoped that the new regime of the Young Turks may mean the dawn of better times for Armenia.

DIVISION, ADMINISTRATION, FEATURES, TRADE AND COMMERCE, NATURAL PRODUCE AND INDUSTRY.

The term Armenia was subjected in the course of the centuries to considerable variations with regard to the territories included under it: in the same way the division of the country designated by the name was not always the same in antiquity. The Armenians (cp. the *Geogr. An. Armeniens*, *Armeniens*, p. 605) divided the whole country into ~~two~~ unequal parts: Mes-Hakk = Armenia major and Pehr-Hakk = Armenia minor. Armenia major or Armenia proper extended from the Euphrates in the West to the Persian sea the ~~the~~ Kar in the East and was subdivided into 15 provinces. Armenia minor consisted of the country between the Euphrates and the sources of the Tigris. This division into two parts was known to the Arabs (cp. e.g. Yaqut, p. 100). But in contrast to the Armenians who are followed by ~~the~~ Romans and the Byzantines, the Arabs ~~as~~ the term *Arminiya* in a wider sense ~~as~~ to include under it the whole district situated between the Kar and the Caspian Sea, i.e. Armenia (= Georgia, Iberia), Armin (= Albania) and the mountainous districts of the Caucasus as far as the Blackland sea (Sak al-Ashwah). This is due to the fact that the history of these districts was always closely connected with that of Armenia, especially where the struggle against Muslims was concerned. By the term *Arminiya al-Kubra*, Great Armenia, the Arabs (cp. Yaqut, l.c.) understood particularly the districts of which Kharab (Albania, q.v.) is the centre, while *Arminiya al-Saghira*, Little Armenia, designated the district of ~~Armin~~ (i.e. Georgia) the *Yasghal* (cp. de Goeje, p. 293) known yet another partition of Armenia proper (without Albania and Iberia) into two divisions: the two parts being the inner and the outer Armenia (*Arminiya al-Bahila* and *Arminiya al-Bahira*). The former includes the districts of Idril (Dzikh), Nakhshab (*Nakhsh-e-rân*) and Khalkale, into Armin al-Bahira (Iberia); the second division belonged to the region of the lake of Wan, Barm, Aghia, Aghia, Wazir, etc.

Side by side with this division into two parts there existed in Armenia a very old system of quarter-provinces, this also was taken over by the Byzantine Government (partition in 536) and apart from ~~some~~ modifications introduced by Muskhos (591) remained in force down to the Arab invasion. The Arabs in their turn borrowed from the Greeks the principle of designating the chief groups of the Armenian provinces as *Arminiya*

2—IV, but deviate considerably from their predecessors in their method of assigning particular districts to these groups; this discrepancy can only be explained on the assumption that a repartition into provinces took place after the Arab conquest. The statements of Arabic historians and geographers also differ considerably among themselves, but on the whole we get the following scheme of the division of the country:

1. Armenia I: Arân (Allanija) with the capital Rânîn's (the district between the Kur and the Caspian Sea (Shirvân) & Armenia II: Djuzjân (Georgia).
2. Armenia III: consisting of central Armenia or Armenia proper, with the districts of Dabûl, Bâsaradûn (Vaspurakân).
3. Armenia IV: the South West with Shûshân (Armenak), Kâhânâ, Aghîz, Ardîsh.

In addition to this some Arabic writers (Al-Bîrûnî, II. 156 et seq. and Abû Yûsuf, ed. Reimund and de Simey, p. 387 = Vâkîfî, ed. de Goeje, p. 362, § 11) refer to a repartition of Armenia which seems to represent a parallel to the division of the country before Justinian, but the enumeration of the districts belonging to each division shows that the number three is arrived at by merely leaving out the Armenia II of the quadripartition given above.

Op. on the pre-Muslim division of Armenia II. (Hilber, *Genauis der byzantinischen Provinzenvertheilung* (Leipzig, 1889), p. 66 and the same author's edition of Georgius Cyprus (Lipsiae, 1890), p. 411, et seq.; on the Arab period cp. Thapar, *Annals of the History of the World*, II. 207, 208, Thapar, *Annals of the History of the World*, II. 63 and in the *Annals of the History of the World*, II. 137.

As for the administration of the country during the Arab period (cp. especially Thapar, *Annals of the History of the World*, II. 193—206, Thapar, *Annals of the History of the World*, II. 123—127) it must be remembered that Armenia in the sense in which this term was familiar to the Arabic authors, did not always form a separate province, but was frequently united with Adherbeidjân and Djasir (Mesopotamia) under a single governor. The latter (Amîr or Wâlî) was usually appointed by the caliph himself; his residence in Armenia was Dabûl (Arab. Dabûl to the South of Tiflis near the Araxes), a town which had been the seat of a Persian Marzban before the Muslim conquest. The chief duty of the governor was the protection of the country against domestic and foreign enemies, for this purpose he had at his disposal a standing army, the garrison of which was not however in Armenia itself but in Adherbeidjân (it had its headquarters at Maragha and Ardabil). Another important duty of the governor was to watch over the punctual payment of the taxes. For the tax the Arabs did not interfere in the administration of the country, but left it to the several local rulers (Armen. *Khakân* = *Mulkshah*, Armen. *Khakân*, Arab. *Wâlî* = *corregidor*) who retained all their dominions after the Arab conquest and were permitted considerable independence within the boundaries of their own possessions. In case of war each of these local rulers had to furnish a certain number of men and certainly since the Abbâsîd period they received no payment for the service.

Compared with the other provinces of the caliphate the taxation in which Armenia was subjected was moderate. The levying of the various kinds of taxes (*khajz*, *shah* etc. =

poll-tax, land-tax etc.) was replaced in the beginning of the 9th century by the Muslim system under which the Armenian prince was obliged to pay a fixed sum of money. Ibn Khaldûn's statement of taxes which refers to the most flourishing period of the caliphate gives the Armenian revenue (in the wider Arabic sense of the name) during the years 358—470 (773—786) at 15 million dirhams which corresponds to about £ 435,000, to this must be added various contributions in kind (carpets, mules etc.); the average revenue for the years 504—537 (817—853) is given by Kufîzî at no more than 1 million dirhams (cp. on the financial conditions A. v. Kienmeyer, *Kulturgeschichte des Orients*, I. 343, 358, 368, 377; Thapar, *Annals of the History of the World*, II. 203 et seq., Thapar, *Annals of the History of the World*, II. 132 et seq.). The Arabic system of coinage was introduced into Armenia; money was struck in the country as early as the Umayyad period (cp. Thapar, *Annals of the History of the World*, II. 127 et seq.).

According to Yâqût (I. 212, II) Armenia possessed as many as 18,000 towns and villages of various sizes; 1,000 of these (according to the *Khakân*) were situated on the Araxes. The most important towns of Armenia proper during the Arab Middle Ages were Dabûl (Armen. Dabûl), which during the whole period of the caliphate was the capital and seat of the Muslim government (at that time a very populous town, now an unimportant village), near Kâhânâ (now called *Nerz* at Kâhânâ (Armen. Nerz), Aradûn (Armen. Aradûn), Mâzadûn (Armen. Mâzadûn), Dabûl (Armen. Dabûl), Ardîsh, Nakhavâ (Armen. Nakhavâ), and Kâz (cp. the several articles). The bulk of the population during the time of the caliphate was composed of native Armenians; it was only in certain districts (Dabûl, Kâhânâ, also in Bâsaradûn (in Arân) and in Tiflis (in Ighânâ), the principal strongholds of Arab power, that strong Arab colonies were to be found. Apart from these large towns settlements of Arab tribes existed particularly in the South West in the district of Alanîk (Armen. Alanîk) of which Bâsaradûn was the capital was occupied by a branch of the famous Arab tribe of Kâs. All the Muslim colonies (on which cp. especially Thapar, *Annals of the History of the World*, II. 125 et seq.) expanded the area of the Baghdad power with the utmost diligence & interfered with the consolidation and extension of their own rule.

Since the Russo-Persian and Russo-Turkish wars of the last century the territory of Armenia has been divided up between Turkey, Russia and Persia.

1. Persian Armenia, the smallest of the three divisions (about 37,700 sq. miles), consists only of a few districts and in a sense is no more than an appendix of Russian Armenia; from an administrative point of view it forms part of the province of Adherbeidjân. To the West it borders on the Turkish vilâyet of Wâzi. The southern frontier against Russia is formed by the Araxes along a line of about 120 miles stretching from the eastern base of the Ararat to Urdabâd (Urdabâd). The capital is Khâl (20,000 inhabitants) and other places of importance are Mâh, Kâs, and Maragha. Persian Armenia corresponds more or less to the eastern part of the old Armenian province of Vaspurakân (Arab. Bâsaradûn).

2. **Russian Armenia.**—Forms the northern and south-western part of the province of Transcaucasia and covers an area of about 39,673 sq. miles. It is composed of the districts bordering upon Persia and Turkey, practically the whole governments of Erivan (106,647 sq. miles), Kars (72,119 sq. miles) and Batum (26,883 sq. miles). Of the governments of Yellissawetpol and Tiflis only the southern and western parts, of that of Kutan only the southernmost portion, no the right hand of the Rion are to be regarded as Armenian territory, for the rest these governments are composed of districts formerly belonging to Georgia (or Georgia and Abkhaz). The following are the most considerably towns of Russian Armenia: the harbour of Batum, of great importance from the strategic and the commercial point of view, and capital of the government of Kars (31,700 inhabitants); in the government of Tiflis there are the two fortresses Akhalkalaki (q. v.) and Akhalkhalaki. In the administrative district of Kars: the strongly fortified town of that name, important also as a centre of commerce (20,000 inhabitants), and the ancient town of Ardahan, situated at a height of 5,230 feet and likewise a fortress of the first rank. In the government of Erivan the greater part of which formerly belonged to Persia we may mention the capital Erivan (31,000 inhabitants) and 11 miles to the west of it the famous monastery of Echmiadzin, the religious centre of the Armenians; also Nakhichevan (Arak. Nakhikawa, q. v.) a town which like Erivan plays an important part in Armenian history, and Alexandropol, (originally called Gamsi), with 35,600 inhabitants (1897), until 1870 important as a frontier fortress, now a rising commercial centre (q. v.). Among the towns of the government of Yellissawetpol we may mention: Yellissawetpol, the ancient Arantz (Gamsi q. v.) with 35,400 inhabitants, which like Shusha in the district of Kars-Baghi was formerly the capital of a khannate; further the frontier town Ordubakh (Ordubakh) on the Araxes.

3. **Turkish Armenia.** The greater part of the Armenian territory, far more than the Persian and Russian portions combined, has for nearly 500 years been in the possession of the Turks. It is divided up among the wilayets of Bitlis, Erzurum, Moumret el-Ain (Gharpi), Wan and a part of Diyarbakir and occupies an area of 74,710 sq. miles. The most important towns are: Siwas with 43,000 inhabitants (1897), Harzom (Arak. el-Rim) with 38,900 inhabitants, Wan and Arinodje (Erinodje) with 30,000 inhabitants each, Bitlis (Hadik, 20,000 inh.) Kharpuz, Makh and Bivasid (see the articles in general).

Population. Since the second half of the Middle Ages the population of Armenia has by degrees been transformed to an enormous extent, partly owing to the invasion of Turkoman and Turkish tribes and partly owing to the advance of the Kurds (in the South) and of the Georgian and other races of the Caucasus in the North-East: the result is that at the present time the original inhabitants of the country, the genuine Armenians, form little more than one-fourth of the total population of the region which once was their own in its entirety. According to the reliable statistics compiled by L. Selezny and N. v. Soldat (in *Petermann's Geog. Mittheil.*, 1896, p. 111 seq.) the six governments of the province

of Transcaucasia enumerated above, which are entirely in partly of Armenian territory, have an area of ca. 62,300 sq. miles a total population of about 3,470,000, of whom 677,000 (or about 27%) are Armenians. If in the case of these six governments we deduct in our calculation only those regions which may be regarded as Armenian territory we are left with an area of ca. 34,645 sq. miles containing an estimated total population of about 2,000,000 of whom about 700,000 (or ca. one-third) are Armenians. Among the Transcaucasian governments that of Erivan is the only one in which the Armenian element (56%) outnumbers the other nationalities. Throughout Transcaucasia the Armenian element is stronger in the towns than in the country, this especially in the government of Tiflis (Tiflis 48%). In the whole of Transcaucasia the Armenians (950,000) form only 20% of the total population of 4,750,000.

The number of ~~Armenians~~ of the five wilayets of Turkish Armenia is 2,642,000, of whom 1,840,000 are Mohammedans, 633,000 Arinodje and ~~Armenians~~ Greeks, the Armenians therefore form barely one ~~Armenian~~ of the total population; it is only in the wilayet of Bitlis (wilayet of Bitlis) and in that of Wan (wilayet of Wan) that they preponderate numerically.

On the basis of these figures the total population of Russian and Turkish Armenia may be estimated at ca. 4,642,000, of whom ca. 1,400,000 are Armenians. In Russian Armenia the bulk of the population now is of Georgian nationality (Georgians, 1,100,000 etc.), while in Turkish Armenia it is composed of Kurds and Turks; to these must be added numerous Greeks scattered throughout the country, as well as Jews, Gipsies, Christians and Nestorian Christians (the latter in the South ~~South~~ of the lake of Wan) and lastly nomadic tribes of Tartars (Turkmen) especially in the West. Concerning the population of Persian Armenia no statistics are available, but it may be estimated at not more than 200,000. In 1891 the Armenian population of the whole of Persia was stated to be 42,000, one half of which number belonged to Akharkhalaki, i. e. chiefly to the Persian Armenian territory incorporated with the latter province; it appears therefore that here also the Armenians are in the minority, the bulk of the population consisting of Persians and Turkmen.

It is to be observed that the number of Armenians on Turkish territory is steadily decreasing, partly in consequence of the wholesale massacres perpetrated by the Kurds and partly owing to emigration. The settlement of so many Armenians in foreign countries and their dispersal all over the ancient world which result the similar fate of the Jews, has the principal cause in the generally unhappy political conditions of their native country: the emigration movement began a few centuries before the Arab invasions and has continued since though not without interruptions and variations in its extent. Cf. on this point especially Ritter, *Erkenntnis*, x. 594—611; St. Wagner, *Reise in den Arab.*, p. 239—250. According to an approximate estimate the total number of Armenians living in the various countries of the ancient world may be put at 2—3½ millions.

Trade and commerce. During the Middle

• Ages Armenia played an important part from the economic point of view as a stage of transit between the Europe and Mesopotamia and as the boundary between Byzantium and the eastern parts of the Empire. The great transit roads and caravan passing through the country necessarily had a great in the development of native industries; aware from this factor trade itself and the industries of the country were stimulated by its wealth in natural products. The commercial importance of Armenia is proved by the numerous trade routes which traversed the country in several directions: 1) the most important of these the Asian geographers have devoted detailed descriptions. From the Asian point of view the chief importance of these routes lay less in the fact that they served the needs of commerce than in the fact which they rendered to their military interests; it was for this reason that the principal routes met at Van, the Arab stronghold for the domination of the country. The maintenance and protection of the roads, especially in a province surrounded by hostile territory, took an important place among the duties of the Armenian government. It is for the same reason that Van, as meeting-place of all the principal roads, is now regarded as a place of great strategic importance and as the key of all Asia Minor.

Armenians maintained its communication with
Breadstuffs by way of Trepezint (Arab. Tishu-
minda), which was the principal place of storage
for Armenian merchandises, especially precious
textiles. The great fairs held at Trepezint oc-
curred twice in each year were visited by merchants
from all the Muslim countries. The merchandise
was usually transported from Trepezint to Dabul
and thence to Basrah (Baghdad). In Persia Ra-
was the most important market for the Armenian
merchandise (see Ibn al-Yakubi, *cit. loc. cit.* p. 270);
they also maintained direct commercial relations
with Baghdad (Ibn al-Yakubi, *cit. loc. cit.* p. 270).

Natural products and industries. Argemone was regarded as one of the ~~most~~ ^{most} useful provinces of the caliphate: it produced men in such quantities as to be able to export it in other directions e. g. to Baghdad (Tabari, iii, 272, 273). The rivers and lakes of the country which yielded so abundantly of fish also favored the development of the export trade: the lake of Wan-e-g produces enormous quantities of a species of bering (*Arcti. stictus*) which in the Middle Ages was killed and exported over great distances. According to Karzel, ed. Whitefield, n. 153 of his book on India: it is still found all over Armenia, Atholistan, Caucasus and Asia Minor as a favorite food.

Armenia is particularly rich in mineral resources, it contains copper, silver, lead, iron, arsenic, zinc, mercury, sulphur (yellow variety) and even gold. We know very little about the exploitation of this wealth by the Arabs; the only Arabic author [?] gives any valuable information about the natural products of Armenia is the al-Buhārī. According to the Armenian writer Leonid silver mines were discovered towards [?] end of the 8 century A. D.; he refers probably to the silver (and lead) mines near the town of Gamsakh-Khano = "silver house" (about halfway between Tiflis and Baku), cf. Hilde, *Geographie*, 2, 272 and Wagner, *Reise nach Persien*, 1, 2, 172.

1894) there are still being worked. Other productive mines are found near Balkan and near Arghana by the Caspian and very old copper mines of Koshag with a branch at Katabul (Katabulistan) Elstanopol and the Alabka lake have undergone a considerable development during the last ten decades through the enterprise of the Russian and proprietors of the local families, the sons of Russian merchants; esp. especially Lobanov-Savoy, Stremenski and others. p. 211 & 249. The mineral found in Armenia in the greatest quantities was salt which was exported not only to the surrounding countries but as far as Syria and Egypt. All the salt deposits referred to by medieval writers were probably situated in the North East of the lake of Van. A very old deposit of mineral salt which is still unexploited is that of Kulp to the south of the upper Araxes (see 2 Haghtman), esp. on this subject Ritter, Erdkunde. i. 470 et seq.; Radde, Die Fortschritte der Archäologie, p. 47.

The industries for which Armenia was particularly famous during the Middle Ages were weaving, dyeing and metallurgy. The centre of this activity is to be found in Babel where costly woollen fabrics, carpets ~~and~~ heavy, coloured silk stuffs with costly patterns (Arab. *azgar*) were manufactured; these found a ready market both in the country and abroad. The *azgar* used was derived from an insect called *moax*. During a long period Armenian carpets were regarded as the most excellent on the market. The town of Anikhat (Ankara), a few miles distant from Babel, was famous for its dyeing industry; that Baladhor (ed. de Bozje, p. 200 op. *Editeur. f. Armen. Paillet*, li. 87, 287) calls it, the town of the red dye' (*Harver al-bahman*). Cf. on the trade and industry of medieval Armenia: Théophrastus in the *Alkestis*, *de Scitu. f. orient. Spr.*, 1904, li. p. 142-152.

of its descent; it is formed by the union of the Black Drin (Ezer i Drin, Alban. Drin i Zi) which flows from the Lake of Ohrid (Skutari), and the White Drin (Aq. Drin, Alban. Drin i Bardhë), but it now discharges most of its water below Ishkodër into the Bay of Valona along a stretch which occurs in the years 1858-59. South of it come the Matra, Arvan (Rade), Ishkumbi, Samina, Semetia, Vioza and Kallabëza. Under the upper portion of the Vardar, which flows into the Gulf of Salonika, belongs to Albania, and does its tributary the Lepenat, which through a formation also joins the Samina, and this again, joins at Mitrovica the Taba, an affluent of the Morava. — Albania has a wealth of large lakes, which correspond to former plains wherein subsidence has occurred, or to basins into which there have been intrusions: the Lake of Ishkodër, measuring 137 sq. mls., half of which belongs to Turkey, and half to Montenegro, and which discharges itself through the Drina into the Adriatic; Lake Ohrid (104 sq. mls.), Lake Prespa (137 sq. mls.), the marshy Lake Malla, and, farther south, Lake Vania. Right in the North is Lake Piana, through which the Drin flows. The existence of lagoons ought also to be mentioned, such as that of Maritza.

The climate of Albania is on the whole a healthy one, being mild at the coast, and very cool to the mountains of the interior which are covered with snow during several months. On the coast of Upper-Albania, at Durazzo and still more so the Drina there are constantly malarial fevers. The mountain-chalets are dry and stony and never yield a harvest; on the other hand, the plains and valleys are but too more fertile. The plain of Mosa is like a paradise. Wheat, rice, corn, oranges, pomegranates, grapes, figs, olives, melons and other southern fruits thrive in the southern western region, called Çamë, the grain of Shqipëri is from the excellent qualities of the fruits indigenous in Central-Europe. In good years part of the harvest of rice, wheat and maize can be exported; but owing to drought the supply not rarely falls short of the demand. Plantations of fir, pine, beech and plane-trees are also found. The commerce is on a excellent quality of oak, and the timber is to be exported in large quantities to France.

The chief means of subsistence of the population are maize and what they gain by the breeding of cattle. Their herds of wethers and goats are so considerable that in winter some of them are driven over the borders into the lowlands of Thessaly, Fœria and Macedonia, where the European has yet not lost, bears a plenitude of beasts of the wild-boar, boar, wolves, chamois which have become rare in our quarter of the globe.

A number of native crafts have been preserved into our time. The preparation of leather has its home in Viana, Prizria and Ishkodër, and in these places Albanian handicrafts are mostly concentrated. The cloaks, called Shpat, with which are always associate an Albanian, are made by the women of the district, while the sandals (i.e. hill-shoelers) wear only clothes which they have woven from home-grown wool. At Prizria and Diklova iron-work such as table-knives, knives, weapons with inlaid pearls and precious metals and even modern weapons are produced.

The sea-birds are among the natural trade-resources. The best shales from storm is offered

by the coast-towns of Preveza and Pasha Limas on the Bay of Ardenia (Ardena), but steamers can also come in the winter to the coast of Ardena, which is now recovering, lately however, from its deep decline, and in 1858. The coast of Ardena (Turk. Shengur). The native sea-going fleet is recruited almost exclusively from the Mohammedan inhabitants of Dedeagaz, which now belongs to Montenegro, and sails to the Atlantic, even as far as England, and possesses about a hundred ships. For the past, commerce, especially the wholesale branch, is in the hands of Austria, which through the excellent arrangements of the Trieste-Lord and the careful regulation of freight has hitherto been able to ward off all, even Italian competition. Statistics of the trade of 1858 are of little account. Twenty years ago Prussia's foreign trade amounted to 54 million francs, Ishkodër's to 5½ million. The Montenegrin customs-station of Podgoritz, which is showing a steadily progressive increase, has importance in a commercial viewpoint for Ishkodër. Albania contains part of two railways, one passing through the Vardar-valley from Mitrovica to Salonika with a branch line from Vardar to Belgrade, and the line from Salonika to Monastir. Prizria is the strategically desirable point for the control of western Macedonia; further, the entire province of Macedonia could be held in check from here before Bulgaria was raised to a principality (1878). The only highway running the whole width of the land passes from Salonika to Viana. The following are possible roads of the second grade: — 1. from Prizria by Vardar and Prizria to Serbia (the stretch from Ishkodër to Prizria is not possible). — 2. from Durazzo by Shkopia (written: Elbasan) and Ohrid to Macedonia. This is the route of the great Roman military road Via Egnatia. — 3. from Durazzo by Rost and Kila to Viana. — 4. from Kila by Tepelena and Legat (Argirokastro) to Shkopia. — 5. from Kila by Aidona (Pamphylia) to the sea. Bridges, even wood-bridges were till recently regarded as a luxury, a fact all the more regrettable because traffic suffers enormously in the rainy season without them.

II. Population. The population of Albania amounts according to the present division into Wilajets to little under a 600,000 inhabitants, of whom 1½ million Arnauts form the kernel, whilst the rest are composed of Turks, Wallachs, Bulgarians, Greeks, Serbs and Gipsies. It is a great step gained by the Greeks that with the aid of their constant troops in the southern and more especially the south-eastern districts they have either entirely or else half-killed many Wallachs and Arnauts. The Roumanians living on the Pindus speak only their mother-tongue, those who dwell farther West towards Prizria as a whole understand also Albanian. Those Wallachs who are become quite Albanianized and number here not a few, have in the eyes of Albanian patriots a special coil in them in the Albanian nationalist movement. Bulgarians are numerous in the region of Monastir more especially at Ohrid, Serbs around Prizria. Of the gipsies in western Albania only those following a nomadic life are not yet Albanianized.

The term Arnaut is to be traced back to the region Arbest extending along the coast from

Corfu to Arbanon, whose inhabitants are called Arber, according to the Albanian pronunciation. The Greek form is Arbanon, the Serbian Arbanon. By metathesis and replacing the *h* of the Greeks by *a* (< *h*) the Turks obtained the form Arman (Arab. plur. Arman), which however appears in the modern Spanish pronunciation and in writing as Arman in Bulgaria. Arman is customary. The inhabitants of Arber probably emigrated here from a place ~~Arman~~ situated in the East of Thrace. Gustav Meyer conjectures that the ancient Greeks by exchanging *h* for *a* and having in mind the Albanians, who lived in the Caucasus and in Central-Italy, obtained the form Arbanon now usual in Europe.

The Albanian is generally distinguished by his tall stature, well-developed chest, and slender, elastic body. He can frequently be recognized by his ~~Arman~~ forehead and short eyebrows. Of avian appearance, he wears neither a just or hat, without contradiction. In the march, thanks to his ready he leaves all others lagging far in his rear; in the mountains he moves with light step over the stony ground, and climbs rocks like a chamois. His step has the power of the athlete, he walks with an actor's air; ~~Arman~~ nature is somewhat savage, as though he dreamed ~~Arman~~ nation's misadventures ~~Arman~~ chastisement of a perverse world. It is very obvious that was to his natural element, and thus Myrian legends ~~Arman~~ of the Roman and Albanian troops in Turkish service have covered themselves with lasting fame. The Albanian wife is loyal and industrious. In ~~Arman~~ towns her activity is restricted to mending the home and zealously visiting her female friends, in ~~Arman~~ villages and mountains however she performs every labor of ~~Arman~~ fields and carries her ~~Arman~~, especially in winter, in spinning wool.

The largest towns of Albania are Plova ~~Arman~~ Monastir with over 40,000 inhabitants each, Ishkudra with 35,000, and Dykora and Gjakovë with 25,000; Uvalle, Isak and Vania have each 20,000; Elbasan is estimated at 12,000. Prishtina and Veria at 11,000, Dibra, Titus, Ohrid and Korica (Turk. Shkëlbi) at 10,000; the figure 8,000 is given for Elget and for Konia, 7,000 for Prava. Smaller towns of more historical importance are Aida Histi (Alb. Krupa, about 10,000 of a population), Arbanon (6,000 pop.) and Isak (Turk. Alb. Isak, Ital. Alzato) and Durazzo with each 5,000. Albanians dwelling without the towns belong to one of the clans (Alb. *At*, *Fat*), which are often named after mountains, towards which they are pledged to loyalty even though they be long absent. The members of the clan are organized into companies (*Batshë*) whose leaders (*Batshë*) are subordinate to the chieftain. In the north-west of Albania, on the borders of Montenegro, the most important clans besides the clan of the "mountains of Ishkudra" are the Kliment, Hori, Isakli, Kastrati and ~~Arman~~. These five tribes achieved renown under the name of Malesia. The Vamskë and Dushkë father ~~Arman~~ and southeast are also held in regard. All these tribes are settled in extraordinarily unfavorable soil and it is astonishing that they can find ~~Arman~~ the necessary means of subsistence. The condition in which they live is felt by ~~Arman~~ European states to be one of distressing misery, but by themselves to be ~~Arman~~ available lot of freedom. None of the tribes could count ~~Arman~~ than 7,000 persons.

They are exceeded in number and respect by the Mirdita who are governed as an independent community. They are organized into five *Batshë* counting 15—25,000 persons. Since their chieftains, whose family-traditions however do not carry back beyond the year 1700, are mostly called *Prinç* (i.e. *Prince*), they take, confounding it with the Romance word "prince", to give to themselves the title of "prince". Their residence is Arush, a little low-lying hamlet among the mountains, which enjoys but few hours of sunshine even in summer. The political affairs of the Mirdita are settled in a general assembly of the people which is annually convoked in the winter church in Orsh. The Mirdita are considered to be exceptionally brave. The Mirdita when conquered attribute their defeat to the absence of the Mirdita. The latter yielded their submission to the Sultan under the promise that they would never be liable for tribute and that no Muslim would be allowed to settle in their territory. They pledged themselves in return to rally to the help of their sovereign in the event of war with a considerable corps, one man per house. They have more than once made the Sultan experience their strength; but they have control of the three highways in northern and central Albania: to Ishkudra, Isak and Aida Histi. They are, ~~Arman~~ consequently, strategically the masters of the country. The important services which they rendered the Turkish government against Austria in the 18th cent. are still rewarded by an annual gift of twenty ~~Arman~~ of wheat. Since the time during the last Russo-Turkish war did not march against Montenegro his loyalty fell under suspicion; and the chieftain *Prinç* with his clan was expelled to Asia Minor in the year 1887. Only the proclamation of the constitution in Turkey (1908) restored him to his home. We owe to English travellers valuable information about the no less interesting mountain-clans of southern Albania. The clans are most worthy of note, ~~Arman~~ Greeks in an earlier period suffered heavily from ~~Arman~~ the passion for war, and hence even yet apply this name to contempt to the whole Albanian nation.

In Roumelia and north-western Asia Minor the Albanians importunate weather-conditions have immortalized the calling of *Arman*. Everywhere in Turkey-in-Europe their idiom can be heard. In Constantinople 20,000 at least of them are engaged in the most varied occupations. Since they have wind and weather nobody makes a rival bid for the sale on the street of bread and lemonade which are bought by *Arman*. For a long time Albanians of the Greek-Orthodox Church and Turks have been settled in Greece; they constitute a tenth of the population, 200,000—350,000. They are thickest in the Peloponnese; but in many districts they have succumbed to the irresistibly hellenizing influence. In Italy Albanians have been settled since the 17th cent.; we find them in Capitanata, Basilicata and the Terra d'Otranto, and numerous in Sicily. All together they are estimated at 100,000 at most. Thanks to their national ecclesiastical organization, the Albanian clergy and bishops of the Greek rite, but subject to the Pope, they have been able to preserve through the course of centuries their language and customs. Hungary possesses two Albanian villages in Slavonia in Croatia.

III. Religion. It is generally stated that the Albanian is cool in his attitude towards religion, even indifferent. Whether Muhammadan, Catholic or Greek-Orthodox dogma is to him as it may be an instance to the modern European more a matter of custom than of deep inward conviction. This attitude of aloofness towards the supernatural favoured the transition to the victorious Islam. The latter found the greater vogue the further the people were removed from Iskender Bey's glorious war. The liberalists, so that by the beginning of the sixteenth century the conversion of the rest of the nation appeared as but only a question of years (see *infra* Section VIII). The Shaks and Shaksis in the Sandjak Ishkodra have remained the most loyal to Christianity, and can boast of counting no renegades in their midst. They are thus the poorest also of all the hill-peoples, but at the same time those who have preserved most purely the rude customs of primitive times. The tribes of Reel, Leka in the Whitet Ishkodra are almost wholly Muhammadan. Entirely Islamic districts are surprisingly few; Korvallek (Kopelaken, Kigori), the valley and range of the upper Aratu as also the districts of Miti; the Muhammadan Ghegs predominate around Elbasan, Ohrid, on the right bank of the Drin, at Dibra, Prizren, Djakovica and Gjirokastra. The adherents of Christianity belong north of the River Ishkodra to the Catholics, south of it to the Greek. For the numerical proportion of the professors of the two creeds there are no data, but the Catholic Arnauts might be estimated at about 150,000, the orthodox inclusive of the half-Christianized at over 300,000. Muhammadan Arnauts number about 1 million. Their Christian fellow-countrymen designate them as Turks.

With a section of the Muhammadan religious feeling runs itself in impassioned adoration of the sect of the Begs (Bektashi) which has also strongly into favour only since the abolition of the Janissaries. Almost the whole population of Tirana and Akte (Lika) belong to it, a fact to which attention has only very recently been drawn. Attempts were formerly openly made to persecute the prosperity of this order in order to secure a finer footing for Muhammadan institutions; but the populace on the other hand have by attaching themselves to a half-heretical sect given forcible expression to their feeling for freedom which they have converted into a religion. But such has been only outwardly the case, for the Albanian Begs are among the loyalist adherents of the government. Their centre is Akte (Lika) in its neighbourhood a pupil of the Kadizade Begs, Sari Salih, killed a dragon which was devastating the crops, and so has everywhere naturalized the medical lore of the order. The whole population annually pilgrimages to the grotto situated on the plateau above Akte (Lika) in which the saint is buried. The names of the Sherbatesh Akte 'Ali Efendi and especially Kadizade who achieved for the abolition of the Janissaries their alleged chartered rights of exemption from taxation are held in high repute. The sect of the Albanian Begs has a deeply imprinted Shiite character. They do not swear by the Koran, declare Paradise and Hell to be theological inventions, fast in Ramadan only three days, but the first nine days of Muharram to make up for that; 'All they hold in far higher esteem than do the Turks.

Their formula of confession of faith runs: In Allah the High, Muhammad rasulu Allah, All wallahu Allah. One will actually seek in vain for the names Allah, Allah, Allah amongst the Albanians.

IV. Life and Customs. There can be nothing stranger than an Albanian house in the country. Built of clay and usually on a pathless eminence it serves for defence against enemies who are never wanting. The small openings in the walls are loopholes which only incidentally fulfil the function of windows and are stopped up with paper in winter. Not a trace of furniture is to be seen within, unless one considers the mats of poplar-leaves lying spread out here and there as such. The carpet which is so popular elsewhere in the East is here the rare luxury of the rich. The Albanian meal consists of a soup of rice or maize-flour cooked in milk. It is served on foot from morning till evening. He is content with this meal. At least a meat (Vahshi) during the winter is served up with chleb-pass, a dish which even the most pampered taste prizes as an incomparable delicacy. At these always simple banquets the heroic deeds of their last-deceased forefathers are celebrated in song by the tribal bard, and finally the old national battle-march is heartily entered by the whole assembly, a ceremony as inflammatory for the rude temper of the natives as ennobling in its effect on the stranger.

The dress of the Albanians, even if varying considerably according to locality and social position, has something picturesque about it. A fact made all the more prominent by the proud carriage of the people. In well-to-do families in the south the men wear the fustanella (Turk. *Shirvan*), a kind of kilt with many folds and consisting of 122 separate pieces of white cotton sewn together, which reaches from the hips to the knees; a gold-embroidered smock covers the body and over this a vest is worn which is open at the breast. The whole is held together by a silk-girdle in a front leather-pocket which the revolver with his bald silver kept. A low, red felt with thick, long tassels of black hair is used to cover the head. From this garb of the Muhammadan Albanians living in the towns that of Unit Christian fellow-citizens is distinguished simply by the darker colour of the smock. The superior Bey in the south wears over and above a white, broad-sleeved jacket which suits the fustanella very well. The raiment of the Muhammadan townswoman is notwithstanding its simplicity one of the most romantic the Orient can show; white tunic with bright colours, and the Dolma (from the Turk. *Shirvan*), a scarlet-red cloth with edges and ornaments in gold and black silk embroidery, which is drawn over the head in the fashion of a hood; although in the height of the shoulders is left open for the arms the slender Albanian prefers to wrap the sleek round body and arms in Oriental fashion, and glides thus along the street with seductive grace. Quite different is the heavy, costly and more European garb of the Catholic women in North-Albania. The black trousers with the long, purple, mantle-like overgarment and the gold-embroidered, recalling the grand ecclesiastical robes, give an exceeding solemnity to the figure. The upshot however is only suitable for the togar. In the mountains, especially of North-Albania, the Albanian has a

more practical work; he is attired with fragments of a coarse white cloth with black fringing, over the chest a close-fitting waistcoat, and above that a black jacket which covers only the back and hips. For protection against cold and rain he wears a sleeveless mantle of black wool which reaches to the haunches and ends above in a kind of hood. At foot-girth high garters and light shoes in which sandals are fastened with leather straps are worn. The Albanians with the exception of the Khegns, shave off the beard. The wearing of the Fez is general among the Christians and Muhammedans; among the poorer class of them it is very frequently made from the durable, thick, combed-out mountain goat's wool.

There are really but few regions in Europe whose population are at so low a stage of civilization as the Albanians. Public schools are confined to the towns; reading and writing are everywhere regarded as inestimable arts. All legal situations are controlled by the *newtires*, and to us unknown in detail. The *Qanuns* of the Lek Enderlis (Tosk. Dukes), whose cruelty knows no higher justice than that of blood-revenge, the obligation to which extends to the whole kin compels the families at strife to years of preparation for fighting. In those regions where honour is everything and counts for nothing murder is the cause of death in from 19 to 30% of the mortality among the male population. The *Toplans* leads the list with 44%. The notion of honour is so strongly developed that a girl to whom even her father's insult is a deadly insult readily but to seek a voluntary death, but the husband falls her luckless kinsmen's vengeance on the slayer's head. Sometimes the despotic governors are successful in negotiating a peace (*deris*) between the quarrelling families. 20 years ago, however, when the War of Independence came to an understanding with the tribes that blood should be accepted only on the murderer himself the *Skutlers* refused their assent; they would hear of no compromise touching becoming matter for political agitation.

V. Administration. The political division of Albania has been for centuries subject to continuous mutations. At the present day it is split up into four Vilayets, the number of whose inhabitants however can only be approximately estimated: Vlora with 700,000 inhabitants (it falls into 3 Sandjaks: Vlorë, Durrës, Lushnjë, Berat, Elbasan, with 700,000 (3 Sandjaks: Mirdita, Gjirokastra, Përmeti, Shkëlzen, Fier, Korçë, with 1,000,000 (3 Sandjaks: Tepelenë, Durrës, Vlorë, with 1,000,000 (3 Sandjaks: Shkëlzen, Fier, Korçë, with 200,000 (2 Sandjaks: Shkëlzen, Fier).

The authority of the imperial government is more limited than elsewhere in Rumelia. The right of the people to carry weapons is in contradiction to the laws. In every relation the officials have to impose on themselves and it is asserted that whether it concern governance or the administration of justice their calling is one of the most difficult. Often and often the members of the court of justice receive letters threatening that they will have to atone by death for a summary sentence. These threats are not empty words, often enough examining magistrates and judges are received with shots if they show themselves too strict. Moreover the power of the authorities may at times extend beyond the prob-

ity of their seat of office. Their authority has chief recognition from the Muhammedan population generally and the Christians living in the towns. With the majority of the Christian population in the mountains, who are organized into clans of their own, they communicate only through the medium of their delegates, the Muhammedan *Bektashis*, whose principal duty consists in relieving the taxes.

VI. Albanian, which in its original form was an Illyrian idiom, is an independent member of the great Indo-European family of languages, and stands in no closer relation to Greek than to, say, Celtic. Perhaps the Palaeo-Slavic group is nearest related to it in its present shape. Albanian has eight conjugations which are distinguished by the infinitives. Composite words have become second nature to it, not in a moment of long periods and constructions. It separates according to the dialect into two main branches, that of the northern *Shkëps* (Tosk. *Shkëps*) and that of the southern *Tosk* (Tosk. *Tosk*). The dividing line is said by the natives to be the course of the *Shkëps*. Von Hahn has more precisely defined the linguistic provinces and to this effect, that the dialect of *Shkëps* is situated to the south of the *Shkëps* shows a transition-dialect. The parent Albanian is spoken, according to the unanimous testimony of the natives, at *Elbasan*. The term *Shkëps* are here used only by the *Tosks*, whilst the latter call themselves *Tosks* in several of their dialects. It is preferable to call both groups *Shkëps* (Tosk. *Shkëps*), the usual explanation of which name ("Rock-dwellers or Eagles") are rejected by Gustav Meyer. He compares it with *Shkëps* (= Albanian language), which is to be derived from the Latin "sculpere", and *Shkëps* (= I understand). This explanation which von Hahn has defended is not to our knowledge shared by Albanians. Albania is called *Shkëps*, *Shkëps*. Although *Tosk* and *Shkëps* on the occasion of a first conversation — and this observation is relevant in the dialects of all languages — can only with difficulty make themselves mutually intelligible, this standing-block is removed after longer intercourse. Educated Albanians warmly emphasize the fact that, despite differences notwithstanding, they can easily exchange opinions with each other.

A great number of the ordinary terms of civilization such as the names for day, night, month, year, in, under, etc. Albanian has in common with the other Indo-European peoples. The Celtic invasions of the Balkan Peninsula at the beginning of the 1st cent. B.C. so have had no influence on the language. All the more important is the mark which the wars of the Romans and their dominion over Illyria have left. Before and it is still pronounced as *h* as in Old-Latin. Also words expressing certain actions and which no nation admits to having spread upon it by another language at a neighbor's notice, e.g. those for *house*, *dog*, *cock*, and words expressing actions associated with civilized life, e.g. *thrive* for gold and silver, have been borrowed from the Romans. Most of the expressions connected with a settled mode of life and organized political conditions can be referred back to them. The influence of Latin does not stop however at the vocabulary, but extends to the sphere of idioms. Albanian exhibits purely Latin words and modes; further

the plural is formed after the Latin fashion. Some numerals have simply been adopted from Latin; even the article is a modification of the demonstrative pronoun) and several pronouns possibly take their origin from this source. Moreover, since Latin was both colloquial and official language in the Balkan Peninsula in the v. cent. A.D. it wanted little for Illyrian to have become completely romanized. The language of the Visigoths, who at the beginning of the Middle Ages settled for over a century (until 535) in Illyria, has left out the slightest trace of itself in modern Albanian. The influence of the Slavs, who from the 11th to the 15th cent. frequently played a very decisive role, expressed itself with lasting effect. Only a few expressions in Albanian can be referred to Bulgarian; the majority of the Slavonic words have a Serbian stamp. On the other hand the presence of *grecisms* in the main part of the influence an illoction.

Next to Latin Turkish has had most prominent influence on the vocabulary of Albanian. Not only was the community of religion decisive in this direction, but also the fact that the Turks in contrast to the Slavs appeared as representatives of a higher culture and are still regarded as such by the Albanians. The number of vocabularies adopted in their full Turkish form is astonishingly great; to nouns, verbs, particles, everything in short the Albanians are accessible. Even into the vocabulary of their Italian kinsmen who emigrated centuries ago several Turkish words have found their way, and this may have happened very early; *and* (night), *and* (anger), *pesor* (market), *fasfor* (window). Of Turkish illoctional exchange only the 3 (in Albanian sometimes changed into 2) characteristic of the Turkish illoction perfect has gone over into Albanian, e.g. *zëvend* (may esteem), *kye* (may esteem). In the Albanian spoken by the Muhammedans, especially the Gheg dialects, and among these again the dialects of Ishkodra in particular, there is a great wealth of Turkish words. Modern Greek has made its presence decidedly felt in the South. The degree of its influence is not much inferior to that of Turkish. The Albanians of Greece, who are here of *grecisms* surrounded by Hellenes, have gone far toward adopting the official language. According to Gustav Meyer's reckoning, of the 5140 Albanian words he had before 1900 400 proved to be common to the Indo-European languages, 1430 to have been borrowed from the Romans, 340 to be of Slavonic, and 2180 of Turkish origin, and 840 to have been adopted in consequence of their intercourse with the modern Greeks.

The majority of the Albanians can speak besides their mother tongue *grecisms* or several other idioms almost with the same fluency. In the South Greek has a strong hold and competes with Albanian on the coast. In Vlorë, the seat of the Wali, the whole population without distinction of creed attends the Greek schools, and at home, although Albanian is often understood, Greek is spoken as a rule. In the North Slavonic is spreading *grecisms* through all the veins of their life; here the Albanians are *grecisms* of Turkish from their childhood.

VII. Albanian Literature. The beginnings of a literature in the mother-tongue were made by those Albanians who obtained in Italy a more secure existence: they availed themselves at first of the

Latin alphabet. There first appeared a Grammar and a Dictionary, the latter printed at Rome in 1655 by Francesco Silvestri. They formed a basis for the religious tracts which subsequently had only a limited circulation. On a difficult task as the translation of the Bible were yet undertaken. The first translation of the Bible dates from the year 1824; in it — it was made during the Hellenic war of liberation — Greek first had the honour of supplying the Albanian with an alphabet. *grecisms* It was at once apparent that the Albanians of the Balkan Peninsula were still too backward in their civilization to be able to produce any large independent work. This rule, then, in Ottomano de Rade of San Demetrio in Calabria etc., of whose family it had a position in the 17th cent. His first work in epik form is the *Conti di Albania paja del despota di Scutari*, which appeared in 1836. In 1845 another national composition of his, *Conti di Scutari* 1781, based from the poem. The popular national *grecisms* was as a rule the threads de Rade's fancy spins in a loosely web. In 1866 he published the *Rapporti di un foresto albanese*, and between 1873-1884 his *Poemi albanesi*. An analytical criticism of his poetical productions would be in our opinion more than ought to be attempted. The lucubrations of which he has been accused and his views on literary taste were posted in tendencies which by his time had already had their day in the rest of Europe; but he was not willing for what we mean by a "modern" public.

While this noble champion yet furnished the collection of Albanian tales and folk-poetry, was begun. Of such collections we have up till the present, excepting the smaller ones, five. Two by G. von Hahn, in the 1. Part of his *Albanische Studien*, and in the 2. Vol. of his *Albanische und albanische Märchen* (Leipzig, 1864); *Albanische Märchen* by the Toak Mlikos, who lives in Egypt (Alexandria, 1873); by Auguste Dorion in his *Albanie de la langue albanaise en albanais* (Paris, 1899); and by Hjalmer Falkenberg in *Albanische, phil.-hist. Skizze der alban. Sprache* (Göteborg, 1899). *Wierisch*, in *Leipzig*, Bd. 20, Leipzig, 1898, translated by him in *Die albanische Volkskunde* (Copenhagen, 1898). During the last decades the leadership of the literary movement has been transferred to the Balkan Peninsula. The first to come forward here was Nestin Bey of Permeti, one of 'All Pasha Trakili' (Turkish), whose poems are mostly lyrical in nature, and have an Oriental flavour; after Turkish fashion every line exhibits Arabic or Persian words. They are all composed in the Gheg dialect. His name, though very familiar half a century ago, has almost completely disappeared from the memory of the present generation. After him appeared Kosta Kristoforidi, who, having enjoyed mastery of the Toak and the Gheg, had a *grecisms* thorough lexical knowledge than any other. He translated freely the Psalter in 1888, and in the following years the various sections of the Holy Scriptures, mostly into the Toak dialect. The work wherein he won for himself a lasting name in the scientific world, viz. the "Dictionary of the Albanian Language" (*Lexikon e gjuhës shqipe*), and which *grecisms* in its author's lifetime (died 1898) attained a legendary fame, was printed at Athens in 1904. In the year 1879 28 Albanians formed themselves into a society with the object of

printing and circulating Albanian literature. This society began in 1882 the publication of the Albanian monthly magazine *Drita* (= *The Light*), which was however changed in 1885 to *Diflari* (= *Education*). A little previously (1883) *de Rada* had begun to issue in Italy the Albanian journal *Fidmori Arbrit* (= *The Mirror of Albania*). It was dropped however after the fourth volume, and in the *Arbrit* (= *The Young Albanian*, Palermo, 1887), conducted by Schiro, had a short-lived successor. The Albanian newspaper, *Shpikimi* (= *The Awakening*), which has been published at Bucharest since 1889, has been received with the loudest approbation. About the year 1890 there was opened at Kufina as a private institution the first school of Albanian as the medium of instruction in spite of good results and a fairly long existence it had, however, to close its doors in the end. Among Muhammadan Albanians of that period *Shirvan* (Shirvan) Bey of Kufina (1850-1904) stood out preeminent for his literary zeal, but his pioneering activity is rather within the sphere of Turkish philology. We will mention only three works written by him in Albanian, which like all his writings are a gem of art; *A. H. Colloquy*, an *Albanian Grammar*, both printed at Kufina in 1886, and the excellent, in Europe less known, *General Geography*. At the same time there appeared *Shirvan* his more gifted brother Nefin Bey (1846-1900). In 1886 were published at Bucharest his three very brief works: 1. *Reading Book for Children*. 2. *Call to the life of the Farmer* in which *Shirvan* extols the sentimental language country-life, the ideal of the Albanian. Notwithstanding *Shirvan* lively — there are only a dozen pages — it is regarded by many as Nefin's best work. 3. *Stories for children*, which, collected from pagan mythology, the Bible and the Koran with *Shirvan* object of giving to boys some definite point beyond the influence of the religious mind which usually their national convictions. The most splendid example of his *Shirvan* given as in two extensive political works, both of which appeared at Bucharest in 1891; an epic poem *Shirvan* (containing 10000 lines) and an extensive tragedy in verse on the death of Hussein, with the title *Korviliya* (= *Korviliya*) in the course of the work, in the accumulation of scenes which have only an external connection with the action, in the confusion in vehement emphasis *Shirvan* feeling there are certain artistic weaknesses. But they are noble productions which will still long earn their place in the literature. Nefin was a free-thinker, and nothing could have lain further *Shirvan* his mind than the intention of sticking up the fanaticalism of his co-religionists. Those who knew him assert that the object he aimed at with *Korviliya* was simply to arouse enthusiasm for the liberal ideal in the daylight who were so numerous in his motherland. His *Shirvan* was *Shirvan* for the Albanians of the Turkish capital. Other notable literary productions, which *Shirvan* mentioned were Luma Shiro's Albanian translation of Lamartine's *Widow's Tale* (Sofia, 1893) and A. Upi Kolugua's Albanian rendering of Saint Bay's *Shirvan* (Sofia, 1901).

What is most worthy of notice in the modern Albanian literature is the person of Nefin Bey of Kufina. Son of Shirvan Bey, and born about 1874, he grew up under his mother's care, who herself

enjoyed reputation as a reformer. He first attended the Greek school of his mother place, and later acquired Latin among the friends of Ishkollari. Next he studied for some time at the Royal Lyceum (Ghilata-Sendi) in Constantinople, until, turning his back on Turkey (1891), he went to complete his education in Europe, where he received the name "Young Spirit Bee". His activity is mainly devoted to introducing the newspaper *Shirvan* which he founded in 1897 with the aid of the large Albanian Society in Bucharest, and which appears in Albanian and French; in this he has published also several novels national in character. Soon he added to it a purely Albanian section containing news of the day. By mixing the Turkish and Albanian dialects and creating new words he is endeavouring to give his nation a single literary language. He has had the gratification, that the municipal council of Bucharest called the street in which his paper is printed Rue d'Albanie.

VIII. History. If the question of the descent of the Armenians has not yet been completely decided up till now he asserted with tolerable certainty that they are direct descendants of the Illyrians who dwelt between the Isthmus and the Danube, the Dan and in the region of Venice, but perhaps also descendants in the past at least very close relatives of the old Epirotes who were settled to the South of the Isthmus, and of the Macedonians who extended towards the East as far as the Strymon. Certain parallels in their civilisations are an argument in favour of descent from these two peoples. On the other hand, the statement that the Pelasgians were *Shirvan* of the Armenians can in the present condition of the science of language be neither proved nor disproved. To leave the Macedonians aside, the Epirotes and the Illyrians, split up into small clans, only twice, in the 11. cent. B. C., formed an independent political organisation; the Epirotes then *Shirvan* over under Pyrrhus to Italy. The campaign of Alexander the Great and his victory over the Macedonian King, Perseus (168 B. C.) added besides Macedonia both Illyria and Epirus to the Roman Empire. In Strabo's time Greeks and Epirotes were separated by the Ambraclian Sinus. Epirotes *Shirvan* Illyrians by *Shirvan* (Ishkollari). The chief town of the district in the later Roman period had the same name as this river, viz. Skanina, which was situated in the neighbourhood of the modern Elbasan. We then for the first time encounter the *Shirvan* with their capital Albanopolis, whom the geographer Ptolemy (middle of the second cent. A. D.) mentions as one of the Illyrian tribes. It is the Slaves again with their ravaging expeditions who are the first to exercise a lasting influence. Before the presents of their advance towards the South, which began in the 11. cent., the Macedonians retreated to the Albanian mountains, where they became merged in the peoples who were of common kin. In the 6th cent. the Goths conquered the North of Albania; until 520 this formed a province of the Serran Empire, and was quite cut off from the Southern part of the country. Finally in the second half of the 6th cent. the Turkish Bulgars who by this time had been taken up by the civilisation of the Slavs, carried their attack against Macedonia, and being favoured by fortune quickly made themselves masters of the whole of central and southern Albania as far as the Am-

try of Montenegro is to be understood, insofar it fell under Osmanli sway — was at that time subject to the fealty of the Kastrioti which had suddenly risen to authority. The small as yet at the Adriatic Gulf was subject to the far more powerful Arbanas, who ostentatiously bore the surname Kastratovic which came to them from their mother's side. His contemporaries conferred on the Arbanal Topis the epithet of "the Great" in recognition of the bravery he had displayed in the war with the Turks. Since he had no relations with Europe, history has not recorded the deeds of this national hero, who prepared the countrymen for the notable high position they attained later. Not till the year 1423 did we again hear of an Osmanli campaign, in the course of which "Lal Bey, son of Kervan, devastated the countryside and forced the towns and both the Arbanas and John Kastrioti to acknowledge the Sultan as their superior. John Kastrioti was allowed to return home on giving up as hostages his four sons, including the youngest, George, and the Arbanas, who were ever meditating ambitious plans, contrived to strike off every letter from themselves and escape to all every mountain with the intention to fight the Turkish colonists. The latter were slaughtered in horrible quantities, and terrorism and the sword were carried far and wide into the country of the Arbanas. Threatened by enemies on every hand in Asia and Europe only after the lapse of ten years did Sultan Murad find time to despatch (1435) a considerable fighting force under "Ali Bey against this people which loved liberty more than aught else. His success was short-lived. On his withdrawal the Arbanas rose afresh, and the Osmanli who had sought protection in the fortified town of Shkiperi would have been put to the sword, had not Turkish troops intervened in the middle of the winter (1435-1436) to the relief of the hard-pressed forces. The Sultan now felt so secure that in violation of all rights he arrogated to himself the sovereign authority over Akçe Hissar which really belonged to George Kastrioti, called Iskander Bey. The latter, now availing in consequence of a long repression indignation, made his escape on the defeat of the Osmanli at Drita (1443) from the Shkimmerion army, in which he held important rank, and summoned all Albanians to battle for freedom. The details of his glorious deeds are not in place here. It is sufficient to remark that there was rarely an encounter in which the Albanians did not draw the full of battle with the corpses of thousands of the invaders. But even in the life-time of Iskander Bey he frequently appeared as if even his heroic soul could not cope with the weight of numbers. After his death (1467) the Republic of Venice entered on the oppressive heritage of protecting, from its position in the Adriatic Sea, the freedom of the Albanian mountains. On the fall of Akçe Hissar, however, in the year 1478 the Doge had to sue for peace, and in return for the recognition of Venetian authority in the places on the coast, to acknowledge (1479) the supremacy of the Sultan over the entire interior and especially in Akçe Hissar and Shkiperi.

In the year 1550 the inhabitants of the mountains in northern Albania secured to themselves, in return for their acceptance of the terms of

compulsory military service in the army of war, the rights which had hitherto been disputed to them, of self-government and exemption from taxation. The only extension of the Osmanli empire on the Adriatic coast consisted in the annexation in the year 1571 of Antivari (Turb. *Antivari* and *Dulcigno*, 1571, shortly before the memorable day of Lepanto. A rumour was put in circulation at this time by officious Venetian agents that the Albanians intended to take up arms against their masters; the people did not venture to do so, however, notwithstanding the fact that the war had resulted unfortunately for the Osmanli. Most resistance to the central authority came from the Klisament, troglodytes who were armed with lances, shields and broad girdle-knives, in little divisions of brigades a few were built in the year 1622 in the neighbourhood of Shkiperi (Gimnye). In this period occurred a fresh wave on the part of the Pope to keep the inhabitants in the ancient faith; the first Franciscan mission is set down by a reliable source to the year 1622. New antagonistic complications with the Turkish authorities and the maligning of the insurgents by Hadji Pascha fell according to the majority of the historians' stories into the year 1624. The conquest of Moros by the Vannians (1637) did not prejudice the Osmanli with the Albanian Arbanas. When the City of the Lagoon made at that time an attack on Dulcigno by opposing to it, the State joined the side of the Venetians and distinguished themselves in the several defenses of this fortress by the fact that precedence was all the Catholic order of the Order of St. Mark was granted to them.

The Greek-orthodox Albanians had not for centuries ventured to raise their voice against the Turkish yoke. Only when the splendid deeds of Austria awakened the cherished hopes of the Christian world in the 18th cent. did they turn their eyes towards the west and the north. After the Treaty of Karlowitz in 1713 the war with Venice and soon thereafter went to war also with the German emperor, the Greek archbishop of Shkiperi in his own name and in the name of other bishops and prelates repeatedly visited the Imperial command-in-chief, Prince Eugene of Savoy, to come to the country's liberation (1716) but these efforts had at first no real contact with the fact that the Vannians had decided (1715) upon several landings, which miscarried however at Durrës, Scutari and Vostiza (Turb. *Vostiza*) in Southern Albania. Also the siege of Antivari (1717-1718) and the blockade of Dulcigno (1721) by Venetian squadrons led to no result.

Favoured by the obscurity of the political horizon Mehmed Bey of Daghli, a village near Ishkender, attained to the middle of the 18th cent. such importance that, for good or ill, he came to dominate him well of his native place. The influential families in the town and province he invited to a war of mutual extermination, so that he remained masterful master of northern Albania. For refusing to take the field against Catherine II he was put to death by command of the Porte. His two sons, Mehmed and Mahmut succeeded him in the governorship. They incorporated the districts of Lezhi, Shkiperi, Shkumbin and the whole of Shkumbin within their sphere, and even in Shkiperi and Shkumbin their word was law. During the first war of Catherine II against the

From the Tons of Moira revolted against the latter and could only be held in check by the despatch (1779) of 3000 Ghags, who were invariably disposed towards the Turks, under Mustafa Pasha across the Isthmus of Corinth to the Peloponnese. But soon Tons and Ghags in league produced yet another disorder, until Ghazi Hassan Pasha, who was almost the sole embodiment of the unity of the empire, in a great battle bowed their obstinate heads.

About the same time as the Bays of [redacted] in the north 'Ali of Tepedelen [q.v.], whose family held for decades an important position, had usurped the authority of Southern Albania, but fell back at first before the masters of the north. Mahmud Pasha of Ishkodra had in 1785 given the impulse to his enterprising spirit and made an invasion which excited a great sensation at the [redacted] into Venetian territory, then advanced against Kird Pasha of Elbasan [redacted] had been compelled to rebuke the family spirit of 'Ali of Tepedelen, and in conjunction with 'Ali inflicted defeat on the Pasha (1785). Next he butchered in the plains of Khorra the Ottoman troops who had been dispatched against him, so that he saw nothing for it but to throw himself into the arms of Austria. The Emperor Joseph II offered to recognize him as sovereign of Albania as [redacted] as he should [redacted] Catholic. Mahmud, who always showed a great fondness for Catholicism, made Catholic and Mohammedan alike swear by the Gospel and the Kor'an respectively to fight [redacted] their last breath the enemies of Albanian freedom. By the excommunication which the Shakh al-Islam pronounced against him he was only obligated to the more violent hate and inflicted fresh defeat on the Turkish armies moving against him. The Emperor Joseph sent him shortly before [redacted] Austrian declaration of war against the Porte a large silver cross, with an armed escort of 2600 men. Mahmud entertained [redacted] deputation at a splendid banquet, and had them murdered in their cups; this bold exploit he turned to such good account in Constantinople that the Sultan, under threat of war from his northern neighbours, consented to his pardon (1787). A year later it is 'Ali Pasha who is seeking to negotiate because of his elevation to be ruling prince of Albania, but on this occasion the negotiations are conducted with the Russian commander-in-chief Potemkin. Soon after this the Christian Albanians of Balli, [redacted] for over a century had led an independent life in their inaccessible and rather unproductive region, entered into similar intrigues. They joined in April of 1790 the deputation from the Greek Islands to St. Petersburg, to request of the Empress Catherine a ruler for their [redacted] isolated native country. Not till 1803 did 'Ali Pasha of Tepedelen succeed in driving the [redacted] out of the land.

We are now verging on the epoch when the old-Hellenic element rose in rebellion against its Ottoman oppressors. This is [redacted] most opportune to make mention of the Armats who were settled in Greece and had played a [redacted] part in these wars. The immigration which had continued for centuries of Turk Albanians into Hellas had in no way stopped since the bloody wars with the Kapetan Pasha Ghazi Hassan in the year 1779, so that by [redacted] beginning of the 19th century a fifth of the population of Greece was

composed of Albanians, who in the number of 200,000 persons formed separate groups in the larger part of Bosnia the whole of Attica, Megara, Corinth, Salamis, Arcadia and almost the whole of Achaea; they preferred the mountains and the low lands, while in the [redacted] trade and crafts as a rule were in the hands of the Greeks. On the islands Paros, Hydra and Spargi all the inhabitants were Albanians. Hydra alone counting 40,000, and being held, [redacted] sailing people [redacted] extraordinary [redacted] in a few decades. The islands of Hydra and Spargi had to provide a number of sailors for the Turkish navy, and maintain them during their term of service.

The warlike nature of the Mohammedan and Christian Albanians brought it about that on the occasion of the Greek rising they cooperated with the Greeks in resolute fashion, and made ample contribution towards the liberation of the Hellenic nation. After he had masqueraded for more than half a century before the world as a defiant rebel 'Ali of Vania felt his position grow daily more insecure. As it was he, the Mohammedan Albanian, who embodied the Greek revolutionary sentiment in Roumania by his literary representations and kept the spirit of unrest awake in Muresa also, so was it the Christian Albanians of Sali who first unfolded (Dec. 1820) the banner of freedom from Ottoman domination and thus made the prelude to the Greek war of liberation which broke out four months later. The [redacted] of 'Ali being able to hold out until February, 1821, in his fortress at Vania projected in remarkable fashion the plans of the champions of liberty.

Whilst the Tons had become deeply involved in the cause of the Greeks, the Ghags were also brought into sympathy by the prevailing instability of the situation.

The overbearing attitude of the people of Durrës persisted almost utterly [redacted] the unequal fight with the enthusiastic Greeks. Further, Mustafa of the famous Bektash family availed himself of the results to which the Porte had listened, since the extermination of the Janissaries to press more and more shameless demands. In 1825 he delayed joining in the Russo-Turkish war, then when the two powers [redacted] concluded an armistice he made bold on his own responsibility to renounce the hostilities. After the declaration of peace he continued to muster round [redacted] colours a line of Roumelian Pashas. The Porte was compelled to despatch (1830) against him its most capable general, the Grand Viceroy Mehmed Reshid Pasha, who succeeded in totally defeating (1831) Mustafa at Petrepe and compelling him to expatriate (1832) in Ishkodra. With Mustafa the line of native governors in Albania became extinct.

The activity of 'Ali and the work of Mustafa has special importance also on the side of social development, in that as far as they could they cleared away the Albanian custom according to which every town was a state and every home a fortress, and thus terminated for Albania its medieval age. Mehmed Reshid Pasha gave the finishing blow to the last remnant of local independence in the central part of the country, so thoroughly indeed that for decades after every innovation [redacted] traceable to him, the "Sadri k'yan".

With the 15th cent. there dawned also a rising day for the Christians in Albania. Presumably those of them living in or near the towns had had occasion to groan under some vexations, their clergy had sometimes been harassed as common criminals because of trifling misdemeanours against the public law of the State and Islam. When the Turkish measures of main came after the beginning of the 17th cent. under humane invitation the Christian Albanians were able to breathe freely again. It resulted in the approximation of the two creeds. The lords of Skutari and Ali of Tepedelen relied for the defence of their authority on Christians as much as on Muhammedans. But these events were only the overture to religious equality which was the sure basis secured after the downfall of the Janissaries. Since the overthrow of Ali and Mehmet of the Muhammedans in Albania have been no less liable to taxation than the Christians, the latter, indeed, had also 1832 the advantage in that they were exempted almost without exception from a military service which has proved very severe because of the many wars. The reforms and the taxation both of the Muhammedans and of the Christian mountain-classes who in many respects had hitherto been independent could not be effected all at once in so broken and mountainous a country. The disputes between the authorities and the tribes lasted for decades. Serious revolts on the part of the Muhammedans had to be repressed especially for the years 1835, 1843-1844, and 1847. Further in 1854 there were bloody conflicts with the warlike tribe of the Lower-Vendris in the Montenegrin frontier on the occasion of the collection of the taxes, but these ended with the defeat of the tribe and its submission to the laws of the state.

During the last Russo-Turkish war (1877-1878) the Catholic and orthodox mountain-classes refused, notwithstanding pressing suggestions on the part of the Russians, to take up arms against their sovereign, the Sultan. Russia avenged herself at the Berlin Congress by providing for the conquered Servians and the victorious Montenegrins at Turkey's expense and also obtained for them many Slavic and Albanian districts; viz., Ieranya, Krahovina and Leshkovo for Serbia, the district of the Vaucovi, Bosh, Kishovani and Ishkell for Montenegro. Now for the first time Muhammedans and Christian tribes were seen united in one Albanian league which claimed to represent the unity and integrity of their nationality. Serbia retained her three districts, whilst Montenegro, which possessed also Podgoritz and Antivari, was given in compensation for the loss of her by far the larger part of bishoprican Iustigau. Before the Albanians would submit to this parceling of their country they had to be brought under subjection by campaigns especially undertaken in 1880 and 1881 by Herzog Pasha.

Changes especially in the system of taxation repeatedly led later in serious dissensions with the Porte. In 1903 Shemsi Pascha found great difficulty in restoring peace at Kishova.

(K. STEINHAUS.)

ARPA (r.), barley, barley-corn, n. weight = $\frac{1}{2}$ *Hakke* (q. v.).

ARPAKĀ, a term, tech. from the age of Feudalism in Turkey, denotes properly "barley-money". There was understood by it an extrajudicial allowance ~~to~~ as a despoiling official, really for the purpose of despoiling the ~~owner~~ of fodder. In the horse he was required to keep. In ancient times there were no actual investments with field under the name Arpakā, and an Arpakā amounted at 1999 *Alde* (cf. *Kozi Beg*, Constantinople 1303, p. 17 = *Zihrak* d. *Dinick* *Arpakā*, *Geitlik*, xi. 338). This custom was departed from later. Persons already invested with a ~~field~~ could ~~invest~~ a second as Arpakā ~~in~~ the course of their income. And thus it could be given not only to *Sipahi* but also to "Lanat". Cf. *Tischendorf*, *Das Lehensrecht in den westl. Staaten* (Leipzig, 1873), p. 126. N. 23 and *Belin* in *Le Journal Asiat.*, Série 2, iv. 493, N. 4. (F. GIERKE.)

'ARRĀDA (A.), a kind of *Saltilia*, the same indeed as was called by the Romans *Onagret*. It is really a loan-word from the Aramaic, though *Franchet* has not accepted it.

ARRĀDJĀN, town in Fārs (Persia). According to the Arabic authors it was founded by the Sassanid king, Kāwādī i. (485, 490—531), who settled there the prisoners of war from Amd (Miyānkahr) and Maysānāh, and gave to the new settlement the official name *Wab Amd-i Kāwādī* = "Good (or better) Amd of Kāwādī", run together ~~and~~ established into *Wamkādī* or (usually simply) *Amd-i Kāwādī* (thus would Marquart errand in *Tahiri*, i. 587, alt.; 588, 2). Some Arabic writers have erroneously given to Arrādjān the name *Abarkāwādī*, which was borne by a district and a town on the western frontier of Amd-i Kāwādī (q. v.); see also *supra*, at *ABARKĀWĀD* in our case, the name which is in common use, Arrādjān, from an older town which existed before the new one founded by Kāwādī.

In the Arabic medieval age Arrādjān was a very frequently mentioned frontier-town of Fārs against Amd-i Kāwādī, and down to the end of the vii. (viii.) cent. was the capital of the most westerly of the five provinces of Fārs; a part of the province of Arrādjān belonged earlier not to Fārs but to Khuzistān (cf. *the Fakhri*, p. 196, 1, *Marquart*, p. 421, 2). Arab geographers describe Arrādjān as a large place with excellent gardens, which manufactured much soap, grew great quantities of corn, possessed numerous date- and olive plantations, and was considered to have one of the bestliest situations of the "hot land" (*Qarnak*). The rise of the Abbasids portended its decline: for they seized possession of several strongholds on the neighbouring hills and from there made frequent plundering raids on the town and its adjacent district, and finally took it in the vii. (viii.) cent. Arrādjān never recovered from the horrors of this conquest. The inhabitants emigrated mostly to the neighbouring town, Bihlān, which succeeded Arrādjān as capital of the province.

According to the Arab geographers Arrādjān lay on the road leading from Shirāz to Isfāh

(Babylon), 37 miles distant from Shirāz and 504 al-Mihrāz (or, al-Mihrāz, q. v.), and a day's journey from the Persian Gulf; it was situated on the river Tāh, which here formed the boundary between Fārs and al-Mihrāz. G. de Bode has discovered the ruins of Arrādjān; they lie a little under 31° 40' N. lat. and 50½° E. long. (Greenw.). The site is called in day Arrādjān of Arrāhān; Mustawfī shows that the latter (Arrāhān or Arrāhān) was the form in popular use at the beginning of the vii. (viii.) cent. The Tāh, the modern Ab-i Kāwādī, was then called after it, and still is occasionally (cf. F. Schwarz, *Iran im Mittelalter nach den arab. Geogr.*, i. 6, N. 1), Ab-i Arrāhān (cf. 'Abi b. Yāzī's *Zafar-Nāma*, Bibl. Indica, i. 600). The site of the ruins, according to the communications of their latest visitor (Hersfeld), is a good hour to the East of Bihlān, Behbān, pronounced Behlān, on a canal leading out of the Ab-i Kāwādī, and forms an almost rectangular plain of 3030 X 2620 ft. close by the foot of the Kūh-i Behbān. In a gorge in the *Wādī* bitumen (*Mūsiyā*) is found, which is used as a precious remedy, a fact previously mentioned by Kāwādī (ib. 94, 160). Close to Arrādjān two famous bridges whose ruins still exist led across the Tāh in the middle Ages.

'ARRĀP (A.), 1907, one who can discover what has been hidden or stolen. Cf. Holscher, *Abhandlungen zur arab. Philologie*, i. 43 N.

ARRĀN, frequently written al-Mān, — Arabic name for ancient Albania (Armenian *Armenia*); later Greek writers also call the country Arriania instead of Albania, and the people Arriania (or *Armenia*); according to Marquart (*Erkenntnis*, p. 117) these terms as well as the later Arabic name of the country are to be traced back to the Persian form of the name Arān. As in ancient times under the name Arān as under the name Arvan originally the whole region from Derbend to North-East to Tiflis in the West and the Araxes in the South and South-West was comprised (cf. *Epiphani*, vii. de *Geogr.*, p. 190). Later writers denote by the name "Arān" merely the land "between Shirāz and Agshadādjān" (thus Yāqūt, ii. 131, 3) or "from the bank of the Araxes to the Kura, between the two rivers" (thus Hamd Allah Kāwādī in Schefer, *Synopsis Nāma*, Supplement, p. 206). The towns of Parth (among the Arabs, Bardha's), on the Taurus (cf. Yāqūt, i. 560, 2; *Thuridh*), but far from where it discharged into the Kura, which in the vi. cent. A. D. had taken the place of the ancient capital Kāwādī (cf. *Thuridh* Chabān, in *Thuridh* Chabān, among the Arabs *Kāwādī*) is described also by

the Arabs as the capital of Arān and the largest town in the whole of Caucasia. In the 14. (15.) cent. Arān¹ i. e. Albanian, was still spoken in the district around Bardha's (cf. Iskhak, ed. de Goeje, p. 192, 1). Albanian Christianity had not yet been finally driven out of Albania by Islam; according to Vahaknēs (ed. de Goeje, p. 376, 1-2) Christians formed the majority of the population in the town of Shāhrvān (now in ruins about 15 m. south-east of the modern Kāhā) and Shāhā (now Nakhā). Nor had the Albanian Church surrendered her claims to independence of the Armenian Mother-Church.

Arān was conquered in the time of Qubāzā (644-656 A. D.) by 𐭠𐭣𐭥𐭥𐭥 the Rābī' al-Dhūl, but was frequently punished later by the Khazars. The oldest Arabic coins stamped in Arān date from the year 700 (708-709) 𐭠𐭣𐭥𐭥𐭥 country was united with the other Arān possessions in Caucasia under one governor, Armenia (Armīniya) being the name usually given to the district so united although the governors resided mostly in Shāhrvān as the largest town. The ancient dynasty of the Albanian kings had by then been long extinguished; the Persian house of the Mīhrān, which 𐭠𐭣𐭥𐭥𐭥 been established here towards the end of 𐭠𐭣𐭥𐭥𐭥 cent. A. D. and 𐭠𐭣𐭥𐭥𐭥 accepted Christianity some decades later, appears to have ruled only a part of the land. In the Arabic period the sphere of these princes, who bore the Persian title Isfahānī, was distinguished from Shīrwān (written by the Arabs also Shīrwān, by the Persians later usually Shīrwān), the sphere of the Shīrwānshāh (i. e. the land between the Kura and the Caspian Sea). The Isfahānī is also called 'Bāzīk (i. e. Pātkīn) of Arān' (Vā'izī, ed. Houtsma, II, 562). The last prince of the house of the Mīhrān, Warāz-Pādā, was murdered by his relative Narsēh (Arab. Nārs, 𐭠𐭣𐭥𐭥𐭥) in the year 821-822 A. D. In the reign of Mūsā (833-842 A. D.) 𐭠𐭣𐭥𐭥𐭥 governor Vahān was routed by Sāhī Ibn Sa'nā, who had taken possession of Arān (Vā'izī, II, 579, Bāzīkīrī, ed. de Goeje, p. 281); this same Sāhī, however, some after (823 = 837-842) performed a great 𐭠𐭣𐭥𐭥𐭥 to the Arab government by surrendering Bāzīk, and in return was confirmed as Bāzīk by the Caliph (Fakhrī, ed. de Goeje, III, 1232). In the history of Albania by Moazz Kāzankīrī (Kāzankīrī, by Pātkīrī, 𐭠𐭣𐭥𐭥𐭥 Petersburg, 1861, p. 106) Sāhī is designated as Isfahānī (Arm. Erasmahhik).

Mar'ashī, II, 63) tells us that in his time, therefore shortly before 330 = 943-944 the Isfahānī Muhammad Ibn Yāsīd made himself master of the land of Shīrwān after the death of the Shīrwānshāh 'Alī ibn al-Mulūzūn, and took the title of Shīrwānshāh; this same Muhammad b. Yāsīd on the death of his brother-in-law or his son-in-law (Sāhī) 'Abd Allāh (according to the Paris Edition; some MSS. have 'Abd al-Mallik; according to the Cologne 𐭠𐭣𐭥𐭥𐭥 from the Muhammad ruled in Derbend in the year 330 = 941-942) Ibn Hishām, Prince of Derbend, annexed this town to his province (Mar'ashī, II, 5). In this way the parts of ancient Albania would have been politically reunited; but Mar'ashī's information is not confirmed from any other source. Ibn Hawqāl (ed. de Goeje, pp. 230, 234) mentions a Shīrwānshāh Muhammad Ibn Ahmad al-Azī, contemporary of the ruler of Adharbaydān Murshān Ibn Muhammad (died 346 = 957-958), but he

also has no mention elsewhere; how far his province extended towards the West is not stated by Ibn Hawqāl. During the following centuries Arān remained politically separate from Shīrwān and was ruled by a dynasty of Kurdish origin, the Shāhshāhī (Shāh Shāhshāhī). The capital of the country at that time was Gāndīk (the modern Julfa-Isfahān); the old capital Bardha's had had fearful punishment inflicted by the Russians in the year 334 = 943-944 and could not recover from the consequences; Vahān describes 𐭠𐭣𐭥𐭥𐭥 as an unimportant village. On the extinction of the little Shāhshāhī (not even mentioned by Ibn al-Athīr) dynasty of the Shāhshāhī Arān was immediately annexed to Adharbaydān and has since had no ruling-house of its own; as in Adharbaydān, Shīrwān and Derbend the population has since the time of the Seljuks gradually grown Turkish; since the period of the Mongols the southern portion of the country has been usually designated by the Turkish name Karabāgh. By that time 𐭠𐭣𐭥𐭥𐭥 was retained really only as a literary tradition.

For the later names of the country see JANJA.

Ver. der Wiss. zu Göttingen, phil.-hist. Klasse, N. F., vol. III, No. 2), p. 116 ff. seq.; and Österreichische und ungarische Reiseführer (Leipzig, 1903) p. 432 ff. seq.

(W. DAEHLING)

ARSENAL, a word adopted by the European languages from the Arabic *dar al-ṣun'a* (i. e. *ḥaṣṣa* under *ḥarṣa*, Dary-Engelmann, *Glossar der arabischen Sprache*, II, p. 205 ff. seq.).

ARSH (A.) denotes in the Muslim Books of Law 𐭠𐭣𐭥𐭥𐭥 compensation to be paid for wounds or injuries; its amount is accurately determined for any given 𐭠𐭣𐭥𐭥𐭥 the injuries be of such a nature as to leave retaliation possible, often the full blood-money for murder (*ḍiyā*) must be paid, in other cases only a fixed part of it. Cf. *ḥṣā* and *ḥṣāṣa*.

Bibliography: The chapter on "Blood-money and compensation for injuries inflicted" in the Books of Fikḥ; K. Sāṭim, *Maṣṣam. Fikḥi wa-sharḥiyyah* (Lahore, pp. 728, 729). (TH. W. JERNSTEDT.)

ARSH, throne (see *RUḤ*).

ARSHIN (Arshīn) (r.), ell.

ARSLĀN (r.), lion, also frequently appears as a Turkish proper-name.

ARSLĀN is Saṣṣīḥ the oldest son of Seldjūk, the ancestor of the Seldjūqs, and appears in the identical with Isḥāq, who in other sources is named as such. Sometimes the name Isḥāq precedes that of Arslān, this name however appears also in connection with another son Mūsā in the part of Rāshīd's history which has been preserved to us neither the one nor the other is mentioned. In the biblical names of Seldjūk's sons, Isḥāq, Mūsā, Mūsā and Yūsuf; the latter is not mentioned in all the sources; there seems to be retained a reminiscence of the Circassian which once was widespread among the Turkish tribes in Semirachien, a fact of which the Syro-Neotrian Tomb-inscriptions published by Chwolson bear evidence. Cf. Barthold in the *Zapiski russk. imp. vuz. v. 1881*, Arslān,

1594, p. 15 et seq. According to Muhammadan tradition however Seljuks was a convert to Islam. However that may be, in the beginning of the 11th cent. we find the Seljuks settled in Nih, Bokhara, with Arslan apparently head of the family and having at his disposal a large number of cavalry, dangerous guests, of whom the neighbouring princes would gladly be rid when they could not utilize them against their enemies. When Mahmud the Ghaznavid came in 416 (1025) to Transoxiana he concluded an alliance with the Karakhanid Khidr Khan, and on this occasion the mother of the Seljuks was discussed and Mahmud formed the plan, which was only carried out some years later, about 420 (1029), of capturing Arslan and disbanding his Turkish soldiers. The disorganised remnant then in Khoresan and was kept in check through their captive chief, the plan seemed cleverly conceived; but, as is well known, was fatal in the Ghaznavids, for the Turkish brigands who settled in Khoresan here began robbing and plundering and could not be held in subjection, since they were again and again reinforced by new troops which crossed the Oxus, and had no more for the captive Arslan. He was kept in custody in the fortress of Balkh until his death which probably occurred in the year 427 (1035-1036). Of his two sons, Sulaiman (q. v.), founder of the Seljuks of Asia Minor, is the better known.

Bibliography. Ibn al-Athir (ed. Torab.), ii, 266, 323; Mirhond, *Historia Seljukiana* (ed. Vallart), ii, 17 et seq.; *Journal of the Royal Asiatic Soc.*, 1880, p. 587; Barthold, *Turkistan as spoken amongst the Seljuks*, i, 283 et seq.

ARSLAN b. Toghrul b. Muhammad and 'L-Muzafar, Kaka al-Nuayr wa 'L-Khan, the Seljuks, reigned from 555—571 (1160—1175). Arslan was only a year old when his father Toghrul died (528 = 1134), and he was educated with his cousin Malikshah b. Seljukshah. In 540 (1145-1146) by the command of the Sultan Mas'ud both were imprisoned in the fortress of Toket, and only set at liberty again through the Caliph al-Muqtadir (549 = 1154). Arslan succeeded in escaping to his step-father, the powerful Atabeg Ildegh (q. v.), with whose help he ascended the throne after the death of Sulaiman (q. v.) in the year 555 (1160). He had of course to resign all pretension to real power since that was in the hands of Ildegh. When the latter died in 568 (1172) his son and successor Muhammad Pehlwan (q. v.) got rid of the sickly Sultan (571—1178) by poison, as some historians probably rightly state, whilst he recognised the latter's son Toghrul, who was yet a child, as Sultan.

Bibliography. Ibn al-Athir (ed. Torab.), vi, 129 et seq.; *Revue de l'Asie asiat.*, i, 181; *Revue de l'Asie asiat.*, ii, 238 et seq.; Mirhond, *Historia Seljukiana* (ed. Vallart), p. 232 et seq.

ARSLAN ARSHUN, son of the Seljuk Sultan Alp Arslan, on the occasion of his premature death of his brother Malikshah (485 = 1092) he took possession of Merv, Balkh, Tirmidh, Nishapur and other towns of Khoresan, and was allowed at first to hold them in peace by Malikshah's successor, Barkiyaruk. But this friendly relation endured only as long as Malikshah's son of Nishapur al-Mulk, was Wazir. When the latter was dismissed, Barkiyaruk sent another

son Alp Arslan, Karibar, to Khoresan. But he met with little success, and was soon after seized by his brother and strangled by his command (488 = 1095). Arslan Arshun however held sway but a short time, for in the end of the following year (1096) he was killed by one of his slaves.

Bibliography. Ibn al-Athir (ed. Torab.), ii, 178 et seq.; *Revue de l'Asie asiat.*, i, 181; *Revue de l'Asie asiat.*, ii, 238 et seq.; Mirhond, *Historia Seljukiana* (ed. Vallart), i, 134 (1096).

ARSLAN-KHAN, MUHAMMAD b. SULAIMAN, Karakhanid, Prince of Transoxiana. His father Sulaiman Togta, grandson of the "great" Tamghash Khan Ibrahim, had governed the country for a short time about 490 (1097) as vassal of the Sultan Barkiyaruk. On the conquest of Transoxiana by Rukn-Khan (q. v.) of Turkistan the young Prince Muhammad fled to Khoresan; after this Karakhanid had been defeated by the Seljuks Sandjar the Prince was appointed ruler in Samarkand with the title Arslan-Khan (495 = 1102); his daughter was afterwards married to the Sultan Sandjar. Only after a prolonged struggle did he succeed in producing peace in the country; then he had to invoke aid from his son-in-law, who interned the prisoners of the Seljuks (both Turkish prisoners and ecclesiastical dignitaries) in Merv. Arslan-Khan appears to have done a great deal, however, in furthering civilization in the country; in the History of Balkh (Continuation of the *Foruzgar-Narajak*) he is credited with creating in this town and its neighbourhood buildings for the common good. At the same time he procured an army of 12,000 Hamulids, and made frequent expeditions into the land of the "unbelieving Turks". In the closing years of his life he had, owing to a scarcity of employment, to associate his son Nusr, then Alpshah, with him as regent. From these circumstances the sedition movements in the country acquired strength; Sandjar again appeared in the role of peace-maker, but not however, till after he had actually been restored, and consequently was regarded by the prince as a hereditary ally; between his father-in-law and him there were first words, then open war; Samarkand was besieged and taken in Rabi' i. 524 (month began 12 Febr., 1230); the ailing Arslan-Khan was fetched out in a litter to his daughter and carried thence to Balkh, where he died soon after (the year of his death is variously given: 524, 525, also 526) and was buried in Merv in a Madrasa he had himself erected.

for questioning the national tradition which names him as the founder of the science of 'Arud, and attributes to him the collapse of the majority of the metrical termini. Goldziher's proofs (*Die Araber im Abendlande*, *Paläst.*, I, 76 ff., 83, 98; cf. Nöldeke, in the *Wiener Zeitschr. f. d. Kunde d. Morgenl.*, X, 342), that with three exceptions the terminology which was usual later was quite unknown in the earliest period of Islam, and its sudden coming into existence points to the first bloom of Arabic philology as the reason of its origin. Besides the very great honors which al-Khaliq experienced from most Muslims on account of the establishment of his theories, he was much attacked by contemporary and later writers. Al-Aghlāsh "the middle man", in particular, appears to have constituted a rival system, of which the eunuch Mas'ūdānī, which traces back to him, is still preserved. Of the vehement opposition of Abū Ḥabīb (died 193 = 906) to the theory of al-Khaliq details have come down (cf. Ibn Khallikān, trans. of de Slane, II, 578; Mas'ūdī, *Paris Ed.*, vii, 88). Goldziher has collected other scattered material of a similar nature (*Wiener Zeitschr. f. d. Kunde d. Morgenl.*, xvii, 188 ff.). Al-Khaliq's system, however, won the day, and in consequence the circle-theory which traces back to him became authoritative. This circle-theory is the one fundamental mistake in the metrical structure of the Arabs, and has involved them in the complicated system of *Ḍiḡfāt* and *ʿIlāl*. The immediate consequence of the scheme of circles is, that the forms of the several metres which follow it, as rather *ḡḡḡḡ* are derived from it, are considered to be the really primary forms of this metrical type, and the other forms with varying *ʿArāḍ* and *Ḥawāḍir* to be irregularities. But such is not the case, for of the 16 primary metres 11 never appear in the complete primary forms, and the remaining 5 (*Kāmil*, *Kāfiḥ*, *Ḳāḥil*, *Muḥallil*, *Ḍiḡḡḡḡ*) but rarely. This error was carried yet farther. These alleged complete primary forms of the metres were analysed, and 3, or rather 10 feet in all were found to be common to all metres, and these naturally were primary feet. But just as little as in the primary forms of the metres does any guiding significance attach to these alleged primary feet. In order, then, to reconcile the results of the scheme with reality the system of *Ḍiḡfāt* and *ʿIlāl* was invented, and thus the fees which actually appear in the ancient poetry were deduced as irregularities from the alleged primary feet. If the circles had no existence, then there perished the primary forms of the metres and with them the 16 primary feet, and the Arabs would have to enumerate singly the 67 paradigms with their 45 possible feet. This natural differentiation of the metres appeared to them far too diverse, and they created the scheme which finally became more complicated than the reality.

The second fundamental error in the structure of the Arabic metrical system is to be explained by the Arabic-Semitic system of writing. Since only the consonants and not the vowels are expressed in the script, the ordinary notion of a sound as the word-stem in writing, and necessarily, therefore, the notion of the syllable as the union of one or more consonants with vowels having equal phonetic justification. For with the

question of Arabic prosody it is impossible to explain the real elements of any foot, the short and the long syllable. This the Arabs felt, and had to feel, in the construction of a metrical system, but they cleverly avoided themselves of the ingenious combination of moved and quiescent consonants into *Arḥāḥ* and *Ḥawāḍir*, but these are not elements of the foot, since they are composed of long and short syllables. The real elements of the prosody would be, expressed in Arab fashion, the moved consonant (*Ḥ = -*) and the *Ṣaḥāḥ* (*ḡ = -*).

It is due to the concealment of this simple fact that it has not been at once generally recognised that we have to do in the ancient poetry with a quantitative metrical system, whose laws were instinctively followed by the ancient poets in virtue of a finely developed feeling for the length of the syllable, and without al-Khaliq's rules. If, then, the general laws of a quantitative metrical system are applied to the Arabic verse they lead to the same results as the complicated rules of the Arabs. An examination of *Ḍiḡfāt* as possible alterations of Arabic feet shows that four of these can be explained by the law of the equality of certain syllables in the verse which admit a long as well as a short syllable (*Ḍiḡḡḡḡ*, *Ḥawāḍir*, *Ḳāḥil*, *Ḳāfiḥ*); that two exhibit the possible appearance of a "long" in place of two "shorts" (*Ḳāḥil*, *Ḳāfiḥ*); that four kinds exhibit the combination of both possible alterations at one and the same time (*Ḳāḥil*, *Ḳāfiḥ*, *Ḳāḥil*, *Ḳāfiḥ*); and finally *Ḳāḥil* and *Ḳāfiḥ* the possible combination of one of the two "shorts" in *Waḥḍ* and *Kāmil*. Of the *ʿIlāl*, on the other hand, the 9 *ʿIlāl al-Naḥḥ* are explained by the law of catalexis of the last foot, and the 3 *ʿIlāl al-Ziyāda* by the possible addition of a syllable or increasing the length of a long syllable at the end of the verse.

Since both foundations of the native prosody of the Arabs have been proved to be too weak, the whole structure collapses. Individual portions, however, can be saved. We must be grateful above all for this, that in the traditional rules for recitation, viz. the *ḡḡḡḡ* metres enumerated above for the *ḡḡḡḡ* metres, they have provided us with the key to the understanding of the rhythm, for without these would be, as in many Greek songs, constant doubts in regard to the placing of the columns. These *ḡḡḡḡ* metres with their divisions of the rhythm in the verse were certainly the starting-point of their metrical theory, and they were fixed by ear by the Arabs who had the declamation of the metres in view, in order that the characteristic rhythm of the several metres might thus be retained in memory.

The general characteristic of Arabic prosody indicates that the origin of the Arabic art of versification and also of the science of the structure of the verse is not to be sought among the Greeks, as has sometimes been supposed, but in *ancient* phenomena. The Arabs have occasionally advanced theories as the origin of prosody in art, and discussed the camel-drivers' songs, which harmonise with the rhythmical stride of the camel, as the oldest poems. Mas'ūdī (viii, 92) relates that Ibn Kharrābīshah expressed before al-Muʿammiḥ his opinion on the song and made this statement among others, that the *ḡḡḡḡ*, the song of the camel-drivers, existed before the *ḡḡḡḡ* and generally illustrates the beginning of musical

declaration and song. He uses as illustration of the mutual influence of the camel's stride and the song the well-known story of the Beduin, when his arm was broken by the fall of his camel, involuntarily uttered this rhythmical expression of pain, *ya fawḥā, fawḥā* ("Oh my hand!"). We find something similar in the *Ḥikma* (Fing X, 134 we under *Ḥikma*), a Beduin had beaten his servant, who uttered in his pain *ḥabāḥ*, the sound of which affected the camel's gait. From such traditions and the observations of travellers it is obvious that not only has the camel's gait influenced the driver's song, but vice versa the slow or quickened tempo of the marching-song has had an effect on the beast's stride, and still has (Bocher, *Arabisches Liederbuch*, 4. Ed. 1904, p. 131). Corresponding to the iambic alternation in the lifting and lowering of the camel's feet there arose as the oldest verse an iambic alternation of long *ḥabāḥ* short, i.e. *Radīx*. Through tradition and the work of scholars it has been established as the oldest metre. Its age may be observed from the fact that it occupies a middle position between rhymed prose, *Sadī*, and the more artistic metres, and thus seems to be the connecting link. The view of Grimm (*Oriental. Litt. Zeit.*, i. 398 ff 1877), that *Radīx* is the latest and not the oldest metre, since iambic series stand at the end of a development and always belong to the later formations, has *ḥabāḥ* with no support and remains unproved. It is impossible to demonstrate in as vivid a fashion the origin of the more perfect and richer metres, for even in the oldest poets they were found already fully developed. And as the hypothesis of Jacob must also be abandoned, which derives the various metres from the measure in the various gait of the camel on the journey. Many other phenomena and noises have noticeably influenced the rise of metres, Böhmer, who derives all metre ultimately from the rhythmical *ḥabāḥ* in work, distinguishes three primary modes of motion of the workman, and though he does not pretend to have solved all the problems, thus arrives at the Iamb and Trochee, i.e. the alternation of a soft and a firm tread, the Spandee, i.e. the metre in beating, *ḥabāḥ* the Dactyl or rather the Anapaest, i.e. the metre in hammering. To the first form would correspond Arab tradition with its derivation of *Radīx* from the camel's stride, and the well-known account of al-Khāḍī's invention of his metrical system would approximate to the others. It is said (Hart, ed. de Sacy, p. 151) that he was stimulated to lay down a system by observing in the course of a *ḥabāḥ* through the street of the followers in *Ḥaḥā* the different *ḥabāḥ* on the rebound of the smith's hammers (*ḥabāḥ, ḥabāḥ, ḥabāḥ*). On the other hand, it is also recorded that Mutadrik, when all his feet consist of Spandee, is called *ḥabāḥ al-Nāḥīya*, i.e. "the pounding of the hammer".

Further development brought this result that the ancient *Radīx*, the real "mama populsire", had quite early little value, and was only employed in a limited *ḥabāḥ* when with artistic poetry more perfect and varied metres were developed, which in contrast to the former were called *ḥabāḥ*. Freytag (p. 15 N.) and Jambel (p. 190) have compiled statistics of the occurrence of the various metres in the ancient poetry and have reached almost the like results. *Tawīl* is by far the *ḥabāḥ* frequently employed, then *Wāḥ*,

Kamīl and *Ḥabāḥ*; *Mudḥarī*, *Mudḥarī*, *Mudḥarī* and *Mudḥarī* are entirely wanting. Observation of this led to the really correct conjecture, that these metres had no actual existence, and that they were derived by al-Khāḍī from the fourth circle simply for the sake of symmetry; whilst Mutadrik, the metre of al-Khāḍī, also given in *ḥabāḥ* to *ḥabāḥ*.

Ewald has the merit of having set up an entirely new system of Arabic prosody, and thereby, as Wellhausen rightly says (*Compendium*, I. 394), takes equal rank with al-Khāḍī. Under impulse from the pioneer-work of the classical philologist, Christian Hermann, he set aside the native traditional theory, and began to apply the system of the classical quantitative prosody to Arabic verse, and published his results in the short work *De metris arabicis antiquioribus libri duo* (Brunswick, 1825). Freytag having shortly thereafter used his *Darstellung der arabischen Metrik* (Ronn, 1830), Ewald in 1833 again dealt with the subject in the Appendix to his *Grammatica critica linguae arabicae* (II, 323-343). In his criticism of Freytag's book Ewald (*Abhandlungen zur wissenschaftl. Arab. Lit.*, Stuttgart, 1832, I. 27-59) emphasizes very sharply and *ḥabāḥ* equally that this book marks no progress in the understanding of the nature of Arabic prosody, since Freytag has entirely followed the system of the native grammarians. He himself lays down the thesis, that the structure of the Arabic verse and all its variations from the norm are to be explained by a specific rhythm. The treatment and development of this thesis, however, is essentially different in detail in his two treatises. Whilst he asserts in the former that Arabic prosody knows only iambic, agal metres, which proceed from short syllables to long, he modifies this statement considerably in the Appendix to his *Grammatica*. Consequently the two theories laid down by Ewald regarding the construction of the 16 metres from the various feet differ very much from each other. Whilst there was for him at first only the one iambic rhythm, in the Appendix to his *Grammatica* he distinguishes 3 kinds (Genus jambicum, Genus antispasticum, Genus amphibrachicum, Genus anapaesticum, Genus iambicum), under which he subsumes the 16 metres. The first system, in consequence of the tracing all metres back to a single rhythm, *ḥabāḥ* collapse; the second is on surer ground, even if it is not tenable in this form. Ewald's mistake lies in this, that instead of applying only the principles of quantitative prosody to Arabic verse, he has taken over in its entirety Greek prosody with all its characteristic feet and the rhythmical complexes peculiar to it. In this he pays no heed to the fact that the Arabs themselves have handed down in the monosyllabic words for the verses the best and only method for placing the columns of the *ḥabāḥ*. Whilst Ewald at first, thanks to his iambic theory, left this fact out of account and made a.g. *Tawīl* (*ḥabāḥ* *ḥabāḥ*) equivalent to the following metrical complex (*ḥabāḥ* *ḥabāḥ* *ḥabāḥ*), he gave more heed later to native tradition. Even in his second treatise he is far from being correct, since he did not accept the traditional rhythmical groups of the Arabs in their original forms, but pressed into them Greek feet alien to them in nature. Through an amphibrach, an anapaest, or other specially Greek feet Arabic verses can never

be entirely explained. Westphal, who in dealing with prosody in general (Berlin, 1893), deals also (p. 473 *et seq.*) with the prosody of the Arabs, but confines himself mainly to repeating the rules laid down by Buhārī, advances the unproved and certainly false hypothesis, ~~that~~ ~~the~~ ~~whole~~ ~~metrical~~ system of the Arabs was borrowed from the Greek grammarians, and ~~now~~ ~~even~~ ~~the~~ ~~traces~~ of an Arabic translation of a metrical compendium:

Guyard in his *Nouvelle théorie de la versification arabe* subjected Arabic prosody to an entirely new treatment (*Journal asiatique*, ser. 7, vi. 413 et seq.; viii. 101 et seq.; 285 et seq.; x. 97 et seq.). Proceeding from the close connection in general between speech and music he came to the decision not to be content with the mere distinction of "long" and "short", but also to take the various long syllables and to fit them in musical notes. The division of the verses handed down in the Arabic manuscripts, verses he regarded as correct, but through measuring them according to musical principles he obtained the result, that a *temps fort* and a *temps faible* must alternate. Apparent contradictions he settled either by declaring a *temps fort* to be weak (as e. g. the syllable *ya*, *se* or *mar* in the feet *mafā'ila*, *fā'ilun*, *mafā'ilun*) or by marking a penultimate (*shams*), which was *weak* graphically expressed however, but which played the rôle of a *temps faible*, e. g. after the *in* in *fā'ilun* or between the two feet immediately following one another *fā'ilun fā'ilun*. Further alterations are possible through the law of the double "time" in every Arabic foot, and so he can eventually explain the 16 *qasidas* with all their variations as corresponding to the musical rhythm; only the *qasida* *mafā'ilun* does he dispose of as imaginary, because incompatible with the principles he sketches. He had not, however, by this means explained the metrical verse, but turned it into a musical one. D. Ginsburg seems to have obtained similar results (*Revue asiatique*, ser. 8, viii. 103—146). The inadequacy of Guyard's system has been emphasized on many sides, especially by Hartmann. To proceed to explain a metrical verse by purely musical principles is an arbitrary act, since in this way one could divide any verse into whatever metrical division one pleased, and explain not only the Arabic but every quantitative metrical system. We owe, however, to Guyard the discovery of a primary law of Arabic prosody, the law of Diodoty, with a chief and a secondary accent, whose significance has been shown in extreme, especially by Hartmann.

Hartmann by avoiding the errors of Fowell and Geyer, in that he would ~~use~~ apply the minimal theory of the system in the verse, but returned to the traditional division of the verses, thereby laid the foundation for the structure of a system of Arabic prosody. In his work *Al-musammah wa al-Asghar* (Giesen, 1824) he endeavored to discover the origin of the simplest verse, the alternation of the accented and the unaccented syllable, in the ~~ancient~~ mode of advancing her feet as pairs, and to establish the rule of the chief and the secondary tone in Arabic verse. Accordingly he distinguished in his Preface [*Actus de nov. versibus innotat. de Orientis et Occidentis*. Soci. III, p. 33—36] a type of verse for Marathānāh: the flexed-type (مفعول فاعول), i. e. a diction with a constant three syllable in the first place.

and the Rhythmic-type (*unstressed* — — — — —), i. e. a dihem with 1 constant short syllable in the third place, corresponding to these, the Rhythmic-type (*stressed* — — — — —), i. e. a dihem with an obligatory short for the first depression and a Macchiavelli-type (— — — — —) with the short for the second depression. This established he explains the more complicated metres; his theory, however, is far from being fully developed; its importance lies in its setting of 4 main types with their variations, and the consequent notes on the possible combinations of feet; his value may also be observed in this that it can be applied to the more recent poetic forms.

The Arabs, when, have devoted their attention only to the poetry of the classical poetry: in explanation of its rhetorical structure they have developed the theory of *ʿArṣ*, i. e. primarily prosody, also developed the science of rhyme, which, however, will be mentioned here only to explain the strophical construction of the poem. On the other hand, *ḥikm*-poetry (*ḥikm*), which is used in the Korʿn, arabian literature, the Maknāl and frequently elsewhere, and a strophic structure similar to the ancient-Hebrew, which D. H. Müller discovered in the Korʿn, do not fit into the frame of prosody in its stricter sense. The coupling of the same rhyme at the end of every second hemistich throughout the poem is the primary principle of the *ḥikm*, i. e. the classical poetry, and the cause of its utter lack of strophic arrangement. The earliest poem for the theories of the Arab grammarians is the *Nasīb*, a poem containing at least 7 complete verse: *ḥam*, in one of the 16 exponential metres unchanging the same rhyme throughout, and having a mid-rhyme in the first verse, but so-called *ḥam*, if the *ḥam* be wanting, the whole is only a *ḥam* (a fragment). Groups with a smaller number of verses are called *ḥam* (2 or 3 *ḥam* ranged together are termed *ḥam*, a 3 or 4 complete verse *ḥam*).

In sharpest contrast to this context, unadorned repetition of the rhymes stand the ~~more~~ recent poetic forms of the Arabs, which are distinguished from the ancient poetry through their use of the colloquial and a number of new motifs, but especially by the grouping of the verses into strophes. This change came about slowly, however, and the various stages are unknown to us. It was stippled by the Arab theorists who prohibited everything which fell without the scheme of rhymical feet and stanzas and so forbade many poets, perhaps even corrected their writings. Even if in quite early times Abū Tammām (Abū b. Aws (died 337 = 846) disregarded the prohibition and used a new metric (Proleg. *op. cit.* p. 10 N.; p. 443), and even if Abū l-'Arabī justified himself that he was greater than rules of prosody (Aghar, III, 131), and many such verses pointing ridicule on the metrical theories were in circulation (Proleg. p. 7), yet correct new poetic forms are only of late appearance. On the other hand, it is impossible to suppose that the Arabs allowed themselves to be for centuries completely fettered by the academic laws, and that there existed no folk-songs or poems in the colloquial (Lahz). The song which the Mevlā sang at the digging of the trench around Mevlā in the 5th year of the Hijra (de Goeje in *Kutub der Gezworen*, II 7, p. 141) was certainly not entirely in the *ṭawīl*, and of the elegy

of the slave-girl of Laila for al-Barmaki, the earliest known Mawālī, the contrary is expressly mentioned. Only to late writers however do we owe more accurate information about the existence of many poetic forms. Ibn Khaldūn, Ibn al-Jayr and others speak of 7 kinds of strophe, which are known by the name of the *Sufi's Fakhm*, and have been treated of by Gies in his by no means exhaustive monograph (Leipzig, *DMG* 1877). The most important of them are Muwāḥḥah, which Hartmann has given special treatment on the basis of abundant material (*Semitist. Studien*, No. 13, 14; Weimar, 1896-1897), Zadjal, Dihāl, which was borrowed from Persian poetry, and Mawālī. *Mawālī* is in general use today as the name of the folk-song; the other three, *Ras wa-Jas*, *al-Kāma* and *al-Hināh* (rather *al-Salsala*) scarcely exist now, and have importance for the scholar only. It is certain that in the *Sufi* composed in the classical tongue, the *ḥamz*, the law that the same rhyme must be preserved throughout was early violated, and the strophic groups were distinguished. In this transition-period the long verse with its two characteristic hemistichs, the one rhymatical and the second rhymed, had to go. The verse in the folk-poetry is a unit in itself, and has approximately the length of a classical hemistich. If we take several of these hemistichs of the same metre, and see that they have the same end-rhyme, and then set at the end of this strophic group a verse with another rhyme, which, however, is always repeated at the end of each strophe as principle rhyme and thus holds the whole poem together as a unit, we get the simple and exceedingly popular poetic form *Tamīm* (the stringing of pearls). Each strophic group consists of not less than three not more than ten such short verses; and as we obtain 8 kinds of *Masnūnāt* — poems, which are named, according to the number of the verses, *ṣaḥb al-lah*, *ṣaḥb al-lah*, *ṣaḥb al-lah*, *ṣaḥb al-lah*, *ṣaḥb al-lah*, *ṣaḥb al-lah*, *ṣaḥb al-lah*, *ṣaḥb al-lah*; the favourite, and indeed the oldest of these strophes is *Muḥabba* (aax, bbb); tradition, however, places a *ṣaḥb al-lah* as early as the 11. cent. of the Hijra (Hartmann, *Der Masnūnāt*, p. 112 et seq.). Among the Persians we find all the varieties of *Masnūnāt*; in Arabic poetry, however, mostly the odd numbers only are chosen as the verses which shall have the separate rhyme, perhaps thereby to preserve outwardly the *Kasida*-form of the whole, *Tamīm* as a poetic form in the classical tongue and in the 16 canonical metres being generally regarded as *ḥamz*.

It is otherwise with *Muḥabba*, which Hartmann rightly derives from *Masnūnāt* as a further development. *Muḥabba* consists of 2-10 strophes in different metre having the same or different separate rhymes, which are held together as by a glue (*ḥamz*) by the principle rhyme, which rhymes in the introductory strophe and must be repeated at the end of each strophe. These portions of the strophes (*Dawr* or *ḥamz*) which do not share in the common rhyme are called *ḥamz*, and those with the common rhyme *ḥamz*; an introductory strophe (*Mawālī*) and a final strophe (*ḥamz*) with a common rhyme have special names. But, in sharp contrast to *Masnūnāt*, the *ḥamz* (*ḥamz*) of the two parts of each strophe of *Muḥabba* consist not of one member but of several (*ḥamz*) whose number, rhyme and metre must be the same in every

strophe. Further it is important to notice that not only the 16 canonical but also a large number of new metres, some of which are difficult to scan, are employed, whose number, according to Hartmann, amounts to about 200. According to the common tradition found in Ibn Khaldūn, Saʿī al-Dīn al-Jayr, etc. the classical tongue, the *ḥamz*, must be fixed in *Muḥabba*, the *ḥamz* in the last verses only of the last strophe which show the common rhyme. In contrast to this *Zadjal*, which in other respects is constructed like *Muḥabba*, is composed entirely in the colloquial. While *Muḥabba* following the lead of Ibn Khaldūn, commonly hold *Muḥabba* to be the older and *Zadjal* the later and vulgar imitation of it, Hartmann sees in *Muḥabba* an artistic composition, a *ḥamz*, a refinement of the original and older folk-song, the *Zadjal*, and in the *ḥamz* the *ḥamz*-verses in the *ḥamz* still indicate its origin. The poems which stand midway between these two poetic forms and show the *ḥamz* as well as the colloquial tongue are called *Masnūnāt*. Spain is the traditional home of both these poetic forms, the *ḥamz* (died 555 = 1160) being one of the first to employ *Zadjal* and the most famous later development has brought it to pass, *ḥamz* from about 1000 (11. cent.) only poets of the *ḥamz* have cultivated these poetic forms, and that very little is composed to them at the present time outside Egypt. There were also other alterations. The modern *Zadjal* is scarce sung any more by professional singers, but is recited and has become an entirely literary form, the most frequent metre employed in it being a kind of *Masnūnāt* (*ḥamz*). On the other hand the notion of *Muḥabba* has been much enlarged and is given to any song sung in the vernacular, accordingly *Masnūnāt*, representing an earlier transition-stage between these two, has quite disappeared.

There exist besides these in the modern Islamic world many and very varied kinds of folk-songs proper, a knowledge of which has only been acquired in the last two decades through study of the songs collected by travellers. But a comprehensive treatise on the metres of these songs and on the laws of prosody observed in them, as also of their strophic structure, has not yet been written; we can only refer therefore to some, mostly brief, metrical introductions to the publications of these songs:

Sachau, *Arabische Volkslieder aus Mesopotamien* (Berlin, 1889), p. 2 et seq. 17 et seq. 43 et seq.; Steiner, *Arabische Märchen und Gedichte* (Leipzig, 1893), i, xii-217 and *Tripolitank-lit. (antike Bräutendieder)* (Leipzig, 1901), p. xiv et seq.; Meisner, *Neuzeitliche Gedichte aus dem Iraq*, *Abh. d. Sem. f. Or. Spr.* (Berlin), vi, 1 et seq.; Mergal, *Les dialectes arabis parlés à Tadmor* (Paris, 1902), p. 203 et seq.

It is impossible to enumerate all the known kinds of songs; only the best-known, constantly recurring groups will be mentioned. Besides the quatrains composed in the classical tongue, the *ḥamz* *ḥamz* *ḥamz*, there are three forms of popular quatrains:

1. The origin of *ḥamz* (or, more accurately, the *ḥamz* *ḥamz*) is to be sought far in the past; it is current to day only in Syria, Palestine and Mesopotamia. Of the *ḥamz* short lines the first three have the same rhyme, the fourth rhymes

with the syllable *ʾa* of the mnemonic-word 'Aḥḥa, and is prolonged in singing, and frequently is simply added without any sense. The syllable *ʾa* is rarer at the end of the fourth short verse. Mervane records for an 'Aḥḥa-verse of this kind the name *Laḥi*. The metre is a sort of *Wāḥi* (— — — — — | — — — — —).

2. 'Aḥḥi, called *Maḥḥi* in Egypt is current in Africa; its second and fourth verse iambic rhythm, the first and third du as frequently in metre, which according to Stamma is iambic, is to be classed as *Maḥḥi*. 'Aḥḥi-verse with more than 4 verses are properly called 'Aḥḥi *Zāid*.

3. The last and widest spread of these popular quantities is *Mawāl*, which is to be found from Mesopotamia to Morocco and has, in contrast to 'Aḥḥa, its home in the towns. Accordingly it admits both the correct and the colloquial tongue. The metre of *Mawāl* is an abbreviated *Baḥi*; it usually contains four, five or seven lines in the quatrain — four short lines rhyme or only the first two with the fourth. The form with five lines has special vogue in Egypt and in Tlemcen; its fourth short verse is unrhymed; according to tradition it is also styled the *Shayḥi Mawāl* (*al-shayḥ*), in Tlemcen it is called *Shayḥi*. It is interesting to note that the *Khaldīn* mention the latter name as a sub-species of *Mawāl*, that the *Baḥi*-edition however of the *Maḥḥi* inserted in place of the strophic form called *al-Kāmil*. Only the so-called *Mawāl* is commonly styled the *Baḥi* or *Nirman-Mawāl*; Mervane records from 'Irāq the name *Zahri* (= *zahr*) for this form; it contains a double rhyme (a a b b a).

Besides these vulgar folk-songs the ancient *ḥamī* of artistic poetry has been preserved down to the present time, the *Kaḥḥa* of the Beduins. The most abundant material is now contained in Socin's *Diwan aus Contrabanden* (Leipzig, 1901, I. 1—3), in which the older literature is also collected (Vol. III. 1 et seq.). At the present day the *Kaḥḥa* is cultivated by Beduins almost exclusively, and if its name has a wider extension — *ḥamī* — *ḥamī*, being sometimes given even to quite short poems and to modern strophic forms, yet most is to be regarded 'in content, form and language as in direct descent from the ancient-Arabic art of versification', besides *Kaḥḥa* with a single rhyme throughout one very often meets others in which now the first and now the second hemistich rhyme with each other. The metre of the modern Beduin-*Kaḥḥa* is usually a *Tawīl* with the first syllable wanting (not *Mansurī*); *Mawāl*, *Baḥi*, *Raḥḥa* and *Wāḥi* are also still in use. Outside the artistic poetry *Tawīl* is very rare, but is still found in almost all the *Kaḥḥa* in the vernacular which occur in the *Romān* of Hāḥi; *Wāḥi* is similarly employed in the *Romān* of Zīr. Of the ancient metres *Mawāl*, *Kaḥḥi*, *Maḥḥi* and *Maḥḥi* are quite wanting in the folk-poetry.

In connection with the rich collections of material of Arab folk-songs the question of the nature of modern Arabic prosody has been frequently raised and been variously answered. While, in the first place, Stamma believed that in some pieces the rhythm of the verse is determined only by the accent, Sachs and Socin have firmly held by the principle of a quantitative prosody for the later poetry as well. This principle was for the first time seriously questioned through Landsberg's publications and researches; he demon-

strated that in the song of the modern Arabs the metrical form becomes apparent only when they are sung, since it is only when that the necessary helping-vowels are inserted; thus these being wanting when the song is declaimed there can be no question of metre. From this he concluded — somewhat too radically — the inseparability of verse and melody, and declared metre to be primary, and metrical form secondary, is practice however he applied the old quantitative metres as being quite sufficient. His investigations have thrown light on the question of the metres in which Arabic poetry was conveyed in the literature, but they have not overthrown the views entertained as to their metrical character. The helping-vowels, which are mostly remains of the old *Tawīl*, must be wanting in the folk-poetry when this is spoken, and for this reason, that they are also wanting in the vernacular; but the circumstance that they must appear immediately and wishes to introduce a metre, either theoretically or through singing, that they are metrical necessary elements of the verse, which in this its complete form would in the main almost exactly coincide with the classical *Baḥi* or *Shayḥi*. Whether the ordinary Arab brings any intelligence of rhythm in a verse spoken in the *Lahn* and inserts the necessary helping-vowels or not, is a matter of indifference for the point in question, and hence the employment of most investigators and travellers about the defective rhythmical and metrical intelligence of the modern Arabs is not generally valid, especially as the contradictory accounts do not show that this intelligence is entirely a question of the individual. Some, e. g. assert that the Arabs pronounce their poems very rhythmically when reciting them with the requisite quickness, but not when they dictate them (cf. Zeller, *Deutsch. Marginal. Gesellsch.* I. 418); but none deny to the poet himself a consciousness existing after metre whenever he would create a rhythmically ordered verse. In these folk-songs we have quite irrespective of singing and the melody, in distinguish between the pieces in the form in which they are dictated and the metrical enunciation a poet may have made in them. We will then arrive with Hartmann at the conclusion, that the original metrical form can be recognized in the majority of cases, but only by those who are familiar with the characteristic treatment of the syllables by the vulgar poetry (cf. Zeller, *Deutsch. Marginal. Gesellsch.* II. 178). Hence the principle of a quantitative prosody appears to be established also for the later classical poetry and for the modern folk-poetry in the songs and strophic forms which have been treated above. Indeed certain rules of quantity can be laid down especially for the vulgar poetry, which hitherto have been dealt with incidentally only by Stamma (*Teip-tun. Beduinische Lieder*, p. 22 et seq.) and Kien (*Mohammed's Fikar-entwürfe* Leipzig, 1898, p. 23—26, 48), e. g. the ambiguity of the final vowels, the possible solution of any "long" into two "shorts", that although are not counted as such, etc.

If it were desired to derive theoretically from the scheme an accentuating metre in the vulgar poetry, it would be necessary to begin with the verse in which the syllables are counted. In case the transition would be constituted of

such metres as e.g. the four-syllabled *Mutadarrik*, which as *Qasf al-Nafis* may appear purely in the form of spondee, by the catenation of each metre an accentuating metre could come about through the interpretation of "shorts". By-metres poetry could be added as an analogy, where in late times the verses were still constructed regularly according to the quantity, but were really accentuating. Further, such a view would be strengthened by observing that the ancient Arabs made short syllables long and long syllables short, and that this phenomenon is still more frequently perceptible at the present day. But everything of a metrical verse in any shape or form is strenuously rejected by Sachau. "The Arabs have never copied from the Christian poets of the Greeks, Romans, Syrians the method of syllable-counting, and if in many popular compositions the metrical form appears only to consist of a certain number of syllables, yet we must not see in this a metrical principle, but only an extravagance on the part of the old one" (p. 3). Even though feeling for the length and the shortness of the syllable was dwelling they did not introduce the word-accent to regulate the rhythm, and if in quest of the word-accent we examine songs which the old metro only a corresponding number of long syllables were removed, we will find many a time that metrical and word-accent coincide, and that this agreement is a purely casual one, and that the intention of enforcing a monotonous number of long syllables by means of the word-accent was always born far from the Arab poet's thoughts" (p. 6). This is still valid for the songs and strophes of the poets, but in "the folk-poetry in its most real sense", as Stumpp styles it, or the "possessing-metres", as Despermet calls it (*La poésie à l'usage, d'art de cet usage, mètre, des Orientaux*, III. 417 et seq.), one will not always be able to apply the laws of a quantitative prosody and therefore the scheme of the Arabic metres and their variations, for the modern Arabic vocabulary with its frequent slurring and especially its deficiency in short vowels cannot always satisfy the demands of a quantitative prosody. A poet of course can by the insertion of helping vowels still measure the syllables of the verse according to their own quantity, but the real folk-poetry proper can not. In it the emphasis of certain syllables and the rhythmical accent of the whole will frequently owing to the deficiency of short vowels be the sole normative influences. The final answer to this question will perhaps have to be long awaited; but we must remember how long it has taken to come to a decision upon the metrical character of the old Italian renaissance satirists, which presented similar but not so difficult problems. The system of Arabic prosody will only be possible when accurate investigations into individual metres and poetic forms have been undertaken independently of Arab tradition.

Like the Romans who took over with knowledge of letters also the use of versification from the Greeks, the Persians adopted from the Christians the almost canonical system of Arabic prosody, adapted it to the peculiarities of their own language and poetry, and endeavoured to bring it into harmony with their rich literary tradition. The main principles of Persian prosody are the same as those of Arabic, indeed in the

structure of the verse the metrical law of the quantity is much more marked than in Arabic. Of the 16 Arabic metres *Takmil*, *Basl*, *Wazn*, *Kamil* and *Mafid* appear almost not at all; of the rest the epic *Mutadarrik*, and the metres *Kamil* and *Mafid* are in special favour. Through synthesis of the primary feet of the two last three now peculiarly Persian metres have arisen, *Mafid* (*فعلان فعلن مفاعيلن*), *Kamil* (*فعلان فعلن مفاعيلن مفاعيلن*), and *Mughalil* (*فعلان فعلن مفاعيلن مفاعيلن*).

As in Arabic poetry so also in Persian there are no chymelised verses; a special feature of the Persian metre is the *Radif* or *Refain*-rhyme. It arises through one or several, but always the same words being added throughout the poem to the main rhyme of each line. But out of almost these same elements the Persians have been able to construct richer and finer strophic forms than the Arabs. The *Persiana*, too, have the Arabic article *Kajala* with one or several initial metres having end-rhyme (*Qasf al-Nafis*), but it is far from holding a dominant position. The *Qasf*, which has quite the same structure as the *Kajala*, being a poem in one metre, with one rhyme and *wasf*, with a limited number of verses, is more common; the number of lines it varies between 4 and 15. Besides the various kinds of *Qasf* a characteristically Persian strophic poem must be mentioned the *Varzi Band*. It consists of a series of one-rhymed strophes of 5-10 verses in the same metre, but with different rhyme, so which an invariable rhyme-verse in the same metre is added as a refrain (*israf*). If the *Varzi* at the end of the several strophes is not the same but always different, the poem is then called *Varzi Band*. In contrast to these later poetic forms which have been mostly only derived from Arabic models stand the originally Persian kinds, the older *Rubai* and *Mathnawi*. *Rubai* or *Qasf* is a quatrain in which the first, second and fourth short verse rhyme with each other; if the third also rhymes, the poem is called *Rubai* *Israf* (= melody). Each of these quatrains is complete in itself, without relation to the others. In the *Rubai* a special group of 24 metres is used, which are regarded as varieties of *Mafid*, and, according to the last classification becomes *maf'ulan* or *maf'ulan* in consequence of the license *Alfarn* or *Alfard*, are derived by Persian prosodists from two circles. The characteristic feet of the Arabic and Persian *Alfard* (— — — — —) — — — — — is *maf'ulan*. Finally *Mathnawi* is known by its rhyming in couplets (aa bb cc); each hemistich rhymes with the other, but the same rhyme does not run through the whole poem. On account of the great freedom in the choice of rhyme this poetic form is the usual one for long pieces, whilst the one-rhymed or Arabic system is preferred for shorter.

If the application of the metrical system of the Arabs to Persian verse must seem a strange thing since the rhythm in the structure of the verse is different in the two languages and the fitting in the system could but result in rough edges and harsh outlines; the adaptation by the Turks of Arabic prosody, which the Persians had remodelled, exhibits the utter subversion of the measure and rhythm of the real Turkish verse and can only be explained by the enthusiasm of the Ottomans for the letter-letters of the Persians. Their

original and distinctive mode of verse-construction was never systematized by the Turks; they copied only the Arabic-Persian metrical system. But the alterations are of so striking a nature that it would be superfluous to enumerate them. Particularly Turkish verse-construction depends, simply on the enumeration of the syllables, the *Pesmanî Hakkı* (i.e. finger-counting). Each hemistich consists of 7–15 syllables with a caesura after about every 4, and the tone is determined by the accent of the word itself. When the Persian metrical system was adopted the syllabic and the quantitative primacy were both in use at first, until the former entirely disappeared in the xv. cent. Remains of the old Fokk-halled, the Turki, have been preserved to the present hidden in *Şâhî* which has been derived from it and metrically adjusted. Recently a beginning has been made on one hand to get back to the ancient Turkish verse, and, on the other, to introduce European forms of verse into Ottoman poetry.

The rules and *qasidas* of Arshic primacy have been adopted also by Jewish poets in Islamic lands, and have been introduced into the late Hebrew poetry.

'ARUDJ. [See *arudj* 'Arudj.]

'ARUDJ. famous Turkish Chieftain, co-founder of the Algerian-Turkish state. Christian authors often give him the name Barberossa, which however rather belongs to his brother Khân al-Dîn [q. v.]

His origin has been much disputed. Some take him to be the son of a Turkish captain, others that of a Greek or Albanian seaguard or even of a nobleman of Saintonge. The most probable view is that his father was a potter of the island Melian (the ancient Lesbos). From earliest youth along with his two brothers Khair al-Dîn, Elias and Ishâk he practised piracy in the Grecian Archipelago. On one of these piratical expeditions 1214

was killed and 'Arudj taken captive, whereupon he had to serve a term at the oars on the galleys of the Knights of St. John. For his term, his early years are much veiled in darkness, notwithstanding the legends with which popular fancy has adorned the life-story of the famous corsair. It is certain however that 'Arudj left the region of the Archipelago and turned towards the western Mediterranean. From 1501–1510 he cruised continuously along the Spanish coasts, feared by the Christian population and already in renown amongst the African Moors. A host of adventures attached themselves to him, so that by about 1510 'Arudj mustered over 1000 well-armed men and a flotilla of from 20–22 ships. The Khalid-cultan of Tunis, Mulei Muhammed, whom he had now over to his enterprises by the gift of a part of his booty, empowered him to procure himself in the baronies of Tunis and transferred to him the governorship of the island of Lycia, which he made his headquarters.

'Arudj had wider designs however, and proposed creating an independent principality. For the settlement of disputes between the various of the Barbary States he offered to mediate, & the hope of possessing a strip of land as recompense for his services. In 1512 he finally complied with the call of the King of Naples, Abd al-Rahman, whom the latter sought for his aid against the Spaniards, who had driven him out of his capital. He besieged Naples, but at the storming of the town lost him also by a cannon-ball, and had to withdraw. Another and likewise unsuccessful attack on Naples which was undertaken two years later (1514) forced him to flee to Tunis. From there he watched events in Kabyle, where possessions two native princes were contesting, 'Abd al-'Aziz, Sultan of the Dâd 'Abbas (the Sultan of Labe) of the Spanish western, and Ahmad b. al-Kadi, the Sultan of Kado. 'Arudj took the cause of the former and helped him to win of his opponent in 1516. Thereafter 'Abd al-'Aziz proved for 'Arudj a valuable confederate, who furnished him with soldiers especially for the expedition to Algiers. For about this time, the Sultan of Algiers, Selim al-Tumî, requested 'Arudj's help in freeing Algiers from the Spaniards, who from the fortress of Cazan controlled the town with their cannon, prevented the entry and departure of the ships and so brought ruin on the inhabitants (see *Algiers*, p. 258). 'Arudj hastened to fulfil the request. He sent the half of his troops by sea, and himself with 800 faithful and good warriors from Kabyle marched towards Algiers; he overcame Sherghal, of which one of his former officers had taken possession, caused Sherghal to be hanged, then advanced into Algiers whose inhabitants welcomed him. But their attitude changed when they observed the ineffectiveness of the attacks attempted by 'Arudj against Cazan and the violence of the Turkish soldiers, who treated Algiers like conquered territory. In view of the growing discord 'Arudj speedily removed Selim al-Tumî by throttling him to his bath, then had himself proclaimed sultan by his own soldiers. Bloody violence suppressed the protests of the townspeople, and military expeditions secured the subjection of the Mitidja.

The occupation of Algiers by the dreaded corsair naturally caused disturbance in Spain, and as

already. In 1516 Cardinal Ximenes endeavored to wrest the town from him. But the expedition led by Don Diego de Vera against Algiers came to grief and cost Spain 1500 men (304 Sequi, 1516). Since the conduct of the sultan of Tunis (Tunisi) had been open to suspicion, 'ARUDJ used this as a pretext for an attack. He conquered Milyana and Medes (al-Madiya), and eventually, after the subjugation of his opponent on the banks of the Wad el-Lit (Wajer), brought Tlemcen under his power. He was ~~in~~ in this town, when a disputation of people arrived from Tlemcen to ask his aid against king Abū Hammū, a confederate of the Spaniards of Oran, and ~~the~~ was extremely opportune for 'ARUDJ's ambitious plans. He ~~was~~ referred to Khair al-Din the administration of Algiers and made with all speed towards the West. On the way thither he took the Kal'a of the Hane Reghū, in which he put a garrison under command of his brother Ishāq, sent to fight the army of Abū Hammū at Arbul, and entered into Tlemcen without striking a blow. But then, instead of restoring ~~the~~ the throne the pretender Abū Zaiyān in whose interest he had moved, he took possession of the town for himself. Then he interposed himself in the Maghwar (Cludei), had the Zaiyān prisoners ~~and~~ their adherents put to death (according to a local tradition 70 members of the royal family ~~was~~ drowned on one day in the Saharidj to pool in front of the town (see Tlemcen)), garrisoned the districts Tāzla and Qūda, and ~~and~~ made into the region of the Bahīl Saasien to force them to recognition of his authority. Finally he set on foot negotiations with the Merinid sultan of ~~the~~ for ~~the~~ procedure against the Spaniards. For the latter fitted out an expedition against Tlemcen in order to wrest it from the Turks and to restore their old confederate Abū Hammū to the throne. In January 1522 Don Martin de Argota with a small Spanish army reinforced by native troops took the Kal'a of the Hane Reghū, and thereby cut off 'ARUDJ's return to Algiers. Ishāq after a powerful resistance was compelled to surrender the fortress, but was done to death by the Arabs against the terms of the capitulation. Simultaneously Manigula Comares, commander-in-chief of Oran, advanced to the siege of Tlemcen. 'ARUDJ defended himself for six months, at last in the town; and then, after it became untenable, in the Maghwar where he barricaded himself in with his Volāshāh ("Comrades"). But on the day of the 'Id al-aghāz the Moors of the town entered the Maghwar under pretext of a desire to pray in the mosque of the citadel, and put to death the majority of the Turks. 'ARUDJ, who had but a few faithful companions left, resolved on flight, and escaped by night making for the sea. He was pursued by the Spanish cavalry and overtaken at the ford of the Rio Salado, and after a desperate defence ~~was~~ slain by the Spanish Rinsign Garcia de Neco. 'ARUDJ ~~was~~ only 44 years of age. According to Hæddu he was of medium stature, powerful, indefatigable and very brave; had a reddish beard and a brown complexion. His soldiers loved and feared him, obeyed him and bitterly lamented his death. He was not only a capable soldier, but displayed also great political insight. He recognized the possibility of utilizing the anarchy of the Maghreb to found a mighty Islamic state on the ruins of the small Berber principalities which would impose a limit on the attacks of the Christians on the African

coast. His considerable fighting-strength allowed him to prepare this great plan, which Khair al-Din was called on to adopt and realize.

ARZACHEL. [See *ARZ-ZABĀLA*.]

ARZAN. town in Armenia, half-way between S'ini (S'ört) in the East and Maiyāshān in the West, $\frac{1}{2}$ Parang (1 parang = 3.6 miles) distant from the latter, situated rather under 41° 40' N. long. (Greenw.) and a little over 38° N. lat. According to ancient-Armenian geography Arzan (in Armenian Arza) was the chief place in a district of the same name belonging to the province Armini, and this name the foreigners (Greeks and Romans) have transferred to the province (Arzachie). The names Armini and Armenie ought, moreover, to be sharply distinguished from each other. The Arabs, who took possession of the town in their first Armenian expedition under 'Isā b. Uthman in the year 20 (640), included it in the territory of Hajar (Mesopotamia). Arzan, the 'Arz' of the Byzantine historian Cedrenus (Anon. 1839, II. 577), was situated, according to the accounts of the Arabic authors, in the middle of a fruitful, well-cultivated region, and was considered in the Middle Ages to be one of the most flourishing towns of Armenia; it was protected by a strongly fortified fort. The strategic revenue from ~~the~~ of the districts of Arzan and Maiyāshān together amounted, according to Kudama (de Gize, *Hist. Geogr. Arab.*, vi. 246), to 'Abdāh (thine) to 4,000,000 Dirhams = ca. £ 165,000. (Cf. A. v. Kremer, *Culturgech. der Orient unter den Chalifen*, I. 368.) At the beginning of the IV. c. AD. cont. the Hamdanid Sul al-Dawla took up his residence in Arzan. When he and his brother (Nāṣir al-Dawla) were engaged in war and political enterprises in Calyculia, the Byzantines utilized this favorable opportunity for an incursion into Mesopotamia in the year 330 (941), when they took and sacked Arzan; cf. Weill, *Gesch. der Chalifen*, II. 673; Ann. i. 690, and Freytag in the *Zeitschr. f. Deutsch. Morgent. Gesch.*, x. 472. The town appears to have

entirely recovered in the course of time from this blow, for al-Mustawfi on his travels in the vil. (xiv. cent. describes it (he calls it Arzun) as a flourishing place. But from the beginning of the 7 cent. there is evidence of Arzan (in Syriac Arzun, hence occasionally also in Arabic Arzun) being the see of a Nestorian bishop (cf. Guidi in the *Zeitschr. f. Orient. Forsch.*, *Geogr.*, xiii. 403). Arzan is to-day a pretty extensive stretch of ruins, which occupies according to Taylor an area of 5000 paces (ca. 0.386 sq. m.) and in which Klepert, wrongly however, sees the site of the Armenian royal-city of Tigranocerta. Arzun lies on the right bank of the *Arzun* (Kizil)-Su (Cal), in Kurdish Qharzu (Qharzo)-Su, which, flowing from Qharzu-Dagh, falls into the Tigris about 25 miles south of Arzan. Below Arzan this river is also called Redwan-Su after the town Redwan (Rihwan); its other name, Yashd-Kharu-Su comes from modern neighbouring Kurds who belong to the sect of the Yashids; the Arab geographers call this watercourse Nahr al-Jahh (Jahh) or al-Sarhu. This Arzun-Su must not be confused with the Nahr Arzan (also Nahr Shihab) of the Arab geographers; for the latter is the Artaban of the classics, the modern Murad-Su (or Sai), the eastern (better southern) arm of the two sources of the Euphrates; for further details, see under Murad-Su and Euphrates. The name Arzan is found elsewhere in this region, e.g. = the name of a small, eastern tributary of the Euphrates, which has its mouth below Malhiya (cf. the art. Armanah N. 2 in Paul-Wissmann's *Reisenergebnisse der klass. Altertumswissenschaft*, ii. 1872). Finally warning must be given against the confusion, which appears several times even in Oriental authors, of our Arzan (near the Tigris) with a town of the same name situated in the region of the source of the Euphrates, near Theodosiopolis. When this town was sacked by the Seldjûks in the year 1049 those inhabitants who escaped the blood-bath went near and settled in the neighbouring Theodosiopolis (Armenian Karin, Arabic Kâhîlâ), and named this after their devastated home "Roman-Ardzu"; Arabic Arzan al-Rûm, modern Erzerum; for further details, see art. ERZERUM.

ARZAN AL-RÛM (See ERZERUM.)

'ASĀ (A.), Rod, Stick. — The rod mentioned in the Kor'an is that of Moses; the self-same account is given of it (Sura 20, 17, 25, 32) as of Aaron's rod in the Bible (Ex. Ch. 7, 2 et seq.).

On the occasion of Allah's self-manifestation in the fire Moses receives the command to cast his rod in the ground, and here, too, it becomes changed into a serpent (Sura 20, 17, 27, 28, 32). As in the Bible, the rod is effective at the passage through the Red Sea (Sura 26, 63), and makes water flow from the rock (Sura 2, 27).

The commentators and writers add further details which show partial dependence on Jewish legends (cf. Grünbaum, *Arise! Barmage* etc. *Geogr.*, *Supplement*, p. 162 et seq.). Only the following need be mentioned here: Moses' rod was a branch of a myrtle or black-berry bush in Paradise, 10 ells long. Adam fetched it thence with him, and after him it became the hereditary possession of the prophets till Jesus. — According to another version it was entrusted to Jethro by an angel. — Moses received it miraculously from his father-in-law.

Moses' rod has served many purposes, its two branches shone in the darkness, it made water gush forth from the ground and disappear again, it put forth leaves and fruits, etc. — It is also related that Solomon had a rod from which he never separated.

Yâskî has embodied in his *Kisâs al-Fayâs* wa 'l-Fahm a section on the rod, in which he speaks specially of the use of the rod amongst the ancient Arabs and in the Khutba (Kairo, 1311-1313, vol. 4, p. 49 et seq.). Also 'Asmâ b. Mar'ûf has composed a *Kisâs al-Fayâs*. Cf. Pétrichou in his edition of the Text of the Autobiography, p. 499 et seq.; and *Mittheil. orient.* p. 116.

For the use of the staff in public worship see 'ANATA.

(A. J. WASSINK.)

'ASĀBA, 'Asābāt (A.), as a jocular term denotes Agnates. Cf. the art. *AL-ĀḤ*.

'ASĀBIYA (A.), patriotism, party-spirit.

ASAD (A.), the Lion. Known to the Semites from earliest times the lion has engaged the imagination of the Arab people and the Arab poets, especially in the pre-Islamic period. By that time, indeed, lions may no longer have been at all abundant in Arabia, for the number of *As'ad*'s, i.e. districts abounding in lions, mentioned in the literature is small (the Harâ of Sharr and Khafis were held in most fear). Notwithstanding the scarcity of the lion the Semite literature shows the most thorough acquaintance with its characteristics. The thick mane — almost covers the mane — is regarded as symbol of power and majesty; the fetid breath, the aloft spring, the ferocious roar, the boldness and voracity of the lion recur again and again; but occasional cowardice, his craftiness and his "going in the rein" were also sharply observed. As old as Arabic poetry itself is the identification of the dimal warrior with the lion; the forest of tamar with which the Beduin enter the fray appears to the poets like the thicket of reeds (*qasab*) which lions hunt. Just as the lion has found a place among the constellations in the heavens, so does a whole Beduin-tribe bear the proud name "sons of the lion" (see next art.). — In Islamic time the

Imam al-Kais, Hujr's son, did indeed take heavy vengeance on them, but was unsuccessful in his endeavour to bring them under subjection to himself.

With the year 624 they make their entry into the history of Muhammad. Two men of consequence of the Asad thought they might turn to use Muhammad's supposed weakness after his defeat at Ohod (625) in order to recommend to him (the a preliminary expedition against Medina; other with their judgment of the position of affairs warned them not to do so, but in vain. However before the assembled Asad were ready to set out, the Prophet got wind of the plan and, according to his policy of wiping every such movement in this kind, sent about 250 men under a capable leader by forced marches against the Asad, who had to escape attack but left with the Muslims considerable booty in camels and sheep. The person who gave the Prophet information about this proposed expedition of the Asad was a Tayyite, and they were Tayyites also who availed themselves of the confusion which was now spread among the Asad and attacked and utterly disposed them. In the year 627 they gave a contingent to the great coalition (The Campaign of the Ditch) formed by the people of Makkah against Muhammad, which separated later its object unaccomplished. To the news Muhammad despatched an expedition against the Asad, led being warned to time, but again lost camels. At the beginning of the year 9 (Syng. 630), which was for them a year of famine, a section of the Asad announced their political mission. To this embassy and its negotiations Sirat 14—15, makes reference. Here too the outward mark of political subjection was the payment of the *badaka*, but whether conversion to the religion of Islam occurred among this widely-dispersed tribe, of which, too, some lived apart, is totally uncertain. The alleged ill-conduct of the Asad envoys in Makkah is but a biased invention; Asad appear, however, even in Muhammad's lifetime to have offered many an occasion for complaint. Immediately before the death of Muhammad Talha (Tulāha), the chief instigator of the Asad attack planned in 624, the leader of the Asad in the Campaign of the Ditch, participated in the Asad embassy to Medina, and returned to proclaim himself a prophet — an attempt with inadequate means, to say the least — and to urge apostasy from the faith of Muhammad. Muhammad's death, the generally uncertain allowance produced thereby and the absence of the large Muhammadan army in North Arabia enabled Talha to greatly extend (632) the religious-political movement initiated by him. At first he succeeded in bringing the Asad to open apostasy. But his endeavours to bring the powerful Beluiz tribes whose encampment were in the West to a great, united instruction had only partial success. It appears that only the *Parwa* attached themselves openly to the Asad. But bye and bye men from the *Ala*, the *Qhabyān* and the *Tayy* seem also to have been found among them. At the well of *Buqāha*, in the territory of the Asad, there ensued a fight with the faithful under Khalid's leadership. When Talha in the middle of the fight was left to the mercy of the Fazez the day was lost to the Asad. Some subsequent skirmishes (e.g. at al-Gharrā) completed their subjection. Only then

appear to have occurred their conversion to Islam.

In 630 they occupied later a quarter of their own, and constituted a considerable section of the local population. We then find also their Kufic contingent, e.g. to the armies of 'Alī, Husain, Muḥammad, Nuḥayl and Zaid.

ASAD n. 'Abd Allāh al-Kasat (according to the Arabic sources; according to the Persian al-Kushajirī, governor of Khurasan under the Caliph Hishām b. 'Abd al-Malik, 106—109 (724—727) and 117—120 (735—738). Especially during his first term of office he conducted himself in relation to the Arabs as a faithful adherent of the Yarmukite party. With the Persian *Shāhanshāh* (handowners), he was in high favour and was praised by them as a prudent "householder" (*Kāshghar*) of his province. *Shāhanshāh*, the ancestor of the *Sasānids*, succeeded Islam under him, and in his honour gave his son the name Asad. The city of Balh which had been demolished by the Arabs he had built anew, and transferred (107—708) the Arab camp thither from *Barāghān* (a passage from Balh); later he made this city his place of residence, probably in order to be more effectively to carry on the struggle with the princes of Tukharistan their Turkish allies and the Arab insurgents under *Khalid b. Surāsh*. In contrast to his predecessor *Nasr b. Sayār* he did not achieve any great military successes. The village of *Asadabad* near *Naisabur* was built under him, and remained in possession of his successors until the administration of 'Abd Allāh b. Tūhr (903).

Wellhausen, *Das Arabische Reich und seine Vorgeschichte* (Berlin, 1902). (W. BASTIEN.)

ASAD n. al-Fakr b. Sa'ad, AMT 'Abd Allāh, born 142 (759-760) in Kairō, came while yet quite young with his father to Africa, afterwards to Medina he attended the lectures of the famous jurist Mālik b. Anas (q.v.). After the latter's death he went to Jeddah, made the acquaintance of the pupils of Abū Hāshim, and studied thereafter in Egypt under Ibn Kāsim (q.v.). Returning to Kairō (181 = 797) he soon acquired the reputation of a great jurist (cf. art. *Asṭath*), and by the Aghlabid Zaydād al-Asad was appointed *Kāfi* of this town (303 = 818-819) along with Abū Nuḥās Muhammad who was already occupying this office, although it was unusual for two *Kāfis* to officiate at the same period in the same town. Great as was his reputation he enjoyed as jurist but a poor lot known by the expedition to Sicily (310 = 826) which was commanded by him (with the title "Asad"), in the course of which, during the siege of Syracuse, he was (313 = 828) of the plague, or, as another tradition has it, by an enemy's hand.

Nat.*, xth, I, 177-192); de Goetze, *Abhandlung über die Carmathen im Irak und die Fatimiden* (Leiden, 1886), 166 et seq.; Blachet, *Le Manichéisme dans l'histoire musulmane* (Paris, 1903), p. 59; E. Reuven, *Literary History of Persia* (London, 1903), p. 408 et seq.

(GOLDZIEHER.)

ASFA (a.), yellow; also, in distinction from black, simply light-colored. Some Arab philologists and equesters indeed claim for *asfa* also the meaning "black"; see the discussion thereon in the *Abhidhāt al-Aḥād*, II, 415. The Arabs called the Greeks *ḥamā 'Asfar* (from *ḥamā* and *asfa*). *Uḥd al-Ḥādā*, I, 274, 3 ab infra according to Tabari (ed. de Goetze, I, 357, n. 354, 1) signifying "Some of the Red One" (Eḥūd). In the *Ḥādāth* mention is made of the context of the Arabs with the *Asfar* of the conquest of their capital Constantinople (*al-Ḥādāth al-Ḥādā*, II, 173). *Al-Ḥādāth* *ḥamā 'Asfar* (*Abhidhāt*, I, ed. VI, 98, 14) = the Christian princes, especially those of the Rōm (ib. p. 98, 3 ab infra; cf. *Abd Tamīm*, *Diwan*, ed. Beirut, 18 ab. in a poem to al-Muḥajir after the battle at 'Amuriya). Later this designation was applied to Europeans in general, especially in Spain. *Tarīkh al-Ḥādā* (Spanish Era) can thus be best explained; other views in *Zeitschr. d. Deutsch. Morgenl. Gesellschaft*, xlviii, 626, 637. Many genealogists have explained *Asfa* as the name of the grandfather of Kān (*Ḥādāth* in the Septuagint, Gen. 36, 1) and father of Kānūl (*Ḥādāth*, Gen. 36, 2), ancestor of the Rōm. According to the explanation of De Sacy (*Not. et Extr.*, ix, 437; *Journ. As.*, 3, Serie, Pt. I, p. 94), which Franz Ebnassir accepts (*Zeitschr. d. Deutsch. Morgenl. Gesellschaft*, 237-238), the designation *ḥamā 'Asfar* was a literal translation originally referring to the Flavian dynasty, then because extended beyond it to the western caliphate from his travels among the present-day Nubians (q. v.) H. Lammens relates that they designate the Emperor of Russia *Maḥd al-Asfar* (*Un pays du Nubie* in *Revue de l'Or. chrétien*, Paris, 1900, p. 42 et seq. separate edition).

(GOLDZIEHER.)

al-AḤḤĀ, *Asu* *Ḥaḥā* *Maimūn* a. *Kān al-Bakā*, of the tribe *Kān* in the *Ḥaḥā*, eminent poet of the period of transition from the *Ḥaḥā* to *Ḥaḥā*. To distinguish him from other poets of the same name he is called *al-Aḥḥā* *Talḥar*. The epithet *al-Aḥḥā* was given him from a verse in his so-called *Maḥāḥa* (ed. Lyall, Calcutta, 1894, v. 20). The year of his birth is unknown;

he died ca. 840 A. D. Though he lived therefore into the period of *Ḥaḥā* and even composed a very famous poem in praise of Muhammad, yet he did not accept the new faith. But just as little may he have been really a Christian, although he professes to be a monk and came into close contact with Christianity through intercourse with the court of al-Ḥaḥā and through those in his intimate neighbourhood. Next to *Ḥaḥā* al-Ḥaḥā, al-Aḥḥā is the ancient Arabian poet who has wandered about most in the world and procured for himself thereby a proportionately broad horizon. Hence, too, the astonishing number of allusions to historical incidents, and the numerous foreign words, especially Persian, in his poems. Through these *Wissungs* al-Aḥḥā and 'Alī b. Zaid have served as models for the later *Ḥaḥā* of *Ḥaḥā*.

Bibliography: Brockelmann, *Gesch. d. arab. Litt.*, I, 37; Geyer, *Zwei Gedichte des al-Aḥḥā* (Wien, 1908); H. Thorksen, *al-Aḥḥā's Lyrische auf Muhammad*, in the *Morgenl. Forschungen*, [N. HANSEN.]

AḤḤĀ HAMDĀN, properly 'Abd al-Rahmān b. 'Abd Allāh, Arab poet, who lived in *Kān* in the second half of the 1. (vil.) cen. He was married to a sister of the theologian al-Ḥaḥā, and he, again, had married a sister of al-Aḥḥā. The role which he played under 'Abd al-Rahmān b. al-Aḥḥā is best known. He took part in his campaign against the Turks and was taken captive but escaped with the aid of a Turkish woman whose passions were inflamed for him. When the al-Aḥḥā turned against al-Ḥaḥā, the poet's sharp tongue aided him with satire. The decisive battle at *Ḥaḥā* resulted unfortunately, the al-Aḥḥā took to flight, and al-Aḥḥā was led prisoner before al-Ḥaḥā, who immediately recalled to him some of his malicious songs. His contemporaneous sentence of death was carried out on the spot (83 = 702). The poems of Aḥḥā Hamdān which have been preserved to us are reflections of his adventures and political sentiments.

Bibliography: *Abhidhāt* (1st ed.), v. 126 et seq., 128 et seq.; *Maḥāḥā*, *Murād* (Paris), v. 355 et seq.; *Tabari* (ed. de Goetze), I, Index.

(A. J. WERNER.)

ASHĀB (a., sing. *Ḥaḥā* or *Ḥaḥā* (a single one: *Ḥaḥā*), "Companion"; so term. techn. of *Ḥaḥā* it has the special sense of "The Companions of the Prophet"). In earlier times the term was restricted to those who had enjoyed intercourse with the prophet for some time, and had accompanied him on his expeditions. Later the circle of Companions became more and more extended, the condition that this must have been actual intercourse being disregarded, and those orthodox being also included in the *Ashāb* who had met the prophet during his life, or who had seen him even if but quite a short time, without regard to the age of the persons in question. (On the differences of opinion on the definition of this term, cf. Goldzieher, *Mus. Studien*, II, 240). The definition which is valid in Theology attaches itself to the wider extension of the term (*Ḥaḥāḥā*, VI, 88). 'Amir b. Waḥāb al-Ḥaḥā 'Abd al-Talḥā who died shortly after 100 A. H. is styled the last of the Companions (*Ḥaḥā* al-Ḥaḥā, III, 97, v. 233), and must have been

quite a little child when he saw Muhammad; he was only born in the year of the battle of Uhud and was with the prophet at the age of 8 (cf. *Leitner, d. Deutsch. Morgenl. Gesch.,* vol. 595). Orthodox Qibn, whose legend mentions as having communication with the prophet, also have according to this even their place among the Ashāb. The Ashāb occupy in Sunni Islam high rank in the estimation of the Faithful. After the Korān they are the sources of authentic religious doctrine, since information about the prophet's expressions and procedure traces back to the communications which they as ear and eye-witnesses have made regarding them. On the other hand, down by them an authentic tradition is based; those Hadith which trace back to them in an unbroken chain are *mutawatir* ("propagated"). Attended accounts of their procedure are regarded as evidence for the correct Sunna, which the Faithful must hold to as the rule of conduct at all times. Their intercourse with the prophet and the importance which they have in the establishing of Islam have made them from the beginning objects of piety to the orthodox. To render them as to hold them in contempt is considered an execrable crime. Scourging is the penalty set upon their reviling (*Sahih al-Bukhari*), even capital punishment in the event of an absolute repelition. A procedure among the Ashāb the first four Khulafas occupy the highest places in the order of their succession as the ruling power; in other Ashāb share with them this preeminence; that Muhammad named them while yet they lived of Paradise (*al-Bukhari al-munawwir* vol. 1, *al-Bihar*); they constitute a separate category of Ashāb. Other categories among the Ashāb are determined by the different nature of their share in the prophet's enterprises. *Mukadhir* (who emigrated with him to Medina), *Ansar* (natives of Medina, who share besides only the emigrants), *Muhajirin* (who cooperated with him at Mecca), etc. The opinions on their qualitative gradation have been collected in Nawawi's Commentary on Muslim (*Sahih*, V, 164). The contemptuous attitude which manifests a hatred that rarely becomes intensified into a wild fanaticism towards the Ashāb, is met with their approval the first Khulafas wanted away the rights of 'Ali and his family, forms an outstanding peculiarity of the Shi'a in contrast to Sunni Islam. The adherents of the latter constantly make the Taqiyah-Enquiry (*indhiya Allahu 'alahu, 'Allah be pleased with him?*) follow the mention of any one of the Ashāb in speech or writing. In the theological literature of the Shi'a the collection of the traditions concerning the saviour (*Bayan al-Munawwir al-Ashāb*) receives arduous attention, most systematic works on Hadith contain a section on such. There are besides several works in which the names of the entire companions have been collected with biographical notices and communications regarding the Hadith they have handed down. They display many variations from one another. Of 'Abd al-Rahmān al-Kāfi: a Maḥabba of the Ubayyid family (died in Baghdad) 351 = 962; a *Maḥabba al-Sayyid* is mentioned (Ubayyid, *Taḥṣīl al-Hadith*, iii, 99). The authors of the most famous of these works dealing with the Companions are: Abū 'Abd Allāh al-Bāḥī (died 395 = 1004-1005), Abū Nu'aim al-Ishāqī (died 430 = 1038-1039), Abū Qasim b. 'Abd al-Rahmān al-Kāfi (died

403 = 1070-1071), *Maḥabba al-Sayyid* (2 Vols. Haidarabad, 1318) of the critical notes on this is *Sahih*, *Taḥṣīl al-Hadith*, vol. 135). Abū 'Abd al-Muḥammad b. Abi Bakr al-Ishāqī (died 581 = 1185-1186). The material of these predecessors has been critically compiled, corrected and supplemented by 'Abd al-Muḥammad al-Ishāqī (died 630 = 1230-1235) in his comprehensive *Uṣūl al-Ashāb* (1 Vols. al-Sayyid al-Sayyid) (5 Vols. Cairo 1286). *Uṣūl al-Ashāb*, *Taḥṣīl al-Hadith* (2 Vols. Haidarabad 1315; 8000 lithographs). Still fuller is given by Abū 'Abd al-Rahmān al-Ishāqī (died 851 = 1448-1449) in his *Uṣūl al-Sayyid* (4 Vols. printed in the *Madrasa* of Calcutta 1853-1894; 4 Vols. Cairo 1325-1325).

(Continued)

ASHĀB AL-KADĪM (A.), the adherents of tradition in the *Ashāb al-Kadīm* (q. v.). For further information on this and similar combinations see Ahi.

ASHĀB AL-KAHF. "the people of the cave". This is the term used in the Korān to denote the youths who in the West are commonly called "the Seven Sleepers of Ephesus". This is the story almost as Muhammad tells it (Sura 18, *al-Kahf*). Some youths in a pagan town are loyal to the one God; they conceal themselves in a cave, whose entrance is on the north side. There God puts them and their dog to sleep. "And if you had come upon them you would have found them and been filled with terror." After 309 years the sleepers awake and each one of their number into the town to buy bread. — The Korān has no more to relate; there is only added that their number is variously given as 3, 5 or 7 and that the story is intended to confirm faith in the resurrection.

The historians and commentators have told of the various traditions which at Tabari (ed. de Goeje, I, 775 ff. *supra*, *Taḥṣīl*, loc. cit. xv, 123 ff. *supra*) communicates the various versions of the following type: In a town of Greece (or Asia Minor) some youths, who have gone over to Christianity refuse to worship the idols. They flee from the town and with a dog which would not be away conceal themselves in a cave, where they go to sleep. The pagan king Diocletian (*Diocletian*, *Diocletian*) appears at the scene with his soldiers to seize the persons of the young men. But no one is able to enter the cave, and so the only thing possible for him is to build up the entrance that those shut in may die of hunger and thirst. This he does. Afterwards the king is forgotten. On day an owner of flocks sends workmen to remove the wall at the entrance, and comes a shepherd to his congregation there. The workmen however do not observe the sleepers. In God's good time the latter awake. Filled with anxiety they rent, covering all eastern, one of their number into the town to buy bread. The baker does not recognise the coin which is given in exchange and brings the young man before the king, when everything is explained. The man has slept for 309 years; in the meantime the pagan has given place to a Christian generation. The king is much rejoiced, for the presence of this youth is proof that the body is ruled with the spirit, a thing which some had doubted. At once the young man enters the cave again he goes to sleep beside his companions. A church is then built at the spot.

This account ends rather. Only one differing version need be mentioned which originates from Waho to Munaŋŋŋ (Japan), ed. de George, 1, 278 *et seq.*, the al-ŋhar, ed. Tsuchi, 1, 254 *et seq.* One of the apostles went to the above-mentioned town, at the gate he found that all who had been out up before which every one who returned had to prostrate himself. In consequence he remained without the town and hired himself out as an attendant at the baths. There he carried on his propaganda and won the youths for Christianity. One day as the son of the king was about to enter the baths in company with a female the apostle admonished him. This time he prevailed upon to forgo his intention, but not the next time however. Then the divine punishment fell on them both, and they died in the bath. As soon as this reached the king's ears he issued a warrant to arrest on the person of the apostle. But he and the young men were carried off for safety to a cave by an acquaintance; there was also a dog with them.

What it goes on to state agrees with the other version. -- The story is told in the sources with much historical and geographical detail; many of these details are contradictory, and others have not yet been explained. The most important of them will now be noticed.

The pagan king is named Dätya, i. e. Devina (340-351), who persecuted the Christians, and the Christian is Theodosius II, (408-450). This however does not agree with the Koranic account, that the sleep lasted 300 years, and with others, according to which it lasted 472 — The question as to which town is the scene of the story is important. The western sources all pronounce Ephesus; some of the original, Arab. The Arabs know of two places called Afoa. The one is the well-known town; the other is the old Araphous in Cappadocia, which is called also Afoa (now Yarpuz). Are we to seek there the scene of these actual or supposed events?

The Chicago ~~MS~~ adduced proofs out of the literature in favour of ~~MS~~ view. Some travellers e.g. relate that a horse was pointed out to ~~MS~~ there containing 24 male corpses which looked as though they had ~~MS~~ up (Vajir, *Ma'ham*, II, 206; al-Muqaddasi, p. 133; Ibn Khordadhab, p. 166, 120; al-Biruni, *Chronology*, ed. Sachau, p. 290). Further in the *Kameli des Indes* vol. II *L'Auteur des Nidjems*, ed. Honnema, IV, 153 it is simply stated that Atablan is the place of "the people of the ash". Perhaps it is this discovery which is the original source of the legend of the seven sleepers. Because of the name Adwa people came to think later of Indonesia.

Another important question is connected with the meaning of the last word 阿哈基姆 Koehakim "king of the cave and (of) al-Kahim". Many take it to be the name of the dog, and to be the tablet 阿哈基姆 contains the story of the family. The Arab geographers regard it as a geographical name. Ibn Khordadbeh, e.g. calls the cave, which is mentioned as containing the corpse, al-Kahim, he lays the scene of the story of the family at Ephesus. Al-Mukaddasi on the other hand regards the 13 men discovered as the Ashad al-Kahim, and knows of a place al-Kahim in the country to the East of the Jordan not far from Tadmor. There a wonderful incident has occurred with 3 men who are therefore called Ashad al-Kahim. Chir-

many Canadian has visited the cave there and considers it to be the one described in the legend.

While significance attached to the dog we cannot tell, nor where the mountain Anahilis (the spellings of it are very various) is to be looked for, none is there evidently in regard to either the number or the power of the result.

The oldest mention of the legend is in the east we first trace by Dionys de Tell Mahra in a Syrian work of the 7th cent., in the east by Theodosius in his book on the Holy Land. In these versions the names of the youths are Greek. Opinions are at variance as to the question whether the version found in Dionys was translated from the Greek or was originally composed in Syrian. — The legend is widely spread in the literatures of east and west. On this point see the work by Julius Koch, who has attempted to give it a mythological interpretation.

[1. WASHINGTON.]

APHĀB al-RASS, the people of the "well" or "of the well", are twice mentioned in the Koran (Sura 25, vs; 30, 12), along with 'Adh-hamūd and other unbelievers. The commentators know nothing for certain about them, and so give widely divergent explanations and all manner of fantastic accounts. Some take al-Rass to be a geographical name (cf. Vāḡī, 12b, 1200); some hold that ~~the~~ people, a remnant of 'Adh-hamūd, ~~and~~ (rare) their prophet (Sura 13, 11 v. with (vss)) and were consequently exterminated. It is also related that the mountain of the kind 'Aḡā [q. v.] was situated in their region. — Tabari mentions the possibility of their being identical with the Aphāb al-Uḡhūd [q. v.]; otherwise he does not know of anything relating to them; just as little do we.

ʿAṣṣat al-Ash'ab (Cairo, 1297), p. 141 et seq. (A. J. Wensinck.)

ASH'AB AL-RAY (A.), "the man of opinion", i. e. a speculative jurist, who recognises of course the authority of tradition, but also holds to the value of the individual insight of the jurist who supports himself on tradition recognises as true. Cf. the article *Kiyas* and *Ray*.

Bibliography: Sachau, *Zur ältesten Geschichte des muslim. Rechts, in Sitzungsberichte der Kais. Akad. Wiss. in Wien, Phil.-hist. Klasse, 1877*, p. 2 et seq.; Goldschmidt, *Die Fiktionen*, p. 2 et seq.

ASH'AB AL-UKHUUD, "the people of the ditch", mentioned in *Sura*, 85, 4 et seq. The Muslim historians relate as follows in regard to this passage:

King Liba Nuwas of Yemen was a devotee of Judaism and intolerant to Christians. He made them choose between Judaism and death. The Christians preferred martyrdom. Thereupon the king ordered a long ditch to be constructed in which they were to be put alive.

This story is partly confirmed by Christian sources and enlarged upon. When the Khazars were unable, since winter had set in, to send a victory to Yaman, Nuwas (he is variously named), who was a convert to Judaism usurped the authority and persecuted the Christians. Moreover he laid siege to Najran, and breaking through on the capture of the town destroyed the churches and the Christian life and work. Of a real ditch however there is no mention. — Almost the same as this is the account given by Simon de Bertrandon and by the anonymous writer in Bologna. The account of these events was written in the spring of 524 A. D. in Syria; they happened therefore towards the end of 523.

Other explanations are also given, e. g. that the "people of the ditch" were Daniel and his companions (*Taheri, Tafseer*, s. loc.) a man which Moser (*Was hat Mohammed etc.*, p. 192) and Luth. *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, XXXV, 121 regard as probable. — According to a tradition in *Tha'labi* the "people of the ditch" were Antiochus of Syria, Nebuchadnezzar in Persia, and Nuwas in Yemen.

ASH'AR [See *ʿAṣṣa*.]

AL-ASH'ARI, Abū Bura' 'Amr u. 'Amr Mūsā, judge and traditionist. When Shahrī b. Yaḥyā appeared at the head of the Khawārij in the year 76 (695-696) and captured Kufa, Abū Bura' had also to pay homage to the insurgent. Later he was appointed judge in Kufa. Through his personal

qualities he gained great regard as occupant of this office; besides he was considered to be well versed in Muhammadan tradition. According to the usual account he died in the year 103 (721-722); but 104, 106 and 107 are also given as the year of his death.

Bibliography: Ibn Sa'd, vi, 187; Tabari (ed. de Goeje), I, 131 et seq.; Nawawi (ed. Wüstenfeld), p. 653 et seq.; Ibn Khallikan (Trans. of de Slane), II, 2 et seq.

(K. V. Zetterstien.)

AL-ASH'ARI, Abū 'Alī-ʿAlī, famous theologian, born at Ray in the year 260 (873-874), descendant of the above-named. The complete genealogy is: 'Alī b. Ismā'īl b. Isḥāq b. Saḥm b. Ismā'īl b. 'Abd Allāh b. Mūsā b. Bilāl b. 'Abd Shams. Until his 40. year he was a zealous pupil of the Mu'tazilite theologian al-Jahshārī (q. v.), then on the occasion of a dispute with his teacher on the theory of God's pre-determinations disagreed with him and went his own way. But Spitta has shown that we have to do here with a biased legend and that probably the study of the traditions elucidated for him the contradiction between the Mu'tazilite views and the spirit of Islam. However that may be, he henceforth championed the orthodox views against the Mu'tazilites and composed a large number of works of a dogmatic and polemic nature. Ibn Fāris states that their number amounted to about 300, Ibn Asakir gives the titles of 93 of them, which are repeated with occasional notes in Spitta, *Zur Geschichte des Islām in al-ʿAsār*, p. 63 et seq. Only a few of them have been preserved, and are enumerated by Brockelmann, *Gesch. der arab. Litt.*, I, 195. The work *al-ʿAsār* 'an *Uṣūl al-Diyāna* was printed with three supplements at Haidarābād in 1321 (1903). Also a *ʿAṣṣa fi ṣūfīya al-ʿAsār* A. 'Al-ʿAsām (ibid. 1323). His philosophical system is sometimes disparagingly judged. Cf. Goldschmidt, *Beiträge zur Literaturgeschichte der Islām, Sitzungsberichte, Vienna, Bd. LXXXVIII*, p. 473 et seq. For the rest he belonged to the Madhhab of Shāfi'ites. He spent the closing years of his life in Baghdad and died there in the year 324 (935).

Al-Ash'ari enjoys the credit of having overcome the antipathy of the older Muhammadan scholars to dialectic in articles of faith by his successful utilization of it to combat the Mu'tazilites and the chiefs of other sects who were suspected of heresy. He is, therefore, the founder of orthodox scholasticism (*Kalām*), since the few orthodox teachers who had ventured on it before him had too little culture to be able to avoid giving offence by certain of their expressions. His method to come to a sound acceptance especially with the Shāfi'ites, and he gathered round him a circle of pupils from whose midst there went forth various famous theologians who developed and spread his dogmas. The best-known of these older Ash'arites are al-Bāqillānī, Ibn Fāris, al-Jahshārī, al-Kharrāzī, al-Juwāwizī (Imām al-Haramayn) and especially al-Ghazālī. Outside the Madhhab of al-Ash'ari the opinions of al-Ash'ari met with less recognition. The Isma'ilites preferred the doctrine of his contemporary al-Maturīdī, who however differed from him only in subordinate controversial points; the Hanbalites kept to the old point of view and remained opponents of the Ash'arite school. In Spain Ibn Harūn (q. v.) opposed the doctrine of al-Ash'ari. Under the first Seljuks, Toghrul-Beg, the dialectic

grievous Ash'arite teachers were even persecuted at the instance of the Waizir al-Kunduri; however, his successors, Nizam al-Mulk soon put an end to this treatment of them. They gained more and more influence generally, especially through the writings of the famous al-Ghazali. In the Maghrib they found an ardent champion in Ibn Tamiyya, the founder of the empire of the Almohades. The eventual result was that the Ash'arite *Ak'ā'id* was everywhere taught in the schools of the Sunnis and the initial opposition became silent.

IV, 79 et seq.; Macdonald, *Development of Muslim Theology etc.*, p. 187 ff seq.

AL-ASH'ARI. **ABU MUSA' ABU ALLAH b. KAIS.** governor. **ABU MUSA** belonged to Yemen and early accepted Islam. According to the usual tradition, after his conversion in Mecca he joined the emigration to Abyssinia and only returned on the conquest of Ghazir. Thereupon he was appointed governor of a district by Muhammad. In the year 17 (638) 'Umar conferred on him the governorship of Basra on the deposition of al-Mughira b. Shu'ba. It was no light task however to hold the restless Beduin in check, and when **ABU MUSA** set out to assume his office he took with him twenty nine distinguished men in order to strengthen his position. When the ~~governors~~ of Kufa were dissatisfied with their governors the Caliph acquiesced in their desire, and since they declared they would like best of all to have **ABU MUSA** he was transferred to Kufa in the year 22 (642-643). But soon it proved that the new governor was unable to satisfy the capricious people of Kufa, and he was recalled after a year and was given back his post in Basra. Soon after he was sued before the Caliph who, however, accepted his excuses, and even after 'Umar's death **ABU MUSA**, who had distinguished himself as a commander on the field, filled the governorship of Basra. But some years after 'Uthman's accession he was deposed and **ABU ALLAH b. Amir** nominated his successor, whereupon **ABU MUSA** retired to Kufa. In the year 34 (649-655) 'Uthman appointed him governor of Kufa; but when on the murder of the Caliph this town joined the cause of 'Ali, **ABU MUSA** was forced aside and had to flee. Once again he appears in the history of Islam, for, when hostilities were interrupted in the ~~Arabian~~ *Siffin* in the month of Safir, 36 July, 657, and the combatants agreed to leave the decision as to whether the sovereignty belonged to 'Ali or **ABU MUSA** to two impartial arbiters, **ABU MUSA** and 'Amr b. al-'As were entrusted with the commission. In Ramadan of this year (February, 658) the two arbiters met in Dima al-Jandal (or rather in Adhroh [q. v.]). Here **ABU MUSA** was overruled, ~~declining~~ both 'Ali and Mu'awiya unworthy of the Caliphate, the choice of a successor to the Islamic community. 'Amr then stepped forward and agreed with him in regard to 'Ali, but authorized Mu'awiya's possession of the dignity. This was the end of **ABU MUSA**'s

political activity. Equally unpopular with both parties he only with difficulty managed to save himself and escape to Mecca. But here also he felt insecure, and later betook himself to Kufa. The year of his death is variously given. According to the oldest tradition he died in Kufa in the year 42 (662-663) or in 52.

(K. V. ZETTERSTEDT.)

AL-ASH'ATH b. KAIS b. MA'IN was a Kindite prince to Hishamm al-Ha. His real name was Ma'athar. He was called al-Ash'ath because of his ever unkempt hair. Rare epithets given to him are al-Ashadidi, 'who has a scar on his head', and 'Ud al-Nar, a South-Arabian ~~name~~ used to denote a traitor. His *Kunya* is Abu Muhammad. His father, who was the last of the dynasty of 'Abd al-Murrit was the real heir to the chieftainship amongst the Kindites was murdered by the Mu'awiyites. To avenge his father's death he undertook an expedition against them, but was taken prisoner and had to pay 3000 mawla for his ransom. In the year 10 (631) he was the leader of the embassy which announced to the prophet the submission of a section of the Kindites. According to some he had by that time already married Umm Sa'wa (or Kuraija), sister of Abu Bakr, but could not take her with him to Hishamm. A number of his was engaged to Muhammad; but Muhammad died before the nuptials. Perhaps even in Muhammad's lifetime he had provoked disturbances amongst the Kindites. In any case after Muhammad's death (632) he brought about the defection of his clan, the al-Ash'ath b. Ma'awiya, to whom the 'Amr b. Mu'awiya, having been driven in extremities by the conduct of the Muhammadians had previously attached themselves. He was defeated by the army of the Muhammadians which had meantime advanced against him, and he threw himself into the citadel of al-Mudaira. When he ~~was~~ that there was no help for it he made a compact with the besiegers, according to which his person and that of 9 others should be immune from danger if he surrendered the citadel. But since he, as it is said, omitted when drawing up the contract to insert his own name in the list he was within an ace of being executed. However it was decided to send him a prisoner to Medina for the Caliph to decide what was to be done with him; there he succeeded in securing not only his pardon but also reinstatement in his dignity. ~~At this time~~ [cf. supra] **ABU BAKR** gave him his sister in marriage. He then remained in Medina. When 'Umar in the year 15 (634) for the first time employed South-Arabian troops to cooperate with him in the Persian war which had then entered on a new stage, al-Ash'ath and his Kindites took part under the leadership of Sa'd. He fought at Qadisiya, Madain, Nahawand, and also in Myria at the Yarmuk, where he lost his one eye. On the founding of Kufa he was among the first settlers, and possessed a house there until his death. In the

Banya and 'Ashir. The town formed a natural stronghold and could be attacked only on the east from the ridges of the Djebel Tasmal. There the Citadel was built, now called *Manzah bint al-Sulaym*, which was protected on one side by an inaccessible mountain-ridge, and on the others by walls. About 1½ mls. N. W. of Banya, and exactly opposite its ruins are to be seen on the flat watered over an area of about 37 acres, which are now called Ashir or al-Yashir. Traces of three gateways can still be recognised; otherwise the ground is now under cultivation, and only the remains of tiles, bricks and rubbish-heaps in the upper part of the town give evidence of the town that once stood there. About 3¼ mls. to the east lies to the west of the modern al-Yashir, on the northern declivity of the Kef 'Akhjar are situated the ruins, now called *Manzah bint al-Sulaym*, of the citadel which stood upon a projection of rock slightly flattened, steep at almost every point, and almost unassailable. Running from S. to N., and about 360 ft. high this rock is clearly separated from the central point of the chain which rises about 490 feet higher, and stands vertical to the Kef 'Akhjar. The plan of the citadel forms a quadrilateral of about 905 ft. X 82 ft. There can still be seen the remains of a bastion, two piles, a closter, a tower and an inner court. A single door placed in the west wall and commanded by the middle tower served as entrance. A foot path, which is impracticable at several points and is still used by the people of the tribe Rab'ya, went through the pass of the Kef Sura and joined these three places.

The last-named part, *Manzah bint al-Sulaym*, is undoubtedly the ancient Ashir or Ashir-Zari; al-Yashir, on the other hand, is the town built by command of the Fatimid-Caliph al-Mansur, and finally Banya the recently built Ashir.

Ashir or Ashir was founded between 333 and 334 (30. Nov., 945 — 3 Aug., 946) by Ziri b. Manad, chieftain of the Sanhaja, a Berber-tribe, which possessed the entire modern Département of Algiers with Tizer and Biskra excepting Greater Kabylie. The Fatimid-Caliph Abu Tahir Isma'il, later called al-Mansur, commissioned his vassal Ziri to extend his town, Abu 'l-Baith 'Ustaf Buluggin, son and successor of Ziri, transported to Ashir the inhabitants of Tlemcen who had been in revolt in 341 (24 Oct., 971 — 12 Oct., 972). The governorship of Ashir was preserved under this prince and his successors and direct heirs Abu 'l-Fath al-Mansur and Abu Muhammad in almost unbroken succession from 337 (987-988) till Muhammad b. Buluggin, the founder of the Rifa of the Banu Hammud and of the Hammudid-dynasty. In 395 (1004-1005) Ashir was besieged by the Zenata, who however had to flee before the advance of Hammud. In 408 (1017-1018) on the ratification of his independence Hammud obtained permanent possession of the town. In 468 (1075-1076) Ashir was temporarily occupied by the Zenata al-Moutaghit b. Gharnata, but soon after again under the dominion of the Hammudid. In 495 (1101-1102) Tashfin b. Tashfin, governor of Tlemcen, took possession of the town in name of the Almoravid Yusuf b. Tashfin, and utterly demolished it. Rebuilt by the Hammudid Ashir fell into the power of the Sanhaji al-Hafsi, who availed himself of the arrival in Buqaya of his ally, the

Almoravid governor Abu Ghafiq, to obtain the mastery of Ashir (c. 580 = 1184-1185).

After this date Ashir became forgotten, so that we do not know when it disappeared to leave only a heap of ruins as evidence of its former splendour.

Ashir was the birth place of Abu Muhammad 'Abd Allah b. Muhammad b. 'Abd Allah al-Sanhaji al-Aghlil, jurist, collector of traditions, grammarian and litterateur, who died at Rastbek in 561 (1165-1166); according to the author of the *Taqd al-Aghlil* however this scholar belonged to Ashira, a hamlet in the neighbourhood of Saragossa in Spain.

'ASHIRA (A.), tribe, cfr. *Ashira* (q.v.).

ASHKABAD, properly 'Ashkhabu (Akhsh, Turk. form of Ashk. Pers. 'Ashk, 'love'), Russ. Ashkhabad, capital of the Trans-Caspian region; 19,428 inhabitants (1897); first became a town-ship under the Russian regime; previous to 1836 was the most important Turkoman-Ash (500 tents) in the district of Ashkhabekke (q.v.). The town possesses a museum (contains also ethnological exhibits of the Turkomans) and a public library (possesses also some Persian MSS.). Some 4-5 mls. to the West are the ruins of the town Nush (two ruins-surrounds, no remains of ancient buildings appear on the surface); 6-7 mls. to the East are the ruins of the town Anaw (remains of a fine mosque with inscription of the builder Abu 'l-Kasim al-Nawar, died 861 = 1456-1457).

(W. BARTHOLO.)

AL-ASHMUNAIN, town in Upper Egypt. Al-Ashmūnain, more correctly al-Ushmūnain, lies between the Nile and the Bahr Yabus, about 27° 47' N. Lat., not far from the railway-station Iking in Upper Egypt. It is a small country-town (Village) of 3853 (including 3 dependencies, 7729) inhabitants, and belongs to the district (Markaz) of Mallawi in the province of Assiut.

This place which is now quite unimportant was formerly one of the chief towns of Egypt. The name — an Arabic dual — corresponds to the old Egyptian *Ushmūn*, the Coptic *Shmūn*; the Greeks and Romans called the town Hieropolis Magna. Some ruins still witness to its former greatness. In the Coptic-Arabic Saga the Eponym *Ushmūn*, son of Mery, is regarded as the founder. The modern name, for which however there is extant evidence in early Arab times, as a dual points to a double Ushmūn, and can only have originated in the Arabic period; and certainly

the Papyrus of the I. and II. centuries of Islam know of two places, *Ushmun al-Sufa* and *Ushmun al-Fil*, i.e. Lower and Upper-Ushmun. One of these two ~~names~~ is the ancient Hieropolis, the other is doubtless of late foundation, and was made possible through the drying up of the Bahr Vnaaf ~~as~~ through the shifting of the Nile-bed, a matter about which there ~~are~~ various accounts existing. The double-name of this transition-period then adhered to the new town. First ~~as~~ *Shighin* was in ancient times the capital of a *sudya*, an *Ashmunin* became in ~~the~~ Islamic period the representative town of a *khira*, and, on the inauguration of the provincial divisions under the *Fatimid al-Mustansir*, the capital of a province. It flourished till ~~the~~ late the *Mamluk*-period, but by 1720, in consequence of a fresh change of the Nile-bed, the neighbouring town *Mallawi* became the chief town; the same conditions resulted later in the preeminence of *Minia* (*Munyat al-Kharab*).

In the Middle Ages *Ashmunin* was famed for its fertility. Red woollen-carpets after the fashion of ~~the~~ *Armenian* *Khams*-carpets were also manufactured there. Owing to the sheep-rearing of the Arabs who encamped in its neighbourhood it became a centre ~~of~~ the manufacture of wool, and the products (*garments*) ~~were~~ exported.

Malatini informs us about ~~the~~ manner of *legentary* buildings, and especially of a walled passage under the Nile connecting it with *Ainina*, the ancient *Antioch*.

The town must not be confused with two other places of the same name in Egypt, ~~the~~ *Ushmun* (*al-Ramla*) ~~and~~ *Ushmun* (*al-Djizali*) in the province of *Manufiya*.

AL-ASHRAF, name of three Ayyubids.

1. **AL-MALIK AL-ASHRAF MU'AYYAD AL-DIN ABU 'I-FATH MU'IN** was a son of al-'Adil I. [q. v.], and thus a nephew of Saladin. Born in Cairo or in Karak in the year 578 (1182-1183), he received from his father in the year 598 (1201-1202) the governorship of Edessa to which Hama was added later. He quarrelled with the Zengid *Nûr al-Din Arslân-Shah* ~~at~~ *Mosul*, ~~who~~ defeated him in 600 year 600 (1204) in the battle of *Bain al-Nahrain*. Later his father transferred to him also *Kharrâ*, *Masyaf* and ~~other~~ other towns, and from the year 606 (1209-1210) on he conquered the larger part of Mesopotamia; his residence was at *al-Rakha*. On the death of al-'Adil (q. v.) of Aleppo (613 = 1216) ~~he~~ moved Aleppo to his line, when it was threatened by Saladin's unfortunate son al-'Adil and *Kat-Khafa* of *Rim* (*Asia Minor*).

When on his father's death the Franks lay before *Damietta*, he decided after some hesitation to hasten to the help of his brother al-'Kamil, the now head of the family. The reconquest of *Damietta* was ascribed to his lucky star. When on the death of al-Mu'izz of *Damascus* his son al-Nâsir was attacked by al-'Kamil, he joined first al-Nâsir, but soon after al-'Kamil, who transferred to him *Dam-*

ous in return for his yielding to his claim to a portion of his eastern possessions (626 = 1229). Shortly afterwards he allied himself with *Kat-Khafa* of *Rim* against the common enemy *Uthûl al-Din Khâfira-Shah*, but prince of this house, who was being hard pressed by the Mongols; him they defeated in the year 627 (1230). Soon afterwards the Ayyubid Princes al-'Ashraf and al-'Kamil were a truce ~~with~~ *Kat-Khafa*, who made an attack on Mesopotamia (631 = 1233-1234); their expedition was at first unfortunate, but they succeeded in repelling the *Seldjuk* in the year 633 (1235-1236). Thereafter al-'Ashraf, obviously from jealousy, broke with al-'Kamil, and the latter took the field against him, but, before arms could decide the issue, al-'Ashraf died at *Damascus* on the 4. Muharram, 635 (27. August, 1237). Al-'Ashraf was reported for his liberality and kindness, and so was beloved by his subjects. Notwithstanding the praise lavished on him he cannot be placed on a level with the great princes of his house.

Bibliography: *Alm 'I-Fidâ* (*Recueil des Historiens du Croisade*; Hist. Or., i. 80-113); also (*Constantinople*), iii. 116 ff.; Ibn *Khalikân* (*Transl. of M. Simon*), iii. 486 ff.; *Uthûl al-Din Khâfira* (*Recueil des Historiens du Croisade*; Hist. Or., i. 339 ff.); *A. Müller, Der Islam im Morgen- und Abendland*, ii. 163 ff.

2. **AL-MALIK AL-ASHRAF MU'AYYAD AL-DIN MU'IN**, son of al-Mu'izz *Shahin*, was the last Prince of Hama of the house of the Ayyubids (line of *Shirâh*). He succeeded his father in the year 644 (1246-1247). Two years later al-Nâsir of the Aleppo-line supplanted him against the wishes of al-'Adil of Egypt. On the invasion of the Mongols he was restored to his office, and his position confirmed later by the *Mamluk* *Kutuz*. The dynasty became extinct on his death (661 = 1262-1263), and Hama ~~was~~ administered directly by the *Mamluks*.

Bibliography: *Alm 'I-Fidâ* (*Recueil des Historiens du Croisade*; Hist. Or., i. 124-150), also (*Constantinople*), iii. 184 ff.

3. **AL-MALIK AL-ASHRAF MU'IN**, son of Yusuf and grandson of the last Ayyubid prince of Yemen, *Yusuf*; in the year 648 (1250) this lad of six years ~~was~~ proclaimed by the first Egyptian *Mamluk* Sultan, *Ainshâ*, as ~~the~~ *Mamluk* master of Egypt. The country lasted for ~~the~~ years. Nothing further is known about him.

(C. H. DECKERT.)

AL-ASHRAF, name of several *Mamluk*-princes. [See *BARBAR*, *MANALIS*, *QAL*, *QATIR*, *KARIR*, *QATIR*, *QATIR*, *QATIR* and *QATIR*.]

ASHRAF (*Asyraf*, *Asyraf*), town in the Persian province of *Mazandaran* and chief town of a district (*shah*) of the same name, situated 53° 40' E. Long. (*Greenw.*) and 36° 40' N. Lat., distant about 6 mls. from the South-Eastern shore of the Caspian Sea, on the coast leading from *Astara* to *Sari*, about 40 mls. to the west of *Astara*. This town, built at the foot of the *Elburz* range, is distinguished by its picturesque site and wealth of vegetation above all the others on the south coast of the Caspian Sea, the district of *Ashraf*

however is one of the poorest in the whole province of Māzandarān; excellent rice, cotton and sugarcane are cultivated in the (Hager), but trees the pomegranate, lemon and mulberry trees grow best. Before the time of Shāh 'Abbās I. Ashraf was an unimportant village; its situation so pleased the Persian king that he made it an imperial residence (1622 = 1623), and in its gardens erected palaces which, according to the Persians, had an equal in splendour and grandeur. The palmy days of the town fall into the period of Shāh 'Abbās I., the Great, who chose it whereto to set up his splendid court; in 1627 there were 2000 families living in it, and it contained no less than 300 public baths. About the middle of the xviii. cent. Ashraf was more than once the scene of civic disorders, and was also repeatedly plundered by the Turcomans. These internal disorders and the dangers which constantly threatened from without caused many inhabitants to leave Ashraf. And as the town, in which the peace between Turkey and Persia was concluded on 3. October, 1727, again fell into neglect and gradually into decay. It has now declined into a large but unimportant village of 843 houses (in 1850), therefore of about 8—10 000 inhabitants, who support themselves mainly by a transit-trade, the cultivation of cotton and silk.

The gardens, well-known under the name *Bagh-e Shāh* ("King's Park"), lie to the south-west of the town on the foot of the mountain *Sāh-e Shāh*, and are divided into beautiful gardens, separated each other by high walls and contain a number of palaces and other buildings. In the course of time they have suffered so much from fire, devastation and earthquake that they now give no idea of their former splendour. The palace *Chih-Sāh* which was destroyed by Nadir Shāh in 1144 (1731) after a conflagration is the best preserved. Fully $\frac{1}{2}$ mi. to the north of the town 'Abbās erected upon a mountain with a magnificent view another palace with an observatory, which is now usually called *Safābād*; after Shāh 'Abbās' successor *Qāsr*; it is also lying in ruins.

ASHRAFĪ, also *Sharīf*, equals, *shāh gold-cloth*. Cf. Dory and Kugelmann, *Glossaire des mots persans et turcs*, *Siècle de l'Irak*, 2. ed., p. 353.

ASHRAFĪYA, *Qorish-onlar* (according to d'Alton), which takes its name from 'Abd Allāh

Ashraf (Taher) Rami, died 899 (1493) in Cōnstantinople.

al-ASHRAF, *Shāh* p. *al-ASHRAF* *al-Nāṣirī*, loyal companion and lieutenant of the Caliph 'Alī b. Abī Tālib; accompanied him on a campaign against the Byzantines on the southern frontier of Syria (Bédalhart, ed. de Goege, p. 104); conveyed to Medina the complaints of the habitants of Kufa about the forestalling of *al-Nāṣirī* which Sa'īd b. al-'As, governor of Iraq, was attending for 'Uthmān on behalf of the Korāsh; but since he did not meet with success, he noted the inhabitants to revolt, looked the way for Sa'īd, and as the Caliph's command submitted to 'Abd Mūsā 'al-Ashraf, a former governor under 'Umayyad. At the time of the conspiracy which led to the murder of 'Uthmān, he brought 200 men to Medina (35 = 655); on being persuaded by 'Alī's promise of reforms he returned with his companions, but was met on the way by a retainer of the Caliph who carried their death-warrant. He did not however take any part in beheading 'Uthmān's house (*Wāṣ'at al-Dīn*) nor in his assassination. After this event he compelled some who had remained obstinate to take the oath of allegiance to 'Alī (Tabarī, ed. de Goege, I. 306 ff.), and was commissioned to bring round the wavering of Kufa to his master's side; then when 'Alī took the field against the rebellious Baṣra he furnished him with reinforcements. In the Battle of the Camel (10. Jumādī II, 36 = 4. Dec. 656) he fought hand-to-hand with 'Abd Allāh b. al-Zubair (or according to Tabarī I. 320, with 'Abd al-Rahmān b. 'Attab). In Kufa he vainly endeavoured to restrain 'Alī from sending Hārīr b. 'Abd Allāh al-Raḍī to Mu'āwīya, after the former had pledged himself to urge Mu'āwīya to acknowledge 'Alī's authority (Ya'qūbī, II. 214). In the campaign against Mu'āwīya he forced the obstinate inhabitants of Raqqa to construct a position across the Euphrates (Tabarī, I. 345 ff. Ya'qūbī, II. 318). At Siffin he commanded a corps of 4000 cavalry and infantry, and was killed at the indecisive battle on Tuesday, 7. Safar, 37 (25. July, 657). On the following Thursday he commanded the attack against the soldiers of Mu'āwīya who had vowed to fight to the death and had done so the great *shik* portion (*Mas'ūdī, Morādī*, IV. 356); some state that it was he who killed 'Umayyad b. 'Umayyad with a thrust of his lance. On the decisive day he overthrew the right flank of the Syrians and won victory in his hand, when 'Amr b. al-'As suggested to Mu'āwīya the famous artifice of sticking leaves of the Korān on the points of the lances. On being referred to by 'Alī whom the rebels had threatened with death he was in favour of continuing the fighting. When 'Alī proposed him as the arbiter for his party, he was rejected as having been *shik* chief agent in provoking the civil war; he refused in consequence to sign the arbitration-agreement. He was appointed governor of Egypt, but at Mu'āwīya's instigation was poisoned (38 = 658-659; Tabarī, I. 339 ff. Bédalhart p. 218; Ya'qūbī, II. 227) in Kōshān through a honey-drink given him by the *Qorish* (Tax-wild-tor, *passim*, *Gloss. Tab.*). When 'Alī received news of his death he exclaimed: *Li 'ayadīn wa li 'ayadīn* ("his hands and his mouth have killed him"), Mu'āwīya, on the other hand, exclaimed: *'Allāhu wa leglām* (*Qorish*) "God and honey". He took to himself the surname *al-Aṣṣ*, "the ripe" (*Mas'ūdī, Morādī*, IV. 357) Mu'āwīya regarded him as one of 'Alī's two right hands,

the other was 'Amār b. Vāṣit (Tab. i. 3394) who fell at Qiftān.

'ASHURA', name of a voluntary fast-day which is observed on the 10. Muharram. When Muhammad came to Medina he adopted from the Jews amongst other days the 'Ashūrā'. The name is obviously the Islamic *Yāsur* with the Aramaic de-

terminative ending; in Lev. 16, 29 it is used of the great Day of Atonement. Muhammad retained the Jewish custom in the city, that is, the fast was observed on this day from sunset to sunset, and not as was usually the case only during the day. When in the year 2 Muhammad's relations with the Jews became strained Ramadan was chosen as the fast month, and the 'Ashūrā' was no longer a religious duty but was left to the option of the individual. — The whole day of the Arabian year the fast was originally observed cannot now be ascertained owing to our defective knowledge of the calendar of the period; naturally the observance coincided with the Jewish one the 10. Tishri, and so fell in the autumn. The 10. Muharram finds early mention as the 'Ashūrā'; probably the tenth day of the first Muslim month was selected to harmonize with the tenth day of the first Jewish month. From the calculations which have already been made it does not seem possible that it could have been originally celebrated on the 10. Muharram (see Cantel, *Annali*, I. 431 f.).

Presumably for the sake of distinguishing themselves from the Jews some fixed the 9. Muharram either along with or in place of the tenth as a fast day with the name *Tūfā'*.

The Jewish origin of the day is obvious; the well-known tendency of tradition to trace the Islamic customs back to the ancient Arabs, and particularly to Abraham, states that the Mekkans of olden time fasted on the 'Ashūrā'. It is not impossible that the tenth, as also the first nine days of Muharram, did possess a certain holiness among the ancient Arabs; but this has nothing to do with the 'Ashūrā'.

The fast of the 'Ashūrā' was later and is still regarded by Muslims as commendable; the day is kept by the devout of the entire Muslim world; it is holy also on 'historical' grounds: on it Noah left the ark, etc. In Mecca the door of the Ka'ba is opened on this day of the 'Ashūrā' for visitors (see Snouck Hurgronje, *Medina*, II. 51). In lands which are still or come under Sufi influence quite different usages have become associated with the 10. Muharram; in this connection see *Muḥarram*.

AL-'ĀSIR is the name to be among the Arabs for the Orontes, the chief river to the north of Syria, whose usual designation in classical antiquity is preserved in Arabic as *al-ʿAṣīr*, al-ʿAṣīr. Presumably the word as with the Greek *Asios* is to be referred back to an earlier native name. The common explanation of al-ʿĀsīr = 'the rebel' is a popular etymology with no actual foundation, and the name al-ʿĀsīr al-ʿĀṣīr = *Asios* is a scholarly invention.

The river-system begins in the north of the watershed of the highland-valley of al-ʿĀṣīr not far from Baʿlabakk, but really only obtains its volume of water further north at al-ʿĀṣīr from a spring, generally called simply the Orontes-Spring, which wells forth in a strong stream from the rock. Following the line of the Syrian coast to the north and the river flows through several lakes or marshes (those of Kadas and of ʿĀṣīr = Kaṣat al-Maṣīr); on its banks we situated the most important towns of central Syria, Hama and Hama. Where the Syrian wooded ranges meet the fields of the Asama-Asia Minor region, the river winds round from the north into a south-westerly direction, and takes up the water which has been drained off northern Syria and collected in the marshy region of al-ʿĀṣīr, and discharges itself below ʿĀṣīr, to the south of the Asama, at a flat and levelless shore (Selaṣa and al-Sawādīya were artificial havens).

'ĀSİM EFENDİ AHMAD (ASIM), Turkish philologist and historian, received the first part of his education in his native town 'Asīr, and then went to Constantinople, where from 1211 (1796) he was engaged as *Madrisi*. After a short residence in Selahit he returned to the capital and died there in 1235 (1819). Of his writings the following may be named as in the first rank: the Turkish translation of Firdawsī's *Arabī Dictionary al-Kawāṣir* (ed. Dūḥ, 1250, and several times), the Turkish translation of the *al-Fihrist* dictionary *Barāhīn al-Kāfī* with the title *al-Fihrist al-Kāfī dar Farḡānīya Barāhīn al-Kāfī* (cf. in this connection *al-Muḥall* *Literaturgeschichte*, p. 308 ff. 19.) Among his philological works are: *Kiṣṣa Sīyur*, *Nuṣṣa al-Maṣīr* *fi Sharḥ al-ʿĀṣīr* and *Tuḥfa al-Luḡatī* *ʿArabiya*. An *al-Fihrist* hagiographer he composed the *Waṣṣaf al-Salawī* (L. Flügel, *Catalog der Handschriften in Wien*, II. 312 ff. 19.).

'ĀSİM EFENDİ İSMAIL (See *QURAN-ḤADIS*). **'ASIR**, a hilly region in Arabia between Hama and Yemen; since the Turkish conquest (1891) has been a *Sandlak* belonging to the Wilayat of Yemen; it is divided for purposes of administration into 7 *Kazas* (al-ʿAbba, Banā Shabir, Ghāmid, Ghāmid, al-ʿAbba, al-ʿAbba and al-ʿAbba), though this division holds good only on paper. The Arab geographers of the Middle Ages do not

know it as a geographical name, and include this region partly in Hadda, partly in Yemen. Al-Hamadani (ed. Müller, p. 118) alone knows of an originally Yemenite tribe of the name of 'Asir, which however was reckoned among the Isma'ili tribes, as belonging indeed to the 'Ans b. W'il, and names among its locations the above-mentioned Adha. From this tribe the region, which was occupied by Isma'ili tribes, especially the Isdhila (cf. Ibn Dja'bir, ed. de Goeje, p. 132). And Abd Khatib, took his name. Mubarak is not acquainted with it; he states that the Arabs of the coast between Adh and 'Asir and Hadda dwell in tents and spoke a dialect which differed from the Arabic spoken in Hadda and in Yemen. Although they call themselves Muhammadans, they are regarded in Yemen as Kufis and are called as Bent Hadda, worshippers of the moon. He mentions a story of their customs that they circumcise not merely the foreskin, but have a section of the skin of the abdomen entirely removed, and submit with the greatest courage to this painful operation, which often enough results in death. These accounts are confirmed by Ibn Dja'bir (see *supra*) and others, so far as any tale as they make mention of the rude customs of this brave hill-folk. According to Durr-i-Hind they sell their marriageable daughters in open market and place their wives at the guest's disposal.

The region has only become known to any extent, insufficiently however, since the Egyptian campaigns of 1822-1827. Like the whole coast 'Asir also is divided by the mountain-chains (Sawad) into two parts, a coastal region (Hadda, q. v.), and a hill-country, the real 'Asir. Various Wadis run down these mountains towards east and west, e. g. Wadi Dha, Wadi Shabran, Wadi Dhaif. Some of these Wadis, especially Wadi Dha, belong to the fairest and most fertile districts of Arabia.

History. 'Asir only became known to Europe when, in consequence of the Wahhabi rising in Mecca, a Muhammad Abd Nukha, with the aid of the Wahhabis, made almost the whole of 'Asir subject to himself and compelled the inhabitants to accept the Wahhabi doctrines. Ibrahim Pasha had in consequence to dispatch Ahmad-Pasha with Egyptian troops to 'Asir in the year 1822, but this expedition even after a second attempt, in the following year did not bring about the submission of the brave hill-folk. Just as little success attended the campaign of 1834 and the following years; in the end the Egyptian troops, seriously weakened by famine and cholera, had to vacate the field, whilst the Ibn Dja'bir of 'Asir, 'Ali b. Musa, continued to hold sway in peace in the hill-country and bequeathed it to his son Muhammad. The latter extended the province of his authority, and in the winter of 1870-1871 drove the Turkish garrisons out of the coast-towns of Yemen and made himself master of the whole region. The government of Turkey was now compelled to intervene, and sent troops under the leadership of Muhammad Raddi-Pasha, who actually succeeded in forcing an apparent submission on the part of the hill-folk.

ASIR (A.), captive, slave.

ASIR, more precisely Mirza Hajjib Ash b. Mirza Marzuq, Persian poet, born at Isfahan, died while still young in 1604 (1630-1640), according to another account in 1603 (1633). He was a pupil of the poet Faghi and a friend of Shah 'Abbas I. and composed the majority of his songs while under the influence of drink. An edition of his *Asiriya* appeared at Lucknow in the year 1850.

ASIRGARH, name of an ancient fortress situated in the district of Nimar in the Central Provinces of British India. It stands on a projection of the Satpura Range. In 1600 it was wrested by Akbar from the last king of the Muhammadan dynasty of Khambhat; this event is also mentioned in an inscription which is set down to that period. Of the buildings, some of which were erected by Akbar's successors, a mosque of the year 992 (1584) and still in a state of preservation is noteworthy from the fact that it (like another preserved in the neighbouring Bhatnagar area both an Arabic and a Sanskrit inscription. This mosque erected by the last of the 'Abdihila dynasty of Khambhat perhaps served Hindus and Muhammadans conjointly in accordance with the 'Jinai Hindu'.

(J. H. H. H. H.).

ASITANE. (See *Asitane*.)

ASIVA. This is the name given by the commentators to Pharaoh's wife, who is twice (28. 1; 46. 1) mentioned in the Koran. She plays the same part as Pharaoh's daughter in the Bible, so that there is obviously confusion. In the last mentioned passage these words are put into her mouth: "My lord, build me a house with thee in Paradise, and deliver me from Pharaoh and his evil deeds and deliver me from the wicked". In connection with this passage it is related that Asiva refused every invitation to the hands of Pharaoh because of her faith (she was an Isma'ili), and finally he even caused her to be cast down on to a rock; at her prayer God took her unto himself, so that only the body fell on the stone. — It is also related that Pharaoh converted her to death, but on Moses' praying to God she did not feel any pain.

(A. J. W. W. W.).

ASKALAN, a former coast-town of South Palestine, one (Hebrew: 'Ashkelon) of the five Philistine towns known to us from the Old Testament; in the Roman period is oppidum Ascalo liberata. It was according to Strabo, *Geographia* etc. *Ascalon* (1000 in *Ascalon* Jeru., 2. Ed., ii. 67) a flourishing Hellenistic town famous for

its cults and festival names" (Deiratha-Aphrodite shrines); in the Christian period a bishop's see (tomb of the two laureate martyrs Aegyptii).

Askalân was one of the last towns of Palestine to fall into the hands of the Muslims, but was soon after ravaged by the Turks and restored by 'Abd al-Malik b. Marwan. According to an inscription from a building which was discovered by Clermont-Ganneau the Caliph al-Mahdi in 155 (772) caused a mosque and minaret to be erected there. After varied fortunes the town fell into the power of the Fatimids. Askalân attained its greatest importance in the period of the Crusades. For over half a century it successfully withstood the Franks and was a continuous menace to the capital of the young Kingdom of Jerusalem. Not till 548 (1153) did Salâh al-Dîn III get possession of the town. After the battle of Hattin he had, the seat of the stronghold in Palestine, to surrender to Salâh al-Dîn (553 = 1157). In 587 (1192) the latter found himself after the battle at Arsuf out in a position to attack Askalân against Richard of England and destroyed it. Richard rebuilt the fortress. According to the conditions of peace of the following year it had however to be again destroyed. The truce between al-Salâh Ayyûb of Egypt and al-Salâh Isma'il of Damascus again let it slip into the hands of the Franks. After the decisive battle of Hattin the newly-fortified Askalân could no longer expect help. It fell in 643 (1247). In order to make it impossible for the Christians to effect a landing the Mamlûk-Sultan Bâibars al-Mansûr (1270) destroyed Askalân and other places on the coast. This was the end of the town.

In antiquity and the Middle Ages the now desolate environs of the town were famous for their wine, sycamores and figs (Kypria). It has given its name to a species of union (Stalut). By al-Mas'ûdî's time there was a noticeable lack of gardens (see *Zeltchr. d. Deutsch. Paläst.-Verins.*, viii. 123). Modern authors often call Askalân the "Bride" of Syria or of the world, Spouse Syria, a phrase which is traced back to the Prophet. It is uncertain whether this expression is used to characterize it as the maiden or the unconquered or the lovely.

Into the period of the Muslim supremacy of the Fatimids the construction by al-Aḥdî b. Badr al-Jamālî (491 = 1098) of the Maḥbad for the reception of the head of the Prophet's grandson, Husayn. This highly-revered relic was in 548 (1153-1154) saved from the Franks (cf. Maḥbad, *Kāfiya*, 2. Ed. II 283, Maḥbad, *Châtrah ay Aḥdîf*, II. 60), and carried off to Cairo. Later Muslim pilgrims visited besides Husayn's chapel especially an Abraham's Well.

(R. HARTMANN.)

AL-ASKALÂNÎ. [See 108 *INDEX*.]

AL-ASKAR (A., from Pers. *Lashkar*), the army, the soldiers, etc.

AL-ASKAR. [See 108 *INDEX*.]

ASKAR MUKRAM ("Camp of Mukram"), town in Alirâs (Shamir), one of those places refounded by the Arabs which have and there in the time of the Umayyads grew up out of fortified encampments. Mukram, an Arab commander whom al-Jahshiyâ had sent to Alirâs to suppress a rebellion, pitched his camp near a tower which the Arabs had destroyed of the name of Kusim Kahlîl (corrupted by the Arabs into Kusim Kahlîl). From this camp there soon developed owing to the favourable natural situation a flourishing town, in only a little below is the main arm of the River Nadjîl (or Khrin), the modern Shajit (= Shajit, i. e. small river), runs with its eastern branch the Maḥbadh Canal (modern Ab-i Gargi or Gargi) which branches off at Shajit, and not very far from there its most important tributary, the Fihâl Rûd (modern Ab-i Dû) flows into the Nadjîl. Askar Mukram lay on both sides of the Maḥbadh, and was the chief place on this canal. It is stated to have been the mint-town during the 11. (11.) century under the Uyyûd Muḥiz al-Dawla; cf. *Zeltchr. d. Deutsch. Morgenl. Gesellsch.*, xl. 452. The name Askar Mukram is no longer found on our maps; its place is marked however by the ruins of Band-i Khr ("Embankment of Khrin"), about 28 miles to the west of Shajit (Arab. Fatar), the inhabitants of Shajit wrongly look on the remains of Askar Mukram in some considerable number of mounds quite close by their town, which they therefore call also Lashkar (Pers. = Arab. al-Askar).

Bibliography: Belajir (ed. de Goeje), p. 383; *Yāqut, Muḥjam* (ed. Wüstenf.), iii. 676; G. in Strongo, *The History of the Eastern Caliphate* (1903), p. 233, 236 f., 242, 246 f., also in *Journal of the Roy. Asiatic Society*, 1895, p. 312 (on the Maḥbadh); K. Ritter, *Erzkunde*, ix. 164 f., 168 f., 191-192, 227; *Weil, Guck. der Chaldäer*, II. 457.

ASKAR SÂMARRÂ = Askar al-Mu'tasim, the camp of Samarra or of Mu'tasim, is the place where the Caliph al-Mu'tasim li Aḥsān encamped with his Turkish troops on the founding of Samarra in the year 231 (836). Hence this quarter of the town, like Askar Abi Dja'far al-Ḥusayn or Askar al-Mahdi, i. e. Kusim Kahlîl, received his name, and with greater right, since Samarra remained as long as al-Mu'tasim was ruler, i. e. till 247 (842), the character of a camp, and only because under al-Walîd, as Yāqut says, a civilised town. The story of the foundation of Samarra shows that the quarter Askar al-Mu'tasim stood upon the site of an older settlement which appears among the Syrians as Shāmarrā and so the classic writers of the time of the campaign of Julian the Apostate as Samarra (Amonapa Marcellinus) or Samarra (Zosimos). It is this quarter of the large town which alone survived the transference of the Caliphate to Baghdad, as Yāqut and the *Maḥbadh* tell us, and which still exists. Here lived and were buried the tenth Imam, 'Alī, and his son al-Husayn, who consequently have the cognomen al-Askariyain. Besides these holy tombs this place preserves the *Sarâb* of the Kā'im Muhammad al-Muntazir al-Mahdi under a golden dome presented by Nāṣir al-Din Jahān and completed under Muḥaffir al-Din Shih in the year 1903. This Maḥbadh of the Mahdi is also occasionally called al-Askar owing to its situation.

the occasion of their flight [see infra]. She was one of the earliest believers and married in the first period of Islam al-Zubair b. al-Awwam (q. v.), who was also one of the earliest believers and found himself at that time in such distressing circumstances that she was compelled to do heavy and humble work; in this matter her husband also acted harshly towards her. She did not join her husband on the emigration to Abyssinia. When Muhammad and her father on their flight to Medina concealed themselves for 3 days in a cave, she fetched them every evening food and water, and after the flight she settled in 'Gaba', not far from Medina, with her eldest son; the well-known 'Abd Allah b. al-Zubair (q. v.), and became the mother of the first believer born after the Hijra. She had 3 sons and 3 daughters. Later al-Zubair separated from her, whereupon she joined her son 'Abd Allah and experienced all the vicissitudes of his fortunes, and learned of his fall (73 = 692) when she had reached her 80th year, and though grown blind still retaining her mental vigour, her request to be allowed to bury the impaled corpse of her son was refused. A few days later her eyes closed in death.

(RECOMMEND.)

ASMA' (A.), names, plur. of *Am* (q. v.).

AL-ASMA' I., AND SA'ID 'ABD AL-MALIK b. KURAB, one of the famous figures of Arab philology, born in Basra in 122 (740), died there 213 (828). His name al-Azma' he took from one of his ancestors al-Azma'. He was reared in indigent circumstances, and applied himself with diligence and to his studies in the school of his native town, where he especially enjoyed the teaching of al-Ebadi, of Basra. He was one of the disciples of Umar b. al-'Alfi. Soon he became himself a teacher much in request at this school, and turned out such notable pupils as (Abu 'l-Faql) al-Kisrabi, Abu 'l-Ebadi, Abu Hanan al-Shijibi (Abu Sa'id) al-Sukuti. His astonishing memory embraced all the treasures of knowledge of his time; he had a very special mastery of the language of the desert-people and their dialects, as well as of the whole range of poetry, and as a philologist held unchallenged supremacy among his contemporaries. He reached the rank of *Ulama* al-Rashid, who brought him to his court at Baghdad as tutor to the *Ulama* al-Azma'. Here he soon became the acknowledged leader in the active intellectual life of the Caliph's court. While held in high honour he retired with the wealth accumulated by a prudent economy to spend the rest of his life in his native town.

Al-Azma's many works, a large number have been preserved, some manuscripts, among them besides well-known writings a *Kitaab al-Fatawa*, *Kitaab al-Mas'ala*, *Kitaab al-Mas'ala*, etc., are contained in a private collection in Baghdad (cf. Haffner, *Festschrift zur arabischen Literatur*, Leipzig, 1903, Preface, p. v.), and as an edition of them is unfortunately impracticable. His works deal with their subject somewhat arbitrarily and are never exhaustive, but the material contained in them is reliable and is based on his own studies, in which connection the oft-related anecdote of how al-Azma' was in competition with the great philologist Abu 'Umid al-Azma' from the tribe al-Faql b. al-Rabi' is significant. The

splendid renown of al-Azma' is shown by the fact that he is the most frequently quoted authority in Arabic works, so that from these whole books of his can be compiled. Of the ancient Arabic poetry he has not only preserved in his works single verses in the form of quotations mostly taken from the oldest literary authorities but also prepared collections of whole poems. Besides the collection, al-Azma' has, bearing his name, most of the dialects of the Arab poets which have been preserved are due to him.

Bibliography: Brockelmann, *Gesch. der arab. Litt.*, 1, 104 f. and *Arabisches* p. 514; 1, 3.

(*Kitaab al-Azma'*) the name (= *Kitaab al-Azma'*) should be struck out; — in 5. (*Kitaab al-Azma'*) there ought to be added: ed. Haffner, in *Festschrift zur arabischen Literatur* (Leipzig, 1903), p. 66—157. — of 6. (*Kitaab al-Azma'*) the Vienna MS. contains only a fragment, which however can be supplemented, since there is in St. Petersburg a second fragment, and in the private collection in Baghdad a complete manuscript, of which the author of the present article has been able to obtain a collation. — 8. and 9. are the same titles (*Kitaab al-Azma'* and *Kitaab al-Azma'*), — in 10. (*Kitaab al-Azma'*) there should be added: ed. Haffner. — 11. *Kitaab al-Azma'*, ed. Haffner, in *Festschrift zur arabischen Literatur* (Leipzig, 1903), p. 158—232. — 12. *Kitaab al-Azma'* and *Kitaab al-Azma'*, Haffner in *Mas'ala*, 1902, p. 883 f. — Cf. also: Alwardi, *Schamshur al-Arab* (Berlin, 1902).

(A. Haffner.)

'ASR (A.), time, particularly the afternoon, hence *Salat al-'Asr* = Afternoon-prayer (see Th. W. Juganoli, *Handbuch der islam. Geistesl.*, index); *Salat al-'Asr* is the title of the 103. Surah.

ASRA' (A.) = he travelled in the night, *laft* (trav.); hence *Salat al-'Asr*, one of the titles of the 103. Surah.

ASRA'IL (See *ASRA'IL*.)

ASRA'IL (A.), secret, plur. of *Sirr*; in Turkish (used as sing. and pronounced *Asra'*) denotes a preparation of henna.

ASSAM, name of a district in British India, which since 1905 has formed with 15 districts of northern and eastern Bengal the new province of "Eastern Bengal and Assam". The district of Assam covers 54, 682 Eng. sq. mls., and lies between 10° 19' and 28° 16' N. Lat. and 92° 42' and 97° 12' E. Long. The population in 1901 amounted to 6, 126, 000 persons, of whom 1, 381, 317 were Muhammadans, and of those 2724 called themselves Shikhs. Almost three-fourths of the Muhammadan population belong to the district of Sylhet. The first Muhammadan conquest of Sylhet is ascribed by legend to the Saint Shah Jalal of Yemen, whose grave in Sylhet is held in veneration. Of the numerous invasions of the Muhammadans which succeeded one another from Bengal from the end of the 14th cent. some were unsuccessful, and were secured for them lasting possession of the country. Eventually in 1663 they abandoned the attempt to conquer the district. In the 18th cent. a depressed class of the Muhammadan population have descendants of the captured troops of the Muhammadan commander Turbak, who made in 1532 an unsuccessful invasion. The remaining Muhammadans of Assam call themselves Garos, which name they intend

to indicate their origin from *Assar*, the ancient Mughammadan capital of Bengal.

ASSAR, **SHAMS AL-DIN MUHAMMAD**, Persian poet, died 784 (1382-1383). *Assar* was one of the panegyrists of Shāhī Iwān, but is chiefly known for his poem (which has been translated into Turkish), *Mithr o-Mashhur* composed in 778 (1377), the content of which has been described by Eise in *Grundriss der iranischen Philologie* in the following words: "the story of a love, which is free from every frailty and pure from every ~~sexual~~ lust, between Mithr, son of Shāhshāh and the comely strippling Mashhur."

Bibliothèque de l'Asie: *Veijer, Comment. de Mithr o-Mithr o-Mashhur* (Berlin, 1839); *Floisner, in Zeitschr. der Deutsch. Morgenl. Gesellsch.*, iv, 389 ff.; *Rieu, Catal. Hist. Mus.*, ii, 626; *Peruch, Catal. Berlin*, p. 243 ff.

ASSASSINS is the name given to those fanatics, who at the time of the Crusades occupied fortified hill-fortresses in Syria and other Mohammedan countries, and were wont to rid themselves of their opponents by assassination. The ordinary meaning of *assassin* however did not belong to the word originally, for the latter is to be traced back to the Arabic *hashshiyān* denoting "consumers of hashish", *hashish* is a preparation of hemp (Cannabis indica), which oriental tyrants sometimes consumed in order to induce the ecstatic state and to become intoxicated. It is said that those who were selected, the so-called *Fidā'is* (q. v.), by the spiritual leaders of the Assassins to carry out any important mission, e.g. an assassination, were urged to its use in order that they might as volitional tools be ready for any deed. From the *Fidā'is* the Khalifas call the Assassins in general also *Fidā'iyas*; but in the oriental sources, when they are not simply called *hashshis*, they are often named *Mulshidā* (heretics) or *Nizāris*.

The Assassins in so far as they are a branch of the Isma'ili and have general principles in common with all Isma'ilis will be referred to in the article on the latter. What specially distinguishes them is less a doctrine differing from the other Isma'ilis than their political organization into a secret league whose members owed blind obedience to the spiritual head; and also the fact that they resorted themselves of murder to get rid of their foes in the new phenomenon in Islam, Abū Ma'shar al-Jāhil and Ma'shar b. Sa'ūd, whose followers were called "Strangers" (*Akharā*), had previously resorted to it and magnified assassination for political ends as a religious and meritorious act. For the rest, the theological tenets of the Assassins as far as they are not contained in the Isma'ili writings discussed below are insufficiently known to us, for their holy books, of which only one is known to us by name (*Sar-gashshat al-Najm* = History of our lord, i. e. of Hasan b. Sabbāh, see infra) were all destroyed in the Mongol period. Thus much we know, that the founder of this secret league, Hasan b. Sabbāh, whose biography follows in a later article, during his residence in Egypt (1078-1080) was won over to the claims of the Fātimid Nizār b. al-Mustansir, from whom the members of the league derive the above-mentioned name *Nizāriya*. As is well-known it was not Nizār but a younger

son of al-Mustansir who on his father's death was recognized by the Fātimids as Imam under the name al-Musta'li; but the Assassins supported the claims of Nizār until a later successor, who was also called Hasan (i. e. Muhammad), of Hasan b. Sabbāh gave himself out to be a descendant of Nizār and hence laid claim to the dignity of Imamship. With this end in view he summoned all his followers to a great assembly (*al-~~al~~ al-Khūma*, feast of the resurrection) in the year 539 (1144), at which he not only secured his recognition as Imam but also publicly proclaimed the abrogation of Islamic law. A reaction occurred under a third Imam (Izzat al-Din), who on succeeding his father in 597 (1200) returned to the statutes of Islam, informed the Abbāsid Caliph of his submission to him, and allowed his mother to make the pilgrimage to Mecca. Hence his name Naw-Mashūm (new believer). Under his successors there arose among the Assassins differences of opinion and factions, about whose real nature nothing is accurately known, and soon afterwards the political strength of the secret league was destroyed by the Mongols. With this the Assassins as such came to exist, and those of them who survived the catastrophe and continued loyal to their views were absorbed by the other Isma'ilis.

The history of the Assassins commences with the conquest of the hill-fortress of Alamūt by Hasan b. Sabbāh in the year 483 (1090-1091), who removed his residence there and from this place of difficult access carried on his propaganda. This consisted first in his followers obtaining possession of a large number of hill-fortresses in all parts of Persia, and getting rid of the most dangerous of their opponents by assassination. One of the first victims was the famous Seljūq-Malik Nizār al-Malik (485 = 1092). The death of Sultan Malik-Shāh which occurred soon after, and the resulting disputes for the succession among the various pretenders, and the appearance soon after of the Crusaders in the lands of Islam threw the Mohammedan world into a disorder which secured great success to the Assassins. Their strength consequently became very considerable in a few years, until 599 Seljūq-Sultan Muhammad I. ascended the throne and ordered every nerve to be strained for the destruction of the Assassins. The fortress of Alamūt, called *Shāh-Diz* by Malik-Shāh, in the vicinity of Isfahan, was at that time in the hands of a distinguished leader of the Assassins of the name of Imām al-Aqāsh, who had counted Hasan b. Sabbāh among his pupils. It was captured after a courageous resistance (600 = 1107). Of the official account of this in the al-Fakhri (cf. Amédée, p. 152 ff. sq.). The Turkish Emir Arslan-Shāh was then entrusted with the conduct of the war against the Assassins, and he after several successes was on the point of taking the fortress of Alamūt itself when the death of Muhammad (611 = 1118) forced him to leave the siege. Hasan survived this danger almost 7 years, he died in 618 (1224) leaving the leadership of the Assassins to Khayr Durrān Rūdihān, who bequeathed the conduct of affairs to his descendants. The following were the rulers of Alamūt:

Hasan b. Sabbāh . . .	483-518 (1090-1124).
Buzurg Umar b. . . .	518-539 (1124-1158).
Muhammad b. Buzurg	
Imām	552-557 (1138-1163).

Hassan b. Muhammad . . . 557—561 (1162—1166).
 Nur al-Din Muhammad . . . 561—607 (1166—1210).
 [Salah] al-Din Hassan b. . .
 Muhammad . . . 607—618 (1210—1220).
 *Ala al-Din Muhammad . . . 618—633 (1220—1235).
 Rukn al-Din b. Muḥam-

mad . . . 633—634 (1235—1236).

During the rule of these Grand-Masters the Assassins had more than once to endure severe persecution, but neither the Caliphs nor the Seljuks-Sultans succeeded however in breaking their power, destroying their robberies. They skillfully rid themselves of their most implacable enemies by assassination and zealously carried on their propaganda. Especially they succeed in settling firm foot in Syria, where the Seljuks of Halep, Ridwan, availed himself of their aid. A certain Abū Ṭāhī, who seems to have pilled the art of goldsmith and hence was called al-Sāgh, was sent to Syria as emissary and won in Halep particularly many converts. In 499 (1103-1106) he managed by treachery to remove from his post the governor al-Aḥmar, but was disappointed in his hopes of becoming himself master of the town since the Crusaders soon after took possession of it. The bloody persecution of the Assassins in Halep after the death of Ridwan in 507 (1113) did not prevent another Persian emissary named Bahram some years later from obtaining a large following and even gaining possession (520—1126) of the town of Bāḥiyā, which was surrendered three years later to the Crusaders. The Assassins often entered into friendly relations with the Christians, and continued to strengthen their position by cleverly availing themselves of the political conditions. In 535 (1140-1141) they conquered the hill-fortress of Ḥiṣn al-Maḥṣūṣ (Maḥṣūṣ) and other fortresses situated in North Syria, e.g. Kadi, Kaduḥ, Ḥillāḥ, al-Ḥiḥḥ, etc. The temporary chief of House Syrian Assassins was usually called *Shaykh al-Jabal* (translated by the Christians as "the Old of the Mountains", the *Vieux de la Montagne*), so that this term does not denote, as is sometimes stated, the Persian Grand-Master, the universal chief of the Assassins. One of the most famous of the Syrian rulers is Raḥmān al-Dīn Sūdā (q. v.).

The Mongols who effected such great changes in the political conditions of Asia accomplished also the downfall of the Assassins. The last Grand Master Rukn al-Dīn had just entered upon his dignity when Hülegü marched his forces on Assuan. Resistance was impossible; Rukn al-Dīn had to submit (654 = 1256), and was to be brought before the Great-Khān, but was executed on the way thither. The strongholds held by the Assassins were taken and some of them razed to the ground. The hill-fortress of Syria, e.g. Maḥṣūṣ, fell in 655 (1256) for the time being under the power of the Mongols. It was reserved for the Mamluk-Sultan Balbān to give the Assassins the finishing blow (671 = 1272). This ended for ever the political power of the dreaded sect, but there were and are to the present day in the mountains of the Nigālāḥ mountains descended from the Assassins, as also in Persia and India. [Cf. the articles *India* and *Khyber*.]

History of the Assassins. The history of the Assassins is contained in the Universal Histories of Ibn al-Aṣir, Ibn Khaldūn, Aḥmad al-Fāḍl etc. Cf. also the appropriate sections in Mirkhond's

History, separately edited in *Noticia et descriptio*, ix. 193 et seq. and in *Tārīkh-i Ghalib*, translated in *Journ. ASSUAN, town in Upper Egypt. Assuan, in Arabic character *Assuan* (Assuan also appears), popularly known in the Middle Ages as Assuan, is situated 24° 5' 30" N lat. on the east bank of the Nile to the north of the first cataract, and is the capital (13 000 inhabitants) of the Egyptian province of Nubia and chief town of the district (Makāza) of the same name. The district of Assuan includes of the *Wāḥ* of Elephantine town in antiquity the name *Wāḥ*, "land of elephants", a name which the island still bears. The island is in ancient time more important than the town lying on the east bank, via Swage, the Syene of the Greeks, the Soan (Vahit) the mostly Arabs. In the Araba in the neighbourhood were stone-quarries whence the ancient Egyptians obtained their columns and the blocks for their statues. Pliny calls this stone Syenite after the place whence it is obtained, but the name does not denote quite the same as the modern geological term. In Islamic time *Wāḥ* were quarried there—perhaps ancient columns were turned to a like account. This manufacture of statues was for a time a royal prerogative. The stone-trade of Assuan (pole and plumb) was also famous.

The town stood an old temple containing the representation of a serpent. If on the 12. Bayanda day (7th, but 7th) were pressed on this occasion, any one carrying with him a piece of the clay was immune from the bites of scorpions (Abū Ṭāhī).

Assuan both in antiquity and the time of the Arabs was the frontier-fortress of Egypt against Nubia. The frontier ran just on the other side of the cataract at Philae (Bilak). The first Nubian town was al-Khā. The Christian king of Nubia paid annually to the Prefect of Assuan so-called tribute (*Bakī*), which was in reality only a kind of official exchange, for he received an equally costly present in return from Egypt. The oldest contract in this connection dates from the year 31 (651—652). The proximity of the gold-mines of *Alīk* (q. v.) and other economic interests attracted numerous Arabs into this region, and this led to constant friction. From the 14.—15. cent. Assuan suffered partly from Nubian incursions, partly from these Beduin-borders (see Article *Nubia*). Under the Fatimids, especially under the Mamluks, Assuan or rather the most southern province of Egypt, when in the hands of weak governors became the asylum of rebels who were here for the time-being beyond the jurisdiction of the central authority. This did not entirely cease until the time of Muhammad 'Alī who removed the Egyptian frontier well towards the south. The

conquest of Kuba under the Mamluks brought little change.

Assuan possessed at all periods great economic importance; for it formed the natural centre of the Nubian, eastern African, and for a long time also of the Indian trade. Slaves, gold, ivory and ostrich-feathers were the chief imports. Egypt exported on the other hand corn, wine and manufactures (clothes). In the first centuries of Islam Assuan was a favourite starting-point for the pilgrimage to Mecca, which proceeded from Assuan through the desert to 'Alubbāh and thence by ship to Djidda. Assuan long remained therefore the most important town in Upper Egypt. Later it declined very considerably when traders and pilgrims preferred the route by Kāf. By the close of the Fatimid period it had declined administratively, and in the Mamluk period economically as well, into a dependency of Kāf. The political conditions previously described prevent it from regaining its former splendour, but, thanks to its position (entrance, junction of several canals), it remains an important for the Central African trade. Recently it has lost greatly through the Mahdi rising.

The climate is excellent; the fertility (corn, vineyards) of the district is limited by alluvial plains; in the Middle Ages it was famed for its dates. There were more varieties of dates here than in Iraq. The section by England in 1898 of the huge dam (Djassir, Sudd) has seriously affected the climate, but has enriched Assuan with a spectacle of 100,000 rank and the whole of Egypt with a source of increasing blessing.

(C. H. BECKER.)

ASTARĀBĀDH (also Astarābād, Astarābād, Astarābād) of a North-Persian town and province.

1. The town of Astarābād, chief town of the same name; situated 36° 40' N. lat. and 54½° E. long. (Greenw.), and near the south-eastern corner of the Caspian Sea (23 mls. east of it). It stands on an insignificant eminence (350 ft. above sea-level) on the foot of a very high and thickly-wooded chain, a spur of the Elburs, and on the margin of a large and in many parts marshy plain, which though fertile is but little cultivated and later ends in the Turkoman sandy desert (Kara-Kum). Occupying a commercially and strategically important position Astarābād certainly dates back to a remote antiquity. Very probably it is mentioned (according to Mannert, Nordmann, Kiepert) by Arrian (*Anabasis*, II, c. 23 and 25) as *Zabāstara*. Some explain the name Astarābād as the city of the stars (Pers. *astar*, *stār*, 'star'), others as the city, or rather the place of the sun (Pers. *astar*, *stār*, 'sun').

Since, it is said, there dwell in it originally only sun- and star-drivers. The re-founding of a town here is ascribed to the Arab general Yaḥyā b. Muḥallab, who when on his campaign towards Khavārdān and Tabaristān in the year 98 (716) was so pleased by the site (occupied at that time by the village of Astarak) that he took up residence in it. In the Arab Middle Ages Astarābād was the second town of the province of Khavārdān, in the history of the Caspian coast-lands it is often mentioned. Since there were several adjoining peoples in its vicinity it was often involved in wars and feuds. During the civil disorders which occurred repeatedly in Persia in the 11th cent. Astarābād frequently suffered fire and was several times ravaged. Under Kādīr-Shāh (1730—1747) it attained its present compass (3. mls.).

The town which is built four-square is surrounded by a high picturesque wall flanked by bastions, which was last repaired under Agha Muḥammad Khān (q. v., vol. I, p. 180) but is now much dilapidated. The handsome palace (now the governor's residence) erected by Shāh 'Abbās I is also on the way to ruins. The frequent rains compel the inhabitants to build their houses of stone, and hence Astarābād presents a more regular appearance than other Persian towns. The numerous prayer-houses and public mosques (27 in number) are characteristic; with them are associated 7 academies (Madrasas). Astarābād is regarded in Persia as a stronghold of Shi'ite persecuted Sunnis; hence the epithet *Shah al-Ma'mūn*, 'the house of the faithful' (also in color): there is a large number of alleged descendants (called *Najaf*) of the Prophet dwelling in it. The number of the inhabitants, who must have been more numerous in earlier centuries, is now given at 10—12,000. Astarābād was never a large town, yet it was never without importance; for since it stood at the beginning of two important trade-routes, one leading to Herat, Meshed and the other to Tiflis-Tokharestān, which illustrate to the southwest of Ussia, it was natural that there should spring up here an important trade-emporium, a market for the products of Persia and Central Asia. The chief articles of trade are cotton, rice, silk, sugarcane, salt, opium, saffron, carpets, horse-dogs. Since the Russians advanced their frontier close to the southern shore of the Caspian Sea an active exchange of wares has been set up with them also. On the other hand the commercial intercourse of the town has suffered heavily by the opening of the Trans-Caspian line, so that the wares from the interior of Asia coming through Khiva and Bukhara are despatched almost exclusively by this line, so that the trade-trade of Astarābād is being more and more limited to the products of Persia and Russia.

The small town of Kander-Ges or Kander-Ges (Russ. Giss or Perovsk), 1. v. (passage) with ca. 1000 inhabitants, situated about 30 mls. to the west of Astarābād and about 2½ mls. to the south of the gulf of the same name serves as port of Astarābād. This is the best and most sheltered harbour on the whole southern coast of the Caspian Sea. In the Middle Ages the town of Astarābād (q. v.) served as common port for Khavārdān and Astarābād.

2. The Province of Astarābād, named after the chief town of the same name. It comprises the region at the south-east corner of the Caspian

Sea and extends from the river Kara-Su on the east, or rather north-east, along the northern slope of the Elburz-range, which separates it from the province of Khorāsān, westwards till about the middle of the Bay of Astarābādh, where the river Gālyō is considered to be the boundary between it and the province of Māzandarān. Area: 5634 sq. mls.; population small: ca. 80,000 (only 14,2 in the sq. mls.). The land is exceedingly thickly-wooded, but is also very marshy. There are no rivers of any importance. Among the products rice must have first mention, further walnut-wood, wax and sesame-oil. In the Middle Ages there was considerable rearing of silk-worms. With few exceptions (Gaz and a few places in the hills) all the villages of the province are in pretty poor plight. Agriculture and industry nowhere exist. Apart from the capital and its port (aemporium for Persian cotton) trade and commerce are quite insignificant. The magnificent Chinese laid out by Shih 'Abdās I. in the xvth cent. is now quite destroyed. In summer the sand-filled marshes serve as roads. The countless hordes of the Turcomans, at whose hands the country formerly suffered utterly, have almost quite ceased since Russian authority extended as far as the river Atrek (about 38 mls. to the north of Kara-Su). Astarābādh falls into 6 *khūds* or circles. Among the inhabitants (partly Shī'ites, partly Sunnis) there is a surprisingly large percentage of Molikān (clergy) and Isyādis ('Alids). In many villages reside Gāders, an energetic tribe widespread in the provinces of Astarābādh and Māzandarān especially, and descended by the Persians, which is engaged in agriculture, cattle-rearing, the cultivation of silk and the drying of fruits. Astarābādh is also the native place of the present ruling dynasty in Persia, the Kājārs, a Turcoman nomadic tribe, which came to Astarābādh on the conquest of Tabaristān by Timūr, and gave Abgha Muḥammad Khān as first king of the present reigning house.

Bibliography: 'Abd al-Rahmān al-Ishīrī (died. 403 = 1014) wrote the chronicle of the town of Astarābādh, a work often quoted by Yāqūt, but now lost; cf. also Brockelmann, *Gesch. der arab. Litt.*, I. 138, and Heer, *Die Arab. u. pers. Quellen in Yāqūt's geogr. Wörterb.* (1898), p. 40; *Bibl. Geogr. arab.* (ed. de Goeje), passim; Yāqūt, *Ma'ādhim*, I. 242; H. ASTARĀB. [See ASTURĀB.]

ASTRĀKHAN, Russian administrative province and its capital, properly Astarākh; founded by the Mongols in the neighbourhood of the Khwarezm town of Iul (q. v.). The town is mentioned by Kämpfner and Mühnemann travellers as early as the first half of the xiii. cent., according to the Russian a sainted Muslim pilgrim dwelt there, and so the place was exempted from all ~~taxes~~ hence the name. Colon appears to have been visited by Ibn-Battuta only from the year 782 (1380). Demolished by Timur in the winter of 1395-1396, the town seems to owe prosperity in the xv. cent., probably due in some measure to the simultaneous decline of the ancient capital Sami. After the decay of the "Golden Horde" there arose in Astrakhan a new ruling house which endured until the middle of the following century. In 1554 Astrakhan was conquered by the Russians, who appointed as first Khan Dmitrii 'Alī their vassal and did not annex the country till 1559; in 1569 a Turkish army appeared before Astrakhan, but soon had to quit the field, in 1579 a Russian fortress was built near the Tatar town Astrakhan has since remained under the sway of the Russians, and owing to its favourable situation at the mouth of the Volga has gradually by trade and industry developed into a large town (at present 113,000 inhabitants). (W. BARTHOLO.)

ASTROLOGY. Its technical name with the Musl. *ilm* (or *ḥikmah*) *al-ḥikmah al-urḥādīyah* 'al-*nujūm*, "the science (or the art) of the decrees of the stars", ~~the~~ shorter, *ilm* (*ḥikmah*) *al-akḥḥān*. Some Arab writers from the xii. cent. A. H. on use also the expression *ilm al-nujūm*. On the other hand the expression *ilm* (or *ḥikmah*) *al-nujūm*, "the science (or art) of the stars", *ilm ḥikmah al-nujūm*, *ilm al-nujūm* denote indifferently astrology or astronomy or both those sciences together. — The astrologer is called *al-nujūm* or *muḥaddith*; but the latter name denotes also the astronomer. Nor III we reach the s. A. D. do we find any precise distinction made between *muḥaddith*, "astrologer", and *ḥakīm*, "astronomer".

The majority of philosophers and authors of bibliographical and encyclopaedic works, basing to the classification of the sciences given by the

cipal systems: 1. The system of "interrogation" or "questions" (*mas'ala*, *istisna'at*). Intended to reply to questions relative to the events incident to daily life, e. g. when the client desires information regarding some one who is absent, or to discover a thief, or to recover something which has been lost, etc. This is the simplest and commonest part of the art. — 2. The system of "elections" (*istihlakat*, *avayaj*), i. e. the choice of the auspicious moment for accomplishing such and such an act; this moment is determined by observing in which of the twelve celestial houses the moon is. Astrologers who preferred the Indian method employed the 28 lunar stations (*rasas*) in place of the twelve houses. — 3. The genethliological system, or, to keep to the nomenclature of Muslim writers, that which is based on the "revolutionary annuum" (*asbabul ahwal*), i. e. on the years or fractions of the tropical year which have expired or are thought to have expired since the birth of an individual or the commencement of a reign, sect, or religion, or the foundation of a town, etc. Its fundamental principle, which is quite different from that of the other two systems, is that at the instant of birth the configuration of the celestial sphere irrevocably fixes the destiny of the newly born, and it will then be independent or nearly so of subsequent changes of the sphere. This is the system adopted by Ptolemy, who makes only very slight and ineffectual concessions to the principle of the "elections", and has not a single word to bestow on the "interrogations"; it is also a system which has more technical difficulties than the other two and too often encounters the impossibility of knowing the instant of birth or of commencement with sufficient approximation. When the prognostications concerned individuals, the "revolutionary annuum" (*asbabul ahwal* and *asbabul ahwal*) were employed, for prognostications concerning peoples, towns, sects, etc., (and consequently epidemics, famines, wars, inundations, etc.), the "revolutionary annuum" (*asbabul ahwal* and *asbabul ahwal*) were employed.

The fundamental operation in all these three systems was the determination of the ascendant (*raf'at*), from which the initial (*raf'at* or *raf'at*) of the remaining eleven celestial houses were calculated. In the case of the "interrogations" and the "elections" the ascendant to be determined was that of the moment in question; but in the third system, the genethliological, it was the ascendant at the birth of the individual or the commencement of a reign, etc. Now even supposing that the ~~moment~~ of the birth or commencement were known, how could the ascendant be determined if it varied very rapidly in consequence of the diurnal movement of the celestial sphere? Birth is not an instantaneous act, even if the astrologer had aided at the commencement he would not be able to choose the exact instant for determining the ascendant. The genethliological system has therefore in fact the theory of the "annuum" (*asbabul ahwal*), i. e. very complicated rules for choosing an imaginary ascendant for the nativity; the methods most in vogue with Muslim astrologers are the method of Ptolemy and those which they ascribe to Hermes and Zoroaster respectively. For prognostications not concerning individuals, the ascendant of the eclipses or of the great planetary conjunctions were employed.

But there is still more contained in the ge-

netliological system. Thereby is determined by use of the planets (including the sun, the moon, also the "par. fortune" and the ascendant) occupying at the moment of the birth the ascendant one of the five places which Ptolemy calls *rasas* *asbabul*, and our medieval astrologers "loci illegales" (*asbabul ahwal*). In this situation the planet (sun, moon, "par. fortune", ascendant) becomes the apheta or indicator (*raf'at* or *raf'at*), significant, *shayekh*, *hilegium*, *shayekh*, which is to be "directed" towards the stars and those points in the heavens possessing a particular astrological signification. From the examination of the combinations arising from these meetings may be learned the fortunes of the newly born. On its mathematical side this directing (*raf'at*, *raf'at*, *raf'at*, *raf'at*) can be explained as follows: In consequence of the diurnal movement of the celestial sphere a planet or a point of the ecliptic having a particular astrological importance will arrive at a certain moment at the circle of position (i. e. the circle passing through the points of intersection of the horizon and the meridian) formerly occupied by the indicator. The equatorial angle (hour-angle) thus "reversed" is calculated; when dealing with ~~human~~ life a solar year is counted for each equatorial degree, but with general events each degree counts only as one day. — It ought to be added that for prognostications relative to peoples, towns, religions, etc. the indicator is chosen in a different manner. According to the Arab followers of Ptolemy it is the planet or the star possessing the most "signification" over the point of the ecliptic where there has occurred an eclipse of the sun or moon. But the majority of Muslim Astrologers give the preference to the system of the planetary conjunctions (*asbabul*), which they probably learned from the Indians; they base their calculations on the conjunctions of the three superior planets (Mars, Jupiter, Saturn), whenever they draw their prognostications by the method of the *raf'at* or by other methods. — The *raf'at* of the above-mentioned indicator gives the duration of life. For the other events of life one must choose, according to the nature of the event one wishes to know about, between five other indicators (ascendant, ~~par. fortune~~, moon, sun, calculating degree) and "direct" the one chosen. — Further it is necessary to translate into terms of time, according to special rules, the uniform movements of the indicators according to the order of the signs (i. e. from west to east), in order to determine species of lords for the tropical solar year, the months, and the days of life: this movement (of the indicator), at the point of the ecliptic where it arrives, is called *raf'at* (Alaythia, protection). — Finally, there are cycles of the years of life which are specially subject to the influence of this or that planet; these cycles, corresponding fundamentally to the planetary "rotation of time" (*asbabul ahwal*) of the Greeks, but modified however and often very complicated (especially in Abu Ma'shar), are called *raf'at* (*asbabul*).

Other secondary methods were also employed, among which I will mention only that of the constellations and images (*raf'at*) according with the *asbabul*, which goes back to the Chaldean tradition of Teneor, and that which is founded on theplings of the star Sirius (Sothis of the *asbabul*).

it and astrology a *Ashtology*; further al-Fārhī and Ibn Rushd (Averroes) understood by *ḥisāb al-ʿarḥamī* *al-ḥisāb* ("the mathematical art of the stars") theoretical astronomy, and by *ḥisāb al-ʿamalī* *al-ḥisāb* ("the experimental art of the stars") observation of the stars. — Following the Aristotelian classification the sciences Muslim astronomers consider astronomy as one of the four mathematical sciences (*ʿulūm ḥisābiyya*). For them, as for the Greeks, astronomy only aims at studying the apparent movements of the stars and giving a geometrical representation of them; it comprises therefore what we call spherical astronomy (with the calculation of the planetary orbits and their employment in the compilation of ephemerides) and the "theory of the instruments." The study of the stars in the Aristotelian sense (including comets, shooting stars, etc.) and of what might be called in elementary Astro-Physics and Celestial Mechanics (origin of celestial movements, nature of the spheres, light of the stars, etc.) belongs entirely to the domain of physics and metaphysics. — The sum total of the practical knowledge necessary for determining by calculation or instruments the hours of day and night, having especially in view the fixing of the times of the five canonical prayers in the mosques, is called *ʿilm al-ʿaṣr* or "the astronomical science of the fixed times."

At the beginning of Islam the Arabs already possessed some knowledge of practical astronomy in their frequent night-journeys the Muslims often had no other guide than the moon and the bright stars whose places they knew; and relying they knew and from which they could estimate approximately the time by night; they determined also the seasons of the year from observing the position of the moon relatively to 28 successive groups of stars called binary stations (*ḥawāṣṣ al-ʿaṣr*). Among the majority of settled tribes the agricultural seasons and meteorological prognostications were associated with the annual rising of certain stars or the course setting (*ḥawāṣṣ*) of the binary stations.

But it was only in the 11. (12th) century of the Hijra that the scientific study of astronomy was entered on, under the influence of two Indian books: the *Brāhmasphuṭasiddhānta*, composed by Brahmagupta in 628, which was brought to the court of Baghdad in 854 (221), perhaps only in an abridgement, and was used as a model in Arabic by Ḥunayn b. Isḥāq al-Baṣrī and Yaḥyā b. Fāris; and the treatise of Aryabhata (al-Aryabḥat) or al-Aryabḥat of the Arabs) composed in 505, from which Abū ʿAlī Ḥasan al-Ahwaz derived his tables of the planetary movements. These books consisted of a short explanatory text followed by numerous tables of celestial phenomena arranged according to the artificial millennial cycles; for the fundamental hypothesis was that at the commencement of the world the moon and the planets were all in conjunction at the same degree of longitude, and will again be in conjunction there at intervals of millions of years. This method, which was called *al-ʿaṣr* or "theory of the stars," was still employed by Muslim astronomers at the beginning of the 17. cent. A. H. (18. A. D.). From Indian books the Muslims learned also the use of trigonometrical Sines.

To these selections from Indian astronomy there

was soon added the Arabic translation of the Ptolemaic tables entitled *ṣifāt al-ʿaṣr*, "royal astronomical tables" (Arab. *ṣifāt al-ʿaṣr* or *ṣifāt al-ʿaṣr*), which had been compiled in the last period of the empire of the Sassanians. They had great vogue with the Muslims of the 10. cent. A. D.; but about two centuries later they ceased to be used.

The Greek influence was the last in order of time, but first in order of importance: it introduced into Muslim astronomy the geometrical representation of the celestial movement, so characteristic of the Hellenic genius. The first and very unsatisfactory Arabic translation of the *Almagest* dates from the end of the 8th or the beginning of the 9. century; it was followed by two others much superior, that of al-Bīrūnī in 1009 finished in 1012 (322-323; not 322 = 322-323, as is commonly stated), and that of Ḥunayn b. Isḥāq (after the middle of the 10. cent.), revised by Thābit b. Qurayb in the first half of the 11. cent.; there were also translated the Geography, the *Hand-Tables*, the Planetary Hypotheses and the *Wonders of Ptolemy*; the *Almagest* of Theon of Alexandria; the work of Aristarchus on the size and distance of the sun and moon; two treatises of Antikyra, three of Theodorus and one of Hipparchus. In the same century appeared very probably the translation of the tables of Arzachel, and the translation of a work entitled *ʿilm al-ʿaṣr*, strongly ascribed to Ptolemy, dealing with the size and distance of the celestial bodies.

The first series of regular observations with the aid of early superior instruments appears to have been made at Hunsdabāt (Gondshapur in the South-West of Persia) in the 10th cent. of the 12. cent., and was visited by Abū al-Ḥasan al-Nāṣirī when compiling his "General Tables" (*ʿilm al-ʿaṣr*). But it was during the Caliphate of al-Muṭṭasim (833-853 A. D.) that the most brilliant period of Muslim astronomy commenced. At Hunsdabāt used in the quarter called al-Ḥamāsīya in Baghdad the Caliph's astronomer under the direction of Vahyā b. Abū Manṣūr (d. 850 or 855 A. D.) not only made systematic observation of the celestial movements, but also verified with remarkably precise results all the fundamental elements of the Almagest: the obliquity of the ecliptic, the procession of the equinoxes, the length of the solar year, etc. After these observations they composed the celestial "Fixed Tables" (*al-ʿaṣr al-mawḥūḍa*), for which they also had at their disposal the series of observations made in the other observatory of the Caliph on the mountain of Ḥaṭṭān, 2-2½ miles to the north of Hunsdabāt. This same Caliph carried out one of the most difficult and delicate geodetic operations, the measuring of an arc of meridian in the region between Tadmūr (Palmyra) and al-Baṣra in the plains of Mesopotamia. The same result gave 36½ Arabic miles as the length of a degree of meridian, a remarkably accurate value; for the Arabic mile being 6973 ft. the value is equal to 364,342 ft., a number which only exceeds by about 2877 ft. the real length of the degree between 38° and 36° N. lat. (for fuller details concerning these numbers see Nolhen, *Ueber die Messung des Grades der Meridiane zwischen Tadmūr und al-Baṣra*, Tübingen, 1893). — Among the astronomical calculations of the time of al-Muṭṭasim

mention might be made also of Muhammad b. Mūsā al-Kharrāzī, whose life had a wide circulation during two centuries.

From 850 to 870 A. D. the three sons of Mūsā b. Shākir made regular observations in the observatory they had fixed up in their house in Baghdad, at the gate 1111 al-Tāq, on the Tigris; in the second half of the 10. cent. others made observations with excellent instruments at Shirāz, Nishāpur, Samarkand, the celebrated al-Bīrūnī (q. v.) made observations from 877 to 911 A. D. at al-Rak'ia on the Euphrates. Ibrāhīm b. Kurrā (d. 985 = 990) utilized the observations of his predecessors in revising the theory of the movements of the sun; al-Muharrir and al-Nawāzī continued systematically the immediate study of the heavens. Shortly after the year 1000 (1002-1003) al-Haṣḥab composed at Baghdad his principal work in which trigonometrical processes attained an unexpected degree of perfection. — In the second half of the 11. cent. the Bayid-Sultans founded an observatory in their own palace and gathered around themselves astronomers including 'Ibān al-Bāḥiths al-Sūfī (d. 1076 = 1086; q. v.), 'Ibān al-A'īn (d. 1075 = 1085), Wajīd b. Kurrān al-Kāhī, Abū al-Faḡhār (d. 1079 = 1090), Abū 'l-Wafā' (d. 1088 = 1095; q. v.), and various others. At Ghazna in Eastern Afghanistan (d. 1100 = 1105; q. v.), the 11. cent. original and the profoundest thinker, 'Ibn al-Haytham has produced in the domain of physical and mathematical sciences, displayed the greater part of his literary activity.

In Egypt the scientific study of astronomy began during the reign of the Fatimid Caliph al-Ḥafṣ (1065-1074 = 1075-1086), founder of a celebrated observatory at Cairo, who received a rich endowment also from the Caliph al-Bīrūnī (1088-1111 = 1096-1121). It was here that Ibn al-Bannā (d. 1100 = 1109, q. v.) made from 1067 (1077) to 1106 (1107) the regular series of observations which served as a basis for his famous "Ishkandī Tables" (al-Bīrūnī). Among the others on astronomy in Egypt ought to be mentioned also Ibn al-Bīrūnī (d. 1100 = 1109), author of a very valuable little treatise wherein, obviously on the analogy of the second book of the *Hypothese of Ptolemy*, he explains the celestial movements by the two hypotheses of solid spheres and of discs (spheres, disc of the sphere, & segments passing through the centre of the sphere).

In Spain astronomy was cultivated especially from the middle of the 10. cent. A. D. and regarded with favour by the princes of Cordova, Seville and Toledo, and it is to Arab astronomy that the works which appeared first in Spanish and afterwards in Latin by order of Alfonso X. of Castile (1252-1284) must be referred. The most distinguished Spanish astronomers were Moḥammed al-Madrāsī (d. 1088 = 1097-1105; Ibn al-Samī (d. 1120 = 1138), 'Ibrāhīm b. Aḥmad (d. between 1140 and 1150 A. D.) called 'Ibrāhīm al-Māḥi by our medieval translators and especially al-Zarkālī (Arabic in the translations), who flourished in the second half of the 11. cent. and with whom we will deal later. It was in Spain, as will be shown below, that the philosophers opposed the Ptolemaic representations of the celestial movements. — In North-Africa (by way of Egypt no regularly organized observatories are known of, but certain astronomers who made

good observations could be mentioned, e. g. Abū 'Alī al-Mas'ūd al-Bīrūnī (wrongly called Abū 'l-Hafṣ). An enormous manuscript, who made in Morocco about 1150 A. D.

Among the Seljuks of northern Persia were gathered a number of astronomers who had at their special disposal an observatory founded in 1067 (1074-1075) at al-Ra'is or at Nishāpur by the Sultan 'Izzat al-Dīn Mulkshāh, the same who introduced into the civil calendar a very important reform based on an excellent determination of the length of the tropical year. For one of his successors the astronomer al-Bīrūnī composed shortly after 1118 his important "Sindhjātī Tables" (already mentioned). — A year after he had pillaged Baghdad and overthrown the 'Abbasid caliphate the Mongol Khān Hülegü of the dynasty of the Ilkhān continued in 657 (1259) the construction of the great observatory at Marāgha in western Persia near the lake of Urmia; with this was associated a number of select astronomers under the direction of the illustrious scientist Naṣīr al-Dīn al-Tūsī, who after spending twelve years preparing them published in Persian his famous "Ilkhānī Tables" (already mentioned), kept al-Dīn Mahammad al-Bīrūnī (d. 1110 = 1120), a pupil of Naṣīr al-Dīn, also deserves special mention. — At Cairo, the al-Bīrūnī (d. 1111 = 1121-1129, or 1131) took good observations; his tables were reproduced in Syria, Egypt and the whole of North Africa. — The astronomical sciences of the Muslims experienced its last glories at Damascus. Naṣīr al-Dīn 'Izzat Beg, grandson of Izzat al-Dīn, founded a large observatory there, in which he continued the most eminent astronomers of his time, such as 'Izzat al-Bīrūnī, Kāshī Zāde, al-Bīrūnī, Abū al-Bīrūnī, etc.; and in several years produced in person all the observations and left in his tables (1171) a glorious monument of his zeal for science. Like Naṣīr al-Dīn before him 'Izzat Beg not only had the tables of celestial movements improved, but also undertook a complete and independent revision, i. e. not based on direct observation of the heavens or the catalogue of the stars made by his predecessors. The Sultan himself wrote in Persian the preface a few months before he perished by an assassin's hand (1171 = 1180).

With 'Izzat Beg the scientific study of Astronomy ceased throughout the Islamic world. Henceforth we only meet with authors of elementary manuals, compilers of Ephemerides and Almanacs and dwellers of the astronomical instruments; the real astronomers have disappeared and in their place we find only the *observatores* of the mosques.

Muslim astronomers accepted almost without reserve and always followed in their tables the fundamental features of the Ptolemaic system of the universe. The earth stands absolutely motionless in the centre of the universe, the movements of the celestial bodies are all circular and uniform, and their apparent inequalities are explained by the combination of circles concentric with the earth, with the Zodiac, eccentric circles (eccentric circles) and epicycles (solid spheres). — Even in the 16. cent. A. D. the possibility that the earth revolves on its own axis is one of the questions discussed, but in the following centuries its absolute immobility is universally accepted. The question as to the nature of the spheres (1171) is dealt with only by the philosophers and

the dogmatic theologian, whilst the astronomers of the last centuries are not concerned therewith, being content to consider them for the purposes of their science as geometrical circles, and it is only in the time of Ibn al-Haytham (d. 430 = 1039) that there is introduced into astronomical instruction the idea of solid and transparent spheres. Although the hypothesis of eccentric circles and epicycles made the *math* of planetary movements an extremely complicated one, yet it corresponded too well to the data from observation (without pendulum or telescope) and the needs of the calculator to be replaced by other hypotheses for which no satisfactory physical explanation was then forthcoming. — No trace is found of the heliocentric system, in which *ma* came and the same time the authority of Ptolemy, the philosophy of Aristotle and the dogma of astrology would have been opposed. It ought not to be forgotten that *math* in the opinion of the Copernican system was far more than a century a purely philosophical one, indifferent to the astronomy of observation which could not have contributed any *math* or important argument in support of it.

The Arab astronomers understood perfectly *math* instead of advancing *math* general theories *math* more demonstrable than the ancient *math* it was necessary to observe the heavens methodically for centuries and thereby to correct the numbers given in the Almagest. This task they splendidly performed, without allowing themselves to be influenced by the so-called, fallacious observations of Ptolemy. They perceived that the *math* of the sun, believed to be immobile by *math* ancients who stated *math* they had always *math* it from the same point *math* longitude, is subject to the movement of the procession *math* the equinoxes; al-Battani even succeeded in discovering the slight movement peculiar to this *math*. They perceived that the obliquity of the ecliptic is not invariable, *math* the circles had *math* it to *math* on the ground of fictitious observations, but is subject *math* a slow secular diminution whose approximate limits only our Celestial Mechanics of the xix. cent. has naturally been able to determine. The climates of the sun and partly also of the moon, the length of the tropical and the sidereal year, the procession of the equinoxes they investigated with marvellous accuracy; they also improved *math* Planetary Tables, and Nasir al-Din al-Tusi endeavoured to perfect the theory of the planets by rendering the geometrical constructions of Ptolemy yet more complex. It ought also to be mentioned that, in contrast to the Greeks, the Arab astronomers gave to Venus the *math* longitude of the syzygies, the same eccentricity and the *math* centre of equinox *math* to the sun, which was fundamentally equivalent to transforming the orbit of Venus into an epicycle of the solar orbit having the sun for centre, i.e. to making Venus a satellite of the sun. Arab catalogues *math* the fixed stars, in so far as they have not been simply derived from the catalogue of Ptolemy, have considerable importance; lastly, in the application of trigonometrical formulae, in the number and the quality of their instruments, in the technique of their observations the Arabs have splendidly outstripped their predecessors the Greeks. In the number, continuity and precision of the observations we mark the most striking contrast between Greek and Muslim astronomy.

The hypothesis of the expedition (darab al-

math was *math*, i.e. motion forwards and backwards) of the fixed stars, which was accepted by Thabit b. Qurra and in a slightly different form by al-Battani, is false; but its authors had given expression to it in order to bring the observations of the Greeks into harmony with those of the Arabs in regard to the variations of the obliquity of the ecliptic and of the procession. — It is a mistake to attribute to Abu 'l-Wafa' the discovery of the third lunar inequality or variation, which was first made by Tycho Brahe; but it ought not to be forgotten that about the half of this "variation" was already contained in the *math* of Ptolemy and in the "equation of the lunar anomaly" (*math* *math*) of the Muslim astronomers.

An eminent theologian and philosopher, like *math* astrologer, Fakhr al-Din al-Razi (d. 606 = 1210) expressed on several occasions his profound scepticism in regard to various fundamental hypotheses of the astronomers. But it was in Spain that certain philosophers in the name of Aristotle proclaimed war against the Ptolemaic representation of the celestial movements. The first was Muhammad b. Yahya b. al-Sa'igh, called Abu Badaja, the Avicenna of our *math* (d. 533 = 1139), who rejected the epicycles and claimed to be able to explain the whole by means of eccentric circles. Ibn Jafar (d. 581 = 1185-1186) rejected both the epicycles and the eccentric circles, but has not left any written exposition of his views. Ibn Rushd or Averroes (d. 595 = 1198) largely revived Ptolemy's hypothesis of the concentric spheres, with its spiral-shaped (*math*), the *math* of Ptolemy's planetary movements, i.e. in the form of an elongated *math* according with the ecliptic, the *math* half *math* in the *math* and the other *math* in the western hemisphere; but he had not time to give a complete exposition of his system. Lastly al-Battani (Alpetragius; d. ca. 606 = 1204), in order to reduce everything to harmony with the principles of the peripatetic Physics, not only admitted, with Averroes, only spheres concentric with the earth and turning on different axes, but also makes another strange hypothesis (which he held in common with the *math* al-Sa'igh and Fakhr al-Din al-Razi), denying the existence of any motion of the celestial bodies from west to east: i.e. the direct movements (towards the east) of the planets *math* only as optical illusion due to the fact that the angular velocity of the planets is less than the celerity with which the celestial sphere accomplishes *math* diurnal rotation round the earth. None of these hypotheses of the Spanish philosophers were accepted by the astronomers.

Math Delambre's, *math*, de l'astron.

math (Paris, 1819), p. 1—311, 513—539; is not a history, but a mathematical analysis, of very unequal worth, of several works of Muslim authors, an analysis which has the further disadvantage of frequently substituting Delambre's own explanations for those of the authors studied. The other histories of astronomy, of which Wolf's is the best, are all out-of-date and insufficient. References may be made here *math* my extensive article which will appear in the *Encyclopædia of Religion and Ethics* (ed. by Hastings), v. v. Starr; Nallino, *al-Battani al-Astrolabi Opus astronomica* (Milan, 1903—1907, 2 vols.); Canalis, *La terra di la Grande*

Table astronomiques (Paris, 1804), in *Nouvelles et anciennes des arts de la République*, Vol. vii, 1804, pp. 16–240 (Text and Translation of the more important historical parts); Sédition, *Astronomie ou les instruments astronomiques des Arabes* (Paris, 1804); J. Gauthier, *Une référence du système astronomique* (Paris, 1804), in *Philosophie des sciences exactes*, Vol. XIV, p. 483–510; astronomically very insufficient; von Hammer, *Fortsetzung über Geogr. u. Trigonometrie* (Leipzig, 1800), I, 42–86, for biographical and bibliographical notices of astronomers see the excellent work by Sator mentioned at the end of the art. Astronomy.

(C. A. NALLING.)

ASTURLAB or **APPTURLAN** (Ar.: the moon) is also the *Abulalik*, cf. Wüstenf., 19, 779; cf. 746 of the Egyptian edition), Arabic, from the Greek *ἀστὺρ*, name of several astronomical instruments, which may be reduced to three fundamental types according as they represent the projection of the celestial sphere on a plane, or the projection of this projection on a straight line, or the sphere itself without any projection.

1. The astrolabe in its strict sense is the flat (*astrolabe* or *mensural*) Arabic or "astrolabium planissimum", in Arabic called *astrolab* (the instrument) equalling of "labeled". It is a portable instrument in the form of a disc of from 3.9"–7.8" diameter, with a handle (*qaws*, *qaw*) through which passes a corresponding ring (*qaws*, *qaw*) by means of which it is supported in a vertical position. The simplest type of this astrolabe, and the one which was known to the Greeks and Syrians, consists of the following pieces: 1st the "mother" (*umma*), a disc or circular tablet, with a raised edge (*huffa*, *huffa*, *huffa*) which gives it the appearance of a box; it contains the other tablets. Its circular surface is called "face" (*rawfi*), the exterior surface "back" (*huffa*); 2d other discs or circular tablets (*qaws*, *qaw*, *qaw*), usually nine in number, contained in the mother; 3d the "spider" (*qaws*) or the "web" (*qaws*), a tablet placed above the others in the mother; it is made as open as possible having of course due regard to its utility and the requisite *huffa* for marking in the signs of the Zodiac and the planets and houses of the chief stars, and in consequence consists only of strips of metal with several points or indicators (in the ring, *qaws*, *qaw*) artistically cut, which indicate the stars; 4d the ruler or diameter or altitude (*qaws*), revolving round the centre of the "back" and as long as the diameter of the latter; its two arms are sharpened to a point (*qaws*, *qaw*) and each has a perforated sighting-piece (*huffa*, *huffa*, *huffa*) so that the sun's rays can pass through the two holes (*huffa*) of the sighting-pieces; the hole or pivot (*qaws*) (*qaws*, *qaw*), a hole which passes through the centre of all the other pieces and holds them together; the head of the hole is to the back of the astrolabe, and at its other extremity there is a small ball or screw-nut which prevents it from slipping out and from its form is called the "base" (*qaws*).

On the back of the astrolabe are several concentric circles having the degrees marked and also chronological indications (i.e. a sort of per-

petual calendar); they with the alidade are used for measuring the elevation of the stars. On both sides of the tablets is marked the stereographic polar projection of the Almucantars (*qaws*, *qaw*), i.e. circles parallel with the horizon, the projection of the vertical circles (*qaws*, *qaw*) of the equator and of the ecliptic, for a particular geographical latitude in this projection the observer's eye is situated at one pole of the sphere and the plane of projection is tangential to the opposite pole and parallel to the plane of the equator. Certain astrolabes have also a tablet which gives for a particular geographical latitude the projection of the circles of position, of which one is made in the astronomical calculation called "direction" (*qaws*); others have a tablet for all latitudes (*qaws*), also called the tablet of the horizons (*qaws*, *qaw*) or general tablet (*qaws*), the use of which is not very clear. According to the arrangements of the tablets are all marked, 1st only from 1 to 2, from 3 to 3, from 3 to 3, from 6 to 6, from 9 to 9, from 10 to 10 degrees, the astrolabe is called *rawfi* "complete" (*qaws*, *qaw*), *qaws* (*qaw*), *qaws* (*qaw*), *qaws* (*qaw*). Lastly this common, the astrolabe is distinguished into northern (*qaws*) or southern (*qaws*) according as the plane of projection is tangential to the north pole or to the south pole of the sphere; the former is naturally the more common. By adding other markings to those already on the tablets and changing the order of the radial signs on the net they obtained astrolabes which were at the same time northern and southern and were named after the somewhat fantastic figures in which the radial signs were grouped on the net, as *qaws*, "Dragon", *qaws*, "Myrtle", *qaws*, or *qaws*, "Crab", *qaws*, "Shell", *qaws*, "Bull", *qaws*, "Antelope", etc. Probably the *qaws*, of Ahmad al-Shifa (ca. 400 = 1009) belongs to this category. The "perfect" (*qaws*) astrolabe has besides the other markings a circle of the sun's equator. — Other astrolabes which have as basis a different projection from the stereographic are to be regarded as fluxional constructions without practical significance, e.g. the astrolabe devised by al-Battani and called *qaws*, "cylindrical astrolabe", because of its projection (the "Astrolabe" of Ptolemy), which al-Battani called cylindrical, and which we now call orthographic; the circles of the sphere are projected on so that in the form of straight lines, circles and ellipses. The *qaws* (*qaw*) astrolabe, described by al-Battani (*Astronomy*, p. 358–359), appears to have been only a stellar clock in equidistant polar projection, i.e. the pole of the ecliptic was the centre of the projection, the parallels with the ecliptic or circles of longitude were represented by equidistant concentric circles and circles of latitude by equidistant radii.

The astrolabe gives immediately observation the height of any star, and consequently the hour already spent of day and night; it also enables one to solve without any calculation all the problems of spherical astronomy. It is useful further in geodetic operations, e.g. for calculating the distance of an inaccessible place, the height of a building, the depth of a well whose diameter can be measured. Naturally we cannot look for absolute accuracy from so small an instrument, which moreover on account of the precession of

Medina or to Baghdad. To legitimise his claims he married the widow of the murdered Shah. Her line power was of short duration. A number of another nomadic tribe, Kays in Habasha al-Makhabili, with whom al-~~ah~~ conquered the country, allied himself with the overthrown Pashas, at whose head stood Firdi ~~al~~ Daythawalla, and obtained effective support from the widow of Shah, who had won the usurper much against her will. With her help they made their way into the fort and, according to tradition, killed al-Ahwad as he lay on his couch a few days before ~~his~~ death of Muhammad. The fall of al-Ahwad ~~was~~ however, no importance for the Muhammadians, since Kays soon afterwards engaged to himself the authority and separated from the Pashas who had given him their help. The accounts about al-Ahwad are of special ~~interest~~ from the fact that they represent him as possessing prophetic aspirations, a feature which has undoubtedly historic reality. According to Bakhit he was a Kabin or prophet and styled himself *Kahman* of Yemen (i.e. he who speaks to the ~~men~~ of Bahman), just as Muhammad had ~~been~~ forward as *Kahman* of Yama. Another account calls him a juggler who did some remarkable tricks and deluded the mob with his words. He had a *ghibatan* who communicated to him everything, even the plans of his enemies: ~~the~~ the story is graphically told of how after the slaughter of a number of mischievous animals in the open square in Zan's he listened with his ear to the earth and heard the mysterious voice of his spirit ("he tells me"). When on the occasion of an invasion by night he followed like a bull his nose packed the watch who came hurrying up with the words: "he has a divine revelation". Also ~~the~~ epithet "the rolled one" is connected with his act of divination.

ASYUT, 1000 in Upper Egypt. Asyut, the largest and most commercial town of Upper Egypt, is situated 27° 11' N. Lat. on the west bank of the Nile. Owing to its situation in one of the most fertile and compact districts of the cultivable Nile-valley, and also to its being the natural terminus of great desert-highways it was in antiquity as important ~~as~~ (Syon, Greek: Lykopolis) and the chief town of a Nomos. Under Islam Asyut remained the chief town of a *Kaza* (modern *marka*, "district"), and the inauguration of the division into provinces became the capital of a province (*Amil*, ~~modern~~ *Mustafira*). The town itself contains 42,000 inhabitants, the district 120,000, and the Province embracing 8 districts 715,000.

Asyut is the colloquial form of the literary *Asyut*. Both are Aramaic for the Coptic *Asyut*, which in the Coptic records of the Middle Ages the form *Sayut* or *Seyut* corresponded. But as early as the time of Kallikandali (d. 828 = 1413) the popular pronunciation was *Asyut*.

A history of Asyut cannot be written for the reason that we want but say mention of it in the histories, and only towards the end of the Mamluk period, under 'Alī Bey, did it play any

historical part, viz. in the year 1183 (1769-1770) when it was for a time the centre of revolt. From the accounts of geographers and travellers we ascertain that it enjoyed unbroken prosperity throughout the entire Islamic period. At the end of the 13th cent. it experienced a considerable recession of importance, especially after it became linked by rail with Cairo (in 1292 = 1875). Its population has risen from 28,000 in 1293 (1876) to the present figure 42,000.

In the Middle Ages Asyut was famed for its agricultural products, its industry and trade. Besides corn and date quantities were found here in great quantity. The main industries were the weaving of woolen, cotton and linen goods. Owing to the alum and indigo obtained from the adjacent oases dyeing was extensively carried on; e.g. the materials manufactured for export to Luxor were dyed here. Its specialities were linen goods, called *Asyut* after their chief place of production Dabih in Upper Egypt, and soft woolen goods and carpets made in the Armenian standard pattern. Asyut now manufactures black and white Tulle-shawls with silver-work, which are very popular in Europe, and represent the last remnant of an industry once very famous throughout the Orient. Further Asyut was engaged in the preparation of opium and in the making of pottery which with its antique patterns is still much in demand in Luxor and as "*Asyut-ware*".

There was a brisk trade in these products throughout Egypt and abroad. The ~~Asyut~~ trade with the Sudan is especially famous. The annual fair *His caravans* (ca. 1500 caravans) brought slaves, ivory, ostrich-feathers and other products of the Sudan, and received in exchange the products of Egypt's industries, especially stuffs. The scholars of Napoleon's expedition made careful investigations into this trade which has now so much declined.

Like all industrial towns of Egypt Asyut had a large Christian population — 60, according to others as many as 75 churches and chapels —, but no Jews at all, a fact repeatedly stated.

Cathacrastra, barns, bath, — one of the latter famous and ~~as~~ *Asyut* —, mosques and other public buildings adorn the town today as formerly. In one of the mosques stood a *Mishra* which at certain seasons was filled with corn and carried through the streets as *Mahmal* (the *Dukim*). Like as the flourishing towns in modern Egypt, Asyut has a strong admixture of Levantines and it assumes a European appearance.

Asyut is the birth place of Plutarch, the Coptic Saint John of Lykopolis and of several Arabic scholars bearing the name al-Sayut, of whom the jurist Djafar al-*Asyut* (d. 911 = 1505) is the best known.

ATFIH, town in Middle Egypt. Afih (also written with *r* instead of *f*) is a small town of 4300 inhabitants on the East bank of the Nile on the eminence of the Faiyûm. The old Egyptian name of the town was Tep-yeh or Per Iahor nabi Tep-yeh, i.e. "house of Iahor, lady of Tep-yeh". From this the Copts obtained the form *Tepeh*, the Arabs *Afih*; the Greeks identifying Iahor with Aphrodite called the town *Aphrodisiopolis*, abbreviated to *Aphrodisia*. The town must still have possessed importance in the Christian period, for it had over 30 churches, of which in the 18th cent. 10 were preserved. The ancient *tepeh*, later *Kurk*. Afih was called also *al-Sharfiye*, since it lay on the east bank; on the occasion of the division into provinces towards the end of the Fatimid period a whole province, *Afhiya*, was named after it. Not till the year 1250 (644-1835) was it incorporated as a district (*markaz*) of the province of *Qia*. Recently *al-Sha* took the place of Afih as chief town of the district.

Information about Afih is very scant, it must have seriously declined in the Mamluk period; the Khedives first began to do anything for this region by putting an end to the Turkish pillaging on the part of the Beduin and Hamula, and building, or rather restoring canals. Afih is to-day a port with a small trade and possessing some local importance.

ATHAR (Ar. properly signifies "trace"), a tradition [see *ATHAR*]; a relic: *athar al-sharif* (the *al-sharif al-jahiz*), relic alleged to have belonged to the Prophet, such as hair, teeth, pieces of garments, autographs, etc., especially impressions of his foot-prints which are preserved in mosques and other public places for the edification of Muslims [see *ATHAR*]. The relic is also known both by *athar* and Muslim *athar* (relics).

ATHLITH, formerly a harbour on the coast of Palestine between the promontory of Carmel and al-Fanjis (Tyre), on a little tongue of land which lies to the north of a small bay and is washed on three sides by the sea. According to the *Itinerarium Burdigalense* there was a mutine Cœlia there, but the name *Athlith* appears to be ancient. *Athlith* appears in the light of history in the period of the Crusades. In 583 (1187) it fell into Saladin's hands. In 1213 the Castellum peregrinorum, as the Franks called it was reconstructed as a powerful Templar-fortress. Along with Marston-Detroit (Marston-Detroit) it had to guard the passes of Carmel leading south. In 1291 it was conquered and demolished by the Mamluk Sultan al-Ashraf Khalil. Not about 1400 *Athlith* was again mentioned as the most southerly official port of the Mamluk of Acre. — About 1000 Fellahin now dwell among the ruins, which are worthy a visit.

ATIKHA, a native of Mekka and daughter of the Hani Zaid b. 'Amar (of the Kurayshite family of 'Adi b. Ka'b) and Umm Kur' bint al-Judham. She accepted Islam before the Hijra and accompanied Muhammad on the Hijra. Her first husband was 'Abd Allah, son of the later 'Uthayb Abu Bakr. Of dazzling beauty she so captivated him that he in defiance with her assumed to fulfil the religious obligations, even the obligation to war, and 'Abd Allah insisted on their separation. After long resistance 'Abd Allah submitted to this, but was so consumed by his longing for her that 'Abd Bakr consented to their reunion. On his death-bed 'Abd Allah extracted from her a promise that she would ever remain a widow, and begowned on her to return a considerable legacy. But a year after his death Umm Kur', who subsequently became 'Uthayb, prevailed on her to acquit her of her promise by restoring the inheritance to the family of the deceased and to give him her hand in marriage. According to another account this restitution was only effected after yet another marriage at the instance of 'Alaba, sister of 'Abd Allah. According to another account she did not marry 'Umar until he became Caliph. 'Umar's father al-Shaybān and 'Atika's grandfather 'Aur were brothers. After 'Umar's death she married al-Zuhayr b. al-Awwām (q. v.). On his death she married Hani, son of 'Ali; further both 'Ali and Marwan had been unsuccessful suitors for her hand. Before her marriage to 'Umar she had been consort of his brother Zaid. 'Umar was assassinated, her other husbands were mortally wounded on the field of battle; none more the saying, who will die a hero's death may wed 'Atika. Her elopement with her husband al-Zuhayr has attained some celebrity.

ATJEH, a small northern part of the island of Sumatra. Here flourished the most powerful Muslim empire of Atjeh, which is now subject to the authority of the Netherlands. The southern limit is now formed by the administrative district of "Sumatra's Westkust" and "Sumatra's Oostkust", but in earlier times the province (or at least the sphere of political sovereignty) of Atjeh extended much further towards the south. A considerable part of both the east and west coast of Sumatra was subject to the authority of Atjeh, and even the pagan chiefs in the Battak regions received their rank at the hands of the princes of Atjeh.

Great-Atjeh. Only the district to the north-west with the Atjeh river and the port Atjeh,

1) In this article 1) is retained from regard to the official mode of writing in the Netherlands; 2 = closed, 3 = open 4 = upon 5

the former residence of the princes of Atjeh, was from the first reckoned as Atjeh proper. The Dutch named it Great-Atjeh and the capital Kuta Radja (i. e. fort of the prince). The port of Sabang situated on the island of Pulu We (to the north-east of Kuta Radja) only dates from the beginning of the present century. The inhabitants of the littoral (Barokh) are distinguished in many respects from the population of the highlands of the interior (Taroeng); the customs and speech of the former (who live of course in the vicinity of the residence) are always considered to be the more refined.

The Dependencies. The other districts situated on the west, south and east coasts are usually referred to as the Dependencies. Among the important towns are: on the west coast: Molaboh, Tapu, Tatu and Singkel; on the south coast: Nigh in the region of the former empire of Pölle (Pedir), Gligeng, Maroda, Semelang, Pöwangan and Lilit-Somawö. In the region between the latter place and the river Djumbo Ayé stood the flourishing empire of Pasé (Paseh) which the Rajas (ed. Delemeroy and Saugnier, iv. 225 et seq.) visited in the year 1345; recently many monuments with inscriptions have been discovered here (cf. C. Suwack Hurgonje, *Arabie en Ost-Indie*, p. 8—10 = *Études et les Indes Néerlandaises* in *Revue de l'histoire des religions*, lxxv. 63 et seq.). On the east coast are situated among others: Simpang Ulim and Ili. A narrow transverse land some years ago joins the east and north coasts with Kuta Radja. The west of the dependencies which on the coasts are very thickly populated at parts is mainly dependent on the cultivation of pepper, great quantities of which are exported annually. A part of the population has migrated thither from Great Atjeh; many Malays have also settled here from the neighbouring districts.

Gayö and Alas-Counties. High mountains chains overgrown with virgin forest separate the littoral from the Gayö-country; transverse chains divide the region of the Gayö into four tablelands. The most northerly (containing the great Tawar lake and the sources of the river Pöwangan) is occupied by the so-called "Uyang Laut" (i. e. people of the lake); the plain to the south of it is occupied on the other hand by the "Uyang Darat" (i. e. people of the land); to the south-east lies the table-land of Serbölöli containing the sources of the river Foröla which flows in an easterly direction. The fourth table-land, situated to the south, and containing the head of the river Tripa which discharges its waters on the west coast, is called Gayö Luar (i. e. the wide, spacious Gayö-country). The Alas-counties lie south of this. The population of these regions, who differ in many respects from that of Atjeh, have from the first recognized the authority of Atjeh. The four chiefs appointed by the prince of Atjeh to the several parts of the Gayö-country (the so-called "Kedjurdan" were mediators between the Gayö and Atjeh. Two of these Kedjurdans had their sphere of influence in the region of Lake Tawar (their distinctive titles were Rodjü Bukei and Sialu Usam), among the Mandar, and the fourth in Gayö Luar (with the title Rodjü Linggö, or Pölimbung). Serbölöli was formerly without inhabitants; later its most eminent chieftain was also called Kedjurdan (Kedjurdan alak). In the Alas-counties the authority of Atjeh was represented by two Kedjurdan.

For accurate information about the people of Atjeh we are indebted above all to C. Suwack Hurgonje, who first in the years 1891-1892 investigated the present but little known social, political and religious conditions of this nation (*De Atjehers*, Batavia, 1893; of the English translation of this work which is provided with a new introduction and some additions by the author: *The Atjehans*, Batavia-Leyden, 1906), and later described at length the land and customs of the Gayö (*Het Gayöland en zijn bevolking*, Batavia, 1903).

Population and Language. Little is known about the origin of the people of Atjeh. Linguistically they belong to the Malay-Polynesian peoples. Slaves (from the island of Nias, etc.) and other foreigners (e. g. merchants from Hindustan) have influenced to some extent the composition of the population. Atjeh has many dialects, and each dialect again many differences; the literary language is in general closer affinity with the dialect of the South-district. For the literature of Atjeh see Suwack Hurgonje, *De Atjehers*, ii. 57-193 (rather fuller in *The Atjehans*, ii. 66-189). The dialect of the Gayö is so different from that of Atjeh that it may be regarded as an independent language. Malay is almost unknown in Atjeh except among a portion of the inhabitants of the sea-ports. Those scholars who wrote books in Malay while yet the empire flourished were mostly foreigners from earliest times in Atjeh letters, official documents and many works on ethnology were written in Malay, but as a general rule Achinese who are not well educated do not understand Malay; for further details see C. Suwack Hurgonje, *Studien over Atjehische taal- en schriftkennis* in *Tijdschrift van het Koninklijk Genootschap van Letteren en Wetenschappen*, 1892, xxxv. 346-442. *Atjehische Taal- en Schriftkennis*, 1900, xlii, 141-252; K. P. H. van Langen, *Handleiding tot de kennis der Atjehische Taal*, Haag, 1889; also *Handleiding tot de Atjehische Taal*, Haag, 1889; v. A. J. H. van, *Gedicht- en Prosa-Atjehische Taal- en Schriftkennis met Nederl. woordenboek*, Batavia, 1907.

Tribes and Families. There are still preserved traces of a division of the population of Atjeh into 4 tribes. The members of each tribe or family — Achikness: Kawum (from the Arabic *Kawm*, people) — regard themselves as blood-relations in the male line, and have (especially in regard to blood-faith and the payment of blood-money) common rights and obligations. The members however of the various Kawums are scattered throughout the country; only where many kinmen dwell together are they wont to choose a chief to represent their common interests. The traces of this Kawum-division which has been preserved from a remote period of civilisation are disappearing among the Achikness; the Gayö on the other hand are still divided into families who gather together under their chiefs (Rodjans). When Rodjan disagree division rests with the Kedjurdan.

Administration of the Village. In Atjeh the *Kayak* or *Kyik* (i. e. the elder) is the head of the *Gampöng* — i. e. village, also a quarter of a town (= Mal. *Kampung*) —; in case of necessity he controls the "elites" (i. e. the people who have had experience of life). The religious affairs of the *Gampöng*, e. g. leading the community in the Salat, are the concern of the *Tongku*. This

This is borne in Atjeh both by people whose functions are connected with religion, and by those who have acquired more acquaintance with the sacred law. The *Tempang-Tengkor* are not men of learning. Their rank has become hereditary, and the ignorance of many *Tempangs* is so great that they are scarcely able to administer their office without the help of other people.

The Princes, *Uleëbalangs* and *Sagi-chiefs*. In historical times Atjeh has always been divided into many small districts, whose hereditary chiefs — the so-called *Uleëbalangs* (i.e. *commanders-in-chief*) — lived in constant feud with each other. They paid homage however to the prince of the part of Atjeh in which they were over-lord. The latter had the title of Sultan in official (Malay) documents, but was usually called by the *Achehnese* *Sagie* or *Sagie* (i.e. "our master"). The power and dignity of the *Achehnese* princes and the riches and splendour of their court, which was maintained both in the earliest times and European accounts, depended on the tribute of the neighbouring regions on the coast and the harbours of the capital Atjeh. The *Achehnese* mariners were master of sea and harbours; if they demanded tribute few dared resist. The interior of the country possessed little interest for the prince. Even when the empire was flourishing (2. half of the 17th cent. and particularly during the 1. half of the 18th) the authority of the Sultan was confined to the immediate vicinity of the capital.

By the end of the 17th cent. the princes were become quite independent of the *Uleëbalangs* in Great-Atjeh. The latter had at that time apparently on the ground of common interests formed themselves into three federations, the *Sagie*, the *Sagie*, i.e. of the triangular-shaped Great-Atjeh, which exist to this day. Each *Sagie* had an over-lord (*Panglima-Sagie*), whose authority however did not extend beyond the common *Sagie*-territory (1b). Dependence on such federations are found. The Sultan chosen by the three *Sagie*-chiefs to give to them a certain sum. He usually belonged in the family of the previous ruler, but sometimes elected to the Sultanate. In the course of time other chiefs obtained a voice in the choice of a ruler; according to tradition at one period 12 chiefs (including the 3 *Sagie*-chiefs) formed a kind of electoral college.

The majority of the *Uleëbalangs* in Great-Atjeh and the Dependencies later received and still receive their authority from the Sultan's hand and in witness thereof were given a document bearing the ruler's seal (a so-called *Sarakah*; on the Hindustani origin of this seal see C. P. Koenig, in *Revue de la Tour, Indes et Orient*, vol. 1, 1871, Serie 5, p. 349—354; cf. C. Snouck Hurgronje, *ibid.*, Serie 7, vol. 52—53). The *Kedjongs* of the Gayas and Alueas on the other hand usually received a kind of dagger as symbol of their rank.

Division into *Mukims*. The Friday-service according to the Shaf'ite doctrine is only valid if 40 *Mukims* are present. A *Mukim* is a person domiciled in the place and satisfying the stipulations of the law. Since the population of the *Tempangs* was not numerous enough to be able to hold a regular Friday-service with 40 participants, it became the custom to group together several *Tempangs* and as near the centre

as possible of each district to construct a mosque for the Friday-service. Hence *Mukims* (here pronounced *Mukim*) acquired, not only in Atjeh but also in some other Malay regions, the meaning: department, circle. Each *Uleëbalang* was lord over several of these *Mukims*. Further the names of the 3 *Sagies* have been derived from the original number of their *Mukims*; i.e. they are called: the *Sagie* "of the 22 *Mukims*" (in the South), the *Sagie* "of the 25 *Mukims*" (in the west) and the *Sagie* "of the 26 *Mukims*" (in the east; of the triangular-shaped Great Atjeh). These ancient names were preserved even after the number of the *Mukims* in the *Sagie* of the 25 *Mukims* and especially in that of the 22 *Mukims* had mounted up owing to the increase in the population.

The chiefs of the *Mukims* bore the title of *Imam*. This word denoted originally the leader of the Friday-service (*Ansh Imam*). The *Imam* became however gradually hereditary, secular chieftain, who transferred the leadership of the Friday-Salat to special officials.

Administration of Justice. Laws. As a general rule the chiefs themselves were well to fulfil the functions of judges; they based their decisions on the unwritten law of custom (*Adat*). There are indeed some statutes (*Sarakas*), which tradition credits *Mukim* *Islam* and other famous rulers with having issued, and the *Achehnese*, who know these laws only by name, ordinarily assume they contain an exact statement of their law; they really contain however only of brief regulations regarding matters of administration, court-ceremonial (including the language to be recited to the ruler by the *Uleëbalangs*), the division of the harbour-revenue and the fulfilment of certain religious obligations. These regulations date from the time when the prince attempted, without permanent result however, to centralise his imperial administration; muslim scholars on the coast also left their impress on these laws (for fuller information see C. Snouck Hurgronje, *De Atjehers*, I. 3—17; *The Achehnese*, I. 4—16; K. F. H. van Langen, *De inrichting van het Atjehsche rechtsbestuur onder het sultanaat van Djidjeng van de Toel, land en volk van Ned. Indië*, Serie 5, III. 381—471). Further back the Sultan and the *Panglimas* had their *Kadi* (= *Kadi*), but these ecclesiastical judges only took a share in the administration of justice on exceptional occasions (e.g. in the division of an inheritance, in some forms of divorce, in contracting marriage, and in other cases where the religious law was usually followed; in other matters only if the chiefs expressly sent them counsel). The judge of the Sultan bore the title *Kadi Mukim Ali* = *Kadi Mukim* (*Adat*); his hereditary office degenerated in course of time: he became the peculiar chief of several *Tempangs* within the Sultan's realm. Also the rank of the other *Kadis* became hereditary, and at those people who were *Kadi* in virtue of their hereditary right possessed the knowledge requisite for this office as well by a rare chance.

Religion. From earliest times there existed trade relations between Atjeh and Sumatra. The civilisation and language of Atjeh were at first subject to Hindu influence; later Islam reached the shores of Atjeh, probably conveyed thither by Hindustani merchants. When the *Uleëbalangs* ruled in 1545 Islam held the field; the ruler of the country warred against his unbelieving neigh-

- XXX. *Shari' al-'Alam* (1815—1816).
 XXXI. *Dawlat al-'Alam II* (1818—1824).

 XXXIII. *Maqsur Shah* (1835—1870).
 XXXIV. *Mahmud Shah* (1870—1873).

The earlier history of the princes of Atjeh is known only in its main outlines from Malay chronicles, occasional notices by European authors and a few other sources. According to tradition the founder of the kingdom of Atjeh, which had hitherto been a dependency of Pedir, was 'Ali Mughayat Shah (*supra* n. 1). His two sons Salah al-Din and more especially 'Ali al-Din Rasyid al-Falaki increased the importance of the new kingdom. In the first half of the seventeenth century Atjeh reached its greatest prosperity, attaining its zenith during the reign of Iskandar al-Daula, honoured after his death by the title of *Makmur 'Alam* (i.e. Crown of the World, *supra* n. XII). The dominion of the Atjehs was extended far to the south during his reign. Iskandar's expedition with a great fleet against Pahang and Malacca forms the subject of an important Atjehese epic (for particulars see Snouck Hurgronje, *De Atjehers*, II, 82—92; *The Achahs*, II, 30—35). After the death of his son Iskandar Daula, *supra* n. XIII) four princes ruled over Atjeh in the second half of the seventeenth century (1641—1699). This period of feudal rule was naturally much to the advantage of the Uleebalangs, whose power and authority were thereby increased: but on the other hand many disadvantages of this state of affairs and declared as the authority of a sacred received from Mecca that it was forbidden by law for a woman to rule. Thereupon in the beginning of the eighteenth century arose a series of dynastic wars. Some of the princes contended for the throne were Sayyids (i.e. descendants of Husain) born in Atjeh. The best known among these was Djamal (*supra* n. XX). After he was deposed in 1726, he held out for a considerable time against the later Sultans, amongst others against Ahmad (*supra* n. XXIII), a man of Hungarian descent, ancestor of the last dynasty of Atjehese princes and his son Djulda (*supra* n. XXIV). The contest between Djamal and Djulda and the death of the former are the subjects of another great Atjehese epic (cf. Snouck Hurgronje, *De Atjehers*, II, 92—100; *The Achahs*, II, 35—100). Even after the authority and wealth of the court had gradually become insignificant, there survived, indeed till quite recent times a great reverence (among the Atjehese) for their rulers whom they honoured as the representatives of a glorious past.

The subjection of Atjeh. The piracy and slave trade on the Atjehese and their raids on neighbouring territories constituted a constant danger. Merchants visiting the shores of Atjeh for the pepper trade were always liable to be murdered or robbed. The Dutch government were at first not in a position to put a stop to this evil as they had pledged themselves to England in 1824 not to extend their dominion in Sumatra to the north. When this obligation was removed by a new treaty with England in 1871, Dutch troops occupied in 1873 the chief town of Atjeh with its immediate neighbourhood and some parts in the Dependencies. The last prince (*supra* n. XXXIV) fled from his residence and died soon after (1874). It was now expected that the in-

fluence of the interior of the island would gradually acknowledge the authority of the Dutch; but this hope was not fulfilled, on the contrary there grew up among the Atjehese a powerful, irreconcilable faction in favour of war, organized chiefly by the native jurists. Learned men have always enjoyed a certain authority in Atjeh but the political situation at this time increased their influence to an extraordinary degree: they went throughout the land preaching a holy war: they asserted that the *Zakariya* lived on the people; the native chieftains were ignominiously thrust into the background. Other political adversaries, amongst them the famous Toket Umar, made use of the changed state of affairs to obtain for themselves positions of power. On the other hand Muhammad Ibrahim, the 6 year-old boy chosen Sultan in 1873 who subsequently reigned with his court as a rule in Kumbang in Peñic, had really no political influence.

After Great Atjeh had been conquered and occupied in the years 1877—1891, the Dutch troops were again concentrated in the near neighbourhood of Kuta Rumbia. As recently as 1896 they had again to take vigorous offensive measures, chiefly in Great Atjeh but also in the Dependencies and even later in Gayaland and Alasaland. This had the desired result; the sovereignty of the Dutch was gradually recognised everywhere by the Uleebalangs and other chiefs and in the beginning of 1903 by Sultan Muhammad Ibrahim also. Nevertheless the latter was not contented in his dignity.

For some years Atjeh with Gayaland and Alasaland had been quite subdued. The different districts and departments are governed by traditional native chiefs under control of the Dutch authorities. Continuous insubordinate warfare in many parts of this wide territory still requires, however, a fairly strong body of troops to follow to their hiding places and render harmless the lawless spirits — not only the implacable fanatics but also the incorrigible outlaws.

(Th. W. Kuyper.)

ATLAS. Collective designation of the whole mountain system which forms the skeleton of North Africa and stretches from the Atlantic Ocean through Morocco, Algeria and Tunis to the Gulf of Suez. The name, which was already in use among the Greeks, seems to be a corruption of the Berber word *Adrar* ('mountain'). Although North Africa was a Roman possession the ancients appear to have had only very indistinct notions of the Atlas.

Sarabos (Book xvii) identifies the Atlas of the Greeks with the mountain called Dyrus (Dyrus, *Barbari* by the natives, which lay in the extreme west of Mauretania beyond the pillars of Hercules. At the same time, however, he mentions a mountain-chain which stretched from Mauretania through Numidia to the Syrtis.

The Arab Geographers are not much more accurate. Al-Hakim (transl. by deSlane, p. 299) designates by the name of "Atlant" (Atlas) a mountain "opposite which the Isles of Blise lie", but he does not appear to extend this name to the whole North African mountain system. The statements to be found in this and some other authors are of two classes; on the one hand fairly clear and detailed descriptions of the elevations in the South of the town of Matrikuh, which modern geographers call "the High Atlas" and the Morocco Berbers *Adrar el-Berber*; on the other hand very obscure conceptions of the western extension of this elevation and a want of exact accounts of its boundaries and direction. "In Tameruzi" writes Al-Hakim "begin the pass over the Dyrus. This range, placed there as it were, to be a rampart to face the desert, is inhabited by Sanhadja tribes . . . it is said to stretch as far as the Mulattani hills in Egypt". (transl. by de Slane, p. 353). According to Mohammed bin Yusef the Dyrus is the highest mountain in the world and stretches to Andalus and the mountains of Neftia at Tripoli (Hakim, *loc. cit.*). According to Ibnul Hishel Dyrus al-Afrik, at the foot of which passes the road from Tarentum to Agrigento, is notable for its height, the fertility of its soil and the great number of settlements in it. "It stretches from S. on the Atlantic coast to the chain of Djebel Neftia the nature of which it takes. Some authorities on the other hand insist that these mountains stretch to the Mediterranean as far as a place called Anthon" (Hakim, transl. by Dany and de Goeje, p. 736). Ibn Khaldun regards the mountains of Dyrus as "a girdle enclosing Maghrib at Atlas from Asfi to Tama", *Hist. of the Berbers*, transl. by de Slane, I. 173.) In another place he describes the Dyrus range in detail.

"The Dyrus range, situated on the western border of Maghrib is to be counted among the highest mountains of the world. Having their roots in the depths of the earth these mountains touch the heavens with their summits and fill the space between with their colossal mass. They form a continuous wall around the coast lands of Maghrib and starting from Asfi on the Atlantic Ocean they stretch to the East an unknown distance. According to some accounts however they are said to come to an end in the land of Barba south of Barcelona. Across the breadth of Morocco they appear to be arranged in layers so that they rise in terraces from the desert to the Tell range. The traveller coming from Temeus on the coast of Morocco who desires to cross this range to reach the provinces of Sûs or Drâ'a (Djird) requires more than a week to do it". Writing in the sixteenth century, Leo Africanus, who collects the previous notices, is not much better informed, though he distinguishes the mountains "of the coastland of Barbary" which lie along the African coast from Rif in Tunis, and the Atlas range in the narrower sense which runs from mount Meus in the neighbourhood of the Egyptian frontier to Mezza in Sûs and whose mean distance from the South coast

of the Mediterranean is about a hundred miles. (*Geographia of Africa*, I. 77.) These two ranges are called "Serra Menor" and "Serra de Athabante Major" by Mayrort (Africa, I. c. Ch. 5.) Some additions to these statements are given in the seventeenth and eighteenth centuries by isolated European visitors to the Barbary states, notably Shaw (*Travels or observations relating to several parts of Barbary and the Levant*, London, 1740; second edition 1757) at the beginning of the nineteenth century the Atlas mountain-system was thought to consist of two chains, the one, the little Atlas range running along the mediterranean coast from Tangier to Cape Blanco, the other, the Great Atlas range, along the northern limit of the Sahara from Sûs to Tripoli. Between these two chains lay a broad plateau, traversed in Morocco by the heights of the Middle Atlas range (Hakim, *op. cit.*, I. 886, 895). The possession of Algeria by the French paved the way for the scientific exploration of the country. As regards Algeria and Tunisia this work is now almost finished but in Morocco on the other hand, in spite of the numerous journeys of exploration undertaken in the second half of the nineteenth century, there remains a good deal to be done and many blanks are still to be filled up. In this article we will confine ourselves to a few general observations and for details refer the reader to the articles on Morocco, Algeria and Tunisia.

The Atlas is an extensive corrugated mountain system covering the whole of North West Africa. It stretches about 1600 miles from West to East and with its ramifications covers an area of more than 165,000 square miles. In the South it is bounded by a series of valleys formed by the beds of the *Wâd Drâ'a*, the *Wâd Ghâd* and the streams of the *Algero-Tunisian Shotts*. In the North it slopes rapidly down to the mediterranean coast. Geologists consider it to be an upheaval formed at the same time as the Apennine and Pyrenean systems and separated from them in comparatively recent times. The folding of the Moroccan chains appears to have been completed by the end of secondary times but on the other hand the upheaval of the *Algero-Tunisian ranges* seems to have taken place for the most part in tertiary times. During the quaternary period these upheavals were subjected to very great erosion. The debris proceeding from this erosion has covered in various places the framework of the ranges and altered the original physiognomy of the system in a marked manner. With reference to these distinctions the Atlas system can be divided into three distinct groups: a. The ranges of Morocco; b. The plateau of the shotts; c. The ranges stretching along the coast.

a. The Ranges of Morocco. These traverse Morocco in the narrower sense and have the highest peaks of all North Africa. Four parallel lines are distinguished: the High Atlas range in the middle, the Middle Atlas range on the North and the Anti-Atlas range in the South of the High Atlas; and lastly the *Djebel Rif* on the border of the Sahara. Stretching from S. W. to N. E. the various folds are separated from one another by valleys, lying along them which in their turn are again cut up into divisions by transverse ranges. Through these valleys run the chief water courses of Morocco; the *Melija* and the *Wâd al 'Ahd* to the North, the *Wâd Sûs* and *Wâd Drâ'a* to the South. The High Atlas is the most important of these ranges; it runs from Cape Jir on the Atlantic

coast to Sidi Tigi, a distance of about 650 miles; its average height is about 10,000 feet but some peaks surpass this; thus Tis is 13,300, Melal in 12,600 high, and lastly Djebel Ayrach, a mountain range about 100 miles broad, 15,000 feet high. There are no glaciers, however, no eternal snow. The greatest elevation of this range, called by the natives Adhar 'n-Deren, lies to the immediate south of the town of Marrakush. The High Atlas range forms an exact dividing wall between Morocco and the Sahara; it is difficult to cross as its passes are all at a considerable height. The most frequented, the Pass of Midian over which runs the road from Marrakush to Sals is 5,550 feet high, the others with the exception of the most eastern are on an average 6,600 feet and in the Adhar 'n-Deren about 12,000 high. This mountain wall then affords secure protection against the dry wind from the Sahara while the moist winds from the Atlantic Ocean strike the northern slope and nourish forests extolled by Arab writers, notably by Ibn Khaldun (*see etc.*) The Middle Atlas range, still little known, especially in its eastern part, runs northward from the High Atlas range, from Wad Tassout in the province of Nemtat to the branch at Mulayn. At first surrounded by rather low spurs, it starts out more on the other side of the ravine of the Wad al-Ahul and runs as a single, fairly unbroken ridge to the summit of the Unm al-Reb'a (Jebel Amikush). Its height is almost as considerable as that of the High Atlas range; its passes are never less than 5,700 feet high. The mountain ridge alone would be difficult enough to cross; it is rendered still more impassable by the forests on both its slopes in which wild animals (lions and panthers) lurk. On this account the trade routes from Fes to Marrakush go around it with a wide curve to the west. At the other side of the source of the Unm al-Reb'a this mountain chain bifurcates. The most important branch, which again branches and ends with a rugged declivity into the Mulayn valley, contains several peaks; the Djebel Tawarakul, the Djebel Enki and the Reggu. To the Northern branch belong the Djebel Zafra almost as high as the main range, Djebel Sidi and Djebel Wawata. To the W. and N. W. the Middle Atlas range shows a series of gradations which stretch in several ramifications almost to the Atlantic coast.

The Anti-Atlas begins in the vicinity of the Atlantic Ocean and stretches some 600 miles wide, as far as the district of the Wad Gz near the Algerian border. Somewhat to the west of the meridian of Marrakush it is united with the High Atlas by a huge spur, crowned by Djebel Sals (about 11,000 feet). The greatest part of its course the Anti-Atlas exhibits a fairly straight ridge about 7,000 feet high in the centre. Passes are fairly numerous but they are all from 5,000—7,000 feet high. The slopes are on an average bare, with the exception of the north slope in the Sals district. The Anti-Atlas may be divided into three parts: a western section from the coast to the chain uniting the Anti-Atlas and the High Atlas; a middle, from this point to the southern branch of the Wad Gz, and an eastern from the Wad Gz to the Wad Gz. The western Anti-Atlas consists of two principal chains with numerous spurs penetrating the Wad Nn district to the Atlantic coast. The middle Anti-Atlas shows a much simpler structure, a single, very

sharp ridge, turning twice at right angles, with very steep slopes on the south side and gentle declivities to the north. The eastern Anti-Atlas rises on the other side of the Wad Gz, to Djebel Saghin, the highest point of the whole chain and then sinks and stretches out in a wide plateau pierced in its middle by the valley of the Wad Gz.

The Djebel Sals 400 miles long, running parallel to the Anti-Atlas and separated from it by the plain of el-Felja is a wall of rock of black sandstone devoid of vegetation from $\frac{1}{2}$ to $\frac{1}{4}$ miles broad. Its greatest elevation in the middle part is about 3,000 feet but the northern part is scarcely 1,500 feet high.

6. The plateau of the Shotts. While in Morocco the Atlas system branches off into several distinct chains, in central Algeria it extends into a wide tableland whose height and declivity decrease from West to East and in the somewhat altered centre of which the water collects in enclosed basins (Shotts, Selkhet). This is the Algerian Highlands. In the north and south the closely connected mass of these plateaus is dominated by mountains on its verge, to the north by the Tell-Atlas and to the south by the Sahara Atlas. How these ranges connect with the Morocco chain is not exactly known. The Tell-Atlas range runs still the plateau of Debila as far as the break at Mulayn. The Sahara Atlas range meets the Anti-Atlas in the neighbourhood of Kenouba. These Algerian ranges are distinguished from those of Morocco in more than one respect. They are, first of all, lower for their highest peaks in the north are only 7,000 feet, in the south only 8,000 feet in height at most and are much more accessible. The individual mountain masses have been divided into sections by erosion and are cut up by broad ravines which render possible the traffic of the plateaus with one another and with the rest of the world. Nowhere in Algeria are the mountains such obstacles to traffic and isolating barriers as in Morocco; and lastly the two border ranges do not run parallel but gradually approach one another and unite at last in the province of Constantine, while the ridges of the Sahara Atlas combine with those of the Tell Atlas and spread over the whole of the North East of Algeria and northern Tunisia. In Tunisia the mountain chains diverge more to the east and some to the north-east, the river Medjerda forming the boundary between the two groups. In the north extend the mountains of Khrouk and covered with cork-oak forests; to these are joined the heights of the Megal district. In the south the Zeugitania chain runs like the backbone of Tunisia with a continuous series of rounded summits and flattened plains to the vicinity of the Gulf of Tunis. Here the average height of the Atlas decreases still more. The Khrouk mountains do not rise above 3,000 feet and the highest peaks of the Zeugitania range are above 6,300 feet (see *etc.*)

7. The ranges lying along the coast. — These appear now only as fragmentary mountain masses separated from each other and scattered along the coast, which some Geographers have denoted by the common name of Sahal (Sahel) or Kit (*etc.*) These ranges are separated from the main Atlas system by a subsidence. Their height does not exceed 1,000 feet and their direction is

Morocco as well as in West and Central Algeria is clearly marked by the great courses of the Wadi Susunian, the Mulaja, the Ghail, the Soumman etc. The valleys running parallel to the coast facilitate traffic between eastern and western Barbary and serve as natural roads not only for commerce but also for hostile raids. In eastern Algeria, however, the tertiary formations of the tableland have filled in the valleys in different places between the ~~mountains~~ and ~~the~~ interior rendered the distinction between the mountains on the coast and the border chains of the Sahel plateau, occasionally, rather difficult. The most important mountains on the coast are those of the Rif and three districts of the Algerian Dahra (Zahra) and those of Great Kabylia. Their height varies considerably and ranges from 1300 feet (the Sahel of Algeria and Oman) to 600 feet (Kabylia) (see MOROCCO and ALGERIA).

Though the Atlas range may be called the backbone of North Africa, its individual parts are so very different from one another that one cannot establish any general characteristics for the whole system. Every one of the mountain groups specified has its own peculiar character, its own special physiognomy. There could scarcely be a greater contrast than between the huge ~~masses~~ of the Moroccan Atlas with their wooded slopes and green pastures running up to a height of 3500 feet on the one hand and the ~~low~~ plain and the slopes of the Tell Atlas, cut up by ravines or the scarcely discernible ridges of the Sahara Atlas on the other. Within the same group the contrasts are often no less striking. One cannot, for example, compare the jagged ridges of the Djurdjura with the plateaus of the Aures cut up by deep and narrow gorges or the cloud-capped summits of central Tunisia. The influence of the Atlas range on hydrography and ~~the~~ ~~climate~~ conditions varies considerably, also, in different localities. Torrents stream from the summits of the Moroccan Atlas, which are covered for nine months with snow, down courses which have nothing but the name in common with the Wadis of Algeria and Tunisia. From the point of view of climate also the Moroccan Atlas plays a much more important role than the middle or eastern mountain ranges. The middle High Atlas and the western Anti-Atlas shelter the northern districts from the winds from the desert. It is quite the opposite with the Tell and Sahara Atlas, partly on account of the ravines penetrating them, and partly on account of their insignificant height. On this account, the Moroccan Tell shows many more special features than the Algerian Tell, where the climatic influences of the Sahara counteract those of the Mediterranean sometimes even down to the districts on the coast.

Nevertheless from the economic and ethnographic points of view some common features to the whole Atlas system can be found. For the Atlas in its whole extent seems to conceal important mineral treasures and it is inhabited for the greater part by Berber tribes. Its richness in minerals is undoubted. Iron, copper, lead containing silver, calamine and other ores have been found in numerous places in Algeria and Tunisia. The exploitation of these natural treasures as well as the phosphate deposits disseminated throughout the whole of eastern and central Maghrib, seems to secure Tunisia and Algeria of a permanent place among the richest lands of the earth in ores and to promise them a brilliant future. Morocco

appears to be no less favoured. Even in the sixteenth century Leo Africanus called attention to the deposits of iron, lead, silver and antimony. The preliminary investigations of present-day explorers seem to confirm the reputation (for mineral wealth) of the soil of Morocco.

Regarding the ethnography, the original population seems to have survived more unaltered in the Atlas than in the plateaus and plains. In Morocco where the Berber element preponderates, Arab culture, and with it the authority of the Shari'ah, comes at the foot of the mountains. The tribes in the Atlas, the Rif and in the mountains of the Beni Isadjon have preserved an almost complete independence in speech, manners, and customs from the ruling caste in Fez. In the same way in Algeria the mountains of Tlemcen, Great Kabylia, of Aures and in a lesser degree the mountain stock of the Vannia (Wangshah) of the Zekhar, Little Kabylia and Djebel Aneur and in Tunisia the Khennou district have ~~remained~~ uncontaminated by the consequences of the Illal invasion. There the mountains afforded the Berber population an almost inaccessible place of refuge from the Arab invaders and enabled them to preserve their language, manners and customs and until the possession of their land by Europeans their political institutions and independence also.

(G. VYLL)

ATLAS (A.), seventh level. From this comes the name Atlas for a certain kind of silk, quite unknown in the Romance languages. Cf. *Quatrecent*, *Histoire des Nations Strabon*, II. 1. p. 69.

ATRABULUS (See TABABULUS.)

ATREK, a river forming the present day boundary between Russia and Persia. The name seems to appear first in Hsundallah Kaswin (740 = 1330), it is not mentioned by the geographers of the 16. to 18. century. It rises on the northern slope of Mount Hartz-Mandsh, flows through the districts of Kutan and Amjursk which have been Russian principalities since the days of Shah 'Abbas I (one of the most fertile districts of Khuzistan, the ancient Anshusan or Anshush and the medieval Uzunay and receives the waters of the Sumbar (more correctly Simbar) at the village of Qat or Qash. From this place till its discharge into the Caspian Sea it has formed since 1882 the boundary between Russia and Persia. At the village of Ghomkhana (north of Badkubad) where the river is crossed by a wooden bridge, it is 25—30 feet broad and 2-3 feet deep. Below the village of Ghomkhana both banks are almost quite uninhabited with the exception of a few huts of the Tarkhan tribe of Vamut though there are many traces of ancient irrigation canals. Quite recently a dam, built on the Russian bank (at Qash) has given its lower course a northerly direction, so that the southern river-bed chosen as the political boundary, is now almost quite waterless. The district watered by the lower course of the Atrek on the north side, was called Dabistan in the middle ages (perhaps from the Daks, an ancient people). Now there is to be found there the ruined town of Mashhad-i-Miriyak, usually called Meataryan on maps; water was brought to this town from the Atrek and even farther from the Sumbar (over 35 miles). Dabistan is said to have been called as early as pre-Muhammadan times but Isfahani and Ibn Haskal

statement about 40 works containing 700,000 verses. Among his prose writings are the *Lives of the Saints, Tadhkirat al-Awliya*, edited by Nicholson (London and Leiden, 1905—1907) his *qasid* poems as well as many voluminous works. His poetical works are likewise devoted to the cause of Islam. The best known is the short *Funeral* edited and translated into French by Silvestre de Sacy (1819) (repeatedly printed in the East). More extensive is the poem *Manzil at-Tair* edited by Garcin de Tassy (1837) and likewise translated into French (1863); a lithographed edition of his complete works (*Awliya*) appeared at Lucknow in 1877 and there are similar editions of single poems. The titles of his writings are to be found in the unmentioned works though the best account of them and of 'Attar's biography is to be found in the introduction (in Persian) by Mirza Muhammad Kazwini in Nicholson's edition of the *Tadhkirat al-Awliya*.

Bibliography: 'Awli, *Ladab al-Awliya* (ed. Browne) II, 337 ff.; Unwaleghat, *Tadhkirat al-Awliya* (ed. Brown) p. 157 ff.; the catalogues of Manuscripts by Kien, Yü, Springer, Stewart etc.; Ethé, *Grundriss der handschriftlichen Philologie*, II 384 f.; Horn, *Gesch.* III *pers. litter.* 158 f.; Browne, *A Literary History of Persia*, II 381 ff. **AT-ATTAR**, KAMAR A. MUHAMMAD, Arab theologian and theologian, born in Cairo in 1180 (1766), was at first his father's assistant and studied at the Achar. Later he travelled in Syria and Turkey but finally returned to his native town where he took up the position of editor of the *gazette al-ahadith al-waqifa*, founded by Muhammad 'Ali in 1244 (1828). Three years later, however, he was appointed Rector of the Azhar-Madrasa. He died either in 1250 (1834) or 1254 (1838). His Arabic works are better writing *Intihaf at-Attar* was repeatedly printed in Cairo (1270, 1297, 1300) and in Bombay (1302). His commentary to the *al-Minhaj* of al-Ghazali is *al-Asrar al-Aswaja* has likewise been printed (Heliopolis, 1284, Cairo, 1297).

AWADH. [See **AWA**.]

AWADHILA. [See **AWADHILA**.]

AWALIS (Awali, Halut, Marwaleh and Marwaleh), dynamic zone of a group of tribes

in South Arabia. Their country is bounded in the South by the Arabian sea, in the West by Iraq (in the southern part), by the land of the Awali (in the centre) and by that of the Rada (in the northern part); in the Northwest by the Kapla (Kasla), in the Northeast and the upper part of the East by the land of the upper Wahidi and in the lower (southern) part of the East by the land of the Hishli (Hishli). The whole country of the 'Awali falls into two divisions: 1. The country of the upper 'Awali. 2. The country of the lower 'Awali.

1. The territory of the Upper 'Awali consists in the main of three large plateaus: Marha (the ~~main~~ part only) in the South, Nijah (Anjah) to the Northwest of Marha and Hishli (with its satellites) in the Northwest. The largest wall is the Wall 'Aladun. The climate is tropical and the ground fertile. It produces wheat, maize, tobacco and indigo. The chief town is Nijah (Anjah) with about 2000 inhabitants (including several hundred Jews); it contains many palaces, fortresses and a large mosque. The northeastern part of the upper 'Awali is ~~main~~ by its own ~~own~~ who is only dependent on the Sultan of the upper 'Awali in external matters. He has his court at Yashburn (Yashburn), a town with about 1000 inhabitants (including several families of Jews) containing several mosques and four-like houses. The inhabitants of the country of the upper 'Awali being for the most part in the title of Mahajir in the North (whence the name *Am al-Mahajir* for the northern part of the upper 'Awali) and in the South (Yashburn) in the Ma's tribes (among these are the Mahajir of Hamulani) who are mostly independent (Kadali); they are fond of fighting and enlist in great numbers for service in the East India.

2. The country of the lower 'Awali consists of the great plateau of Marha in the East; the remainder is partly highland and partly lowland. The largest wall in this barren coastland is the Wall Akwar (Umar) which is almost always dry. By this river dwells the tribe of al-Rasid; for the most part they are subject to the Sultan who taxes them on and exercises jurisdiction over them. Another, quite different tribe, the Kamul, inhabits the plateau of Marha and is independent (Kadali). The capital and residence of the Sultan is Akwar (Umar). Cf. Malcolm, *Nizam al-Mulk al-Mulk* (Munich, 1873), pp. 230—231 and Landberg, *Notae preliminaries. sue de papi libe de Clapham et de Sultanatu de 'Awali inferiori etc.* (in Arabic, in. Leiden, 1897), pp. 34—35. (J. SCHLITZER.)

AWARID AKCESI or WACSI. The name of a direct tax which has been levied in most of the provinces of Turkey. This impost belonged to that class of milid burdens which are known as voluntary taxes (*Taklif-i-Urfiyah*) in opposition to those laid down in the *Shari'at* (*Taklif-i-Shari'ah*). This tax with the others in the same category was abolished with the reforms instituted in 1235 (1834) and replaced by a single tax (*wings*).

Opinions differ regarding the adjustment and application of this tax; what complications resulted from the practice in administering the very numerous taxes differed considerably in the various provinces of Turkey and that the word *'Awali* was applied in a general way to denote several quite distinct extraordinary levies.

The Hungarian Historian Franz Salamon says

'summer-campaigns') from the 'Awaghin-district' were organized every summer, considerable hostilities of troops being often called out who always returned with rich booty and a considerable train of prisoners.

Through these constant raids and devastating incursions the marches very often became much depopulated. When the Caliphs for their protection and to strengthen the Muslim population settled there, several times brought people from distant provinces of their kingdom hither, the old population of the country gradually changed to a varied mixture of immigrants or imported elements. Among the latter were Christian Arab *ḥimyarīyāt* (ḥimyarīyāt Tabari, II, 185, 1194), Slavs, Persians, Manichaeans, *Sayghids* and Zuzi. Christian Manichaeans whose origin is unknown were originally active on the Byzantine side but were taken over into the Arab service as frontier guards under Walid I. The apparently Turkish tribe of the *Sayghids* [q. v.] were settled in Asaphiya and the *Chichagars*. Large numbers of the Zuzi [q. v.], an Indian people (*Ilhudi*: *Ilait*) who had been sent by the conquerors of India, Muhammad II al-Basim with great herds of buffalo to South Babylonia, were sent by order of the Caliph Yazid II to the Chichag border and particularly to al-Basim (Mop-moia). By the introduction of thousands of these buffaloes with their accompaniment of Zuzi herdsmen al-Walid I sought to combat the plague of fleas which was becoming so serious in the deserted valleys in the neighbourhood of Antioch. From this period dates the abundant supply of buffaloes to these districts (cf. al-B. Hartmann, *Das Arab. Reich*, 1894, p. 71) in the east al-Mufayyah required a large colony of the Zuzi to Aid Barba [q. v.]; the al-Ashir, vi, 311; *Avogon*, *Arab. Arch.* (ed. de Goeje), II, 475.

From the time of al-Walid (705-714) the Byzantine troops pressed *Ḥimyarīyāt* Arab leaders and farther back the *Ḥamshānī* al-Basim succeeded, in the middle of the tenth century, in defending the military marches against the arch-enemy successfully but his success was only temporary. In 353 (963) and 354 (965) al-Basim, Adilana and Tarsis, long the strongest points in the line of defence, fell into the hands of the Greeks and were turned by them into fortresses against *Ḥimyarīyāt*. Subsequently the district of 'Awaghin was merged in the principality of Antioch which had arisen with the help of the Crusaders; parts of it also passed under the sway of the kings of Little Armenia (*Ḥimyarīyāt*) who resisted to the end. With these territorial changes the hitherto independent position, for political and administrative purposes, of the North Syrian and Arab Minor borderlands ceased to exist.

AWDAGHOST (or *AWDAGHOSH*), an ancient town in N. W. Africa which has quite disappeared from the face of the earth according to *Leiri* II was situated between the land of the negroes and *Saghlina*, distant about 51 days journey from the latter oasis and 15 from *Libana*; according to *Leiri*'s hypothesis it lay between long. 10° and 11° W. of Greenwich and between 18° and 19° north, not far from *Saghl* and *Barba*, that is to S. W. of the military station of Tidjiks in French Mauritania.

We have only a few scanty notices of this town; it appears to have been originally a trading settlement of the *Zenaga* (*Saghlina*) on the northern border of the Kingdom of *Ghina*. About the end of the tenth century when the *Zenaga* had conquered a large part of *Ghina*, Awdaghost was the capital of a powerful tribe. From 350-360 (961-971) they had a *Saghlina* prince, *Tin Verutan*, as their ruler who *Ḥimyarīyāt* over twenty negro kings among his vassals and whose kingdom measured 60 days' journey in length and breadth. In the following century *Tim Vatin*, founder of the *Almoravid* sect, attacked Awdaghost, stormed the town, plundered it and massacred the inhabitants (448 = 1054-1055). After this the *Zenaga* power declined. At the beginning of the thirteenth century the *Ḥimyarīyāt* invaded the country and drove out the *Zenaga* or made them tributary.

In the time of al-Bakri Awdaghost was still a flourishing town. Its considerable population consisted of Maghribi Arabs and allied peoples from the province of *Hittaya*, al-Barkas (*Barbajama*), *Lompa*, *Zenaga*, *Nefisa* and especially *Nefisa* and of courses of negroes also. The town, surrounded by orchards and palaces, contained schools, mosques, splendid public buildings, handsome houses, busy markets. It had an important trade in wax and fruit from *Melancholia* countries, in amber from the Atlantic coast, in cloths, copper ware and incense. Payments were made in gold dust. By the time of *Leiri* its decline was evident. The population had dwindled away, the commerce was unimportant and camel-breeding formed the only means of livelihood of the inhabitants. The complete downfall of the town is no doubt connected with the ultimate break-up of the *Zenaga* power.

Bibliography: *Bakri, Description de l'Afrique septentrionale* (transl. G. de Slane), p. 349 et seq.; *Leiri* (ed. Leiri and de Slane), tome, p. 344; *Barth, Reisen und Entdeckungen*, Vol. IV, Appendix IV. (after the *Tafel* of *al-Bakri* of al-Bakri.) (S. 100.)

AWDHILLA (sing. *Awadh*, pl. *Awadhilla*), in *Hamshān*, *Ḥimyarīyāt*; according to *Spengler, Die alte Geogr. Arabien*, p. 206, 260, identical with the *Udhra* of *Polony* and the *Awadhilla* of *Ḥimyarīyāt*, a South Arabian tribe. Their territory, lying between the land of the *Vah* and that of the *Awadh*, is for the most part highland and crossed by a great range, the *Ḥebel Khar* (Kor) often also called *Zahir* (*Ḥebel*). Of the *Wah* that rise in the *Ḥebel Khar* the *W. Veranda* (*Jerusalem*) is the best watered. The climate is tropical and the ground very fertile; the chief produce is honey. The chief town is *Ghuta* (*Lahut*) with

several hundred inhabitants (including several Jewish families) a large market and the palace of the Sultan who lives here. The largest town is Zahir (Daher) with about a thousand inhabitants (including several hundred Jews) and a flourishing trade. The inhabitants of the Awbiubaland air for the most part independent free villages (Kobahs) who only obey the Sultan in case of war. Cf. especially Mallat, *Reise nach Sudanen* (Hann. Schwesig, 1873), I, 275-282, and Landberg, *Neue orientalistische Reise in Sudan* in *Zeitschrift für Ethnologie* 14, 1884, p. 34, note.

(J. SCHUMMER.)

AWDJ (A.), Arabised from the Persian *Awj*. *Awj* and *Awj* denote in Astronomy the Aquides.

AWJILA. = Tripolitan oasis situated 150 miles south-west of the coast of the Gulf of Gabes 152 miles east-north-east of Murzuk and distant about 60 hours' journey from Benghazi. Hawkal describes it as a small town which had just shortly before been incorporated in the province of Barca and makes particular mention of its richness in date-palms (the Hawkal, transcribed by de Sene, *Journ. As.* Series 3, vol. 183). A century later it is mentioned by al-Bakri as a thickly populated town with bazars and several mosques and he adds that Awjila is really the name of the district, the name of the town being Arakhiya (Bakri, *Descr. de l'Afrique Septentrionale*, trad. by de Sene, p. 32). Today as in al-Bakri's time the name Awjila denotes a whole group of oases, viz. Awjila (15 miles long, 2 miles broad), Ujila (15 miles long, 8 miles broad with extensive tracts of desert and sandhills between palmgroves), Bafra or Bafra (Wadi and lastly, a day's journey eastward, Lebkhomah. These various oases contain about 200,000 date-palms of which 40,000 are in Awjila and 200,000 in Ujila. The thousand inhabitants of whom 400 are settled in Awjila and 600 in Ujila, fall into three classes: 1. the Awjila, of Berber descent and language live chiefly in Awjila and the little market town of Lebba in the oasis of Ujila and are farmers, gardeners, milkmen and herders; 2. the Musjidra, Arabic-speaking, herders, dwell in the neighbourhood of al-Ara in the oasis of Ujila, are traders and have the reputation of being particularly honest; 3. the Zalya, an Arab tribe which has settled in Lebkhomah. All these oases however are considerably mixed with negro blood. For administrative purposes Awjila belongs to the Pashalik of Benghazi; in matters of religion however the oasis is under the influence of the Senbalya and no mosque is very successful to Europeans. Only four explorers have as yet entered it: Hornemann (1798), Pacho (1825), J. Hamilton (1852) and Gaumnann (1862).

Bibliography: Pacho, *Relation d'un voyage dans le Maroc* et *le Soudan* (Paris, 1827); Kohls, *Von Tripolis nach Alexandria*, Bd. II: *Reise nach Tripolis*; *Mitteilungen, Reise- und Forschungsberichte* 9, p. 68; Reiche, *Göteborgs*, 21, 33 ff. (1874).

AWFI, MOHAMMAD B. MOHAMMAD, Persian master of letters, who styled himself as being descended from 'Abd al-Rahman b. 'Awf (q. v.) whence the name 'Awfi. When and where 'Awfi was born cannot be ascertained with certainty. But this much is certain that he spent his early years in

Rehber and the other towns of Khuzestan till the Mongol invasion carried him into India. Here he was received at the court of Sultan Nasir al-Din Khilji and composed for his Viceroy 'Amir al-Mulk Husayn al-Agha the oldest Persian *Tadhkirat* (Tadhkirat) that has been preserved in which bears the title of *Awfi al-Agha*. After the death of the Sultan in 1259 (1256) he addressed himself to the victorious Ilkhanid (q. v.) and dedicated to him his famous collection of maxims, the *Awfi al-Agha*, which he had already begun to write under instructions from Nasir al-Din. He probably died some after in Delhi but the exact date is unknown.

Bibliography: Muhammad 'Awfi, *Awfi al-Agha* (ed. Browne), Persian introduction by Mirza Muhammad Husayn; Brown, *A Literary History of Persia*, II, 477 ff. 189.

AWHAD (properly al-Malik al-Awhad, Nizam al-Din Awhad b. al-Awhad, an Ayyubid, received from his father the governorship of Balqa, Hama and a few adjoining towns. A first attempt to bring the town of Hama under his sway failed (603 = 1206-1207). He was successful however in the following year but it was only with great difficulty that he maintained his hold there against the Georgians. Indeed his rule did not last long, for he died soon after in 607 (1208) and left his territory to his brother al-Ashraf (q. v.).

Bibliography: Ibn al-Athir (ed. Farnberg), III, 103 ff. 104; Makrizi, *History of Egypt* (transl. by Huchet) p. 290, note, 290.

AWHAD, RUKN AL-DIN, a Persian poet who died in (1537) at Maragha. He had taken the pen-name of Awhad in honour of his teacher Awhad al-Din Kermah who himself was a famous Sufi and poet (cf. Bakhshi on him, ed. Wustani, II, 104 ff. 105). Awhad left behind him a *Diwan* of 10,000 verses but he is best known by the mystic poem *Diwan-e-Nazm* (the golden of Nazm). He also composed a *Shah-Nama*.

Bibliography: Karamatli (ed. Brown), p. 110 ff. 111; *Like in the Garden of the South*, *Philology*, II, 11 ff.

AWKAF (A.), plur. of *Awf* (q. v.)

AWKAT (A.), plur. of *Awf* (q. v.)

AWL (A.) In Muslim legal works is a certain method of reducing inheritances. It sometimes happens that the number of heirs leaving a claim upon the estate at the same time, according to the Koran, is so great that the total of the legacies due to them under the statutes is greater than the whole estate; for example in the following case: if a man dies leaving a widow, both his parents and two or more daughters, their claims are as follows:

The daughters are entitled to $\frac{2}{3}$ of the estate	$\frac{2}{3}$ (100%)
The father	$\frac{1}{3}$ (50%)
The mother	$\frac{1}{6}$ (25%)
The widow	$\frac{1}{6}$ (25%)

which would make a total of $\frac{11}{6}$ or 183.33%.

In such a case the legacies must be correspondingly reduced. The estate is then divided into 27 and not 24 parts. Of these the daughters receive 16, the father 4, the mother 4 and the widow 3. Such a reduction of legacies is called 'Awf.

 (Tr. W. F. J. VAN NELLE).

AWLAD (A.), plur. of *Walad* [q. v.].

AWLIYĀ (A.), plur. of *Walī* [q. v.]. This plural is sometimes used improperly by the Turks and Persians for the singular.

AWLIYĀ-ATĀ [i. e. "holy father"]; chief town in the Sir Jurg district in Russian Turkmenia called after the tomb of Saint Kars-Khān. The grave of the saint is mentioned as early as the seventeenth century (*Ḥikāyat al-Awliya* of Mahmūd b. Walī, Cod. Ind. Off. 345, fol. 119^v); the town itself arose only in the nineteenth century and was conquered by the Russians in 1864. The present tomb dates from quite modern times and is without inscriptions; the tomb of the so-called "little saint" (*Ḥikāyat al-Awliya*) in the same town bears an inscription of the year 860 (1457) and is the grave of the prince Uluḡ Beg (Uluḡ Beg) *Shāh* Beg b. Hyāz (published in *Ḥikāyat al-Awliya*, *Ḥikāyat al-Awliya*, Vol. xii, p. 5). The town of Tāriz (Tāriz) mentioned by the Arab geographers in the same district seems to have utterly disappeared. Old Turkish epitaphs have recently (since 1896) been found in the district of Awliya-Atd at Tāriz (concerning these see *Zaynī* etc., Vol. 2).

(W. BARTHOLOM).

AWN (A.), Help, helper; hence: "servant" = at thy service; also used in honorary titles, e. g. "Awā al-Dīn [see *awā* (HURAI).]

AWNĪ, pet-name of Sultan Mahmūd II.

AWRA (A.), *AWRA* (v. t.) punishment; woman.

AWRANGĀBĀD, chief town of the division of the same name in Bahārabad (Deccan) situated between 19° 33' N. and 75° 20' E. and the second largest town in that state, having in 1901 36, 837 inhabitants. The town founded in 1690 by Aurangzeb, minister of the ruler of Ahmadnagar, was originally called *Pathanagar* and did not receive its present name till 1693 when Aurangzeb was Governor of the Deccan. When Aurangzeb declared himself independent as *Shah Nizam*, AWRANGĀBĀD was added to his territory. The town contains many Mohammedan monuments such as a mosque which Malik Aurangzeb built, the tomb of the wife of Aurangzeb and Aurangzeb's palace. The silks, work, embroidery, gold and silver brocade and silk-stuffs manufactured there enjoy a great reputation. About two miles north of the town are some famous caves of Buddhist origin. Of the 2,363,114 inhabitants in the division of AWRANGĀBĀD in 1901 only 10% were Mohammedans.

Bibliography: Imperial Gazetteer of India, vi. 149–150.
 (J. HODGKIN.)

AWRANGĀBĀD, a small town in the Gylā district of Bengal which in 1901 had 4,689 inhabitants.

Bibliography: Imperial Gazetteer, vi. 150.

AWRANGĀBĀD SAIIYID, a small town in the Bahārabad district of the United Provinces, founded in 1704 by Sayyid 'Abd-al-'Azīz, a descendant of Sayyid Dāwūd al-Dīn (founder of Bahārabad, and still belonging to his descendants). It is called AWRANGĀBĀD SAIIYID (of the Sayyids) to distinguish it from another AWRANGĀBĀD (A. Chaudhūrī). Name of inhabitants (in 1901) 3916.

Bibliography: District Gazetteer of the United Provinces, V. Bahārabad (Allahabad, 1903), p. 191.
 (J. HODGKIN.)

AWRANGZEB (1618–1707), the third son of the emperor Shahjahan by Arjumand Banu Begam Mumtāz Mahal, daughter of the Persian immigrant Asaf Khan Yamin al-Dawla, was born at Dihli (usually converted into Duhād) on the 13th Dhu l-Hijja 1027 (Nov. 3rd 1618) in the camp of his grandfather Jahangir, then on his way from Ahmadabad (Gujarat) to Lakhnau to Mithila. It was his fate to be born and die in a camp, and to pass many years of his life in one.

I. From birth to accession, 1618–1658.

In his early years the prince shared the adventures and wanderings of his father Shahjahan from the Dakhin to Orissa, Bengal, and back again to the Dihli. In the last year of Jahangir he was sent with his elder brother Durr-i-Shikoh to Lakhnau as a hostage for his father's good behaviour. His first public employment was in 1635 when he was made the nominal generalissimo of three armies operating in Baniachand. This was immediately followed by a first period (1636–1644) as governor of the Dihli or southern provinces. During a fit of religious fervour he resigned public life, but in 1645 he was restored to his rank and sent to Godhara. He was called thence in 1646 to take command in the newly acquired province of Balkh, which was still in a very disturbed condition. He acted with great vigour but secured no more than a temporary success. The emperor found that Balkh was costing him more than it could ever yield, and handing it over to a former ruler, he recalled AWRANGZEB, who in March 1648 marched direct to his new government of Multan to which Tatta was afterwards added. Kandahar was the next scene of his labours in the field, but two attempts, in 1649 and in 1652, to retake that fortress from the Persians were unsuccessful. After his return from the second of these sieges, AWRANGZEB was transferred to the Dihli again. Here under his father's orders he attacked the Kuch Shah king of Gokanda and the 'Adil Shah king of Bijapur, obtaining from both considerable cessions of territory and large sums in tribute. In 1657 Shahjahan fell ill and it was reported he was dead. His younger son at once entered the field to contest the throne with their eldest brother, the heir apparent Durr-i-Shikoh.

II. War of Succession, 1658–1659.

The second son Shah Shuja was the first to advance on Agra: but he was easily repulsed. AWRANGZEB joined forces with his next brother Murad Baksh and, defeating an imperial army near Ujjain on the 22nd Rajab 1068 (April 27th 1658), they encountered Durr at the head of the main army at a place east of Agra. The great battle of the 7th Ramezjan 1068 (June 8th 1658) resulted in the crushing defeat of Durr, who fled to Agra and thence to Dihli and Lakhnau. The victors advanced on Agra and made the emperor a captive. Resuming their march westwards, Murad Baksh was seized by AWRANGZEB in their camp close to Mathura (11th Shawwal 1068 = July 5th 1658). When he reached Dihli AWRANGZEB proclaimed himself as emperor (13th Dhu l-Hijja 1068 = July 31st 1658). After pushing Durr first to Lakhnau and then to Mithila, he was recalled to Agra by a renewed attempt of prince Shah Shuja. Shuja was defeated in

a pitched battle at Khajwāh, between Adilshah and Agra, on the 19th Rabi' II 1069 (January 14, 1659). Leaving his commanders to drive this antagonist eastwards from one point to another until he fled into Auran, Aurangzeb returned to Agra.

Dara ~~Shikoh~~ gone down ~~the~~ Indus as far as Bhakkar and then ~~forward~~ onwards, was admitted into Ahmadabad, and assembling a fresh army moved northwards to Ajmir. There Aurangzeb met and finally defeated his ~~brother~~ brother on the 28th Jumada I 1069 (March 23rd 1659). Two generals were sent off in pursuit of the fugitive; he was at length captured some distance to the west of the Indus, brought to Delhi with ignominy, and there condemned and executed, 21st Rabi' II 1069 (Sept. 10th 1659).

III. Years one to twenty three of reign (1658—1681).

The first half of the reign was marked by an invasion of Assam, a continuation of the remarkable career of Sivaji the Maratha leader, and many vicissitudes of the Pathans in the country between India and Kābul. Sir Djumla's attempt to conquer Assam was a failure and he died shortly afterwards (April 10th 1663). Bayazid Khan, the emperor's uncle, and Miranpur, his second son, ~~sent~~ sent successively to the Dakhn but obtained little success; they were followed by Raja Jai Singh of Amber and he persuaded Sivaji to submit and attend at the Delhi court. The reception accorded him was not cordial, he soon fled, and when he reached his home country at once resumed the strife. — Aurangzeb early in his reign paid one short visit to Kashmir, and on account of the Pathan troubles he passed ~~some~~ years, 1674—1676, in Hamirabad (Rawlpiandi district). In 1678 he resolved on absorbing the semi-independent Rajpūt states. He moved to Ajmir and sent his forces to invade Udaipur territory. At first ~~he~~ and with some success; but his fourth son, Akbar, having broken into rebellion, his attention was diverted from the Rajpūts. After Akbar had fled into the Dakhn, the emperor moved on after him, reaching Burhanpur on Nov. 23rd 1681.

IV. Years twenty three to fifty of the reign (1681—1707).

For four or five years the emperor was occupied in pursuing Sambarhā, the son and successor of Sivaji, and in attempting the capture of Akbar. Akbar finally took refuge in Persia where he died. The local dynasties of Gulikonda and Bidjapur were next attacked. Gulikonda was partially annexed in 1685 and its total extinction effected in 1687, when the last king was taken, October 1st 1687. Bidjapur ~~was~~ been annexed in the previous year, the king submitting on Oct. 18th 1686. Sambarhā was captured on December 28th 1684, and executed along with his Braduan minister. A successor, Rām Rājā, fled south and continued the struggle at Bidjā, where he stood a desultory siege for over seven years. The ~~many~~ clashing ~~gangs~~ were taken up with the reduction of many hill forts, but without much effect on the general situation, as they were frequently recaptured after a month or two. Aurangzeb's last exploit in the field took place in 1705 when he commanded in person at the taking of a petty

fort Wādhakarn (now in the Nizam's Territory). In May 1705 he had a severe illness and for 12 days did not appear in public; some thought he was dead. The end had not yet come and he resumed his marching. He arrived at Ahmadnagar in January 1706, and died there on the 20th Rabi' II 1122 (March 3rd 1707), having reigned fifty (lunar) years and twenty-seven days. He was buried at Khuldabad (or Kāwda) four miles west of Daulatabad and not far from Aurangabad.

His style and titles in life were Abul-Muẓaffar, Muhammad Shahi T-Din, Aurangzeb, 'Alaung, Nadehah, Ubaid; and after his death he was referred to as 'Khuld-makān'. He had four wives, Rahmat al-Nisa known as Nawab-Begum, mother of Muhammad Sulān, Muhammad Mo'azzam and Udd al-Nisa Begum; Dima Bānt Begum, mother of A'zam Shah and Udd al-Nisa Begum; Aurangabad Mahal, mother of Mihr al-Nisa; and Bā' Udaipur, mother of Rām Rājāh.

Aurangzeb's gold coins bore the device:

Shah wa shah shah shah shah shah

Shah Aurangzeb-i 'Alaung.

On the silver coins ~~only~~ was changed into ~~shah~~. He rejected the use of the ~~shah~~ on coins, from conscientious scruples.

AWRĀS (Awāra; in the sixth century A.D. *Awāra* in Protophry, *De Hist. Zand.*, l. 8, ll. 12—13, 19—20) a community in Algeria in the Sahara Atlas (see *ALGERIA*, *ATLAS*). The meaning of the word Awrās has not yet been ascertained. It is probably a word of Berber origin that appears in several mountainnames. Possibly Global Awrās in the South of Khenshela has given its name to the whole system.

The ~~system~~ forms a quadrangle which from

North to south and from East to West measures about 65 miles and is the south of the province of Constantine covers an area of about 3500 square miles. It is terminated on the West by the low hills of Zib which were traversed in ancient times by the Roman road from Lambirid to Vesera and at the present day are crossed by the Blain-Bakra railway; on the East the valley of the Wad al-Arab separates it from the Jebel Sherbet. In the North it rises above the plateau of Shakh and the basin of the Tars; in the South it borders on the Sahara. The northern face slopes up to plateaus whose height in the lowest parts is about 3000 feet though in some places it is about 3300 (Bakas 3443 feet) with the Awaks. It is connected by very successive spurs (Jebel Zella, El Amara, El 'Aziz). The south slope drops abruptly into the low plateau of the Sahara (400 feet at Bakra—1000 feet in the Shakh height) and raises its almost perpendicular walls from 4000 to 5000 feet above the desert.

Consisting chiefly of Neocomian chalk and limestone, the Awaks was once subjected to very great erosion. While stories have been swept away by the waters. In some places all the movable earth has completely disappeared and the mountain becomes a rocky skeleton. The ruins, dissolved into muddy masses, have filled the valleys or been piled up in huge heaps at the foot of the southern slopes. The erosion still continues although at times it is much slighter now than in the past. The waters still descend through the valleys and, in various places e. g. in Tighastin between Hanyan and M. and elsewhere, have dug out narrow ravines, straight gullies, sometimes several miles long with perpendicular walls hundreds of feet high. In other places in the valleys solitary rocks, worn by the waters, stand as evidence of the original formation of the land.

The structure of the Awaks is, though more regular and clearly marked, similar to that of other mountain systems of the Saharic Atlas. The Awaks consists of a series of huge parallel folds stretching from S. W. to N. E. "which run close beside one another like folds in a cloth and form long straight ridges separated by deep valleys" (Nina).

The most important peaks on the northern slopes are Jell Malma (7740 feet), Shelia (7759 feet), the highest mountain in Algeria, the Jebel Faran (6980 feet) and T. Azeg (6419 feet); on the southern slopes the long edge of the Ahmar Khaddu (6933 feet) the south western spur of which thrusts itself out like a headland towards the desert.

Four valleys, which are only very slightly connected with one another and which are much split up in the upper parts, lie between the parallel ridges. These are from North to South: the valley of Wad Kantira formed by the union of the Wad Fedala with the Wad al-Ahmar; the valley of the Wad 'Abd reinforced by the Wad Hedra; the valley of the Wad al-Ahmad, and in tributary the Wad Shemshara; and lastly the valley of the Wad al-Arab formed by the confluence of various Wads from the country round Shelia. These four rivulets flow from northeast to southwest and disappear in the plain of the Sahara almost immediately on emerging from the mountains. On the northern slopes were the important streams the river the

Wad al-Mahder, Wad Shemshara, Wad El Yaman, Wad Ma'rou and Wad Baghat which are lost in the lowlands of Shakh and in the Gers al-Tarf. All these ~~streams~~ form narrow courses, where they break through the spurs of the Awaks, which are picturesquely called *Wad* (creeks).

Lying as it does between the plateau and the Sahara, the Awaks combines the flora as well as the climatic conditions of these regions and at the same time has the characteristics of various districts in the Tell Atlas owing to its height.

The highest peaks are constantly covered with snow in winter and spring, and the plateaus of the northern slopes are under the influence of the cold north wind; even in the South in the high-lying valleys the temperature sometimes falls to 12—14° below freezing-point. To balance this however the thermometer in these same valleys, are exposed to the hot winds from the Sahara and the dry Shebil, often rises to 100° to 104° and the temperature in the mole in summer. The flora and agriculture offer similar contrasts. From the desert one comes gradually into woods. The transition is peculiarly striking in the valleys of the southern slopes. The arable land in the lower valleys of the Wad 'Abd and the Wad al-Ahmad with its date-palm, orange and pomegranate gardens still bears the character of the oases of the Sahara. At a height of about 1300 feet the date-palm is only an ornamental tree though it is still to be found as high as 3000 feet flourishing in the gardens ~~of~~ olive and evergreen trees and the fruit trees of the temperate zone (apples, cherries and pear trees and others etc.). Higher still grow the trees which lose their foliage in winter such as nut-trees, the oak and at a height of 4000 feet the cedar. The last named tree seems to have once covered wide tracts of the slopes of the Shelia but for reasons which are as yet little known, it is dying out and the few cedarwoods still surviving, of which the most important is the forest of the Jell Ughma on the slopes of the Shelia, are in a very miserable condition. The Awaks possesses arable land only to a small extent; this is to be found in the depths of the valleys where the natives have made use of it for laying out gardens, and on the slopes of these valleys where it is ~~used~~ together by a succession of walls of dried bricks. The highest hill districts only afford pasture. Arable land, strictly speaking, is confined almost entirely to the northern sides. This irregular division of the natural resources of the Awaks has determined the habits of its natives as they can nowhere satisfy all their requirements but on the contrary find only one necessity of life in one place and another in another, they have been compelled to adopt a nomadic life. In winter the tribes settled on the southern side of the Awaks sow their fields on the north which they have reaped in summer; in autumn they descended to the Sahara to buy dates. In the intervals they bestowed great care on their gardens in the depths of the valleys. Thus the inhabitants of the Awaks combine the Tell and the desert in their way of living just as the Awaks unites these regions in its flora and climate. On their migrations they live in tents; when they are stationary they live in houses whose walls consist of clay and pebbles plastered on a framework of branches and which are covered by roofs of hardened clay. In some

of the very narrow valleys they live in caves (*ayra*) in the cliffs in order to use the ground to the greatest advantage and also to have a better protection against hostile attacks. The valley of the Wād al-Abyad contains such Troglodyte dwellings in large numbers. The houses are grouped in villages which appear to hang on the slopes of the valleys or to crown steep hill-tops, difficult of access, and to be dominated by the Gela's (*ǧāḥ*; in Shawiya *ǧāḥ*) a large stone building of several stories. A spiral staircase in the interior of the building leads up to these stories and the rooms in them where the harvest and provisions of the various families are conserved. During the absence of the dwellers in the village the Gela's is guarded by a responsible watchman. The name Dakhla denotes also in a wider sense, the whole valley. The relatively large population of the Awrás may be divided into 11 tribes who form 36 *ḥuḥ* with a total of 88,500 souls. The density of population varies in different places; it is greater in the valleys than in the higher districts and it also decreases from West to East. In the Ahmar Khadda there are 11 among the Uḥād 15,000 33, among the Uḥād 'Abdī 37, among the Bent Fera 40, among the 'Amzura 44, among the Bent 88, among the 48 inhabitants to the square mile.

The population of the Awrás consists of different elements. Other constituents have been added to the Berbers who form the original stock: in the first instance descendants of the Romans and Byzantine colonists as well as the Vandals invaders and later the Arabs. No further elements is still by far the most important, being particularly predominant in the mountainous and least accessible parts of the range. On the other hand the Arab element is conspicuous in the valleys and the neighbourhood of the Sahara. Of Arab or semi-Arab tribes — they are for the most part mixed with Berbers — there may be mentioned: the 'Abkhyaḥ Hailiya, who have immigrated from the Biskra district or they are another branch of this stock; the Uḥād Kaddān who come from the Illian district, the Uḥād Ziyān who have settled in the oases of Bent-Salk, Ghomra and Runka in the lower valley of the Wād 'Abdī and who are said to have immigrated in the thirteenth century from Sūḥāya al-Baḥrā but are in reality Arabic speaking Berbers; the Uḥād 'Abdī and the Uḥād Kaddān who profess to be of Illian descent. The two last-named groups are said to have incorporated descendants of Roman colonists on which account they have received the name Rāmiya. The Rāmiya settled in the upper valley of the Wād 'Abdī, the Rāmiya in the valley of the Wād al-Abyad after the Illian-Berbers had been driven out. Lastly the Bent Sūma, a branch of the 'Amzura, the Ghurfa and the Dakhla of the Ahmar Khadda also claim to be of Arab descent.

The Berbers, however, are superior in numbers and they have therefore given the population of the Awrás the cast of features which is characteristic of them to this day. These Berbers call themselves *ǧāḥ* (Kalyā) but by the Arabs on the other hand they are called *Shawiya* from *shā* (sheep) perhaps in a contemptuous sense, for the Arab proverb actually credits the *Shawiya* with having sheep's brains in their skulls. Physically they present no uniform type throughout, no doubt owing to the numerous crossings between indivi-

duals of different stocks. Yet to the Awrás fair haired people with blue eyes are more numerous than in any other Berber country and make up nearly one eighth of the population. The language of the *Shawiya* is a Berber dialect which they themselves call *ʿAḥḥā* (Kalyā). Although belonging to the same family as the dialects of Great Kalyā it is so different from them that it is impossible, for example, for a *Shawiya* to make himself understood by a *Kalyā* according to G. Menier. The *Shawiya* would seem to be more allied to the dialects in the Wānuḥ (*Wānuḥ*) who belong to the Zenata family like the Berbers of the Awrás. A number of words have passed into the Amazigh dialects, whose Latin origin is still easily recognised e. g. *ḥāḥ* the garden (*hortus*), *ḥāḥ* (quercus) etc. The dialects of the various valleys also show marked distinctions in pronunciation and vocabulary so that two distinct groups of dialects may be distinguished: the *Shawiya* in the eastern and the *Tuḥāḥ* in the other parts of the Awrás. Although they have been converted to Islam since the earliest days of the Arab conquest, the *Shawiya* have still preserved some traces of the religions (Paganism, Judaism, Catholicism, Islamism) adopted successively by the inhabitants of the Awrás. This accounts for the survival for example of litology in the form of a song or in the form of the letters *ḥ* and *ḥ*. *ḥ* is traditionally sacred places, the taking of oaths at religious monuments and the festivals at certain seasons of the year. Thus processions take place among the Uḥād 'Abdī in the spring similar to Christian processions of intercession, followed by initiation and dances lasting for two days. Similarly the threshing and bringing in of the harvest in the beginning of autumn gives occasion for great rejoicings and lastly New Year's Day (*ḥāḥ*) is celebrated with songs, dances and customary rites. Besides, the *Shawiya* have preserved the Julian calendar instead of adopting the Mohammedan. Their year contains 365 days; the names of the months (January, February, etc.) suggest the old Latin names. The names of the days of the week also are borrowed from the Arabic. These survivals of pre-Islamic times do not prevent the *Shawiya* from following the impulse of Mohammedan fanaticism and they enter religious brotherhoods almost as readily as the *Kalyā*. The brotherhood of the *Rahmāniya*, whose centre is the *Zāwiya* of Timimtuḥ on the foot of the Ahmar Khadda numbers 2500 members, in the Awrás that of the *ḥāḥ* 2000, the *ḥāḥ* 1000, the *ḥāḥ* 1000. Lastly the *ḥāḥ* enthusiastic adherents of the family of *ḥāḥ* 'Abdī, the owners of the *Zāwiya* of Menā, are likewise widely spread. It is by the investigations of these brotherhoods that the results have been worked up of which the *ḥāḥ* has been the scene since the French conquest. On the other hand mystic love has in no way impressed the morality of its adherents. The code of morals prevalent in the Awrás is a very loose one. *ḥāḥ* is frequently resorted to (in the Wād al-Abyad 500 *ḥāḥ* cases yearly). Prostitution or *ḥāḥ* (ḥāḥ) are very numerous. Certain places, especially Menā are notorious in the whole district on shades of pleasure.

At the time of the Arab conquest the Awrás was populated by Berber tribes of the great Zenata family (Awrās, Ghazwa). All these tribes

had maintained their independence in the mountains. After the Romans and the Vandals the Byzantine Emperors had been content with keeping the Berbers in check by a row of fortifications on the south slope of the Aures (Lambæsis, *Bagdâ*, *Mamallâ*). The advance of the Arabs seems however to have brought about a *suffocant* between the Berbers and the old advances. When the Arabs penetrated into the Maghrib the Berbers united with the Greeks and inflicted such severe losses on him before Bagdâ and Lambœsis that he did not dare to penetrate further into their land. To his *success* to the West from his great campaign he contented himself with a reconnoitring *force* into the Aures till met his death at Tefenda in the neighbourhood of the Aures. Apparently the tribes of the Aures on this occasion united with the other Berber tribes under command of Kneiss to act conjointly in a rebellion and chose Kneiss as their chief. After the destruction of his kingdom by Zuhair b. Kala, the Aures seized the defeated peoples as a place of refuge and became the centre of resistance to the Muslims. It was not till the beginning of the eighth century A. D. that oppression was finally crushed under the government of Hishâm b. al-Nu'mân after bloody battles allied to in the reign of Kahlân, *governor* of *Lybia*. The Aures and the *Uthman* *tribes* exterminated by these wars their place was taken by the *Howas* and *Luwâs*, Berbers from Tripoli and South Italy who settled in the Aures. All these native tribes were converted to Islam whether willing or unwilling, but nevertheless they preserved a certain independence of thought which was manifested in the enthusiasm with which they adopted heterodox doctrines such as Alidism in the eighth and the *Nekhar* system in the tenth century. It was from the Aures also that Abu Yusuf Muhâmmad b. Kaïdal (q.v.) "the man with the beard", came, whose rebellion in 934-937, temporarily interrupted the *Fatimid* dynasty founded by 'Ubad Allah (q.v. *fatimid*). The *Ellah* invasion in the eleventh century altered the ethnographic aspect of the Aures. The *Barak*, a branch of the *Alid*, settled on the northern hills, then advanced southwards and established part of the *Howas*. Nevertheless the great mass of the invaders remained at a distance from the interior of the mountains and a certain proportion of Arabs seems to have blended with the natives and become *berberised*. In the following centuries the people of the Aures played practically no part in the history of the Maghrib, though they have been able to maintain their independence intact and to avoid falling under the *domination* of the *Maghrib*, the new rulers of the peninsula of Constantine. The rule of the Turks in later *times* made no difference in this respect. In the sixteenth century the Turks have had a garrison in *Blakka*, but it was not till the beginning of the eighteenth that they attempted to appoint chiefs in the Aures who would support their policy. The first of these was Zahir b. Muhâmmad b. *Diya*, who according to the account of the traveller *Poyessouet* was recognised by all the tribes about 1722 and took the title of *Shah* of the Aures. The majority of these chiefs, however, as well as *one* of the *Beys* of Constantine on whom they were dependent was always very doubtful. Thus for example, the *Wad* *Mel* continually prevented the entrance of Turkish troops situated with the

collection of taxes and the *Wad* *Abd* only allowed the troops summoned for the relief of the garrison of *Blakka* to pass through. The *Beys* *Diya* and the *Amir* were almost incessantly in revolt against the *Beys* of Constantine of whom the last, Ahmad, was forced into a campaign against them in 1834.

The French conquest of the tribes of the Aures preserved with their independence, their old political institutions which on the whole resembled those of the Kabylia. They never managed to constitute a great political system for they never once succeeded in combining into federations of several tribes tamed to one another by such as the Berber tribes of the *Maghrib* had already done. The basis of their organisation was always the village, a genuine commonwealth governed by the council of the people (*Shaykh*). The institutions of this village however are more primitive than in Kabylia. For while the Kabylia *Shaykh* appoints an authorised President (*amir*) invested with power to execute their resolutions, the *Shaykh* of the Aures limits itself to entrusting the execution of its orders in some man (*Kadî*) distinguished for his courage and physical strength. Legislation is also much less developed and the *Shaykh* collected lists of punishments for different branches of the law are much more summarily compiled. Besides these differences however, there are many points of agreement between the institutions of Kabylia and those of the Aures; the same representative spirit, the same equity between the individual villages and within the villages themselves the *Shaykh* division into parties (*Suf*), whose rivalries often result in hostilities and bloodshed. Among the *Wad* *Abd* and the *Wad* *Diya* for example, each village is divided into four *hilla* camps of which each had its own leader (*Amir*, *Shaykh*). Even the topographic situation of the human settlements and the precautionary measures adopted for their defence are sufficient proof that the individual tribes looked on their nearest neighbours as their worst enemies. All that can be further learned of the domestic history of the Aures is limited to constant tribal feuds and quarrels in the villages. Some families which have attained power by plot or by their warlike spirit have moreover been able to make use of these rivalries to their own advantage e.g. the *Wad* *Abd* (*Wad*), the *Wad* *Diya* (*Diya*) and also the chiefs of the *Wad* *Zawiyas* of *Timimoun*, of *Shang* *Sidi* *Abd* and *Mel*.

The French occupation put an end to this state of affairs. Immediately after the conquest of Constantine (1837) the necessity became apparent for subjecting a district that served as a place of refuge for the ex-Bey Ahmad and all the anti-contents *Diya* and *Blakka* were occupied in 1844. In the following year the *Wad* *Abd* advanced into the Aures from the south and conquered *Magh*. *Beau* marched through the valleys of the *Wad* *Abd*, the *Wad* *Diya* and the district around *Shang* and forced the chief tribes to recognise the supremacy of the French. This conquest however was only temporary. Incited by Ahmad Bey the natives refused to pay taxes and opposed the *Shaykh* appointed by the French government. Under the command of *Caumont* and *Carbena* new campaigns were undertaken into the *Wad* *Abd* in 1848 and 1849.

These had scarcely ended when the rising of Bu Ziyas in the Zila brought about another rebellion in the Awka. This was suppressed by Cameroons who captured and destroyed the village of Nana in the Valley of the Wad 'Abd on the 6th January 1850 and by St. Armand who marched through the mountains with a column of troops in May and June of the same year. Perfect peace now reigned till 1859 when a rebellion broke out under the leadership of the Marabout Si Sadiou (Sadiou) b. al-Hajj who was overthrown by general Morina. When the Kabylais took up arms in 1871, the Awka remained loyal, thanks to the influence of their two chiefs Si Ben Yijal and Si Muhammad b. 'Abbas. In 1879 however, the Ulad 'Abd revolted on the call of the Sheriff Si Ahmad Amayyan and supported by the Lchala, a Marabout clan of Arab origin who believed their prestige to be endangered by the increasing intercourse between the Christians and the Shawiyas. This rebellion which began with the murder of all Kabila devoted to the French cause, was suppressed by the troops of the Constantine Division (3-30 June 1879). The forces of the Ulad 'Abd were annihilated in the battle of Babat on the 6th June. The survivors died of hunger and thirst on their flight to Southern Tunisia, and Si Amayyan who had fled into the Desert was handed over to the French authorities.

Since that time there has been no revolt in the Awka and peace may be considered finally secured. Nevertheless, with the possible exception of the northern borders, the Awka offers no future to European colonisation because of the sterility of the country and its want of natural resources; just for these reasons it seems that it ought to be preserved for its natives. With regard to administration, it comprises three communities (communes indigènes): 'Ain Tuta, Awdia (with ~~Medina~~ as capital) and Khenshela and in addition a military colony with Takt as its chief town.

AL-AWS, a tribe in Madina. The name is abbreviated from the dropping of the ~~Al~~ of some deity in the gensive, probably Maad for there is an Awsian clan called Aws Maad in the Islamic period Aws Allah. The genealogical scheme is. Aws b. Hisham b. Thilaba b. 'Amr b. 'Amir b. Hisham b. Imru' al-Kala b. Thilaba b. Maad b. 'Abd Allah b. al-Aws. The statement of the Arabs, that the Awsians did not call themselves sons of Hisham but were of Kala their mother is

confirmed by Isma. They are also said to be often included under the name of their more important collateral tribe the Khazraj (q. v.). In ancient times they were divided into five clans: 'Amr b. 'Awf, al-Nabih, Hisham, Maad and Imru' al-Kala. From the weakened remnants of the three last-named was formed a new clan to which the neutral name of the Aws Allah or briefly al-Aws was given. The Aws Allah were divided into four septa, the Khazraj (the most powerful, formerly the Hisham) the Maad and the Wadl (formerly the Maad) and the Wadl (in reality the earlier Imru' al-Kala). Among the clan al-Nabih was a sept the Zafu which was also called Ka'b b. al-Kharadij, so that there were Khazrajites among the Aws. "The Aws inhabited a wide district in the east and south around the Khazraj" (Wellhausen).

History. The Awsians originated in South Arabia and after settling peacefully with the Khazrajites among the Jewish tribes in whose presence the Medina was gradually reduced them to a state of inferiority (see Medina). For the most part the Jews among the Awsians were scattered, but there were however two powerful independent Jewish families in the Awsian quarter, the Naif and the Kharadij, allied with the Awsians. They afforded effective resistance to the Awsians in the time of the wars with the Khazrajites, when however Muhammad's war of extermination against the Jews was begun. In later days, the Awsians were not to a position to do them similar services in Medina. The Awsians in Medina were much broken up and weakened by feuds of more or less importance among their clans and families. This resulted in many changes in their power as well as in their settlements, in wholesale exoduses from the district, in families settling in the lands of one another, in the utter extermination of certain parts, and in driving many Awsians over to the side of the Khazrajites. The serious wars the fights between the Aws and the Khazrajites which lasted ten years in which sometimes a large and sometimes a smaller part was annihilated and sometimes even the whole tribe. This was in which brother fought against brother reached its crisis shortly before the battle of Badr in which the Awsians although weakened by previous feuds which ended unfavourably for them, were victorious, being supported by Arabs from outside the district and the two Jewish tribes above mentioned. They were thereby moved for a time; their existence however was only proved as a result of the Migration of Muhammad who gradually adjusted the still very strained relations among them. The Awsians had no share in the earlier overtures between Muhammad in Mecca and the people of Medina but they did take part in the conclusion of the treaty promising protection, which paved the way for Muhammad's settling in Medina. When Muhammad shortly after his arrival in Medina persuaded the greater part of his followers from Mecca to fraternise with the emigrants of Medina, there were but few Awsians among the latter and for a long time many Awsians held themselves aloof from Islam or were even hostile to it; at times they caused the prophet ~~Muhammad~~ difficulty by their opposition in religious matters, by ~~their~~ indifference in the religious wars etc. Gradually however they all adopted Islam, even the Jewish ~~tribes~~ which

Museo in Venice, while the most beautiful of the structures erected by the Empire in Ravenna are, to a pale, shadowy and dimpled fecundity of the un-imagined antiquity in the capital with the application of new and improved methods of construction. According to the most recent researches the Aya Sofia in its original form was not built by Constantine the Great but, according to his last instructions, by his son, Constantius after he de- feated Licinius his brother in law. It was built in the form of a basilica and consecrated in 360 A. D. This "Great Church" passed through many vicissitudes at short intervals. Fire and earthquake played havoc with it. In 415 A. D. it was again from its ashes, to again unfinished for over a century till it was completed by Hys (as was the greater part) of the true and even the same architect in January 532 during the ruling by the factions of the church.

The Emperor Justinian then projected his resolution to re-erect the church in order of splendour. Before this time Justinian had given strict orders throughout the provinces of the whole kingdom, in which so many pagan temples of art had miserably decayed, that the valuable material of these ancient monuments was to be sent to his capital. After this this material was used principally for the reconstruction of the Aya Sofia. Two of the greatest architects the world has ever seen, Anthemius of Tralles and Isidorus of Miletus were entrusted with the supervision of the building. Mindful of the fearful warning, that the sea should should be proof against fire and earthquake, they began the new means of building its previous fate, in a system of building and dome. In December 537 the consecration of the splendid building was completed with unusual pomp so that Justinian was able to exclaim at the fullness of his soul, "Solomon, I have beaten thee" Nevertheless in his reign (558) the eastern part of the dome collapsed as a result of an earthquake whereby ambon, tabernacle and the holy table were raised. The dome, which had been planned too low, was now heightened by some 20 feet and the abutments of the great main pillars much strengthened so that by 563 it was possible again to have the ceremony of consecration. The church had a most enviable situation: to the South was the Augustæum, with its equineum station of Justinian, which was appropriated to national festivals; to the North, just within the modest Basil walls, were the court churches, five monasteries and the palace of the consuls; in the East, towards the sea was the Imperial palace.

On the west wall the visitor entered a court, the Atrium, surrounded on the right and the left by open halls. From here several doors (perhaps four or five) led into a closed hall (Ecclesiastical) which was also regarded as part of the Atrium, from these five doors led in to the North proper (Ecclesiastical) where still another door opened on the lovely appointed north and south ends. The passages now branched will turn and nine rectangular doorways facilitated the entrance to the interior of the church of which the central one, imposing and richly decorated, was the King's door.

The space covered by the church is almost quadrilateral while the length of the interior with the exception of the chief space, divided in the

east wing is about 250 feet and the breadth nearly 225 feet. The pendentive dome, shaped almost in the form of a hemisphere, rises 120 feet above the floor space which is cross-shaped. At the outer walls alone could not have supported its weight it had to be supported by four piers and these again by pillars smaller, though of great importance in the construction.

On the east end were sides of the dome were two white, semi-circular apses, each of which was crowned by three half-domes. In the construction of the interior the two-story arrangement of the galleries adjoining the main body of the building, of which the upper, as was usual in Byzantine churches, was reserved for a woman.

The number of pillars which lined the walls of the building, was 107, 60 below and 47 above, nearly 1000000 of coloured marble (Veris called), some however of red porphyry. The richness of the interior decoration, the marble used in a most extravagant fashion for all parts, the figures of Christ, of the Virgin, of the prophets, of the apostles and of the saints and of the mighty archangels in the pendentive of the dome) which covered the walls with a sea of colour, the inlaying of the domes and walls with gold mosaic in unusual splendour, made a striking impression on the spectator of the middle ages. The surrounding walls and the railing of the original building were built entirely of brick. The floor for the clergy (which) situated on the east side, containing the altar and ciborium and leading to the chief apse was separated from the central part of the church by a screen of con- siderable height adorned with pictures and placed with beautiful designs. The clergy who had also to attend to the services in three other churches consisted of 225 persons including 100 chorists. Shortly before the break up of the Byzantine Empire the number of officials of the Aya Sofia was about 500.

The first thorough restoration of the Aya Sofia took place in the reign of the Emperor Basil II (1025-1028) in the 11th century. In 1040 a part of the dome fell in during an earthquake. The church suffered severe damage at the hands of the Latins in 1204 who plundered reck- lessly and devoted the gold ornaments and vessels by using them as trophies and trophies for their homes. The various alterations which date from Byzantine times belong in the fourteenth century, in the first half of which the walls of the great building were strengthened on all sides and the east wing, the finest part of the building, especially was supported by high and broad buttresses on the outside.

We have no description of the interior of the Aya Sofia in Byzantine times from the pen of a Muhammadan. The first Muslim to give full account of the cathedral is Ahmad b. Rosta (Akkad) in his *al-Asfar* in the 12th century, ed. de Goez, VII; the author lived about 1100-1150. Without entering into a description of the edifice which he calls *al-Masjid al-Akbar* (i. e. the Masjid 'Aqbar) he gives an exact and lively picture of a procession of the Byzantine Emperor in church. On a festival in which the Muhammadan prisoners of war were led to church (it may perhaps mean into the Atrium) they greeted the ruler with the cry, "May God preserve the Emperor's life for many years," (*al-Asfar*, p. 125)

of importance is his remark that there had been four and twenty little doors, mentioned nowhere else, at the west door besides a *Mağfir* (which probably means benches) the opening of each of which was a square square. At the end of each hour of the twenty-four one of the little doors spring open and closed again automatically.

As a result of the decline of the caliphate, Arab writers after Ibn Rusta give less and less information about the great city of Constantinople till about first century later, after Ayla Minor had been conquered by Turkomen tribes, *al-Muḥammad al-Dimashqī* ed. Peilm and Mohren, St. Petersburg, 1863 p. 227) who however to have called on a work of the somewhat earlier copyist *Alḥmad*, mentions the *Aya Söğü* a few lines (*ibid.*, p. viii). The only noteworthy point is his remark that an angel lived in the church and that its abode was threatened by a sword by which no doubt is meant the place containing the altar and the ciborium beside the

Muḥammad b. Dāwūd (ed. Deffenbury, London, 1834) is the first, some centuries later, to mention the building as the *Aya Söğü* to *Asaf b. Harshiyā* (q. v.) said to be a cousin of King Solomon. Ibn Dāwūd's remark lies in his very exact description of the *Ayān*. He dared not enter the church himself, however, as he narrates, because he had not obeyed the order mentioned by him in several places before the cross at the entrance.

When the Turks conquered Constantinople (29 May 1453) the defenceless inhabitants in crowds to the church for the belief that as soon as the enemy had reached the pillar of Constantine the Great an angel would appear in the heavens and scatter the victors so that they should never see their Asiatic homes again. But the Turks came, broke open the doors of the house of God and finding the trembled people an easy prey, carried them off both men and women into slavery. Hysenides makes no mention of the blood polluting the holy place which later writers delight in describing. The unfortunate refugees quickly made prisoners and the tragedy was quickly over, the conqueror himself entered the church — but not on horseback as is often insisted — *al-Muḥammad* to realize the call to prayer including the crowd and threw himself at once with all his followers on his knees before the one God. This was the temple of Constantine and Justinian consecrated to Islam.

The changes which the iconoclastic prescriptions of the victorious religion forced upon the new masters were very important in the interior. The mosaics which previously decorated the walls and ceilings, works of art which seemed to have been made for all times by the cunning hand of the Greek craftsman were concealed from the eye of the spectator by monotonous whitewash. The screen between the place for the clergy and for the laity was torn down, the rich fittings of the east wing, and the *ḥizma* were destroyed. As the old Byzantine churches were built in the direction of Jerusalem and the *Söğü* on the other hand must be performed with the face towards Mecca, since the day of the conquest the Turks have prayed in the *Aya Söğü* not only towards the east wing of the mosque but towards rather

towards the South in a diagonal direction. Since the time of Mehmed II the preacher has mounted the pulpit armed with a wooden sword on Fridays and on the afternoon of Ramadan and at the festivals of Bairam (cf. Article *ANARA* and Juybüll, *Hakkâr*, *in* *Atatürk*, p. 34, 37). There are also two flags at the sides of the pulpit. We further know of the reign of Mehmed II that he built powerful buttresses against the south-east wall and built in the same place the first of those slender minarets which rise high into the air. Sultan II built the two buttresses on the north side and the second minaret on the north-east corner. His son Murad III was the builder of the other two.

Sultan Murad III undertook a thorough renovation of the whole mosque. This was primarily concerned with the structural defects which had come to light in course of time but of course contributed considerably to the beautifying of the bare space. Sultan took advantage of this occasion to place in the interior near the principal entrance two huge plateaux, each holding 1000 gallons of water and erected two large estrades (*Alḥadīda*) on one of which, the right, the Koran is recited almost every day in that cadence peculiar to the liturgy of all Oriental creeds; while the other, the left, is reserved for the *Muḥallid*. Murad III also had the crescent measuring 150 feet in diameter, which crowns the dome having taken the place of the cross, gilded at enormous expense. Thus, from afar, from Olympus in Ithya the Muslim subject of the Porte sees the symbol of his faith glittering in the sun.

In the second half of the sixteenth century, they began to build the mausoleums of the Sultans in the cemetery adjoining the mosque on the south. The oldest is that of Sultan Salim II. His son Murad III and his grandson Mehmed III are also buried here. Sultan Mehmed's closest brothers, whom he had murdered on his accession to the throne, were also laid in their eternal rest here. When some decades later, on the sudden death of the Sultan Mustafa, who had been deposed a long time before, a suitable burial place could not be readily found at once, the old Hapitery (on the south side of the Narthex) which had served the Turks as an old store since the conquest was appropriated for this purpose. Sultan Ibrahim, Mustafa's nephew, was also buried there some years later. The very considerable store of oil was afterwards kept in the hall and court on the north side of the Hapitery.

Sultan Murad IV (1623-1640) took considerable interest in the walls which were unloving in their bareness. It is only since his reign, which is marked in some ways by a revival, that the gigantic quotations from the Koran written in gold by the hand of the famous calligrapher *Wakīfī-Zade Mustafa Celal*, have been in existence. Letters like *Alif* are 30 feet long. All the artistically pointed, much interwoven verses, whose placement is still the delight of old Turks, were nevertheless surpassed by the clear, vigorous painting of the names of the first four caliphs which were fixed on the walls. The pulpit (*Minbar*) also a work of art which still exists, dates from this period. Of Ahmad III we know that he built the enclosed raised seat (*Mahḥab*) on the north side of the chief apse, for the Sultan. Mahḥab I (1730-1754) built, besides the great logs for the Sultan in the gallery of the first

It was then that they began to paint out the spot on which the Arab hordes of the first century of Islam pressed on the occasion of their siege of Constantinople and the place in the centre of the nave from which Khizr superintended the building.

In the southern gallery a hollow block of stone was shown as the skull of Jesus. An anecdote, which can still at the present day be heard from young theologians, is connected with Hüsameddin Tahiri who is said to have obtained his position at the mosque ~~by the~~ Sultan Mehmed II the Conqueror gave him, the mystic (Sema'i), this job (Ayas) instead of the lack of his hand to him and he thereupon received the position of Modarret of the Aya Söğüt. The so-called "damp pillars" (*suğut direk*) and the "cold window" (*soğuk pencere*) near the Kible enjoyed the greatest celebrity in the days of 'Abd al-Hamid II as wonderful-working places of pilgrimages to these holy halls. It was here that Shalih Af. Khamsi al-Din, whose words had at once the effect of firing his contemporaries and even Mehmed the Conqueror to action, first expounded the Kor'an, everyone ~~was~~ is quite recently convinced that the blessed draughts of fresh air which rushed in by the "cold window" were of the greatest efficacy in the deepening of theological knowledge.

History of Aya Söğüt. The most trustworthy Byzantine authorities are the authors Procopius, Agathias, Pankas, Malpasianus ~~who~~ lived in the reign of Justinian; of modern writers the most notable are: Pierre Gillon, *Le topographie Constantinople* (Paris 1874) (Lyon, 1861 and often reprinted); *Byzantine Topography* (Lyon, 1861 and several times later); Charles de Planhol, *Les monuments byzantins* (Paris 1880); J. van Hamme, *Constantinople and the Basileus*, I (Paris, 1882); *Imperial*; *Byzantine*, *Kaiserreich*, I (Athens, 1881); C. Fournier, *Aya Sophia of Constantinople as recently restored* (London, 1882); W. Salmonberg, *Architektonische Studien über die Konstantinopel* (Berlin, 1884); Augustus Schulz, *Über die Aya Söğüt bei Konstantinopel* (Paris, 1885); J. P. Richter, *Quellen der byzantinischen Kunstgeschichte* (Reprint from Buchhändler von Koberger's *und* *Neu Quellenchriften für Kunstgeschichte und Kunstwissenschaft des Mittelalters* (Wien, 1897); W. R. Lethaby and H. S. Swainson, *The Church of Santa Sophia, Constantinople; a study of Byzantine building* (London and New York, 1892); Helmut Holtzinger, *Die Sophienkirche und verwandte Bauten der byzantinischen Architektur* (in *Die Baukunst*, edited by R. Hermann and R. Engel, Heft 10, Berlin and Stuttgart, 1898), the best work is still: Eusebios, *Mixakia Aynasöğüt*, *Enchiridion* der *Aynas Söğüt*, in: *Kilisekiler Mazarlar*, 3 Vols., Athens and Leipzig, 1907—1909. Notices by G. H. Stuart Prod. W. H. Schleyer (Mannover).

Not far from the great church is the neighbourhood of the *Müftü*-Place in the Little Aya Söğüt (Kocak Aya Söğüt). Here by Justinian a mosque was formerly a church dedicated to the saints Basilios and Sergios. A dome crowned the octagonal base which extends into four apses. The church was turned into a mosque in the reign of Mehmed II by the superintendent of his harem and since that time has contained all the establishments and institutions required

by Muhammadan religion and education. The entrance hall with the five flat domes rising from it is of Turkish origin. (L. Söğüt).

AYA SÖĞÜT, now a Turkish village, capital of a *Kaza*, with 2,393 inhabitants according to Calist, *Le Turquie d'Asie*, III, 305, in the middle ages, an important town which was called by its present name as early as the time of Ibn Battuta (ed. Paris, II, 308). When this traveller visited the town in 1333 (1333) it had 15 gates and was an important centre of trade on the Kayastra (now called Kütük Mendere Çay) the banks of which were covered with gardens and vineyards. The ruins of a Turkish castle may still be seen and the remains of several mosques and *Mektebs* amongst which may be mentioned the fairly well preserved mosque of 'Isa Bey. By the sitting up of the harbour the ~~town~~ gradually lost its importance and a new port, Neapoli, Scala nova, called in Turkish *Kaşh Adası*, ~~was~~ in western medieval (Latin) authorities Aya Söğüt is known as *Allo-lingo*, *Altulugo* or *Lato lingo*. The Turkish name is really a corruption of the Greek *Ἀγία Σοφία* the name by which a church built here in the early centuries of the Christian era was known; it was held in great reverence ~~and~~ dedicated to St. John.

History. Aya Söğüt has replaced the famous town of Ephesus whose ruins are situated in the immediate neighbourhood. This is not the place to describe these ruins nor to pursue the ancient history of Ephesus and Aya Söğüt. It may however be noted that the Arab geographers still know the name by the old name of Ephesus (*Alfay* or *Ufay*) and place there the case of the seven sleepers (see *Asfay al-Sayf*). The Arabs advanced as far as Ephesus only for a brief period in 132 (752) but after the conquest of Asia Minor by the Seljuks the town fell ~~into~~ than once into the hands of the Turkish emirs of the neighbouring country, only to be recaptured again by the Byzantine troops. After the fall of the Seljuk kingdom of Konia and indeed during the time of Ibn Battuta's visit Khizr Beg the son of the Emir Muhammad of Ahiun was ruler here. In 1331 the Emirs of Ahiun had to give up their territory to the Ottoman Sultan Bayezid, but there was a break in the period of Turkish rule from 1401, when Timur pitched his camp here, till 1425 when Muhammad II received the homage of various chiefs here and Aya Söğüt finally became incorporated in the Ottoman Empire.

Historiography. G. L. Stange, *The Land of the Eastern Empire*, p. 155; Heyd, *Geschichte der Kreuzzüge*, see Index.

AYAN (s. plur. of *ayan*), the most influential men of a society or of the state; see other meanings see dictionaries.

AYAS, a city on the coast of Cilicia, on the west shore of the Gulf of Alexandrette to the east of the bay at the mouth of the *Lishan* (Pyramus). In ancient times there was a town here called *Aigal* (see Ramsay, *Historical Geography of Asia Minor*, p. 353). Since the second half of the nineteenth century the place has played a more important role. The gradual expulsion of the Franks from the eastern shore of the Mediterranean concentrated all the eastern trade in this part of the Christian kingdom of Little Armenia as it was connected by frequented trade routes with Syria as well as with the interior of Asia

Minor. The Italians called the town *Isajano*. After it had been plundered in 665 (1265), and again in 674 (1275), by Muslim troops and finally destroyed in 722 (1322), by the Mamluk Sultan al-Nasir Muhammad, but again built by the Christians, it fell in 748 definitely into the hands of the Egyptian Mamluks. From this time dates its decline though it is mentioned as late as about 1400 as belonging to the province of Haleb. — Today it is a wretched place on the coast with numerous ruins.

AYAS PASHA, Turkish grand vizier (1530—1539) under Sulaiman I. Ayas Pasha, an Albanian by birth, was enrolled in the corps of janissaries and accompanied Sultan Selim in his campaign against Egypt. Under Sulaiman he was appointed Beylerbey of Anatolia, and later Wali of Syria. During the siege of Rhodes he fell into disgrace, was deprived of his office, and even thrown into prison. Soon afterwards he was again restored to favour and with Khair al-Din Pasha Barbarossa took part in the siege of Corfu (1537). He died of plague in 1539.

AYAT (A.), plural of *aya* [q. v.].

AYAZ, the Emir, lord of Hamadhan played an important role in the struggle for the throne between the Seljuq prince Barkiyaruq and Muhammad I. After having first taken the side of the latter he went over to the wife of Barkiyaruq in 1100 after his death (1098—1104) he became Atabeg for his son Malikshah who was a minor. He could not, however, hold his own against Muhammad and was treacherously murdered by him in 1105.

Bibliography: Ibn al-Athir (ed. Tornik.), I, 294 ff.; *Revue de l'orient chrétien* 8 (Aix, 1874), p. 90.

AZAB (A.), actually a slave, emancipated in Turkish the irregular footsoldiers who were made use of in raids, sapping operations etc. Like the *Akinci* [q. v.] the *Azab* played an important role in the earlier wars of the Ottomans.

AZAD (A.), free; in the religious sense: free from worldly desires, plus the chance a fortunate personal name e.g. of Mu Ghulam 'Ali Bilgrami [see *ghulam* 'Ali].

AZAK, Russian AZOV, a town near the mouth of the Don; it is first mentioned in the fourteenth century (after 1316) as a Genoese, then (after 1337) as a Venetian colony under the name of *Tana* (from the ancient *Tanais*). The Turkish name has appeared since 717 (1317). In the year 797 (1395) the town was destroyed by Tatars and taken possession of by the Ottomans in 880 (1475). The Russians (Cossacks) appeared before Azak for the first time in 1589; in 1637 the town was captured and the whole Muhammadan population put to the sword; in 1643 the Cossacks held the town successfully against a numerous army, but by order of the Tsar retreated in 1644 and at the same time razed the town to the ground; Azak was at once rebuilt

by the Turks and Tatars and again besieged in 1648, captured by Peter the Great in 1696. Azak had again to be surrendered to the Turks in 1711; in 1736 it was recaptured for the third time and by the treaty of 1739 the Russians were allowed to retain it though by the terms of the treaty the fortifications had to be destroyed, and they were not rebuilt till 1769. Since that time the town has remained in the possession of the Russians but it has lost its former importance with the rise of the neighbouring town of Kozlov. Thence of Azak, the Muslims of the ancient, has taken its name from Azak. (W. HARTMANN.)

AZAL (A.), an eternity, which is without beginning, but not without end. (cf. *AZAL*.)

AZAR, in the Koran (VI, 24) the name of Abraham's father. There appears to be some confusion here as the name is nowhere else given to Abraham's father. That he was called *Farah* (Pharakh) is also related by Muslim commentators and historians; to reconcile these two statements the usual artifice was resorted to, but these have no value. According to *Prolegomena* (v, 90) the name *Azar* is due to a false reading '*Azar*' in Eusebius' Ecclesiastical Chronicle. Neither Eusebius, nor any of those who cite him later, has given a more exact reference in the passage. Eusebius regularly writes *Shapha* in other places. But in any case the chance would be very improbable.

For the life of Azar and his son Ibrahim the reader is referred to the latter article where the bibliography is also given. (A. J. WERNICK.)

AZAZIL (A.), the Biblical *hymn* (*Azazel*) also used as a name of the Devil. Cf. Grunbaum, *Neue Beiträge zum rabbinischen Sagenbuch*, p. 261.

AZAZD, an Arab tribe, occasionally written *al-Azd*, and thus not to be confused with the *Awad* (without the article). The proper name is said to be *Dazil*. The genealogical table is: *al-Azd* b. *Qhuwailib*, *Qharo* b. *Malik* b. *Zaid* b. *Kahlil* b. *Salim*. Four principal groups were distinguished of this widely ramified family of tribes. 1. *Azd Qudus* in *Qudus*. The Korashites were unwilling however to recognize the *Qudus* *Azila*, in particular, as *Azila*. They lived for most part by fishing, a calling on account of which they were often mocked; the nickname of *Mirdas* seems also to be connected with this. — 2. *Azd Sarat* in the mountains of *Sarat* in *Jaman*, famous as weavers and silkmen on that account. — 3. *Azd Shams* = *Kalb*, rarely written *Shams*; the *Nisba* is *Shamsi*. Their genealogical table is *Kalb* b. *al-Harith* b. *Kalb* b. 'Abd Allah b. *Malik* b. *Maym* b. *al-Azd*. They likewise live in the *Sarat*. The *Azd Sarat* and the *Azd Shams* seem to be really the same. — 4. *Azd Qhuwailib* = *Mudh* in the North and in Syria. The *al-Aws* and the *al-Khazraj* in *Medina* and the *Qhuwailib* in and around *Mosra* were also counted as *Azila*. *Abi-Mukallab* b. *Abi-Safra* belonged to the *al-Azd*, a clan of the 'Abd Allah b. *al-Azd*. *Abi-Huraira* was descended from this clan.

Localities which are known as *Azila*: *Abida* (in the *Sarat*), *Harik* (a mountain in the *Sarat*), *Hulid* (mount), *al-Hal* (in *Jaman*), *Maknun* (in *Jaman*), *Shu'it* (in *Jaman*), *Mirdas* (in *Jaman*), *al-Hufna* (in *Kirman*), *Karna*, *Rafid* (a strongly fortified place on the *al-Sarat*), *Tahat* (in the *Sarat*), *Tadlis* (in the same district), *Tu'm* (in the

Vandalism inhabited only in part by Azdites), al-'Uda' (a mountain to the South).

History. In pagan times the Azdites were amongst the chief worshippers of Shams and of 'Ilu 'l-Khaba. 'Alm was an idol in the Sarat. The burning of the dam of Ma'rib seems to have compelled the Azdites to move out of Salé, and to have contributed to their dispersal. On their entry into the Sarat mountains they had to fight with the Khath'am, and overcame them. Ardabhis I is said to have settled Azdites in Qmān where they remained for a long time under Persian rule. In the sixth year of the Hijra the demand received by Muhammad to adopt Islam was acceded to by a number of the Azdites without dissent, and they exchanged the Persian suzerainty for the Muhammadan. The number of Muhammadans among the Azdites was scarcely noticeable. After the death of Muhammad the Azdites rebelled, but were conquered by the Muhammadans. They sent 'Abd Bakr, and found themselves again compelled to attach themselves to Islam. The 'Ard Shund's had sent an embassy to Muhammad in the year ten of the Hijra, according to tradition. The victorious Azdites took no part in the campaigns of the caliphs till the time of 'Uthmān. Then we find the 'Ard in Kufa and Basra. When Ma'wīya in Basra attempted to stir up resistance to the caliph 'Alī, the Azdites afforded shelter to Ziyād, who was the governor of 'Alī at that time. It was not till after the 'Ard 'Uda's the last of the great tribes to settle there, had come in greater numbers, about the end of the reign of Caliph Mu'awīya and at the beginning of that of Yazīd I, that the Azdites attained to power there while they allied themselves with the Rabī'a against the united Tamīm and Kaba, in continuation of friendly relations dating from heathen times. Then the Azdites took the position of chief champions of the Southern Arabs (Khazim) in the warfare between the north and south Arabs. They supported Ziyād and his sons e. g. after the death of Yazīd I and again in the war against the Khazimites. In Khurasān whither they had come from Basra, they were the important tribe after the Kalabī Tamīm. By the rise of the Azdite Muḥallab and his family the importance of the Azdites also increased. They were much exasperated against the Kalabī Kotalba, the oppressor of the Muḥallabites and took an active part in the rebellion against him in Khurasān. Kotalba fell by the hand of an Azdite. Ever afterwards the thought of revenge for the Muḥallabites was alive among the Azdites. At times they had to suffer severely; Yazīd II persecuted them with persecution in his hatred of all that pertained to the Muḥallabites. For a brief period their position in Khurasān improved in the reign of Yazīd III.

Bibliography: concerning the Azdites in time of the Umayyads see Wellhausen, *Das Arabische Reich und sein Sturz*, p. 248 ff., 275 ff. (RECHENFORD.)

AZEMMUR (Fr. AZEMMUR), a town on the Atlantic coast of Morocco, 50 miles S.W. of Casablanca and 7 miles N. E. of Mazagan, on the left bank and near the mouth of the Umm al-Raba'. This river is navigable even by ships of small tonnage on account of a mudbank that bars its entrance. Azemmur therefore, though it is the natural market for the sale of goods from the

Dakikah district, ranks far behind Mazagan in commercial importance. The town has some 3000 inhabitants including many Jews but no Europeans. It is for this very reason that it has preserved its native character better than the other towns of the coast and that its inhabitants show themselves exceedingly hostile to Christians. In the sixteenth and seventeenth centuries the district of Azemmur was the scene of the heroic deeds of the 'Maghāhidin', champions of the faith. The neighbourhood is full of Kabiles which are dedicated to pious personages. The best known and most revered saint is Sidi Isḥāq, patron saint of the town.

Azemmur was founded by Arabs in a district rich in wild olive trees (azammur). Its history is little known till the beginning of the sixteenth century. Then it aroused the cupidity of the Portuguese who already possessed Tangier, Arzila, and Mazagan. According to Leo Africanus (transl. by Schefer, i. 297) it was then a town of about 2000 households, and owed its prosperity chiefly to the shadowing in the Umm al-Raba' which now farms out for 6000 ducats annually. In the year 914 (1508) Zayyan, a Marinid prince, who wished to make himself independent in Azemmur, offered to surrender over the town to the King of Portugal, but when the Christians appeared before the town they found it in a perfect state of defence, and they had to retire after the loss of several ships. Zayyan really wished to pose as the defender of the faith against the infidels whom he had himself invited there, in order to gain the confidence of the inhabitants. In 1513, however, another expedition under Don Jayme de Braganza and Don Juan de Meneses was successful in bringing Azemmur into the power of the Portuguese who held it for 28 years. They showed great activity in Azemmur, built a church (which was later turned into a mosque) a fort and walls around the town which surrounded the Medina to the present day. The expenses of maintaining the defence of the town, however, became more and more oppressive, so they resolved in 1541 to evacuate it. The Sheriff Muhammad al-Nahīl populated it again at the instigation of three Marabutas who guaranteed him the future impregnability of the town. This guarantee did not, it is true, prevent Luis de Torres, the Governor of Mazagan from surprising the town in 1545, and carrying off the Marabutas as prisoners who had to be ransomed for 22,000 ducats. Nevertheless Azemmur has since then remained in the possession of the Muslims, and although the Portuguese still continued to visit that stretch of coast and even obtained permission to fish at the mouth of the river they were never allowed to leave their ships or to enter the town.

(F. Voss.)

AZERBAIDJĀN. [See ARHARBAIDJĀN.]

AZERI (Azerbaidjān), a Turkish dialect. Name and distribution. Azerbaidjān is the Turkish dialect which is spoken in Armenia in the province of Transcaucasia and in Persia in the Province of Azerbaidjān and also though isolated, in Hamadjan, Farsistan, Teheran and Khurasan.

The Azerbaijani is Turkic. It belongs with the Turkomans and the dialects spoken in the Caucasus, in Anatolia and in the Crimea, to the South Turkish family, according to the classification proposed by Radloff. The Azerbaijani may be divided into a northern and southern dialect. The former is spoken in Russia, the latter in Persia. Only the latter and only in the dialect of Tabriz and Urmia have been scientifically, though not exhaustively, studied by Foy in the *Nichtungen der Semitischen für orient. Sprachen, Westindische Studien*, vi. 126 and vii. 197 under the title of *Azerbaidschanische Studien mit einer Charakteristik der Südlichen (Persischen) Mundarten* (cf. also Foy I. and II.). Unfortunately Foy's work is only a fragment, for the author died in the interval and it has the disadvantages of an incomplete work. In the main I follow his arrangements⁹.

The Language. The Azerbaijani agrees as a rule with the other South Turkish dialects but has some peculiarities of its own. Foy I. (143-141) has given the general characteristics of South Turkish to which I refer the reader. The essential peculiarities of the Azerbaijani are given here.

Phonology. a) Vowels. Among the vowels, which are otherwise the same as in all South Turkish dialects, special mention must be made of the double *e* viz. *e* and *ä*. The former, which in Azerbaijani approaches more to *e*, conforms as a rule to the *e* of the other dialects; the latter, on the other hand, which is pronounced rather like *i* is seldom met with except in Azerbaijani e.g. in that Anatolia and here and there in the dialect of Kars. It can be traced to an original *i*; cf. Foy, *Thür. Philologie*, i. 199-204.

e is often changed to *ä* e.g. *gerdek* = *harabik*, *şax* = *şax*. Several vowels moreover are different in Osmanli and Azerbaijani e.g. *şifä* = *şifä*. Among the diphthongs *ay* is found for Osmanli *ey*, *ay*, *ay* in Turkish words and *ay* or *ay* in Arab loan-words.

b) Consonants. The greatest changes have taken place in the sounds *ş* and *z*. *ş* is very seldom found (only double e.g. *şifä* and in the combination *şä* e.g. *şäzä*); elsewhere it has regularly become *s* at the beginning, *x* at the end and in the middle of a word, *ç* before consonants and *y* before vowels (consonants also to *x*). In Turkish words *ç* on the other hand has been retained at the beginning of words, usually it has remained before vowels and finally in certain monosyllabic stems, in other places it has become *x*.

ç never becomes *ä* as in Turkish.

ä is no longer pronounced and has as a rule become *e*, only occasionally *z* and then it has something of a *j* sound.

By the influence of an *ä* preceding *ç*, separated from it by a vowel, is changed to *ä* e.g. *ä* in the locative *şifä*, *şifä* to *şifä*. Among South Turkish dialects this phenomenon is found only in Turkoman. The other changes cited by Foy are shared with Anatolian by Azerbaijani and indeed with the spoken dialect of Constantinople itself e.g. what Foy tells us about the disappearance of *ç* consonant before another consonant holds for the most part also for Anatolian.

ç and *ç* disappear in certain verbal forms, thus *ä*, *ä* = *ä*, *ä* and *ä* or *ä* in place of *ä*.

Accentuation. The most striking point is that certain endings are used only in the strong forms quite contrary to accentuation. Thus the infinitive termination is always *ä* e.g. *şifä*, the participial termination *ä* e.g. *şifä* in place of Osmanli *şifä*, the termination of the 1st pers. plur. *ä* and *ä* e.g. *şifä*, the future ending *ä* e.g. *şifä*, the termination of the 1st pers. plur. of the imperfect is *ä* e.g. *şifä*, the termination *ä* is found only in this form e.g. *şifä*, the comparative ending *ä* e.g. *şifä*.

Accidence. a) The Noun. The *ä* of vowel stems does not end in *ä* as in Osmanli but *ä* or *ä* in *şifä*. The accusative of the personal suffix of the 3rd pers. sing. ends in *ä*. In adjectives, the old comparative ending in *ä* still survives.

b) Verb. There is a definite and an indefinite present. The former ends in the affirmative mood in *ä* (e.g. *ä*, *ä*), in the negative in *ä* (e.g. *ä*, *ä*), the latter in the affirmative in *ä* (e.g. *ä*) in the negative in *ä* (e.g. *ä*). It is derived from *ä* = Osmanli *ä* (cf. Foy I. 159). The forms of this present from *ä* are: *ä*, *ä*, *ä*, *ä*, *ä*, *ä*. The form in *ä* occurs only in the 3rd person, besides *ä* there is a form *ä* in the 1st and 2nd person. The preterite in *ä* occurs only in certain persons, for the others Azerbaijani forms a preterite from the gerund in *ä* with the present of the *ä* *ä*. Besides the 1st pers. sing. of the optative there is also a 1st pers. sing. of the imperative in *ä*, *ä*.

The mood of impossibility (instead of *ä* *ä*) is used; the mood of necessity (instead of *ä* *ä*) they *ä* *ä* and the abbreviated infinitive form in *ä* (*ä*) are not found. The infinitive in *ä* takes the personal terminations. Various grammars are also wanting. The participle in *ä* is more frequently used, e.g. *ä* = Osmanli *ä*, *ä* = *ä*.

Bibliography. The most recent work is the *Durham-Namâ* edited by Mirza A. Kasim Beg (Petersburg, 1891). The oldest and most famous Azerbaijani poet is Fasih of Bagdad (s. Olib, *History of Ottoman Poetry*, iii. 79). More modern poets have been made known by Adolf Beig, *Dichtungen iranischer Sänger der XIII. und XIV. Jahrhunderte in arabischer Mundart* (Leipzig, 1868) and by Bodenstedt, *Beiträge zum kanakischen Türkisch* (Zeitschr. d. Deutsch. Morgenl. Gesellsch., v. 245). There is in the dialect of Tiflis including romances by Mirza Fasih Akhundzade have been published in the *Journal des Études*, etc. s. Bodier de Meynard, *Paléographie arabe et turque* (8th series, vol. 10, cf. also Foy I. 136); s. Lucien Bureau, *Histoire de l'écriture turque* (10th series, t. 393, cf. also Foy II. 191); s. Lucien Bureau, *Les vers* (10th series, iii. 239 and 365).

Recently the printing presses in Tiflis, Baku and Erivan have developed great activity and several newspapers appear there. For a knowledge of the spoken Azerbaijani in the dialect of Urmia and Tabriz of to-day, we must have recourse to the phonetically written texts in Foy II. The transcription of the Azerbaijani is given by Vambery, *Altarmenische*

⁹ Foy's system of transliteration is also retained.

Spokenatien (Leiden, 1901) p. 114 is unreliable and incorrect. There is no really useful grammar. Niclas Kasim Neg's *Grammatik der Arabisch-Sprache* contains useful notes. The "*Praktische Leitfaden der Arabisch-Sprache*" of Larzest Baidgull (Moscow, 1857, in Russian) must be used with caution (cf. Voy II, 201 f.). An Arabic grammar compiled by Azarimjānīan was Voy II, p. 203. (V. 1912.)

AZHAR (أَزْهَارُ al-AZHAR, from *al-Djāz* 'border'), mosque and College in Cairo.

1) Buildings and endowments. The mosque was built by Dīwān al-AZHAR al-Sibīhī (Sibīh al-Sibīhī), general of Abū Tamīm Ma'add a year after the occupation of Egypt by the Fatimids, and immediately after the foundation of the new capital (al-Kāhira, Dīnawarī I, 200 — Rasmān 361). It was consecrated 355 opened for services in Rasmān 361 = June—July 972. It was situated not far from the 'great earth' then in existence between the *ḥammām* quarter (N.) and the *ḥammām* quarter (S.) in the south east of the city. Dīwān placed an inscription on the dome, dated 360 A. H. the text of which has been preserved to us by al-Makrīzī (*Akhbār* II, 273. 4—5) van Berchem, *Corp. Inscr. Arab.* I, 43. n° 304; it has disappeared. Several other Fatimid rulers built additions to the mosque and endowed it with grants and foundations. al-Aḥmad Nāḥī (365—386 = 976—996) for example made it an *ḥammām* and erected an almshouse *ḥammām* it for *ḥammām* men.

A *ḥammām* (*ḥammām*, Tallman) is mentioned as a curiosity on the first building; figures of birds were placed on the tops of three columns which prevented birds from nesting or breeding in the mosque. Further additions were made to the building under al-Ḥakīm (386—411 = 996—1020) and endowments and gifts were bestowed on the Azhar and other mosques. A document relating to these of the year 400 has been handed down to us by al-Makrīzī II, 273 *et seq.* In the year 510 (1105) al-Aḥmad built a prayer niche (*ḥammām*) with carvings in wood, the inscription on which is still preserved in the Arab Museum in Cairo (Rasmān, *Sur les inscriptions*, p. 10; van Berchem, *Corp. Inscr. Arab.* I, n° 455). Its name also may be explained from the Fatimid origin of the mosque, it being rightly interpreted as an allusion to al-Zahra' a title of Fatima; a *ḥammām* of the mosque also took its name from her (*Makrīzī*, II, 275, 281. Smaller additions are due to the sultans al-Muḥammad and al-Ḥakīm.

With the Ayyubid *ḥammām* a reaction set in, since they as ardent Sunnis sought to destroy every trace of the Shi'a Fatimids. Saladin *ḥammām* from the mosque the right of *ḥammām* and deprived it of several of al-Ḥakīm's endowments. Nearly a century passed before the favour of the rulers and nobles was again bestowed on it. Al-Malik al-Nāḥīr Baibars made new additions to it, took an interest in the learning taught there and restored to it the privilege of *ḥammām* (645 = 1266—1267, *Dīwān al-Dīnawarī*; cf. van Berchem, *Corp. Inscr. Arab.* I, p. 128. Several kings followed his example. From this period date the prosperity of the Azhar as a mosque and educational institute. Apart from the attention bestowed on it at home it was further benefited by the fact that the ravages of the Mongols in the East and the decline of Islam in the West destroyed

or weakened so many of the old flourishing Mosques. When in 702 (1302—1303) the mosque was damaged by an earthquake, the Emir Saif al-Dīn rebuilt it. From the year 735 (1325) date the new buildings by Muḥammad b. Husayn al-Jāḥiz (from Seirt to Armenia), the Madrasa of Cairo; about the same time colleges, *ḥammām*, built by Emir *ḥammām* the mosque: 709 (1309—1310) by Saif al-Dīn, in 720 (1330—1340) by al-Nāḥīr *ḥammām* al-Wahid, cf. van Berchem, *Corp. Inscr. Arab.* I, n° 110, 125, 126, 127. These were later bought under the Azhar and still belong to it. Various additions and repairs were made by the monarch Saif al-Dīn al-Nāḥīr al-Nāḥīr (about 741 = 1350), he also presented a *ḥammām*, endowed a *ḥammām* for it, renewed the kitchen for the poor and founded a school of *ḥammām* law. In the year 788 (1397—1398) a minaret fell in, but was at *ḥammām* rebuilt into Sultan Saif al-Dīn's *ḥammām*. This catastrophe was twice repeated (817 = 1414—1415 and 827 = 1423—1424) but the damage was always made good. About the same time a *ḥammām* was dug, a *ḥammām* built and a *ḥammām* for *ḥammām*, *ḥammām*, erected. A school just beside the mosque was also built by the monarch al-Nāḥīr al-Nāḥīr (died 844 = 1440—1441). Further information regarding this (al-Dīnawarī) will be found in 'Abū al-Muḥammad, *al-Dīnawarī* (I, 196). The greatest benefactor of the mosque in the ninth century was Saif al-Dīn. His extensive additions were finished in 900 (1492—1493) just shortly before his death. Besides these, many foundations for the poor as well as for the learned were due to him. We also know of his buildings from *ḥammām* (van Berchem, *Corp. Inscr. Arab.* I, n° 21—23). In 1028 (1623, 1624) he takes a remarkable hall of the ruler in order to go to the mosque of al-Azhar disguised as a *ḥammām*, pray there and listen to what the people said about him. We are not told the result. The last great Mamluk ruler, Kaḥḥ al-Dīn (1006—1022 = 1500—1516) built the two towered minaret on the inscriptions see van Berchem, *Corp. Inscr. Arab.* I, n° 20, 27.

In the Ottoman period the splendour of the mosque actually paled a little. At the *ḥammām* many acts of attention have to be noted. The conqueror Selim II often visited *ḥammām* prayed there, ordered *ḥammām* to be read in it, and bestowed gifts on poor students (Ibn Iyās, *Chronicle*, III, 216, 222, 246, 309, 375). The style of the buildings of the Ottoman period shows a marked deterioration from those of earlier periods. From the point of view of progress the place of worship for the blind is worthy of mention (*ḥammām* al-Dīnawarī) which was built by Ottoman Kethboda al-Kethboda (Ḥajj al-Dīn) in 1748 (1735—1736) (cf. also J. Hirschberg, *Asiatica*, 1890, p. 101). Among the greatest benefactors of the mosque must be reckoned 'Abd al-Rahmān Kethboda or Kethboda (died 1790 = 1776) a relative, it appears, of the above mentioned Ottoman al-Kethboda. He built a large and richly furnished *ḥammām* (a sanctuary surrounded by lattice work), a prayer niche, a pulpit, an elementary school for orphans, a cistern and a tomb for himself in which he was afterwards buried. The above-mentioned Madrasa of al-Jahhān (Jahhān) and al-Jahhān (whose name was later corrupted to Jahhān) were connected with *ḥammām* another by new buildings. Beside making other smaller alterations

in the buildings he made provision for the supply of food and clothing to poor students. It is significant that al-Biharī says that in his time about 1220 (1805), a generation after their founder, most of these pious foundations had fallen into neglect. Some afterwards the French expedition came, which inflicted much hardship on the Azharites though not unduly. The national restoration under Muhammad 'Alī was at first not favourable to the Azhar; it is only the later Khedives who have done their best to keep up the fame of the several buildings. 'Alī Mubārak gives an excellent description of the present building, not of course from the standpoint of the archaeological but from that of the educated Muslim (al-Biharī, *op. cit.* 14-26), detailing the exterior, doors, windows, prayer niches, cloisters, lodgings, courtyards, minarets, madrasas, both the above-mentioned madrasas, the loggia (*darb*), being rooms (*halls*), classrooms, lamps, fountains and carvings. Several points of interest to the archaeologist, e.g. the gateway of Bahā' Bey and the prayer niche of the Madrasa al-Falūṭiyya are reproduced in Franks' *Excavations in Egypt* (1903) p. 21 ff. with plans; cf. also Badiker's *Egypt*.

II. The interior arrangements in the earlier period. Though we are very well informed about the history of the building of the Azhar, our materials on the interior arrangements of the mosque and college are very insufficient as but few early plans are concerned. It is certain that in the time of the Fatimids it was one of the first mosques in the city and the land. The Sa'ad rebellion under the Ayyubids has already been mentioned. Not after the Mamlik Sultan Bahars began to devote his attention to it, in spite of all the vicissitudes which it has suffered from earthquakes and political changes, its importance has steadily increased. Even in the middle ages it was home of students and places of refuge from the most distant lands; for centuries the Azhar represented all other madrasas in Muslim countries as an educational institution. Among the causes which explain this position, the period of the Mongols with its devastations outside Egypt and the extinction of the Arab civilization in Spain have already been mentioned. Other reasons can also be given: its central situation, the vicissitudes of the Nile, the purely Arab character and the economic importance of the country; the extensive African hinterland and — last but not least — the ancient intellectual culture of the Nile valley, where numerous influences have contributed to a literature of scholarship and belles-lettres. The condition of the Azhar college at the present day will be discussed later (iii).

The introduction of the Azhar explains the fact that even in the middle ages it has often been mentioned as an asylum for refugees (Ibn ʿAsākir, *op. cit.* 262 ff. III. 1.). Further we often hear (e.g. Ibn ʿAsākir II. 177; III. 116, 132, 167) that extracts from the Kor'an or from religious books publicly read in it, usually to remove various plagues or famines: in the year 798 (1395-1396) Shihāb al-Dīn 'Umar b. Rūṣṣūf al-Buhārī stayed in it during the famine (Ibn ʿAsākir, *op. cit.* 132). In the year 1172 (1758-1759) the students asked their professor to lecture on Buddhism to avert a plague raging in Cairo (Volkmann, *Kur. Literatur*, 2. 729, 62; cf. 'Abd al-Mahmūd al-Biharī, *op. cit.* 34); the day of the great epidemic under al-Farūq is mentioned by Ibn ʿAsākir

(I. 82, J. Foundation for *Asākir* i.e. for Sa'ad, Sa'ad, and pious endowments were early instituted. But under cover of piety all sorts of dissolute people came to have taken refuge there. Robberies, brawls and immorality are mentioned which took place especially in the nights of the great festivals. This explains why the Inspector of the Azhar, the Emir Sūdūb in 818 (1415-1416) took the drastic measure of turning out of the Azhar all the occupants, students, beggars, and loafers with their goods and chattels. Soon after however, the fury of the people turned against him, even the Sultan (al-Mu'ayyad) was prejudiced against him, had him seized and imprisoned in Hammam al-Mahmūd (II. 276). Likewise in his account takes the side of the pious rubble and recognizes the hand of God in the fate of Sūdūb. On this occasion mention is also made of great gifts and endowments and it is stated that among the *Asākir* were Persians, people from Zaila and Diyarbakir and from the Maghrib. That each group (*ṭabaqa*) had its own *Riḥla* (see below). Another detail of student-life is mentioned during the time of the Inspector and Emir Bahadur in 784 (1383-1384); he obtained a decree from Sultan Barqūq that the possessions of students who died in the Azhar without legal heirs should be divided among the other students. This decree was carried to stone and placed on the 'great Nile-gate' but does not appear to have been preserved (Makrizi, *Asākir*, II. 276, 277).

Even in the middle ages the students as at the present day, seem to have lived partly in and partly outside the Azhar. The internal students were divided into residential groups the most of which had and still have their own *ḥisra* and their *Riḥla*. By the *ḥisra* (for the word cf. *Zeltzer, d. Deutsch. Altertumsgeschichte*, XVII. 733; III. 325) are to be understood the living rooms where the students kept their furniture though they frequently slept outside in the courtyard or in the loggia, where the libraries were kept. The loggia (*darb*, cf. *darb*) is strictly speaking the space between two pillars; it was here that in former days instruction was given to many little groups, here the *Riḥla* is celebrated, discussions and conversation take place. At the present day there are 38 *Riḥlas* and 15 *ḥisras*. These are: 1. al-Bahārīya, students from upper Egypt, large and important, chief residence of the *Madrasa*; 2. al-Farāṣiyya, *Madrasa* and *Madrasa*; 3. al-Bahārīya (Bahārīya) for the Tatars, people of Tatar, from Samarkand, Diyarbakir, Watal etc. (cf. 2); 4. al-Shawwān, Syrians; 5. al-Qadāwī, *Madrasa* and others from further India; 6. al-Sulṭāniyya, from Afghanistan and Khurasan; 7. al-Maghārīya, from North-West Africa, large and influential; 8. al-Samāniyya, instituted by Muhammad 'Alī (cf. 2); 9. al-Aṣṣā, Turks; 10. al-Hamāniyya, from Bama and the neighbourhood; 11. al-Hamāniyya, from the Somal coast; 12. al-Yamaniyya, from South Arabia; 13. al-Aḥḥād, Arabs; 14. al-Hamāniyya, Indians; 15. al-Baghādīyya (Baghdadiyya), from Iraq; 16. al-Bahārīya, from the Northwest of the Nile Delta; 17. al-Fayyūmiyya (Fayyūmiyya), from the Faiyūm-Oasis; 18. al-Aḥḥādīyya (Aḥḥādīyya), belonging to the above-mentioned *Madrasa*; 19. al-Shawwāniyya (al-Aḥḥādīyya, al-Wāṣṣiyya), from the Southern Delta; 20. al-Hamāniyya, of the Hamān coast; 21. al-Fayyūmiyya, from Central Egypt; 22. Ibn Mu'ammār,

a private foundation open to all nationalities; 23. al-Barkhiya (Barkhiya), Khabla; 24. Dakhmal Sakh, near the country round Lake Chad; 25. al-Sharhawiya, from the North East Delta, in honor of 'Abd Allah al-Sharhawi (c. p. 337 n. 13) recently instituted; 26. al-Hanabliya (Hanabliya), the sect of Ibn Hanbal, very small.

The inter-Islamic importance of the mosque can be seen in nothing better than from this list of names of visitors from countries outside of Egypt, which takes us from Central Africa to Russia and from Further India to Morocco. Political and economic affairs of course often regulate the attendance; hence there are great variations in the statistics; the improvement of methods of communication increases its influence here as at the great Masjid. The division into *shaykhs* as we can easily be seen partly according to nationality, partly according to sects and rarely according to special foundations.

The students are called from their close connection with the mosque, *Mustafiri* (Mustafiri, -in), as learners *Talib* (Talib, *Talib*) or *al-Fuqara* "seekers after knowledge". The teachers or Professors are officially known as *Madrisi* (Madrisi, -in), they themselves take a pride in using the modest title *Shaykh al-Islam*, "servant of knowledge". The latter like the students live, as a rule, as simply as possible. The Professors are supported by honorary contributions and the receipts of various foundations. Only a few are well-off. In the same manner very few of the students are supported by the resources of their parents or relatives; most of them gain a modest, if not miserable, livelihood. The students are dependent on their own earnings for what is not covered by the receipts, mostly in kind, derived from various bequests; they undertake small duties in houses or in the Bazar, the reading of the Koran, education, and even handicrafts. Since the foundation of the Khedival Library many find employment there as copyists. In the matter of dwelling, clothing and food they are models of economy. Hygiene is something quite unknown to them. The clinics of the Azhar are full of brawl and revolts among the students; sometimes the quarrels arise from differences of nationality and sect, sometimes over the grants in kind (*Qasbiyat*) and other gifts which an eccentric and unscrupulous administration kept back from them. In accounts of the brawl among the students themselves, the most frequently mentioned are the boorish Upper Egyptians, the restless Syrians and the fanatical Magharba and lastly the occupants of the above mentioned chapel for the blind.

The cultivation of learning and the method of instruction are carried out in a very different fashion from that which is usual in the West to day, but they remind one of the earlier periods of our culture. The dogmatic intellect, proceeding from the theological centres, which such as has been non-existent for centuries, still exists there in unmitigated barbarism. The object of education is not research, proof, comparison or correction, but the true transmission of what their ancestors have left them. Each generation is supposed to be inferior to the preceding; from the Prophets there is a decline to his companions and their successors; the independent thinkers and authorities (*al-Mufasssin*) lie far behind us in the dust and distant past. The history of the lands of Islam

is regarded from this point of view of continued decline, in this case not unjustly.

This standpoint also explains the appreciation of the various sciences. At the top stand the "transmitted" branches of knowledge, *al-Adab al-sharifiya*: Theology, Jurisprudence, Hadith, Sufism, in the second rank come rational sciences, *al-Adab al-akbari*: Philosophy, Metaphysics, Rhetoric, Logic and Astronomy, the latter studied almost entirely for practical purposes (chronology and time of prayer). The other sciences also, *adab al-khass*, history, geography, physical sciences, mathematics are really belong to the second group, but since the middle ages they have receded more and more into the background and, as far as they still survive, are only pursued out of scholastic and insufficient text-books. Al-Tamimi who taught in the Azhar about 1827, before going to St. Petersburg mentions his lectures on the *Asfahani* of Hariri and on the *Asfahani* with the commentary of Zawalid and adds that as far as he knows no one before him had treated of this subject there (*Zawahir f. d. Asfahani* vii. 59). The extraordinary impulse which the study of profane sciences has received in Egypt in the nineteenth century under European influence, has not benefited the Azhar in the slightest. This point will be treated of below.

The distinction between the above mentioned two groups of sciences is strikingly brought out in the times allotted to their instruction. It is the custom to devote the hours of the morning in which the mind is freshest to the "transmitted" sciences on which religion and the religious organization of the state rests; the later hours are devoted to subsidiary sciences which are their origin merely in human "reason" (*Adab*). The evening is given over to repelling, conversation and meditation.

It was antiquity, not for its traditional respect which each branch enjoys but for its popularity, when jurisprudence takes the rank of importance in public life and the numerous offices and appointments connected with it. Modern times which have referred many legal cases to the International "Tribunals" and placed European as well as native jurists on the "tribunals of justice" (*al-Majlis al-sharifi*) have also interfered with the old method of studying the *fiqh*. Only Muhammadan family law remains to the *Kadi* of the old school. The subjects of philology and rhetoric are very largely attended, especially if one includes the elementary instruction provided for the younger Arabs and for the numerous non-Arab students. Of the theological subjects, Dogmatics proper (*al-Kalam*, *al-Fiqh*) is the most studied, the exegesis of the Koran (*Tafsir*) and the "holy tradition" (*al-Hadith al-sharif*) rather less. The most usual text books for all subjects are given in section V.

The relationship between teacher and pupil is patriarchal. The students show their tutors the greatest respect, kiss their hands, carry their shoes and show them little courtesies of all sorts. They are fond of calling the professor 'master' (*Ustadh*) or "our lord" (*Mawlana*). On unpopular subjects, however, opposition to those in authority soon appears. The much respected al-Khawwalid (see below iv. 19), who wished to introduce decency and order into the chapel of the blind, was thrashed by the refractory inmates. On holidays, appoint-

ments and promotions and especially also on the deaths of Professors or students the intimate relationship of the community appears most strikingly. On the death of a learned Professor, the *Majlis* (junta) call the *Ashar* (Sura 36, 2.) from the Minaret, the prayers and *Thikra* are endless. Rites of benediction were as in ancient times as official distinctions by the Professors. While teaching, the tutor draws a little stool of palm-wood (*Diwala*) or wood or stone leaning against a pillar on the matting (*Hafsa*) which covers the floor of every mosque. The scholars sit around him in a semicircle, whence the phrase "the circle" (*al-Hafsa*) like "cadizium". The lecture is usually based on a text; but the texts (*Asara*, plur. *Alustas*) of the oldest authorities are only very rarely in their hands, in place of them there are commentaries (*Sharh* (Hic. *Sharah*)) which in their turn are again drawn into the background by glosses (*Ushra*, Mos. *Ushra*), superglosses and notes (*Talika*). The scholar seeks to understand the text and makes notes after the lecture. They are fond of using short, rhymed manuals to aid and refresh the memory. There were formerly no examinations; the *Ustas* (*Ustas*), paid since ancient times, the "license" and the testimonial which the teacher gave the student as a certificate that he understood a certain text, served as a graduation certificate and gave him permission in his turn to give instruction. A Leipzig vocabulary (D. C. 166 = Vollet's n. 729) affords us a good insight into the studies in the Ashar in the twelfth century of the Hijra.

The relationship of the great Sana'i sects to one another has always played an important part in the Ashar, especially in regard to its management. Since the time of the Fatimids the *Sana'i* has been hampered. The *Hamali* are (as already mentioned) in indignation in numbers and influence that they have never attained to the Rectorship (see below 11). The *Mullas* who live chiefly in Upper Egypt and also in the Delta have always held a respected position, but have not often attained to the Rectorship, and have never quite managed to retain or regain the influence which their numbers might warrant. The competition thus almost always lay between the *Sana'i* and *Hamali*, the former representatives of the traditional ritual, followers of the Imam, whose very holy Mausoleum is visible from Cairo, the latter representatives of the mind of the Fatima, Caucasians and Turks who have held the ruling power for centuries. The controversy, nay, struggle, continues to our own times when the generosity of the *Hamali* Sultanate has in this matter one of its most effective means of influence in the Nile valley. The official preferment of the *Hamali* has occasionally caused conversions to this sect. The opposition among the learned between the strictly dogmatic tendency and the mystic (*al-Tajawwuf*) must be briefly indicated here. The former has always held the chief authority, though it has been occasionally threatened by the other. As far as opposition in its numerous forms only appears as secondary, peaceable or tempered with sacrifice, it is not interested with it is otherwise when it rejects, combats or attempts to suppress the main doctrine of its opponents. For an inexorable and consistent champion of the mystic conception like *al-Hafsa* (died 977 = 1565) there was no room in the Ashar. The differences in the conception of

Revelation and other questions constituted an impassable gulf.

In the middle ages we find an inspector (*Alim*) at the head of the Ashar, who was chosen from the higher officials of the state. Each *Majlis* besides and each sect had its own chief (in the latter *Shaykh*, in the former *Ustas* also). It is not till Ottoman times that we meet with a scholarly head of the Ashar the *Shaykh 'Ustas* who may be compared to the Rector of the German Universities (except that he is not changed every year). He sat under him the *Shaykhs* of the various divisions and dealt directly with the government. Thanks to Liebert's Chronicle we have the list of these Rectors for more than 300 years (see below IV.).

The periods of instruction (*Dasr*, Plur. *Dasr*) are usually broken by longer or shorter holidays (*Bayt*). The longest interval lasts from the holy month of Rajab through Sha'ban and Ramadân till the close of the "holy festival" in the beginning of Shawwâl. After two months again comes the great artificial fast for several days; besides there are the many holy days (*Bayt*, Plur. *Bayt*) especially those of the Prophet and of *Hadra* in Tarsûs.

The domestic arrangements, the management of the library and of the supplies are in the hands of the *Ustas* (= *Ustas*) who again has numerous minor officials and servants under him.

III. The above sketch of the internal arrangements of the Ashar has dealt mainly with the earlier period and therefore requires to be supplemented by an account of the improvements which the nineteenth century has effected. When Napoleon's expedition had shattered the old Turkish dominion in fragments, Muhammad 'Alî sought with the help of European material to erect a new building from the ruins. As a Turk, as an uneducated man in the academic sense, as a man of action and of new ideas, he could not hold the Ashar in particularly high regard. The Arab spirit felt itself repelled by the Turkish, the oppressed Egyptian had for a long time hated the Ottoman despot, the spirit of the Ashar, ignorant of the world, devoted to the past, was in striking contrast to the water-of-life attitude of the new ruler, who regarded only the present and the future. In the interest of the State, Muhammad 'Alî did not hesitate to confiscate the extensive estates of the Ashar, although they were endowments with the inviolability of a religious bequest, and to do much harm to Professors and students.

By the institution of the "Mission Schools" in Paris (1825) many of the best brains were taken from the old traditional teaching and guided on quite new lines. Subjects which (as already mentioned) were placed in the lowest rank in the Ashar or quite neglected, Mathematics, Arithmetic, Physics, History, Geography etc. now took first rank, opened the path to office and honour, and threw no very favourable light on the educational stagnation of the Ashar. The new generation by the translation of European, mainly French works into Arabic, had, once the old scholastic terminology did not suffice, to form a new vocabulary and a new style which called forth the scorn of the Asharites. Whoever of these young people came back from Paris was regarded by the champions of the Ashar as insolent and affected. This antagonism which had developed by the time of

al-Tamkawi (about 1830; cf. *Epitaphs*, p. 8, *Kinnas* d. *Murshid*, vol. 66) has continued in spite of many changes in the present time. The Azharites continue to teach: the Egyptian education in Europe with their not very thorough twofold education are like certain birds which can only hop or waddle on the ground, but can neither fly nor swim properly.

Under Ibrahim, 'Abbas I, and Sa'id affairs pursued much the same course. The institution of new special schools did the Azhar still more damage. It was not Ibrahim's reign that the revolution was completed. Perhaps in this matter also the Khedive was guided by the tendency to set up a purely Arab state in place of the "head" with an Ottoman "hardman". To this purpose a reformed Azhar conforming to modern ideas would be very useful. His agent was the energetic, enlightened and experienced Jurist Muhammad al-'Abd al-Mahdi al-Jassafi, then Rector of the Azhar. He perfected a new constitution (*Qanun*) which had as its object the elevation of the position of Professor and students (Text in the newspaper *As-Sabah*, 16 Febr. 1872). Incapable and unworthy elements were to be discarded. The melancholy situation of most of the professors was to be improved by fixed salaries. That Europeans, particularly French ideas, were at the bottom of it, was shown most in the reform of the student's curriculum, the close of which had to be confirmed by examinations. An examining body of six members was formed, and the subject of the examinations to be passed were defined. Distinctions and rewards of all sorts awaited the candidates. The theological, legal, philological and rhetorical courses were divided into eleven subjects of examination. The petty jealousies of many groups in the Azhar were limited, and the direction was concentrated more than before in the hands of the Rector.

The zeal and good will of the reformers is not to be doubted but force of circumstances was stronger than they. From the Azhar itself arose an opponent to al-'Abd al-Mahdi in the person of Muhammad 'Uthman, an important Mafiki but a fanatical zealot, around whom all the opponents of reform gathered. The events which followed, the financial and political downfall, the British occupation and other troubles were exactly favorable to the reform of an organism which had been stagnant for centuries. How many of the proposed reforms have been carried through and how many have remained dead letters can not easily be told on account of the exclusiveness of the Azhar. The successors of Ibrahim, Fawsiy Kabba and 'Abbas II have not been lacking in attention to it. The latter especially has done all he could to bring about another state of affairs; but the passive and latent resistance is too great. If one tries to consider analogies from European history he will easily understand that reform, that is, the sweeping of the Azhar in new ideas, can only progress slowly if it be not actually impossible. There is no lack of enlightened individuals but the great mass has hitherto been inaccessible by any innovation. While almost all other departments of Egyptian institutions have been penetrated by European influences, the Azhar stands alone like an island and is proud of its impenetrability; one need be under no delusion as to the spirit in which it is steeped. Even the few

reforms that have been carried out seem to the champions of the old state of affairs a desecration of the place. This may be understood from the saying of this group: *al-Azhar ashar*, the Azhar is an institution deprived of its honour and glory. When about the year 1884 the Mahdists of the Sudan threatened the Nile valley also, they received much sympathy in the circles of the Azhar. How far their sympathy led to action can of course not be ascertained. When on the 7th June 1896, the Egyptian police commanded by Europeans attempted to arrest the Azhar during the cholera epidemic to carry out most necessary sanitary measures they were bombarded with stones, became vessels by the students and had to retreat. These young people for whose spiritual guidance their teachers were responsible, lived in the belief that dirt was inseparable from holiness and that the inevitability of even the closure of the Azhar was a part of "holding fast to their religion" (*al-Tamamut fi 'l-Din*). Incidents of this kind explain the situation better than the mere letter of the statutes, or local or official explanations. A great students' revolt took place in 1909.

For the statistics of the internal affairs of the Azhar in modern times we have various statements which often differ somewhat considerably. 'Ali Mubarak, who worked on the records of the *Dirasat al-Azhar*, gives for the year 1293 (1875) 325 teachers (*Shukhs*) of whom 147 were *Shafis*, 99 *Malikis*, 76 *Hanafis* and 3 *Hanbalis*. For many years no student is said to have taught in the Azhar (*al-Azhar*, I, *al-Fihrist*, iv, 11 above). Further he gives 10,750 students comprising 5,652 *Shafis*, 3,616 *Malikis*, 1,238 *Hanafis*, 25 *Hanbalis*. These figures agree very well with those given for several years of the same decade by I. Goldziher (published in *Eders' Jahrbuch*, II, 88). The Russo-Turkish war is adduced as the cause of the serious drop in the figures in 1877, but the decline in the number of Professors from 325 (1875) to 231 (1877) is not explained by it. An official report for 1892, soon after the accession of 'Abbas II gives 173 Professors (according to sects 79, 81, 35, 3) and only 8,437 students (according to sects: 5,921, 2,308, 1,774, 36). The not unimportant difference of these figures from those given above is explained by the fact that the official account gives only the regular paid teachers and the students proper, while the general statistics include the other teachers and also the scholars of the elementary and secondary schools connected with the Azhar. In 1899, 191 *Shukhs* were given; for 1901-1902 on the other hand 251 "Professors" and 10,403 students (*Fihrist*, in the *Presse*, *Jahrbuch*, 1903, xiii, 1908). In 1908 there were 312 teachers and 9,064 students (cf. p. 201).

All accounts of the yearly expenses of maintaining the Azhar must be taken with still more caution. In 1875 the income is said to have been 275,646 Turkish piastres, the expenses 390,834 piastres. 'Ali Mubarak, who examined the accounts, more deeply, prefers to remain silent on this point. The official report above mentioned gives for 1892 total figures of 8,432 and 10,000 leaves daily. On the other hand for 1901-1902 it mentions 10,000 and 13,510 leaves daily. The 8,432 are divided as follows: the salary of Finance continues 6,622, the *Ulama al-Azhar* only 5,757 and the rudiments of the various

Khiva total only 1632. One may assume that the official reports give only the essence of the Azhar without the contribution of the state (regulated according to requirements).

(V) Thanks to the excellent Chronicle of al-Jahant we possess a list of the Rectors (Shaykh, Plur. *Shaykhs*) of the Azhar from 1100 A. H. onwards, who are chosen from the most prominent scholars (the office of Rector is called the *Shaykh*). We find among them important and unimportant men; some were capable as administrators but not learned, others the opposite. The favour of the Ottoman Pasha seems to have formerly played an important part in the selection. The jealousies of the various sects became evident on elections to the *Shaykhs*.

We are told that the oldest *Shaykh* of the Azhar was:

1. the Malikī Muḥammad b. 'Alī al-Allāh al-Kharāṭī (Kharāṭī, died 1101, known as a commentator on various texts); 2. Muḥammad al-Sayyidī (died 1120), likewise a Malikī. Then followed a fierce contest between the adherents of 3. Ahmad al-Nasafī and 4. al-'Alī al-Kāfī al-Kāfī, who was at last victorious. The students in the mosque settled the contest with weapons and left a number of dead and wounded. After the death of Kāfī followed 5. the wealthy Malikī Muḥammad Shānān (died 1173); 6. the Malikī Ibrahim b. Mūsā 'Iṣṭiyāzī (born 1062, died 1137); 7. the Shāfi'ī 'Abd al-Allāh al-Shahrāṭī, famous as a poet and litterateur (died 1171); 8. the pious and learned Shāfi'ī Muḥammad b. Sallām al-Hijāzī al-Khalwānī (died 1181); 9. 'Abd al-Rahmān al-Sayyidī (died 1180); 10. Ahmad b. 'Alī al-Muḥallī al-Damāḥī (died 1190). Then arose a struggle which lasted a year between the supporters of the Hanafī 11. 'Abd al-Rahmān b. Umar al-'Arābī (died 1193) and of the 12. Shāfi'ī Ahmad al-'Arābī (died 1203). In the same year there were several disturbances among the students on other questions, partly against the Syrians and the Maghāribī, partly against the authorities and governing body on account of food etc. due to the students being withheld. The period of office of 13. the Shāfi'ī Rector 'Abd al-Allāh al-Sayyidī (died 1217 = 1211) was one of the most important periods in the history of the Azhar because the Napoleonic expedition with all its horrors and troubles fell within it. al-Sayyidī is well-known from several biographic, genealogical and historical publications, and is looked upon as one of the most distinguished occupants of the office. After his death the students again divided into two parties of which one wanted 14. Malikī, the other 15. Muḥammad al-Shānānī (died 1233). al-Shānānī held the rectory for a nominal period only and had to make way for his opponent. There followed 16. Ahmad al-'Arābī (died 1245), then 17. Ahmad b. 'Alī al-Damāḥī (died 1246), next 18. the enlightened Hanafī b. Muḥammad al-'Arābī (died 1250), famous as a scholar, poet and stylist. He was followed by 19. the learned Hasan al-Kharāṭī (died 1254); 20. Ahmad al-Sayyidī al-Sayyidī (died 1263); 21. Ibrahim b. Muḥammad al-Badrī (Badrī, died 1277), very celebrated as a scholar, but weak as an administrator. When he became unfit for his task through old age a board of four guardians (*awṣiyya*) was appointed which was dissolved by 23. Maḥmūd 'Iṣṭiyāzī (died 1287) in 1281. He prepared the reforms which

under his successors, the above list continued 24. Muḥammad al-'Allāh al-Mahdī al-Hawṣī were carried through while the young support of the Khedive Ismā'īl. In the year of the rebellion (1299 = 1881) he had to give way for a brief period to Muḥammad al-Badrī, but soon recovered his office and held it till 1304 (= 1886) when he was again deposed by Muḥammad al-Kubābī, a learned but pedantic man opposed to all innovation. al-Badrī did not execute the commission imposed on him by the government to write a history of the Azhar from the original documents. He was replaced in 1313 (1895) by 26. the Hanafī Ḥamīd al-Nawawī who was deposed by 27. the Hanafī 'Alī al-Kahhāl al-Nawawī in 1317 (1899) who died immediately after. The 28. Malikī Selām al-Nashrī followed him in 1317 (1899) who had been chief of the Malikīs since 1305 (1887); he was succeeded in 1325 (1905) by 29. the Shāfi'ī 'Abd al-Rahmān al-Shānānī.

V. The text-books used in the Azhar give us an insight into the scientific and literary taste of recent centuries. First the older texts were gradually more and more suppressed but already been mentioned. We notice the same phenomenon in other systems which have fallen victims to dogmatic exaggeration. This explains the great difference between the taste of the European Arabist and that of the Arab, themselves of which the spirit of the Azhar is typical. Just as strongly as we incline towards the older, fundamental and more creative literature, the Eastern mind inclines to the more recent explanatory works of painstaking commentators.

Since the great scarcity of printing-presses, and partly through the medium of the Khedival library, even *ṭibāt* of the Azhar school have begun to devote their attention to the noble works of ancient times (Aḥad, Poetry, Philology, History etc.). The influence of the Koran and the importance of sacred tradition have been the means of the oldest works especially in *ḥadīth* (rather less in *Tafsīr*), remaining in honour.

If we go through the curriculum of the Azharite and begin with grammar then the first work to be mentioned on this subject is the *Aghar* (Djardjard) of Muḥammad b. Dawūd al-Shāhīdī (died 723). In the numerous elucidations of this manual the commentary of Hasan al-Kāfī (died 1201) and that of 'Abd al-Rahmān al-'Arābī (died 905) with the annotations of Abū 'Iṣṭiyāzī and of 'Aḥmad are the most popular. For the advanced courses the works of 'Abd al-Allāh b. Yūsuf b. Muḥammad (died 761) viz. *Kaṣṣ al-Naṣṣ*, *Shawāḥid al-Dīn* and *Maḥṣūl 'Iṣṭiyāzī* with numerous commentaries and glosses are used; also the *Aḥṣā* of Ibn Malik (died 672) with the commentaries of Abū 'Alī (died 769) and of Bahmūd (about 900) a gloss on it by Ḥabīb (died 1200) and others; more rarely the *Liṣṣat al-'Asat* of Ibn Malik.

Of the numerous dictionaries of earlier times the *Ḥamīd* of Ḥamīd al-Shānānī was so commonly used that the name in modern times generally has the meaning of "dictionary". The *Shāfi'ī* of Ḥamīd al-Shānānī has also always had a good name. It was only European influence that brought other collections especially the *Ṭaḥṣīl al-'Arābī* and *Liṣṣat al-'Arābī* to positions of honour. It required the intervention of a European diplomat to complete the printing of the *Liṣṣat* which had come to a standstill. What we look for in such a work, namely

the explanation more especially of the mystical poetry, is quite foreign to Arab ideas. Reference to the unknown meaning is only made to illustrate the theological meaning of a word. When the printing of the *Lisān* was completed in 1368 (1891) an official notice recommended the work in the following words: "Un excellent ouvrage, qui entre autres choses d'une utilité incontestable, réunit le sens mystique des versets du Coran et des traditions, dont l'interprétation a fait l'objet de controverses insurmontables, mérité à bien des titres l'admiration des savants" etc.

The rhetorical subjects which are little esteemed by us are naturally ~~more~~ with the philological. The *Risāla* of Abū 'Ishāq al-Samarqandī (about 890) on *al-Furūḡ* (Metaphors) with numerous commentaries ~~is~~ ^{are} very popular, also the *Risāla* of ~~al-Samawī~~ (died 1201) who was a famous Maliki jurist; and ~~of~~ ^{by} Saḥbān. For the advanced courses the *Taḥṣīl al-Mafāḥ* of Ḳasrūlī (died 739) is taken, of ~~the~~ commentaries the favourite is the *Muḥṣan* of Taḥṣīl al-Sa'īd al-Dīn (died 791). ~~Philosophical~~ philosophical questions have been forgotten for centuries, logic alone of this branch is studied. ~~is~~ ^{is} based on the "Scale" (*al-Salṣala*) of Aḡḡāḥ (about 941) with many commentaries, the *Ṣaḡḡ* of Porphyrios in the adaptation of Abḡarī (died 683) likewise often annotated, the *Ḥawṣala* of 'Alī b. 'Umar al-Ḳasrawī (died 675) and the compendium of the theologian Maḡmūd b. 'Iṣḡāf al-Saḡīḡ (died 892).

At the head of theological subjects stand dogmatics with its systems, compendiums and catechisms. The large and small *Ḥikma* of Saḡbān, just mentioned are very popular; so are the *Ḥawṣala* of Ibrahim b. Ibrahim al-Lajḡī (died 1045) and *al-Ḥawṣala* of the already mentioned Ḳasrūlī, all with numerous commentaries of ancient and modern times e. g. by Maḡmūd al-Baḡrī, al-Ḥudḡūb, al-Ḥurḡūḡī, al-Ḥaḡḡī. The literature of the "Milla" of the Prophet and the poetry devoted to his praise (*Mawḡib*) must also be ~~mentioned~~ ^{mentioned} here.

On the Hadīth the old, canonical collections, notably al-Bukhārī are still much read by scholars while more recent, smaller collections ~~are~~ ^{are} used in teaching. The ~~most~~ ^{most} important of these is *al-Ḥaḡḡ* of Naḡḡī (died 911) with supplement, notes, ~~and~~ ^{and} new adaptations. A special branch of this field is Prophecy, the dogmatic conception of the personality of Muḡmūd. Highly valued works on this subject ~~are~~ ^{are} the *Ḥawṣala* of Tirmidhī (died 279), and the *Mawḡib al-Ḥawṣala* of al-Ḳasrūlī (died 923) the *Ḥikma* of Ḳaḡḡī (died 844). Of the many works dealing with the technical language of the tradition (*Ḥawṣala* *al-Ḥawṣala*) the favourite are the *Ḥawṣala*, whose author lived in the eleventh (seventeenth) century and the short treat called after its opening words *Ḥawṣala* *ḡaḡḡ*.

On the *Tafsīr* ~~the~~ ^{the} once celebrated commentary *al-Ḥawṣala* has fallen much less disuse through theological changes, and it is only through European influence that that of al-Jabbar has been recently deemed worthy of printing. The great commentary of Fakhr al-Dīn al-Jalālī (died 606) is very popular; further may be mentioned the work of the *Ḥawṣala*, al-Mahallī (died 804) and of al-Sayyid (died 911) with the gloss of Saḡbān al-Dīnawī (died 1209); also the *Ḥawṣala* of *al-Ḥawṣala* al-Ḥawṣala (died 977) and

the *Ḥawṣala* of the Turk Abū 'Iṣḡāf al-Ḥawṣala (died 923). More rarely used are al-Ḳasrūlī (died 716) and his commentator al-Ḳasrūlī, Shaḡbān and others.

The doctrine of fundamental principles (*al-Ḥawṣala*) common to the great sects is readily studied from the *Ḥawṣala* *al-Ḥawṣala* of 'Abd al-Waḡḡ al-Saḡḡ (died 771).

In other respects each sect goes its own way. Among the *Ḥawṣala* the *Ḥawṣala* of Nawawī (died 676) extracted from the *Ḥawṣala* of al-Ḳasrūlī (died 613) holds an unvalued position. The most popular commentaries on the *Ḥawṣala* are the *Ḥawṣala* of al-Randī (died 1044) and the *Ḥawṣala* of Ibn Ḥawṣala al-Hallawī (died 974 or 973; cf. on this commentary Saḡḡ Ḳurḡḡḡ in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* LIII, 123). Two works of Zakariyā al-Anḡarī (died 976), the *al-Ḥawṣala* and the *Ḥawṣala* *al-Ḥawṣala* are also popular; there are also the commentaries of Ibn Ḳasrūlī al-Ḥawṣala (died 918) called, *al-Ḥawṣala* *al-Ḥawṣala* and the *al-Ḥawṣala* of Ḳasrūlī al-Ḥawṣala and the compendium (*Ḥawṣala*, *Ḥawṣala*) of Abū Ḳasrūlī al-Ḥawṣala (about 500).

Among the *Ḥawṣala* the formerly celebrated *Ḥawṣala* of 'Alī al-Maḡmūdī (died 593) with its many commentaries has ~~been~~ ^{been} ground before more recent works. The *Ḥawṣala* of 'Abd Allāh b. Ahmad al-Nasābī (died 710) is popular with the commentaries of al-Ḥawṣala (died 647), of Mullā (Ḳasrūlī) Maḡmūd (about 950), of Ibn Ḥawṣala (died 1000), of Maḡmūd al-Ḥawṣala (died 1197); further may be mentioned the *Ḥawṣala* of Ḳasrūlī al-Ḥawṣala (died 1069) the selections from it, the *Ḥawṣala* *al-Ḥawṣala* with the gloss of al-Jabbarī (died 1231) also al-Ḳasrūlī's (died 1088) commentary (*al-Ḥawṣala* *al-Ḥawṣala*) with the gloss of Ibn Ḥawṣala (died 1753) on the *Ḥawṣala* of Maḡmūd b. 'Abd Allāh al-Ḥawṣala (Demednābī died 1004); likewise the *Ḥawṣala* *al-Ḥawṣala* and the commentary *Ḥawṣala* *al-Ḥawṣala* of Mullā Ḳasrūlī (died 883). Ibn Ḥawṣala mentioned as a commentator devoted also a favourite system (*al-Ḥawṣala* *al-Ḥawṣala*) and a collection of judicial decisions.

Of the earlier literature of the Maliki besides the fundamental work, the *Ḥawṣala* of Mullā Ḳasrūlī (died 179), the chief that have survived are, the *Ḥawṣala* of 'Abd Allāh Ibn Abī Zaid al-Ḳasrūlī (died 188) with many commentaries, e. g. that of Abū 'Iṣḡāf 'Alī al-Ḥawṣala (died 939), of al-Tirmidhī (died 942) and of al-Ḥawṣala (died 1066). For the rest Ḳasrūlī b. Ḳasrūlī (died 767) with his compendium holds a similar position to al-Nawawī among the *Ḥawṣala*. Nearly all prominent Maliks have expounded his *Ḥawṣala*, among them Taḡḡ al-Ḥawṣala, 'Abd al-Baḡ b. Yūsuf al-Zurḡānī (died 1099), al-Ḥawṣala (Ḳasrūlī; died 1101), al-Dardī (died 1201) and Maḡmūd (Ḳasrūlī; died 1299). Another important treatise is the *Ḥawṣala* of 'Abd al-Baḡ al-Ḥawṣala with the commentary of Ahmad b. Taḡḡ (about 992) and the *Ḥawṣala* known as *Ḥawṣala* which has been explained by Ibn Taḡḡ, al-Faḡḡ and al-Zurḡānī.

The more recent literature of the Hanbali is as small as the number of its adherents. The *Ḥawṣala* of Maḡmūd b. Yūsuf (died 1033), and the *Ḥawṣala* *al-Ḥawṣala* of Maḡmūd b. Ahmad al-Faḡḡ are popular.

The law of inheritance (*al-Farḡ*) which is

common to all the great sects is usually studied from the *Qur'ān* and the *Hadīth*.

The sciences in general studied in the Azhar are treated in: Nasse al-Hawāḍiq, *al-Makṣūṭ al-muṣṣaf* al-maḥṣūṣ al-*al-ḥikm al-asharīya* (Kairo, 1320). The most popular texts, especially those in verse have been frequently reprinted recently in *Maḥṣūṣ al-Maḥṣūṣ*, e.g. Cairo, 1306, 349 pp.; 1302, 239 p.p., lithogr.

VI. Like other sciences, the Azhar has in course of time acquired important treasures of books which were partly for study and partly for teaching. When Khediv al-Library was founded in 1870 and the mostly abandoned madrasas had to give up their collections for this purpose, the Azhar was left unharmed, much to the disadvantage of Arab studies in Europe. It would have been better to make a division and leave the best books to the Azhar and to give the scientific works to the new library. Our knowledge of the contents of these collections is therefore not only insufficient but (what is worse) one cannot be certain that the works mentioned in the old catalogues still survive. J. L. Burckhardt compiled a list based on his own examination and published it in 1816 (*Catalogue of Books in the Mosque of Azhar*). A selection from its contents of the Azhar and other Madrasas was published from a Vienna Codex by U. Flügel (*Maḥṣūṣ al-Kutub*, vii, 1-32).

From an official catalogue of 1269 (1850) take the following. The divisions, *Kutub*, and endowments are distinguished as follows: 1. *Turk*; 2. *Syrian*; 3. *Kurd*; 4. *Magharib* (Libe); 5. *al-Nadī* (Libe); 6. *al-Sūdān*; 7. *Riyāṣ* (from the Delta) or *Mamlūk* (the Mamlūks) or *al-Shamawī*; 8. *Madīna* (from the Hijāz); 9. *Shāhī* al-Balāḥ; 10. *al-Madīna* al-*al-Balāḥ*; 11. *al-Falāḥ* (Central Africa); 12. *al-Shāhī* al-*Tāḥī*; 13. *al-Balāḥ* (from Dardān and district); 14. *al-Muṣṣam*; 15. *al-Madīna* al-*Tāḥī*; 16. *al-Shamawī*; 17. *al-Shamawī*; 18. *al-Shamawī*; 19. *al-Shamawī*; 20. *al-Shamawī*; 21. *al-Shamawī* (from Baghdad and neighbourhood); 22. *al-Shamawī* (from Baghdad); 23. *al-Shamawī*; 24. *al-Shamawī*; 25. *al-Shamawī*; 26. *al-Shamawī*; 27. *al-Shamawī*; 28. *al-Shamawī*; 29. *al-Shamawī*; 30. *al-Shamawī*; 31. *al-Shamawī*; 32. *al-Shamawī*; 33. *al-Shamawī*; 34. *al-Shamawī*; 35. *al-Shamawī*; 36. *al-Shamawī*; 37. *al-Shamawī*; 38. *al-Shamawī*; 39. *al-Shamawī*; 40. *al-Shamawī*; 41. *al-Shamawī*; 42. *al-Shamawī*; 43. *al-Shamawī*; 44. *al-Shamawī*; 45. *al-Shamawī*; 46. *al-Shamawī*; 47. *al-Shamawī*; 48. *al-Shamawī*; 49. *al-Shamawī*; 50. *al-Shamawī*; 51. *al-Shamawī*; 52. *al-Shamawī*; 53. *al-Shamawī*; 54. *al-Shamawī*; 55. *al-Shamawī*; 56. *al-Shamawī*; 57. *al-Shamawī*; 58. *al-Shamawī*; 59. *al-Shamawī*; 60. *al-Shamawī*; 61. *al-Shamawī*; 62. *al-Shamawī*; 63. *al-Shamawī*; 64. *al-Shamawī*; 65. *al-Shamawī*; 66. *al-Shamawī*; 67. *al-Shamawī*; 68. *al-Shamawī*; 69. *al-Shamawī*; 70. *al-Shamawī*; 71. *al-Shamawī*; 72. *al-Shamawī*; 73. *al-Shamawī*; 74. *al-Shamawī*; 75. *al-Shamawī*; 76. *al-Shamawī*; 77. *al-Shamawī*; 78. *al-Shamawī*; 79. *al-Shamawī*; 80. *al-Shamawī*; 81. *al-Shamawī*; 82. *al-Shamawī*; 83. *al-Shamawī*; 84. *al-Shamawī*; 85. *al-Shamawī*; 86. *al-Shamawī*; 87. *al-Shamawī*; 88. *al-Shamawī*; 89. *al-Shamawī*; 90. *al-Shamawī*; 91. *al-Shamawī*; 92. *al-Shamawī*; 93. *al-Shamawī*; 94. *al-Shamawī*; 95. *al-Shamawī*; 96. *al-Shamawī*; 97. *al-Shamawī*; 98. *al-Shamawī*; 99. *al-Shamawī*; 100. *al-Shamawī*; 101. *al-Shamawī*; 102. *al-Shamawī*; 103. *al-Shamawī*; 104. *al-Shamawī*; 105. *al-Shamawī*; 106. *al-Shamawī*; 107. *al-Shamawī*; 108. *al-Shamawī*; 109. *al-Shamawī*; 110. *al-Shamawī*; 111. *al-Shamawī*; 112. *al-Shamawī*; 113. *al-Shamawī*; 114. *al-Shamawī*; 115. *al-Shamawī*; 116. *al-Shamawī*; THE A. NESTORIAN held office in rapid succession. The appointments of the Nestorians, as well as that of a few, Manichee, to the chief secretariats in Syria, were in accord with the Fatimid policy of toleration in regard to religion and race. But in the case of al-A'ziz, special kindness was accorded by his Christian wife, the mother of his son and heir al-Mu'izz. Her two brothers were appointed Melkite patriarchs of Alexandria and Jerusalem, by the caliph's express, though irregular, command, and the Christians never enjoyed as much toleration as under his rule. The Coptic patriarch, Epiphanius, who stood in high favour with al-A'ziz, obtained permission to rebuild the church of Abu Saif al-Musallim (Fustat) and all opposition by this grant on the part of the Mahomedans was completely suppressed by the caliph. Indeed, he even went so far as to encourage discussions between Christians and Mahomedans on divine (see note at p. 534) and to confer in personate apostasy on the part of a Mahomedan, though he was the first to institute the custom that the caliph went in state to the mosque every Friday in Ramadan, the month of fasting, and performed the prescribed service in the presence of the people. Such appointments and grants naturally gave offence to the Mahomedans. To pacify them, al-A'ziz from time to time removed objectionable officials, but having influence, at least in the case of the Nestorians, and the need of their advice was restored those who had been dismissed. The discontented were forced to reconcile themselves to this policy by a firm administration backed by a powerful army, for which al-A'ziz was the first of his family to adopt the tried policy of importing Turkish troops. The caliph had secretly any cause to call upon his forces to quell insurrections at home, though, on the other hand, active service was demanded of them abroad. The Turkish general Atsikin, who, after the intervention of the Germans which carried Syria from Egypt, had restored the name of the 'Abbasid caliph at Damascus, emboldened by the death of al-Mu'izz, advanced upon Sidon which he conquered, and then proceeded as far as Tiberias, whence he returned to Damascus. Thibet Ujowhar was dispatched in 365 (976), but after besieging the city for two months retreated to Acre on upon al-Mu'izz's al-A'ziz al-Karami coming to Atsikin's relief. The allies pursued the Egyptians and the veteran Fatimid general was forced to promise Atsikin valuable presents in order to extricate himself from a precarious position and return to Egypt. Immediately upon his arrival, al-A'ziz in person advanced into Palestine and defeated the allied forces in the year 367 (977), capturing Atsikin, but with characteristic generosity pardoning him and showering honours upon him. In 372 of the victory, Damascus was still but nominally under the control of Egypt. Kasim, one of Atsikin's counsellors, straightway usurped authority over the city, and withstood all attempts to remove him on the part of the general Abu Maqbul, al-Fadl b. Salih, Saladin b. Ma'ar b. Fakh and Ibrahim b. Jannama, till he was forcibly ejected in 372 (982) by Yabukin, who had been sent to Ramla to discipline al-Mu'izz b. Daghfal. Owing to a revolt on the part of the Maghribi troops at Cairo in 373 (983-84) Fakh al-Din was recalled and Ramla was entrusted to Badkhar, who had quarrelled with his master the Hamdanid Abu Ma'ar

Sa'd al-Dawla. Extraordinarily astiduous, the new governor assumed command of Badkhar and al-Fakh, endeavoured to strengthen his position by making treaties with neighbouring rulers, and even went so far as to treat with the Banu al-Harith al-Bakri and Sa'd al-Dawla for Ilam. Upon their refusal, Badkhar again turned to al-A'ziz and requested reinforcements to capture Ilam from Sa'd al-Dawla. The Caliph, not unwilling to extend his power, agreed and commanded Nasir, the prefect of Tripoli and other Syrian generals to support him. These, however, at the instigation of the Nestorians, deserted him at the critical moment and Badkhar betrayed by some of his own troops, suffered a crushing defeat and later, denounced by an Arab with whom he had taken refuge, was executed at the order of Sa'd al-Dawla. Five years later al-A'ziz persuaded by his general Abu l-Husayn al-Maghribi, once more sent an army under Maghribi against Ilam now in the hands of Abu l-Fayz the son of Sa'd al-Dawla. After defeating an army of 50,000 men dispatched to the relief of this city by the Byzantine government of Antioch, the Fatimid general besieged the city for thirteen months in 385-1386 (995-996), whereupon the Emperor Basil II himself, abandoning a campaign against the Bulgarians, came to its relief. At his approach the Egyptians retired, and the Emperor sacked Ilam and Baitani, and made an unsuccessful attack on Tripoli. Straightway al-A'ziz went to Sidon where he collected a large force. The departure of the expedition, however, was delayed by the destruction by fire of eleven of his largest vessels. Though this misfortune was speedily repaired by the energetic Ibn Nestorian, preparations were brought to an end for a time by the death of al-A'ziz on the 28th of Ramadan 386 (October 15, 996). He was without doubt the wisest and most beneficent of all the Fatimid rulers of Egypt, and, though active under Yusuf Balgin and his son al-Mu'izz, was lowering its ties from Egypt and Syria was only retained by force of arms, the Fatimid rule extended at least nominally over the greatest amount of territory during his reign, his name being placed for in the mosques from the Atlantic to the Red Sea, in Famen, at Mecca and over even in the pulpit of Mecca.

(N. A. Kewen.)

'AZIZI, a Turkish poet, who was born in Constantinople, and died there in 993 (1585). His proper name was Mustafa. He is the author of a kind of *ghazal* entitled *Shir-az* (cf. on this style *Shir-az* (ibid.), *A History of Ottoman Poetry*, II, 232 f.) which J. von Hammer published in volume 1, of the *Miner* (1818) and Glib translated, *loc. cit.* II, 182 ff.

'AZIZI, poetical name of 'Abd al-'Aziz Kari Celabi-Nade (q.v.).

'AZL (a), depoultion, dismissal, in Algeria, estates which belonged to the head of the state or to the community used to be known as 'Azl. After the *ghazal* occupation they became national property and the government disposed of them either by granting the use of them to individuals on payment of a certain duty called *Shir* (Plur. *Shir*) or in certain cases by recognising their proprietary rights to them.

AL-AZRAKI AND 'I-WALID AHMAD B. MUHAMMAD AND HIS GRANDSON 'ABD-UL-WALID MUHAMMAD B. 'ABD-ALLAH A. AHMAD, the historians of the town of Mecca. The *Nisbat*-Azrakī under which both are known, is taken from an ancestor of theirs, 'Uthman b. 'Asad al-Ghassani al-Azrakī (i.e. the blue-eyed). He, a contemporary of Muhammad, belonged to the ruling house of the Ghassanids of Hims. Al-Azrakī the grandfather (died 219 = 834 = 222 = 837) was the first to collect traditions relating to the history of Mecca. They were first written down by the grandson, who was already dead in 244 (858). Al-Fāṭ (q.v.) issued a new edition and this recension, later augmented by his nephew Abu 'Uthman Muhammad, has been published by Wüstenfeld in the first volume of his *Chronik der Stadt Mekka*.

Bibliography: in Wüstenfeld, *op. cit.* 67. also Brockelmann, *Gesch. der arab. Litt.*, I, 237.

AZRAKĪ ZAKI AL-DIN AND BAKA B. ISRA'IL AL-WARAZĪ, Persian poet; who according to Rithé died in 327 (1232-1233) or 329 (1230). Mirza Muhammad Kasrawi has however shown (*Chahar Maqala*, p. 175 ff.) that the poet probably was dead before 465 (1072-1073). He composed a *Diwan* which among other things contained a panegyric on Tughlakh b. Alp Arslan the governor of Herat (one of Nizāmī, as is often stated) and on Amirshah b. Kasrawi. On the other hand it appears to be incorrect that he, as Mirza Kasrawi among others has stated, is also the author of the *Shah-nama* and of an obscure work entitled *Alfayaz-sha'ir*.

Bibliography: 'Asad, *Lahiz al-sha'ir* (ed. Browne), II, 36 ff.; Dawlatshah, *Tughlakh al-Shah* (ed. Browne), p. 72 ff.; Nizāmī, *Arsh*, *Chahar Maqala* (ed. Kasrawi), p. 44, 170 ff.; *Kasrawi de lahar al-sha'ir*, A *History of the Seljuks*, I, 22 ff.; Rithé, in *Grundriss der armen. Philologie*, II, 258; Browne, *A Literary History of Persia*, II, 327.

AZRAKITES (Azrakīya), a Kharijite sect, so-called after their leader Nāṣir b. al-Azrak (q.v.), who founded the doctrine that all followers of other doctrines were (though) exception infidels and — if they did not at once become converted — doomed to death with their wives and innocent children. After Nāṣir had met his death on the battlefield, 'Uthān al-Azrak b. al-Muhallab became leader of these fanatics till he also was slain in the battle of Siffin (May 66 = May 686). A similar fate befell his successor Zuhayr b. al-

Muhallab, but the Azrakites asserted themselves under the leadership of the brave Hasan b. al-Fudayl (q.v.) till 77 (696) in which year he also was killed and the Azrakites disappeared from history. Al-Shahrastāni assumes the sect of eight hundred. Most of these passed from their holding all followers of other doctrines as infidels, though special question may be made here, that they also condemned prudent concealment of one's own belief (*Taqiyya*) and rejected institutions, which were not laid down in the Koran e.g. the stoning of an adulterer on the ground of an alleged revelation hitherto customary.

Cureton), p. 80 ff. esp. (transl. by Hirschbaker, I, 133 ff. esp.); Brunnow, *Die Geschichtsbücher*, p. 36 ff. esp.; Wellhausen, *Die religiös-politischen Oppositionsparteien im alten Islam*, p. 28 ff. esp.

'AZZA (a; young girl), a common woman's name, two daughters of which are especially famous, 'Azza Kuthayyir and 'Azza al-Mallik. 'Azza Kuthayyir whose real name was 'Azza bint Humaid b. Waḥsh (q.v.); *Aghani*: bint Humaid b. Waḥsh and was a widow of the tribe of Tamim. She was called 'Azza Kuthayyir, the 'Azza of Kuthayyir because this poet dedicated all his *ghazals* to her (which for his part brought him the title of Kuthayyir 'Azza). She must have been quite a child when Kuthayyir fell in love with her. Later she married another, which did not hinder her, however from meeting the hero of her youth on pilgrimage and elsewhere. Nothing further is known of the details of her life. The story that she fell in love with the beautiful Humayd and thereby aroused Kuthayyir's jealousy probably springs from a love of playing on etymologies and from a desire to connect Kuthayyir and 'Azza with another equally famous pair of lovers Humayd and Basma. According to Ibn Kuthayr she died in Egypt at a time when Kuthayyir still was concerned with love for her; on the other hand according to the *Aghani* al-Aghani she came as an old woman to the Caliph 'Abd al-Malik and related to him the story of Kuthayyir's love for her in days gone by.

Bibliography: Ibn Kuthayr, *Aghani al-Aghani* (ed. de Goeje), p. 252 ff. esp., 328—329; *Aghani* (I, ed.), VII, 36—36; *Aghani* al-Aghani, II, 381—382.

'AZZA al-Mallik, i.e. 'Azza with the swinging gait, a famous singer. She was a pupil of the singer Sa'ib al-Khayl and Naf'is (both Persian origin) as well as of woman singer Rāḥa. 'Azza, a client of the Amir lived in Medina and was a general favourite there not only on account of her skill in singing and playing the lute, but also for her beauty and moral life. Humayd b. Thabit is said to have been moved to tears by her song, 'Umar b. al-Khattab to have weened with delight at her musical interpretation of his poems. The singers Ibn Muhallab and Ibn Surayj enjoyed the benefits of her tuition. The period of her activity can only be approximately fixed from the assertion that she sang in Medina during the reign of Mu'awiyah and his son Yazid as well as from the persons with whom she is said to have come in contact; the Ibn Surayj, not mentioned but famous from her while a young man and died at

remained till 1516 (922) when the Ottoman Sultan Selim conquered Syria and incorporated it in his kingdom. Since that time Basilex subsisted in the Porte has been in the hands of petty dynasts chiefly of the Hafsah family. In the continual struggles between the Syrian families the prosperity and population of Basilex has suffered. It suffered considerable damage from the earthquake of 1559. About 1831 the town was conquered for a short time by the Egyptian Ibrahim Pasha. On his departure it again passed into the hands of the Hafsah family. It was not till 1850 that the Porte placed a regular administration there, when Basilex became the seat of a *Kaimakam* under the governorship of Damascus. Since then its prosperity has been continuous; at the present day its inhabitants number 5000, of whom about 3000 are Sanat Muslims, 2000 *Shi'a* Mutawalla. Excavations have been carried out by the Germans, under the direction of Fuchslein and Schulz and Basilex is becoming more and more the goal of all tourists to the East.

The fortress of Basilex (extracted from the second Annual Report of the excavations of Fuchslein, Berlin, 1903 p. 41 ff.). The Arabs turned the temple into a citadel. The general form of the citadel was defined by the Arab architects by the courts and the two temples the outer walls of which afforded sufficient security. The small temple appears to have been a separate building by itself inside the fortress, a sort of *Wanjoon*. Its ditch with the walled counter-scarp on the north side are still recognizable and the great fortified tower on its south-east corner was built especially for its protection. Greater expenditure was necessary to fill up the gap on the south-west corner of the fortress, between the two temples and here, where the entrance and exit to the city were situated, the Arab architects had to compete with the Romans and show their own skill in counterbalancing the solidity of the ancient walls manifold constructions have been necessary to meet changing requirements. The various periods of building are defined on the plan. The most recently fortified ground was the lowest of the whole town, a sort of lower town or suburb.

In the first period of building, a wall was built in the south-west in the direction of the south front of the small and another in the direction of the west front of the large temple. The gate was placed in the middle of the "cut side," flanked by two towers of no great height. A second period of construction may be placed in the time of Muhammad b. Sibt who besieged Basilex unsuccessfully or in that of Zengi-ko, as inscriptions discovered and literary records show, occupied himself with the fortification of Basilex. This period is marked by the filling up of the doorway on the south side, where a road led to the interior of the outer fort through a long covered corridor and from here through another, likewise covered path, gradually rising to the interior of the eastern part of the citadel. In place of the old gateway and its two small towers a new large tower was built and, to the right and left of it, new curtains were drawn not far from the old ones; a tower seems also to have stood in the southwest corner. Sultan Valdemar Sult created a new one here in 1273 (680) and the tower in the northwest corner of the citadel in 1224.

The strengthening of the front of the west tower may also be ascribed to him. Finally in a fourth period Sibt and his successors built more important and very strong new buildings after the destruction of Basilex by the Mongols at the end of the thirteenth century. The two west curtains were taken down and moved to the front of the west tower which was also built in a new style by the use of great blocks of stone. The strong tower at the southeast corner of the small temple likewise belongs to this period. The old temple, south gate was, as required by changed conditions strengthened as if by a barbican, so that the road behind the bridge over the ditch and behind the outer gate had four turns before it led through the inner gate, where still another smaller court which could be swept from above, awaited the enemy. This barbican according to the foundation inscription on the fallen prop of the outer gate is to be dated about 1240 (689). After the end of the thirteenth century no alterations were made in the fortification of the citadel, only improvements such as those in the moat in 1394 (796) when Sultan Barak (q. v.) prepared to resist Timur as is proved by inscriptions.

Further work of the Basilex-Expedition, with the histories and Arabic inscriptions of Basilex, by M. Sobornheim will be published shortly. The Arab source given there.

(M. Sobornheim.)

BÄB (a.) Gate, gate. Unlike the open tent of the Bedouin the ancient Arab house had a sort of stronghold which could only be entered by a door. *Bäb* is still often the case the door varied with the style of house and was small and concealed, heavy and baricaded, or high and open. The *Bäb* always concealed the view into the interior of a dwelling, nothing of the richness and luxury of which could be gathered from the exterior. The *Bäb* thus became a symbol of approach and beginning of the means of doing anything, of aim, of perception and finally as a symbol of any goal. The symbolic application of the word is frequent and manifold in Arabic and its sphere of influence and has not been without influence in the West. The count of the Sultan appears as the "Sublime Porte" or the "Gate of Fortune"; the Milky Way is the "Gate of Heaven"; the "Two Doors" are metaphorically this life and the next, the contents of a book are contained in various gates (chapters). One speaks of the gates i. e. means of livelihood, of war, of rebellion, of the gates of the right path, of wisdom, of dominion, of death, etc. The gate of the mighty appears especially frequently as the roadways of supplicants and the professional beggar lives "at the gate of Allah" (*ata älä älä, cf. Italian: alla porta*). Cf. Lane, *Arab-Engl. Lexicon*, I, 372; *Deasy Supplément aux Dictionn. Arab.*, I, 124, 125. (J. Herz.)

BÄB, an Arabic word signifying "gate", only

received among the Shi'a the meaning of "gate by which one enters, means of communication with that which is within". Among the families, this word is used symbolically for the Shaikh or spiritual leader, who initiates into the mysticism of religion, the *Akbar* (Ghani). *Fragmente*, p. 206; *Journal* of Kowatir, Salomon M. Farhat, estimated with the propaganda of the Shi'a (H. Dussaud, *Asyout*, p. 62, n. 3). The Druses call by this name the first spiritual mediator, who embodies universal reason (*Manzil* 'aql "standing point of spirit"; cf. *Encyc. Brit.*, II, 59). The name has been famous by the Salihi 'Ali Muhammad of Shiraz who called himself Báb, when he declared himself to be the gateway to knowledge of divine truth (3. *Encyc. Brit.* II 1860 = 21. Jun. 1844). Born on the 1. Muharram 1236 (36. March 1821), the son of a merchant, he became an orphan and was placed under the guardianship of his maternal uncle; he continued his father's business and at the same time occupied himself with religious questions. He practiced asceticism and exposed himself for hours to the rays of the sun so that his skin became affected. He then made the pilgrimage to Karbela and there received instruction from the Shaikh. Returning to Shiraz he proclaimed himself a reformer and delivered a series of sermons, in the Mosque of the South, interrupted with denunciations of the official clergy. A Shaikh, Husain of Bushayr who was seeking a successor to the Sayyid Kásim of Reza, who had just died, chose 'Ali Muhammad and became his first disciple. The latter then set out for Mecca via Bushayr and Muscat and took advantage of the pilgrimage to write various treatises which were considered divine revelations. On his return he had a contest of faith loudly proclaimed in which he added to the Shi'ite formula the declaration that "All praise be to God". A rising followed and the governor had the missionaries of the Báb imprisoned. Sayyid Yahya of Dama, who was sent to investigate the doctrine, became a convert to it. Meanwhile cholera had broken out and all who could quitted Shiraz. At Isfahan 'Ali Muhammad enjoyed the protection of Mandaqir-Jahan Mirzabek al-Dawla, governor of the city, but on his death, his successor received orders to place the Báb in the fortress of Maku in Adirshahin where he was detained.

Mandaqir-Jahan of Bushayr continued his preaching and converted two brothers in Teheran, Mirza Nuri (later called Subh-i Za'al) and Mirza Husain 'Ali Nuri (who became Subh-i Ahsa). At Kerman, a young Zarin Taly, nicknamed Kurrat al-'Ayn, daughter of Molla Bakhsh, of rare beauty and supreme intelligence declared herself a follower of the new religion. In consequence of a correspondence with the Báb, being forced to quit the town after the murder of her uncle Muhammad Taqi, a fanatical Mujtahid, in which she was accused of being implicated, she fled by night and sought refuge in Badkub in Khurasan where the first assembly of the disciples of the reformer took place.

After a long stay in Maku, 'Ali Muhammad in consequence of troubles which broke out in Shiraz, Teheran and in Zandjān (see above) was transferred to Chahuk and from there taken

to Yafsa. His execution, being determined upon, was entrusted to the Christian engineer of Dabadan who shot him with his disciple Muhammad 'All of Yafsa. At the first volley the bullets only entered the cords which bound him so that it was necessary to fire again (27 *Shahin* 1260 = 8 July 1850). After the execution, his body was thrown into the town ditch but was taken up by his devoted disciples, and carried to Teheran, where it lay buried for 29 years when it was taken out of its place of concealment by order of Násir-'Allah and according to an oral tradition, carried to St. Jean d'Acre (Akko).

His doctrine, under the apparent reform of Islam the Báb founded a new religion with its own beliefs, dogmas and its own conceptions of a new state of society. God is one and 'Ali Muhammad is the mirror in which He is reflected and in which every one can regard Him. "You ought to make mirrors of yourselves and your deeds so that you shall only see in those mirrors the sun which you love", says the *Kitáb-i Asmá*, *Ismael* by Shihab, p. 133. God created the world by means of seven attributes called the Letters of Truth, which are Predetermination, Predetermination, Will, Volition, Permission, Doing and Revelation (*Ismael*, *Ismael*, *Ismael*, *Ismael*, *Ismael*, *Ismael*, *Ismael*). Cabalistic counting plays an important role: the number 19 is sacred. It is found in the numerical value of the letters composing the word *ashd* and *ashd*, *ashd*, *ashd*; the year is divided into 19 months (*Ismael*, p. 146), the months in 29 days (= 361 days in a year). A council of 19 members is to regulate the affairs of the community; each Báb is to pay the tax of one fifth of the value of property which is levied each year on the capital, provided the latter has not diminished meanwhile (p. 188); the believer is pledged to pay it, but neither the spiritual nor temporal authorities may employ force to make him pay it. All penalties are abolished except fines and the interdiction of cohabitation between married people for longer or shorter periods. Absolute freedom of trading and contract is recognized, payment of interest is allowed on goods sold on credit.

Marriage is compulsory after the age of eleven. Divorce is discouraged and a year is allowed the parties to come to an agreement in. Divorced parties are allowed to come together again nineteen times, after one month (p. 184). Widowers and widows are to marry again, the former after 90 days, the latter after 95, under pain of a fine (p. 207). The schoolboy may not be beaten before the age of five (p. 163) and after this age he must not receive more than five blows, some reviving being interposed. Disciples are bidden to be cautious; the laws of Islam against luxury, regarding the use of articles of precious metals and of silk stuffs are repeated (p. 162).

Every year there is a fast of one month (19 days) from the *ashd* of the sun to its setting, compulsory from the age of eleven to forty two. Ablutions are merely recommended without being formally prescribed. There should be a bath in each locality. All women may be seen unveiled and are allowed to be spoken to without restriction by any one, but not chided upon; it is allowable, however, to limit the number of words exchanged to 25 (p. 182).

The places of pilgrimage are the house where the prophet was born and where a mosque is to

he built (p. 140, 146), the place where he was imprisoned and the dwellings of his principal disciples. Journeys are not in a safe advisable except those for purposes of trade; sea-voyages are forbidden except to pilgrims and merchants. Prayer is no longer to be offered up in common except at funerals (p. 200), although preaching to mosques is recommended. There is no longer to be any legal inquiry; new converts are purified by the act of conversion itself (p. 129), and all that they possess becomes pure immediately; water is purify itself and it purifies 19 vessels of the Hajan ought to be read every day and the name of God mentioned 365 times. The dead ought to be buried in crystal whence arises the story that the body of the Bāb was buried in a crystal coffin or rather in brass and polished stone and wear a ring on the right hand with a verse inscribed on the setting "so that the dead may have no fear in the tomb" (p. 132, 137). No one should turn any one's face nor cause his neighbour pain (p. 163). One should answer a question or a letter and carry letters faithfully to their destination (p. 169) and not fear them up. Electrocution, flogging and imprisonment are forbidden (p. 200). Once in every thirteen days one should invite thirteen persons, be it only to drink water. Lugging is forbidden. It is even a sin to give to a beggar.

The division of an estate after defraying funeral expenses is as follows (p. 179): the children $\frac{1}{10}$, the husband $\frac{1}{10}$, the father $\frac{1}{10}$, the mother $\frac{1}{10}$, the brother $\frac{1}{10}$, the sister $\frac{1}{10}$, the teacher $\frac{1}{10}$; the right of inheritance does not extend further; representation however is allowed (p. 190). 'All Shāhismānī is the author of several works, all unimportant: the two *Hayāt* (Arabic and Persian), *Alif Bā*, *al-Hurūf* and of a commentary on the *Sūrat Yūsuf*.

BAB or **ABWAB**, the "Iron Gate" at Derband, (see the latter).

BAB or **MANDAB**, the (ancient) 17 miles broad between the Red Sea and the Gulf of Aden. According to Yāqūt, *Maḥzan*, ii, 630d, Mandab which means the place of calling, or of lament for the dead, is the name of a mountain on the Arabian coast. According to the legend mentioned by him, this mountain was originally joined to the onlying mountains opposite the African coast till a certain king caused it to be cut through. Mandab or Mandam is also however, the name of a harbour, the *Bayat* *harbour* of Foulouy, which at the present day must be looked for in Shāhī Sūd in a neighbouring place. In the early days the desert volcanic island of Perim (Ma'iyūn) which the English have held temporarily in 1799—1801, and permanently since 1857.

BABĀ, (Turkish) "father" is also used as a designation of any old man of the people, in East Turkish it also denotes "grandfather" (*Vakıtnā, Çagat. Sprachstudien*, p. 240; *Sāleḥīnā-Elmānī, Lughat al-Fāhāt*, p. 66). This surname is best known from the story in the 1001 Nights of 'Abū Bābā and the Forty Thieves (French Translation by Galland), of which the Arabic original has recently been discovered (Drazen R. Macdonald in *Journal of the Royal Asiatic Society*, April 1910). Some holy men have borne this name, like Gāfil, Bābā and Vaghl Bābā who accompanied Salih al-Dīn at the days of Timur; a *Shaykh* of the Crimea, Bābā Gīyā, son of Bishkman Gīyā who succeeded his father as *Shaykh* on his death and was assassinated six months later (929 = 1522). Before the introduction of reforms the forty doorkeepers (*kapıdar*) of the imperial harem were called Bābā; their chief bore the title of *Agā Kapıdar* (Rashid de Maynard, *Supplément*, I, 157). The name of Abū Bābā was borne by the heads of the corporations of craftsmen who gave the apprentices the leather apron and the title of *masterman*.

Babā Dagh, a mountain in Adu Minor (province of Alidin, Sanjak of Dersin), in the South of the last named town. Babā Dagh is also the name, among others, of a mountain and town in Roumania.

Baba bāru "Cape Baba" (the ancient *Amos*) a promontory on the West of Asia Minor between Smyrna and Constantinople, 23° 44' long. 66, 39° 25' lat. N., forms the western extremity of Mount Ida. On its flanks rise the market town and fortress of Baba belonging to the Sanjak of Nigla and the head of Adana with a little fortified harbour called Baba Isarık, 4—5000 inhabitants. It was formerly famous for the manufacture of papyrus.

BABA 1214, official name of the market south of Baba Isarık or Baba Baba, chief town of a *kāz* of the province of Adana, Sanjak of Nigla, comprising 3 *kāz* and 34 villages; it has a station on the railway to Adana.

Bibliography: Rashid de Maynard, *Supplément aux Dictionnaires turcs*, v, 1; *AD Daman, Dictionnaire turc*, p. 143; *ST*, same (1375), p. 206, 280; Teiler, *AD*, *same*, p. 20. (Ch. Huan.)

BABĀ BEG, an Uzbek chief of the family of the Keleges, was till 1870 prince of Shahr-nah and had taken part, in the summer of 1868, in the siege of the citadel of Samarkand then held by the Russians. In the summer of 1870 Shahr-nah was conquered by the Russians under General Adomov. Babā Beg led to flee with a small body of those faithful to him, first to the upper valley of the Zhetysay then to Ferghana where he was seized by order of Khān Khodiyar and handed over to the Russians. An annual pension of 3000 Koubits was granted him in Tashkent. After 1873 he entered the Russian service, took part in the same year in the expedition against Shokrad, and the following year in the end of the campaign received the rank of Major. He afterwards lived in Tashkent till his death which took place shortly before 1900.

(W. RATTNALL.)

From certain differences in style this latter work must have been written down from the author's dictation by three successive scribes. The text has been published by Uminski (Kashan, 1857) from a copy made by Kehr in 1737. A manuscript which belonged to Sir Salar Khan of Lucknow had been reproduced in facsimile by Mrs. Annette S. Beveridge (*Gleanings of Europe* Vol. I 1905 with two indices). It was translated into Persian by 'Abul al-Rahim Mirza Shihab, son of Bahān Shihab (1890) and this version was translated into English by J. Leyden and W. Easton in 1826. The French translation by Pavet de Courville (Paris 1891) is based on the edition of Uminski. These Monitors show a certain number of lacunae either due to the desire of the author to be silent on certain deeds little to his credit or to the accidents of his adventures.

Beveridge, in *Journal of the Royal Asiatic Soc.*, July 1900 and 1901, Oct. 1905—Jan. 1906 (Separate edition under the title of *The Hyderabad codes of the Bektashis*); P. Toulou, *Bahar und Abu 'Isa* in the *Zeitschr. f. Deutsch. Morgenl. Gesch.*, xxviii, p. 141 et seq.; Lane-Poole, *Bahar* (OxL, 1899); A. Müller, *Islam*, II, 328, 340 et seq., 353 et seq., 373, 403—414; on the Bahānawāh: *Grundr. d. Islam. Philol.*, I, 361—363. (Cf. HODART.)

BÄBL, the designation of the followers of the Bah who however prefer to call themselves *Ahl-i-Bayān*. The preaching of the doctrine began with the sending of missionaries into various Persian provinces [see BÄH]; their teaching, which aroused the protestations of the Shi'a population brought about persecutions which the Bahs resisted in consequence the sect at first of a purely religious character, became a political party. After a counsel held at Herat, Moïse Husain of Faghayeh set out for Herat with at the head of a little troop which could no longer defend themselves in the north and entrenched himself in the monastery of Shihab Tabriz which he turned into a fortress; being besieged by the Royal troops he made several successful sallies but fell in the final encounter. Under pressure of famine the Bahs signed a capitulation in spite of which they were all massacred in 1853 (July—August 1849). In Samarkand the chief (son of the province of Khurasan) the Bahs harried the town and seized the Citadel of 'Ali Murdan Khan but after various vicissitudes was dislodged from this position and overpowered (May 1849—February 1850). Sayyid Yahya Durrani whom the inhabitants of Nafis, discontented with the agents of the central authority called upon to lead them, shut himself up in the ancient fortress there and held out for several days (January 1850). Nafis al-Din Shihab having been wounded by an attempt directed against him by the Bahs (Shah Wali 1268 = 10 August 1852), this was the signal for a general persecution of the Bahs which extended throughout the Empire. Mirza Yahya Kān remained quiet; Azal who had declared himself the successor of the Bah, left Persia and retired to Baghdad from which town he was brought to Cyprus by the Turkish government and detained in Famagusta. His half-brother Mirza Husain 'Ali entreated Kān 'Alah, arrested, then acquitted after an enquiry, obtained permission to go on pilgrimage to Karbala and stopped in Baghdad

[see BÄH ALLAH]. More recently Shihab Kān was executed at Ispahan on the charge of belonging to this sect as was Mirza 'Abbas al-Kabuli (October 1888). Persecutions took place at Bushah and at Nadjesbad. A certain number of Bahs took refuge at Ashkhabad in Russian territory where they were allowed to build a mosque. The schism between Shihab Azal and Bahā 'Alah divided the Bahs into two sects, the Azalis and the Bahā'is; the former, who represent the pure doctrine of the master, are now but few in number, the latter who look upon the Bah merely as the successor of Bahā 'Alah are spread throughout the world and besides Persians have made some converts among Europeans and Americans.

BÄBL, the ancient Babylon, situated on the Euphrates in 32° 41' 30" North and 44° 25' 30" East of Greenwich.

The ancient Babylon had even in early times a much greater importance for Islam, as for us, than the town which still existed in the earlier Islamic period. All that the Muslims know about Bābil, comes from three sources, Jewish, Persian or Christian. It is not quite clear whether the information, which can be traced to the Bible, has come through the Jews or the Christians.

Even Adam and Shāh and Bābil are placed in Bābil after the expulsion from Paradise and as capital originally is also ascribed to the Byzantine Babylon-Babylonia in Old Cairo (Yāqut, I, 45) according to the Thāra. After the fall of Nūh b. Mūsā b. Uthmān and his sons settled in Bābil (the Khawāshir, p. 77; Tabari, I, 217—Yāqut, I, 442, 447). Bābil is after Hārān the second town that was built on the earth (Ibn al-Fākih, p. 496). The Tower of Bābil is ascribed to Nimrod and the tower is called 'Majdal', Palace (Tabari, p. 436). By the confusion of tongues God scattered the sons of Nūh from Bābil, the etymology of the name Bābil connected with this is also known (Gen. 11, 9 (Ibn Kāsim, p. 108; Mas'ūdī, *Tamdh.*, p. 197; Jāqut, a. v.). Nimrod the King of the first king of the earth, the first to commit murders and who built the first canals, had his tomb in Bābil (Ibn Khawāshir, p. 77; Ibn al-Fākih, p. 109; Tabari, *passim*; Jāqut, p. 101, 880; Mas'ūdī, *Tamdh.*, p. 94, after the Thāra, p. 103, 105, *Mas'ūdī* *passim*). His contemporary was Hārān, born in Hārān and brought with his father as a child to the land of Bābil where Labān lived and Hārān married and then departed (Tabari, I, 252 et seq.). In spite of many divergences from the Old Testament account this must be regarded as of Jewish origin as well as the accounts of the later period of Babylonian history. Babylonians who destroyed Jerusalem and led the Jews into captivity in Babylon, lived in Bābil (Ibn al-Fākih, p. 215; Tabari, I, 692; Mas'ūdī, *Tamdh.*, p. 105, 106; Yāqut, I, 448). That Cyrus the Mede slew Bālbāhar b. Awshamzādah b. Bālbāhar may also have come from Syriac sources (Tabari, I, 216). The Baby-

theatre has come to light. For ages the ruins have been used as a quarry as early as Herodotus, as building material. Babel especially, which this reason is called by the natives *Abgillib* (*Abgillib*) or also *Abgillib* (according to Herodotus, the "Overturned"). Although the situation of the ancient Babylon has always been known to scholars, it had to be rediscovered by western knowledge at the end of the eighteenth century.

Streck, *Babylonien und Assyrien*, Geographien, passim; on the scientific rediscovery of Babylon: H. V. Hilprecht, *Explorations in Upper Mesopotamia during the XIXth Century* (Baltimore, 1905); the excavations were treated in those of the German Orient-Gesellschaft, in the *Mitteilungen der D. O. G.* since 1890. (KURT HARTMANN.)

BABYLON (Bābālyūn), a town in Egypt. The name Babylon of the medieval Egyptian town in the neighbourhood of the modern Cairo is according to Cassiano the Greek form of an ancient Egyptian *Wabylon* through assimilation to the Arabic *Babylon* which was familiar to the Greeks. This assimilation is not quite free from objections but there is no doubt that some ancient Egyptian place-name resembles it. By the name it meant the ancient town and fortification of the Greeks which — situated on the borders of Upper and Lower Egypt — commanded the interior. Even to the present day portions of the ancient fortification have survived in the *Kast al-Shara*. The situation and importance of this place was much more important in ancient times as the Nile then flowed farther to the East. From the location farther on the conquest of Egypt by Achaemenes. With the fall of Babylon (23 B.C. 11, 20 = 9 April 648) the name of Egypt was sealed. The camp of the Arab Army which developed in later times into Fostat Mir was then pitched near this place, important from the military point of view, and the ancient fortification made use of. As the name known from papyri, Babylon and Fostat were still distinguished at the end of the first century. In Fostat lived the Muhammadans, here their *Khaj* were marked out. In Babylon were the great *canon-monasteries* and the seat of the administration. The arsenal on the island of *Roda* which is also mentioned in papyri, was closely connected with the fortress. The original distinction between *Fostat* and *Babylon* was naturally soon lost, the name Babylon fell not at use among the Arabs and only among the Copts, its application by the latter being extended, for the Copts occasionally used Babylon to describe the whole of the great series of towns from *Kast al-Shara* through *Fostat* and *Cairo* to *Marjuth-Hellipolis*. This usage then spread in western Europe. This is why Babylon with varying orthography appears in the literature of the numerous *commercial* centres between Egypt and the western states, which have been published by Amari. The same may also be found in the contemporary literature of Europe as in the letters for example in *Montevideo* and *Rome* when following historical documents call *Sablon* "Sablon al-Babylon".

BADA (A.), appearance; in the dogmatic sense: the intervention of new circumstances which bring about the alteration of an earlier divine determination. (Hoy gives the term too with a significant Arab name *al-Mishar* de *al-Mishar*, 287, translating it "unstable of the Day"). Three sorts of *Bada* are distinguished (*Shukran*, ed. *Carleton*, p. 110) according to the word refers to the knowledge, the will, or the command of God (*al-Mishar*, I, *al-Mishar*, p. 100). The possibility of *Bada* in opposition to the very divergent orthodox Sunni doctrine, always dealt with in the chapter on divine knowledge (*Ilm*) in the textbooks of Shi'ite dogmatics, in which however it has found no authentic statement. In its widest conception, which includes the hypothesis of the mutability of the divine will, it is taught only in the ultra Shi'ite sects (*Madh'ib*); the modernist *Isma'ili* schools are careful to exclude the mutability of divine knowledge or at least to give it very *restricted* expression (see below). The former could quote the doctrine of the Shi'ite *Madh'ib* *Madh'ib* *al-Bada* (*q. v.*) according to which God's knowledge only appears on the realization of the object; that which does not yet exist (*al-Mad'ar*) could not be an object of his knowledge, this follows as a consequence of things as soon as they become phenomena (*al-Mad'ar* *al-Bada*, *al-Mad'ar* *al-Bada*, *al-Mad'ar*, *al-Mad'ar*, 1328—1910, ed. *Muhammad Badi*, p. 49), subtleties which are also treated of in modern times in the religious philosophy of the Shi'ite *Shukran* sect (cf. *Revue des Études musulmanes*, 1910, XI, 135—138). This conception leaves room for the admission of God's knowledge being in correspondence with our experiences and of His changing a fixed resolution. The Islamic historians of the sect agree that the doctrine of *Bada* was first propounded by *Mughfir* (*q. v.*) and then became the doctrine of the Shi'ite faction of the *Kababiyas* (*Abd al-Badi* I, 20 30; cf. *Ahmad b. Yahya b. al-Murad* in *al-Murad*, I, 100; cf. *Ahmad b. Yahya b. al-Murad*, *Thalagat* in *Islam* (Honn, 1910), 124). *Abd Allah b. Nawf* is occasionally said to be the originator of this doctrine (cf. *Wellhausen, Die Religionen des Judentums*, p. 88, 1). When *Mughfir* had to defend himself in the battle, which was to decide the fate of his enterprise, against the superior forces of *Mughfir b. al-Zuhair*, he (or *Abd Allah b. Nawf*) announced that God had revealed to him that he was assured of victory. When the alleged *Bada* was proved false by his defeat, *Mughfir* (or *Abd Allah*) said referring to *Sura* 13, v. that something had intervened (*al-Mad'ar*) which had caused God to alter his determination after the defeat of the Shi'ite community this view had to be

which born intellect and originality could be traced. This may be inferred from *Diehl, Frie Opuscula*, ed. van Vloten, 183, - (correcting (لأل) to (لأل)).

Biālogonjāy: Abū Isḥāq Muhammad al-Kulnī, *al-Ughat min al-Djāmi' al-Kabir* (Bombay, 1302 H.), 82-86; *Al-Mawḥi al-Kabir* (Lahore, 1328-1330 H.), 1, 110-121 (this utterance, and *Biālogonjāy* of the most moderate Shī'ite authorities on *ḥādī* are here quoted in full); I. Pridmore, *The Heterodoxy of the Shī'ites according to Ibn Ḥazm* (New Haven 1909 = *Journal of the American Or. Soc.*, 1910, 71. (Göttingen).)

BADAJOS, at the present day, the fortified capital of the province, the largest in Spain of the same name, the southern half of Spanish *Kutnamāra*, on the left shore of the Guadiana before its bend to the south on the Portuguese border (130,000 inhabitants). The identification of the town with and the derivation of the name from *Ba* (Juba) Augustus or Colonia Pacensis is without foundation and has arisen from an error of local patriotism as the latter certainly is *Beja* in Portugal (Arabic *Baja* = *Beja* from *Pacem*). The identification with the doubtful *Baia* of Valerius Maximus and *Baia* is also uncertain. Its first certain historical appearance is under the Arabic form *Bajalān* (which is the original of the modern Spanish form) as the strongly fortified base of the house segregate the *Marwa* (363 = 875) during his revolt against the Caliphate of Cordova (Muhammad II). It was only regained from his vassal son by Amīr al-Rahmān III in 318 = 930 (*Rawd*, ii, 105 et seq.; 140, 145, 213 et seq., 176). The new town founded by the Arabs at *Bajalān* (Arabic *Bajalān*, 1731 *ḥudūd* *al-Andalus*) gradually and the place of *Colonia Augusta Emerita*, Arabic *Marida* = *Merida* 140 miles to the east along the left bank of the Guadiana which was sinking into insignificance especially after it became on the decline of the Caliphate of Cordova, the brilliant capital of the Almoravids [p. 9.] who united the greater half of Northern Lusitania into an important Kingdom 1022-1094. After the defeat at al-Zallāḡa = Sacurima, northwest of Badajoz, in 1086 so fatal to the Christians, the principality of the North-western part of Badajoz like the other *Reyes de Taifa* also fell into dependence on the Berber al-Murāwids who had hastened to their assistance from Morocco till in 1094 it was incorporated by this more powerful dynasty and became a part of the Spanish Province or dependence of the Almoravids of Northwest Africa and of the Almohads who succeeded them. In 1165 Alfonso I. Henriquez of Portugal took Badajoz by surprise, but it was taken from him again by Ferdinand of Leon who afterwards gave it back to him. Badajoz again became an Almohad possession and it was not till 1230 that it was finally conquered by Alfonso IX. of Castile and Leon. Badajoz was the birth place of many Arab scholars, the most prominent of whom is Abū Aḥmad ibn Muhammad al-Bajalānī al-Bajalānī who died 521 (1127) cf. Brockelmann, *Gesch. der arab. Lit.* i, 427, where 444 (1052) is to be read; I. Pridmore 639.

Al-Bajalānī: Yāqūt, *Ma'ājam*, i, 664; *Ma'ājam al-Bajalānī*, i, 150, iv, 344; Dory, *Histoire des Musulmans d'Espagne*, ii, 183 et seq., 207,

(C. F. NIXON.)

BADAKHSHAN, frequently written *BADAKHSHI*, *BAKSHI*, is the spoken language also sometimes called *BADAKHSHI* (with Arabic plural ending) a mountainous land on the upper course of the Amu-Darya or more correctly of the *Ḥamā*, on the left bank of this stream which is the source of the great river; from it comes the adjective *Badakshian* or *Badakshi*. J. Marquart (*Reise nach Turan*, p. 279) explains the name as "land of Badakhsh or Bakshish, a kind of ruby which is said to be found only in Badakhshan at Kaktā". It is very probable however that *Badakshian* (from which comes the French *Bakhs* and the English *Bales*) originally denoted the land as a dialectic form for *Badakshian* and was later transferred to the kind of ruby. Vāḡ (ed. Wüstenfeld, i, 528) states that the form *Badakshian* was the form for the name of land more commonly used among the people; Marco Polo also gives this form. The names from which the rubies come are found outside of Badakhshan proper — in *Shughnan* on the right bank of the Amu-Darya as is testified by a ruby a traveller as Marco Polo; this however has no historical times usually been noted with *Badakshian* under one ruler. *Tuḥfat al-Awāḥid*, Pers. also 23) of *Badakshian* were famous in the middle ages throughout the whole Muhammadan world; in Persian poetry the expression "*ḥalāḥ* *Badakshian*" or "*ḥalāḥ* *Badakshian*" is frequently used in a figurative sense for wine or the lips of the beloved, in Central Asia this expression is widely known even amongst the common people. The district with the mines in question belongs now to the territory of *Bukhara* under Russian rule; the mines however are still exploited in the same primitive fashion as in former days and have not as yet attained any importance in the European jewel trade.

Badakshian is watered by the *Kokta*, a tributary of the Amu-Darya, called the *Khizmat* in the *Ḥudūd al-'Alam* compared in 372 = 983-993, cf. on this work J. Marquart, *Central-Asien und Ostasien*, *Strassburg*, p. 212; unique manuscript in St. Petersburg) from the economic point of view, only the valley of the *Kokta* and its tributaries have ever been of importance — here were the towns of *Badakshian* — probably not far from the modern capital *Paidahat*, first founded in the 17th century — *Ḥāḥ* and *Khizmat*; the two latter which are already mentioned in the earliest Arab accounts have retained their names to the present day. The lapis lazuli of *Badakshian*, famed in the middle ages as now, came from the mines on the upper course of the *Kokta*; the trade in these stones is at the present day a monopoly of the Afghan government; they are exported exclusively to India. Besides these, iron and copper mines are found in *Badakshian*.

The name *Badakshian* is first mentioned in Chinese annals of the sixth and eighth centuries A. D. in *Hsiao-tsang* in the form *Pa-to-tsang-na*, of which according to Schlegel the ancient pronunciation was *Pa-to-tsang-na*, in the *T'ang-shu*, *Pa-to-shan*, in the encyclopaedia *Pa-to-shan*, *Pa-to-shan*. The country is described by the Chinese as part of *Ta-ho-to* (*Tukharistan*). The Arabs likewise use the name *Tukharistan* in two

meanings: Tukharistan in the narrower sense was only the land between Balkh and Badakhshan, in its wider application it comprised all the lands east of Balkh on both banks of the Amu-Darya. The name seems to come from the Tukhara who first appeared in the second century B. C., the conquerors of the Greco-Bactrian kingdom. In the fifth century A. D. these lands were conquered by the Hephthalites (the Kephthalites of the Byzantine writers). Again in the anthology composed by 'Ardi in the sixth (vi) century we find a story according to which a king of the Hephthalites gave his and the lands of "Djirm and Badakhshan" (Barthold, *Turkistan*, I, p. 91). The kingdom of the Hephthalites was overthrown by the Turks in the seventh century; at the time of the last Arab conquest the ruler of Tukharistan in the latter sense according to Arab and Chinese sources, bore the Turkish title *Yabghu* (arch. *Yabghu*); the princes of various lands, amongst them the prince of Badakhshan, were his vassals. We have no accurate information as to when and how Badakhshan was conquered by the Arabs and later introduced; the name of the country is not once mentioned by Tabari; amongst the events of the year 118 (736) mention is made of a campaign against "Mishin in the land of *Shabghaya*" and other places (Tabari, II, 1230 et seq.). According to Yaqubi (ed. de Goeje, p. 258) *Djirm* in Badakhshan was the frontier town of India in the trade route (the *Wakhjan*) to Tibet. The same author also mentions an otherwise unknown Turkish prince *Khwarizmshah* (this is the correct reading) "King of *Shibin* and Badakhshan". Yaqubi (ed. de Goeje, p. 278) describes Badakhshan as "the territory of Abu 'l-Fath"; probably the prince Abu 'l-Fath al-Fath is here meant whose son Abu Nasr is said according to Barthold (*W. Barthold, Turkistan*, I, p. 60) and Yaqubi (I, 1023) to have fought with *Khar-Beg*, the Samanid Governor, (died 340=951-952; cf. Ibn al-Athir, ed. Varnhagen, VII, p. 157 and 270) in the neighbourhood of Balkh. Nothing else is known about the political affairs of Badakhshan in this period. In the eighth century the decline of the Samanids was brought to Badakhshan by the poet *Nasir-i Khawar* and disseminated there with success his tomb is still pointed out on the upper valley of the Kohistan; his teaching has survived to the present day in Badakhshan and the adjoining lands. In the second half of the ninth century Tukharistan in the wider sense (with Badakhshan) was under the sway of a branch of the Ghazni house which had its capital in Herat and like the other branches of this dynasty was conquered by Muhammad Shah of Ghazni in the beginning of the tenth century.

Badakhshan was not affected by the invasion of the Mongols and remained till the sixteenth century under the rule of its native dynasty. The tradition of the descent of this ruling family from Alexander the Great is first mentioned by Marco Polo and is often mentioned later by Muhammadan writers. The daughter of the last ruler is credited by Muhammad Jaldar (*7c 1000* *Shah*, p. 203) with the statement that her ancestors had ruled Badakhshan for 1000 years. Her name and her successors only succeeded in obtaining an acknowledgment of their suzerainty after severe fighting. The land was not incorporated in the kingdom of the Safavids till the time of Timur's

great-grandson Abu Sa'id. The last ruler of the Sultan Muhammad Badakhshi had before this abandoned the observance of the prescriptions of Alexander the Great (*Faris al-Shah*) and composed a Persian *Shah* under the pretence of last (*Faris al-Shah*, p. 247). He submitted without resistance to the army sent by Abu Sa'id and betook himself to Herat; his son had to flee to Kashghar, Muhammad took a son of Abu Sa'id was appointed Prince of Badakhshan. Soon afterwards the prince returned from Kashghar; Abu Sa'id was expelled; Badakhshan had to be conquered for which Muhammad Abu Sa'id and Shah Sultan Muhammad associated in 871 (1406-1407) (*Faris al-Shah*, ed. Stewart, p. 233). The date must therefore have been sent through in the inscription discovered by the English in 1885 according to which this prince built a stone bridge in the year 884 (1470-1480) (*Faris al-Shah*, p. 247). Abu Sa'id was afterwards driven out of Badakhshan by his brother Sultan Mahmud, Prince of Herat. The conquest of Herat by the Tatars in the beginning of the sixteenth century Badakhshan remained united with Herat. A military movement led by Muhammad Shah and Zahir Razi 1500 in Badakhshan against the Uzbek conquerors; a fortress on the left bank of the Kohistan which still bears the name *Khwa-i Zahir* (source of victory) given it by Muhammad Shah is mentioned as the centre of the movement. The Uzbeks were driven back; the Timurid *Sayyid Mirza* (brother of Zahir) who had been called upon by the rebels was recognized in Badakhshan as ruler about the end of 910 (corresponding 1505) but could not come to an agreement with the leaders of the movement and was driven out after two years. In the year 913 (1507-1508) Sultan Wab Mirza, usually called *Mirza Khan* or *Khan-Mirza*, son of Sultan Mahmud Mirza, came to Badakhshan with the consent of Herat and was received in *Khwa-i Zahir*. Muhammad Shah had been slain shortly before by his companion Zahir; Zahir who wished to retain the power in his hands even after the arrival of the new ruler was unconsciously put out of the way by assassination. A short time afterwards Shah Razi al-Shah the chief of the *Khwa-i Zahir* of Badakhshan appeared in Badakhshan, gathered the followers of his doctrine around him and brought a part of the land under his sway; he was killed soon afterwards in the spring of 1509 and his head brought to *Mirza Khan* at *Khwa-i Zahir*. *Mirza Khan* died in 920 (1520) being still ruler of Badakhshan, whereupon Zahir adopted *Sultan* the son of the deceased ruler, who was left without a guardian and in place of him sent his own son *Hamayun* to Badakhshan in 925 (1523-1524). *Hamayun* was called to India by his father; after an unsuccessful attempt on the part of *Sultan Khan* the ruler of Kashghar, to bring the land under his sway, *Sultan* was recognised as Prince of Badakhshan by Herat as well as by *Sultan Khan* in 1530. *Sultan* reigned till 983 (1575), was driven out in the first half of that year by his grandson *Shahruh*, went to India and thence to Mecca but later returned to his native land. In 1585 Badakhshan was conquered by the Uzbeks under 'Abul Allah Khan; *Sultan* and *Shahruh* had to take refuge in India but returned afterwards and made several attempts to dislodge the conquerors. Even as late as the beginning of the twentieth century a revolt

AL-BADĪ AL-ASTURLĀBĪ, *Ḥakīm al-Ḥisāb* A. AL-Ḥisāb A. AL-Ḥisāb (also Yūsuf) AḤD L-KĀSĪ, a distinguished Arab scholar, physician, philosopher, astronomer and poet, but especially eminent in the knowledge and construction of the astrolabe and other astronomical instruments. The date of his birth is unknown; in the year 320 (1116-1117) we find him in Ḥisāb (sic) friendly terms with the Christian physician Amr al-Dawīd b. al-Tīmūdī. Later he lived in Baghdad and is said to have made a considerable fortune by his profession under the Ḥalīf al-Mustashīd. According to Abū Ḥāshim astronomical observations were made under his direction in 324 (1130) in the palace of the Ḥalīf al-Mustashīd in Baghdad; probably the "Ḥalīf al-Mustashīd", composed by him and dedicated to Sultan Abū Ḥāshim Muḥammad b. Muḥammad (1118-1131), were a result of these observations. He died in Baghdad in the year 334 (1139-1140) and according to Abū Ḥāshim, was only apparently dead. As to his efforts in the domain of poetry, according to the Ḥalīf they were noble and beautiful, according to the Ḥalīf al-Mustashīd they bordered on the sublime and ludicrous; the latter and the Abū Ḥāshim give some specimens of the latter of them. Besides a selection of his own poems he published a selection of the poems of the Ḥalīf. In one volume dated 1141 he published a selection of the poems of the Ḥalīf.

We must not be led astray by the praise bestowed by the Arab biographers, notably Ibn al-Kāfī, on al-Badī al-Asturlābī and appreciate him too highly. The historians and biographers of the thirteenth century had too little knowledge of mathematics and astronomy to be able to value at their proper worth the really remarkable achievements of the masters of the art in eleventh centuries. In these sciences they therefore easily fell into the error of exalting the talents of scholars who were nearer them in point of time, unduly and at the expense of those of the golden age of Arab science: neither al-Battānī, nor Abū Ḥāshim nor al-Badī al-Asturlābī although they have earned a high enough degree

BADĪ AL-ZAMĀN "wonder of the age", a title of honour given to the Arab writer al-Ḥamīdī (q. v.).

BADIL (A.), "Equivalent", "Equivalent", (See also 41.)

BADĪS AL-ḤAMĪDĪ A. AL-ḤAMĪDĪ, called AL-MUẒAFFAR (the victorious), a Berber Zīrid, cousin of Badī al-Zamān (q. v.), King of Granada (439-465 = 1038-1073), a blood-thirsty tyrant and despot, obtained the sovereignty of Granada by the help of his clever Jewish vizier Samuel ben-Nagid (Samuel ha-Levi ben Joseph ben Nagid, arab. Isma'īl ben Nagid) after the death of his father Ḥabīb and the voluntary withdrawal of his younger brother Is-

ḥāq who was protected by a powerful party in the Kingdom. He at once sought to secure his position by murdering various opponents such as the Slav Zuhayr, Emir of Almería and his rival Ibn al-Balā. A war lasting many years, which he waged with the Ḥabībids of Seville over the sovereignty of Andalus, ended indecisively. Allied with the Berber prince Muḥammad al-Ḥamīdī and Isma'īl of Málaga he defeated the Ḥabībids (Isma'īl, the son of Ḥabīb al-Ḥamīdī Muḥammad I, who was besieging Carmona, at Seville 431 = 1039) but he could not prevent the recovery of Seville, the Ḥabībids al-Muḥammad (q. v.) obtaining possession of several small Andalusian Berber states such as Mérida, Huelva, Huelva, Seville, Almería and in the end Carmona also (439-1067) though he soon recovered Málaga, which he had seized after the fall of the Ḥamīdīds in 449 (1057), after its capture by al-Muḥammad the son of al-Muḥammad. To avenge the murder of a number of Berber nobles by al-Muḥammad, Isma'īl resolved to massacre all the Arabs of Granada while in the mosque at the Friday sermon, a plan which Samuel thwarted only with the greatest difficulty. The abilities of this vizier brought the Kingdom of Granada to great prosperity; the capital fortified and adorned with splendid buildings by Isma'īl was the great bulwark of the Berber power in Spain but after Samuel's death in 459 (1066) the kingdom soon fell to pieces. After the death of Isma'īl in 465 (1073) his grandson Abū al-Balā inherited Granada and Isma'īl's brother Tamīm, Málaga.

(H. SCHMIDT.)

BADĪS, AḤD AL-ḤAMĪDĪ A. AL-ḤAMĪDĪ, son and successor of al-Muḥammad, a prince of the Zīrid dynasty, succeeded his father on the 3 Rabi' I, 365 (26 March 998), as governor of Ifriqiya and Central Maghrib. His accession was confirmed by his father-in-law al-Ḥamīd al-Muḥammadī, the Fatimid Caliph of Egypt. He continued the war against the Zānids and after entrusting the government of Tūnis (Tūnis) to his uncle Isma'īl he went against Zānī b. Ayya, sovereign of Fās, his other uncle Isma'īl who was defeated at Amdī, Isma'īl then advanced in person and his adversary retired before him but while the former was occupied in the West, Fāzīl b. Sa'īd, governor of Tūnis, rebelled against him and with him Isma'īl and Zānī the grand-uncles of Isma'īl, whom Isma'īl had offended by his preference of younger relatives in filling the offices of state. Isma'īl and Zānī were defeated by Isma'īl in 391 (1001), Zānī fled to Spain where he founded the Zīrid dynasty of Granada. Meanwhile Isma'īl had overthrown Fāzīl, who, after besieging Nāghā (Nāghā) in vain, had turned his attention to Kairuān, and defeated him at Wād al-Aḥlā (to Wād al-Aḥlā 389 = 23 Oct. 999). Fāzīl fled through the desert and found refuge in Tāpūl where he died in 400

(1009-1010) Bādī (then marched against this town and received the submission of Warā, brother and successor of Fāfāl. While these events were taking place, Hammad founder of the Kalā of the Band Hammad, had rebelled in anger at being deprived of the governorships of Tifla and Constantine. Bādī put himself at the head of an expedition against him and defeated him on the borders of the Shālīf, whereupon Hammad having lost army and treasure, succeeded in fleeing to the fortress (al-Kalā) which he had built. He was saved by the death of Bādī which took place in the night of the 27th or 30th of Rabi' 7-Kāda 406 (9th or 10th May 1016).

(Ibn al-Battān.)

BĀDIYA, country residence of the Omayyads. The conquering Arabs, accustomed to the free life and open air of the desert, required some time to become used to the confinement of towns, frequently ravaged by epidemics; whence their saying "Health dwells in the desert". Some of the Umayyads even had their tents brought up to the desert by the Lakḥmids of Hira who resided there periodically. This repugnance to the town capital was also why the caliphs, especially Mu'awiyā I and 'Abd al-Malik, usually lived outside Damascus. In the desert survived purity of language and of national customs threatened by contact with conquered peoples. The desert was therefore called "the school for princes" and Mu'awiyā readily allowed his son Yazīd to sojourn in it. 'Abd al-Malik regretted not having sent Yazīd I there to improve his habits. We also know that the Omayyads passed a part of the year, preferably the spring, in the desert. Their residence there they called their *ādīya*, from which comes *adadād* "to dwell in the desert." Each caliph — and following his example the members of the ruling house — chose for their *ādīya* a corner in the Syrian desert where they enjoyed the pleasure of spring, the most beautiful season for a nomadic life. The Arabists note the departure of the caliphs to their *ādīya* and their return. Mu'awiyā who used to pass the winter at Sūzra on the shores of the Lake of Tiberias seems to have done without a *ādīya*. The *ādīya* of Yazīd I was in the neighbourhood of Hama; 'Abd al-Malik passed the spring at Bādiya. His successors, especially Yazīd II conceived the tradition. Their *ādīya* are to be sought for preferably in the wilderness adjoining Bādiya. Living in tents they there exercised the splendid hospitality of the ancient Arabs and entertained poets and *wuḥūd*. Sometimes the *ādīya* presented the scene of gay picturesque confusion, that seems to have existed in the life of the Ghaznawids and the Lakḥmids, train for the military escort, more substantial buildings for the ruler and his harem.

Some camps possessed the tents erected along the Roman frontier; others isolated camps, erected *ḥabāḥ* (tents in lines) in the midst of the desert, others again only a simple shelter for hunting from, one of the favourite recreations of this system in spring. In these *ādīyas* they lived with their families and their guards (*shūḥr*). Some of these buildings were adorned with precious marbles, sometimes even with frescoes. The ruins visited by Dr. A. Muhl enable us to fix the site of several *ādīyas* and to reconstruct the whole appearance of these singular spring residences, peculiar to the Umayyad period.

BĀDĪ, *l. l.*, a gift, tax, toll etc.
BĀDJADDĀ, in the Arab middle ages, a small strongly fortified town in Mesopotamia, south of Harran, some distance east of Bādiya situated on the road to Ka's al-Aḥ, with famous gardens. It appears at the present day to be no longer in existence. The Aramaic name (ܒܕܝܬܐ) denotes "house of fortune"; cf. perhaps,

an "Alo-gadda" = "source of fortune" in the Hammurabi and the Gadda of the Tablets Penningtonians in Syria. See thereon Noldeke in the *Zeitschrift f. Deutsch. Morgenl. Geschicht.*, xix, 447.

Bibliography: Yazīd, *Muḥṣan* (ed. W. W. W. W.), l. 453; *l. l.* (ed. de Goeje), p. 174, in which *Bādjadda*, not *Bādjadda* is to be read; G. le Strange, *The Lands of the Eastern Caliphs* (Cambridge, 1905), p. 103.

(Strickland.)

AL-BADJALI, AL-HASAN b. 'ALĪ b. WARRĀD, founder of a sect among the Banu of Morocco, whose adherents are called *Badjaliya*. Al-Bakri states that he appeared there before Abū 'Alī 'Alī al-Shā'ir (n. v.) came to Ifriqiya (before 280 = 893). Al-Bakri came from Nāḥa (Nāḥa) and found many adherents among the Banu Lāma. His teaching agreed with that of the Khawāḥish but he asserted that the Imam belonged only to the descendants of al-Ḥasan. So al-Bakri and Ibn Ḥanbal state in opposition to the *Ḥawāḥish* (ed. de Goeje, 65), who says that he was a *Ḥawāḥish*. He recognised the Imamate of Muḥ b. 'Uṣayf, a descendant of Ḥanbal. The *Badjaliya* were afterwards conquered and exterminated by 'Abd Allāh b. Yūsuf.

BĀDJARMĀ, or *BĀDJARMĀ*, name of a district east of the Tigris between the lower Zab to the North and the Qadāb Hamrān to the South whose chief town in the middle ages was Karkāb (Syr. Karkāb de Beth Nūḥ) during the caliphate it formed a district of the province of Mosul (cf. Ibn Khordādhbeh, 97, 2). *Bādjarmā* is an Arabic rendering of the Aramaic term (ܒܕܝܬܐܝܪܡܐ) while *Bādjarmā* goes back to some Middle Persian form of the name of the

The usual cry with which they invoke the saint's help when their boats happen to fall in danger is "Allah, Nahr, Pant Mir, Badr, Badr, Badr" (God, the Prophet, the Two Saints, Badr, Badr, Badr). It is very probable that the Syrian mariners have borrowed the idea of "peopling the waters with saintly spirits", hobbling away over them, from the ancient Hindus.

After the latter's death in 372 (983) Badr inclined towards Fakhr al-Dawla and thereby came into conflict with Shams al-Dawla the son of 'Aḥmad al-Dawla. In the struggle he was victorious over the troops sent against him under Karategin in 377 (987) and brought the province of al-Biḥār under his sway. He thereby became one of the most powerful rulers of the time and in 383 (993) received from the Caliph the title *Nāṣir al-Din* wa *Ḥ-Dawla*. In his old age about the year 400 (1009) he quarrelled with his son Ḥafṣ who made him prisoner. On being free again he was able to gain power once more with the help of the Ḥayd *Badr* al-Dawla, after the troops sent to his assistance under Fakhr al-Mulk had taken his son prisoner. Five years later in 405 (1014) Badr was murdered by his own people.

BADR *al-Dawla*, *Salim* *al-Aḥ* *al-Dawla* the *Ḥasanawān* governed the town of Ḥafṣ. He was uncle of *Ḥafṣ* and reigned from 1101 after the latter's death in 316 (1122) but had to retire soon after, when in the following year he sent *Ḥin al-Aḥ* to the Crusaders and his nephew *Badr* b. *Ḥafṣ* advanced against Ḥafṣ in consequence. When in course of time *Zang* became lord of Ḥafṣ the governor *Kutugh* *Abu* made himself so hated by the inhabitants that they again called on *Salim* in 523 (1126) *Salim* thereupon laid siege to *Kutugh* *Abu* who was able to hold out in the Citadel of the town till *Zang* sent troops to his aid. An attempt by the Crusaders to take the town during these troubles was unsuccessful. *Zang* summoned both *Kutugh* *Abu* and *Salim* to al-Muwad (Munad) and reconciled them with one another but did not allow either of them to return to Ḥafṣ.

Bibliography: *Ḥin al-Aḥ* (ed. Tarnberg), vi, 418 ff.

BADR *al-Din*, a title of honor of *Ḥafṣ* (q.v.).

al-DJAMALI, a *Fatimid* commander-in-chief and ruler. The most brilliant *Fatimid* kingdom was on the verge of its downfall under the incapable Caliph *Mustansir* (447-487=1036-1094). The *Seljuks* were pressing forward into Syria, in Egypt the Turkish slave soldiers were fighting with the negro-corps, a seven years' famine was exhausting the resources of the country, all state authority had disappeared in the general struggle, hunger and disease carried off the people, luxury and violence destroyed all prosperity and it appeared as if the *Fatimid* kingdom must disappear in a chaos of anarchy. Then on the

call of the Caliph, the Syrian general *Badr al-Djamali* took command of the government as well as of the army and with great though brutal vigour brought order into affairs again and indeed a second period of splendour in the *Fatimid* kingdom.

Badr was an *Armanian* slave of the Syrian Emir *Ḥafṣ al-Dawla* the *Amir*, whence his name *al-Djamali*. He must have been born about the beginning of the fifth century A. D. for at his death in 487 (1094) he was over 50 years old. Even before he became ruler he had made a great name for himself in Syria. He was twice appointed Governor of *Damascus* but fell into difficulties each time on account of his stringent measures with the pampered troops. He then became commander-in-chief of *Akkā* and in this capacity had to fight against the troops of *Malik* *al-Bakr*. He had an *Armanian* bodyguard for himself and the soldiers he commanded were also to be relied on. He took them with him on being summoned by the Caliph in 466 (1073) to deliver him out of the hands of the despotic Turkish officials. This latter never suspected the reason of *Badr*'s coming to Egypt, fell into the trap prepared for them and were all murdered in our sight. *Badr* thereby became master of the situation. Now followed his appointment as commander-in-chief of *al-Djizirah* (in the popular language *al-Djizirah*), as chief justice, chief treasurer and ruler. The most popular of these titles was the first; the *Ḥafṣ al-Djizirah* is still a common appellation of the *Mamluks* commanding *Caïro* on the spot of which *Badr* built a mosque, a *Mosque* in which according to popular belief at the present day the *Sult* *Ḥafṣ* has buried. After quelling the capital he brought about order to the east then to the west of the Delta. *Alexandria* also had to be taken at once. The task of conquering Upper Egypt was also difficult as the Arab tribes had set themselves up as independent there. In Syria he was not so fortunate. Affairs were un-expected here, and *Damascus* fell into the hands of the *Seljuks* about the end of the year 468 (1076). The *Fatimids* were never to regain it. In the following year the victorious *Seljuk* general *Atab* appeared before *Caïro* but did not have time to collect his troops and drive back the *Seljuks*. In spite of repeated attempts in the years 471 (1078-1079), 478 (1085-1086), 484 (1090-1091) he was not successful in regaining *Damascus* and Syria and at his death only a few towns in the South of Syria were still in the possession of the *Fatimids*. His strength in Syria was weakened by never constantly breaking out in Egypt, inspired by one of his

Of his activity as a governor we know little but he is praised on all sides. Under his rule the annual revenue of Egypt from taxation was increased from about 2 to about 3 million *Ḥafṣ*. These large receipts enabled him to put into practice the lessons learned from the *Seljuk* *Invaders*. *Caïro* was invested by him with its second wall and the three strong city gates which were admitted to this day, the *Ḥaf* *Zawila* (*Zuwayla*), the *Ḥaf* *al-Nahr* and the *Ḥaf* *al-Furṣ*, were built. In *Rabi* 1 487 (March-April 1094) *Badr*'s active and successful career came to its close after he had arranged that his son *al-Aḥ* *Ḥafṣ* (q.v.) should succeed him in all his offices. The Caliph *Mustansir* who had then been reigning for

preter of the Korān, also called Muḥyī al-Sunna and Kẖẖā al-Dīn, a native of Bagh or Baghahār in Khuzestān (1844, i. 695). In Marw al-Rūdī he studied with the Ḥajjī Abū 'Alī al-Muḥsin b. Muḥammad b. Aḥmad al-Mawwāḥidī and did not leave this his second home again and there, over, eighty years of age, in the month of Shawwāl 516 = Dec. 1122, according to others in Shawwāl 510 = Febr. 1127. Besides a collection of *Ḥadīth*, which has not been preserved to us, in which he also noted the opinions of his teachers he wrote the legal compendium *al-Talabāt fī 'l-Fiqh* (v. *Fikrāt al-Kānūnīyyah al-Ḥadīthiyyah*, iii. 212). His commentary on the Korān *Ḥẖāṣṣah al-Furqān*, 12th. in Persia (place and date not stated), 4 vols; printed Bombay, 1309 (1891), 2 vols fol., enjoyed a greater popularity. He compiled a very complete collection of traditions entitled *Sharḥ al-Sunna* (cf. Abtwardt, *Vorarbeiten der arab. Hist. der Kgl. Bibliothek zu Berlin*, N^o. 1095-1096) His love of the Muhammadan world however rests chiefly on his collection of traditions, compiled from the seven fundamental works, the *Maṣābiḥ al-Sunna* in which the traditions are divided in each chapter after a regular plan into *ḥadīth* from Ḥokhmāt and Muslim, excellent, (*ḥadīth*) from the Sunna and quite unusual (*ḥadīth*) and *ḥadīth*; printed Cairo 1294 (1877), 2 vols 1318 (1900). A new edition of this work, the *Maṣābiḥ al-Maṣābiḥ* of Muḥammad b. 'Abdallāh al-Khāṣṣ al-Dīlāwī completed in the year 537 (1336) is still very popular on account of its fullness and practical arrangement; it provides the Muslim, particularly the half-educated with all the other older collections, avoids all the wearisome pomp of the *ḥadīth* and is written with a view to edification rather than learned pedantry (cf. I. Goldziher, *Muḥammed. Studien*, ii. 270, 271). The work has been several times printed in Delhi, Bombay, Calcutta and in Kāran in 1909. Lithographed St. Petersburg, 1898-1899, 2 vols. Translated into English by A. N. Muthowā, Calcutta, 1899. The author himself wrote a *Ḥẖāṣṣah al-Ḥadīth* on it which he completed on the 10th 20, 740 = 22 Jan. 1340, v. Nicholson in the *Journal of the Roy. Asi. Soc.*, 1899, p. 910. A commentary thereon was written, *Ḥẖāṣṣah* *adhera*, by the Ḥājjār al-Hājjārī, died 974 (1366), printed Cairo 1309 (1891), in 3 vols; a Pers. commentary by 'Abd al-Jalīl al-Dīlāwī, died 1032 (1622), has been printed in Calcutta and Chitabā 1251-1259 (1835-1843).

Ḥẖāṣṣah al-Ḥadīth; 12th. Khāṣṣah (Rūḥ, 1899), N^o. 177 = Wustenfeld, 184; Sakhī, *Talabāt al-Sāḥib* (Cairo, 1324), iv. 214-217; Sayyidī, *Talabāt al-Ḥadīth*, xv. 30; 16, *Talabāt al-Maṣābiḥ* (ed. Meuseghue), p. 12, N^o. 35. Brockelmann, *Gesch. der arab. Lit.* i. 263.

BAGHBŪR. (See FACHBŪR.)

BĀGHĒ SARĀI (Turkish "Garden palace") Russian Багъизар, a Tatar town on the Crimean peninsula in the district of Taurus 20 miles from Simferopol, the capital of the district and about the same distance from the sea shore. The town lies in the narrow valley of the Çirk-Su, according to Pallas "Dachnakh Su" = drinking water; the ravine of Salakh tone is an easterly direction to the mountainous fortress now called Çakal-Kal'a ("the fort of the Jews"), the oldest settlement in the neighbourhood of BāghĒ Sarāi. This was the

chief settlement of the Jews (Karaites) in the Crimea during the Tatar rule. Among the Karaites the name BāghĒ Sarāi was preserved into the 16th century. The fortress is first mentioned by Abu 'l-Fida, *Geographie* (ed. Reimund, p. 214) as an abode of the Alans (Aḥ); the name is vocalized "Kirkī" by Abu 'l-Fida; but the meaning (forty men) which he himself gives implies the pronunciation Kirk-er. The name is explained by others as Kirk-ur (forty persons) but on the coin only the reading Kirk-er (forty places) is found. As Saitow remarks, the name is a Turkish popular derivation from the Greek Καλλιστο, Καλλιστο-Γιρ, the founder of the dynasty of the Girys placed his capital at Kirk-er about the year 858 = 1454 (the first cannon struck at Kirk-er in 1454); his grave is in the Salakh ravine. The oldest settlement (now called Kaki-Yurt) was at the valley of the Çirk-Su about 1/2 mile west of the modern town; there are the graves of most of the Khāns of the 16th century. Later the palace from which BāghĒ Sarāi has taken its name gradually became the centre of the town and Kirk-er as well as Kaki-Yurt became depopulated. The palace according to an Arabic inscription on the principal gateway was built by Mangli Giray in the year 909 (1503-1504). In opposition to Kirk-er, BāghĒ Sarāi has always been an open town; even the palace was not surrounded by fortifications. The Polish ambassador Broniewski (1578) described BāghĒ Sarāi as a small town with the stone palace of the Khān, and a stone mosque said to have been built from the ruins of Christian buildings. Another small town Salakh (apparently in the ravine of this name) mentioned BāghĒ Sarāi, a Muhammadan cemetery (apparently a Khāṣṣah of Derakhān) was likewise built out of the ruins of Greek buildings. In the 16th century the town is called Kirk-er only on coins, the name BāghĒ Sarāi appears first in the 17th century; after the time of Isma'il Giray II (1664-1666) BāghĒ Sarāi was the only mint in the Crimea.

On the 28th (19th) June 1736 BāghĒ Sarāi was taken by the Russians under Mänlich, plundered and partly burned; a quarter of the town including the palace, the principal mosque and the library founded by Selim Giray II (reigned four times 1671-1676, 1684-1691, 1692-1699 and 1702-1704) as well as the Jewish mission and its library were destroyed. The town then consisted of about 2000 houses of which about a third belonged to Greek Christians, who had their own church there. Under Salim-Giray II (1740-1743) the destroyed part was rebuilt again in part; in the year 1753 (1740-1743) a mosque was built opposite the palace; books were sent by Sulṭān Mahmūd I from Constantinople for its library; in the palace itself the Khān had a new hall of audience built in the year 1750 (1743). N. E. Klemm, who visited BāghĒ Sarāi in 1769, mentions, besides the palace and the mosque, the mint of the Khān, (on the right of the palace) and the residence of the French Consul which was the best in town after the palace. The houses did not form continuous streets but stood at some distance from one another on which account the town occupied a greater area than was necessary, combining the population.

After the Crimea had been incorporated in Russia in 1783 Potemkin had the palace restored in

1784 for the visit of the Emperor Catherine II. According to Pallar the town then contained 31 stone mosques, 1 Greek and 1 Armenian Church, a synagogue, 2 baths, 16 khāns, 1566 dwelling-houses, 1166 male and 2610 female inhabitants. The Russian Government afterwards had the palace restored in its ancient splendour as a monument of Oriental architecture. As none of the buildings of the khāns of the Golden Horde have been preserved to us, the palace of Bighte Sarai is the only memorial of this art in South Russia, and is famed as the "Tatar Alhambra". In Russian poetry the palace is well known from Pushkin's poem "The Fountain of Bighte Sarai". The archives of Bighte-Sarai, discovered by Prof. Semenov in Simferopol and now included in the Imperial Library in St. Petersburg, (123 bound volumes — all that escaped destruction in 1736) contain many important records; this material has not yet been used in the best advantage by historians.

At the present day Bighte Sarai is an important centre of Tatar industry and Tatar literary activity. The influential journal "Tardjmañ" (Tatar and Russian) is there published by Ismail Muzä Geyrpiev; a large number of Tatar books are printed annually in the printing establishment founded by him.

Ben-nawski (Bronnawski), *Russia aus der Türkei (Asiatische Factaria)* (Cologne, 1503; Leiden, 1630), Russian translation in the *Zapiski Akademii istorii i Druzhestva*, vi. 333 et seq.; 2. Mikhaïl Ernst Kleemann's *Reise* (Leipzig, 1773); French translation, (Neuchâtel, 1780); 3. Pallar, *Bemerkungen aus einer Reise in die türkischen Statthaltschaften des Russischen Reichs in den Jahren 1792 und 1794*, Vol. II. (Leipzig, 1801), p. 26—37. The Arabic and Turkish inscriptions of Bighte Sarai and the neighbourhood were collected in the years 1836—1847 by A. Horvath and V. Doumbrowski by orders of the Russian government and afterwards published in the *Zapiski Akademii istorii i Druzhestva*, II. 480 et seq. Doumbrowski also published a description of Bighte Sarai (*Obzrié Bakhkadra*, Odessa, 1848). On the invasion of the Russians in the year 1736 we have the account of an eyewitness, Captain Maanstein in the *Memoirs Historiques, politiques et militaires sur la Russie*, Mour. ed., Paris, 1800, I. 183 et seq. The most complete work on the history of the Ghay is W. Smirnow, *Krimische skazaniia* (St. Petersburg, 1887; ill. the xviiith century, and Odessa, 1889: the xviiith century). The colus have been most fully described by D. Retowski, *Die Mäuren der Ghay* (Moscow, 1905). Cf. also W. H. Valentine, *Muslim Cities of the Muhammedan World* (Lund, 1911), p. 96—99. On the Archives: 1. The short notice by K. Ibranzew in the *Zapiski Fov. et. Arch. Akademii*, Vol. xlii. p. xviii. (W. Baktunov.)

BAHGHDAD, the name of the largest town in the modern Isā (Babylonia); once the brilliant residence of the 'Abbasids and the metropolis of the Muhammedan world and now the chief town of a wilāya of the same name (formerly a pashalik); situated on both banks of the Tigris in 39° 19' N. lat. and 44° 44' E. l.

IN HISTORY.

The name Bāghdād, usually now pronounced Bāghdād, is undoubtedly Iranian and means "given

by God, the gift of God". In the middle ages a number of variations of this name were in use of which the most frequent was Bāghdād of M. Streck, *Babylonien*, I. 49 and de Sierje, *Journ. asiat.*, Ser. 4. Vol. 3 (1904), p. 159. This pre-Babylonian name was always the one preferred by the people, while the name Madinat al-Salam, also Madinat al-Salam, i.e. "Town of peace (or welfare)" whence the Greek *Βαβυλωνία*, given by the Caliph al-Manṣūr to his new creation, appears to be limited as a rule to the official style (therefore it appears in the coinage). The slangs of Arab scholars on the origin and meaning of this sacred name are very much at variance. Al-Manṣūr probably chose it as a good omen for his new residence.

At the same time a reference to Paradise was no doubt intended (cf. the article Bāb al-Asmā), since Bāghdād thus becomes one of the four places (the other three are Mecca, the Ghay of Damascus and the valley of Bawwa in Persia), which the Muslims describe as "paradises of the world" (*Jannat al-ard*). The Persians at any rate have taken Madinat al-Salam in this meaning, as their rendering of it by Bihisti-Abād = "place (lit. foundation) of paradise" shows. This appellation is chiefly used by them in poetic language, as it also is by the Turks who have copied it from them. Bāghdād was also occasionally called al-Bāghdāda after its founder. A further, not quite clear designation of the town was al-Zawra', "the winding, or overgrown", probably an Arabicised form of an old Iranian word to which a popular etymology has given a new meaning; on the various explanations of this name see Le Strange, *Babylonia*, p. 11; Streck, *Babylonien*, I. 50; Salmon, *Hist. of Babylonia*, p. 94; V. Schwarz, *Die Arabischen-Namen* (Leipzig, 1909), p. 38 et seq.

Bāghdād is very often confounded with Babylon by European travellers in the middle ages and sometimes also with Seleucia and Ctesiphon and appears in their accounts as Babel, Babelonia etc. The erroneous application of the latter name to Bāghdād & likewise confusion of the Talmudic-rabbinic literature of the Babylonian Geonim (in the 'Abbasid period) as well as in the later Jewish authors. Pietro della Valle, who was in Bāghdād from 1616 to 1617, was the first to relate this error, widely spread in his time. Down to the seventeenth century the name Bāghdād was generally known in the West in the corrupted form Babilach (Babylonia).

It is certain that there was a settlement, on what was later to become the east of the city, quite early in antiquity. H. Rawlinson in 1848, J. Oppert in 1855 and Payson and Harper in 1889 found bricks inscribed with the name of Nebuchadnezzar II, which came from a quay on the west bank of the Tigris, still partly visible at present day; cf. H. Rawlinson in the *Exped. Archéologique* (t. v. Bāghdād), vol. II. 234 n. and in G. Rawlinson, *Herodotus* (London, 1852), II. 513; J. Oppert, *Bāghdād, scientif.*, I. 93; Harper in *The Academy*, 1880, N. 877, p. 139. There are the remains of a building, similar to this quay, somewhat below the present town near the Mir Canal. That the name Bāghdād appears on cuneiform inscriptions (under the form Bāghdā) must still be regarded as improbable, as the doubtful place-name which first appears on a

boundary-stone (*ḥudurrā*) of the Babylonian King Merodach-baladan I (1194—1182 B.C.); see Schell, *Mon. et. Pers.*, vi, 1903, p. 38 et seq.) may also be read *Ḥudādā* (on this point see Streck, *Mitt. der Vorderasi. Ges.*, xl, 1911); besides, it is unlikely that a name which is certainly Iranian goes back to an great antiquity. It mentions in the Thamnian inscription, Euting v, 565, suggested by Litman (*Mitt. der Vorderasi. Ges.*, ix, 23) appears doubtful also. On the other hand there can be no doubt that we have two references in the Talmud to pre-Muhammadan Baghdad (as comp. relat. *Ḥudādā*). Cf. A. Berliner, *Weiss. z. Geogr. u. Ethnogr. Babylonien im Talmud u. Midrash* (Berlin, 1883), p. 25. In its probable mention in a Pahlavi text (as *Rakdā*) see Blochet in *Revue de Trévoux*, xlii, p. 170.

According to the Ptolemaic chart, *Ḥudādā* (Ptol. vi, 1) is on the site of Baghdad. The *Erratum* of Xenophon (*Anabasis*, 4, 43) must have been just adjoining the latter town; cf. R. Kiepert in H. and R. Kiepert, *Formae orbis antiqui*, Heft 1, (1910) p. 6.

It would be a mistake to recognise in the modern *Baḡdād* (= Turk. *“Baḡdād”*) *Baḡdād* [q. v.] above *Sassanid* a predecessor of the modern *Baḡdād*, of the same name; this name which has only arisen quite modern times, owes its origin to the custom, of which other examples e. g. *Baḡdād* may be quoted, of naming ruins after important places in the neighbourhood. The name *Baḡdād* is borne by only one other place in the East, Tell-Baḡdād south-west of Uruk-Kish (somewhat below the 37° N. lat.); see Sachau, *Reise in Syr u. Mesop.*, p. 118.

The Arab authors are also quite explicit that al-Mansūr's foundation must not be considered as the entirely new settlement of a hitherto uninhabited district. They mention a whole list of pre-Muhammadan places which had gradually arisen in the area afterwards filled by the ‘Abbasid capital. The most important of these was *Baḡdād*, a village of Christians on the west bank of the Tigris, belonging to the district of *Baḡdāyā* (q. v.); which, probably including the site of the so-called ‘Round Town’ of al-Mansūr, the nucleus of the new capital, gave the latter its popular name. The majority of the more ancient settlements, chiefly occupied by Aramaic Christians, are to be sought for on the southern half of the later metropolis (of the town on the western bank of the Tigris) within the great market quarter, the *Karkh* and its eastern and western vicinity. The following are mentioned as villages of *Sassanid* origin here: *Rayḡwast* (or *Ranawast*), *Sāl*, *Shawwānīya*, *Sūbūyā* (the later ‘Old Town’, *al-Qadīya*), *Wardānīya*, *Wardhāl* or *Wardhālā*. The *Karkh* itself (= Aram. *karḥā* = ‘town’) takes its name from an earlier village here which the *Sassanid* King *Shapur II* (309—379 A.D.) is said to have built. In pre-‘Abbasid times, the small town of *Harthā* some distance north-west of *Karkh* was independent but in course of time it was practically swallowed up by the expansion of the western side of *Baḡdād*. In the northern half of the latter, later the al-Farḥīya quarter, were before the time of al-Mansūr, the villages of *Ḥudādīya* and *Shawwānīya*.

According to Xenophon (*Anabasis*) Achæmenides possessed vast parks in the district of *Baḡdād* (as *Sittake*). This is also true of the later Persian

King. Two such *ḥadīthā* gardens were afterwards built over (the quarters *Ḥudādīya* and *Harthā* al-Farḥīya). Near the mouth of the *Nahr al-Farḥīya*, the *Sassanids* had built a palace, later called *Karḥ*. In their time also a bridge rendered communication with the east bank of the Tigris possible at this spot, where in later times a bridge of boats, led from *Karḥ* to the palace of the Caliph. Another bridge, distinctly dated to be pre-Muhammadan (*al-Baḡdādīya*) spanned the *Ḥudādīya* canal south-west of the *Karkh* gate; on the eastern Tigris, pre-Muhammadan origin is only ascribed to that of *Sūbūyā* (*al-Farḥīya*) on the *Nahr al-Moḥalla*, as well as to the *Muḥallā*, the *Ḥudādīya* settled (under *Chosro*). This name, however, has no connection with the *Ḥudādīya* of *Ptolemy* (v, 19) as not *Ḥudādīya* agrees with the location of *Baḡdād* on *Ptolemy*'s chart (see above). Our Arab authorities also emphasize the fact that what, was subsequently the Muslim cemetery of *Ḥudādīya*, before the time of al-Mansūr, served the fire-worshippers as a burial-ground. The greater number of the Christian monuments of *Baḡdād* which consisted in *Sassanid* times must date back to pre-Muhammadan times. We have direct testimony that the palace al-*Ḥudādīya* of the Caliph on the western bank of Tigris included the site of an ancient monastery, and that a district at the junction of the *Ḥudādīya* and the Tigris showed in later times, by its name of *Ḥudādīya* (= ‘the old monastery’), or what one it had originally been called.

None of these ancient settlements on the site of the later *Baḡdād* attained any political or commercial importance, so that the town built by the second ‘Abbasid Caliph may justly be regarded as a new foundation.

In the East a change of dynasty is very frequently followed by a displacement of the residence centre of power. It was absolutely necessary for the ‘Abbasids in particular to give up *Damascus*, the capital of their predecessors with its Unalloyed associations. For they lay, for one thing, too near the Byzantine frontier and it was too far to the West for a kingdom which stretched from the Mediterranean to the Indian. We can easily understand that the new ruling dynasty would move the centre of gravity of their kingdom from Syria, poor and unimportant, to Iraq, so richly endowed with natural resources, which seemed pre-eminently destined to serve as a connecting link between the Semitic and Iranian worlds, and to undertake all of internationality between the two great divisions of the Muslim world. For apart from the fact that the chief strength of the ‘Abbasids lay in Greece for the troops of *Khuzdān* formed their chief support, it was surely to their own personal interest to shift their capital more to the East, which by its foundation was again becoming of preponderant importance to politics and culture.

Even the *Ḥudādīya* Caliph of the new dynasty, al-Mansūr, had taken up his residence on the *Ḥudādīya*. He deliberately chose neither of the two great Arab towns, *Rayḡwast* and *Karkh* which had been in existence since the *Ḥudādīya* Muhammadan conquest of *Babylonia*, both of which, especially the latter, were inhabited by a turbulent populace, devoted to the cause of *‘Alids*; *Bagda*, besides on account of its southern situation was clearly little suited to be the centre of the kingdom; he preferred

to hold court in al-Hishmīya [i. e.] near al-Ashūr. His successor al-Manṣūr built himself a similarly named residence in some distance from Kufa, but soon forsook it, for the proximity of the Euphrates was disagreeable to him. On his search for a new place, suitable for his camp and for the centre of government, he finally settled on the district on the Tigris above the mouth of the great Euphrates canal Nahr 'Isā, where, as has already been mentioned, there was already a village called Haghdād as well as various other small settlements.

It must be confessed that the homestead which recommended this site to the Caliph is a peculiarly suspicious one for his new capital. It certainly fulfilled its promise. The choice could not have been better. The exceedingly fertile stretch of land between the Euphrates and the Tigris, where they approach one another, and, united by purely navigable canals, form a hydrographic system and, where the Tigris, falling into the Tigris, forms a natural gateway for the easiest ascent to the Iranian highlands, has always been a home of civilisation, indeed, the cradle of ancient Oriental culture as well as anemporium of trade and commerce, of international importance. The capital had another here, Babylon, Seleucia, Ctesiphon; and this site was the main city of the Caliph's journey (7 passages) = 100 miles from its immediate predecessor, Ctesiphon.

The gradual advance of the marshes on the lower course of the Euphrates below Babylon, and the thereby increased difficulty of communication by sea with the Persian Gulf explains the fact, that since the Seleucid period this site for the capital for the time being was always chosen on the Tigris.

Al-Manṣūr laid the foundations of his new capital in the year 145 (763). In the course of four years, a town designed on a central plan was completed by a wholesale levy on Babylonian and extensive resources (100,000 men are said to have been employed); in its midst the palace of the Caliph (called Bab al-Mansūr or al-Kubbat al-Khawāṣṣ) and the principal mosque came to its completion. The different ruins of Ctesiphon furnished the main the quarry for the necessary building material. Around the circular nucleus the town proper was grouped, falling into separate quarters, which soon attained considerable compactness. Apparently because al-Manṣūr soon felt himself somewhat confined in his abode by the rapidly increasing population, and perhaps also did not feel quite secure, he built for himself a second palace, al-Khūṣūd, some years after the completion of the Round Town, to the east of it outside the city walls on the Tigris. Al-Manṣūr is not only the founder of the so-called west side of Haghdād, the town on the right bank of the Tigris; he must also be regarded as the founder of the later, eastern half of the town. In 151 (765) he began extensive buildings in the north of it for his son, Crown-Prince al-Mahdī, of which the chief was the palace al-Khūṣūd.

Al-Manṣūr in no way intended to found an imperial city in Haghdād, his primary intention was rather merely to lay out a camp for his Khurasan troops at some distance from Kufa. For this reason he divided the ground around his town among his relatives, clients and generals

in fact, and did the same in laying out al-Khūṣūd. A list of these fiefs is to be found in al-Ya'qūbī and in al-Buhārī al-Baghdādī.

The history of Haghdād which begins with al-Manṣūr falls into two great periods: 1. The 'Abbāsid period which lasted 500 years, in which Haghdād, with the exception of an interval of 55 years, was always the centre of a great Muhammadan kingdom of occasionally universal extent, and more or less the centre of the intellectual life and the great commercial centre of the eastern East, not only throwing all provincial centres into the shade in this respect, but taking the most prominent place in the civilised world of the time on account of its size, splendour and riches; 2. the period to the present day, from the fall of the 'Abbāsid kingdom. Throughout this latter period, apart from the temporary choice of it as a winter residence of a few Mūḥallabīs, it has always been merely the chief town of a province. As such it was at any rate under Turkish rule long in the fortunate position of being the chief town of the largest and most important Baghdad, equal or next to Egypt. Since the extent of the Baghdad however and therefore its authority was much reduced, the importance of Haghdād has been more and more limited to the sphere of commerce, in which it has retained much of its earlier pre-eminence to the present day. A complete history of Haghdād in its first period as the capital of the Caliph would practically be a history of the 'Abbāsids; here we must limit ourselves to a concise sketch of its development from the earliest point of view of local history.

Haghdād's period of greatest prosperity falls in the century immediately after the death of al-Manṣūr, its more exact in the reigns of his five successors from al-Mahdī to the death of al-Muḥallab (159—218 = 775—833). When al-Mahdī succeeded the throne the capital already covered an area of 5 or 6 miles square. As this Caliph moved his court to al-Khūṣūd, the quarter of the town on the east bank of the Tigris, it soon attained great importance. The aristocratic rich families of the time now settled there at the same time with their retinues of slaves, eunuchs and dependants, numbering thousands, and built themselves huge palaces. The most splendid of these buildings was the pleasure-resort of the very influential and famous family of the Barmaḥites, which, on their sudden fall in the reign of Harūn al-Rashīd, became the property of the ruling house, and subsequently formed the basis of the great complex of buildings of the palace of the Caliph on the east side. At the beginning of the reign of Harūn, which perhaps marks the zenith in the history of Haghdād, the east side was already challenging comparison in size with the west. In the war of succession which broke out, 20 years after Harūn's death, between his sons Aḥmad and Mū'awī, Haghdād had to suffer a siege for the first 14 months. Aḥmad was completely beaten in, in the capital towards the end of the year 206 (821) by the troops of Harūn's son Tahir, the two generals of Mū'awī; while the former cut off the town which was only protected by a barricade hastily put up, Tahir, encamped before the Aḥmad gate, kept the west side in check. Strife between the armies of the hostile brothers, brawl between the soldiers of the garrison and the desperate inhabitants, later-

guns and treachery of all sorts filled the long period of the siege. The west town especially, suffered from the effects of the artillery. The greater part of its northern half (the so-called *Jardiya*) was destroyed. The Caliph at length found himself confined to the palace of al-Khidr on the Tigris. Soon afterwards he was captured while attempting to escape and put to death (in the beginning of 196 = 813) when the siege came to an end. The flourishing capital was reduced for the first time to ashes and ruins; a great fire raged over whole sections of the town and all the government archives were lost; in particular the *wasit* side, which had suffered most damage from this catastrophe never completely recovered, nor did it ever again attain its former extent. In this first siege of, above all the exhaustive account of Tabari (III. 864-925) which is of great value on account of his accurate topographical details, as our oldest authority on such questions; see also Well, *Gench. der Chalifen* II. 190 et seq.; Müller, *Islam* I. 301 et seq.; Le Strange, *Baghdad* p. 303. 306 et seq. The death of Amin aroused great discontent in Baghdad. The *wasit* side of the populace which found expression in this resulted the Abbasid prince Ibrahim b. Mahdi to gain possession of Baghdad and to hold out there for nearly two years. It was not till he found himself betrayed by his generals, that he was forced to hand over both town and government to the Caliph al-Ma'mun.

The two palaces of the Caliph on the west side, the so-called "Golden Gates" in the heart of the central town of al-Mansuri and al-Khidr on the Tigris, had suffered great damage by the siege under al-Amin. al-Ma'mun moved the official seat of the Government to the east side. He took possession of the above mentioned palace of the Basasidides and *wasit* it very considerably. Under al-Ma'mun's successor, al-Mu'tasim (228-237 = 833-842), Baghdad had to cede its predominant position as *wasit* of the kingdom, for a period of 55 years, to the small, hitherto insignificant provincial town of Samarra, 3 days' journey up the river, which had, in a relatively short time, been transformed into a splendid royal residence. The immediate cause of the transference of the court to Samarra (in 231 = 846) was the resentment of the people of Baghdad to the *wasit* policy of the Turkish-Nestorian militia, whose numbers under Mu'tasim had risen to a standing army of about 70,000 men, so that the permanent retention of a large garrison in what had hitherto been the capital appeared to be attended with difficulties. The loss of the court and the government officials does not appear to have done much injury to the development of Baghdad, as it fortunately proved to be only a temporary measure, of not too long duration. Baghdad was ruled in this period by governors mostly of the influential family of the Tahiri.

In this interval, the Samarra epoch in the history of the Caliphate, falls the second siege of Baghdad which occupied almost the whole year 251 (865). When the tyranny of the *wasit* in Samarra became more and more unbearable, and the Turks there were fighting among themselves, al-Mu'tasim fled to Baghdad with the smaller portion of his troops whereas the larger portion, which had been left in Samarra, of the Tur-

kish guards appointed Mu'tasim, cousin of Mu'tasim, Caliph. Mu'tasim had scarcely time to complete a circle of walls running round the whole east and west side of Baghdad when Mu'tasim appeared at the head of his troops and began to reconquer the ancient capital. In spite of the efforts of the *wasit* who defended themselves, from fear of a new Turkish regime of force, with the courage of despair, Mu'tasim on account of his weak and vacillating attitude was finally forced to capitulate on easy terms and to give up all claim to the throne. While the first siege under Amin shattered *wasit* over the prosperity of the west side of Baghdad, the second under Mu'tasim was accompanied by *wasit* consequences on the *wasit* side, the most important quarters of which (Baghda, *wasit* al-Mansuri) *wasit* then destroyed and only in part afterwards rebuilt, *wasit* on this second siege Tabari, III. 1553-1578; Well, *op. cit.* II. 385 et seq.; Müller, *op. cit.* II. 328; Le Strange, *op. cit.* p. 311 et seq. Affairs continued to be unsettled, after, *wasit* as before this siege; with and disorders *wasit* recorded (cf. the years 240 (863), 251 (867) and 255 (869); cf. Well, *op. cit.* II. 381 ff., 402 et seq., 412).

In Samarra meanwhile the situation became more and more unpleasant for the Caliph as he was practically at the mercy of the leaders of the mercenaries. Mu'tasim, the seventh *wasit* of al-Mu'tasim, therefore in 279 (892) finally turned his back on the royal residence chosen by the latter and again made Baghdad the capital of the kingdom. Unmolested by the Turks and Berbers who were kept well in hand by his brother al-Ma'mun, Baghdad resumed the capital without interruption till the decline of the Abbasid dynasty. The fifty years between the return of the Caliph to the ancient capital and the entry of the *wasit* prince are marked by the enlargement on a large scale of the Caliph's palace on the east side; Mu'tasim, al-Mu'tasim and al-Mu'tasim, the three immediate successors of Mu'tasim, displayed the greatest activity in this undertaking. A whole collection of palaces and garden-like areas which, covering a third of the whole area of the east side, was separated from the rest of the town by walls. A circle of new, thickly populated quarters soon grew up around the extensive quarter occupied by the court.

Under the active rule of Mu'tasim and al-Mu'tasim Baghdad again had peace to develop on. Under these two the Turkish troops did not dare raise their heads. But on the death of al-Mu'tasim the *wasit*, inevitable decline of the temporal power of the Caliphate set in. Disturbances, especially mutinies of the soldiers, often accompanied by conspiracies, rapine and rioting increased more and more in the capital and caused its prosperity quickly to decline. (LE STRANGE.)

Affairs improved to some extent when in 334 (945) the Turkic Ahmad Shihab al-Dawla of the family of Buyan took possession of the capital and succeeded to the temporal power of the Caliph which was to develop no less dynasty for over a century. The Buyid prince at first occupied the palace of the former Amir, Mansur, in the northern part of the *wasit*. In course of time he and his actual successor built several splendid *wasit*, which were comprehended under the collection *wasit* al-Mansuri. In that part of the town which had been lying desolate since the

siege of 251. It may be specially noted that 'Adud al-Dawla rebuilt al-Khulā, the former palace of al-Muqaddas, as a hospital. The Shia fanatics of the Bayha-ites gave rise to serious outbreaks, but, while the entire populace of the suburb of al-Karkh on the west side as a rule were in sympathy with them, other quarters of the town were inhabited largely by Sunnis. The Bayhids therefore were never able to take the town in the level it had reached in its golden days though the main reason why their efforts failed, was that after the death of 'Adud al-Dawla in 372 (983), the power of the family was divided and the various ~~branches~~ fought with another, and Bagh-~~dad~~ was ~~more~~ than ~~once~~ involved in the struggle. Anarchy often reigned in the capital, sanguinary battles between ~~Sunnis~~ and ~~Shias~~, between Turks and ~~Iranians~~ were the order of the day and the high took advantage of the unrest to rob and plunder to their heart's content. This state of affairs did not ~~change~~ till the al-Muqaddas, the ruler of the Caliph al-Kā'im bi-Amr Allāh called in the aid of the Seljuks Toghrilbeg who entered Bagh-~~dad~~ in 347 (1055). Some years later in 350 (1059) the revolt of al-Basā'iri broke out. He ordered prayers to be read for the Khalid Caliph so that the 'Abbasid had to leave the town; this was only ~~an~~ interlude however for, when Toghrilbeg returned a year later, ~~the~~ usurper had to quit the town and the authority of the Caliph al-Kā'im was again restored; henceforth the Caliphate ~~was~~ under the powerful protection of the Seljuks. The latter did not reside in Bagh~~dad~~; Alp Arslan ~~once~~ visited the capital, but they appointed a military governor who ~~was~~ to see that order was main-~~tained~~ in the town. ~~Malikshah~~ ~~was~~ ~~not~~ ~~not~~ visit it, which he did on several occasions and in the last years of his life he intended to make Bagh~~dad~~ his winter residence. For ~~this~~ purpose he had the palace of the Bayhids in which he was staying restored and transformed, and built the foundations for a great mosque (Qibla al-Sulṭān) which on account of his premature death was not finished till some years later in 524. In this period there arose in Bagh~~dad~~ as in other towns many madrasas among which the Nizāmiya founded by the famous vizier Nizām al-Mulk in 457 (1065) soon attained a great reputation. The building stood to East Bagh~~dad~~ in its southern part not far from the bank of the Tigris.

The Caliph al-Mu'tadī 467—487 (1075—1094) and al-Mustashir 527—532 (1094—1118) were also distinguished for their love of building. In the beginning of his reign the latter raised the quarter of East Bagh~~dad~~ in which the Caliph lived, ~~the~~ so-called ~~Harām~~ and the adjoining parts of the ~~city~~ to be surrounded by a wall which on the whole is identical with the city wall of Bagh~~dad~~ as it existed to ~~the~~ time of Midhat Pasha in the last century. According to Ibn Hawqal, ed. de Goeje, 164 Note 1 (cf. Ibn al-Aṭṭar ed. Tuschke, II, 300) it was called the Caliph al-Mustashir who built this ~~the~~ in 568 (1173) though it had certainly been begun by al-Mustashir. Ibn Mubārak who describes this wall some years later in 581 (1185) (ed. de Goeje, 229), ~~says~~ that it had 4 gates, viz. beginning on the side next the Tigris on the north: 1. Bāb al-Sulṭān (now Bāb al-Mu'azzaz); 2. Bāb al-Zalziya (now Bāb al-Waqāfi); 3. Bāb al-Jāhiliya (now called up, see below) and 4. Bāb al-Bazāliya (now ~~the~~ al-

Sharāf, (Karakūz Kapı (Kamilik Kapı) in Nisabur).

The last two centuries of the 'Abbasid caliphate were on the whole peaceful ones for Bagh~~dad~~. Of course there were often fires, and now and then as in 466 (1074), 554 (1159) and 614 (1217), disastrous inundations; there were also riots and popular violence and from time to time desperadoes and highwaymen brought about a reign of terror, but only once had Bagh~~dad~~ to suffer a serious siege, in 551 (1157) from the Seljuks Salṭan Muḥammad II. The various incidents of this siege have been related to us by an eye-witness, the famous scribe and historian 'Imād al-Dīn (q. v.) (cf. *Revue* ~~de~~ *l'histoire* *religieuse* *et* *politique* *des* *Seldjucs*, II, 246—255). The Seljuks had finally to retire without having effected anything.

Two of the last Caliphs erected buildings which still survive. The first of these was the Caliph al-Nu'mān b. al-Asad, who restored the Bāb al-Jalbiya in 615 (1217) and embellished it with an inscription which was first made known by Niebuhr and has recently been discussed by Mittherr in the *Zeitschrift des D. M. Gesells. für Mittelasiatische Arch.* XVI, p. 19 and by H. von Soden in *Archäologische Reise in Syrien und Palästina*, *Arabische Inschriften*, p. 36. The last-named scholar has discussed in great detail a remarkable relief which ~~was~~ both spanside of the archway above the ~~the~~ walked up entrance into the tower, which is now called Bāb al-Jalbiya (the Gate of the Tallness). The second ~~the~~ Caliph, al-Mustashir b. al-Asad, was the builder of a Madrasa which according to an inscription published by Niebuhr was erected in 630 (1232-1233). (Cf. *Revue* ~~de~~ *l'histoire* *religieuse* *et* *politique* *des* *Seldjucs*, II, 240.) The building still stands close to the bank of the Tigris at the bridge of boats and is now used as a custom-house. The inscription has almost entirely disappeared and been replaced by a modern one. Another inscription dated 632 (1235-1236) of the same Caliph was on the ~~the~~ al-Khulā, which has now disappeared, to which the famous Minaret ~~the~~ al-Chaṣṣ, still in existence, probably belonged (reproduced in von Oppenheim, *Reise in Mittelasiatische Arch. Gesells.*, II, 240). This building was not erected by this Caliph but only restored; it stands in the centre of the town, to the east of the Madrasa and is identical with the ~~the~~ al-Kar, one of the principal mosques of the city, founded by the Caliph al-Mu'tadī 467—487 (1075—1094). Cf. Le Strange, *op. cit.* 232 ff.

In Muharram 656 (January 1258) Hulaḡa with his Mongols and Turks arrived before the walls of the town and by the 4th Šafar (10 Febr.) the last Caliph al-Musta'ẓir found himself forced to make an unconditional surrender. Ten days later he was put to death with several members of his family while the town itself was plundered and set on fire. As Hulaḡa however wished to retain the town for himself, it was not utterly devastated like other towns; on the contrary Hulaḡa afterwards entered some of the buildings which had suffered most, such as the above mentioned ~~the~~ ~~the~~ al-Kar, to be rebuilt.

The history of Bagh~~dad~~ since the Mongol conquest can only be sketched here in its main outlines. Till 740 (1339-1340) it belonged to the kingdom of the Ilkhāna or Hulaḡids as the capital of the province of 'Irāq 'Arabi. It was during this

period that the famous traveller Ibn Battuta visited the town in 727 (1327); his description (*Travels*, ed. Paris, II. 100 et seq.) unfortunately is for the most part copied from that of Ibn al-Bihar. Hafid Ali Shah Mustawfi's description also belongs to this period (740 (1339)). In 740 Hassan Buzurg [q.v.] appeared as an independent ruler in Baghdad and founded the Lutfiyyid dynasty. He built a Madrasa there which was not completed till the reign of his son Uvais, probably about 758 (1357) and was called the *Madrasa* after a certain Emir Khudjam. The building still exists and the inscription on it have been published, in part by Niebuhr, *III* full by van Berchem, *op. cit.* 908 et seq.

The rule of the Lutfiyyid family lasted till 1410 and during this period Baghdad was twice taken by Timur: the first time in 795 (1392-1393) the town escaped with little damage but the second time in 803 (1401) the population was well nigh exterminated, and many public buildings and private houses destroyed. After the death of Timur in 807 (1405) the *Uyghurid* Sultan Ahmad returned to Baghdad, restored as far as possible the walls destroyed by Timur, but not long after in 823 (1418) he was slain by Kara Yulduz, Emir of the Kara Koyunlu (Turkmen) of the Black Desert. The Kara Koyunlu themselves entered into possession of the city and held it till 872 (1467-1468) when the Ak Koyunlu under Uzun Hasan replaced them. In the year 914 (1507-1508) Baghdad was conquered by the Salween Shah Isma'il and remained under the sway of his successors till 921 (1514). After the Kurdish chief Ulu Ghazi had had the Khawaja send there for a safe space in the name of the Ottoman Sultan Sulaiman I. Shah Tahmasp ~~sent~~ the town from him for the Salween again in 936 (1530). In 941 (1534) Sulaiman I. entered the town, and Baghdad was governed by a Turkish Pasha till the rebel Bekir Sulaiman called in the help of the Safawid 'Abbas I. who took possession of the town in 1033 (1623). The Turks were by no means willing to give up their claim to Baghdad, and in 1048 (1638) it was regained under the personal direction of Sultan Murad IV. On this occasion Murad pulled up the wall of *Tahmasp* (see above) and restored some famous tombs such as that of Abu Hanifa, at the modern village of al-Mu'ayyaz, on the east bank of the Tigris north of the town, and that of 'Abd al-Hadi al-Ghaffar within the town. At this time the fortification of the town had sunk to their lowest ebb and according to the estimate of Tavernier in 1652 it had only 14,000 inhabitants.

Baghdad thus again became the capital of a Pashalik which has sometimes ~~been~~ governed jointly with that of Hama by the same governor. A list of the names of these Pashas is given by Mikulicz and by Hurst, *History of Bagdad during recent times*. The latter brings it down to the year 1247 (1831). During this period the prosperity of the town increased and the number of inhabitants had risen to 150,000 in the beginning of the nineteenth century; after the terrible plague in 1831 only 30,000 houses were left.

In recent years the period of the governorship of Muhiy al-Din Pasha 1869-1872, was a remarkable one in the development of Baghdad on account of the laying of the telegraph line of a horse-railway to Kaspala, by the erection of schools and other useful institutions. He also had the old city wall taken down so that at the present day

all that is left of the old fortifications is a wall-like ridge with a few ruins. He introduced a Turkish steamway line between Baghdad and Hama after the concession for this route (and the Persian Gulf) had already been given to an English Company, the Lychn Sea Navigation Company. Great expectations are centred in the making of a railway to Asla Min and Comanulnople, whereby Baghdad will be linked up with the world's main arteries. Baghdad is already the terminus for trade with all the adjoining countries and also with Persia.

The number of inhabitants in the town and its suburbs is put by von Oppenheim at 200,000, (Cohen: 145,000) of whom about 150,000 Mohammedans, mostly Shi'as. There are also about 40,000 Jews and 10,000 Christians, the latter mostly Catholic and Gregorian Armenians.

A. THE TERRITORY OF THE ANCIENT CITY.

From the preceding historical sketch it is clear that the modern Baghdad on the east side of the Tigris still occupies the same area as in the later centuries of the 'Abbasid caliphate. In those days, however, additional quarters of the town separated from one another by raised areas stretched out as far as the modern al-Mu'ayyaz with the tomb of Abu Hanifa and of many others of the Saints of Islam. There was situated one of the most ancient cemeteries of Baghdad, which took its name from Khawaja, the mother of the Caliph Harun al-Rashid, and where at a later period the tombs of the Caliphs also were. To the south of it lay the old East Town of al-Ruqaya or 'Ahar al-Mahdi with al-Mahdi's palace, and the mosque of al-Ruqaya, one of the principal mosques (*Umayyad*) in the city during the caliphate. The quarters of al-Shumayyis. Dar al-Rai (the Christian quarter) and al-Shahrazur adjoined it on the east and south. In 1000 last-named the Khawaja took up their residence (Dar al-Mamlaka) and the Seljuk Pasha also resided there, whenever they held court in Baghdad. It was here that Malikshah built the chief mosque *Mustafa* al-Sulaym, which has been mentioned above, though not a trace is left at the present day either of this building or of the mosque of al-Shumayyis, although they both survived the Mongol invasion. Three districts covered the area between the village of al-Mu'ayyaz and the modern East al-Mu'ayyaz, which was about half an hour's journey apart. In the modern East Town there were formerly the palaces of the Caliphs (1st al-Shumayyis) originally a pleasure house of the Harunide *Harun* (q.v.) and afterwards of the Caliph al-Mu'ayyaz before he succeeded the throne. It was only after their return from *Spain* that the 'Abbasid caliphs shifted their court here and built ~~several~~ palaces of which the (2nd) al-Fadl was the most prominent. The foundations were laid by al-Mu'ayyaz but the buildings were not finished till the reign of his son and successor al-Mu'ayyaz who was also the builder of the third (in chronological order) the second great mosque of East Baghdad, the *Mustafa* al-Sulaym (cf. above). The *Fadl* stood on the banks of the Tigris and was protected from inundation by an embankment; beside it al-Mu'ayyaz built the *Kutubi al-Din*, (the *Academy*) so-called because ~~it~~ could reach the top by going on the back of an ass up a circular, slowly ascending path. This style of building reminds one of the

according to the seasons. There are two of these; the rainy season which usually lasts four months and the dry season which lasts eight months and sometimes more, to the great detriment of vegetation.

Agirmi is, except in cases of abnormal drought, a relatively fertile country. As it is cultivated sorgho and millet which form the staple food of the natives, rice, grown in the marshes which are formed during the rainy season, beans, and lastly a plant called 'Ojejo' by the natives which is much appreciated by the natives. Corn is rare and reserved, according to Barth, for the use of the Sultan. ~~It is~~ sufficiently abundant to allow the raising of cattle. The trees and shrubs are the baobab, the almond, the cotton, and Indigo plants and lettuce. The forests become more and more dense as one approaches the equatorial zone. The fauna is very rich. Large animals, elephants, giraffes, panthers, antelopes, hippopotamuses, rhinoceroses and crocodiles, swarm on the banks in the vicinity of the rivers; insects abound, in particular ants and termites of which certain species are a terrible scourge to the crops and even to human beings.

The population of Agirmi, estimated by Barth at one and a half millions and by Nachtigal at a million is still decreasing on account of the continual wars which devastate these countries. A census in 1904 gave 420,000 as the number of inhabitants of Agirmi. According to Lt.-Colonel Langeron this figure ought to be reduced to 80,000 of which 16,000 are in Agirmi proper, the density varying from 0.3 to 0.9 of an inhabitant per square mile according to the districts. This population consists of very different elements: 1. The Agirmians, a people sprung from the mixture of the aborigines with foreign invaders. 2. Kanuris settled in colonies in various parts. 3. Arabs (Aasas, Salasas, Khazas, Udd Maa, Shas) scattered throughout the country but in villages which are almost exclusively inhabited by them. 4. The Fulbe, almost all shepherds, very numerous in the south. 5. Negro tribes (the Gbani on the right bank of the Logon, Sira on the middle basin of the Kati, Tammak, Nyellou etc.) more or less related to the Agirmians, but speaking a different language and still fetich-worshippers.

From the point of view of physique the Agirmians hold a high place among the peoples of Africa. Travellers note their tall stature, the regularity of their features and the suppleness of their limbs. The beauty of their women is famous. They speak a language, the Agirmian, which, according to Barth, is related to the Shilluk spoken at Koko. At first fetich-worshippers, about three hundred years ago, they adopted Islam which was brought into these regions by the Fulbe but have retained numerous pagan practices. Through their intermediary, however, Islam has gradually gained ground towards the north. Barth brought the beginnings of civilisation to the primitive inhabitants of these regions. The culture of the Agirmians is, nevertheless, still very rudimentary. Barth remarks that none of them knew how to write and that only those individuals who have made the pilgrimage to Mecca have any knowledge of Arabic. They are, on the other hand, more industrious than the majority of their neighbours. Amongst them are clever artisans, especially dyers and weavers. It was the Agir-

mian captives brought to Wadal by Sultan Saba that introduced the art of weaving into that country. Slave-trading was till the end of the nineteenth century the principal occupation of the Agirmians. Slavery, with the continual wars of which Agirmi has been the theatre and the difficulty of communicating with Northern Africa, have certainly retarded the progress of civilisation.

In the time of Barth, the chief town of Agirmi was Masanya, the capital. Eighty miles to the north of Bahr Kapi it was surrounded by a girdle of walls seven miles in circumference. The houses which it comprised were, it is true, only mud-bats with the exception of the Sultan's palace and a mosque of stone. Partly destroyed by the Westans in 1870, it was abandoned after the invasion of Koko, Masanya, at the present-day, stands second in Agirmi, situated 60 miles to the west on the left bank of the Shari. 150 miles to the east of Masanya, at the foot of the Gbani mountains of Kanga, which local tradition regards as the cradle of the reigning dynasty.

The government of Agirmi is a despotic monarchy. The Sultan or *Wang* exercises absolute authority; he is the object of servile manifestations of respect; his subjects have to stand with head bare in his presence and spread dust on their foreheads. Only a few great dignitaries are allowed to sit on carpets in his presence. Among the relatives of the Sultan the queen-mother and the oldest son enjoy some influence; the brothers of the *Wang* are blinded in one eye to disqualify them from ruling. The principal officers of the state are some freeborn, others chosen from among the slaves. The most powerful is the *far-wa* or head of the army. Special functionaries are charged with the supervision of the forests and pastures and the government of the more important districts. The revenues of the Sultan are obtained from taxes paid by the Muhammedan subjects and tribute levied on the pagan tribes. The former supply grain, cattle and cotton-wool, the latter give slaves which still constitutes, as they did to a greater extent in the time of Barth and Nachtigal, the real wealth of the Sultan.

The state of Agirmi was founded in the sixteenth century of our era (the tenth of the Hijra). It owes its origin to adventurers who came from the east, probably from Fart. After defeating the Koko, the newcomers united with them and with their help imposed their authority on the Fulbe and on the Arab communities settled in the region. The conquered peoples were forced to pay tribute but were allowed the invaders to adopt their religion. The latter, like most of the founders of Senegalese empires, claim to be of Arab origin and say they come from Yansu. Their chief, Jackenge, was, according to the legend, the founder of Masanya and conquered the four small kingdoms into which the land watered by the Fatchikou was divided. The *Wang* (Sultan) increased their dominions to the east and south. One of them, a contemporary of 'Abd al-Karim, the founder of the Kingdom of Wadal, embraced Islam and took the name of 'Abd Allah. From that time to the reign of 'Abd al-Hadi who received Barth on his journey to Masanya, forty princes have occupied the throne of Agirmi. During the seventeenth and eighteenth centuries they gained much power at the expense of the native fetich-worshippers and enriched themselves by the slave trade.

A period of decline succeeded this period of prosperity. The struggle against Sulṭān, Sulṭān Wadai (died 1815) induced Bagirmi Sulṭān 'Abd al-Rahmān, betrayed by the "faṣṣa" was killed and many Bagirmis led into slavery. The dissensions which arose as consequence among the sons of 'Abd al-Rahmān as well as the intrigues of the "faṣṣa" itself provoked renewed interventions by the Wadaians. Finally Othmān Sar-gomunda, the eldest son of 'Abd al-Rahmān was left as head of Bagirmi but had to recognise the suzerainty of the Sulṭān of Wadai and to pay tribute to him. After being interrupted for several years, hostilities recommenced on the death of Othmān. Bagirmi was ravaged with great cruelty by the Sulṭān of Wadai and his ally the Shilluk of Kordofān. Othmān succeeded however in maintaining himself against all his adversaries. He was an energetic ruler but without faith or law, plundering indiscriminately his friends and enemies and not hesitating to marry his own sister. His son 'Abd al-Jahid managed to live at peace with these neighbours and devoted himself to raising the pagan tribes. But in the reign of Sulṭān the Wadaians invaded Bagirmi again (1860-1877). Massouya was taken, Abu expelled and replaced by one of his cousins. He regained power, however, in 1883 and continued it till his death in 1894. His successor Gwamug had to meet the attacks of a powerful adversary Rabah, the establishment of whose power in Bornu was a perpetual menace to the security of Bagirmi. (See below.)

The Franco-German convention of the 4th February 1894, having placed Bagirmi in the cone of French influence, Gwamug agreed without demur to recognise the French protectorate and signed a treaty to this effect with the explorer Gentil in 1897. His agreement brought on him the wrath of Rabah. Being incapable of resisting his enemy, Gwamug himself fled to Massouya. The governor Bostomut who was sent to his assistance was defeated and killed at Taghio on the 17th July 1898. But in the following year the death of Rabah, who was defeated and slain at Kousséri by the forces of commandant Lamy (23 April 1900), brought peace at length to these regions so long harassed. Bagirmi at present day is included in the military district of Chad; it remains under administration under the nominal rule of the French authorities.

BAHĀ' ALLĀH ("splendour of God"), surname of Mīrāz Buhār 'Alī 'Alī, born at Nūr in Māzandarān on the 12th November 1817, last

brother of Mīrāz Yahyā surnamed Ḥabīb 'Alī, was almost thirty years of age when he became a convert to the new doctrine preached by the Bāb (see 281). Without having ever seen him he became one of the Bāb's chief disciples and was recognised as his successor by the greater part of the Bābīs. After the attempt on the life of the Bāb he was imprisoned in Irbid; he was then called and settled in Haḡḡil in 1852. It was there that he declared himself to be the person announced by the Bāb in the mysterious words: *Ala yaḡḡirun 'Alā*; "He whom God will manifest". He lived the life of a hermit beside Sulṭānīya, where he drew up the main scheme of his work, which was to make the religion of the Bāb universal and afford a universal religion; he was imprisoned in Adinopolis (1864), then at Acre (August 1868) where he died on the 29th May 1892, leaving his spiritual authority to his eldest son, 'Abbas Effendi, surnamed 'Abd al-Jahid.

His doctrine. Right living consists in doing harm to no one, in loving one another, in bearing injustice without rebellion, only regarding the good, being humble and devoting one self to healing the sick; such are the principles adopted by Bābī, an obvious echo of Christianity. The ultimate aim of universal peace which is to be brought about by the adoption of this religion, which possesses neither clergy nor community. Every town is to institute a place of assembly for a managing committee, consisting of nine members which is called *ḥaṣṣ al-ḥaṣṣ*, their chief members are to collect the dues to the treasury, receipts from them and a tax of one nineteenth on capital to be paid once and for all. Anterlites are forbidden; taxes are waived for hospitals.

The principal works of Bābī are the *Kitāb al-Aḡḡal* and *Ḥamāy* and *St. Petersburg*, the *Kitāb al-Ḥayāt* (transl. by H. Dreyfus and Ḥabīb 'Alī Shīrāzī, Paris, 1904), *Ḥamāy al-Ḥayāt*, *Ḥamāy al-Ḥayāt* (transl. by H. Dreyfus and Ḥabīb 'Alī Shīrāzī, Paris, 1906), *Ḥamāy al-Ḥayāt* (transl. by H. Dreyfus and Ḥabīb 'Alī Shīrāzī, Paris, 1908) and transl. from the Persian text by H. Dreyfus (Paris, 1908); his last words have been edited by Tūmānshī (*St. Petersburg*, 1897).

Bibliography. — H. Dreyfus, *Étude sur le Bābisme*, in *Mémoires de la Société de l'Asie*, 1909; Edw. G. Browne, *A Year among the Persians*, p. 50, 300 et seq. (The Illyrian).

BAHĀ' AL-DAWĀ, and Nāḡī Ḥabīb, a Bāyī. After the death of 'Abd al-Dawā in 1892 (March 1893) his son Samṣam al-Dawā was appointed *Amir al-Ummat*. The latter's brother Shams al-Dawā, however, refused to recognise him and a war broke out in which the third brother, the fifteen-year old Bāb al-Dawā, was also embroiled. In the end Samṣam al-Dawā had to submit and was thrown into prison in Rumayṭū 376 (January 1897). The 'Alī then appointed Shams al-Dawā *Amir al-Ummat*; the latter died soon after in 379 (1898) and Bāb al-Dawā succeeded him as senior *Amir*. The new *Amir* restored his freedom to Samṣam al-Dawā who now began a fierce struggle between the latter and his nephew Abū 'Alī, the son of Shams al-Dawā. In the following year Bāb al-Dawā had Abū 'Alī murdered and then a quarrel

Bibliography: Ab. ibn 'Asā Allāh Tāhāzī, *Barhān-i Ma'shūr* ed. in; Abul Fazl, *Akbar-Nama*, III, 700, 774 sq. (1590, Ind.); Firāqī, *Gulshan-i Bahār* Ma'shūr III.

BAHĀDUR SHĀH I (1643—1712) MUHAMMAD MU'AZZAM was the second son of the Emperor Aẓẓam-shāh 'Alamgir by Kāshimā al-Nūr Nawsāshāh, the daughter of Rājā Rājā of Rājāpur in Kashmir. He was born at Bārbāpur in the Dakhin on the 30 Rajab 1053 (14 Oct. 1643). From Shāhān 1086 (Oct. 1675) he was generally known by the title of Shāh 'Alam, then conferred upon him.

In 1657 when his father left the Dakhin to contest the throne with Durr Shikōh, Muhammad Mu'azzam was left in charge at Awrangābād. He acted twice as governor of the Dakhin (1663, 1667), and was sent there a third time in 1678. He was recalled to take a part in the Rājāpur campaign, and helped in the suppression of his brother Akbar's rebellion near Adwār. In 1683—4 he held command of an army operating against Shambhū Dī, Akbar's son, in the Konkarn. Shortly after his return to the emperor's headquarters, he was detached against the kingdom of Golkanda (1685) and took part in the Rājāpur (1686) and the second Golkanda campaign (1687). Falling under suspicion of treason he was thrown into prison in March 1687 and was not released until April 1694, when he was sent to govern Kāshī, the province of Lāhūr being subsequently added.

Shāh 'Alam heard of his father Aẓẓam-shāh's death on the 15th Dhū l-Hijjah 1118 (March 22nd 1707), when he was at Kāshī, west of Peshawar. He marched at once for Hindustān and it was a race between him and his brother Akbar Shāh, who had already started from Ahmadnagar, as to which of them should first occupy Dillī and Agra. This first move was won by Shāh 'Alam. Finally, the contending claimants met at Bāghpur between Agra and Bhopāl. The battle was fought on the 18th Rabi' I, 1119 (June 18th 1707). Shāh 'Alam won the day, Akbar Shāh and one son were killed, while the other sons were taken prisoners. While still in the Panjāb, Shāh 'Alam had celebrated his accession, and had taken the title of Bahādur Shāh (24th Muharram 1119—April 26th 1707), but he dated his reign from the 18th Dhū l-Hijjah 1118 (March 22nd 1707), subsequent years being counted, as usual, from the first day of that month.

Bahādur Shāh now proposed a campaign against the Rājāpur states, but before such progress had been made he was called away to the Dakhin, to dispose of his brother Kāshimā's claims to independent sovereignty. Kāshimā was defeated outside Maidarābād on the 3rd Dhū l-Hijjah 1120 (January 13th 1709), and he died of his wounds the next day. The interrupted Rājāpur campaign was now resumed, but before any real progress was made, the Sikhs rose in the north of the Cis-Satlāj country. A hasty peace was patched up with the Rājāpur, and Bahādur Shāh hastened northwards to meet the new danger. The fort of Lohgarh into which Banda the Sikh leader had thrown himself, was stormed and taken on the 19th Shawwāl 1122 (Dec. 20th 1710), but Banda escaped. The court then moved to outside Lāhūr where Bahādur Shāh died on the 30th Muharram 1124 (February 27th 1712). He claimed Sayyid descent through his mother, and insisted on inserting the word *salāt* into the Friday prayer. He

was also suspected of a leaning to Sūfism. These questions led to two serious riots at Lāhūr and Ahmadābād, headed by the learned bigots of those two places.

(WILLIAM LUTHER.)

BAHĀDUR SHĀH II, the last king of the Mughal (Moghul) dynasty. He was the direct descendant of Timur, as may be seen from the genealogical table in Blochmann's translation of the *Asmā al-Jarīd*. But there had been no king of Delhi who was possessed of real power since the death of Muhammad Shāh in 1748. Bahādur Shāh's full name was Abū l-Muẓaffar Shāh al-Muḥammad Bahādur Shāh, and he was the second son of Akbar Shāh II. He was born in October 1775 and succeeded to the title of King in September 1837.

Bahādur Shāh, who was then over seventy years of age, joined the Marāṭhas in 1837 and struck out as a sovereign. When Delhi fell, he took refuge in the town of his ancestor Humayūn, but surrendered to Hindostā. Two of his sons and a grandson surrendered on the following day but were shot by Hindostā to prevent a rescue. Bahādur Shāh was tried and found guilty of abetment of murder. He was disposed, and in December 1858 was sent to Rangoon, where he died on 7 November 1862. He was a scholar, a poet, and a calligrapher. His *Diwān* or book of verses has been printed, and also his commentary on Sa'ādī's *Gullistan*. Garcia de Traz has a notice of Bahādur Shāh, under his poetical name of Zafar in his *History of Hindustani Literature* III, 317, and has given a translation of one of the *rekht* odes.

(H. HERMANN.)

BAHĀDUR SHĀH GUDJARĀTĪ, second son of Marāṭhā Shāh II. Having had a disagreement with his father he went to the court of Badshah Salīm the last king of the Lodī dynasty. He was present at the battle of Panipat, but did not take

part in it. On hearing of the death of his father and of the succession of his elder brother Sikandar Shāh, he proceeded towards Gujartā, and on the way heard of his brother's assassination. He became king of Gujartā in August 1536 and avenged his brother in a cruel manner so that he is described by Blinn (ed. Erskine, p. 343) as a bloodthirsty and ungovernable young man. He was an energetic enter and famed for the celebrity of his movements. He conquered Mīlwa and Chitral, but was defeated by Hamayūn, son of Bābur. In his distress he applied to the Portuguese for aid, but when Humāyūn left Gujartā and Bahadur recovered his kingdom, he repented of his invitation and sought to get rid of the Portuguese. The Portuguese Viceroy arrived with his fleet at Diu, but declined, on the plea of sickness, to come ashore and visit Bahadur. The latter took the rash and singular resolution of visiting the Viceroy and came on board his ship. It was the third day of Ramadan and Bahadur was probably under at the time, but as he was a great drinker, he may have been suffering from a delirium of the previous night. When he found that the Viceroy was not really ill, he wanted to return, but the Portuguese had made up their minds to seize him and would not let him depart. An altercation and a struggle took place, and the result was that Bahadur was killed, and that his body fell into the sea. Immediately afterwards, the Portuguese took possession of Diu, which had been deserted by the inhabitants. Bahadur's death took place on 14 February 1537. One of the chronograms made on the occasion was: *shāh al-bahār shahīd al-bahār* "Mourning-shower, Martyr, rose!" (1943 A.H.). Bahadur was a cruel and worthless prince, but the Gujartāis cherished an affection for him on account of his vigour and of his single death. He reigned for eleven years, and was the last of his line.

AT-BAHĀ'Ī. (See AL-AMĪL, p. 317.)

BAHĀR, Arabic, more accurately *BAHĀR*, a word supposed to be of Indian origin meaning "load" which had spread through all the lands of Islam from the Indian Archipelago to Africa as a dry-measure and weight. As a measure it is equal to 2 *andak*. The Arab authorities give very different values to the weight. It is most often reckoned equal to 3 *fantar* in 100 *fantar*. See *Savvān* to *Jawāb*, *Arabia*, 3 Series, III (1884), p. 403—404. In modern Indian commerce the value of the *Bahār* varies in the different towns from 220 to 250 *Chā*.

BAHĀR-I DĀNISH, a Persian collection of tales and fables by Shāh Inayat Allāh Kashgari, written in 1661 (1651) based on the Indian stories of a young Brahman and supplied with an introduction by the young brother of the author Muhammad Shāh Kashgari. The love-story of Ghāfir and Sultān and the story of the greater part of the work. It was

put into verse by Husein 'Alī Ince during the reign of Tipu-Sulṭān, Sulṭān of Mysore (1797—1831) = 1751—1799) and dedicated to him. *India Office* 153. It was translated into English by A. Lane (London, 1765) and by J. Scott (Shrewsbury, 1799); on these are based the German translation by A. L. Hermann (Leipzig, 1802) and the French by Lacroix (Paris, 1804).

Bibliog. 1549: Elliot, *History of India*, vol. VI, p. 325. (Cf. HART.)

BAHĀRISTĀN, a Persian work by Nūr al-Dīn 'Abd al-Rahmān Jāmī in poetry and prose modelled on Sa'dī's *Guznāva*, which also bears the title of *Khawāṭir al-shahīd* "a martyr's memoirs"; it was composed in 812 (1437). It is divided into eight chapters called *asā'id* and contains anecdotes of the life of Shāhī Jāmī and other mystics, philosophers and poets as well as fables and parables. It has been supplied with Turkish commentaries by Shamsī (Istanbul 1883 and 987 = 1554 and 1594), by Khafaja Shāhī (ed. Constantinople, 1252 = 1836; and translated into German by Hermann von Schlegel-Wassberg (Vienna, 1846).

Bibliog. 1549: J. von Hammer, *Asienische Reisebeschreibungen*, p. 344; Elliot, *History of India*, vol. VI, p. 305. (Cf. HART.)

BAHĀWALPUR, a native name of Ludhiana, within the Province of the Punjab (area, 15,918 sq. m.; population, 1901: 710,872; revenue: Rs. 27,00,000). It stretches for about 300 m. along the L. bank of the Beas, Punjab and India, extending into the desert a mean distance of about 40 m. The chief crops are wheat, rice, and millets, which are entirely dependent on irrigation from the Beas river. Of the population, 13% are Muhammadans, chiefly *Lahori*, *Kashmiri*, and *Balti*. The ruling family of Bahawalpur has an interesting history, its claiming descent from the Abbasid Khalifa of Egypt. Their ancestor is said to have come from Egypt to Sind about 1370. But the town of Bahawalpur was not founded till 1748, and the independence of the state dates from the grant of a *mir* by Shāh Mahmūd of Kabul in 1802. British relations are governed by a treaty made in 1838.

Bibliog. 1549: General C. Macleod, a former resident, wrote a history of the country from the earliest times, which is still in MS. Several histories of the ruling family, written in the 19th cent., also remain in MS. — *Bahawalpur Gazetteer* (Lahore, 1908), p. 41. *Al-Bihar*, *Collection of Persian, Pajavani and Sanskrit literature* (Calcutta, 1892), II, 187, 188. (Cf. S. CORTON.)

BAHDAL or *Yazd* or *Wādā* or *Kūshā*, belonged to the clan of the Banu Hāritha b. Jashāsh, which was also *Qasbi* or the aristocracy of Kūsh. A Christian like the great majority of his tribe, his chief claim to fame is that he was the father of Ma'nu, mother of Yazd I. His tomb also existed in the south of the ancient Palmyra, whither Ma'nu afterwards brought the young Yazd, and where the Umayyads remained after the conquest of Hīra and the battle of Marj Dabiq. Bahdal was thus the founder of the great prosperity of the Kabbis while the Umayyad dynasty lasted though he did not himself take an active part in politics. As one of his sons was accused of being a Christian under the caliphate of Yazd I, Bahdal must have died a

a Christian probably before the battle of Jiffin, in which one of his sons commanded the Muslims of Damascus, and at an advanced age his son succeeded him and became the last person in the state; in consequence the partisans of the Umayyads were called Bahilīya. His grandson Hishām, guardian of the minor Yazīd I, after the death of Mu'awiyah II even tried to elude the project of succeeding him. The undue preponderance of the Bahilites and the Kalbites contributed largely to the division of the Arab race into two parties, that of Hala and that of Yemen, after the battle of Marj Dabīb.

BAHILA. The members of the Isdūn tribe of Ma'n in North Arabia were usually called Bahila after Bahila, the daughter of Sa'ī, who was married her stepson Ma'n. Their grazing-ground in ancient times lay in southern Yemen and are known to have been there as late as the fourth and fifth centuries. In later times we find them in the neighbourhood of Baysa in possession of the well-stocked four miles from Baysa, which is of importance to the caravans of pilgrims. The reputation of the tribe was a very bad one and the name Bahil (Bahilite) was a term of reproach.

AL-BĀHILĪ, **ABU NĀṢA** **ABU NĀṢA** **AL-BĀHILĪ**, Arab philologist and author, a pupil of Aḥmad, Abū 'Uṣayb and Abū Zaid, belonging to the school of Hama, lived first in Baghdad, then in Isfahan and finally in Baghdad again where he died in 231 (855). As a tale followed his works the footsteps of his predecessors and like them wrote a book on trees and plants, animals, cereals and palm-trees, horses, birds and insects, of which latter he was the next to treat. In his works on proverbs, on proper names, and on the names in the language of the common people, many valuable notes must also have been contained for us, but unfortunately like all his other writings they have perished.

AL-BĀHILĪ, **AL-HUṢAYN** **AL-BĀHILĪ** **AL-ʿASBĀṢĀ**, a client (shamsī) of Bahila, an Arab poet often called al-Husayn al-Bahilī (the libertine) on account of his dissolute habits. According to al-Khwarizmi, al-Bahilī, who came from Khawāzima, was born in the year 162 (778-779). He afterwards went to Baghdad and became one of the most confidential friends of the illustrious Caliph al-Muṭawakkil. When the latter perished soon

afterwards, al-Bahilī composed an elegy on the tragic event; he remained at the court of his successor however and was held in great esteem till his death at a great age in 250 (864). The biographers give further information about his relationship to Abū Nuwās. Cf. p. 102 above.

BAḤIRĀ, a she-camel or a sheep with white ears. The Korān and the ancient poetry (cf. Ibn Khallikān, 38) show that the ancient Arabs used to carry out certain religious ceremonies with respect to their cattle, which consisted firstly in letting the animal go about loose without making any use of it whatever, and secondly in imploring permission to eat its flesh (after it had died). In the various tracts the animals bore special names (*Bahira*, *Shira*, *Wajila*, *Himā*; on these names cf. Wellhausen as cited below). The lexicographers are not quite agreed on the point in which cases a camel or sheep had its ears white. According to some, it was after it had borne ten young ones, according to others when its fifth young one was female etc. — Muhammad abolished these customs and attributed them to arbitrary inventions. Sura 5, 100: "Allah has made neither *haram* nor *halal*, nor *haram*, nor *haram*; but the unbelievers have invented these against God, and the greater part of them do not understand"; Sura 6, 145: "and they say: these cattle and fruits of the earth are sacred; none shall eat thereof but whom we wish (so they say); and [these are] cattle on whose backs it is forbidden [to ride] etc."; verse 146: "and they say: That which is in the bellies of these animals, is only for our use and forbidden to our wives; but it is the both dead and both partake of it. We will reward them for their abstinence [these things to them] for he is wise and knowing".

BAḤIRĀ, the name of a Christian monk. It is related that in his twelfth year Muhammad was taken to his uncle Abū Tālib on a caravan journey to Syria. When the travellers were near in Hama, a monk who lived there in his cell noticed that one of them was accompanied by a cloud and that the branches of the tree, under which he sat, sprouted to give him shade. The monk whose name was Bahirā thereupon invited the whole company to eat with him. They went, but left Muhammad behind to guard the caravan. Bahirā missed among his guests him, whose features were described in his books as those of the last prophet, and asked if they were really all, the learning that one had been left he insisted on the boy's coming too. When the latter was sent for and entered, he gazed fixedly at him and asked him his name and al-Bahirā answered his questions. After Muhammad had taken the opportunity to show his aversion to heathen deities, he convinced him in answer that he was the promised one. The monk thereupon warned Abū Tālib to protect the youth from the Jews.

This is the version of the legend given by Ibn

Ilshām (115 *et seq.*); according to others Abū Bakr was present at this meeting and was even then prepared for future events. Mas'ūdī (ed. Harber de Moynard, i. 146) tells us that the name of the monk was Sergius and that he belonged to the 'Abd al-Halāq; according to Ilshām (l.c. 157) his name was Georgios or Sergios.

Besides this story there is an account of a similar meeting, which happened 12 years later. Muhammad was then travelling to Syria in the service of Khadija in the company of her servant Maimun. In Homs he met a monk named Nestor who recognised the future prophet by certain signs. We are also told of some men of Rūm who arrived at one of these meetings to seek the future prophet.

In the oldest versions the name of the monk is lacking (Ibn Ilshām, 119 *et seq.*); in the later Muslim and Christian sources he is called Sergius. Bahirā (the Arabic *Ahrīz* 'chameleon') is interpreted as an epithet.

On the authenticity of such legends little can be said when, as here, all clues are lacking. In the cycle of legends which have gathered round Muhammad, they form a class of which numerous examples appear which all show the same type, namely the tendency to prove by an apparent accident that possessors of books had learned beforehand from their books that Muhammad was to be a prophet (cf. my *Muhammad in the Judea of Medina*, p. 54-60).

The figure of Bahirā is, under the name Sergius, mentioned quite early in Byzantine literature in a connection which agrees with isolated Muslim traditions (cf. Sprenger, *Das Leben u. d. Lehre des Muhammad*, R. 384 *et seq.*).

Thus Theophanes (ed. Chassign, l. 573) and George of Paphlagon (ed. Bekker, 395 *et seq.*) relate that after the first appearance of Gabriel and Muhammad's epilepsy to Khadija herself in great anxiety to Sergius, a heretical banished monk; he comforted her with the assurance that the angel was sent to all prophets.

The Muslim Bahirā-traditions have been preserved in a much expanded form in the Bahirā-Apocalypse, a Christian production, which in its present form perhaps dates from the 15th or 16th century and has been preserved to us in several recensions in Syriac and Arabic (cf. Guthe, *Christliche Rahma Legend in the Zaitun. f. Assyriolog.*, vol. xlii *et seq.*).

This work which is said to have been composed by one Ishōyah falls into three parts: 1) the stories referring to the Muhammadan dynasties which Sergius Bahirā saw on Mount Sinai; 2) his conversation with the young Muhammad in the desert of Yathrib; 3) the prophecies of Sergius, partly a repetition of 1. In the second part it is told how Sergius communicated to Muhammad his doctrine and laws and parts of the Korān with a view to making the Arabs acquainted with the one God. The object of this part of the work is clearly to expose Muhammad as an impostor who received his pretended revelations from a heretical monk.

Sergius is also mentioned in the literature of the middle ages.

BAHIST (Arabic *baḥīst*), the name of Persians among Persian Muslims. Even in the Arabic the expression *al-baḥīst* 'the best world' for the abode of the chosen in the future life is found (William Jackson in *Geographical Dictionary*, *Paris*, ii. 685).

(C. L. HUANG.)

BAHLÖL LÖL, founder of the Lölö Dynasty in Dillī, (reigned A. H. 855-894, = A. D. 1451-1495); he came of an Afghan family settled in the Panjāb and succeeded his uncle as governor of Seikid; the weakness of the central power enabled him successfully to revolt against Alam Shah, the last representative of the Saljuq Dynasty, and to seat himself upon the throne of Dillī (A. H. 855). He was an energetic ruler and restored to Dillī much of the prestige that it had lost under preceding reigns; he reconquered the province of Ghaznī (q. v.), which had been ruled by an independent dynasty for more than 80 years. He is said to have been extremely temperate in diet, fond of the society of learned men, and zealous in the execution of justice.

Bibliography. Nizām Allāh, *Tārīkh al-Ashrafīyeh*; B. Dorn, *History of the Afghans, from the Persian of Nizām Allāh*; Elliot-Dowson, *History of India*, iv. 85 *et seq.*, 436; v. 70 *et seq.*

BAHMAN, Bahman, Arvan. *Faḥl Muvah*, *Shāh Bahman*, one of the Amesha Spentas of the ancient Persians, according to Plutarch = *Arvan*; it is also a frequent Persian proper name. In Persian chronology, Bahman denotes the seventh month and the second day of each month.

BAHMANI DYNASTY, a line of Muhammadan kings, eighteen in number, who ruled in the Dekhān from 748 (1347) to 932 (1525); in the period of its greatest power, this kingdom extended from Berar in the north to the borders of Vijayanagar in the south, and from sea to sea on the east and west. This dynasty was founded by Hasan Gāngū (or Kāṅkū, [q. v.]), a military officer in the service of Muhammad bin Taghlab, Sultan of Delhi (725-750 = 1324-1351); he took advantage of the weakness of his master, to found an independent kingdom in the Dekhān and assumed the title of 'Alā' al-Dīn Bahman Shah. Firuzi explains this title by a story that Hasan was, in his youth, a servant of a Bahman astrologer, and that while ploughing the field of his master, he found a box full of gold, which he at once took to the Bahman; pleased with Hasan's honesty, the Bahman recommended him to Muhammad bin Taghlab and predicted his future greatness, at the same time making him promise that he would take the name of his former master as part of his title; but there is no historical foundation for this legend, and Colonel Haig has shown that the title Bahman Shah points to Hasan's claim to be descended from Bahman, one of the mythical ancestors of the Sāssanid kings (*Journal of the Asiatic Soc. of Bengal*, ix. 3-4).

Hansa made Gubbarga [q. v.] its capital, but the ninth king of the dynasty, Ahmad Shah I, 825—838 (1422—1435) transferred the seat of government to Bahja [q. v.], which remained the capital of the Bahmani as long as the dynasty lasted. The Bahmani kings were constantly at war with Vijayanagar, the powerful Hindu kingdom on their southern border. The prestige of the dynasty began to decline after the death of Muhammad Shah III (867—887 = 1465—1482) and his able minister, Mahmud Gawan [q. v.]. The governors of the various provinces made themselves independent and the kingdom was divided among the "Lords of Bahja of Bahja, Nizam of Ahmadnagar, Barid of Bidar, "Adil of Bidar, and Khat of Bidar." The following list gives the dates of accession of the Bahmani kings:

I. Hasan Gangan.	748 (1347).
II. Muhammad Shah I.	759 (1358).
III. Muhammad Shah.	776 (1375).
IV. Ismail Shah.	780 (1378).
V. Muhammad Shah II.	780 (1378).
VI. Ghias al-Din.	799 (1397).
VII. Shams al-Din.	799 (1397).
VIII. Firuz Shah.	800 (1397).
IX. Ahmad Shah I.	825 (1422).
X. Ahmad Shah II.	838 (1435).
XI. Muhammad Shah.	867 (1465).
XII. Nizam Shah.	867 (1465).
XIII. Muhammad Shah III.	887 (1482).
XIV. Muhammad Shah.	887 (1482).
XV. Ahmad Shah III.	924 (1518).
XVI. Ala al-Din.	937 (1520).
XVII. Wali Ali Shah.	929 (1522).
XVIII. Khatun Ali Shah.	937 (1525).

AL-BAHNASÄ, a town in Egypt. Now an important village of 150 (with two dependent villages 300) inhabitants in the district of Beni Mazar, in the Province of Minya. **AL-BAHNASÄ** (the Egyptian *Permeret*, Coptic *Pemje* and the Greek *Περμερ* or *Περμερ*) was in antiquity a famous town and even in the early Muhammadan period it was one of the most important towns in central Egypt. It lies somewhat north of 28° 30' N. between the Bahja Valley and the edge of the Libyan desert and at the present day is almost buried in sand. At one of the chief towns of ancient Egypt — it is said to have once had 360 churches

and was the seat of a Bishop — and held by a Byzantine garrison, it played a certain part during the Arab conquest which is reflected in an apocryphal version of war, the *Fortif al-Bahman*. Under Arab rule also it remained the seat of government of a district (*Kāra*). When the division into provinces was carried out under the Fatimid al-Mu'izz, it gave its name to the province of al-Bahmaniya. Under the Turks it appears to have gradually declined, no doubt on account of the encroachment of the desert. During the period of the French occupation it was being used by the inhabitants of the neighbouring villages as a quarry. — It owed its importance in the middle ages chiefly to its industry. It is given the following account of it, "In this town there were and are to the present day looms on which the so-called Bahman tails and Bahman cloths (*Nakaf* *Saifan*) are woven for the government, and large tents and Bahmaniyara cloths. There are also many private looms there. Next to the principal fabrics of the place, merchants appropriate most highly the tails. — These tails, carpets and garments are found throughout the land." Wool and cotton-wool were the chief raw materials used. The great forests of Bahman, controlled by the treasury were also famous; numerous notices of them have been preserved under the name of al-Bahman (not al-Bahman) as it is often misprinted). Jews and Mary are said to have lived for seven years near Bahman during their stay in Egypt. The names of many villages in Egypt begin with the name Bahman.

BAHR (A). See. The word is also used of large rivers e.g. *Bahr al-Azrak*, the White Nile, *Bahr al-Azrak*, the Blue Nile, *Bahr al-Azrak* (see below). — In proverbial *Bahr* denotes a matter, see above p. 464.

AL-BAHR AL-ABYAD, "the White Sea", an Arab name of the Mediterranean. [See *BAHR AL-ABYAD*.]

AL-BAHR AL-ASWAD, "the Black Sea", [See *BAHR AL-ASWAD*.]

BAHR AL-BANAT i.e. "the Maidens' Sea", as the Arabs call the islands of the Archipelago on the west coast of the Persian Gulf. It is called *Bahr al-Banat*.

Bibliography: Ritter, *Erdbunde* III, 390, 589 *et seq.*

BAHR FARIS, the sea of Fars, the name given by Isakli (p. 5) and Ibn Hawkal (p. 33—41) to the Indian Ocean by an erroneous extension of the term. In Muhammad (p. 17) and Mas'udi (*Précis des*, vol. I, p. 207) the name merely designates the Persian Gulf proper from 'Al-Bahja at the mouth of the Tigris (Shah al-Ash), to Oman including the Gulf of that name. There are dangerous shallows in the estuary of the Shah

called *al-Aghazib*, "the piles", i. e. a lighthouse built on piles, where a watchman lights a fire to point out the entrance to ships; there are pearl-fisheries at the island of *Umm al-Qasr* opposite Djazira. The principal harbours on the coast of the Persian Gulf are *Ahmedia*, *Mehrabad*, *Sana*, *Djizirah*, *Sana*, *Umm al-Qasr*, *Umm al-Qasr*, *Tis* (Melatay), a list to which one must add *Umm al-Qasr*, *Bandar 'Albi* (Gumrin), and *Linga* which have recently become important. The Persian Gulf is separated from the Indian Ocean by the *Umm al-Qasr* (Kurois) *Umm al-Qasr* — in which many ships are wrecked. It is the islands of *Awai*, *Shamir*, *Kish* (Kais), *Kishm*, *al-Lis* (Larak). The most important ports are the Arabian *Kowait*, *al-Qayl*, *Mas* (now called *Masat*).

BAHR AL-GHAZAL, a tributary of the White Nile and the name of a province in the Egyptian Sudan. The *Bahr al-Ghazal*, "the river of gazelles", arises from the union of numerous small streams which flow north and north-east from the watershed between the Congo and the Nile and receives its most important tributary the *Bahr al-Arab*, from the south. After its junction with the *Bahr al-Arab*, which flows from the Central African lakes, the name of *Bahr al-Abyad* i. e. White Nile is given to the river they form. The *Bahr al-Ghazal* is not simply a river but a complicated, extended system of water-courses with a slight drop in the rainy season it is a sheet of water in breadth stretching farther than the eye can reach; on the fall of the Nile it is an impenetrable swamp in which the floating barriers of plants (*raha*) render navigation very difficult and in places quite impossible. The "Gazelle river" was first explored by a Khazax merchant, *Ismael* in 1833 and in 1856 by Consul Petherick. Schweinfurth afterwards described it thoroughly. Before the clearing of the mud from the riverbed, undertaken by the English, navigation ended at the so-called *Mashra* (i. e. *Mashra*) the starting point for all expeditions into the adjacent lands, also called *Port Rose* or *Mashra al-Rak* on maps. According to Schweinfurth the *Rak* are a Dinka tribe in the neighbourhood.

All the districts around 5 and 10° north and 23 and 30° east and thence also the province of the Egyptian Sudan is called *Bahr al-Ghazal*. The country is inhabited by beathan negroes, the *Dinka* and the *Ninka* who are divided up into small tribes. These peoples must have lived here for many centuries for they have become quite acclimated to life in these swampy regions. Their chief occupation is cattle-rearing (humped-cattle) and they are work in iron which is imported. As tribes, which have been driven out of the neighbouring territories, are settled in *Bahr al-Ghazal*, the population is very varied. *Stalin* (trans. Wingate, p. 194) mentions the following names: *Kara*, *Kanga*, *Perit*, *Kreisch*, *Daya*, *Tiga*, *Banda*, *Niam Niam*, *Bango*, *Monbattu* and others of which each group has its own chief and fights vigorously against the others. All these tribes are beathan. The geographical nomenclature is mostly Arabic however but this is due to the constant expeditions (trading or slave-raids) which

the Arabized nomads of Kordofan and *Umm al-Qasr* of the *Dongolara* of the Nile have undertaken from ancient times to the *Bahr al-Ghazal*. The history of the *Bahr al-Ghazal* is really only the history of these robber raids which are further complicated by the bitter feud between the *Umm al-Qasr* and the *Dongolara*.

We can only begin to speak of a history in the narrower sense of the word when Egypt, following in the track of the slave-hunters, laid her hand on *Bahr al-Ghazal*. At the time of the first occupation of the Sudan by the Khedive in the middle of the sixteenth century, *Bahr al-Ghazal* was a dependency of *Umm al-Qasr*. In 1860 a semi-Arab named *Zaher* (*Zubair*) won for himself private power and undertook long expeditions from a strong position after the manner of all slave-hunters. His head quarters were called *Dem Zaher* and became the chief town of the *Bahr al-Ghazal* and the seat of a governor (*emir*). The first governor was *Zaher bin Ali*, whose authority was confirmed by the Khedive in 1843. *Zaher* then conquered *Umm al-Qasr* for the Egyptians but was summoned to Egypt in 1876 when he threatened to become too powerful, and not allowed to return to the Sudan for several decades. *Zaher* had left his son *Sulaiman* (*Soliman*, *Silman*) in his absence in *Bahr al-Ghazal*. The latter came into conflict with the Egyptian authorities, rebelled, and after a fierce struggle was overthrown by the Italian *Romoli* *Cassi* and executed. This *Gess Fajha* was the first European governor of the *Bahr al-Ghazal*. He was replaced in 1881 by *Lapin* *Boy*, who had to capitulate in 1884 to the *Shahida*. Even before this a certain *Ismael* *Alkhi* had been appointed governor of *Bahr al-Ghazal* by the Mahdi *Muhammad* *Ahmad*. *Lapin* had to capitulate not because the natives, who were of course pagans, forced him to, but because his own soldiers and officers did. For over ten years *Bahr al-Ghazal* formed part of the kingdom of the Mahdi or rather of his Coloph *'Abdullahi*. It was not till its reconquest by the English that order was restored in the Sudan and from the annual *Khazax* on Egypt and the Sudan we can learn the progress made under Anglo-Egyptian rule. *Bahr al-Ghazal* like the whole of the Egyptian Sudan is under the united rule of England and Egypt (Treaty of January 19, 1899).

The *Bahr al-Ghazal* was for a long time the subject of serious diplomatic complications; for it is the frontier province of the Egyptian Sudan and borders on the French and the Belgian Congo. In 1898 a crisis arose between England and France over the *Fashoda* episode which might have ended in war had not France yielded the point in dispute. On the Belgian frontier there have also been occasional difficulties but according to the latest blue-books these have been finally settled.

BAHR AL-HIND is the usual name amongst the Arabs for the Indian Ocean which is also called *Bahr al-Hind* from its western shores or — the part for the whole — *al-Bahr al-Akbar*; the expression *Bahr Furs* also, sometimes, includes the whole ocean.

According to Ibn Rūstah its eastern shores begin at Tā Maṣrā, i.e. western al-Aḍā, Abū 'l-Fida' gives the Bahr al-Sin as its eastern boundary, al-Hind to the northern and al-Yaman to the western, while the southern is unknown.

The various parts of the ocean bear special names derived from various lands and islands. If we neglect the northern arm, the Bahr al-Fulūm and the Bahr Furs in the narrower sense, which are dealt with in separate articles, we have first the Bahr al-Yaman stretching along the south coast of Arabia with the Khawṣa Sharyfa (Kuria Maria) islands and Soqatra.

On the African coast we have, beginning at the Straits of Bab al-Mandab, first the land of Baḥrā, i.e. Somaliland to the harbour of Manka, then the land of the Zanḡ (see Bahr al-Zanḡ) with the towns of Barasa, Malinda, Maḥmas and the island of Zanzibar i.e. roughly British and German East Africa or (as the island of Kanibala undoubtedly Madagascar). Sofala is joined to Kanibala and finally at an uncertain distance is al-Waḡ = H.

If one sets out from the Bahr Furs at Tā Maṣrā he comes to the coast of al-Hind with the delta of the Indus and the commercial town of al-Babul on the shores of the Bahr al-Sin; lie the towns of Kanbāya (Canton), Sūfira, Sulūm and Sindushira (Siam). The archipelago of al-Uḡadīr, the Laccadives and the Maldives, separates the Bahr Furs from the Bahr al-Hakand. The last port on the Malabar coast is Kulam-Mah (Quilon) the southernmost of the islands is Sūmūdīth (Ceylon). The route to the East Indies appears to have lain straight across the Bahr al-Hakand to the island of al-Kūmāl which is reached by the waters of the Bahr al-Hakand and the Bahr Shūlūth; apparently al-Kūmāl (al-Kāna, al-Kāna = al-Jawān, whence the sea is there called Bahr al-Jawān to Sumatra, to be more accurate North Sumatra while Shūlūth = South Malacca. Voyagers sailing to China must have kept somewhat further north for they touched at the islands of Lau, Kōbādīth or Langkātāth, the Nicobars, to the north of which are placed the Andaman Islands, and from there reached Kalāth Bāy (Kodak) on the Malay Peninsula; the Straits of Malacca is therefore called Bahr Kalāth (Kalāth Bay) while the Bahr Shūlūth, when it is distinguished from it, appears to be the sea adjoining it on the south. We have now reached the land of the Mahārājā the centre of which is the land of al-Fahādī. This name originally denoted Central and South Sumatra, where Sūfira = Palembang is to be sought for, then its use was extended to include Java (Jāwā) and in its political application it includes a series of smaller islands and the coast of Malacca. Beyond these islands is the Bahr Kārdandī, the Gulf of Siam which is continued on the coast of Kīmā (Kiam = Canton) in the Bahr Sinī, the sea of Annam and the waters adjoining it on the south. Passing the island of Sūndarfatā (Siam) we reach the al-Bahr al-Sanḡī, the Chinese Sea where Khawṣa (Hsing-Chu) is the great em-

porium for the trade with the west. The knowledge of the Arabs concerning Sūs (Canton) and the Waḡ-waḡ Islands (Japan) was vague and limited.

The notions of the Arabs of the tenth century concerning the Bahr al-Hind become more and more vague as one goes to the East and South and the interpretation of their statements more uncertain. In many cases they have merely followed their Greek predecessors: they have, in addition, confused the accounts of their own voyages. Details from different sources were never properly assimilated to form a uniform picture. Sometimes the Bahr al-Hind appears to pass into the "Sea of Darkness", in which manner driven out of their course are said to be tossed about for ever; sometimes, it is believed that it joins "the Black Sea" on the North of Asia, sometimes again, East Asia and South Africa appear to be connected, so the use of the name al-Waḡwāḡ (q.v.) for Japan as well as for a land in the South of Africa, sometimes for Madagascar, shows. This idea is supported by Isidore according to whom the Zāhidī islands are opposite the land of Zandī.

The voyages of the Arabs and Persians, who availed themselves of the monsoon, just as their sailing place the Persian Gulf; Sūfī and Sūfī are important harbours there. The most important commercial centre appears to have been the land of Zandī, to which merchants sailed even from al-Fahādī — Madagascar itself was ultimately colonized from the Malay Islands, — and al-Zāhidī itself, which had relations with China. The commerce of the Medians with China came to a standstill in 384 (875) because of political changes. The Arab authors usually do nothing but hand on the old material. It was not till much later — under the Mongols — that intercourse again became active on the history's account of his voyage above.

BAHR AL-KHAZAR, "Sea of the Khazars", (Pers. *darra* Khazars), the Caspian Sea is so-called by some Arab geographers, after the Khazars, to whom the land on the north shore of this sea, with the important commercial town of Bīl (not far from the mouth of the Volga), belonged, in the best period of Arab geographic literature, in the 10th (10th) century. More rarely (by Ibn Khurādādhbih, following him Ḥudūd and Masūdī) the Black Sea (with the Sea of Azov) is denoted by the same name, probably because the dominion of the Khazars included a part of the Peninsula of the Crimea. This name does not appear to have been used until the Muhammadan world; the Old Russian name **Kāzakhazje* (Russian: *Kāzakhazje*,

Arabs *Arabs* *Arabs* is certainly to be connected with the name of the land of Ethiopia, although the Arabs and Persians have always applied the name of Lake (or Sea) of Ethiopia only to the Sea of Arab. The Arabian Sea is also called in Muhammadan literature after various adjoining lands. "Sea of Muscat" (the "Muscovite Sea" of the ancients), "Sea of Aden" (from the harbours at the mouth of the Ganges), "Sea of Tataristan" (or Maximilian), "Sea of Dailam", "Sea of Ormuz", and in later times (since the Mongol period), also "Sea of Shirvan" or "Sea of Rika" (the latter name appears in the middle ages in European works also in addition to the name "Sea of Sardinia"); the name *Bahr al-Kulzum* which is properly the name of the Red Sea is frequently also transferred to the Caspian Sea. In Turkish literature, the enormous *Bahr-i Gharb* (after the famous nomadic people, the predecessors of the Turcomans and Osmanlis) and *Ar-Rika* (more frequently applied to the Mediterranean) are also used.

BAHR KH-ARIZM or **BAHR KH-ARIZM** =

Sea of Arab. (q. v.).

BAHR AL-KULZUM, the Red Sea. The ancient names for the Red Sea were not adopted by the Arabs although the Hebrew name for the "Sea of Reeds" was known to them and they erroneously applied it to the whole Red Sea. They much preferred to call it after the town of Kulzum, the ancient Suez, at its northern end, near Suez. The name *Bahr al-Madaya* is popular and even appears in the Turkish *Shah-nama* in modern maps, while *Bahr Suez* only denotes the Gulf of Suez. The Gulf of 'Aqaba was called *Khabidh Adn*, now *Bah 'Aqaba*. Adn and Kulzum have shared the fate of all harbours built on land undergoing secular upheaval and are filled up. According to the Muhammadan conception a great East and West Sea flows from the Ocean, *al-Bahr al-Madaya*, which surrounds the earth and there approach nearest one another at Kulzum and al-Faraj (Isthmus of Suez). The western arm of the East Sea, also called the Indian or Chinese Ocean is the *Bahr al-Kulzum*. The northern limit has been given; the natural termination at the *Bahr al-Madaya* is usually taken as its northern end but includes the Gulf of Aden, the *Khabidh al-Barbar* (also *Barbar*) as an entrance to it. In almost all the geographers the description of the town on its coast begins at *Bahr al-Madaya*, the narrow strait of which has given rise to the story that the Red Sea was a fertile land. It was only when a certain king removed a mountain at *Bahr al-Madaya* to make a small canal, through which the Indian Ocean could reach in and flood the country of its enemy of his, that the whole Ocean burst in and thus a new arm of the sea took the place of a flourishing country. The following measurements given: length, 30 voyages, and greatest breadth,

3 days' journey; according to others from 1300 to 400 miles in length with a breadth of 90 miles (the actual length from Suez to *Bahr al-Madaya* is 1400 miles and the greatest breadth 200 miles).

The *Bahr al-Kulzum* had a bad name among the Arabs on account of its storms and naked rocks (coral-reefs), especially the northern parts, which on this account were for a time avoided by traffic (see article *Aden*). The southern end of the Peninsula of Sinai was especially feared, where the winds from the two northern arms one another, particularly near the islands of Tiro (in Arabic usually *Taru*), at the entrance to the Gulf of 'Aqaba and *Jibral* (undoubtedly to be identified with *Jibutai* or *Jibutai*) as the entrance to the Gulf of Suez. The seeds of the destruction of Pharaoh and his army, so often mentioned in the Koran was somewhat vaguely located in this region. According to *Khatashandi*, *Qasr al-Sabk*, 123, and *Qasr al-Fil*, 123 the "Sea of Reeds", was called *Birkat al-Gharandal* which may be compared with *Saradala*, Attendants of Christian pilgrims. On account of the storms it was, and in the custom of the local natives to hug the coast, sailing only by day and anchoring at night in the shelter of the coral reefs. Nevertheless the commerce on the Red Sea has always been considerable. In early Muhammadan times a canal united the Nile with Kulzum, and caravans plied between Fostat and al-Jizir, the port of Medina. The route of the Indo-European traffic, which was in the hands of the Jews, was over the Isthmus of Suez and thence by sea again, without touching Egypt, to al-Jizir and *Jibutai* and thence on to India and China. In the most flourishing period of the *Abbasid* caliphate the chief trade in spices naturally followed the route by Baghdad, but with the increasing importance of Egypt it was gradually diverted to the Nile valley. Aden was the great commercial centre; from there ships went first to the harbours of the sacred towns, to al-Madaya, the port for the Egyptian Sea, then for several centuries to *Adhbi*; it was not till the end of the 11th (eleventh) century that al-Jizir in the north at the foot of Sinai was of greater importance. From Fostat, *Adhbi* and al-Jizir there was great traffic in *Jibutai* on account of the pilgrimages and also from the southern *Jibutai* towns. Navigation was always been more flourishing in the southern half of the Red Sea than in the north, owing to the ancient civilisation of the adjoining lands and the more favourable winds. In ancient times, for example, intercourse had been established between Yemen and Abyssinia. The *Bahr al-Madaya* and lands adjoining it have from the earliest times formed a sort of bridge for migrations. Life and commerce on the Red Sea, the kinds of ships and the management of harbours are discussed in *Khuzinger's Oberägypten*. Here we find many terms which also appear on the coast of West Africa and reflect the terms in use in the Indian Ocean. The horrors of a sea voyage as often described by Arab travellers, they sought to avert by all sorts of magical practices of which some have been collected in the *Arabic for Religious Science*, II. (1902) p. 157 ff. seq.

The following places located in the *Bahr al-Kulzum* have a fabulous character. The maguetic mountains, south of Kulzum, on account of whose attraction but even the ships of the district were

made without any parts of iron, and the islands of al-Hamasa and al-Hassa (the "dry", firm) are animal that according information ~~these~~ leads it to the Anti-China (al-Dudayil). We are told of fishes 200 cils long, of some with the heads of owls, and other wonderful marine animals. All these features arise, partly from inaccurate observation, and partly from the material of Oriental romances such as the Romance of Alexander.

BAHR LUT, "Lot's Sea", is the modern Arab name for the Dead Sea which is usually called by the Arab geographers *al-Bihar al-Mawt* "the Dead Sea", *al-Bihar al-Mawt* "the sinking Sea", *al-Bihar al-Mawt* "the overturned Sea" (because at *al-Bihar al-Mawt*, "the land that has been overturned", the *al-Bihar al-Mawt* is placed), *al-Bihar al-Mawt* (Zakariya) "the Sea of Zoghar", also "the Sea of Sodom and Gomorrah". The Persian *Nāghī Khosraw* (v. = al. century) appears to be the first geographer to know the name *al-Bihar Lūt*.

The name *Bahr Lūt* refers to the story of Genesis xix which is often referred to in the Koran though the sea itself is not named.

To the present day, names in the neighborhood of the Dead Sea — e.g. *Ubel Sodom* (*Udun*) — and legends current among Arab natives, recall the catastrophe related in Genesis xix. These are remarkably founded on popular than on learned tradition.

Geography. Between steep and barren slopes of the "desert of Judah" and the mountainous land of Moab lies the Dead Sea, like a blue mirror 1750 feet below sea-level from north to south. Its length is about 50 miles, its width 8 miles and it has no exit.

The deepest part of its bottom is 2600 feet below sea-level. An isthmus (*Ma'adim* "tongue") running out from its east shore separates the southern, quite shallow part from the northern basin. With the East and West shores the mountains rise up from the shore to a height of over 3000 feet, the land on low-lying in the north, at the mouth of the Jordan and in the south, where on the east shore of the *al-Bihar*, Pentapolis (Genesis xiv and xix) is to be sought for, it only rises slowly into *al-Bihar* and *al-Bihar*. The composition of its water, so extraordinarily rich in salt is unsuited to organic life and is even an impediment to navigation. On only a few places on the shore, inhabited oases of almost tropical character have survived.

Geology. The Dead Sea fills the deepest part of the Great Syrian system of depressions which was formed at the close of the Tertiary period. In the periods of alternate drought and rain of the diluvial epoch, the great floods filled the greater part of the Jordan valley and a part of the Arabi with an inland sea: this was never connected with the Red Sea. There being no exit to this basin the water, which to begin with, flowed partly from springs rich in minerals, came in course of time, by evaporation or contain a high percentage of salt of peculiar composition. In the dry period of historic times the sea has shrunk to the bed it, at present, occupied. In the last century a gradual rising of the level of the sea has been definitely ascertained. Tectonic disturbances have affected the surrounding district down to the present day. It is to one of the most recent of these that the origin of the southern basin is due.

The procuring of asphalt from the Dead Sea, as in antiquity (cf. the name *Bihar Asphaltit*) seems to have been an important business in the middle ages, also. The asphalt was used as a protection against insects in vineyards. It was also used for many medicinal purposes. To the waters of the sea itself, healing powers were also ascribed.

The rich products of the coast of Zoghar (near the modern *Qasr al-Jadid*) were highly prized the Dead Sea. The Frankish Crusaders also relied on it. Since the Crusades the political importance of the Sea and the surrounding country has almost completely disappeared.

Schöfer), p. 17 et seq.; the Muhammadan sources have been collected and translated in Ch. Le Strange, *Pilgrimage under the Moslems*, p. 64-67, 286-292. (H. Hartmann.)

BAHR AL-MAGHRIB. Among the Arabs the Mediterranean has a great many names (in many of these the name of the part is applied to the whole e.g. *Bahr Thaghar*, *al-Bihar*). The most frequent are 1. *Bahr al-Maghrib*, West Sea, or *al-Bahr al-Maghribi* or *al-Maghrib* (Western Sea), rarely *al-Maghrib*; 2. *Bahr al-Bihar*, Sea of the Romans and Greeks, or *al-Bahr al-Bihar*, Greek-Roman Sea (more rarely *Bahr al-Bihar*), sea of the Franks or Europeans, applied rather to the European parts; 3. *Bahr al-Bihar* or *al-Bahr al-Bihar*, Syrian Sea. *al-Bahr al-Bihar* = Mare Mediterraneum, Central Sea, or the "Sea in the midst of lands" is an early name, while *al-Bahr al-Maghrib* = Mare Internum, Inner Sea, appears to be modern. The names *Bahr al-Bihar* or *Bahr al-Bihar* are rare and in the first instance apply only to the South East part. It is often called *al-Bahr al-Maghrib*, the Salt Sea in contradistinction to the Nile (*al-Bahr*) with its fresh water, while it is called *al-Bahr al-Abyad* = the White Sea (Turkish: *Abi Deniz*, see this article).

and *al-Bahr al-Akbar* = Green Sea in opposition to the Atlantic Ocean, which is called *al-Bahr al-Akbar al-Maghribi* = the Western Sea which surrounds the world or *Bahr al-Zulma* or *al-Zulmat*, Sea of Darkness or Darkness, or *al-Bahr al-Mafiqin*, Dark Sea (More Tenebrosus), for the name *al-Bahr al-Ahmad*, Black Sea also appears, as well as *al-Bahr al-Ayam* and *al-Ahbar*, Largest Sea (by which *al-Akbar* is meant). Indeed the Mediterranean is sometimes so called.

According to most Arab geographers, the Mediterranean Sea does not begin at the Strait of Gibraltar, which is called *al-Zubet*, the gate, but includes also the Gulf of Cadiz to the northwest of the strait and to the southwest, the sea along the Morocco coast as far as Sala-Rabat. The *Majma' al-Bihar* also is imagined to be west of the Pillars of Hercules, where the two seas, the White or Green (Mediterranean) and the Dark or Black (Atlantic Ocean, also called *Adra* from *Adra* = *Adra*) meet, whose rising and falling cause the ebb and flow of the tides, *medd* and *adra*. The formation of the Mediterranean is regarded by the Arabs, according to the tradition, as having been brought about by a great island of the Atlantic Ocean into the lower lying lands of what is now a sea; or the Mediterranean was regarded as an ancient inland sea and the piercing of the Strait of Gibraltar is said to have been effected by submersed Egyptian Kings or by Alexander the Great (cf. the story of the pillars of Hercules as a matter of fact geology shows that Spain and Morocco were once connected). The Atlantic Sea is usually called *Bahr* or *Bayn al-Mundafin* or *al-Bandafin*, Sea or Gulf of Veles or of the Ventians, the Aegean Sea, *Bahr* or *Al-Bahr al-Akbar*, Egyptian Kings or Gulf of Constantinople (often also the Hellespont, Sea of Maroneia and the Propontis). The Black Sea is called *Bahr al-Kahar* (Venus Marinas) which often appears in the corrupt form *Nifaz* or *Bahr al-Nifaz* (Sea of Taurus), *Bahr al-Khar* or *al-Khar*, Sea of the Russians and Bulgarians, or *Bahr al-Ahmar*, Crimson Sea and in later times also *al-Bahr al-Ahmad* = Black Sea, like the Turkish *Akdeniz*, *Kara Denizi* or *Deniz*; the Sea of Azov is called *Bahr al-Muht* and also *Kaspi* (Black) or *Makhi* = Palus Maotis, corrupted from *Maotis*.

Various calculations of the extent of the Mediterranean from East to West (its length) were given by the Arabs following Ptolemy's estimate, which is too high, as shown by Reinhold, *Introduction to Ibn-Battuta's Geography*, p. cxlviii.

While in antiquity the Mediterranean facilitated the commerce of the Phoenicians, Carthaginians and Greeks and in the Roman Empire bound together its European, African and Asiatic provinces, after the Arab conquest of the Syrian and North African coast, and the temporary conquest of Spain and the principal islands in the middle of the seventh century, it separated Mohammedan culture from the Christian civilization of Central Europe; even the expulsion of Islam from Sicily and Spain was commenced by the great eastern advance of the Turkish and Arab Moors and the Balkan Peninsula in the xvth—xvith centuries, since the medieval crusades were a failure. It was not till the political and military decline of the Mohammedan states and provinces (except Morocco) dependent on Turkey in the Mediterranean to the xvith and

xixth centuries, and the occupation of the most important nations by Africa, the masters of the seas, and the conquest of Algeria (1550) and the occupation of Tunisia by the French and of Egypt by the English that the permanent supremacy of Christian-European civilization and policy was assured in all the lands adjoining the Mediterranean.

BAHR MUHT. Following the tradition of the Greek geographers the Arabs have conceived of the Ocean as a kind of vast river, circular in its general form, surrounding the whole habitable earth. They have for this reason called it *Bahr Muht*, the surrounding sea. They also give it the names of Outer Sea, Sea of Darkness, or Green Sea. (Ibn) compares the earth placed in the middle of the ocean to an egg immersed in water contained in a cup. As the water surrounds the earth, the air surrounds the water and he compares the air under the canopy of the sphere of the Moon.

In the opinion of some oriental scholars, all seas must communicate with the ocean; they are only gulfs or prolongations of it. The ocean is as it were "the source" of all other seas; this is an opinion widely spread. Macaulay tells us (*Strabo's Geography*, I, 258) that the sea apparently shut in are thought to communicate with one another, either underground or by some unknown channel. Thus it has been thought that the sea of the Khazars was connected with the Russian Sea or Sea of Taurus, the sea of Khazars with that of the Khazars, that of Zogha with that of al-Khazars and that of Hadra with the Sea of Taurus. Ibn-Battuta, on the opinion of all geographers (see *Geography*, ed. Meinen, p. 127). — Macaulay tells us that certain scholars believe in an Ocean of fresh water distinct from the Outer Sea which would be the source of all rivers (*Geography*, I, 258).

The Ocean contains 27,000 islands, says the author of the *Compendium of Knowledge* (p. 45) and refers this figure to Ptolemy. In the North-east at the extreme limit of the habitable world is the legendary island of Thule, mentioned by Pytheas and Ptolemy, situated in 63° of North latitude. In its eastern part the Ocean reaches the coast of Britain, numerous towns in France and Andalusia (Spain), several towns on the coast of the Maghrib and the country of the Sefara "the people who live in the red hair". It also reaches the Isles of the Blessed (Ile Macaulay, *Kitab al-Maghrib*, p. 98). It is in these Isles of the Blessed that Ibn-Battuta places the statues erected by Hercules, statues whose attitudes and inscriptions indicated to voyagers that they could go no further. Macaulay places these statues sometimes at Cadix, sometimes to the Straits of Gibraltar. They carved also as

light-house. The Mediterranean has been formed, according to the Arabs, by the Ocean, which burst a natural wall connecting Asia to the Maghrib and poured over the land. Africa was thought to terminate at no great distance to the south of Egypt; the Ocean was found there again washing the shores of the land of the Negroes.

To the south of Asia, the Ocean took the names of Sea of Hind, of Serendib, of Markand, of Komar, of Mahardj, of Zangl. Its eastern part was called the Sea of Sout or Sea of China. [See *BAHR AL-INDIA*.]

Arab scientists have discussed the ~~use~~ of tides and of the ebbness of the sea. As a rule, they attributed tides to the action of the moon, regarding the earth as a sort of animal and the sea as its humours; when the moon waxes it provokes a more active circulation of the humours in the animal. As to the saltness of the sea, Marash remarks that it cannot be due to the effect of the heat on fresh water as many of the ancients believed, for nothing similar is produced by distillation [see, *ibid.*, p. 379].

The Arab geographers ~~also~~ also gave ~~names~~ names of the length of the habitable earth, which is that of the diameter of the ocean.

(CARRA DE Vaux.)

BAHR AL-ULUM, whose real name is *Abd al-'Aziz al-Murshid al-'Ali al-Mizan al-Din al-Kutbi al-Din al-Sakati*, was born 1444 (1731) in the Fiangi Mahall, Lucknow, which had been given to his father by Aurangzeb. The family had come originally from Herat and received grants of land from Akbar. His grandfather settled in the village of Sahal, near Lucknow. Both his grandfather and father were renowned as scholars and religious teachers. *Ubayd al-'Ulam* was taught by his father and his father's ~~predecessor~~, Mirza Kamal al-Din, and eventually succeeded to his father's chair. But a controversial treatise written by him having stirred up bad blood between the Shaf'is and Sunnis, he was expelled by Shajda al-Fawzi, king of Oudh, and lived some time in Shalighanpur under the protection of his Nawab, Abd Allah Khan. After the murder of the Nawab in 1759 (1759), he taught in Rampur and later and finally settled in Moulras, where he died on the 12th Rabi'ul-hi, 1225 (1810). In South India he is known as Malik al-'Ulam (king of the learned). In North India as *Bahr al-'Ulam* (ocean of learning). He was a very successful teacher and a voluminous writer, his chief works being commentaries on Arabic treatises of jurisprudence, logic and scholastic theology.

Bibliography: *Ab-Nadwa* (*Journal of the Academy of Sciences*, April-June 1907); Muhammad Siddiq Husayn Khan, *Abd al-'Ulam*, p. 927; Hasan b. Abd Allah al-'Abdali, *Al-Bihar al-Sawa*, p. 24. (Dr. HADAT HOSAIN.)

BAHR AL-ZANDJ. By the Bahi al-Zandj the Arabs ~~mean~~ mean western part of the Indian Ocean, *Bahr al-Hind* (q. v.) which washes the East coast of Africa from the Gulf of Aden to the Bahari al-Barbar to Sofala and Malagascar which was as far as the scanty knowledge of the Arabs extended. The name is derived from the adjoining coast which is called the *bilad al-Zandj* or *Zanguear*, land of the Zandj. The name Zandj is applied by the Arabs to the black *Bantu* negroes who are sharply distinguished from the Berbers

and Abyssinians. The name Zandj is very old, even Ptolemy knows *Zappia insa*, and Kosmas Indicopleustes *des Zappians Zappia*. The name itself has not been explained. Nowadays it is applied to the island of Zanzibar and to a tributary of the Zambezi which bears the name of Zangwa. The Arab notices of the coast and sea of the Zandj are more than scanty and partly contradictory. The sea was feared and avoided. Only the Arab travellers Mas'udi and Ibn Bajja sailed across it, but they tell us more about the land and its people than about the sea itself. It is clear that the Arabs imagined the coast to run in quite another direction to what it actually does. W. Tomasschek has given interesting reconstructions of their cartographical notions in his *Die topographischen Capitel des indischen Serapion* (Vienna, 1899), while all notices by the Arab geographers on the sea and land of the Zandj have been collected in a quarterly *fashih* by L. Morel Devic (*Le Pays des Zangis ou de l'Arabie d'Afrique au Moyen Age*, Paris, 1883). Navigation on this part of the Indian Ocean is regulated by the periodic monsoons whence the ~~ancient~~ relations between South Arabia and North-West India and the East African coast. For further information see the articles: *BAHR AL-INDIA* and *ZANGI*. (C. H. DUNCAN.)

BAHRA, an Arabian tribe. Etymological table: Bahra' b. 'Ara b. al-Bah' b. Kadi'a. The tribe had its settlement in the plain of Hama (Hamdan, p. 132); Sawa and Muzayyib Bahra, mentioned in the Syrian campaign of the year 13 (635) were among its watering-places. Cf. *Talut* (ed. de Goege), I. 1514, 3222, 3234; *Belshazzar* (ed. de Goege), II. 110; *Yahya al-Madani*, II. 172; *Y. 557*; de Goege, *Minutes sur la conquête de la Syrie*, 30-43.

The Khazikh (ed. Wattenfeld, no. 45) asserts that the Bahra, like their neighbours, the Tadhik and the Tughilb, professed Christianity, though according to al-Wahid in Wollhausen, *Sitten und Gebräuche*, IV. 179, thirteen delegates appeared in Medina to pay honour to Muhammad in the year 9 (631). Cf. also *Tahiri*, I. 1720.

Bibliography: besides the above-mentioned, Sprenger, *Das Leben des Propheten Muhammad*, II. 433.

AL-BAHRAIN, a group of islands not far from the west coast of the Persian Gulf, in 26° 21'. The largest of the islands is Bahrain, called *Qud* or *Sayrak* (Fish), about 35 miles long and 12 broad. The chief town and port is called Manama; the smaller islands are Muharrak, Arad, Sirra, Nahi Yalli, Haya and Khawr. The islands are famed for the pearl-fishing carried on here from ancient times; the Arab geographer *Ibn al-Farabi* gives an accurate description of the operations. The name Bahrain (two seas) seems to be derived from the pearls which stretch from al-Hira and by which the sea is divided. The islands have been inhabited since the beginning of history on account of the pearl-fishing; it is said that the older Sargis conquered them. The name of the island *Ullan* has come down from the Assyrian period and corresponds to the form *Tylus* transmitted by Theophrastus and *Thly*; the name *Andus* is also mentioned by the above named classical author. In the middle ages Bahrain belonged to the dominions of the caliphate. The Portuguese had a settlement here from 1507-1622.

which they had to give up on the loss of Hormuz; from 1735—1784 the Persians ruled it; Bahrain then gained a certain independence under native princes but since 1801 it has been under English protection and the English resident appointed by the Indian government, is the real ruler of the islands, being the Shakh's rule only nominal.

Bahrain the pearl-fisheries the islands derive considerable revenue from the beautiful date-palm groves which cover the well-watered land. The inhabitants who speak Arabic, and as a rule understand Persian, are of mixed race; on account of the situation of the islands far from the world, their customs have preserved their ancient character; for example, slavery is still pursued here quite in the medieval fashion.

On the largest of the islands are a large number of carefully built stone tombs now empty, divided into larger and smaller groups; the largest group is at the village of Abu 'Ali about 6 miles from the port of the island. It is not quite correctly that these graves have attracted the attention of archaeologists. The graves, as yet investigated, most of which were opened by the English resident Mr. Pridoux, all show exactly the same plan. The entrance faces the west; the building is two storied, of carefully hewn square blocks of stone, the lower story being higher than the upper. On both sides of a corridor leading to the east are niches which were designed to hold vases stacked one above the other. There are small holes beside the niches in which apparently wooden doors could be placed right across the corridor, so which offerings to the dead, and votive gifts were to be hung.

Unfortunately nothing found at the spot gives a clue to the historical origin of these tombs. Names of men and animals have been found there, including two skulls in a striking degree dolichocephalic, and a large number of bones of feline (Arab. *farab*) which appear to have crouched in here to die, after their custom; in addition there has been found a small portion of an ivory ox, a golden amulet and numerous quantities of whole and broken earthenware vessels ornamented with a peculiar fashion with black stripes. These finds do not give a secure foundation for any archaeological hypothesis; no trace of any inscriptions has as yet come to light.

The plan on which these graves are built agrees in a striking fashion with those known of the Phoenicians; this was even noticed by Strabo who says that the tombs in Bahrain are similar to those of the Phoenicians (xvi. 1). Herodotus says in the beginning of his history that the Phoenicians came from the Egyptian Sea, i.e. the Persian Gulf. The similarity of the place-names Aradus and Tylos-Tyre points in the same direction. The English traveller Theodore Bent who was the first to rescue these ruins from oblivion has, relying on these facts, called these tombs "Phoenician" without further consideration. Other investigators have taken objection to this supposition and say the tombs date from a much later period and that Bahrain served as a burial-ground for the population of the opposite coast between Umm and Bahala. The express testimony of Herodotus and Strabo can scarcely be set aside by this supposition; it may be that the tombs were again used by later generations but it cannot be denied that the civilisation, which first made them, was closely

allied to the Phoenician; the final solution of this difficult question will only be settled by the systematic investigation of a much larger number of tombs than have hitherto been opened.

AL-BAHRAIN, the ancient Arab name of a province of Arabia on the west coast of the Persian Gulf, opposite the Bahrain Islands, now called al-Bahā (ii. v.).

BAHRĀM (Archaic *partharagana*, name of a genius of victory, Pahlavi *mašrāy*) is in Persian the name of the planet Mars and of the twentieth day of each month.

Bahram is the name of five kings of the Sassanid dynasty. Bahram I (273—276 A.D.), son of Sapor I and brother of Hormizd I, succeeded the latter on the throne. After three years he was succeeded by his son Bahram II (276—293). During his reign the Roman Emperor Carus appeared before Ctesiphon which was only saved by his sudden death in 283. Bahram conquered Sindh from the Sakas and appointed his son Bahram III as governor of it on which account he received the epithet Sagan Shah "King of the Sakas"; a traveller in Sindh testifies to this conquest (see Dieulafoy, *Les Antiquités de la Perse*, Vol. v., Pl. xxi.). Bahram III reigned only four months. — Bahram II was the brother and successor of Sapor III (388—399); he bore the name of Kerman Shah or "King of Kerman"; he died a violent death. — Bahram V (430—438), son of Yazdgerd I was brought up by the Arabs at al-Mira (cf. article MIRYA); al-Mondhir I b. al-Nu'man entered with his education (Tahit, i. 155); his strength and skill in bodily exercises earned him the name of Gar "wild man" not given, as the legend has it, because he transfused a lion and a wild man with one arrow. He conquered the king of the Ephthalites Hunn in Baotiana, slaying him with his own hand in the battle of Keshkashan at Merv and bestowed the crown of the vanquished king to the fire-temple Adharbadnasp (Shir in Adharbadnasp). He persecuted the Christians and declared a war against the Romans, which in spite of the efforts of his general Mihr-Nars was not a successful one; although the Persians had seized the town of Nisibis they were glad to make peace in 431. Bahram died after a fall while hunting. The Bayanid claim as he descended from him.

Bahram Çubin, a member of the family of the Mihran had defeated the Turks in Synnada and himself defeated by the Romans in Armenia when in 589 he rebelled during the reign of Chosroes IV; he reckoned on the support of the aristocracy and of the Mobeds and seized the capital, where he struck the army which was in Mesopotamia in 590 held against the Romans, declared first for Khurraw II who was proclaimed king but soon had to flee to the Emperor Maurice. An army composed of Persians under Bishros and Romans under Naras besieged Bahram Çubin in Salamiy in Adharbadnasp and forced him to flee to the Turks who afterwards put him to death.

BAHRĀM SHĀH (Sanskrit: बह्रम शाह) al-Bahramī Bahramī Shāh a. Bahramī a. Bahramī, Bahramī al-Bahramī (511–558 = 1118–1157). The greater portion of his long reign was quiet and successful, but in the year 1148 Bahram was attacked by the Ghūr chief Saif al-Dīn Sūrī whose brother Kāsh al-Dīn Muhammad had been put to death by the Bahramī king. Bahram Shāh was forced to retire to India and Bahram fell into the hands of Saif al-Dīn. He did not, however, hold his conquest long, for Bahram Shāh returned with fresh forces in the following year, regained his kingdom and put Saif al-Dīn to death. This drew upon him the vengeance of a third Ghūr brother, 'Ala al-Dīn Husayn who marched against Bahram with a large army, drove Bahram Shāh to India and captured his capital with ruthless cruelty that gained him the name of *Al-Jahāshī* ("the world-conqueror") (A. II, 545 or 546). The contemporary authority of the *Tabaqat-i Nāṣiri* states that Bahram Shāh never more regained his throne after 'Ala al-Dīn had been defeated by the Saljuq Saḡīr, and that he died as a Ghaznavid. The *Tarikh-i Ghalib* and the *Khawarizmī* are therefore placing the death of Bahram Shāh before the sack of Ghazna.

Bahram Shāh was a prominent patron of Persian literature. The poets Maṣ'ūdī, Sa'īd Salāmī and others lived at his court, and the latter's *Diwān* as well as Nizāmī's Persian version of *Kalīla and Dimna* were dedicated to him.

'Abd al-Wahhāb in the notes to his edition of the *Qasidat-i Maṣ'ūdī* of Nizāmī 'Arāzi (Leyden, 1910), p. 136 194; *Id.*, in the *Journ. of the Royal Asiatic Soc.*, 1906, p. 26. (S. *Iran*.)

BAHRĀM SHĀH a. Bahramī Shāh, the Saljuq, was raised to the throne of Khwarizm by the Atabeg Mu'izz al-Dīn Bahramī in succession to his father on the latter's death in 565 (1170) but soon afterwards had to make way for his elder brother Shāh [q. v.]. The two brothers thereupon fought with one another with varying success till the death of Bahram Shāh in 570 (1174–1175).

Bibliography: *Recueil de textes relatifs à l'histoire de l'Iraq*, I, 35 117; *Zettner, der Persische Muzand, Geschichte*, 1882, 378 117.

BAHRĀM SHĀH, al-Malik al-Ahmad, son of Farrukh Shāh, son of Shams al-Dīn, was of Ayyubid, great-nephew of Saladin, received Basleḥ [q. v.] from the latter on the death of his father in 1182 (578) and retained it on the division of the inheritance on the death of Saladin in 1193 (589). In 1226 (626) the ruthless Aḥraf Mūsā, lord of Damascus, demanded Basleḥ back from him. Bahram declined to give up his property but after a year's siege was forced to exchange it for the small town of Zuhān (between Damascus and Basleḥ) and several other places. The prince returned to Damascus and was shortly afterwards murdered in 1230 (627), while playing draughts,

in strength by a Mamlūk whom he had purchased for some price. He is said to have been the best poet of the Ayyubids.

Bibliography: *Recueil des historiens de l'Iraq*, I, 52, 70, 106; *Id.*, 313; Ibn Khaldūn, *Kitāb al-Istī'āṣa* (Basleḥ, 1299 = 1883), p. 81, 82; where specimens of his poems are given (see also the *Bibliography* under *BAHAR*). (S. *Iran*.)

BAHRĪ was the name given to the Mamlūks purchased by the Ayyubid Sultan Saḡīd Ayyub [q. v.], whom he kept in barracks on Raqqa, an island in the Nile (Euphrates). His widow Shams al-Dīn married the Mamlūk Abak, who ascended the throne as the first of the Baharī in the year 1250 (648). Among the Baharī the family of Khān took the premier position; they ruled short intervals from 1279–1320 (678–724) and were deposed by the Mamlūk Barqāḥ. (M. *Southern*.)

BAHRĪYA, a group of oases in the Egyptian desert. The Baharīya is the most northerly of the Egyptian deserts. The Baharīya (also singular) i. e. the northern oases are distinguished from the Baharī Khāṣṣa, the southern oases i. e. the Baharī [q. v.] and Baharī (q. v.). Between these two groups lie the Baharī of Farafra (included to the Baharī by some), called al-Farāḥī by al-Bakrī and al-Farāḥī by al-Ya'qūbī. The three large oases are also distinguished as inner, middle and outer, the inner is the Baharī which is called the small. It is sometimes also called the Baharīya as it used to be visited by the people of Baharī. Baharī al-Bakrī and Baharī al-Ya'qūbī are distinguished as early as al-Bakrī, *Nuṣṣa*, 14. At the present day the post goes thence a month from Baharī to Baharī. According to Hufnagel Boy's *Distances* *Geographica*, I, 1, a district of the Province of Minia. It consists of four townships with over 6000 inhabitants in all. The only town of al-Baharī is 1714, al-Khar 1712, Mamlūka 1683 (with its dependency al-Aḥḥa 1798) and al-Zah 856 inhabitants.

The Baharīya like the other oases has the reputation of being exceedingly fertile and in the middle ages its dates, raisins were famous. Cereals, rice, sugar-cane and especially indigo were also cultivated there, and olives and green vitriol found, though the latter is not specially mentioned as being found in the Baharīya, for all the notices of this sort refer to all the oases together. The fertility of the oases is due to hot springs containing various chemicals.

Only scanty notices are available for the history of the Baharīya. In the year 332 (943–944) the Baharīya was said to have been under the rule of a Berber prince 'Ala al-Malik b. Marwān and to have been independent. Under the Fatimids we hear of an Egyptian governor 'Ala al-Malik. In the time of al-Bakrī and al-Ya'qūbī, that is, under the Mamlūks they were not governed directly by the state but by feudal tenants. At all periods the oases have suffered from the predatory raids of Arab and Berber Bedouins while the more southern ones (perhaps also the Baharīya) were sometimes the object of forays by the Kings of Nubia. It is only in quite recent times that they have been placed in closer relationship to the Egyptian government. In the seventies they were visited by Schweinfurth and since then European travellers have often gone there.

In earlier times the cases must have been very much more important than they are now. The land has evidently encroached upon them and caused their decline. Reliable reports and echoes in traditions tell us of ruined buildings and ancient splendour. The Coptic Church appears to have been in a flourishing condition till a late period. We hear of solemn processions with the body of one of the disciples which was carried through the streets in a shrine (*Takrit*) by a team of oxen. No doubt St. Anthelmios is meant (see al-Bakri, p. 14 ought to be extended) perhaps also St. George or both.

Biblical sources: al-Bakri. *Description de l'Afrique* (ed. de Suse), p. 14 et seq.; *Itin.* (ed. Dory et de Goeje), 44. **AL-Bakri** (ed. Breton) (ol. 932, 75); *Maknat*, *Al-Bakri*, l. 234 et seq.; *Kalchschmidt* (transl. by Westenfeld), 103; *Ibn Dahiya*, v. 11 et seq.; *Al-Mabarak*, *Al-Bakri*, vol. 1, p. 207; *Amelienau*, *Al-Bakri*, p. 207; *Schweinfurth*, *Prof. Dr. Anton von Soden* (ed. der *Deutschen Orient-Gesellschaft*, *Mitteil.*, vol. 1, 1884, 1885).

(R. H. BAKER.)

BAHITH, *baḥith* is thorough investigation and examination, in a technical sense the word signifies the process of proving whether two things actually imply or exclude one another. *Al-bahith* is the subject of the positive or negative judgment. These are the definitions of the *Tafsir*. In practice *al-bahith* means discussion, the art of controversy and disputation. It is connected in meaning with the word *maḥal* which means speculation. A good example of the application of these expressions may be found in *Masāʾid*, *Præfatio* (vol. 365). There it is said that Yahya, the Hammawī had a keen intellect and judgment, *wa-bahith* = *maḥal* i.e. a certain gift for discussion and speculation; he gathered around him in conferences, learned men, *Mutakallimūn* and others who were themselves *min al-bahith* = *maḥal* i.e. specialists in the art of philosophical disputation.

Many oriental scholars and printers were fond of controversy. *Masāʾid* speaks of discussions which he had with Jews (*Tasāʾif*, p. 160 et seq.). Avicenna disputed in the presence of *Al-Bakri*. At various times controversy took place between Muslims and Christians of which we possess several accounts. (CASSIDOR VALLA.)

BAHURASIR [See *AL-HADITH*.]

AL-BAHUTH, one of the titles of the *Sira* to **BAI**, a Turkish word, properly an adjective meaning "rich" (in this sense it appears in the earliest monuments of the Turkish language, the inscriptions of Orkhan); as a substantive it means also "landlord, householder". In Central Asia the word "Bai" is frequently appended to proper names, whereby the bearers of these names are shown to be prosperous, independent people in contrast to the masses. The oldest text, in which the word "Bai" appears with this meaning is the story of Mahmud Bai, Viceroy of the prince (Gökhān) of the Kara Khitai in the *Tarikh-i Rikhs* *Kutub* of Djowaini (vii. = xiii. century). Cf. d'Ohrmann, *Histoire de Mongolie*, i. 163; W. Barthold, *Turkistan*, Part I, (Text), p. 113, Part II, p. 384 et seq. (W. BARTHOLD.)

BAI, i.e. contract of sale, (the sale of goods for money. Some other legal transactions however which have in view the mutual exchange of

goods, are described in the Muslim legal works as different "Kinds of Bai" (*ʿAṣnāʾ al-Bai*) (cf. e.g. *Dirasat* of *Tahsin*, *Termin*, i. 137, l. 24—16; al-Nawawi, *Miftāḥ al-Falāḥ*, ed. v. d. Berg, l. 369). Such legal transactions are, amongst others; the exchange of wares for wares (*Muḥāḥala*) or of money for money (*Ṣarf*) and the so-called *Salef* or *Scham*-contract (by this the buyer purchases a thing which he has not seen himself (in which is exactly described, and pays for it in advance), further the agreement by which one who has a legal claim on a certain thing takes another instead of it (*Ṣafāʾ al-Maʿmūn*)).

Bai may also consist in any one's stipulating for an easement; such an agreement is legally regarded as a purchase of the right of use. The buyer thereby becomes the owner of the right, e.g. to go over the property of another (*Ḥaḳq al-Mawar*), or to build on it (*Ḥaḳq al-Binaʾ*), to use his neighbour's walls to support his own etc. On the other hand lease and loan are not regarded as *Bai* by most Fakhis because the tenant on the one hand only stipulates for his right to use for a certain time and on the other the return of a sum lent is not to be regarded as identical with the equivalent given as a proper mercantile transaction (cf. *Bahith* at the beginning of his chapter on *Bai*; *Sachau*, *Musammam*, *Ḥaḳq*, p. 275).

Muslim scholars are further accustomed to distinguish three sorts of *Bai* (*Muḥāḥala*, *Muḥāḥala* and *Tarḥiq*), according to which the buyer agrees to pay either more or less or as much as the seller himself originally paid for the object to be sold. (Cf. a formula of the *Tarḥiq*-contract: *Dory*, *Supplément aux Dictionnaires*, li. 543, 544, 545).

Bai is permitted by the *Korān* li. 276 in opposition to *Ribā* i.e. usury in general and more particularly the sale of bonds (see *Ribā*). The sale of a thing is only valid however, if it is ritually pure and can give the Muslim a legal profit. Therefore, dogs, pigs, fangs, forbidden musical instruments, grapes, from which wine may be made, etc. cannot be legally "sold"; of course one can transfer his special rights in such articles to another. But such a transaction is not called *Bai* in legal works; it is usually devoted by other terms e.g.: "withdrawing the hand" from some thing, "letting fall" one's right to a thing, "giving rid of" a thing; acquisition in such cases is called "acquisition of the actual control" (*Ḥaḳq*) and the handing over *Tarḥiq* i.e. to put any one in a position to acquire anything.

The mere delivery of the thing sold and of the purchase money is not sufficient legally. A purchase to be binding at law, requires a formal declaration binding the seller (the tender: *Ṣarf*) and a declaration of agreement by the buyer (the acceptance: *Ḥaḳq*). Only with things of very little value do the Mohammedan lawyers regard an exchange without further formalities as valid. The closing of a contract by *Muḥāḥala* or *Muḥāḥala* (i.e. with a sufficient examination of the wares to be sold, either when the purchaser has only "handled" them at immediately after they have been "thrown" to him by the seller), was according to tradition expressly forbidden by the Prophet (cf. *ḥadīth* al-Bukhārī's *Sunna*, *Sunna*, *Ḥaḳ* 62, 63).

Both parties have the right to withdraw from the Bai by merely saying so while they are still on the spot where the bargain was agreed to. The contract is thereby terminated (cf. on this so-called *Khiṣṣa al-Maḥḥṣa* Sachau, *Muhamm. Recht*, p. 386 et seq.).

(TH. W. JUYNBOLL.)

BATA, properly means the sealing the contract by clasping the hands (*Ḥilāḥ*, see 374) whence it comes to mean the oath of allegiance taken on the land of the caliph as he ascending the throne. This ceremony consists in placing the hand in the open hand of the prince as a sign of homage. The formula for it was given by 'Omān on the day of the Sakfa (Ibn Hishām, p. 1013) "I said: Open thy hand, o Abū Bakr; he opened his hand and I paid him homage". This act symbolizes the handing over of authority (Ibn Khaldūn, *Prolegomena*, Vol. I, p. 171). Among the Muslims it denotes the oath of pledge taken by all those who embrace their beliefs; this word has been confused by their opponents, with *bā* which signifies the Christian Church and they have drawn erroneous conclusions therefrom.

(CL. HUARY.)

BAIBARS I. AL-MALEK AL-ZAHIR KUTUB AL-DIN AL-SALJUKI, the fourth Sulṭān of the Bahrī Mamlūks (see BAHRĪ), was born in Kiptak in 620 (1223), later sold into Damascus, and in 644 (1246) was taken to Egypt by Sulṭān al-Salḥ Aiyūb and appointed commander of a section of his body-guard. He distinguished himself, even in the life-time of Salḥ, for the death of the latter in 647 (1249) his son Tūrk Shāh aroused such discontent among the Mamlūks that they murdered him. Baibars took part in this conspiracy and was raised over by the new Sulṭān Aibeg. When the Sulṭān had one of his accomplices hung however he was forced to flee to Syria and stayed with the Aiyūbid princes sometimes at Damascus and sometimes at Karak till the assassination of Aibeg, when he returned to Cairo and was soon entrusted by the new Sulṭān Kōtuz with the important duty of leading the vanguard in the campaign against the Mongols, who had conquered Syria. Kōtuz became master of Syria by the battle of 'Ain Jalūt, in which Baibars distinguished himself by

his unflinching courage. The Aiyūbid princes were granted the tenure of the lands they had possessed before the appearance of the Mongols. Baibars, on the other hand, who had been expecting Aleppo as the reward of his bravery, had to go empty-handed and resolved to be revenged for this slight. Conspiring with other Emirs he found an opportunity to slay the Sulṭān while hunting on the way back to Egypt. The commanders of the army and 300 other Emirs thereupon elected Salḥ Baibars who had been the murderer of two rulers.

Baibars entered Cairo without opposition towards the end of 658 (1260). He divided the great offices of state among his dependents and for the rest confirmed 300 governors of provinces in their positions, as well as the Aiyūbid rascals. The governor of Damascus set himself up in opposition as Sulṭān but Baibars was able by bribing his dependents so to weaken him that he was finally able to take him prisoner. Many important tasks swelled the Sulḥ and only a highly gifted, unfeeling, determined, untiring ruler could carry them out. The Egyptian Kingdom was surrounded by enemies on all sides; in the north, the Christian king of Armenia, in the west along the coast of Syria, the Crusaders, in the interior the murderous Assassins; in the east the Mongols thirsting for booty and revenge, in the south of Egypt the warlike Nubians, and in the west the conquered Berbers. In addition there was always the danger of another crusade from Europe. At home he feared on the one hand that an ambitious Aiyūbid prince might lay claim to the throne as the last legitimate successor of the Aiyūbid Sulṭān and readily find adherents, while on the other the Salḥ, who had been repressed since the time of Salḥ al-Dīn, were attempting to put an Aiyūbid throne. Baibars soon found an excellent way of giving himself and his successors the appearance of legitimacy. A son of the 'Aḥḥādī, a son of the Caliph al-Nāṣir who had escaped the Mongol holocaust (see Baghdad) suddenly appeared in Damascus and came to Cairo on the invitation of the Sulṭān: after the genuineness of his descent had been tested and confirmed, homage was paid to him as Caliph with great pomp and ceremony; he then granted the Sulṭān, as a partner in the government (Kāsim al-Nawās), dominion over Egypt, Syria and the lands still to be conquered. The Sulṭān had originally intended to restore the Caliph to the throne of Baghdad and was going to place a well-equipped army at his disposal to enable him to conquer Baghdad, his capital, when on the advice of the prince of Shām he thought it better to keep him in Cairo under his eye; he therefore gave him a force insufficient for his campaign against the Mongols and in the last battle the Caliph lost his life. Not a shadow of real power remained to his successor and even his speech on his accession breathed a spirit of complete subservience to the Sulṭān. This remained the case till Sulṭān Salīm took the last of the Caliphs with him to Constantinople. It was of importance to the Muhammadan kingdom to the Egyptian Sulṭāns to pose as the pious protectors of the Caliphs as they could thereby lay claim to a certain pre-eminence in the Muhammadan world. Baibars thus gained a certain influence over the control of Mecca and Medina and was the first to send, as a faithful "servant of the two sanctuaries" a carpet on a *shafḥ* (a litter) to the

done to the present day and gifts of gold annually to the holy places. He was able to get on good terms with most Frankish and Oriental rulers. He made treaties with the Hohenstaufen King Manfred and later with Charles of Anjou as well as with James of Aragon and Alphonso of Castile. He made a friendly alliance with the Byzantine Emperor Michael Palaeologus who had driven out the Crusaders; he was also on friendly terms with the Soldan princes in Asia Minor and the chiefs of Yemen. Not too particular as to his methods, he succeeded in crushing the Ayyubid prince of Karak in Egypt by promising him on oath that he would be safe and then made away with him and his son. By means of unscrupulous intrigues he managed to throw suspicion on the Mamluks in the Mongol service at the court of Hlaïgan, so that some were executed and some imprisoned, if they were not sharp enough to escape in time. In this way he was able to deprive Hlaïgan of his best advisers. He often came into contact with the Mongols in the Euphrates district but they were so occupied with their enemies in Central Asia that they could not bring their full force against him. The power of the kings of Armenia next attracted Baibars' attention; he raised their hands with barbarous cruelty and wrought unparelleled havoc by his devastation and plundering.

The Crusaders appeared to Baibars to be his most dangerous and hateful opponents; but as they were quarrelling with one another they could not unite on one great common policy. Some exasperated the Sultan by pally intrigues and breaches of faith, while others allied themselves with him to revenge themselves on their brothers in the faith.

The reinforcements sent from Europe were insufficient, and the death of Louis IX. left him from his most dangerous Frankish opponent. Baibars was able to break the power of Prince Antioch of Tripoli by depriving him of Antioch, after seven campaigns. He weakened the Templars by taking Safed and Hama; he annihilated the Knights of St. John by capturing their strongest fortress Hlaï al-Akhal. The once so dangerous Mamluks, also called the Assassins, had also to submit to the all-powerful hand of Syria. Their fortresses, Mayyaf, Kafmha, Kalat, Khawrah, Manbij, Ullahya surrendered one after the other. They became the vassals of the Sultan who used their daggers against the lord of Maraktya and Prince Edward, afterwards Edward I of England. He was the first of the Sultans of Egypt to extend his dominion to the south with any permanent result; his generals conquered Nubia and king Melekha became his vassal. The Mamluks in the West were also subdued.

Baibars continued victorious over his enemies. He shrank from nothing to gain his ends. He was sometimes guilty of breaking his word and forging letters to persuade the commanders of hostile fortresses to surrender.

Nevertheless his success was chiefly due to his power of organisation, his quickness and his reckless daring. His whole kingdom was penetrated by a network of spies, which brought news from the seats of the governors to Cairo with incredible swiftness, e. g. from Damascus to Cairo in three days. The Sultan with his cavalry moved equally quickly. He often appeared before a town in Syria whose inhabitants believed

him to be still in Cairo. His boldest feat was a counter-attacking raid with 40 men against the powerful fortress of Hlaï al-Akhal, and the story seems to us almost incredible that Baibars, disguised as a Syrian, took part in an embassy to Boeroun of Tripoli, to get an idea of the strength of this town. He was always endeavoring to fortify his dominions: he began to rebuild the walls and buildings destroyed by the Mongols and placed garrisons in the more important places. It was he who initiated the custom still in vogue of each of the four orthodox sects having its own chief Masjid. In spite of his moral failings he was the most successful and capable of the Mamluk Sultans. He died in 676 (1277). He had previously appointed his eldest son Barak Khân successor in 667 (1269); and had homage paid to him.

(M. SOREXHAUSE.)

BAIBARS, THE ROMANCE OF, an unique among Arabic romances of chivalry as a combination of historic fact, the freest pseudo-historical reconstructions and combinations, purely fantastic imaginations and picaresque adventures. An outline cannot be attempted here, but references will suffice to the descriptions with considerable extracts by Lane in his *Modern Egyptians* (chap. xii) and Dr. Adward's further details in the Berlin Catalogue (vol. 22, pp. 124—144). It is evident that the life and exploits of Baibars as the great restorer of Islam, a gallant and suggestive personality moving in brilliant scenes, had powerfully influenced the succeeding generations and that he narrowly missed — principally through the lack of writers of real creative genius and simplicity of imagination — being surrounded by such a garden of stories as the older parts of the *Arabian Nights* have thrown about Harun al-Rashid. In the *Nights* he found only a subordinate and chronologically late place, and the second form of the "Story of Jular" (Weil, II. 253—312 from a Cetha MS.; see, too, Berlin Cat. 22, p. 146), in which he figures, and the stories told him by his chiefs of police (Berliner text, XI. 321—392 from Habicht's hand vol. of Egyptian origin; see my study of his recension in the *Journal of the Roy. Asiatic Soc.* for July 1909, pp. 688 and 696) show how greatly the story-telling gift had declined. Yet there are good stories in the long romance, but they proved hard to disentangle and tell separately. Until the recent appearance of the whole, only two such stories seem to have been printed, one telling how the Mamluk Ibrahim al-Jawharî journeyed to Rome (Cairo, 1319) the other, how L'ah Timin served Baibars (Cairo, 1321). The whole appeared in fifty parts (Cairo, 1908—1909), the last two of which, however, are given to a supplementary history of Egypt down to the present time, with a sharply Nationalist conclusion. Date and authorship of the cycle are naturally obscure. The great majority of MSS. belong apparently to the xviii. century, although the origin

Kutubkhana al-Hidaya, I, 353). A criticism of this work, entitled *al-Djauhar al-Nafi fi 'l-Radd 'ala 'l-Bahaki* by 'Ali b. 'Uthman b. al-Turkumani (died 747 = 1346) is printed in two volumes, Haidarabad, 1316 (1898). On his conception of prophecy cf. K. Nylander, *Über die Ursprünge des Dattils al-Nabwani* in: *Studien über die Arabische Literatur*, 1891. Of his chief work on Ethics, the *al-Djauhar al-Muqanass fi Sharh al-Mawrid* (on the title cf. Goldziher in the *Revue de l'histoire des Religions*, xvi, 133 ff. 177.) there are MSS. in Cairo (Fikri, I, 324), in the Escorial (H. Derembourg, *Les man. arab. de l'Escorial*, II, 743, 2) and in Leipzig (Vollert, *Katalog der Isl. u. o. s. Hs. der Universitätsbibliothek zu Leipzig*, N^o. 319). Letters to 'Amid al-Mulk b. al-Djauhari, father of the Imam al-Haramain are given by al-Sabki, *Tahqiq*, I, 273 ff. 299; II, 310 ff. 299.

Bibliography: Ibn Khallikan, N^o. 27; *Yaqut*, *Mu'jam*, 801; Sabki, *Tahqiq al-Shajra*, III, 3; Suyuti, *Tuhfat al-Kutub*, xiv, 13; Wüstenfeld, *Geschichtskritiker*, 203; du Noyon, 407; Brockelmann, *Gesch. der arab. Lit.*, I, 363. (C. BROCKELMANN.)

BAHAKI, Abu 'l-Hasan 'Ali b. ZAID, also called Ibn Fawqar, historian. Of his works there has only survived *al-Ta'rikh-i Bahak* (Persian), a history of his native district of Bahak in Khorasan which was completed on the 4th (according to Hieu 5th) Shawwal 563 (12th July 1168); cf. Perle, *Forschungen* (Berlin), p. 516 (N^o. 535); Kien, *Supplement* (London), p. 60 ff. 299; E. Kahl, *Persische Studien*, arabische Literatur, *Turkistanische Publikationsbibliothek*, N^o. 9^a, p. 3 ff. 299. No manuscripts have as yet been discovered of his work in Arabic or universal history mentioned by *al-Khatib* (v, 344), entitled *Makharid al-shajra wa al-shams al-shar'if*; quotations from it are given by Ibn al-Athir (ed. Tornberg, II, 246) and in the *Ta'rikh-i al-Hakim* of Djauhari (cf. Barthold, *Turkistan* etc., II, p. 32). According to Djauhari the work was a continuation (*ishraf*) of the *Ta'rikh-i al-Hakim* of Ibn Miskawayh; it is fairly certain that his title contains an allusion to this work; nevertheless the author himself (in his *Ta'rikh-i Bahak*) describes his work as a continuation of the *Ta'rikh-i Yama'i* of 'Uthb.

Nothing is known either from his own works or from other sources of the career of this author. As to his family, he tells us that his grandfather Sulaiman Kadduk was summoned as *Nadl* and *Muht* (*hazafi wa fawqar dahan*) from Siwar near Bust to Nishapur by Suljan Mahmud of Ghazni and his vizier Abu 'l-Hasan Maimani, and afterwards on giving up his office acquired an estate in the district of Bahak. We further learn that the author's father was born on 1st Shawwal 447 (24th Dec. 1055), on 27th *al-Hijra* II 517 (23rd August 1173) and spent 20 years in Bokhara. The author himself was at the court of Suljan Sandjar in Sfar 543 (25th Jan.—19th July 1145), when the latter received a query (apparently on religious matters) to Arabic and Syriac from the Georgian king Demetrios. Bahaki was commissioned to answer this question in the same two languages and performed this task very successfully (Cod. Mus. Brit. Br. 3587, fol. 94^v—0 ff. 299).

The *Ta'rikh-i Bahak* contains a full account of the geography of the Bahak district, of its

taxation, of various princes and governors, of men born in Bahak, who had distinguished themselves by religious or political activity etc. This small work which is preserved in good manuscripts is really worth editing; as a source for information on the history of culture it has been almost entirely neglected and is not even mentioned in the *Grundriss der Iranischen Philologie*. Some notices from it have been given by W. Barthold in his *Turkistan u. seine umgebenden mächte* as well as in his essay *Zur Geschichte der Saffariden* (*Orientalische Studien, Festschrift an Ehren von Th. Nöldeke*, Vol. I, p. 175). (W. BARTHOLD.)

AL-BAHAKI, Bakim b. Mughannam, Arab author, of whose life nothing is known beyond that he belonged to the circle of Ibn al-Mu'tazz. He wrote the arab book *Kutub al-Mahidin* (Cairo, 1906) during the reign of the Caliph al-Mu'tazz (295—320 = 908—932).

(C. BROCKELMANN.)

BAHAKI, Abu 'l-Faqi Mughannam b. Izzat, Persian historian, author of a history of the Afsharids in more than 30 volumes. Of this work only a small part (end of Vol. v—ix, and the beginning of Vol. x) containing the history of the Seljuks Mas'ud I. (411—433 = 1030—1041) has been preserved. The work is usually quoted as the *Ta'rikh-i Bahaki* and was first edited by Morley under this title in Calcutta (1862) in the *Persian India* and again in Tehran more recently (1307 = 1889—1890). Whether the author himself had given a title to the whole work is not known; in the surviving volumes the preceding part, devoted to the reign of Suljan Mahmud is referred to as the *Ta'rikh-i Tawin* (cf. p. ed. Morley, p. 158) or as the *Makharid-i Mahmid* (p. 176). There are notices (which have not as yet been made known) of the author and his work in the *Ta'rikh-i Bahak* of his countryman Abu 'l-Hasan Bahaki (vi = 11th century) [cf. the article on this historian]. Even Abu 'l-Hasan had only seen various parts of the great work, and not a complete copy. Quotations from the earlier volumes (on Suljan Mahmud) are found as late as the 11th (12th) century in *al-Fahri* Abi (Barthold, *Turkistan*, I, p. 157 ff. 299); no quotations are known as yet from the later volumes (on Mas'ud's successors).

Bahaki himself tells us he was 16 years of age in 402 (1011—1012) and 65 (p. 246) in *al-Hijra* 450, so that he must have been born about 386 = 996. Abu 'l-Hasan gives his birth-place as the village of Harizabad in the district of Bahak. For 19 years he was in the Afsharid chancellery (*dar-i ruzdar*) of the Ghaznawids under his teacher Abu Nadr Mighnas (p. 759) who was in the beginning of the year 431 (autumn 1039) so that he must have been in the service of the state from about 412 (1021—1032). Bahaki was considered too young to be the successor of Abu Nadr; Abu Salih Zaman who was appointed in preference to him, was not well disposed to him and is said to have afterwards done him much harm. Bahaki sent in his resignation but Suljan Mas'ud gracefully declined to accept it. The surrounding circumstances were not as well disposed to him; Bahaki speaks of a misfortune which befell him at this time the consequences of which still suffered from 20 years later (in reality a little less) while writing his work; he

possessing that he was not merely innocent in the matter but, says he was dismissed on account of his youth (p. 754; he was then about 45 years of age). He was at a later period again active in the service of the state; under Alai al-Bukhari (1044-1053) he was at the head of the *diwan* (p. 122). Towards the end of this reign he was, as Abu 'I-Hasan tells us, condemned by the *Qadi* to imprisonment for illegal organizing of *amls* (*amshams*). When the dynasty, a little later, was displaced by Toghrul, the usurper had the officials of his predecessor 'Alai al-Bukhari imprisoned; Bahakt also had to exchange imprisonment by the *Qadi* (chancellor) for detention in a fortress (*qasr* or *qasr*). Toghrul's reign lasted only 37 days; on the fall of the usurper and the restoration of the previous dynasty, all the officials, including Bahakt, were released. According to Abu 'I-Hasan, Bahakt did not leave the civil service till after the death of Sultan Farukhshah in 1051 (1059) and then devoted himself to his literary work, the greater part (to p. 159) of the history that has survived to us was however written under Farukhshah; the author was then in the "course of unemployment" (p. 121) having resigned some time previously. According to Abu 'I-Hasan he died in *Shahr* 470 (21 Aug.—21 Sept. 1077).

The *Tarikh-i Bahakt* is not a history in the strict sense of the word, as a Kingdom or district, but contains the memoirs of a Persian official in the *diwan* of his rulers and their *amls* on the home and foreign affairs (transacted or neglected in this court). The author says (p. 121) that his work is not a "tarikh" in the usual sense of the word in which we only read that "some one killed this one or some one killed that one", all that he *did* see and experienced, is described "in length and breadth" (p. 10 *id est* "in *shaf*"). We therefore have a detailed, first-hand account of life at *the court* in the *Chaghatai* under Mahmud as well as of the methods of government in the Kingdom founded by Sahaktagin *Shah* Muhammad *Shah* as we possess perhaps for no other Oriental Kingdom of the middle ages. The work is also an important source for the history of earlier dynasties, especially of the Samanids, on account of its numerous allusions to the history of earlier times; its utility is somewhat decreased by the absence of an index in Motley's edition. Numerous excerpts are given by Ellis, *History of India*, II. 53-134, and by A. Wicakreni-Karimabad in the introduction to his edition of the *Shah-nama* (Paris, 1887, p. 17-132).

The portion of the work which still survives was composed during the years 1050 and 1051 (1058-1059). It is often *dated* (even by Abu 'I-Hasan Bahakt) that the work began with the beginning of the dynasty. In Bahakt himself expressly gives *dates* (1018-1019, p. 316) as the year with which he began his narrative; it is *clear* on this account that his friend Mahmud Warrak closed his history (about which we know nothing else) with this year. From the whole plan of the work it is incredible that the long period between the beginning of the dynasty and the death of Sultan Mahmud could have been treated of in 4½ volumes. Abu 'I-Hasan says *clearly* besides his historical work, Bahakt also composed a handbook for officials (under the title of *Kitab al-Kutub*) and gives some interesting extracts from this work, which is otherwise quite unknown. (W. BAUTOLD).

BAIKHAN AL-KASAB, a district in South Arabia to the south of the country of the *Kasab* and Upper 'Awili (q. v.), the most important of the lands lying between Yaman and Ifrahman. It was a centre of early Arab culture and has many ruins and numerous inscriptions. The population, the most prominent in all South Arabia, is capable and enterprising, and the ground very fertile because of the numerous springs. Bakhān al-Kasab is inhabited by a tribe, the *Mu'athim* i. e. the two (sons of) Mu'ath, Ahmad and 'Amr from whom the two branches of the tribe, the *Al Ahmad* and the *Al 'Amr*, who live so friendly with one another, take their names. They are allies of the *Haris* and hostile to the *Kasab* and the *Samir* of *Shahr*.

The most important town in Bakhān al-Kasab is *al-Kasab*, also called *Shahr* 'Al-'Alah (after a son of Ahmad b. Mu'ath), the residence of the *Amir* of all the *Mu'athim*, with 400 houses, 73 *hijra* and 5 mosques. A noble family of great antiquity which is mentioned as early as *Hamzan* in his *Qasidat*, still lives in *al-Kasab*. The *Yemen* who are here (translating *gulfan* and *wevees*) have a quarter of their own called *Shirshah al-Valid*, with 50 houses. The trade of *al-Kasab* is very important and a market is held every day at which the products of the country, especially cotton, are offered for sale. Of the other towns in Bakhān al-Kasab we must also mention *al-Far* (with 30 houses and 3 *hijra*) on the left bank of the *Wadi Bahān*, and which are the famous ruins of *Marib* with many inscriptions, and *al-Harab* (with 200 houses and 3 *hijra*) where the *Amir* of all the *Amr* lives.

Of mountains in Bakhān al-Kasab there must be mentioned, besides the two isolated *al-Karim* which crowned the *Wadi Bahān*, the *Shirshah* (2300 *hijra* high in the form of a long ridge), which is mentioned in *Sahān* inscriptions, on the *Wadi Khir* and the *Shirshah*. This mountain which was famous even in antiquity, is still held in great reverence and is a place of pilgrimage for the people of Bakhān, who spend the *Yul'* *Rahim* on the fifth day of the *Arabi* festival with their families (except their women) and sacrifice to the *Shah* deities; on the fourth day they descend and are received by those they have left at the foot of the mountain with shouts of exultation and cries of joy from the women.

Bakhān al-Arafal (also called *Shahr al-Arafal* and *al-Arafal*) is a continuation of Bakhān al-Kasab; it consists of the few quite small territories of *Ushā*, *al-Shah*, *al-Ishā* with the town of *al-Hima* (with 250 houses and 3 *hijra*) and *Arad* (a town of 500 families and 3 *hijra*).

Bibliography: Hamidat *Diwan* (ed. D. H. Müller), p. 94, p. 101; index s. v. Bakhān; H. C. Kay, *Yaman, its Early Historical History* (London, 1893), p. 205, 226; C. Landberg, *Arabia*, v. (Leiden, 1898), I. Beyhan al-Kasab, p. 3-45, II. Beyhan al-Arafal, p. 67-77; H. Maunier, *Notes in Soudanese* (Bonnemann), 1873, p. 310-313. (J. SCHNEIDER).

BATHASTYA, name of a branch of the *Harizim*, called after their founder Abu Bathas (q. v., p. 50).

BAIKAL, a large lake in Siberia; it belongs to the watershed of the *Vendur*. The lake itself seems to have remained unknown to the Muhammadan geographers in the Mongol period.

The lands around Baikal are called *Baikal'skaja* or *Baikal'skaja-Turkija* and the people who live there, the *Baikal's* (the *s* at the end of this word is the Mongol plural ending) by Rashid al-Din (cf. the Persian text in Berzin's edition, *Trat. Firdausi*, *Ulduzganga Archaologičeskije Očerki*, Saint-Petersburg, 1880, p. 180). The first name is apparently still preserved in the name of a river, the *Burgasch*, which flows into the Baikal from the east. In the Turkish inscriptions of Ochiai (sixth century A.D.) the people of this district are called *Bayrak*; whether, as Hirth supposes (*Nordenskiöld's Reisebericht des Tonjatsch*, p. 7) Lake Baikal has taken its name from them is more than questionable. Among the Yakuts at the present day the word Baikal means "sea". The name is also employed as the Turkish and *Bai* (rich lake); this explanation also cannot be supported by any original authorities. In Europe, Baikal has become known by the discovery and conquest of the land by the Russian Cossacks (in the eighteenth century).

(W. BARTHOLO.)

BAIKARĀ, a prince of the house of Tamerlān, grandson of his founder. He was 22 years old at the death of his grandfather (Shāhshāh 802 = February 1403) so he must have been born about 795 (1392-1393). His father Qutub Shāh had predeceased Tamerlān. Baikarā is celebrated by Dawlat Shāh (ed. Brown, p. 374) for his beauty as a second Joseph and for his courage as a second Rustam; he was prince of Balkh for a long period. In the year 817 (1414) he was granted Herat, Hamadan, Nishāpūr and Samarkand by Shāh Rukh; in the following year he rebelled against his brother Iskandar and seized Shiraz but was afterwards overthrown by Rukh Parwana and allowed to go to Prince Kalāi at Kandahar and Germany, he started up a rebellion there too however and was seized by Kalāi in 819 (1416-1417). Shāh Rukh pardoned him again and sent him to India; nothing further is known of him. This Baikarā which is found in *Al-Bihar* does not agree with what Dawlat Shāh tells us; according to the latter (loc. cit.) he went of his own accord from Bukhara to Shāh Rukh, was sent by him to Samarkand and there put to death at the instigation of Ughl-Beg; according to other accounts he was put to death at the court of Shāh Rukh himself (in Herat). The year 819 is given by other authorities also in the year of Baikarā's death. According to Balā (ed. Beveridge, l. 163 b.) the name Baikarā was also borne by a grandson of this prince, the elder brother of Sulaymān; this second Baikarā was for some years Governor of Balkh.

Biography: The history of the events of the first decades of the fifth century is well-known to us from the *Maṣnawī* of 'Alī al-Kāshī Samarqandī [q. v.], following *Al-Bihar*; cf. the extracts (for the years 807-820) in *Quintessence, Notes et Extraits*, Vol. xiv. part. 1. On the original text of *Al-Bihar* Abū presented in a MS. in the Bodleian Library (Eliot 422) cf. W. Barthold in *al-Bihar* (St. Petersburg, 1897), p. 25 et seq. (W. BARTHOLO.)

BAILAMAN, the original place of emigration of the Yakuts known as *al-Bailamān*, is sometimes located in India and sometimes in Yunnan; cf. Schwartz, *Die Wägen der alten Araber* (Leipzig, 1886), p. 135.

BAILO. [See BAIKAR.]

BAINA (A.). Strictly Acc. consists of the substantive *Baina*, *between*, then a preposition meaning "between". — *Baina* *baina* is an adverbial expression, which means "at middle quality, at middle worth"; *al-Hawā* *hān* *baina* *līn* is a sound between *hān* and *līn* semi-vowel (i.e. *AW*) which corresponds to the vowel following the *hān* (cf. *līn*, etc. 214). According to our method of expression this means: when *hān* is between two vowels, the glottal stop is omitted in certain dialects — among the Korāsh and particularly among some of the Ughia (Hān *Yāh*, p. 1303, 4) — but neither in vowel-sequences containing *u* and *ā* nor in traditional vowel-sequences nor was *u* contracted. In other words, this kind of *hān* is not a sound but what we, following Sievers' *Phonetik* (5 Ed., § 403) might call the "imperfectible" or "diphthong" transition from vowel to vowel (but without forming a diphthong). The Arab alphabet, which could not represent two vowels in direct succession, was to blame for this awkward conception. This sort of transition was employed only in the sound sequences *la*, *no* (Sihawī, ed. Derenbourg, l. 189, 1; *al-Zamakhshari*, *Al-Mufaṣṣal*, 2 ed. p. 166, 12); in these cases the transitional sound appeared (*ya*, *wa*) especially when there was a *Takṣīf*.

Biography: Sihawī (ed. Derenbourg), l. 168-176; *al-Zamakhshari*, *Al-Mufaṣṣal* (2 ed.), p. 166-167; Hān *Yāh*, p. 1302-1310; cf. also the Art. *AW*. (A. SILLIGER.)

BAIRAK (Turk.) Banner = Arab. *Ḥawā* = *Bairak* = standard-bearer. For *Bayrak* *Bairak*, see the Article *MEYRAN*.

BAIRAM, an Ottoman-Turkish name which denotes the two great Muslim festivals: *Akshabairam* "the little festival", also called *Shawaraim* "feast of sweets" in account of the custom of making presents of sweetmeats (hence, the festival on the breaking of the fast (*al-iftār*) which lasts three days. The *Bayram*, "the great festival", usually called *firān-bairam*, "feast of the sacrifice", is the *id al-ahḍā* which lasts four days. A *ritihā* *amwāl*, "official reception", is held at the Imperial Palace on each of these two festivals. (C. PHART.)

BAIRAM 'ALI-KHAN, Prince of Maw (1197-1200 = 1782-1785-1785-1786). His father was descended from the *Iranian* branch of the family of Rājā which had ruled in Maw from the time of 'Abdā I; his mother was of the Turkoman tribe the *Sabir*; he himself enjoyed among the Turkomans the reputation of being a warrior of unparalleled bravery. In the war against Mawālī (Shāh Shāh) of Shāhārā he was led by his fearlessness into an ambush and fell fighting; his head was taken to Bāghār and exhibited on the place of execution. His second son Muḥammad Karim succeeded him in Maw; his eldest son Muḥammad Husayn who had devoted himself to learning and obtained the name of being the "Pope of his age" (*al-ḥafīz* *al-ḥafīz*) remained in Mawālī. Cf. Mu 'Alī al-Kāshī Shāhārā, *Historie de l'Asie Centrale* (ed. Schaller), p. 58 et seq.; V. Zakowski, *Kazani* *Staraja Maw* (St. Petersburg, 1894), p. 83 et seq.

A small fortress (about 900 yards long and 600 wide) in the southern part of the range of the *Mount Maw*, bears the name of *Kāshā* *Bairam* 'Alī Khān and has been recognized by V. Zakowski

(*Reconstrual Storage Heron*) as the latest foundation of this site. In a wider sense the name "Bairam 'Alī" is applied to the ruins of the ancient Heron generally so that the name has also been given to the railway-station near the ruins as well as to the imperial estates (*Goudarabān byrān*) lying there.

(W. BARTHELEMY.)

BAIRAM KHĀN, **SHĀN-KHĀN**, whose name is also spelt *Bairām*, the son of Saīd 'Alī Beg, and the fourth in rank in descent from 'Alī Shāh Turkmān. 'Alī Shāh (cf. *Al-Bihar's Akbar*, ed. Erskine, p. 30), belonged to the Baluchite tribe, and held large possessions in Heratistan etc. His son or grandson 'Alī, who seems also to be known as Pir 'Alī, was an ally of Shāh Shāh Baluch of the Black Sheep. When the dynasty of the Black Sheep was overthrown by Tīmūr Lashkāri, 'Alī entered into the service of Abu Saīd, and when that prince was put to death in 1469, he became an officer of his son Sulṭān Mahmūd Mirza. He stayed with him at Herat Shāhman, and there his daughter Farḡa Begam became Sulṭān Mahmūd's wife.

From Herat Saīd 'Alī went to Kābul and then to Shīr, where he was defeated by the king of that country. During his flight, he was seized and put to death by the servants of Sulṭān Husayn of Herat. Saīd 'Alī's son Qāsim 'Alī Beg settled in Badakhshān, which included Kandahar, and became a viceroy of Herat, as also did his son Saīd 'Alī, who, according to Ferishta, died as governor of Herat. Qāsim 'Alī was referred to in *Al-Bihar's Akbar* (ed. Erskine, 350) under the years 903, 905, 910, and also under the year 933 A.H. Bairam was born in Badakhshān, and he must have also been in its service, but he, this could only be in his early youth. He was educated at Herat and appears to have been an excellent student. Afterwards he came to Kābul, and accompanied Humāyūn to Jāhā, and was present at the disastrous battle of Kābul. After that he took refuge with a Hindu Zamindār in Samāhal, which had been Humāyūn's appanage. He was not allowed, however, to remain there, for Shīr Shāh sent for him and endeavoured to induce him to enter his service. Bairam refused, saying in reply to a remark of Shīr Shāh, that as one who was loyal to his master would ever come to disgrace. He and a companion then made their escape, but they were recaptured, and Bairam was only saved by the devotion of his companion, who persuaded the captors that he was Bairam. Bairam fled to Gūjjān where Sulṭān Mahmūd offered him service. But he preferred a desire to go on pilgrimage, and was allowed to go to Sūrat. There he turned back and eventually joined Humāyūn in Sindh. He accompanied his master in his flight to Persia, and distinguished himself at the court of 'Tahmāsp by his address in sports. He was Humāyūn's general in Afghanistan, India, and was no doubt the real cause of Humāyūn's restoration. He won the battle of Māchūn (in the Lashkāri district) in 1555, and it was probably due to him, as much as to Humāyūn, that the humane order was passed which exempted the women and children of the vanquished Afghans from being enslaved. At the time of Humāyūn's sudden death, Bairam was with Akbar in the Panjab. As soon as he received the news, he, at Kābul, proclaimed Akbar as emperor, and caused him to be enthroned (February 1556).

When Turki Beg was diabolically defeated at Delhi by Akbar, Bairam caused him to be put to death, and this severity is justified by Ferishta. Bairam was with Akbar at the battle of Panipat in November 1556, and it was he, we repeat to say, who killed with his own hand the wounded captive, Hīnd of Rerāt. Bairam's conduct in Turki Beg's case, and his minute regulations about Akbar's pleasures (see *Khāst Khān*, I, 134) show that he would not have brooked his word's interference. In fact, he looked upon himself as being in the place of Akbar's father and he had the title of *Khān Shāh* i.e. the Khān-Father.

In 1557 Akbar, in fulfilment of a promise made by his father, gave his cousin Salīm Begam in marriage to Bairam, and the wedding was celebrated with great pomp at Dīlāshāpur. Previous to his marriage with Salīm, Bairam had been married to the daughter of an Indian Musalman, Dīnād Khān of Herat, and she was the mother of Akbar's famous son 'Alī al-Rāyhan. Neither he nor Akbar had any children by Salīm. Bairam's overbearing manners, and the influence of Akbar's nurses, Maham Anūg, led to a breach between guardian and ward. Bairam was first disposed to submit and to surrender his authority, but the conduct of his nurses changed him into resistance. He failed and was magnanimously forgiven by Akbar. He set off on pilgrimage to Mecca but was assassinated at Sultān in Gūjjān by an Afghani in consequence of a blood feud (31 January 1561). His body was afterwards removed by his nephew to Badakhshān.

Bairam was a Shi'ite and it is an evidence of his greatness and a credit to Salīm, that this bigoted Sunni has said so much in his favour. He had a literary turn and his *Qasida* is still in existence. Būshūf and Ferishta have given several extracts from his verses. There are accounts of him in *Shāh-Jahān's* and in *Velāhī* (when chronicling his death), and in the *Adab al-Lughat* by Shāh Nawās Khān (I, 381). It is chiefly from this last that Motham's notice to his translation of the *Ar-Rāz*, p. 215 is taken. There is also a long and interesting account of Bairam in the Hindustani work called the *Harat al-Akbar*, pp. 153-166, by Shams al-Dīn Muhammad Husayn.

(H. HARTMAN.)

BAIRAMIYA, an order of Dervishes, founded by Hādīdī Bairam of Angora. The founder died there in 833 (1429-1430). His grave adjoins the ruins of the temple of *Artemis* and Augustus, the walls of which bear the famous inscription, the *Munusculum Augustum*. The Bairami Order is a branch of the *Nakshbandi*, which is represented in Turkey in Constantinople. It has settlements in Istanbul, Elyaz, Samsun and Karaman.

Bibliography: Gibb, *History of Ottoman Turkey*, I, 209 Ann.; Depont et Coppolani, *Confessions religieuses*, II, 532; Hādīdī Khānī, *Qasida-nawā*, p. 643. (CL. HART.)

BAIRUT (also written *Bairuz*, *Haruz* and pronounced *Harūr*), a town on the Syrian coast, 23° 54' N. L., lying on the Bay of Sidon, at the foot of Mount Lebanon of which the town is the natural commercial centre; it does not, however, belong to the autonomous district of Lebanon but to the headquarters of an independent Wilāyat.

Lisbon is an ancient Phoenician town which is mentioned as early as the Tell el-Amarna tablets (cf. *Zeltener d. Deutschen Philologen-Ver.*, xix, 1907, p. 13 of 119). An independent kingdom about 1450 B. C., next belonging to the Hittites (Syria), the town fell into the hands of the Egyptians in the time of the Medes, from whom it was regained by Antiochus III, the great. The town was destroyed by the Syrian Diadochæ Tryphon in 140 B. C., rebuilt in the time of Augustus by Agrippa, and made a Roman Colony (Colonia Julia Augusta Felix Beryta). In the following centuries Beirut was famous for its academy of Rhetoric, Politics and Law even the earthquake which did much damage to the town in 349 A. D. did not affect the prosperity of its schools. When in 533 another earthquake destroyed the town, it recovered only with difficulty and as full as ever before the advancing Arab hosts under the command of Abd. el-Djalid.

A period of renewed prosperity for Beirut began with Mohammedan rule. It was the first of the Crusades brought soldiers from Persia to people the town and the whole district; he also had the ships built here with which the first naval expedition was undertaken. Beirut was, however — as it now again is — the harbor of Damascus. Intellectual activity was again awakened and a series of scholars and traditionally worked in Beirut; the geographer Yaqut calls it a famous city.

The Crimeans brought ~~the~~ ^{many} violent attacks. Bahktul I of Georgia captured Batumi after a siege of two months on the 27th April 1830. In 1833 it was captured by Saitak al-Din. In 1837 captured by the Crimeans and held till 1839. In the Turkish period we find the town in possession of Janissaries of the name of Mevlai of whom the famous Crimean prince Fevkal al-Din (1595-1634) was prominent in the endeavour to revive culture in the town. The direct Turkish rule - since 1763 - is wholly involved in the ~~area~~ ^{area} of Russian Pasha against Turkey, and the involvement by the allied English, Turkish and Austrian fleets on the 20-24th Sept. 1840 again reduced the town to a state of depopulation.

India since 1850 has experienced a fast, great development, which however has already passed its zenith. The massing of the Christians in Cochin and Lisbon in that year opened a great future of Christians to India, the town became quite Christian in character and the highlanders now form only a third of the population, which is about 120,000. India thereby became not only the biggest town in Syria, next to Damascus, but became the intellectual and commercial centre of the whole Syria-Arabia population. European schools disseminated European education, printing received a great impulse the union with Damascus by railway (since 1893) and the opening of a new harbour (since 1893) facilitated the traffic which consisted in the export of products of agriculture and some weaving of gold and silver work and in the importation of articles of clothing, furniture, wood, linens and leather. Of recent years India has begun to offer serious competition to Beirut.

day, one of the first towns conquered by the
Arabs, in Western Palestine. A system of dams
and canals, collecting the waters of several large
streams, irrigated and drained the neighbourhood.
To defend the town against the marauds, the
Byzantine garrison broke through the dams and
made real marshes ~~near~~ ^{around} the town, which still exist
in which the Arab cavalry ~~was~~ almost engulfed.
This ~~marsh~~ ^{marsh} was extensive and ~~slightly~~ ^{slightly} opened
its gates, it formed part of the ~~front~~ ^{front} of Jordan,
created by the new masters of Syria. It was the
native town of the Nabish Khalifa b. Nulaw (died
about 112 A. H.) famous for his connection with
the Omayyads and his influence over Chusai II.
It ~~was~~ a flourishing town under the Arabs, it lies
on the verge of a large, fertile plain which com-
prises the plain of Es-Solman with the Libanus.
The valley of Jordan was, as it were, a highway
in which were cultivated the most valuable pro-
ducts, indigo and sugar-cane. To these Haïsan
owed its prosperity. Sugar authors place here the
town of ~~was~~ celebrated Abd 'Ouida bin al-Hijari,
one of the conquerors of Syria. Its palm-trees
were famous — the Haïsan mentions them —
and its wine also which was exported as far as
Hijla. Situated on the route of regular ~~mailing~~ ^{mailing}
out from Damascus or from the Mediterranean
coast it suffered much during the Crusades. Several
battles were fought on the neighbouring
plains. Taken by Godfrey de Bouillon, abandoned
during the war with Saladin, the Crusaders de-
stroyed it in the reign of Uthman. It recovered
with difficulty from this blow. Its state in the
year of 1841 was similar to that at the present day
for he only counted ~~some~~ ^{some} palm-trees there in the
fifteenth century. Haïsan describes it as a
little town. After falling to the level of a miser-
able village it recovered under the Egyptian
occupation (nineteenth century). At the present
day the prosperity of the Haïsan with its beautiful
gardens, abundantly supplied with water, the ~~at~~ ^{at}
the ~~river~~, it has about 3000 inhabitants and is
a fair way to increase in spite of the torrid
heat and the unhealthiness of its climate. Haïsan
has benefited by the making of the railway from
Haifa to Dair.

RAISONKHOR, LUNYAZH At-Mhr. was a high noble and grandson of Timur appointed by his father in 1420 (1412) to the office of chief judge at the court. In 1423 (1420) on the death of Kaya-Yaul, he took possession of the throne and was appointed governor of Astrakhan. In 1425 (October 1417), but he never accepted the throne; the astrologers having predicted to him that his realm was five years then forty years, he gave himself up to dissipation and died at Samarkand, 1st Ruzmatal 1327 (with December 1425).

ber 1433) in the age of thirty six, was buried in the mausoleum of Prince Gawahat. An artist and patron of the arts, he was a designer and an illuminator: in the library, which he had founded, 1213 copyists, pupils of Mir 'Ali, followers of the *Nawā'idī* script, were occupied copying manuscripts. His example had a considerable influence on the development of the art of painting in Persia in the period of the Timurids. In 1429 (1425-1426) he caused a critical edition of the *Shahnameh* of Ferdowsi to be undertaken and a preface to be written to this work, the longer of the two which are preserved. The great history of the world by Isfahānī Abū, begun in 826, (1422-1423) is frequently called after him. *Tabriz al-Faṭṭāḥ al-Bayhaqī*.

BAISONGHOR (B. Cl. Hunt, *Calligrapher and Manuscriptist*, p. 97, 306, 324, 330; J. Mohl in *Firdausi, Œuvres de Rumi* (Schötenberg), Vol. I p. xv, note 1; Mühlmann, *Kunstedt al-Bihar*, v, 212, 213; Khondemir, *Ḥusn al-Sayar* III, 140, 3, p. 116, 123, 130; Geiger and Kubin, *Iranische Literatur*, II, p. 140-144, 303-304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000).

BAISONGHOR, second son of Sultan Mahmūd of Samarkand, grandson of Sultan Abū Sa'īd [p. v.], born in the year 1477 (1478), killed on 10th Muharram 1491 (1491 Aug. 21). In the lifetime of his father he was prince of Gahghar; on the death of the latter in Rabi' I 1490 (30th Dec. 1491-27th Jan. 1492) he was summoned to Samarkand. In 1491 (1492-1493) he was deposed for a brief period by his brother Sultan 'Alī and in 1493 towards the end of Rabi' I (November 1493) finally overthrown by his cousin Bāhor. Bāhor then banished himself to Hissar where he was successful in defeating his brother Mas'ūd and taking the country with the help of the Dog Khawraw Shāh, who came over to his side; he was soon afterwards betrayed by this nameless dog and put to death. Bāhorghor is described by his rival Bāhor as a brave and just prince. He was also famous as a Persian poet under the name 'Add; his Ghazals were so popular in Samarkand that they were to be found in almost every house (*Shāhnameh*, ed. Herzfeld, I, 68 b.).

BAISONGHOR, was also the name of a prince of the Ak-Koyunlu in Persia, son and successor of Sultan Ya'qub; he only reigned for a short period from 898-899 (= 1498-1499) and was overthrown by his cousin Rūstān.

BAIT (A.), House, with the Arabic article, *al-Bait* the House, i.e. the House of Allah = the sanctuary at Mecca, *al-Bait* called *al-Bait al-Haram* (the ancient house) or *al-Bait al-Sharif* (the holy house). Geographical names compounded with *Bait* are frequent, some are given below. — In poetry *Bait* means verse, see *BAḌʿ*.

BAIT AL-DIN. See *BAḌʿ*.

BAIT DJABRIN (Jabalik) or, after a popular etymology: Bait Djabrīn (Jabalik) name, a town in southwestern India. It was one of the neighbouring towns of Moredā, destroyed by the Portuguese (again discovered in Sanskrit) and is first mentioned by Josephus (*Hist. Jew.* IV, 8, 1, where Djabrin is undoubtedly a corruption of the name) and by Ptolemy v. 15, 5 as *Barogabrin* and in the Tabula Peutingeriana as *Barogabrin*. In the Samaritan writings the name appears as

Bait Gubrin. In Roman Imperial times the town received the name of *Blowid-opolis*, but this was soon, as was often the case elsewhere, superseded by the older name. The Roman name appears again among the Christians towards the end of the fifth century but Arab writers know only the name Bait Djabrin and the Christians *Blowidopolis* which was corrupted in Arabic. The name then fairly important, the name of a Bishop, was converted in the time of Abū Bakr by Amir al-ʿArab, who acquired no title there, called *Abū Bakr* was of the freemen. In the following period it suffered much from repeated attacks and devastations. According to the account of Stephen, a monk of Abū Bakr, Constantinople was completely destroyed in 796 during a war between Arab and Armenians. It recovered again, however, for Ya'qub mentions it in 101 as an ancient town inhabited by Christians and a century later it is described by Al-Buhārī as an important city through it had lost much of its former greatness. The Crusaders found it in ruins but built a strong fortress there in 114. Later (1155) it was mentioned for travellers, but in the year 1187 it was conquered with many other towns in Palestine by Saladin and again destroyed. It was afterwards again rebuilt, for it was one of the towns conquered by Saladin's general Bāhor in 1241. An inscription over the principal gateway tells us that the fortress was restored in 1351, the building is now only a village, containing many relics of earlier times.

Bait al-Din, 1477; Thomsen in *Archiv für Kunde*, 1908, 393; P. Thomsen, *Leviathan*, 32, 50; Schlatter in *Zeitschrift für Evangelische Theologie*, 18, 225 ff.; Neuhäuser, *Geographie von Palästina*, 122 ff.; Stephenson, *Acta Samaritana*, 1871, 1872, 1873, 1874, 1875, 1876, 1877, 1878, 1879, 1880, 1881, 1882, 1883, 1884, 1885, 1886, 1887, 1888, 1889, 1890, 1891, 1892, 1893, 1894, 1895, 1896, 1897, 1898, 1899, 1900, 1901, 1902, 1903, 1904, 1905, 1906, 1907, 1908, 1909, 1910, 1911, 1912, 1913, 1914, 1915, 1916, 1917, 1918, 1919, 1920, 1921, 1922, 1923, 1924, 1925, 1926, 1927, 1928, 1929, 1930, 1931, 1932, 1933, 1934, 1935, 1936, 1937, 1938, 1939, 1940, 1941, 1942, 1943, 1944, 1945, 1946, 1947, 1948, 1949, 1950, 1951, 1952, 1953, 1954, 1955, 1956, 1957, 1958, 1959, 1960, 1961, 1962, 1963, 1964, 1965, 1966, 1967, 1968, 1969, 1970, 1971, 1972, 1973, 1974, 1975, 1976, 1977, 1978, 1979, 1980, 1981, 1982, 1983, 1984, 1985, 1986, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1997, 1998, 1999, 2000).

BAIT AL-FAKIH, properly Bait al-Fakih *Uyāt*, i.e. the house of the lawyer Abu 'Uyāt, the name of a town in the Tihama of Yemen, south-west of Hudayda, which first rose to prosperity in the twelfth century when the harbour of Ghadifa (Ghadifa) gradually became silted up and was for some time of importance as the centre of the coffee trade. At the present day the town has about 1000 inhabitants. The lawyer, from whom it takes its name, is the famous saint Ahmad b. Muhammad b. Umar, usually called Abu 'Uyāt who died in 690 (1291). There was at that time a village here called Ghadifa al-Fakih where the saint was buried; his grave was a popular place of pilgrimage (cf. Ibn Sa'ūd, ed. Vass, II, 171) and now it serves the later town of Bait al-Fakih. Sometimes the adjective *al-Fakih* (the lawyer) is added to this name to distinguish it from Bait al-Fakih al-Kabir (great Bait al-Fakih) which lies further to the north in the *zahrā*

district of Baitāh and is properly called Zaidiyya. Niebuhr mentions this town only casually under the name of Sadié (sic) in the district of Jubein, near the old town, ~~now in ruins~~, of al-Mahdān. The old geographers know neither the name Bait al-Fakih nor Zaidiyya so that this town appears to have changed its name in course of time. It is perhaps identical with the al-Mahdān mentioned by them.

Bibliography: Niebuhr, *Beschreibung von Arabien*, 261; ~~ibid.~~, (French Edition) *Travels through Arabie*, 2, 25 et seq.; K. Ritter, *Reisekunde*, 21, 872 et seq.

BAIT LAJIM, the ~~ancient~~ Bethlehem. The Arab geographers describe the town as ~~the~~ birthplace of Jesus, where there are ~~an~~ incomparably beautiful church (the ~~temple~~ built by Constantine), the place where Jesus was born, the grave of David and Solomon (which Christian tradition has provisionally located here, cf. K. Hartmann in *Zeitschr. für deutsche Philologie*, *Verh.*, xxvii, 180 et seq.) and the palm mentioned in the Korān (Sura 19, 25) — a most wonderful tree ~~in these~~ ~~and~~ other palms in the district. The description given by Bishop Arculfus of Bethlehem dates from the earliest period of Arab rule, about 630; the town had then a low wall without towers. On the approach of the Crusaders in 1099 the Saracens laid everything waste except the convent of St. Mary. The Franks rebuilt the town. ~~in~~ In 1187 it was regained with many others by Saladin. In 1244 Bethlehem was devastated by wild hordes from Shawān, hostile to the Christians; and in 1459, the strong fortress was razed to the ground, the town-wall torn down and the buildings, including the convent, destroyed. After this blow the town had a disquieted existence for a long period and it is only in recent centuries that it has somewhat recovered. Bethlehem, where no Jew dared live in Christian times, has always preserved a marked Christian character even in the Muhammadan period. The number of Muhammadans has always been insignificant. In 1831 the Christian population, which has a reputation for being unreluctant since the Muhammadans refused to pay a new tax and shot another rising in 1834. Nazhām Fakih had the Muhammadan quarter pulled down.

BAIT AL-MAKDIS. [See AL-KUDS.]

BAIT AL-MAL means treasury, especially that of the state and is applied not only to the actual building in which the financial business of the state is transacted but also in a figurative sense to the national exchequer as *source*. The beginnings of the institution of a Bait al-Mal

may be traced to the time of Muhammad; for by his time there had arisen the conception of property common to the Muhammadan community. The Caliph 'Umar is traditionally regarded as the official founder. It was he who first drew up *shurūṭ* i. e. laws of payment and instituted a system of accounting; he also recognized that on the gradual transition from the policy of plundering to permanent occupation of the conquered lands it would be impossible for the land to be divided up like portable booty (*ghanima*). These laws were an immense common property (*ṣarf*) the rest from which went to the state treasury. The importance of the *shurūṭ*, which had hitherto been an unknown conception to the Arabs, thereby increased to an enormous extent. Wellhausen (*Arch. Forsch.*, p. 28 et seq.) has shown how the opposition to this new conception of the state led to revolts and finally to the murder of the Caliph 'Uthman. The Bait al-Masāḥib was instituted in contrast to the Bait al-Mal. When political conditions became more stable and the Persian and Byzantine machinery of government was taken over, it naturally followed that the political conception that was in existence before the time of 'Umar and was adopted by him, triumphed and with it the idea of the Bait al-Mal was worked out, in theory and practice. In practice in place of the Bait al-Mal of indefinite times there was instituted the *Diwān al-Dawla* i. e. the complicated machinery which was concerned with the income and expenditure of the various Muhammadan lands. To describe the history of the Bait al-Mal in practice would mean writing the history of the financial policy of all Muhammadan countries. This is impossible here. Like all institutions of the early Muhammadan period however, the theory of the Bait al-Mal gained importance with the development of Muhammadan law. Only those receipts of the *ṣarf* recognized by theory were regarded as legal while all other sources of the state's revenue were considered *maḥrūṭ* i. e. illegal receipts. This distinction carried over into the Turkish period and indeed still exists at the present day.

The Bait al-Mal is controlled by the *ḥakīm* or his representative. The following are the main legal sources of revenue of the state.

1. *Kharāj* (land-tax) and *ḥiṣṣa* or *ḥiṣṣiya* (poll-tax); in each of these the idea of income from the *ṣarf* is apparent; 2. *Zakāt* (alms-tax) also called *ḥaḍr* (tribute) which is derived from agricultural land; since a merchant's *ṣarf* are also liable to *zakāt* according to definite rules, the tax has been legalized as *ḥaḍr*; 3. *Ḍamān* i. e. the bill of the land and receipts that were regarded as similar (e. g. those from mines or Treasures Trove); 4. *Mawāḍif* *ḥaḍr* i. e. the taking of an estate in the *ṣarf* in the absence of other heirs (*ṣarf*); This requires the legal administration of the Bait al-Mal.

These receipts could not, however, be used for any purpose of the state that the authorities wished; the income from no. 2 was earmarked for the poor and needy, the collectors of the tax, the *muḥallif* *ḥaḍr*, the purchase and liberation of slaves, for doctors, those fighting in the holy war and for travellers (Korān, Is. 60). There were also strict rules regarding the application of no. 3, with reference to Korān, viii, 12. Only 3 and 4 are allotted unreservedly to all purposes of the treasury. In practice no one has ever troubled

about these demands of theory and indeed the legal cases have sometimes been applied to very illegal exactions. At any rate Muhammadan rulers have never been so strict and scrupulous with the public moujee as suchness amirados on this point from the early period of Islam would have us believe. It was not till the introduction of European control or of a constitution that this state of affairs improved.

For Bibliography and further information see the above mentioned technical terms.

(C. 11. 11. 11. 11. 11.)

AT-BAIT AL-MUKADDAS, [Not AL-HUDA.]

BAIT RAS (the ~~ancient~~ form found in poetry; locally it is pronounced Bait al-Ras with the emphasis more on ~~the~~ ~~the~~ article, this spelling is also found in the histories of the Crusades), probably the ancient Capitolias, a ruined site of the Byzantine period, an hour's journey to the northwest in which lies an insignificant village, of the Kalnahamas of Hadd (Adhuna) of ~~the~~ same name. Destroyed under the Byzantine Empire, it is mentioned among the towns conquered in the Days of Jordan, of which it afterwards formed part.

It was once praised by the pre-Ishmael poets, such as Nathaniel Hawthorne and Herman Melville and remained in vogue in later times. The true cultivation of the vine has now vanished from the village though it is very favourably situated for this enterprise. The Oxnard Caliph Yacub I is said to have been born there. One of his sons, Yacub II, a famous drinker came to exile here with his favourite Isabella. Of the feast built by him, we think ~~some~~ remains may be found in the ruins which have been taken for those of an ancient church. Isabella died and ~~was~~ buried here. Yacub followed her soon afterwards; his tomb is believed to be in the ruins.

But Kani is also the name of a village named for the wife, near Hahlo.

BALTAH (also *Harpa*, *Ura*) form the direct *forlance*; smith, veterinary surgeon. Although the animal Arabs were fairly advanced in veterinary science from their own experience and practice on herds and cattle breeders, foreign wandering veterinary surgeons, who as the upholding of the name shows came to them from the Byzantine Empire and from Syria, enjoyed a special reputation. Like the wandering wine-merchants these surgeons set up their booths at the great fairs of 'Cham, Min, 'Mudha etc. and extended their art which contained chiefly in blood-letting and attending to wounds. The Hindus appear to have often also applied this skill to human beings, for the ancient Arab poets name the word in the course of medicine.

AL-HA'ITH (A.), the "Awakeener" (on the day of the Resurrection) one of the 99 names of Allah.

BAIYINA (A.), Prod. Name of Spec. April

BAIYUMIYA, a religious order, founded
by Sha 'Ali b. al-Bukhar b. Muhammad, born at
Baiyum in Egypt in 1108 (1696). The order be-
longs to the *Qadiriya* its founder, master of
the *Khawassiya*, renewed the ritual of the *Hada-
siya*, in which he gave a more elongating character
and made stricter by more stringent exercises.
There are well-known of this order in Arabia
(Hijaz and Mecca) in the Euphrates and Indian
countries; the mother-Zawiya is in a village near
Salaga. The *adab* of the *Qadiriya* consists in calling
out 99 *Allahs* with an inclination of the head
and crossing of the hands on the breast, followed
by raising the head and clapping the hands.

BÄKALAMON. (See AIG BÄLUMON, p. 21.)

BAKAR 'ID (vulg. *BAKHA 'ID*, i. e. cattle festival), the name commonly employed in India for the festival of 'ID at-DUMM in, and

st. BAKARA, "the Cow", Title of Sūta II, recalled in the story related in verses 63--68 of the purificatory offering of the Laxelles, *Nam. zin* and *Pakṛaspaṇa*, 1913, 1.

BĀKARGANJ, or BĀKARGANJE, a district of India, in Eastern Bengal and Assam, situated in the joint delta of the Janges and Brahmaputra. Area: 4,543 sq. m.; population (1901), 2,292,752, of whom 68% are Mahomedans. Their predominance may be inferred from the fact that the local dialect is commonly known as Muhammad. The name is derived from Bāgh Bazar, a market of the Nawab of Murshidabad early in the 18th cent. The headquarters are at Barisal, an important centre of river traffic through the Sunderbans.

The latter, being pleased with him, takes him, under the name of Bakhtiyār, into his service. When he has attained a high position, the jealousy of the viziers is aroused, who, taking advantage of an accident, cause him to lose the king's favour and he and the queen are thrown into prison. To save himself the queen declares that Bakhtiyār has tried to seduce her. For ten days, the ten viziers, one after the other, try to put aside the king to condemn Bakhtiyār to death; the latter however always manages to have the execution put off by telling a story sniting his pretensions. When finally on the eleventh day the execution is definitely in this place, the robber captain, who brought him up, appears and proves to the king that Bakhtiyār is his son. The viziers are then put to death while Bakhtiyār becomes king in place of his father, who abdicates in his favour. — The book is extant in Persian, Uigur, Arabic and Malay versions (there is also a modern version in Farsi). The story was originally written in Persian and the oldest Persian version, which we possess, appears to have been composed about 600 A.D. The Uigur (preserved in a manuscript written in 838 A.D.) as well as the Arabic versions, of 1000 A.D. are found in the Thousand and One Nights, are closely connected with this same story. A much later Persian adaptation (ed. Ouseley) comes from India, where the story was also put into verse in 1210 A.D. The Malay version is also derived from the later Persian.

Huxford.)

BAKHTIYĀRĪ, the chief tribe of Luristan, of Iranian origin, partly nomadic and partly sedentary, inhabit the mountains in Southern Persia between Burzujist and Chah-Bahall in the East, the mountains near above Bisf, Shahr and Kani-Masum in the west, the river of Bisf in the north and the river from Kani-Yar to Kani-Masum in the south (layed in the *Journal of the Geogr. Society*, London, xv, 6 et seq.). They fall into two great groups, the Haft-Lang and the Chah-Lang. The tribe of Haft-Lang is to be autochthonous. The Bakhtiyārīs are of middle size and strong physique, have brown complexions with long black hair and aquiline noses (see Khushkhal, *Mémoires sur l'Éthnographie de la Perse*, p. 104). The Almoravid (contracted from Muhammad bin al-Murad) in the district of Kani-Sefid claim a great antiquity and say they are descended from Khamir, one of their tribes bears the name Khamir. By their advance on Tehran, the Bakhtiyārīs gave the Persian revolution powerful support in 1909 (cf. *Asiaticum*, p. 3384).

AL-BĀKĪ, the "Enduring One", one of the names of God (see *ALLĀH*, p. 303).

BĀKĪ, the greatest of Ottoman lyrical poets, properly called Mahmūd Alai al-Bākī, born in Constantinople in 933 (1529-1577) the son of a Mu'adhibi of the Muhammadīya; learned at first the soldier's trade and afterwards studied law to prepare himself for a judicial career. In 962 (1553) Sultan Selim II to whom he had dedicated a congratulatory *ḥaside* on his return from Persia, attached him to the court, where he also enjoyed the imperial favour of Selim II and Murād III. After being successively *ḥāfi* of Mecca and Constantinople and three times filling the office of *ḥāfi* of Amasra and Roumla, he died on the 23 Rabi'ul 1008 (7 Nov. 1600). Remarkable for the purity of his style, Bākī is the most enthusiastic, but not the most exaggerated of the Persianizing school which has dominated Turkish poetry down to the 12th century.

Gesellsch.*, xlii, 1888, p. 560 et seq. (C. Huxford.)

BĀKĪ or **GHARĀD** (also trivially called **AL-BĀKĪ**), a cemetery of Medina. The name denotes a field, which was originally covered with a kind of high growing black berry; there were several such Bākī's in Medina. The place was and is situated at the southern end of the town, outside the modern town-wall through which a gateway, Bab al-Bākī, gives admittance to the cemetery (see the map of Medina in *Oriental Annual*, II, 1, p. 73). The first to be buried at Bākī was 'Uthmān b. Ma'nū, the septic member of the Prophet, the latter's daughter, the little Ibrahim, and his wives were also buried here. It gradually became an honour to be granted a last resting-place here among the relatives of Muhammad, the Imāms and Saints. The graves of the famous dead had memorials and domes built over them by their descendants; the dome of Hasan b. 'Alī for example, rose to a considerable height in the *Musallāt* district. When Burckhardt visited the place after the invasion of the Wahhābīs, he found it the most overgrown of all the cemeteries of the East. Like the grave of Hasan at Ghofar and Kufā, al-Bākī was one of the *ḥijāz* places of Medina where the pilgrims were accustomed to pray.

(A. J. WARMER.)

AL-BĀKĪLLĀNĪ, also BAKR b. 'Alī b. al-Jarrah, Arab author and dogmatist, a pupil of Abū Ṭālib b. Muḥammad al-Ṭayyib al-Bakr, who was a pupil of Abū Ṭālib al-Ash'arī, died on the 23 Rabi'ul 1013 = 6 June 1013 at Baghdad. He was famous for his polemical writings. He introduced new *ḥikm* into the Kalām from Greek philosophy or perhaps from the dogmatics of the Eastern Church, such as the cosmogony of atoms,

than the Nabian "tribe". Down to the time of the Fatimids the Bakt appears to have been regularly delivered. With the decline of Bakt and the Muhammadan occupation of the upper valley of the Nile, the Bakt ceased, though we have no particulars on this point.

(C. H. BECKER.)

BAKU, in the Arab. geographical BAKU, BAKH and BAKHA, a town on the coast of the Caspian Sea. The explanation of the name, which is nowadays accepted in Baku itself and is probably due to a popular etymology (Bakha "a place where the wind strikes") appears to have arisen at a very late period and the same applies to the story of the founding of the town by Khazar Anshirwan. The assumption, that the naphtha wells of Bakt with their "eternal fire" played an important part in the fire-worship of Persia, likewise rests on no historical foundations: fire-worship was not brought here till the 11th century by Indians and Indian Persians. The naphtha springs are first described by the Arab. geographers, most thoroughly by Mas'udi (*Muruj*, II. 75 et seq.) and Yaqut (s. v. Baku). There were two large springs, one of which yielded yellow or white naphtha (according to Mas'udi, the only spring of this kind known to him in the whole world) and the other black or green, each of the two springs yielded 1000 *dhinn* a day; in the 12th (13th) century Baku estimates the amount of black naphtha obtained daily at 200 *man* (manus). According to the *Darband Nama*, vol. Kazan-Beg, p. 136 et seq., the naphtha springs and the salt deposits of Baku (sown) a Wakt of the inhabitants of Darband. At a later period, an inscription of the year 1005 (1394-1395) shows, they were assigned to the Saljuks at Wakt; Baku is first mentioned as a harbour (*band*) by al-Buhārī (ed. de Goeje, p. 376, 2), but at that time the town is spite of its having much the better harbour was of no importance in comparison with Darband, which was the second largest town in Caucasus. We have practically no information on the history of the town; it is not once mentioned by Tabari nor by Ibn al-Athir. The Russians are said to have advanced as far as the naphtha springs about 300 (913-914). At a later period Baku belonged to the kingdom of the Shirwan Shahs and is mentioned in the 15th (16th) century as the residence of his prince. The Shirwan Shahs lived more frequently than ever at Shamakhi. The earliest chief mosque of Baku was, according to an inscription, built in 471 (1078-1079).

During the Mongol period and afterwards Baku appears to have attained greater importance as a harbour; after this period the Caspian Sea is frequently called "Sea of Baku". The authorities for this period also give no scanty information concerning the town; Hasan Ali Shah Karwini in the 15th (16th) century gives rather more than the other authorities and most information is given by 'Abd al-Rahim al-Bakhti in the 16th (17th) century. According to Hamid Allah Karwini there was at this period still only a village in Baku

with a fort lying high above it; there lived a "Head of the Prince" (*Shamsi Isak Khan*) called Shih-shah (*Shahshah*). Baku speaks of two fortresses, one high-lying, which in his time was almost entirely destroyed, and the other on the sea-shore; the latter was considered unusually strong and could not be taken even by the Mongols. The surface of the sea was then much higher than before so that a large part of the town had been submerged. The district immediately surrounding the town was then as now a marshy desert; the gardens of the inhabitants were at a considerable distance; everything necessary to maintain life was brought from Shirvan and Mughan. Besides naphtha and salt, silk was also produced. In the 16th (17th) century belongs the palace of Shirwan Shah, as well as the two tombs (mausoleums) of the year 860 = 1464-1465 lying near the palace. The palace is now used as a regimental depot and is in an utterly neglected state. In 1901 an ancient cemetery with an epitaph of Nadir Shah (September-October 1415) and other (from the tomb of the latter) inscribed inscriptions were found by accident.

In 906 (1500-1501) Baku was besieged and captured by Shah Ismail, the founder of the modern Persian kingdom, and the treasures of the Shirwan Shah carried off. In 1543 the town had to surrender to the Turks under Osman Pasha, and remained under Turkish rule till 1606. When Persian rule was again restored, Shah Abbas I had the town walls repaired, an inscription of the year 1017 (1608-1609) proves. In July 1721 Baku surrendered, after a brief resistance, to the Russian General Matjushkin, but was given back to the Persians in 1735. After the death of Nadir Shah (1747) the prince of Baku became practically independent. During the fights in Caucasus between Russia and Persia in the latter half of the 18th and early years of the 19th century, Yunus Kuli Khan, the prince of Baku allied himself with one or another of the other. On the 11th February 1806 the keys of the town were to have been given up to the Russian General Feltov Talskijow, but the General was treacherously murdered at his interview with the Khan and his head sent to Tiflis. When in the autumn of the same year Feltov Nizhnikov advanced against Baku, the Khan fled to Persia and the town surrendered without resistance on the 9th October and was finally incorporated in the Russian Empire.

The management of the naphtha-springs was a monopoly of the last ruler of Baku, who obtained a revenue of 40,000 roubles annually from it, according to the account of the Traveller Gmelin. Under Russian rule the springs were proclaimed Crown property; it was not till 1872 that the trade was thrown open and springs sold by public auction. Since that time the trade and thereby the town has received a great impetus, especially since Baku has been connected by railway with Russia on the Black Sea as well as with the interior of Russia. In Ritter's *Geographisch-statistisch-ethnographische Lexikon* (5th edition 1864) Baku is described as a town with only 10,000 inhabitants; even in 1889 in the guide officially published in that year the number is given as only 45,679; now Baku is an up-to-date modern city with over 100,000 inhabitants.

Bibliography: G. le Strange, *The Lands of the Eastern Caliphate* (Cambridge, 1905), p. 180

Like other places on the southern shores of the peninsula, Balaklava belonged for a long period to the Roman Empire and afterwards to the Byzantines, retaining possession of the Greeks even in the period of the Latin Kingdoms. It was not till the fourteenth century that the Genoese gained a footing here; in 1380 the whole south shore of Kafa (the modern Theodosia) was granted to the Genoese by a treaty with the Tatars; the country near Inkerman and north of it remained in possession of the Tatars. Balaklava was strongly fortified during this period as the southern part of the Genoese possessions; fortifications were also placed on the "Island" mentioned by Strabo, between Balaklava and Inkerman, the remains of which could still be seen in the nineteenth century. Balaklava was, during this period, the seat of a Catholic bishop. In 1473 the Greek inhabitants of Balaklava succeeded in driving the Genoese from their town, and placed themselves under the Greek prince of the town of Theodosia (probably to be sought for near Inkerman). The next year however a Genoese fleet under Carlo Lanolingo appeared before Balaklava; the town was taken by storm but soon afterwards the Genoese force was defeated at Eski-Krim by the Tatars and almost exterminated. In 1475 the land was conquered by the Turks; Balaklava belonged to the kingdom of the Giray from the sixth to the eighteenth century and is mentioned in the time of Salih Giray (1530-1557 = 1532-1550) as the most worthy point of the kingdom (Muhammad Rida, ed. *Kutub-Nuz*, p. 93); the coast lands to the south were incorporated in the Ottoman kingdom and governed by a Turkish Pasha. During the Crimean war, Balaklava is only mentioned as a harbour and does not appear to have had any military importance; the fortifications of the Genoese period were left in ruins. After the union of the Crimea with Russia in 1783, the Tatar population emigrated to Turkey. In their place Greek emigrants from the islands of the Aegean sea, who had attached themselves to the Russians during the war of 1768-1774, were settled here. Till 1860 Balaklava was used by the Russians as a naval station; on the night September 1854, the town was taken by the English and remained the head quarters of the allies during the siege of Sebastopol and is especially famous for the battle there on the 25th October 1854. Though regarded as a town as late as the eighteenth century, Balaklava is now an unimportant place, visited only by visiting craft.

(W. HARTMANN.)

BAL'AM or BAL'AM a. BAL'AM is the form which the name Balan (Balan b. Bal'at) has assumed in Arabic. It is probable, however, that this is a later, post-Muhammadan, transfer of the name and story, and that before Muhammad, Balan had already been assimilated to Arabic with a partial translation of his name as Bal'ama b. Bal'at. See the similar genealogies in *The Book of Kings* (pp. 133 and 166 of ed. of Cairo, 1314); the article in the *Eden an Eden* (xiv, 322) which (without mention of Balan) brings together the roots BL' and L'AM and the white mark on an ass's nose; the remark by Petrus

Alpharabius (*Magia, Liber 2^{us}, capit. 673*), "Bal'ama, qui lingua arabica vocatur Balaman"; and the bibliography in *Encyclopædia, Arab. or. II, 7*. Some commentators find a reference to Balan in *Kur'an* vii, 175. "And come to them the story of him to whom we gave our signs; then he was stripped of them, and the devil overtook him so he became one of those that err. And if we had willed, we had raised him by signs of them, but he turned to the earth and followed his lust. So he was like a dog; if you attack it, it pants, and if you leave it, it pants." According to various traditions given by Tabari (*Ta'arikh*, ix, 36 et seq.) this was a man named Bal'an, or Bal'am, in *al* or *bal*, of the Sons of Ismael or of the City of Giants or of the people of Yemen or of the Camarites (others held that the allusion was to Qaisiyah b. Abi 'I-Salt (cf. Sprenger, *Leben Allah*, i, 78 and, opposed, Schellhess in *Norddeutsche Zeitschrift*, i, 89); others to Abi 'Amr b. al-Nu'man, called the *MA'AM* Qaisiyah, p. 155, and Sprenger, i, 74; iii, 32 et seq.). There are similar uncertainties as to the Signs. Some held that they were the Most Great Name of Allah, He was an Jewelle who deserted to the Giants, whichever he asked, Allah gave to him. Others that they were the prophetic office; he was a prophet who had given up his mission, others that they were only arguments and proofs derived from things past; he may have studied the former books. Long and varying stories about Bal'an are then given by Tabari (cf. also his *Annals*, i, 308 et seq. of *Legenda* ed. i, 226 of Cairo ed.). The *al*, p. 133 et seq.; Pseudo-Bal'at, i, 143 (text of *al*); iii, 5, 80 of Arabic text) based partly on the Kur'anic passage, partly on the Biblical narrative and partly on Rabbinic legend. He is associated with the jinnas al-Hul-poor and Rabababab details are added, suggestive of the Rabbinic exhortation to tell of him whatever call was possible (cf. *Tractate Berachot*, ii, 467 et seq.; but by later Muslim thought, the idea that a prophet could ever be away from the faith became quite impossible. So we find *al* (*al*), ii, 323 et seq. of Cairo ed. of 1308) describing that Bal'an was only a man who had been taught by Allah and knew the religion of Allah and who afterwards lost it for unbelief. A quite different attitude going back to *Volat* b. Mubabib, a found in Ibn Kuthayb's *al* (p. 24; cf. also Pseudo-Bal'at, iii, 34, 75 of Arabic text) according to which Bal'am was one of a company, including also al-Shaikh and al-Shaikh, who followed in Abraham and migrated with him to Syria. Bal'an was also married by him to one of the daughters of Lot. All this may be only a pseudo-Jewish jest at Muslim expense. Finally, Bal'an figures in Pseudo-Bal'at (iii, 141), but apparently through some strange confusion of name, as a philosopher. His view was that the world was seen all eternity and had a controller (*al*), controlling it and other than it in all respects. He accepted also movement (*al*) and that the first movement was repeated in the second movement, because he held that movement went with the world fundamentally, and that the world was from all eternity.

(G. L. MACDONALD.)

BAL'AMI. family name (Nisba) of two ministers (father and son) in the Samanid kingdom. Of the origin of the name two ac-

counts are given in the *Asās al-Awāl* of Sam'ānī according to some the founder of the house is said to have taken a town (otherwise unknown, it seems) of Bal'am in Asia Minor under the Umayyad Maslama b. 'Abd al-Malik while others derive the name from the village of Bal'amūn near Mays. The family is said to have been of Arab origin and to have belonged to the tribe of Kind Tamim.

The father, Abu 'Ubayd Muhammad b. 'Ubayd Allah, is wrongly described by Sam'ānī as the vizier of the Shaddādī Ismā'īl b. Ahmad (died 295 = 907); in the historical notices of the Shaddāds he is first mentioned as vizier to the Umar of Nays b. Ahmad (301 = 331 = 914-943) and appears to have been the ~~successor~~ of this ruler's first minister Abd 'Alī Allah al-Jahizī, in what year he took up office is not stated. The release of 200 rebel fugitives b. 'Alī who had been detained in Rāhī 21 306 (August-September 938) and ~~other~~ prisoners soon afterwards, is attributed to al-Jahizī by Ibn al-Athīr (ed. Tornberg, viii. 66); on the other hand a poem by this Ismā'īl is given by Tha'ālufi (*Yunna*, ii. 5 Son, l. p. 204) in which the poet thanks the vizier Bal'am for his release. In 326 (937-938) Bal'am was deprived of his office (Ibn al-Athīr, viii. 285) and died in the night of the 10th Safar 329 (14th November 940) according to Sam'ānī.

His son Abu 'Alī Muhammad b. Muhammad, called "Emrek Bal'am" by Mukaddasī (ed. de Goeje, p. 338) was appointed vizier by 'Alī al-Mallik b. Nūh (343-350 = 954-961) towards the end of his reign and held the same rank under his ~~successor~~ Mansūr b. Nūh (350-355 = 961-976). His appointment is said to have been due to the influence of Mādīb Alp-Tegin (see this article p. 321); according to an agreement between Alp-Tegin and Bal'am such was to regard the latter as his representative (ed. 76). Bal'am did nothing then without obtaining his friend's advice. After the accession of Mansūr he most have cancelled his appointment with Alp-Tegin for he was able to remain in office after the latter's fall; according to Mukaddasī (loc. cit.) he was deposed, then reappointed vizier. In 352 (963) he composed the famous Persian version of Tabari's *History of the World*, the oldest historical work in modern Persian. According to Gardizi he died in Rayhān 363 (27th Feb. - 27th March 974) while still vizier; on the other hand 'Abū 'Izzat *Yunna*, ed. Itan, with commentary by Manīat, Cairo, 1286, i. 1763 says he was again appointed vizier in 362 (973) in the reign of Nūh bin Mansūr (363-367 = 976-997) and shortly afterwards in the same year, resigned, because he did not feel strong enough to deal with the critical state of affairs (the Shaddāds were then hard pressed by the Turkish *hök-pašas*, into whose power even the capital Baghdad had fallen. The date of his death is not given by 'Othmān; the date 386 (996) given by Rieu (*Catalogue Brit. Mus.*, i. 70) and following him Eiche (*Grundriss der iranischen Philologie*, ii. 355) and Henning (*A Literary History of Persia*, i. 356) is due to a misunderstanding as the text quoted by Rieu (*Notice de Fakhri*, iv. 363) refers to another person, Abu 'Alī Simānī (see this article p. 77).

Nizam al-Mulk (*Siyāset-Nāma*, ed. Dehbeli, p. 150) mentions "the Bal'am" (*Bal'amīyān*) among the most famous examples of Oriental ministers.

The reputation of a great minister seems to be attached particularly to the elder Bal'am (see e.g. Rukhshār, ed. Morley, p. 127), who like his predecessor al-Jahizī and his sovereign Nays b. Ahmad, is regarded as typical of the best period of the Shaddāds. He is extolled by Sam'ānī as an enlightened patron of scholars and poets; he is said to have specially appreciated the poet al-Buhārī and to have preferred him to all other Arab and Persian poets. Buildings by him in Mays and Baghdad are mentioned by al-Buhārī (ed. de Goeje, pp. 260 and 307) who calls him the "glorious vizier" (*al-shaykh al-ghālib*). His memory was kept green in Baghdad for a long period; his descendants were living in Baghdad as late as the time of Sam'ānī (about 550 = 1155). The modern name of the gate "Bāghīk Dīstān" in Baghdad is probably to be referred to this vizier. In the other hand Abu 'Alī Bal'am is ~~not~~ particularly mentioned by Sam'ānī; the historical writers also have no information to give as to his acts as a minister. His name seems to be due partly to his father but particularly to his historical work.

History of Bal'am. The extract from the *Asās al-Awāl* of Sam'ānī is given by Barthold, *Persian Literature to epocha mongolica*, p. 544. He also gives (p. 58) the part referring to the poet al-Buhārī (also given by al-Buhārī, *Yunna*, ed. de Goeje, in the appendix to Part I of the *Asās al-Awāl* of Muhammad 'Awfi, ed. B. G. Shoyun, London-Erlangen, 1906, p. 192, ~~ed.~~ ed. by Henning, *A Literary History of Persia*, i. 356), extracts from the *Zaim al-Shaddāds* of Gardizi (p. 7 of *ed.*, 11 of *ed.*) and *Shaddāds* the notices of Nūh Bal'am in Vol. II 252 of *ed.*, 262 of *ed.* (W. Barthold).

BAL-ANBAR. (See *ANBAR*, p. 349).

BALASAGHUN, a town in Central Asia, whose situation cannot now be exactly determined. In Mukaddasī (ed. de Goeje, pp. 264 and 275) Bal'amī (ed.) in Wāshukān is mentioned among the towns dependent on al-Buhārī (the modern Balkh, east of Chinkent). According to Yāqūt, i. 708 Balasaghun lay on the other side of the *narīghān* (see Daryā) not far from Kāshghar; on the other hand Yāqūt, loc. cit. 835, says that the town of Bal'h (the modern named city of Osh), but far from the neighbourhood of the Asia and ~~the~~ Sir Daryā, (i. e. northwest of Kāsh or Tashkent) was "further from Bal'h (or further from Shāh noon Hāshāghīn". Both statements are taken by Yāqūt from the *Asās al-Awāl* of Sam'ānī; in place of "further than Shāh" the phrase used by Sam'ānī is "where Shāh" (*Yunna*, ed. Fakhri). Ibn al-Athīr (ed. Fakhri, ii. 356) mentions a Turkish people, who migrated from Bal'h 435 (974 Sept. - 24 October 1043); the summer dwellings of these Turks were near the lands of the Bal'hār (of course the Bal'hār on the Volga are here referred to, not the Bal'hār on the Don) and their winter dwellings are far from Balasaghun. The town must be sought for in the western part of the Russian territory now called "Samarkand", probably on the Co. where several small cities may still be seen at the present day. The latitude and longitude given by Abu 'Ubayd (ed. Reland, p. 500) seem to point to the same direction: 91° 35' or 91° 50' east Long. and 47° 40' north Lat., while Tashkent (the modern *Awliya-Ain* on the lower Tashkent) was in 50° 51' east Long. and 41° 25' or 43° 35' north Lat. (ibid., p. 496). These statements

BALI. This, the most important, of the Little Sunda Islands is 195.5 square miles in area, and is a mountainous island of volcanic origin with the volcanoes Gunung Agung (11,000 feet) Batur and Tambora, rising above the sea to the west of Java. Only the western half of the north coast is Bali; the eastern consists of eddy cliffs. The fauna and the rich flora form a transition between the Asiatic and Australian portions of Indonesia; the tiger, the dwarf antelope and two kinds of ape, for example, are found here but the crocodile only appears in the south of the island. The island with the neighbouring island of Lombok forms a "province" under an official of high rank in the civil service, a "resident" whose head quarters are in Sign Radja (Buleleng). In the years 1906 and 1907 the principalities of Klungkung, Badung, Tabanan, Mengwi and Geger were quite subjected by the Dutch, in Karang, Asien and Bangli the prince is still semi-independent; Buleleng and Djembrana were incorporated after the war of 1846-1849.

As to its history, Bali is mentioned by the Chinese historians of the Tang dynasty in the year 647 A.D. and again in 902; the island is later mentioned as a part of the great Hindu kingdom of Majapahit in East Java, which was conquered in 1518 by the Muhammadan princes of Matrak. The Hindus retained their independence in Balabagan in East Java; another nation fled to Bali where their leader set himself up as independent prince of the whole island under the title of Dewa Agung Ketut in Segel (Klungkung). The governors of these places afterwards made themselves independent in their own districts. Balabagan, supported by Bali, remained independent till the Dutch subdued it in the eighteenth century.

The above events account for the fact that the population of the island, estimated at about 500,000 souls, has remained Hinduism with a few Buddhist tribes and that the original autochthon of Bali (Bali) has been strongly mixed with Javanese and the nation calls itself Weng Majapahit; and further that language, alphabet and literature are closely related to those of East Java. Among the numerous foreign elements in the coast districts are many Chinese and Muhammadans of the most diverse origin. Centuries ago a section of the people of Bali, both men and women, allied themselves in marriage with the strangers and adopted Islam; these descendants live together in the interior in separate villages or collections of villages and are now quite prosperous. It also happens that sometimes among the Hindus attempt to escape from the stringent native laws by becoming Muhammadans, in spite of a constant

increase the number of Muhammadans is still relatively small. With the increase in personal security, immigration of foreigners into the country is encouraged; the spread of Islam is also favoured by the transference of Dutch officials with their subordinates.

The agriculture of the island, chiefly the growing of rice in wet fields (*swamp*) is the most highly developed in Indonesia. Rice is the principal food, there are also grown tuberosous plants and all the other foodstuffs of the archipelago; the following were the values of the exports in 1908: copra / 1,250,000, coffee / 640,000, cotton / 200,000, rice / 200,000, cattle / 325,000 etc., in all / 2,700,000. The imports amount to / 1,050,000. The centre of foreign trade is Buleleng the active trade is carried on at markets held regularly supported by the many spinning, weaving, printing and the cult of handicrafts, native industry has maintained a high level; gold and silverwork, the women's art, wood-carving, sculpture and the weaving (by knitting, *ikat*) of beautiful decorated cloths. The people of Bali are relatively far advanced; many of them can read and write.

An example of an Indonesian Hindu civilisation, on the basis of which Islam has been developing in Java for example, for four centuries, that of Bali is very important. The four chief castes of Hinduism are to be found here: Brahmins, Ksatrias, Wajyas and the great mass of the people; these members cannot share another caste, but the right to bear the titles *sri*, *dhya* and *pati* respectively and, if they are women, may use marry into a lower caste. The priesthood is composed of the highest caste, the Brahmins; among these are those initiated to a knowledge of the sacred, chiefly the *Mantra*, literature and the *Yajna* (*Yajna*) are also chosen from the priesthood. Only a few, and not the great number of the subordinate castes, that appear at the *Wishnu* festival of the *Adasta* continent, are to be found in Bali; besides the members of all four castes are also farmers, merchants etc. It is only for the most highly developed that the outer forms of Hinduism have a definite, religious value; the great mass of the people is still entirely influenced in its daily life by its ancient Indonesian traditions, although the gods are known by Hindu names and worshipped in temples; inspired persons (*Sadhu*), Shamans (*Perwara*) and the guardians of temples (*Pangraha*) play an important part in their worship. The Son-gel of the eastern archipelago appears in a various fashion as *Hikara Sari*, the chief deity of Bali. The *persembah* only appear in great religious festivals when the prince of the land is giving a feast, and at ceremonies; they bless consecrated water and weapons, sell amulets, appoint new judges and inspire great reverence.

BALIGH (a.) "having attained maturity". [See *matu*.]

BALIK, Turki-Mongol word for "town" (also written *BALIG* *BALIGI*); appears frequently in compound names of towns, such as *Balibalik* ("Five Towns", at the present day *Balikesir* in the *Black Sea* Turkey), *Balibalik* (the "Black Town"), Turki-Mongol name (also frequently used by European travellers in the middle ages as a name of *Pekia* (Canton)), *Balibalik* (on the River *Li*, the modern *Li*) amongst others. As the town of *Balibalik* is mentioned as early as the *Uighur* inscriptions (VIII century A.D.), *Balik*, in the meaning of town, is one of the oldest of Turki words, as is the word *Balik* "fish", which is similarly pronounced and is common to all Turki dialects. (W. BARTHOLO.)

BALIKESIR, *BALIKESIR*, a town in Turkey in Asia, capital of the *Sandjak* of *Karam* in the *Wilayet* of *Khudaendegir*, with 13,118 inhabitants, of whom 9175 are *Muhammadians*, 1266 *Orthodox Greeks* and 1941 *Gregorian Armenians*. Built on the foot of the *Yildiz-dagh*, *Balikesir* is watered in winter by a brook. In summer when this is dried up, water has to be brought from *Balikh*. It was the ancient capital of the *Palatians* of *Karam* and was conquered in 737 (1336) by *Attila* in the time of *Sultan Orkhan*. It has a weekly market and an annual fair, and manufactures a coarse kind of cloth called *ak* [q.v.]. The town has 41 mosques of which some are fairly old. We may further mention an old clock tower, a monastery of the *Balikesir* as well as the grave and some plain tombs of the *Balikesir* *Shahs* *Yusuf*. The *Kara Balikesir* comprises 5 *Nahiyas* and 328 villages with about 90,000 inhabitants. Its chief productions are opium, cotton, cereals and fish, including excellent mackerel called *Yusuf*, and honey, which is famous.

BALINUS, in the scientific literature of the Arabs we meet with a name, which is written *Balinas*, *Balinas* *Balinas* and sometimes denotes *Apollonius* of *Tyana* *Balinas* sometimes *Apollonius* of *Pergamon*. It appears most rarely under the current form *Balunus*. To *Apollonius* of *Tyana* it is to be ascribed a book on the "Secret of Creation" by the sage *Balinas* (MS. in Paris) which has previously been given

as *Pliny*; for it is therein stated that the author belonged to *Tyana*, which is clearly to be ascribed to *Tyana* = *Tyana*. A sort of natural history called *Libro de Causis* (MS. in Leiden) and a treatise on astrology, translated by *Abu* *h. Balin*, must also be credited to the philosopher of *Tyana*, as well as a book on the seven books which *Balinas* *Balinas* mention as being by *Balinas*.

But on the whole, *Apollonius* of *Tyana* was little known to the Arabs. On the other hand the works of the great mathematician of *Pergamon* were well-known and diligently studied by Eastern scholars. The author of the *Arithmetica* devotes an interesting notice to him in which he gives a sketch of his famous treatise on cosmic sections. This treatise contained eight books of which the last has been lost with the exception of four propositions. The first four books were translated by *Abu* *h. Balin* of *Hama* (died 270 A.D.), the next three and the four surviving propositions of the last book by *Abu* *h. Balin*. There is a manuscript of these translations in Oxford; the part translated by *Abu* *h. Balin* is to be found in several libraries. Other Arab scholars have studied his *Cosmic Sections* and given versions of it, as *Abu* *h. Balin*, *Abu* *h. Balin* *al-Fahisi*, *Abu* *h. Balin* *al-Fahisi*, *Abu* *h. Balin* *al-Fahisi*, *Abu* *h. Balin* *al-Fahisi*, *Abu* *h. Balin* *al-Fahisi*.

Besides this, his chief work, the *Arithmetica*, is mentioned with other treatises by *Apollonius*; the treatise on the intersections of straight lines or planes in a given ratio (*de sectione determinata*) on which *Abu* *h. Balin* has written an excellent commentary, a treatise on variables, one on tangents and some theorems.

BALIS, a town in North Syria, on the Euphrates, where the stream turns to the east from its southern course, situated in 35° 40' N. Lat. and 38° 13' East Long. *Uzun*.

The name is the Arabic *Balīs*, which is usually given by classical authors in the form *Balibalis*. The oldest mention of the town appears to be in *Narrations*, who mentions a palace and pleasure-grounds of *Seleucus*, Governor of Syria, here. *Plutarch* gives *Balibalis* in its right place and the *Tobias* *Plutarchus* mentions it as station on the Euphrates road. According to the *Narrations*, about 425 A.D. it belonged to the *Augusta* *Enfanti*, held a garrison of the *Egyptian* *Byzantine* and was under the *Arab* *Syria*. *Stephan* of *Byzantium* mentions it before the time of *Justinian* as a walled city. According to *Procopius*, *Kharaw* (I. *Antiochus*) must have destroyed the town in his devastating campaign into Syria about 540. The fortifications were therefore rebuilt by *Justinian*.

The Arabs call the town *Balis*. It was taken by the Muslim under *Abu* *h. Balin* without fighting but most of its inhabitants emigrated from it. Under *Umayyad* and *Abbasid*, *Balis* was one of the frontier fortresses against the *Byzantines*. *Hafsa* incorporated it in the *Umayyad* *Umayyad*, to which *Kharaw*, *Umayyad*, *Manbilis*, *Antiochia*, *Tarsus*, *Balis* and *Rasaf* *Umayyad* belonged. When in later times the frontier had been advanced nearer Asia

Mina, Balis belonged to the district of Hama, one of the six districts of Syria. In 845 (859) an earthquake visited Balis, which also affected Raḥḥa, Hama, Ras al-Ain, Ufa, Hama, Damascus, the Syrian coast and the Cilician lowlands. In 869 (882-883) Balis was under the suzerainty of Ahmad ibn al-Fida. In 887 (900) it was a military station of the Caliph Mu'tasid in his campaign against Cilicia. After the time of the Hammadid Sal al-Din (313-355 (944-967) Balis began to decline and was visited less frequently than before. Isakhari describes it (309 (921) as a little town and Balis about 621 (1222) as still a village. In the Crusading period, about 1111, Balis was for a while in possession of the Franks under Tancred of Antioch. Benjamin of Tudela visited it in 1163. When he regards Balis as the town of Hama ben Her, we have here a Jewish version of the legend which the Arabs attach to Balis in the Balis. To the Arabs Balis is the town of Balis ibn Hum ibn Yakan ibn Sam ibn Nuh. In this is preserved a memory of the pre-Islamic age of the town. According to Ibn Shaddad, Balis belonged to the Ayyubid of Aleppo, al-Malik al-Zahir, who died in 613 (1216) and after him to the famous brother of Saladin, al-Malik al-Adil Abu Bakr, who built a minaret there with his inscription. He gave it to his son al-Malik al-Zahir ibn al-Adil and after him the Ayyubid and Karwini assert that the Euphrates, which formerly washed the town, has gradually retreated from it so that in his time it was 4 miles distant. At the present day the distance is only about 1 mile and the river appears to be again approaching the town. The change in the direction of the river have hastened the decline of the town. After Karwini, the last notices of the town are Abu al-Fida quotes only older passages. The final destruction of the town was wrought by the armies of Cingis Khan.

Balis lies on the great road which leads from Baghdad or from Mosul via Raḥḥa to Syria. It is the first Syrian town on this road. On account of this prominent situation the geographers saw it as a centre in describing the boundaries of the land. It also lies on the dividing line between two strikingly different climates. The raw climate of the plateau of Aleppo here gives way to the more equable climate of the Euphrates. The heat and fauna change here completely also. Balis is called the harbour of Syria on the Euphrates. In spite of its favourable situation it has never been able to recover from the Mongol invasions.

At the present day Balis bears the name of Balis al-Makana, after the quite modern military and post-station in its neighbourhood. The ruins of the town 5 acres in area lie on a cape of the higher bank that stretches out into the Euphrates-valley. The walls around are still recognizable. One can still recognise three gates for the roads to Aleppo, to Hama and Damascus, and to Baghdad. A deep ditch separates it from the hilly hinterland. On this still stand the ruins of the fortress of the time of Justinian: a praetorium and a strong bastion. This ancient fortification must have been used throughout the whole Muhammadan epoch. The apex of the town is full of fragments of pottery, which lead us to conclude that it once had a flourishing ceramic industry. From its midst rises a high octagonal minaret, named in the time of al-Malik al-Adil Abu Bakr as the inscrip-

tion tells us. The name of the Amir who had charge of the operations and the date have disappeared; the architect calls himself 'Abd al-Jalil. In the walls of the town there still are the remains of a necropolis, mediaeval tomb of a saint with two graves.

Clapart, *La Frontière de l'Euphrate* (Paris, 1907); G. le Strange, *Palestine under the Moslems* (London, 1890), p. 417; the same, *The Lands of the Eastern Caliphate* (Cambridge, 1905), p. 107; M. van Berchem and E. Herzfeld in *Sana-Herfeld*, *Archaeologische Reise in Euphrat- und Tigrisgebiet* (Berlin, 1910-1911), claus. I and II. (Rosen, *Natura*).

BALISH, a unit of money among the Mongols; it is mentioned as early as the time of Chingis Khan; after the break up of the Mongol Kingdom into several independent states, the word appears to have remained in use in China only, where they still reckoned by the *balish* in the 15th (16th) century. It is very difficult to reconcile the various passages from Oriental sources collected by Quatremère (*Histoire des Mongols de la Pierre par Rashid al-Din* p. 320 et seq.); as what is given there one can only add (Bühnemann's notes) (*Tubgash-Näpär*, transl. by Haverly, p. 1116) according to which the *balish* was worth 604½ dirhems. The statement in the *Tarikh-i Wazir* (Ikhogr. ed. Bombay 1269 = 1853, p. 21) that the gold and silver *balish*, each weighed 500 milliball (about 4½ lbs.) is very important (Bühnemann tells us the same thing). According to Wazir, a *balish* in gold was worth 2000 dirhems, in silver 200 dirhems, in paper-money 20 dirhems; in another passage (p. 506) in his account of the embassy of 697-704 (1297-1298-1304-1305) — cf. on this embassy d'Ohsson, *Histoire des Mongols*, IV, 320 et seq.; Elliot, *History of India*, III, 45 et seq. — Wazir estimates the value of *balish* in paper-money at only 6 dirhems. The word *balish* clearly does not here mean a gold coin, but the silver coin weighing 3 *balish* (about 13½ grains) also mentioned by Rashid al-Din (cf. d'Ohsson, *Histoire des Mongols*, IV, 464 on this point).

(W. KARTTUNEN)

BALIYA (A.) In pre-Muhammadan times, a female camel, a mare, or other beast of burden was frequently tethered at the grave of a warrior or noble, and without food or water till it perished. The original reason for this custom must have been the belief that the dead man at his resurrection from the dead would not have a steed at his disposal, unless one were given him at his death, otherwise he would have to go on foot like the common people. Another tradition mentions that the Baliya might also be a cow, a sheep or a goat and that the animal was slain at the grave.

Balkh and were renewed in 661, which necessitated a strengthening of the [unclear] forces. By their own request the Tukharī principalities were turned into Chinese provinces and the princes were appointed governors [unclear] the Chinese. The Sāmānīd kingdom was to be restored under Persia [unclear] of Vāsiṣṭh with the help of the Chinese. But as the Chinese government did not allow the undertaking of the necessary military support, the first revolt of Tukharī Nāṣir was put down in 52 (671). By the year 90 however Kūṭiba b. Muṣṭafā had put an end to this unrest and striving for independence. The insecure state of the country forced the Arabs to place the Buḥārīyā on an equal footing with the *Abd al-Azīz* and even in the various "revolutions" not to proceed against apostates with the full rigour of the Muslim law. Kūṭiba appears to have been the first to pacify the country and to convert it to Islam. But tribal feuds among the Arabs and religious divisions in Islam began to bring new confusion. *ʿAbd al-Raḥmān* (q. v.) Governor of Khūṣṭān united Balkh, which had been destroyed in those wars, as his retreat by the Uzbeks (Kasnak) in 107 (726) and transferred the seat of the government from Merw to Balkh. About 130 A. H. *ʿAbd al-Raḥmān*, commissioned by *ʿAbd al-Muṣṭafā* to stir up rebellion in favour of the *ʿAbd al-Muṣṭafā* and Balkh. How long the native dynasties could retain their position and authority in spite of all the revolutions in the northern frontier lands of Islam, may be seen from 200 A. H. that about the middle of the third (ninth) century, we find a certain *ʿAbd al-Aḥdā* of the princely house of Khūṣṭān, as governor of Balkh (cf. Marquart, *Reisebericht*, p. 300 et seq.) who built a palace, the *Nawāḥīd*, which *Yāqūt* b. *ʿAbd al-Lāṭif*, the founder of the Sāmānīd dynasty, destroyed about 257 (870). The Sāmānīds were succeeded in 387 (1000) by the Samanids in ownership of Balkh. From the description of the town which *Yāqūt* (or rather *Yāqūt*) has left us from this period. Balkh with its clay-walls placed by numerous doors (*Yāqūt* gives 12; *Yāqūt* 2 with their names) cannot have presented a very lively appearance.

The town suffered severely during the wars between the Samanids and the *ʿAbd al-Kāḥ*, in which *ʿAbd al-Kāḥ*, the governor of Balkh, played a part. The ancient regal city received new importance as the temporary residence of *ʿAbd al-Kāḥ* and the great *Maḥmūd* of Ghazni. Soon after the latter's death Balkh fell to the Seljuks in 432 (1040) of whom *Qaghan* was chief. About the middle of the sixth (eleventh) century the Ghaznīs began to contest the possession of Balkh with the Seljuks. Their advance was impeded by the invasion of new hordes of the Oghuzs (*Ghuz-Turks*); but in 594 (1198) the Ghaznī *Nāṣir* *ʿAbd al-Kāḥ* of Ghazni seized the town of Balkh in 603 (1206) it was incorporated in the kingdom of *Maḥmūd* b. *ʿAbd al-Kāḥ*. Finally in 617 (1227) Balkh was devastated by the hordes of *Chingis Khan* and it was abandoned under its conqueror from the blow. How thoroughly destroyed the town was, is shown by the *Yāqūt*'s description of it. After *Chingis Khan*'s death, Balkh and Transoxiana fell to his son *Qaghan* and remained in the latter's family till *Tamerlane* deprived it of its power. Various branches of the *Tamurids* ruled in succession over Balkh from 900 (1500). During the following centuries it

several times formed a bone of contention between the Uzbeks, more particularly the *ʿAbd al-Kāḥ* and the *Maḥmūd* Emperors of India, sometimes it was independent. After the death of the *ʿAbd al-Kāḥ* *Nāṣir* in 1160 (1747), who had incorporated Afghanistan and the adjoining lands in the Persian Empire, Balkh remained continuously in possession of the *ʿAbd al-Kāḥ* till 1223 (1820) when the *ʿAbd al-Kāḥ* seized it in 1223 (1841) it was again gained by Afghanistan, to which it still belongs.

The modern town with its some 500 houses is scarcely a shadow of the ancient Balkh, to which the Arabs gave the name of *ʿAbd al-Kāḥ* or *ʿAbd al-Kāḥ*. It has preserved a certain importance in spite of all its vicissitudes, this is due to the wealth, gained by *ʿAbd al-Kāḥ*, of its plains, watered by the *ʿAbd al-Kāḥ*. The ruins of the city are noteworthy, of which those of the *ʿAbd al-Kāḥ* period, which are mentioned in characteristic fashion with names from the *ʿAbd al-Kāḥ* (cf. *Yāqūt* *Reisebericht*), are better preserved than the Muslim ones. The acropolis of the place survives in the ruins *Maḥmūd* *ʿAbd al-Kāḥ*, to be that of *ʿAbd al-Kāḥ*, which is first mentioned in the sixth century.

Topography: Balkh. Geogr. Anst., 1. 278, 286; 2. 325 et seq.; 3. 301 et seq.; 4. 327 et seq.; 5. 18, 32-34, 116, 210-212; 6. 287 et seq.; *Maḥmūd*, *Reisebericht* (ed. *Yāqūt*, 1. 47 et seq.; *Yāqūt*, 1. 713 et seq.; 2. 217-220; 3. 217-219, 58-61; the historical notices in *Yāqūt*, *ʿAbd al-Kāḥ* and in the *ʿAbd al-Kāḥ* *Reisebericht*, *Yāqūt*, 1. 50-52 and 95-103 *Yāqūt*; G. v. Marquart.)

BALKHAN, a mountain range in the Caspian Sea, whose the dry stream of the *ʿAbd al-Kāḥ* (supposed to be the ancient bed of the *ʿAbd al-Kāḥ*) flows into the sea. The mountains to the north of the *ʿAbd al-Kāḥ*, rising to a height of 5500 feet, are at the present day called "the Great Balkhan" range; quite separate from them are the "Little Balkhan" (to the south of the *ʿAbd al-Kāḥ*) which are quite close to the *ʿAbd al-Kāḥ*. The Balkhan lay on the Caspian Sea has taken its name from the "Great Balkhan"; in it is the best location on the eastern shores of the Sea north of the Russo-Persian frontier.

On the story of an "ancient Khazars" on the Balkhan cf. above p. 327, article *AMU DARYA*. According to *Yāqūt* (ed. de Goeje, p. 285), there were cows and horses running wild there; he was also told in *ʿAbd al-Kāḥ* and *ʿAbd al-Kāḥ* that the inhabitants of these towns and sometimes to go in the Balkhan and find many eggs there; but on ruins in this district are mentioned in *Yāqūt* and in other sources. About 420 (1030) the *Turkmen* who had immigrated into *ʿAbd al-Kāḥ* from the west retreat into the Balkhan; they made themselves famous in *ʿAbd al-Kāḥ* by their robberies and were therefore driven out by *ʿAbd al-Kāḥ*, the general of the *ʿAbd al-Kāḥ* *Maḥmūd* (cf. *ʿAbd al-Kāḥ*, ed. *Yāqūt*, 1. 267). After *Maḥmūd*'s death, their leaders, *Khal*, *ʿAbd al-Kāḥ* and *Kāḥ* were summoned with their followers to *ʿAbd al-Kāḥ* and taken into his army (*Yāqūt*, ed. *Yāqūt*, p. 71).

After the sixth (eleventh) century we find the Little

barriers of heights, at the mouth of the river-bed (which was at that time filled with water), mentioned, this place does not however ~~seem to~~ have been of any great importance. The ~~name~~ of the mountain is written Abu 'l-Khān by Abu 'l-Jahād, following an unfortunate lemmatization; in his time several Turkoman tribes lived there. When the river Uchui became finally dried up (about 1370) the district of the Balkhān gradually became deserted; in later times we find there only a few Turkomans of the tribe of Vamsip. In the trade with Khiva, the harbour of the peninsula of Muqbilshuk had, at that period as in the middle ages, an incomparably greater importance than the bay of Balkhān.

It was only in connection with the "Oxus question" that attention was again drawn to the bay of Balkhān, when the 1888 law was conceived, by Peter the Great first of all, leading the Oxus back to its ancient channel and thereby making an uninterrupted waterway from India to the Caspian Sea. It was several times proposed in the XVII and XVIII centuries to build a Russian fortress on the bay but the plan was not put into execution till 1869, when not only the district around the bay of Balkhān but also the harbour of Michailovsk lying to the south of it, was occupied from the Caucasus. A railway was built from the latter harbour as far as Kish-Arwent in 1881, thence continued in 1883-1884 to Samarkand and in 1897-1898 as far as Andijon (q. v.); the Balkhān district has thereby become the most important commercial centre on the eastern shores of the Caspian Sea. The starting point of the line was till 1883 Michailovskaja, from 1883 till 1897, Tash-Adu, and since 1897 it has been Krasnovodsk. Since the opening of the Transcaspian Railway line (1903) the "Transcaspian" has lost no longer the same importance as before for through traffic and is only of value for traffic between the Caucasus and Central Asia. These mountains, almost waterless, and bare of almost all vegetation are of no importance for agriculture; the only industry of importance is the obtaining of gypsum from pits about 5 miles from Krasnovodsk.

The name Balkhān (it is said to be derived from the Pers. Balā-Khāna) was brought to Europe by the Turks and applied to the Himmān mountains of the east; this is the origin of the names "Balkan" (for the mountains) and "Balkan Peninsula", usual in modern geography.

(W. DARTMOUTH.)

BALKHASH, next to the Aral (q. v.) the largest inland sea in Central Asia (6143 sq. m.) into which flow the 11 and several smaller rivers. The lake remained unknown to the Muhammadan geographers of the middle ages; the anonymous author of the *Kitāb al-Aḥwāl* (372 = 982-983, cf. J. Marquart, *Osterrussische und ostasiatische Streifzüge*, p. 222) makes the 11 (Il) flow into the Baykal. A description of Balkhash is, so far as is known, only given among Muhammadan authors by Muhammad Ḥaidar, about the middle of the XVIII century (*Tuḥfat al-Kashf*, transl. by E. L. Kers, p. 366). In this book the lake, which then formed the boundary between the land of the Tatars (Tartaria) and the land of the Mongols (Moghulistan) is called Kūḫā-Yāz (="blue lake") and described as a fresh water lake. The dimensions given for its length and breadth are much

exaggerated and Muhammad Ḥaidar also regards the Volga (Il) as flowing out of Lake Balkhash. Of importance is the statement regarding the name of the water; modern geographers have always regarded Balkhash as a salt lake; it was only as a result of explorations carried out in 1903 by the Turkistan Division of the Imperial Russian Geographical Society, that it was finally found to be a freshwater lake. As was pointed out by the leader of the expedition (I. Berg) the existence of a freshwater lake without an outflow in a district where the annual amount of precipitation scarcely amounts to 200 mm. forms a "geographical paradox". What is said on p. 420 of lake Aral is also true of Balkhash: an unmistakable advance of the coast line was first noticed here in the XVII century, and it was on this account that observations of the drying up of the lake were taken in the last decades of the same century; distinct signs of an increase in the volume of water in the lake have been proved here also so that, as over Central Asia generally, we must not presume a permanent exiccation but rather a periodic rise and fall in the surface of the lake. Cf. I. Berg, *Entdeckung eines im Verborgenen liegenden Balkhash-Seen*, 1907. *Verh. d. Imp. Russ. Geogr. Gesellsch.* 4. 354-359, with a very complete map.

The lake was received the Mongol name of Balkhash from the Kalmucks, who ruled the district in the XVII and first half of the XVIII century. The name of "Balkhash", with a description of the lake, very accurately for the period, is given in the map by the Swedish officer J. G. Kunn, who spent 27 years (1716-1733) in the land of the Kalmucks. Cf. *Carte de la Transjurie desirée par le comte Kunn pendant son séjour chez les Kalmucks de 1716-1733*, ed. de la Soc. Imp. Russ. de Géographie, St. Pétersbourg 1882. The Kalmuck tribes who lead a nomadic life in the same country today call the lake Al-Yāz (="White Sea"). The immediate neighbourhood of Balkhash has always been, as it still is, a dreary desert, so that the lake, as far as is known, has never attained any economic importance; neither have its shores ever been peopled by a civilized race. The shores of the Balkhash, which are covered with reeds, are used by the nomads as a winter-settlement; in summer the district around the Balkhash is quite deserted.

(W. DARTMOUTH.)

AL-BALKHĪ, AND ZAHĪ AHMAD b. SAḪĪ, Arab writer on geography, born in Shamshān (in the province of Balkh), was a leader in his native country, at first adopting the principles of the Muḥāyibī-sect and afterwards studying philosophy with al-Kindī. He found a patron in Abū 'Alī al-Jāhīzī, a Sāmānīd minister, but afterwards quarrelled with him. He was invited to Balkh, but had not the courage to cross the Oxus. He died on the 19th Shawwāl 322 = 31st Oct. 934. The *Fihrist* (vol. I, p. 438) gives a list of forty-three works by him, all of which were early lost; Ḥudūdī Khāfī was only acquainted with six of these including a *Summa al-Ḥikmah* which is quoted by Muḥammad and Ḥamdallah Ḥamawī, and the *Kitāb al-Ḥadīth wa-l-Fiqh*, which was wrongly attributed to him at quite an early period (before the XIII century) and was really composed by Muḥammad b. Ṭāhir al-Maḥdī.

Biogr. et p. v. M. J. de Goeje, The Introduction to the Kitāb al-Fihrist, in the Zāhir, d. Deutsch. Morgenl. Gesellsch., xx, 53 et seq.: 1880.

of Persian Baluchistan the whole country is included within the limits of the British Empire in India, but the political status varies considerably, and the following is the official classification.

1. British Baluchistan. This includes districts formerly part of Afghanistan and ceded by the Treaty of Gandamak in 1879. These are Shikharigh, Khat, Dakt, Kesh, Chaman, and Sherard.

2. Territories administered by the Agent to the Governor-General:

- a. directly administered;
- b. native states;
- c. tribal areas.

a. These districts are either leased from the Khan of Kalat or are tribal areas, or territories obtained by rectification of boundaries with Afghanistan. They comprise the political agencies of Zhik, Lash, the eastern part of Quetta, Shikharigh, Khat and Kesh, as well as strips of land along the railways.

These areas are administered in the same manner as British Baluchistan; the whole area aggregating 43,804 sq. miles.

b. The native states are the Kalat Khans and the feudatory states Las Bela and Khair.

c. The tribal areas are the country of the Mar and Bugti tribes, which are governed by their own chiefs under the Governor-General's agent, and not through the Khan of Kalat. The country near the railway in Kachhi, belonging to the Dambel, Khat and Umar tribes, is administered in a similar way.

Las Bela is under its own chief or Jagan, a territorial not a tribal chief, of Indian Kachhi origin. It occupies the south-eastern corner of Baluchistan as far as the South border and the Indian ocean.

The Khan of Kalat occupies the greater part of the country including the hill country of Kalat (east with the Mar tribes divided into Reza and Dabla (upper and lower), all Makran up to the Persian border and the Indian Ocean and Khair on the north. It also includes the plain of Kachhi below the mountains of Kalat, Khair, the territory of the Nawabshah tribe, is feudatory, but administered by its own chief.

The Khan himself is chief of the Kachhi tribe, and is the head of a confederation of Dakt and Dakt and of other tribes which occupy a subordinate position.

Persian Baluchistan originally formed part of the Khan of Kalat, but was gradually conquered by Persia after the rise of the Kadjar dynasty. The frontier was demarcated by an Anglo-Persian Commission in 1870-1872 and finally surveyed in 1895-1896 under Sir T. Holdich. This province is strictly speaking the western portion of Makran, and shows its physical characteristics.

Area. The total area of the territories under British administration is 43,804 sq. miles, of the Mar and Bugti hills 7129. The states of Las Bela and Khair occupy 79,381 sq. miles. The area of the Persian province cannot be completely stated but is certainly not less than 30,000 sq. m.

Climate. The climate is extremely severe with extremes of heat and cold. Makran probably is one of the hottest districts in the world, but the climate is generally dry; on the coast the heat is aggravated by the humidity of the atmosphere. In the cold season dry storms are prevalent especially on the high lands around Quetta

and Kalat. Makran, Khair and the desert tracts near Quetta are always fields of violent winds from the north. The rainfall is everywhere small, being at its highest in the mountainous country of British Baluchistan and the hills north and west of the Kalat plain. The highest record for rainfall (average of five years) is 17½ inches. No other place has as much. In Kalat it is only 8 to 10 inches, at Kalat 5 inches. There are no records for Makran and the Persian province, but it is certain that the rainfall is less than in the eastern mountains. The whole country is very dry, and cultivation is only possible in the irrigated areas in which water is available for irrigation. There is good reason to believe that the process of desiccation is in progress and that cultivation was more extensive at some former time than it is now, but its substantial characteristics seem to have been the same in Alexander's time as they are now.

Population. The census of 1901 extended to 76,977 sq. miles only. This tract contained a population of 810,746, and the excluded tracts Makran, Khair and West Baluchistan are roughly estimated at 249,655 souls (at 5 persons to the square mile). This gives a total for Baluchistan within the boundaries of the Indian Empire of 1,060,401. Persian Baluchistan may be reckoned at about 250,000. There is a large population of Kachhi origin in the Punjab and South together with some tribes in the last named province, the total being 1,017,307 Hindus and 48,980 Muslims. In Baluchistan itself the enumerated population number only 10,4498, but as the population of Makran and Persian Baluchistan is largely Hindu, it may be estimated at 200,000. Even so the Hindu population of Baluchistan is less than half the number of the same race settled in the Indian valley. The Muslims are mainly settled in the Kalat province and number nearly 200,000.

Flora and Fauna. The greater part of the mountain ranges are barren rock, without forests. There are a few limited tracts in the mountains of British Baluchistan where some small forests are found. There are patches of *Pinus deodora* and *Pinus longistylus*, also of *Pinus rigida* on the Sulaiman Range, a forest of olive (*Olea europaea*) on Mount Shikhar, a tract covered with wild pines (*Pinus nigra*) on Mount Khair, and a smaller forest (*Juniperus communis*) on Kalat, but throughout the greater part of the country there is nothing that can be called a forest. The dwarf palm (*Phoenix dactylifera*) is common everywhere up to 5000 ft., and its leaves are much used for roofing and walls, the central stem is eaten as a vegetable and the woody substance is made into tinder. The glaucous (*Elaeagnus*) and the pink (*Myrica*) are often found near the banks, *Acacia* is also found occasionally in the valleys, and *Prosopis juliflora* and *Prosopis* on the hill sides. Some varieties of tamarisk, especially *Tamarix nilotica*, also grow near water, and the shrub (*Veronica*) grows in dry water courses, where also are found occasional willows (*Salix arbuscula*). The yellow flowered pines (*Pinus wallichii*) is not uncommon in some of the valleys.

The date-palm is abundant in parts of Makran, especially Pandjeh and Mashhad. In Pandjeh it is cultivated and unusually fertilized; the dates

are of excellent quality. In Makhal it is apparently white, and the fruit is collected by the nomad population. Fruit trees generally are few. The climate of the uplands produces the finest fruit of every kind as has been proved at Quetta. Generally speaking an attention is given to the cultivation of fruit trees. Arumaceous plants are frequent in the dry hills, and Makran was of old famous for the production of myrrh, asphaltum and sulphur. The latter, now known as 'ghilg', is produced by the 'bell' bush (*Malva malabarica* or *Makhal*).

The animals are mainly of the desert and Indian types throughout Makran and Persian Baluchistan, but in the higher mountains and plains of the north-east they rather belong to the Iranian plateau. The larger mammalian are scarce. The most important are the leopard (*Prion felis*), the wolf (*Canis lupus*), the fox (probably *Vulpes ferrugineus*), the hyena (*E. Striped*), the badger (*Martes foina*), the black bear (*Ursus schrenckii*), the black bear of India, the gaur (*Bos taurus*), the wild sheep (*Ovis montanus*), the wild goat (*Capra sibirica*), and two wild goats viz. the ibex (*Capra sibirica*) and the mouflon — locally called — (*Capra sibirica*), the former of which is found on the borders of Sind and in Makran and the latter in the Sulaiman Mts. The wild ass or ghor is probably identical with that of Persia and the Indian valley (*Equus hemionus*). The cattle are the same as of India, sheep are both short-tailed and long-tailed, the buffalo is also of the Indian type; the camel or dromedary is the usual beast of burden, the two-humped camel being unknown except as an imported curiosity. Horses are much bred and are of good quality, spirited and hardy, with a strain of Arab blood. The Baluch generally ride the horses only.

Whites and porcupines are common on the coast. Among the larger birds the lammergeier of the mountains (*Cypripus barbatus*) is the most remarkable. Common raptors, hawks and falcons are also found. Among game-birds there are several species of sand-grouse (*Pteropus*), the francolin, the black partridge, three species of quail and the common quail. The lesser bustard (*Ovis montanus*) is found in the better parts in winter, and in summer migrates to the colder parts of the plateau. The flamingo is common on the coast, and several varieties of ducks and geese make their appearance in the winter.

Reptiles (*Lacerta palustris*) are found on the eastern side of the country. The fish of the Indus, and in the absence of the Indus and Sulaiman, but are unknown further west. Snakes are numerous, the commonest poisonous snake being the cobra (*Naja naja*). Cobras are also found in many places especially in the province of British Baluchistan.

Sea-fish abound on the Makran coast. The island of Makran was too small to admit of any abundance of freshwater fish, but mullets (*Murres*) are found wherever there is a sufficient flow of water.

ETHNOGRAPHY.

The population of Baluchistan may be broadly classified, according to the system based on anthropometry adopted in the Indian census of 1901, as belonging to the Turko-Iranian group. They are generally tall, the average height in various

tribes ranging from 5 ft. 5 in. to 5 ft. 7 in. (150 cm. to 170 cm.); broad-headedness prevails, the average index being 84 or 85; noses are long and prominent, hair and beard abundant, lips and eyes generally black with occasional blue or grey eyes and brown hair, complexion light brown but darker on the coast. These characteristics apply more especially to the Baluch and to some extent to the Pashtun. The Afghans in this province have a strong resemblance to the Baluch, but have been dealt with under the head Afghanistan. The Indian elements also are to some extent modified by Indian characteristics such as narrower heads, and shorter noses.

Counting the Afghans of British Baluchistan the population falls under the heads of Baluch, Pashtun, Indian and Persian.

The Indian element consists of the 1,200 of Lakshis and the Jungs who are mixed up with Baluch in Makhal, probably also the Mals and other tribes of low social position in Makhal should be included under this head. There are also a certain number of Hindu (mostly descendants of more modern immigrants from India).

The Persian or Turfuk element consists mainly of the Dakhans or Ghalibans of the Makhal and Quetta plateau. The large and warlike tribe known as Nosakhans of Khashi is also asserted to be of Persian origin, but it is doubtful whether there is any distinction between them and the Baluch.

The Baluch proper are divided into two groups which are separated from each other by the central area of Makhal. That of the north-east occupies the plain of Katel and the hills to the north of it which merge into the Sulaiman Mts. In these mountains they spread to the north as far as the 31° and below the mountains extend towards the Indus. A large number inhabit the plain of the southern Punjab and northern Sind, especially the districts of Dera Ghazi Khan and Jacobabad. The Baluch of Makhal and Persian Baluchistan, lying on the west of the Indian tribes, form the other group.

The Baluch are not so scattered but occupy a compact block of country around Makhal, mostly lying very high, and stretching from Quetta to the north to Lakshis to the south, thus completely separating the north-western from the Makhal Baluch.

The Baluch probably, as will be shown below, entered Makhal from Khashi and Sind about the period of the Saffarid invasion of Persia, and soon spread as far as the Indian frontier, from which time the country began to be known as the land of the Baluch, Baluchistan. The name was unknown to earlier writers. The term Baluch has sometimes been loosely employed to include all residents in the country; thus Nasir Khan the Baluch chief who rose to power in the 18th century is generally alluded to in history as a Baluch.

The nature of the early inhabitants can only be surmised, but they were probably really of Indian stock. The earliest name for the country of which we have any knowledge is the Mals of the Behistan inscription, the Mals of Herodotus (or the Country of the Malyians), which was included in the 14th century. The Malyians are elsewhere associated by Herodotus with the Uras and Parthians who were stated like the Saffarids. The frontier between India and Persia is

shown by Ptolemy to be to leave the eastern part of Baluchistan in India, and Arrian's account of Ora and its inhabitants, the Oristai, who lived on the river Arachos, now the Parosi, shows that they were Indians, as are the inhabitants of Las-Bela at the present day. West of them, the inland valleys were occupied by the Gadrusai, from whom the country was called Gadrus or Gedrosia, and the maritime territory by the Ichthyophagi. Baluchistan was represented by the Medae and other coast-tribes. Gedrosia remained the recognised name of the country through the classical period; we do not meet with Makra or Makla again, but it evidently survived in popular use, for the first Arab invaders in the 7th century of the Hijra found its name to be Makra, the modern Makran. (Possibly the correct reading should rather be Makuran, and this is the modern Baluch pronunciation). The last syllable -ra is conjectured by Walsworth Sykes to be the Skr. *araya*, a waste, (which is found also in the Kham of Kach). Various places along the coast have been identified by Holme, Moehler and others with places mentioned by the Greek historians which are

Las Makra — Malma (Arrian).
Purgh, Pampur — Pura (Arrian).
Gadmir — Garna, Indus.
Kaimut — Kalma.
Aulal Island — Nosala.

In Pura we see no doubt the Indian *pura*, a city, but the names given us a rule-futile no certain guide as to whether an Indian or Iranian language was at that time spoken by the population. The Gadrusai have been identified by Moehler with the Baluch, but there seems no philological justification for this. An original - might give rise either to a modern *k* or *g* or *gh* (as in the case of Gwadar) but an original *gh* could hardly be represented by a modern *k*. There is besides good ground for believing that the Baluch are immigrants of much later date. Hofflich thinks the name of the Gadrusai is to be found in the modern Baluch a clan of Las-Bela, but the Gadar as shown by the recent census are an insignificant clan of Indian origin, numbering more than 2000 persons, and it seems impossible to identify them with a wide spread name like the Gadrusai.

The *Ujaz* of the lower Indus comprise both *Ujaz* and *Rajpoots*, and the same rule applies to Las-Bela where descendants of former ruling races like the Sumra and Sumra of Sindh, and the Langah of Multan are found. At the time of the first appearance of the Arabs they found the whole of Baluchistan in possession of the *Ujaz* (Zaj).

Mas'udi indeed brings them as far west as Kerman, but in general they are alluded to as occupying Makran. The Baluch at that time are described by Mas'udi and Ispahani as occupying the mountains of Kerman and are associated with the *Ujaz* (who are *Ujaz* or *Rajpoots* or *Rajpoots*), but al-Buhārī and Isfahani only mention the *Kaj*. It seems therefore possible that the Baluch, although they were certainly in Kerman, when these chroniclers wrote, had not arrived there as early as 23 A.H. when the first Arab invasion took place. Their earliest location seems to have been near the shores of the Caspian sea, and we learn from Firdausi that Nawshirwan made war against them.

They are associated in this story with the name of Gilan. Moehler (*Journal of the Asiatic Society*, 1865, p. 31) says that Firdausi relates that "Nawshirwan punished them in Makran", and from this agrees that the Baluch must have been in Makran at least a hundred years before the Muhammadan conquest, but a reference to Firdausi's text shows that there was no mention of Makran.

All these early legends recorded by Firdausi, and the exploits of Nawshirwan which are usually historical, show that the associations of the Baluch up to the time of the Arab conquest were chiefly with Northern Persia, but that they were considered to belong to Iran and not to Turan. The name Baluch is frequently coupled in the *Sikandarnama* with *Kaj* but also often occurs alone, and in many cases it is not found in the older MSS., from which fact it may be argued that the association of the two tribes, which existed when Firdausi wrote, did not exist in the legends on which he drew. The southward migration in Kerman and the movement into Sindh and Makran and thence to the Sindh frontier may be connected with various incursions from Central Asia commencing with that of the Sogdians or White Huns in Nawshirwan's time. In the fourth century of the Hijra the Baluch were certainly established in the Kerman mountains side by side with the *Kaj* or *Kaj*, and had also spread into Sindh, while Makran was still mainly in the hands of the *Ujaz* or *Ujaz*. The Baluch had a but population of planters and reared the dromedary of the East, which lies between Kerman and Khurasan. They were consequently frequently attacked by the neighbouring powers such as the Hephthalite *Ajaj* or *Ajaj*, who destroyed great numbers of them, and by Mas'udi son of Mahmud Ghaznavi, who defeated them near Isfahan. All their wars, culminating in the Sogdian invasion and occupation of Kerman and Sindh, doubtless drove the mass of the Baluch tribes southwards and eastwards into Makran, and they soon spread up to the Indian border. They are first heard of in Sindh about 1150 A.D. (the middle of the 13th century A.D.). They seem to have been at this time in possession of the highlands of Kalat now held by the Brahui, and the further migration of a great part of the race into the plains of the Indus valley may be attributed, in part at least, to the development of British power. Another cause was no doubt the decay of all central government in India, which followed on Timur's invasions. This tempted adventures of all classes: the Afghan Lodi, the Emperor Babur and the Arghuns, who found themselves unable to hold Kandahar, were among them. The Baluch tribes participated in the Arghuns' invasion of Sindh, sometimes fighting for them and sometimes against them, and also spread under their leaders Mir Coker Rind and Mir Sadrul Mulk into the kingdom of the Langah *Rajpoots* at Multan and up the valleys of the Indus, Beas and Ganges as far north as Lahore. The Baluch seem to have absorbed and assimilated some tribes of Indian origin during their stay in Makran and on the Sindh border, and probably some Arab families may have risen to positions of influence among them, but there is no sufficient ground for supposing that any considerable body of Baluch is of Arab blood, nor that the Rinds are in this respect different from the rest of the Baluch. The theory

The name *Itai* means hero or warrior, and it seems unnecessary, with Moeller, to seek the origin of this tribe in the Uti of Herodotus. Hughes Buller would with more probability derive the name *Itai* from the Orontal or Haratal of Arrian. He finds in Makrân's tradition that the *Itai* are an old local race, and if they are like the *Uddai*, of Baluch origin, their association with this tribe in the invasion of India would be explained. *Itai* may perhaps be connected with the place name *Dik* of Persian Baluchistan. *Itai* is probably also a nickname meaning grave-digger or grave-urner. It is a word of purely Baluch formation, and Moeller's derivation from 'Georgian' seems far-fetched and without historical justification.

The *Brakhi* although a less important race than the *Baloch*, if *Baluchistan* as a whole is considered, form the most numerous and strongest body in the *Khat* of *Kalāt*, to which they are almost entirely confined. They are spread over the highlands of *Kalāt* from *Quetta* as far south as the border of *Las Bela*. Some tribes winter in the plains of *Kalāt*. Physically the *Brakhi* are of the same general type as the *Baloch*, but differ to some extent in features. Their noses are less upturned and broader, and their face is of a coarser type. Many are of a broader and thicker build, but there are also many of the pure *Baloch* type.

The tribes form a confederacy under the leadership of the *Khan* of *Kalāt* and are divided into two large groups, the *Barakhi* or upper and the *Shahkhan* or lower *Brakhi*. This confederacy is of modern origin and comprises some tribes such as the *Khat* and *Shahkhan* of *Kalāt* which are purely *Baloch*. Nearly all the tribes composing it are however now considered to be *Brakhi*, but many of them are of *Afghan*, *Baloch* or *Indian* origin. Mr. Hughes Buller on the authority of the *Ex-Khan* of *Kalāt* states that the true *Brakhi* who form the nucleus of the whole race are the following:

Kamran, divided into *Ajmadani* (The *Khat*'s clan) and *Mazari*;
Mirani;
Chaghal;
Shahkhan;
Kalander (or *Kalander*).

These, like the *Baloch*, claim to come from *Uddai*, that is *Aleppo* in *Syria*. It is probable that they really are immigrants from the west, and it is possible that they should be identified with the *Kor* who were associated with the *Baloch* in *Karman* before they moved into *Makrân*. The name *Kor* means simply 'mountain', and *Itai* stated that they were a sort of *Kor*. It will be seen below that there is still an important tribe of *Kor* among the *Brakhi*, and the name by which all *Brakhi* are known in *Las Bela* is *Kor-gal* or 'men of *Kor* speech'. There seems therefore some ground for supposing that this original core of the *Brakhi* were consisted of immigrants of Iranian blood akin to the *Kor* of Western *Persia*.

The next group given by the *Khan* consists of the tribes believed to be of *Baloch* origin, and to have been in the country before the arrival of the *Brakhi*. These are the

Angul (the *Garrani* clan of this tribe speak *Baloch*);
Lugay (probably originally a *Barakhi* clan);
Lari;

then follow tribes said to be *Afghani*, viz. the
Kalander;
Sarpari;
Shahkhan (sometimes said to be *Baloch*);
then tribes said to have come from *Persia*, viz. the
Kor;
Mamandi (or *Mahmudi*);
and those said to be of *Uddai* origin, viz. the
Bikandji;
Mangal;
Sajid;
Zehi.

The last in the list are supposed to be the old inhabitants of the country before either *Baloch* or *Brakhi* entered it, but are distinct from the *Uddai*; these are the

Mahmudi;
Neari.

In addition to the distinction of blood between the tribes there are also internal distinctions within each tribe. In most tribes there are certain sections claiming to form the original tribe and others said to be accretions from outside.

The *Brakhi* language, as will be seen below, is of *Dravidian* origin, and may be supposed to be the language of the aboriginal tribes found on the *Kalāt* highlands before either the *Baloch* tribes (speaking *Baloch*) or the *Brakhi* tribes (speaking a tongue known then as *Kor-gal*) arrived. This language seems to have been adopted by the immigrants who settled on the plateau, the *Brakhi* tribes, the *Barakhi* of the *Baloch* who had settled there before them, and the sections of the *Tardu* *Afghani* who joined with them in expelling the *Baloch*. Some of the original inhabitants were absorbed among the newcomers and some, whether *Dravidian* or *Uddai*, kept up an independent tribal organization. The whole were bound together by a common language, the old language of the country, and form the modern *Brakhi* race. This seems to be the most probable history of the formation of this complex organization.

The name *Brakhi* is evidently modern, and, as Hughes Buller suggests, is probably a *grihya* name like most of the tribal names. It is a derivative from *Brakhi* a popular word of *Iranian*. The derivation from *Brakhi* on the mountains is impossible. This hybrid word is supposed to be made up of the *Persian* *Brakhi* with the *Uddai* *gal* mountain, but such a formation is unknown. The adjective *Brakhi* and *gal* contain a term often applied to *Afghani*, the *Persian* equivalent to which would be *Kor* or *Korandi*.

The *Brakhi* are a branch of the *Tardu* or *Eastern Persian* race so widely spread in South *Afghanistan*. They are found mainly on the *Kalāt* plateau. They speak *Persian* and are occupied in agriculture. They are a settled race living in permanent villages, from which they get their name of *Uddai* or village. In distinction from the nomadic *Brakhi*, they hold a subordinate position under the *Brakhi*.

The populations of *Indian* origin may be classified as follows:

the *Kor* of *Las Bela*;
the *Khat* of *Makrân* and *Persian* *tribes*;
the *Khat* of *Kalāt*;
the *Khat*.

Lari. The tribes of *Las Bela* were formerly classed as *Nur* or *Lari*, but according to

Mughes (Kohli) this seems to me now to be excepted as a contemptuous term for the menial classes: it appears to be derived from the Sanskrit *balah* which formerly signified 'weak' on the Sindhi frontier but now lost. (There is however a class still bearing the name among the Borders of the Sulaiman Range). The word *Lasi* is now used for all the tribes of Las; the greater part of which are Khatpat and Ljaji tribes akin to those of the Indus valley.

The leading tribes, which are probably of Khatpat origin are the
Daher, to which the Ljaji or ruler of Las belongs;

Kandhar, the most numerous tribe;
Lajwahi;
Gara, connected with the Sams of Sindh;
Shahji, a mixed tribe;
Sitar, a partly Brahui tribe;
Gogri.

Of a lower social position are the
Bakhar;
Gadre;
Mak.

There are several or subject races, of dark complexion and broad noses, many of them showing negroid features. The Mak are the folk of population living near the sea, and spread also along the Makran coast.

The language of the Las generally is Dialect (or Dialect) that is the language (gall) of the Ljaji. It is a form of Sindhi; but the Sams tribe speak Sindhi, and some of the Mak speak Makran.

The Ljaji of Makran. These seem to be akin to the tribes of Sindh. They are scattered throughout the province and are subordinate to the Mak — the ruling class. The Ljaji, called Zaji by the Arab chroniclers, held the whole country up to Kerman at the time of the first Arab invasion in the first century of the Hijra. There can be little doubt that some of the leading clans have been absorbed among the Mak, and now speak Mak and are not to be distinguished from other Mak by their appearance. The Ljaji tribe for instance are probably akin to the Mak Dohi, and some administrators may be supposed to be tribes whose names are derived from localities in Makran and Persian Baluchistan, such as Bolide, Qish-Kawr and Kulzor in the former from which the names of the Mak, Qish-Kawr and Kulzor tribes are derived; and Mughaz, Lashar and Munk in the latter from which come the names of the Mughaz, Lashar and Munk tribes. The derivation of Khatpat from Khat is doubtful, the *k* is the Indian cerebral, and is not accounted for by this explanation. Possibly Khatpat may be connected with Khat, as in Sindhi dialects initial *k* passes into *h*. In all such cases, where a tribe was so thoroughly identified with a locality as to take its name from it, it is at least probable that some local elements were absorbed. The Mak tribes were however sufficiently numerous and powerful to impose their language on the whole of Makran, and it is only in Las, where the Ljaji and Khatpat remained comparatively pure, that an Indian dialect maintained itself.

The Ljaji of Kandhar. Here the Ljaji and leading population are contiguous to and practically identical with their kinsmen of the Indus

valley, from whom they are separated by no natural barrier. They are in a subordinate position to Baluch and Baluch overlords, and pay them a share of the crops. The term Ljaji here is in the South Pashtun compounds tribes of Khatpat origin such as the Samra, as well as true Ljaji. Other important clans are the Khatpat (also Khatpat) and the Akra. The name Ljaji (with the Indian cerebral) has sometimes been confused with the Makri word *gri* (with dental *r*) which means a small herd only, independent of race or tribe. Among these tribes also the language is Indian, the dialect being akin to the Lahndi of the West Pashtun.

The Khatpat. It is certain that the whole of the triangular block of hill country now occupied by the Mak and Bugti was in the possession of Indian tribes before the Baluch invasion. They were gradually destroyed or absorbed by the tribes from the north and the Afghans from the south, and such names as Shahji among the Mak, Khatpat among the Bugti and Maripat among the Afghans to the north indicate that fragments of these tribes remain among Baluch and Afghans. The Khatpat, however between Afghans and Baluch have preserved their identity and their peculiar Indian dialect (of the Sindhi type) to the present day. The process of assimilation was in progress, and the Khatpat would probably have been absorbed or converted into a Baluch tribe in a few generations if the advent of British rule had not saved them. There is even now a good deal of mixture among them; in organization they are like a Baluch tribe, and certain sections are perhaps of Baluch blood, although the Khatpat, who speak Baluch, are probably the remains of an old tribe which had been annihilated and afterwards destroyed by Mak and Ljaji. The Khatpat, who are absorbed by Baluch and others to be Afghans, are probably really Indian. The Khatpat name means a tiger in Lahndi, and there is no proof of the identity of the tribe with the Khatpat. The medial *h* might have become *g* in Indian words, but scarcely *k*. It is probable therefore that both Khatpat and Baluch are really of similar origin to the Khatpat among whom they live. A Khatpat tribe, the Ljaji, speaking a language like Khatpat, occupies the valley of Orag in the Sulaiman Mts.

Patronymics. It was noticed above that the military Baluch terminations — and sometimes gives way to — *mi* and *ji*. We find a similar mixture among the Baluch who make use of the Baluch *mi*, the Afghan *mi*, and the Sindhi *ji* for the subdivisions of their tribes, — and being much more usual than among the Baluch. The Afghan *ji* is not used. It seems impossible to draw any trustworthy deductions as to race from these terminations which are nearly modern. Similar terminations are found among the Ljaji tribes.

Social organization. The modern tribe both among Baluch and Khatpat is an aggregation of clans around a central nucleus. These clans seem to be the original elements into which the population was divided, and the names of the oldest clans, the 'baloch' of the old ballads, are seldom among Baluch but as tribal names at the present day, but are frequently found among the component clans. The whole tribe (tribe) is under the rule of a chief or *Amir*, whose authority is generally respected, and under him each

heretics who had great influence in northern Sindh, Kutch and Multan in the 1st and 2nd centuries of the Hijra and were attacked at Multan by Muhammad of Ghazni and represented in the present day by the Kalami tribes of Kutch who are claimed among Baluch, but are not considered to be of Baluch origin. They are believed to possess magical powers of healing the sick. Similar powers are attributed to the Kohit who are believed to be of Salyid origin. The story in the *Zair-e-Majma'i* (about 1600 A.D.) derives their name from the tree called *Kohit*, which their ancestor is said to have ridden like a horse. (The Kohit is the *Prosopis Spicigera*). The real origin of the name is probably from a place name, as Kohit is applied to many valleys where this tree is abundant. Certain tribes also possess levitical claims to whom similar magical powers are attributed, as the Naikhan clan among the Bagpla.

Certain racial customs have almost the force of religious observances. Men Baluch for instance will not touch fish, and the principal clan among the Kacchi Baluch object to animal's flesh. The Leharis will not touch the *lams* or *Shay* a milky mixed plant generally eaten by hillmen. All Baluch consider it a disgrace to cut the hair or beard except to perform the *namaz*, or clipping of the mountainous rural among Sunnis. Eggs are often considered objectionable, the reason assigned being that they cannot be killed in the orthodox fashion. Signs and omens are much observed and the usual method of inquiry is to examine the blood-vessels in the shoulder-blade of a newly killed sheep. A similar practice was followed by the Maghulu in the time of Feroz Khan.

Of all virtues that of hospitality and affording shelter to refugees is the most prized, and is considered one of the first duties of a man to punish conjugal infidelity by the death of the woman and her parents, a fertile cause of blood feuds.

Religious poetry is by no means uncommon. The poets are ordinary Baluch, not Mullis nor persons with any special religious character. The plain doctrines of Islam, the delights of heaven and the torments of hell are set forth in simple and vivid language.

Sufyids or reformed Salyids though common among the Afghans are not numerous in Baluchistan proper. There are a few fanatical classes of Sufyids who appear to be of Kacchi blood, but most of the so-called Sufyids of Las-Bela are descended from converts from Hinduism.

Education. There is little education except in the schools at important centres such as Quetta and Sibi established by Government in recent years, and these schools are used more by the immigrant than the indigenous population. Some of chiefs and persons of importance generally learn Persian or Urdu. Otherwise few Baluch and Pashtun receive any education in Baluchistan proper, but in Quetta, Quetta Khan and North Sindh education has made greater progress. Religious schools are hardly to be said to exist. The Afghan districts depend on the schools at Kandahar and Peshawar. As a rule the Mullas in Baluchistan are drawn from the subordinate classes, Pathan or Tajik.

Language and Literature. The Afghan population of British Baluchistan speak the South-western or Kandahari variety of the Pashto language, which has been dealt with under Afgha-

nistan. In the remainder of the country including the Khuzai of Kalat, Persian Baluchistan and the Baluch districts of the Punjab and Sindh the languages are Baluchi, Pashto, Persian and *Gudgah* (or *Shughali*).

Baluchi is an Iranian tongue belonging in the main to the East Iranian branch, although in some points it shows greater affinity with the Old Persian than with the Avesta.

The language is divided into two very distinct dialects.

1. The northern dialect spoken by the tribes of Kacchi and the adjacent hills, the Sulaiman Mts., and parts of the lower *Chitral* Khan Districts in the Punjab and the Jacobabad District in Upper Sindh. It extends occasionally to the Indus, and even among the Mazari to the left bank of that river. It is also made use of by some of the *Barikani* Herbari.

2. The Makrani, or southern dialect which is spoken in Makran and Persian Baluchistan, and also by the family of the *Khan* of Kalat. It is possible that the dialect spoken in Kacchi, the northern dialect and by the Baluch of Sindh should be classified as a distinct dialect from either of the above but sufficient information regarding it is not forthcoming.

Within the above dialects there are also minor differences: the northern falls into a northern group with fuller grammatical forms and a southern group in which phonetic decay has made more progress. Makrani Baluch has eastern and western varieties, the western being more affected by modern Persian.

Southern and Makrani Baluchi differ considerably in pronunciation, but are mutually intelligible.

The following are the distinctive points in Baluchi when compared with other Iranian languages:

1. the vowel system is on the whole well maintained;
2. the distinction between *z* and *t*, between *z* and *h* is persistent, and *h* is in Modern Persian. There is however a strong tendency for *h* to become *t*, *t*. This is more common in the southern than in the Makrani dialect.

Changes considered the following the principal points in the consonant-system which denote the nativity and originality of Baluchi:

1. the preservation of medial and final *z* which are weakened to *h* in Modern Persian;
2. the preservation of medial and final *z*, which often is weakened to *z*, *h* in Modern Persian;
3. the hardening of spirants such as *h*, *f*, *z* into *t*, *p*, *z* (This is more distinctive of Makrani than of North Bal in which this process is confined to initials which are aspirated and become *th*, *ph*, *zh*);
4. original *h* (M. Pers. *h*) becomes *z* (sometimes in N. Bal. *h*);
5. original *z* becomes *g* (or *z* before *z* vowels);
6. original *z* and *h* are kept separate, and not confounded as common *z* as in M. Pers.

There are also other minor points.

The chief phonetic points of difference between the two dialects are the following:

1. the tendency to aspirate and continuant *z*, *t*, *z*, *p* is confined to N. Bal.;
2. the termination *-og* which is so common in Makrani is *-ag* in N. Bal.;
3. medial and final letters in Makrani have a tendency to become the corresponding spirants in N. Bal., thus *z* becomes *h*, *z* becomes *z*, *z* be-

comes *a*, *i* becomes *ā*, *f* becomes *ḥ*, *ḥ* becomes *h*, *ā* becomes *ā*. These transformations make North Baloch a softer and more harmonious dialect than Makrani.

The Balochi vocabulary has borrowed a large number of foreign words, the proportion of which varies in the different dialects. The principal loans are from Persian and Sindhi (or dialects related to Sindhi). The Persian words are very common, but are more so in western Makran than elsewhere. In the same way, while a certain number of Sindhi words are universally used, the proportion is larger in N. Bal. Arabic words appear to be not direct loans, but through the medium of Persian. These are the principal sources from which the foreign vocabulary is derived. A few words come from Dravid, and in modern times Urdu has furnished a few. Pushto has hardly had any effect.

Balochi has no written literature, but possesses a great body of popular poetry, including a number of heroic ballads dealing with the wars and migrations of the 15th-17th centuries, other more modern ballads and romantic tales, didactic and religious poems and love songs. These poems and a number of prose tales and legends have been reduced to writing by modern students. The whole of the poetic material hitherto made available and the greater part of the prose is in the N. Bal. dialect and but little has so far been published in Makrani.

Dravid. Brahui is now recognized as belonging to the Dravidian family of central and southern India. The structure of the language leaves no room for doubt on this point, which was established by Truniger in 1880 and is recognized by Grierson in the recent *Linguistic Survey of India*. The doubts which were entertained on this point were due chiefly to the fact that the vocabulary is overlaid with a mass of Persian, Balochi and Sindhi words, and that the grammar has also been affected occasionally by forms borrowed from Balochi. Instances of the latter process are not however as numerous as has been imagined. In some cases the borrowing has been on the side of Balochi. The affinity of Brahui with the group of Dravidian languages rather than with the Mundā languages of Central India is probably the original language of the tribes recognized as the old Balochi stock who are believed to have been driven out of the Indus valley into the hill country before the appearance of the Baloch or of the other tribes now classed as Brahui. Some of these tribes have not adopted the Balochi language as noted above. In the present day the Brahui speakers occupy a compact block of country separating the northern from the Makrani plain, and touching also on the Ljaghat and Sindhi dialects of Kacchi and Las-Bela, and in the north meeting Pushto in the neighbourhood of Quetta and Sibt.

There is no literature, the language never having been written in modern times. A good many tales and one or two poems are found in the text books of the language compiled by Allah-Bakhsh and Mayer.

Persian. The Brahui cultivators make use of the Persian language, in a form probably very much the same as that used by the Lashis of Southern Afghanistan, but no special study has been made of the dialect.

Lari. The greater number of the Labakhts

of Las-Bela speak dialects which are known as *Ljaghat* or *Ljaghat*, that is the language of the Ljag. These are dialects of Sindhi and may be considered as belonging to the Lari or southern branch of the language.

Dialects of Kacchi. With these may be classed the dialects spoken by the mixed population of Kacchi, Ljag, Hindu traders and some scattered Baloch, Pusht and Afghan who are detached from the main body of the tribes. These belong to the Sindhi or northern Sindhi and are in some respects more like the southern dialect of the Lakhud or Western Ljaghat known as *Ljaghat*. The Baloch name for it is *Ljaghat*, another form of the word used for Lari.

Khetrani. With this language must be classed that spoken by the Khetrans, which although geographically nearer to the Ljag of the Lakhud has some features more in accordance with Sindhi.

HISTORY.

Kerman was conquered in 23 H. by 'Abd Allah under the orders of the Khalifa Umar, and he found the mountains of that province occupied by savage tribes called by some *Kali* or *Koi* and by others *Kardu*, with whom are coupled the *Kali* or *Kali* by certain chroniclers. The conquest did not go beyond the frontiers of Kerman where the *Kali* or *Ljag*, who occupied the whole of Makran, were encountered. But no Arab army actually traversed Makran until later.

Al-Baladhuri states that the Caliph 'Umar sent an explorer to the confines of Hind to obtain information regarding the land, and his route must have been through Makran. He reported that the country was barren and the inhabitants were, so that a small army would be destroyed, while a large one would die of starvation, and that was no doubt the reason why the conquest was so long deferred. In the time of Mu'awiyah, about 44 (664) the towns of Makran were occupied, war made against the *Mak* of the coast, and captivities were pushed up to the Sindhi frontier. Certain unidentified districts named *Nukh* and *Khan* were also occupied, and *Kandah* (the modern Kandahar). *Nukh* probably was the hill country of Kaler, of which *Kaplas* was the capital. Al-Baladhuri says that at this time the people of *Nukh* were *Mak*. In the time of 'Umar, there was fighting in Makran between Arab Gnomes, when Sa'ad b. A'adani was killed by the sons of al-Harith the 'Alsi, who were afterwards driven into Sindhi by 'Umar b. al-Khattab in 705. It is to these 'Alsi that al-Baladhuri attributes the origin of the kind dialects, allied to above *Kandah* (or *Kandah*), generally identified with *Gandhara*, is also said to have been taken at this time. Muhammad son of Qasim was then despatched by 'Umar to his celebrated invasion of Sindhi in 89 (707). This would have been impossible unless Makran had been first subdued, for the overland routes to India through the passes of Afghanistan were not yet open to the Muhammadan invaders, and they had not made any attempts at expeditions by sea. We find that Muhammad b. Qasim spent some time in Makran before advancing farther and took the towns of *Qasim* and *Qasim* which are generally identified with *Kasim* or *Kasim* and *Aras* or *Aras*. From *Aras* he advanced into Sindhi and

alluded to. The correct form of these names is very doubtful. *Kanashūr* or *Kanashān* is certainly a corrupt form, and it is possible we should read *كاش* *Kāsh* *Panashūr*, as the fertile *Panashūr* valley is a position which must have been occupied by the invaders. *Amashēl* is perhaps the most probable form of the name of this latter town, which was the last halting-place before *Sindh* was entered, and the syllable *bel* suggests the name of *Belā* the capital of *Lambāla*. The form *Amashēl* might be represented by the modern *Amara*, but the distance (from *Kashōl*) is too great. *𐎠𐎡𐎢𐎣* could read *Adhis-bel* for *Arma-bel* we might *𐎠𐎡𐎢𐎣* be the *Adhyavahita* or *Atyavahakela* of *Huen Tsang*, which also seems to correspond with *Belā*. The author of the *Cosmographia*, who was a native of *Sindh*, describes *Indo* (a king of *Sindh* before the Arab conquest) took *Amashēl* which he found occupied by *Indo-His* (in accordance with what *Huen Tsang* says), and then advanced through *Makhan* (which corresponds to *Panashūr*) and finally fixed the boundary between *Makhan* and *Kashān*. *Kashābel* although, as *Raverty* points out, it is stated in the *Harshana* to be only five *Parasangs* from *Kashān*, is shown in the map given by the same authority (also reproduced by *Raverty* in the *Journal of the R. G. S. of Bengal*, 1892, p. 222) as distant from *Kashān*, and all authorities agree in placing it in the desert country of *Nudiyā* of which *Bel* was the capital. This was undoubtedly the plain of *Kachh*, and *Kashān* was the capital of the *Kachhi* plateau, generally *𐎠𐎡𐎢𐎣* *Tūran*.

From these accounts we may gather that Mukau was probably slightly better watered and more populous than the present one, but still it had a fair population in a desert and inhospitable country, and it does not appear probable that it ever supported large towns or a dense population. The Arabs write the name of this province Mukau, but the name of the present day call it Makau and this was perhaps introduced by the Arab writers. Marco Polo (A. D. 1295) writes it Kinnouat, i. e. Kadi-Makran, the first syllable being the province of Kadi, Kadi = K22. In modern times it is often called K22-Makran.

The Arabian influence was probably maintained on the coast through the sea trade, which necessitated a hold upon the ports, but inland it no doubt decayed in the central ~~part~~ for Government weakness, and during the following centuries ~~we~~ have very little information regarding it. Dehodes of Ghazni ~~we~~ doubt extended his power from Multan over the plain of Nadliya which extended through northern Sind and Kachhi to the foot of the Hindu, and he also held the ~~plateau~~ plateau, for we are informed in the *Tukhar*: *Wajid* that Kander was subject to him. The population of Kachhi (Nadliya), Kati (Taran) and Makran compared to be mainly Indian, and we may suppose that in Taran and the adjacent parts of Sind the Dravidian tribes continued to hold their own.

Meanwhile the Badji tribes and their neighbors the Kér continued to occupy the mountains of Karaman, whence the Badji raided far and wide, and crossed the I. R. desert into Khorassan, and even spread into Siberia. A-Badji who died 379 (892) and Tabari circa 327 (932) only

mention the Kōē or Kōy, but Maxmill ultra 322 (1943) and Ippakiri circa 320 (1951) give the name of both Kōē and Balōē, as do the later authorities such as Idhar and Yaku. Idhar, about 543 (1851) says that the Kōē mountains were inhabited by a wild race like the Kurda, and that the Balōē were to the north and west of them, were prosperous, owners of cattle, and did not infect the towns as much as their neighbours. Yaku also confirms this statement, and quotes an Arabic poem about this country which says 'What wild regions we have traversed, occupied by Zang, Kurda and malicious Kōy'. The Kōy are described as claiming Arab descent and also as being inclined to the Shi'a tenets. The Balōē, he says, were formerly the most terrible of all these races, but had been destroyed by Agha al-Dasta Ibrahīm (338-378 = 980-1012): it may be added that Agha al-Bakla of the same family lost his head when fighting against Kōē and Balōē Ippakiri mentions that even in his time two provinces of Sindh were known as Balōē country, and soon afterwards their plantations in the 1st interval Talaba and Khaba brought the anger of Mahmūd Ghaznavī down upon them, and in his own time he expelled them, who defeated them near Khāba. They became masters in Sindh about this time and it seems probable that the Ghāni al-Din of Sindh of their legends is the Malik Shams al-Din of Sultan descent, who is recorded in the *Tabakāt-i Nāṣirī* to have been an oppressive ruler. He died in 559 (1164). The Balōē are said in the legends to have been expelled from Sindh in his successor's time. Certain it is that a great peasant movement of the Balōē was begun about this period. They seem to have abandoned Korman altogether, and moved to a region into Makran, which became and has remained a Balōē country ever since, many of the more recent Balōē tribes and the remnants of the Arab settlers being probably absorbed among them during the next three hundred years. The movement from Korman corresponds with the occupation of Patala by the Behlūls and it may be surmised that the Balōē found that strong governments like those of the Behlūls and Ghaznavīs rendered it impossible for them to live by plunder as they had hitherto done. (Houtman, *Maxwell et al. notes relative à l'histoire de Sindhistan*, I. 5-77. Many of them doubtless pressed on towards the Sindhi border, and thence began to raid from the annual barrier. About the middle of the thirteenth century to the time of the Sāmā kings of Sindh Khattī, Mula tr. and Wānā, we find Balōē Sindh allied with Sāmā and Ghaznavī dynasties.

In the year 818 (1421) the Khwarizm King of Ghazni, Balak al-Din Manglart after his defeat on the Indus by Chengiz Khan made his way into Sindh, and thence into Makran, and traversed the country from 820 to meet sinking his way into Persia about 823 (1423); but Balak 823 was seldom visited by the armies of invasions. The Mongols and Chengiz Khan, the Turkish followers of Timur, the Aghlans, and later all followed more northern routes and the Baluch themselves, when they are last heard 823 from Makran, avoided the coast route by Hel, and after occupying the plateau and perhaps to some extent confining with its Dravidian inhabitants, poured down through the Bolan, Mullah and Nati gorges into Karachi. Tradition represents that the Turkish

this period took Kalsat-Nikra from the Hindu, and that the descent into the plains was caused by this force. It seems probable that in reality the Nikra and Muhammad, the old Dravidian stock, had held the Hindu country from early times. The old name of Kalsat-Nikra is a name to denote that they were its oldest inhabitants. In the disturbed period following the Saka and Magh invasion other refugees than the Baluch seem to have found their way to this plateau from the west, among them probably the Khor or Korda who had lived side by side with the Baluch in the Kerman mountains. This is the most probable origin of the non-Dravidian Brahmins, with whom some Baluch and Afghan clans continued to form the Hindu confederacy. The process must have been a gradual one, as the adoption of the old Dravidian language proves. The great mass of the Baluch no doubt found these occupants of the highlands too strong to disturb and pressed eastwards into the Indus valley in search of fresh fertile lands to occupy. Something very like a national migration took place, but Indian Baluch remained in Sindh to make it predominantly a Baluch country ever since. The Baluch are out of the course of the invasion. Its population consequently remained Indian. The Baluch were true colonists, who settled in tribes where they found themselves strong enough, without but not exterminating the aboriginal Dasya. They had no central organization, but each tribe was under its own chief, although temporary confederations under the chief of the Rind or of the Lashari were occasionally formed. It can be judged from the early history. This organization prevented the establishment of any permanent kingdom, each tribe fought for itself, and they often fought against each other. Their invasion of India therefore, although it has profoundly affected the population of the Indus valley, has been almost unnoticed in history, while invasions like those of Chengiz Khan, Timur and Nadir Shah, which have left no trace on the population, all a commonplace place in the historical drama.

The first tribes of which we have any record are the Rind under Mir Cakar and the Lashari under Mir Salar who appeared at the court of Humayun at Kabul, at Kandahar. The Lashari are still known as a Musalman Rajput tribe in Baluchistan, South Punjab, and after the break up of the Sikh Rajastan they formed a small kingdom at Multan. Humayun the second of these kings ruled from 1574 to 1608 (1567 to 1597). During his reign Salar with his followers came to his court and obtained *khil'at*, an emblem of military service. Other Baluch followed, among them Mir Cakar and his Rind who came from Sindh (now generally called Sibi, but Sibi by Baluch). Great rivalry followed, and according to the Baluch there was war between Rind and Nadir. These were killed, and Cakar left Sibi because of his war with the Lashari under Sewahram, and with the Turki under Zana. In their legends the memory is perpetuated among Baluch of their migrations and of their dealing with the Hindu invasions (invasions of India by the Aryans) of Hama, the Hindu King (the Zana of the legends) and his son Shah Beg. The history of this invasion shows that Shah Beg himself had Baluch fighting on his side, but others fought against him on the

side of Lashari-Nadira, and that his son Hama who succeeded him in 1530-1531, fought against the Rind and made an expedition against the Rind and Magh (a branch of the Lashari) in Kandahar. Also that when he attacked the Lashari at Kandahar and Mahan he found their army mainly composed of Rind, Nadir and other Baluch (1531-1532). Meanwhile the Rind and their had spread up the Indus and Ghazni valleys. India sent them as far south as India and Kandahar, in 1539, and later on, when Humayun was driven out by Sher Shah, the three sons of Sher Shah, Ismail Khan, Ismail Khan, and Ghazni Khan met Sher Shah at Kandahar, and he continued their power of South India in the fertile lands along the Indus. The two sons of Ismail Khan and Ismail Khan (and also Ismail Khan, now destroyed by the Lashari) were founded by these three Ismail Khan's descendants, the Mirza Nawab, were local rulers of Ismail Khan, and maintained their power there under the Empire of Delhi and also under Nadir Shah and Ahmad Shah Durrani till they were supplanted by the Kalhor of Sindh in 1709. The Rind who accompanied the Nadir founded a principality in Ismail Khan which after two hundred years fell before the Afghans, and the Lashari (a branch of the Lashari) became chiefs of Multan in the middle of the early part of the 18th century. The present location of the Baluch tribes of the Punjab and Sindh has been alluded to in Part II. The traditional legends still current among the Baluch represent that they joined the emperor Humayun (who is known as Humayun Chaghatay, i.e. Humayun) in his reconquest of India from the Afghans. There is no historical corroboration of this, but the *Tarikh-i-Humayun* shows that Mir Cakar and the Rind as well as Mir Khan and his son had been at war with Sher Shah Sur, who had expelled them of Multan, and therefore it is probable that they would have joined Humayun. Cakar and the Rind retained their lands in the central Punjab, and Cakar's tomb still exists at Sarhanga in the Montgomery District. Humayun had been taken captive by Baluch on his first journey into Persia but was well treated by them, and helped on his way. After his conquest of Kabul from Kamran Humayun bestowed the provinces of Sibi and Multan on a Baluch chief named Lashari. His relations with them were therefore good, and it seems probable that the great extent of land which they were able to retain in the Central and Southern Punjab is evidence that they continued in favour after the re-establishment of the Moghul Empire. It is most unlikely therefore that the traditional tradition is altogether fictitious.

The great migration of the Baluch once left the central body, which began to be known as Rind, in a comparatively strong position, and the Kandahar chief gradually rose to prominence. No doubt the adherence of certain friendly elements especially the Afghan Baluch, strengthened them greatly. In the middle of the 17th century Mir Ahmad Khan descended the Indus and took Kandahar from the Persian Afghans of Sibi. Mir Samundar Khan who followed him is said to have held Kandahar. He was certainly at war with the Kalhor of Sindh, but the capture of Kandahar is doubtful. His successor Mir 'Ali Akbar was a vigorous chief whose name is still famous among both Baluch and

1612. In pursuit of his war against the Kalhoras he utterly laid waste the province of Kachhi then held by them and extended his power to the west also through Makran and Kcc. It was during his rule that the Ghilzai invasion of Persia took place, and Mahmud the Ghilzai chief had many battles in his army when he invaded Kandahar. Afterwards when Ashtab had been defeated by Nadir Shah in 1143 (1730), he was attacked by Nadir in his attempt to reach Kandahar and slain with all his followers in or near Sistan. This perhaps accounts for the favour with which Nadir Shah regarded the British Khans, for after his Indian conquests he awarded them the lands now held in Kachhi which he took from the Kalhoras. 'Abd Allah Khan is said by the Baloches of the Loralai to have invaded that country with his son Mubashhat Khan, and sacked the town of Ujampur. He was ultimately killed in fighting against the Kalhoras at a battle between Wharler and Miri. He was succeeded by his son Mubashhat Khan, who with his brother Nafir Khan had been a hostage at Nadir Shah's court. He was an oppressive ruler but did service with Nadir Shah which kept him in favour. After Nadir Shah's death Mubashhat Khan raised the Kandahar province, and Ahmad Shah Durran as soon as his power was established invaded the Sarawan province, and carried away the Khan's brother Nafir Khan as a hostage. Before long Nafir himself joined the Khan and was invested with the title of Nafir-Nigat. Mubashhat Khan appears to have been killed or kept a prisoner by Ahmad Shah till his death. Nafir Khan accepted the Durran King as his suzerain. He established his authority firmly throughout Makran and Kcc, and returned from an expedition to the Persian frontier by the route through Herat and Kishan. Ahmad Shah bestowed on him the districts of Herat and Musang. He also extended his power over Las-Bela, whose chiefs, known still by the Kaljipi name of Lajun (formerly Lajun) in Sind and still found in Kachhar, admitted his authority, and he obtained the cession of Kachhar from the Kalhoras. Towards the Indus he also held the territory of Turand and Dajil, a tract in the southern Punjab irrigated by the Kachi river which issues from the Sulaiman Mts. of Turand. His great work was the organisation of the Arabians into the two main groups of Sarawan and Ghilzai, and the appointment of the Rabban chief to be head of the northern and the Zibri chief of the southern group. The organisation was on the principle of military service. Each tribe was to supply a contingent to the Khan, and also to the head of its own group. This service was accepted in place of revenue or tribute, and the Khan also distributed among the tribes the land which he had lately acquired in Kachhi and elsewhere. Such a system depended for its success on the character and popularity of the Khan. It succeeded under Nafir Khan, but rapidly fell to pieces under his weaker successors.

Nafir Khan became so powerful that he defied the authority of his suzerain Ahmad Shah who thereupon in 1171 (1758) invaded his territories and inflicted a defeat on him in Musang. Nafir Khan retired into his fort of Kalat and was there besieged by Ahmad Shah. It is stated by Elphinstone that the Durran chiefs were by no means anxious for success, as they did not wish Ahmad

Shah's power to increase. The army also suffered severely before Kalat, and after forty days Ahmad Shah agreed to accept Nafir Khan's nominal submission. Nafir Khan retained independence in his own dominions, but agreed to render military service to Ahmad Shah. This condition he observed faithfully, and he accompanied Ahmad Shah during his wars in Khorasan in 1173 (1759) and afterwards during his wars in India. On the former occasion his troops were mainly instrumental in winning the victory, and he showed the greatest personal heroism. Pottinger who travelled through Baluchistan only fourteen years after his death gives him the highest character for bravery, justice and patience, and a strict regard for truth, as well as liberality without which an ruler can hold his own among Baloches and Afghans.

Nafir Khan died in 1200 (1793) and was succeeded by his son Mahmud Khan, then a child. Nafir Khan's grandson of Mubashhat Khan who had already given trouble to Nafir Khan's life, now again broke out, but was defeated with the aid of Zamana Khan the Durran King. Mahmud Khan however was unable to retain the extensive dominions of his father, Kcc, the western part of Makran was lost, and the Talpur Baluch Amirs of Sind, who had expelled the last of the Kalhoras rulers from that country, recovered possession of Kachhar. The Khan's half-brothers Muzaffar Khan and Rahim Khan whose energy might have upheld his authority in Sind were both killed in a feud. Mahmud Khan died himself in 1221, and was succeeded by his son Mirza Khan, who showed more vigour than his father, and recovered possession of Kcc. but was soon involved in hostilities with Ahmad Yar son of Bahram Khan, who after various vicissitudes was captured and put to death at Kalat. Mirza Khan was very much under the influence of a Ghilzai adventurer named Ibad Muhammad, and discontent among the Arab chief led to an attempt to supplant the Khan. This did not succeed, but his position was much shaken, and some of the tribes such as the Mangr and Durrani of Ghilzai threw off his authority altogether. The province of Herat and Dajil was lost, and annexed by the Sikh ruler Ranjith Singh. Another trouble was brought upon Mirza Khan by the misadventures of Shah Shuja' al-Mulk whose attempt on Kandahar in 1239 (1824) ended in failure. He fled to Kalat, and Mirza Khan gave him shelter and protection, and embroiled him with the Bakhtiar Sardars of Kandahar. He was also distracted by quarrels between his favourites, ending in the death of Ibad Muhammad, the successor of Muhammad Huzari. This man was instrumental in entraining Mirza Khan with Lieut. Leitch, who had come to Kalat as British agent when the expedition to restore Shah Shuja' al-Mulk was undertaken in 1251 (1836). The intrigues of Muhammad Huzari and his colleagues had the effect of convincing the British authorities of the treachery of Mirza Khan, and a force under Gen. Willshire was sent against Kalat. The strongly situated fort was stormed and Mirza Khan himself killed. Kachhar, Sind and Musang were taken from Kalat and added to the kingdom of the restored Durran King. Thus Mirza Khan was badly recompensed for his hospitality to Shah Shuja' al-Mulk in 1834.

The young son of Mirza Khan was set aside,

and Shah-Nawaz Khan a descendant of Mohakhan Khan was made Khan. The deposed son, a youth of fourteen, took refuge first in Pandjgur with the Gikhis and afterwards with Asad Khan chief of the Nawabzais of Khatkhata, and a number of the Sarawan tribes had siege to Kalat where the British Agent Lieut. Lowndes and Memon the traveller were with Shah-Nawaz Khan. Ultimately the town was surrendered and Shah-Nawaz abdicated in favour of Mihal Khan's son (now known as Nazyr Khan II). Lieut. Lowndes was imprisoned and Memon after a time was sent to the British Agent at Quetta. Lowndes was murdered by the Brahui after their defeat at Ishkhan in Dec. 1840. Kalat was again occupied, and Nazyr Khan II was finally recognised by the British Government as Khan at the end of 1841. He held to his engagements through the events of 1842 and 1843, the abandonment of Afghanistan and reversion of Sindh to the Indian empire. The position and influence of the Khans of Kalat had been much shaken by this time. The Brahui tribes were rebellious and discontented, and after the loss of Harat-Lodhi, the Baluch and Baghi, and the tribes of the Sulaiman because practically independent, and plundered the plains of the Desajet, Northern Sindh and Katchhi impartially. To the west the Hujar Government of Persia encroached on Khet and western Makran. Katchhi, Sindh and Makran had been restored to the Khan by the treaty of 1841 by which he submitted the sovereignty of the United king Shah Shuja ul-Mulk, but after the recovery of power in Afghanistan by the Sikhanis, they were retained by the Khan without any admission of the Amir's authority. A tract around Shi however still acknowledged Kalat rule.

The advance of the frontiers of the British empire in India by the annexation of Sindh in 1843 and the Panjgur in 1849 altered the position with regard to the border tribes, whose incursions were curbed by the fortification first of the cantonment of Jacobabad on the Katchhi border, and afterwards by the military posts along the foot of the Sulaiman mountains. Sir Charles Napier invaded the Baghi hills in 1845, and in 1847 General Jacob inflicted on them a severe defeat in the plains, but no attempts were at first made to exercise any regular authority over these tribes. By a treaty signed in 1871 (1854) the Khan accepted a position of subordination to the British Government and bound himself to repress all outrages. He had not however the power to enforce the observance of this condition, and it gradually became evident that some further extension of British power was inevitable. In order to assert his power against the tribes he tried to form a permanent military force and relied on the advice of a Wazir of Arabic origin. Such measures were intensely unpopular, and led to perpetual trouble with the tribes. Mir Nazyr Khan died in 1874 (1857), and without suspicion of poison, and was succeeded by his younger brother Mir Khwairiz Khan. The Mirzogas (or Chambadats) Mir Muhammad was suspected in connection with the late Khan's death, and kept the young Khan practically as a prisoner in the Mir's fort of Kalat, and there they were attacked by the Brahuis with the aid of Lashkars and Asad Khan of Khatkhata. A temporary arrangement was come to through British influence and the Shughlan Wazir Muhammad became the Khan's principal adviser, but the trouble

continued for several years. A successful expedition was, with the assistance of Major Gurney, the British Agent, made against the Mirs in 1859, but no permanent step was put to their raids. In 1863 the Khan was defeated by a Brahui chief, and fled to Sindh; his cousin Samad Khan took his place but was assassinated next year, when Khwairiz Khan recovered Kalat with the assistance of the Khatkhata tribes. Under such circumstances nothing like a settled government existed in the country. In 1866 the Khan of Lashkars revolted by the Brahui chiefs broke into rebellion, but was defeated and finally banished; he was interned in British India for a time. In 1872 the troubles became still more serious. Upstir at the foot of the Bolan Pass, Mugh, the chief town of Katchhi, and Gandhra were taken by the rebel Mirs, and Mugh was seized by a relative of the called Khan. Mugh was also in rebellion, and the Khan had no authority left to him. This brought about more decided intervention, and Capt. Sandeman, who had attained great influence among the Mirs, Baghis, Makrans and other Baluch tribes connected with the Panjgur, was sent to Kalat at the end of 1875, and by means of tact and personal influence, and the assistance of an honest and able Baluch chief, the late Sir Miran Bakhsh Khan Marri, succeeded after many difficulties in arranging all the disputes between the Khan and the chiefs at Mugh by the end of 1878. A treaty was concluded at Jacobabad where the Khan met the Viceroy of India Lord Lytton in October 1876. The result of this treaty was to make Kalat a protected state; the rights of the tribal chiefs were recognised and the Government of India reserved the right of intervention to secure good government. Sandeman became first Agent to the Governor General, with his headquarters at Quetta. The post at Quetta on a plateau nearly 6000 ft. high at the head of the Bolan Pass became a military station, and is now a very strong position. In the war with Afghanistan 1878-80 the Bolan Pass was used freely and without interruption by troops moving from India towards Kandahar. The treaty of Gandamak between the Amir Ya'qub and the Indian Government transferred the districts of Sindh and Pushtun up to the Khwairiz Amud Mir, to British India. These districts formed the nucleus of the new Province of British Baluchistan. A railway was commenced from the Indian valley to the Pushtun plateau by the Harat Pass in 1879, and, though work was stopped for a time in 1880 owing to an outbreak of the Miri tribe after the battle of Maimandi, it was completed after several years' work, the first and at present the only railway which connects from the low land of the Indian plain to the Indian plateau. There was excitement also among other tribes which entered some minor military operations, and by C. Macgregor led an expedition into the Miri hills.

The incorporation of Shi and Pushtun in the Indian Empire led to the further extension of British authority through the valley of Fud Co. and, 1881 and 1882, being between Pushtun (otherwise Pughan) and the old Indian Frontier along the Sulaiman Mts. Ultimately the whole of this country was incorporated in the Indian Empire, generally with the consent of the population, and the Military Stations of Turbat and Fort Sandeman were formed to take the place to some extent of

the old sultans of Dera Ghazi Khan, Rajpoot and Jangshahi. Quetta when commenced by rail with the Indian system became a military centre of more importance. The remaining history of Baluchistan up to the present day is one of increasing efficiency in administration, a growth of peace and prosperity among the tribes whether those near the Pandjsh frontier, those of Makran, the Nawabwats of Khairat or the state of Las-Bela. Sir N. Sandeman, the founder of modern Baluchistan died at Las-Bela in 1892 and is buried there. The Khan of Kalat, Mir Khoshdad Khan was deposed by the Government of India in 1893 on account of a savage and murderous outbreak, and was succeeded by Mir Mahmud Khan, the present Khan.

The boundary between the state of Kalat and Persia was laid down by a boundary commission appointed by the British and Persian Governments in 1872. This was revised and confirmed by the further commission provided over by Sir T. Holdich in 1893-5, in which disputes between the Persian tribes and the Nawabwats of Khairat were settled, and at the same time another commission under Capt. Max Mahon laid down the boundary between Afghanistan South of the Helmand and Baluchistan. The peak of Malik Syah Koh at the north-west corner of Sistan has been fixed as the meeting point of Persia, Afghanistan and Baluchistan. The northern strip of desert country between Khairat and the Afghanistan border, known as Caghaz and western Sindjaran does not form part of the Khan of Kalat but is immediately under the British authorities. Through it runs the caravan route from Quetta to Shikoh and Kermuk. The railway has been continued as far as Nushki where this route starts. Khairat, like Las-Bela is not directly under the Khan of Kalat, but is administered by its own chief, who admits the Khan's suzerainty. All disputes are subject to decision by the agent at Quetta.

The Baluch tribes of the Sulaiman Mts. East and north of the Murts and Ruyge are not under the Baluchistan Government, but are managed like those of the western plains of the Pandjsh by the Deputy Commissioner of Dera Ghazi Khan under the local Governor of the Pandjsh. In the same way the tribes of northern Sindh are managed through the Government of Sindh. In most cases the tribes are governed through their own chiefs, in whom a good deal of authority is allowed by the British Government.

The Talpur tribe who established a short-lived rule in Sindh were an offshoot of the Jangshahi Baluch tribe of Dera Ghazi Khan. The Ance of Sindh against whom war was declared in 1843 were members of this family. After the annexation of Sindh one of these Ance, Mir Ali Murad of Khairpur, was allowed to retain his dominions, and the state of Khairpur still exists, the only feudal state of British India which is under a prince of Baluch nationality.

BALTA LIMANI, a bay on the European shore of the Bosphorus between Beyrudi-Ka and Kinnik Bazar, is called after Balta-Qaghan Sultanku-Bey, the first admiral of the Turkish fleet, who equipped the fleet of 420 ships here, which co-operated in 1457 (1453) at the siege of Constantinople; it is the ancient Philadelp. Bayrak-Pasha's old palace stands here. The commercial treaty with France of 1838, the Treaty of the Five Powers of 1841 and the agreement of 1849 relative to the principalities of the Danube were all concluded here.

BALTAQI, "Ass-beaver", the name given, in the older organisation of the Ottoman court, to a body of palace-guard, consisting of 400 men under the command of the *Asiatic*, and especially entrusted with the duty of guarding the prince and princesses of the blood as well as the Imperial Harem. They wore a peaked bonnet of brown-coloured felt, called *balta* and were quartered in the *Baki-Sera*. They accompanied the Harem to the wars, marching beside the vehicles conveying it and camping around its tents; they were armed with halberds, whence their name. Their commander bore the title of *Baltaqian-Khagan*. He transmitted the Sultan's orders to the Grand Viceroy and at the ceremony of *Manit* assisted the preachers to descend from the pulpit. — The *Balta-Baqi* were a corps of 120 men attached to the service of the chancery (*Khatt-i-Mah*); taking their orders from the *Saltuk-Khagan*; their bonnet, not quite so peaked, was distinguished from that of the *Balta* by two strips of woollen

cloth which hung down over their cheeks (*balta*) whence their name. — In the building of the *Saltuk* gate at Constantinople may be seen a huge club which was carried as high by *Saltuk-Pahlawan*, one of the champions of the *Baki-Sera*.

BALUCHISTAN, or **LITTLE TURK**, a mountainous tract on the N. W. frontier of India, subordinate to the native state of Kashmir; area and pop. unknown. It contains some of the highest mountains and largest glaciers in the world, and includes part of the upper channel of the Indus, on which Skardu, the capital, is situated. The inhabitants, though Tibetan by race and language, were long ago converted to the Shi'a sect of Islam. Their hereditary chiefs are known as *Khans* or *Chakras*, who trace their descent to 'Ali Buz, who conquered Ladakh and founded Skardu about the end of the xvth cent. They were subjected to Kashmir in 1840. Owing to pressure of population on the soil, which is said to average 1400 per sq. m. of cultivation, the Baluch emigrate in search of labour as far as the plains of India.

BALYÖS (by metathesis, from the low Latin *Balio* Lat. *Agulus*), *Bano*, the title of the representative of the Venetian Republic at the Sublime Porte. After the capture of Constantinople by the Turks, Ibrahim Alibey was decapitated on the surrender of Islam; negotiations were then entered into for the resumption of relations and the sending of a new *Balyö* with the same rights and duties as under the Eastern Roman Emperors. Bartolommeo Merello was the first agent in this capacity in 1456. The agent was changed every two years but as he had to await the arrival of his successor his mission in practice lasted three years. By the terms of the agreement, entered at the beginning of the reign of Sultan Süleiman (1520 = 1520) the *Balyö* could not be imprisoned for debt, he administered the estates of his countrymen and made out to them the passes without which no merchant could journey into the interior of the Ottoman Kingdom.

Boncompagni, *Venezia in the XVIIIth and XIXth Centuries* (Rome, 1910), p. 38; W. Heyd, *Histoire du Commerce de Levant* (Leipzig, 1885-86), Index c. v. *Balio*. (CL. HUART.)

BAM (Arab. *Dammah*, a district and town in the province of Kerman, Iran, about 120 miles S. E. of Kerman on the western edge of the great *Baki* desert *Daghi* I. I.

In medieval times Kerman consisted of five districts: *Bardah*, *Stigjan*, *Bam*, *Kerman* and *Ujra*. Bam has long been a commercial centre of some importance, for the road from Shiraz through Kerman to Badkhan or through Makran to Minagha in Sind linked here, whence it is often mentioned in old road-books. Bam has also been a fortified place since early times and it was used as a place of detention by Zafar Ya'qub b. al-Laili in his campaign against the *Tajiks* of

Bhorokha (n 259 (673) A *centro* (1000) b. Haddan, ruler of Sukkur, who had been annihilated by 'Amir b. al-Lakh, and was lord of the province of *Shir* in the time of al-Mahdi al-Hilali, came from Bam, Isakhil and the *Khawar* give a more detailed account of them (in the *10th* — *11th* century). It had then three chief mosques, one called al-Kharidil with the *al-Mahdi* in the town besides the palace of Mansur b. Khurda, son of Karad, a second in the cotton merchants' bazaar (*al-Mahdi*), and the third in the market. The cotton industry flourished in Bam, in particular *karadil* (*karadil*), which was cotton and *karadil* (cotton) in *karadil* were introduced and exported to Khurda, *karadil* and *karadil*. *al-Mahdi* gives a more information and also mentions the four gates of the fortress by name. The fortress was situated in the centre of the town and included a part of the bazaar. A small river and aqueduct supplied the town with water. The houses were built of mud. Of the baths, one in the *al-Mahdi* was famous. The surrounding villages also were dependent on the cotton trade. In the *11th* (11th) century the fortress of Bam is mentioned again by al-Mas'udi.

In the beginning of the 12th century Bam was again a strong fortress which appears to have been built in the time of Nadir Shah. Being a town on the Afghan frontier it was the object of frequent attacks. In 1793 it was the scene of the capture of Lail 'Ali Shah, the last of the Zand dynasty. The victorious Agha Muhammad Shah ordered a pyramid of skulls to be erected here; it was still standing when Khamis saw it but removed by order of Fath 'Ali Khan.

The modern town may be better described as an agglomeration of houses and extensive gardens than as a town. It lies on the both sides of the river *Shir* and is surrounded by *karadil* and *karadil*. Its products are cotton, kenna, indigo and wheat, which are exported to *karadil*. The number of its inhabitants is estimated at 3000–4000 souls. The fortress is at the foot of which lay the older town *karadil* miles to the east outside the modern town: it is an oblong of 400 x 500 yards surrounded by walls without towers and a dry ditch. It was a strongly fortified citadel with a high watch-tower.

BAMBARA (Bambara), the, a negro people in the French Sudan. The Bambara country is bounded on the north by the land occupied by Moors, in the south by the Manding country and in the east by *Hamid*. It lies between 12° and 14° N. Lat. and 4° and 6° W. Long. of Greenwich. Its boundaries are approximately: to the north, a line drawn from Kallabang to *Hamid*; to the south, the upper course of the Senegal from *Hamid* to *Hamid*, the *Hamid* to its confluence with the *Hamid* and lastly the *Hamid*

from *Hamid* to *Hamid*. The Bambara are best found sometimes in very large bodies as in *Hamid* (5000 inhabitants), sometimes in groups scattered among a population of different race (*Hamid*, *Hamid* etc.). They also extend beyond the boundaries of the Bambara country proper and have planted colonies in the *Hamid* country on the shores of the *Hamid* and the *Hamid*. Mixed with the *Hamid* they form the population of *Hamid* south of the *Hamid*, where they have retained their own language and customs.

The Bambara belong to the *Hamid* stock of which they are the most important branch. They themselves do not use the name *Hamid* which is given them by Europeans; according to *Hamid* it is synonymous with the Arabic *Hamid* "unbeliever". They call themselves *Hamid* or *Hamid*, from the root *Hamid* "unbeliever", the animal which is their *Hamid* or *Hamid*, a custom which is also found in other branches of the *Hamid* stock. In physique they closely resemble the other branches of the *Hamid* except that of them the original type has been somewhat modified by crossing with foreign elements, especially with the *Hamid*. The colour of their skin varies from deep black to chestnut brown. They are powerfully built and are usually tattooed with three parallel lines, barred with a line from, running from the corners of the eye to the corners of the mouth. They are brave and hospitable. They readily change their place of abode and since the French conquest they have spread throughout the whole Sudan as soldiers, servants, and artisans. Their industry and economy have earned them the title of "Antiquaries in *Hamid*". Although they have for centuries preferred warfare to any other occupation, leading the practice of trade in the *Hamid* and *Hamid* who live amongst them, they are nevertheless industrious. As agriculturists they take advantage of the rainy season, from July to October, to cultivate millet, sorghum, maize, indigo, tobacco, and *Hamid* etc. etc. etc. they weave cotton, work in iron and make powder. Before the arrival of Europeans they were unacquainted with the use of money and paid for their purchases in cowrie shells and *Hamid* of salt. They are sedentary and live in villages, each of which consists of several *Hamid* or groups of *Hamid* surrounded by an earthen wall. Their houses of *Hamid* earth are usually rectangular and surrounded by a terrace. At the entrance to the village are public houses called *Hamid* which are used as places of assembly and justice by the inhabitants.

The social organization of the Bambara is still very primitive. The family is under the absolute authority of the father. The children are his slaves till they attain puberty: girls are given in marriage by their parents without being consulted, and remain the slaves of their husbands. Polygamy is allowed and divorce common. An inheritance descends from brother to brother. In former times the population was divided into three castes: 1. the *Hamid*, warriors or *Hamid* (literally "bearers of *Hamid*"); 2. citizens or *Hamid*; 3. slaves. At the present day the royal families, *Hamid*, *Hamid* and *Hamid* are at the head of the social hierarchy: next come the *Hamid* or *Hamid*, the *Hamid* or leather-workers, the *Hamid* or *Hamid* and finally *Hamid* slaves. The village is under the authority of a chief entrusted with the administration of justice according to a code of custom

law which is transmitted from father to son. The villages sometimes combine into groups but the bond of union is very weak and these confederations never last long unless it is a question of defending themselves against a common enemy as was the case at the time of the Toucouleur invasions. Union and a spirit of rivalry have almost always been wanting among the Bambara. The states which they have founded have soon entered into conflict with one another or fallen to pieces from internal dissensions.

The language of the Bambara is called *Samankusa*; it belongs to the Mande group of languages and is related to the languages of the Malinke, Soninke and Diula. The *Samankusa* differs most of all these from the original type. It is especially characterized by its extreme conciseness and by the corruption of its words through successive contraction. There is no declension among the substantives and in the verb no distinction of voice, mood, or person (Nash, *Recherches sur le Samankusa*, introd. p. xxi). The Arabic alphabet is used for writing, which is however little practised. There is, strictly speaking, no literature but only the traditions which scarcely last for a week than the *Samankusa* form epics, as well as fables, legends, and narratives intermingled with songs and dances, in which the Bambara take great delight.

The Bambara form the autochthonous element of the French Sudan. With the exception of some insignificant sections living in Kaarta they have retained the propinquity of Islam and remained pagans. Their religious beliefs are those of primitive peoples. Each family has its own *toron* or totem, a *toron* animal which the members of the family must not kill nor eat nor even look at intempestively. Ancestors protect their descendants. The dead are buried in the entrance to the house and are deposited on the interior walls in coloured designs (clouds, stars, geometrical figures), sometimes even in relief. Sacrifices are made to them; perhaps in former times they used to sacrifice captives on the graves of their chiefs. Festivals or *houre* play a very considerable part in their life. Every family, every village has its own which is carefully preserved in a sacred building. The festival is often a time to which animals such as sheep, dogs, and hens are sacrificed or millet and fruits brought. These sacred times are now more surrounded by drinkery in which a sorcerer resides. The sorcerers, recruited mainly from the south coast, and organized in secret societies of which little is as yet known, are very much feared. They foretell the future by examining the entrails of sacrificed animals; by juggling and by weird practices, such as encircling themselves through the villages, clothed in gossamer and wearing calabashes pierced with holes on the head, they keep the inhabitants in constant terror and wield a tremendous influence over them. Among other customs of the Bambara may be mentioned circumcision which is performed when boys attain the age of puberty and which has the character of a period of initiation, and the celebration of festivals, some of which may have been borrowed from the Muhammadans but others of which, such as the festival of the end of harvest, are much more ancient in origin.

From the want of written sources the history of the Bambara is very little known. Apparently

they were numbered among the small peoples of the empire of Mali or Melle and certainly took advantage of the fall of this empire in the 13th century to declare their independence. Ahmad Diala indeed, according to the *Annuaire* which was one of the rulers of the empire of Melle, a kingdom peopled by the Bambaras, the Samankusa and the Samankusa. A century later, about 1030, perhaps to escape the propinquity of Islam they moved to the upper Niger. Kalidou Kumbata, one of their chiefs made himself master of the land inhabited by the Samankusa and formed a vast kingdom on both banks of the Niger. He divided it amongst his six sons, who thus became sovereigns of independent kingdoms, often at war with one another. In the beginning of the 15th century one of his grandsons, Kita, again united the lands of the Bambara under his sway. He reigned thirty years and was succeeded by his eldest son, who founded Segou-Sikoro. The development of the kingdom of Segou was arrested for some years by civil wars (1748-1754) but its progress was resumed in the reign of Ngala (1754-1787). After getting rid of his rivals, this chief succeeded in overcoming the Fulbe of Kaarta after an eight years' war, captured his predecessor on the Fulbe kingdom of Minna and made his word law from Bambara to Timbuktu. During the first half of the 18th century the kings of Segou, Mamang (1747-1808) and Dabara (1808-1830) were again very powerful. They maintained the Bambaras of Kouma and conquered the Mande and Fula to pay them tribute.

Another Bambara kingdom had been established in Kaarta in the 15th century by Sakha, son of Kalidou Kumbata. In the 17th century this state passed into the power of a new dynasty founded by Sele Maissa who reigned at Niuru about 1734. His son, Sime Kumbata, was ruling this town in 1766 when Mungo Park passed the river. His successors maintained their independence in Kaarta till the middle of the 18th century.

The kingdoms of Segou and Niuru were destroyed by the conquering Toucouleur al-Hajj Umar (q. v.). Kaarta was conquered in 1850. Two years later, Ali Bata, king of Segou, who had made an alliance with the Maasina to resist the Toucouleur invasion, also was conquered by al-Hajj Umar. Umar entered Segou on the 10th March 1860 and there installed his eldest son as king. The Bambara however were by no means ready to acknowledge the rule of the Toucouleur. They rebelled in various places against al-Hajj Umar and his son Ahmad. The people of Niuru in particular were successful in regaining their independence. They cut the Toucouleur empire up into two great divisions and cut off communication between Kaarta and Segou. This state of affairs remained till the French troops took possession of Segou and destroyed the power of the Toucouleur (1890-1891). The land occupied by the Bambara then passed under the rule of the French who have since been endeavouring to establish law and order there.

Bibliography: Nash, *Recherches sur le Samankusa* (Paris, 1906); Héranger-Frédard, *Les populations de la Sénégambie* (Paris, 1875); Dinger, *Land und Leute in Senegal* (Paris, 1896); Dou, *De Niger au golfe de Guinée* (Paris, 1889), appendix p. 329-331; Collin, *Sur les empires de la race bambara in the Bull. Société d'anthropologie de Lyon*, 1885, pp. 11,

of the *Khazars* and stretched to the north east as far as the borders of Kāshghar. Like the other lands of the Ghōzids, this kingdom also was incorporated in the kingdom of Mōhammed Shāh of Kāshghar in the beginning of the 13th century; Bāmiyān was granted with Ghazna and other lands to Jalāl al-Dīn the eldest son of the Khwarizmshāh (Nasir, ed. Houtar, text p. 23; trasil, p. 44). In 1219 Bāmiyān was again separated from Tokharistan and united with the countries south of the Hindu-Kush. Soon afterwards (1218 = 1221) followed the destruction of the town by the Mongols. Murgha, a grandson of Gīngis Khān fell at the siege of the town; in revenge for this death the conquerors razed the town to the ground and exterminated its inhabitants, the place retaining the name Mo-bāli (evil town) or according to Rāhid al-Dīn Mo-Kar-gān (evil fortress) and was still uninhabited 40 years later in the 1260s of the historian Juvaini. The town built on a hill and destroyed by Gīngis Khān is apparently identical with the ruins now called 'Galgala'. These ruins are situated on a hill in the southern ridge, opposite the rock with two idols.

The modern Bāmiyān lies a few miles to the west of the ruined town and is no longer of any political importance; it is usually described by recent travellers as a "considerable village". For the last few centuries Bāmiyān has always been combined with Herāt and Ghazna; like these towns it belonged down to the 15th = 16th century to the empire of the Moghols and afterwards to the newly founded Afghan kingdom. According to 'Abd al-Kādir Rūdharī (ed. Scheller, p. 4 et seq.) 100,000 rupees were yearly levied on Bāmiyān for the rulers of Afghanistan in the beginning of the 18th century; the Indian traveller Manthi Mahān Lal (*Journal of a Tour through the Punjab*, Calcutta, 1835, p. 32) reckons the receipts from customs alone at 70,000 rupees. The main authority informs us that the inhabitants of Bāmiyān speak two languages, Persian and Pushtu (Afghan). The population of the valley mostly belongs to the Hazara stock.

Etymology: The Chinese and Arab names have been collected by J. Marquart, *Sanskrit, Berlin, 1901* (see Index). Le Strange, *The Lands of the Eastern Caliphate* (Cambridge 1905) p. 418 is to be used with caution; what Mukaddasī, p. 303 et seq. tells us about Ghazna is there erroneously applied to Bāmiyān. On the history of the Ghōzids see Bāmiyān ed. Fakhri Nājiri (ed. Nassau Leech), p. 101 et seq.; id. (transl. Raverty), p. 421 et seq. On the Mongol conquest see the text of Juvaini (*Zafar-nāma* Khawāss) in Scheller, *Central-Asiatische Forsch.* II. 142 et seq.; the text of Rāhid al-Dīn (*Qāṣṣat al-Mamlūkāt*) in Bercey, *Travels*, ed. Lep. Roux, *Arch. Asiat.* VII, iv, text, p. 116; id. 'Othman, *Siyaat al-Musafir*, I. 294 et seq.; J. Milne, *Southern Asia*, a sketch of the *Chirāghyān* Ann-Darj, St. Petersburg, 1879 (see Index) has collected the names by modern travellers.

(W. BARNHART.)

BAMPUR, a district and town in the centre of Persian Baluchistan, the seat of a governor, who is under the Governor-General of Herāt. In the older literature it is only mentioned by Mukaddasī 52 (wrongly Barbat

Balbat) and in the *Asfhar-nāma* it lies at the intersection of several trade routes, from Shīrāz or Kermān (town) to Balkh, Baluchistan and India, and from the harbours of Lāhōr, Gwādar, Gwādar to Sindh. Till about 1750 it belonged to Persia, later under Nadir Shāh to the Afghans. After the death of Nadir Shāh he placed himself under Ahmad Shāh Durrān of Afghanistan and became independent after the latter's death; he died in 1795. Baluchistan then broke up into various divisions each with its own chief. In the reign of Muhammad Shah (1834-1844) Persia again attempted to acquire the sovereignty. When a chief of Bampur attempted a rebellion in Kāshghar he was captured by the Persians. In 1849 a rising again took place after which Bampur itself was taken by the Persians. Since that time it has been held by Persia under Persian governors.

The town itself is rather a *qasr* of soldiers with their families than a town. It has a fort on a hill 100 ft high which protects the cultivated valley of the stream of Bampur from the advance of the warlike tribes of the desert. The fort is substantially built with walls of brick. The river valley is covered with gardens and date groves belonging to Baluch, which present a striking contrast to the white barren plain of Bampur. This land is crown property and produces corn and dates. A small station of Persian infantry, artillery, and cavalry, is stationed in the fort while a standing militia of Baluch is encamped in the neighbourhood.

Botany: *Asfhar-nāma*, p. 330; *Eastern Persia*, by W. John Lovell Smith and Goldsmid, p. 76, 203, 206; G. N. Curzon, *Persia and the Persians* (London 1892), II, 267 f. (H. H. H. H. H.).

BAN (n. and v. from the Indian *Bāṇ*). According to Abu Hanifa and Dioscorides the tree is like the Oriental tamarind, tall and slender, with soft wood and supple green branches. Ancient writers tell us that the tree was principally to be found in Arabia Felix; at the present day it is identified with the *Moringa aptera* (Sikou-largue), indigenous from Upper Egypt to India, the seeds of which yield the finest of all vegetable oils; it was highly prized even in antiquity and was well known to the Romans as *glans asperocarpa* and to the Greeks as *βήλας μωρφοειδής* (Moringoides). The bright, green, bean-like fruit (*ḥabḥ al-bān*, *ḥabḥ al-bān*, *ḥabḥ al-bān*) was crushed in a mortar, strained and then put in a press. The oil obtained in this way was considered an effective remedy against various diseases (convulsions, leprosy) in traditional Arab medicine; a mixture of the seed (not ground) taken in honey and water was used as an emollient and cathartic, in another treatment it was given with vinegar and water to horses as a remedy for colic. In addition to its use in medicine the oil of the tree was much used in cosmetics.

Botany: *Asfhar-nāma*, ed. Deligmann, I, p. 44; *Asfhar-nāma* in *Her. Stud.* ed. J. Marquart, I, 20, p. 193 and 399; *Ann al-Baluch*, ed. Leach, N. 226 and N. 252; *Ann al-Baluch*, trans. J. Marquart, Tome II, p. 145, p. 145. (J. HALL.)

BANĀKIT, a town in Central Asia, on the right bank of the Sir-Darya, and far from the mouth of the "river of Bāṇ" i. e. the

modern Angren (properly Abengerân). The name is written Binkath in Mukhammad (cf. de Goeje, p. 277, 1); this form is doubtless more correct than that given by Yāqūt (l. 745), for the name like many others such as Akhalkath, Binkath, Tinkath, is evidently compounded with *kat* (= 'village', *ḡāyat*, cf. l. 747). In later times the name is also written Binkat and Binkam. In Mukhammad's description of the town (l. 6) we are only told that it had no walls and that the Friday mosque stood on the market-place; there seems to be no other description of the town in any of the sources that have as yet come to light. In 883 = 1220 the town had ~~no~~ surrendered after a three days' siege by a small division (3000 men) ~~of~~ a Mongol army; cf. *Yüeh-shi*, *Historie des Mongols*, l. 224, and the ~~note~~ of Yüeh-shi (the only authority for this siege) in Schafer, *Chien-shi-chi* *Vermerk*, li. 115. In Tü-hu's time the town was ~~ruined~~; it was rebuilt by his orders in 794 (Apr. 2001, 1392) and named Shih-ching-tsia after his son Shih-ching (Zafar-Nâmâh, Indian edition, il. 836). In this connection it is related that the town had been destroyed by Chingis-Khân and remained in ruins till the time of Timur; Yüeh-shi however says nothing about any such destruction; the state, in which the town was towards the end of the 15th = 16th century, was perhaps brought about by some later event. At the present day Shih-ching-tsia is in ruins, and nothing is known of the date of its final destruction; in *reference* ~~to~~ the 'Yüeh-shi' ~~note~~ perhaps, Shih-ching-tsia is frequently, including the *note* (= 15th) century, mentioned as a strong fortress. The site of the ruins (now called Shih-ching) was fixed by Russian explorers in 1876. Cf. Le Stourgeon, *The South of the Eastern Caucasus*, p. 488, where ~~the~~ date of the destruction ~~of~~ the town is wrongly given (W. BARTHOLOMEW).

BAKĀKITI, *Barakī* (1317-1338) AND SĀDĀT-
DĀWUD A. MUHAMMAD, Persian poet and
historian (died 730 = 1329-1330). According
to his own statement he was appointed "king's
poet" (*shah-dar-shair*), by Qutb al-Din, Mongol
ruler of Persia, in the year 701 (1301-1302); one
of his poems is given by Dabulnāsh (ed. by Mac-
art. 237). His history shows the *shah shams al-
shair* *fi as-sawād al-ahdā* or *Qandā* and
was composed in 717 (1317-1318) in the reign
of Khān Abū Sa'īd (q. v., p. 107); the preface is
dated 25th Shawwāl of this year (31st Dec. 1317).
With the exception of some short notes on events
of later years the work only gives the contents
of the *shams al-shair* of Rashīd al-Dīn in a
brief form, with the material in a different ar-
rangement and of independent value. Blochet (*Inter-
vention et influence des Mongols par Fakh al-Dīn
Rashīd al-Dīn* (Ceylan-London, 1920, p. 68) corre-
ctly states that the Chinese sources for the
shams al-shair are not given in Rashīd
al-Dīn but only in Hsuanhsin; the text of Rashīd
al-Dīn, in which they are given was published
in 1886 by Baron V. Rosen (*Collection scientifique
de l'Institut de langue orientale du ministère
des affaires étrangères*, III. *Manuscrit Persan*,
St. Petersburg, 1886, p. 100 sq.). Hsuanhsin's
work is divided into three sections; the 8th part
which contains the history of China was edited in
Peking and Lodi in 1677 by A. Müller with the
commentary of Abdullāh Ibrahimī *Shihīrī*
Sinensis; Quinterón has since given that the

external combs, not from the *Alnus incana* (L.)
of Michx. but from Banksia's *var. alba* (L.)

1836), vol. iii. (London, 1837), p. 55 et seq.;
Blond, *Catalogue des Min.*, 1. 79 et seq.

BANAT, a frontier province of Hungary, which only received this name after the Peace of Passarowitz (1718), without having ever been ruled by a Ban, more correctly Temeszar Hannu, so-called after 1799 town of Temesvár, which was under Turkish rule 1552—1746.

BAND () meaning "hand", "tunnel" and signifying anything used for tying, binding or closing; it is applied, *hence also*, to the barrage constructed across a valley from one hill to the other and converting the upper part of the valley into a lake used as a reservoir. There are for example the *band-kut* near Shikra built by the Huzars, the 'Aqul *band-kut* near Ferozshahpur, the *band-kut* built under the Safaris, which supplies the town of Naghro with water and the *band* of the forest of Kachro, to the north of Coomashigro built to secure the water supply of the city. There are nine in number, amongst them being the great *band* and the little *band* fedded by two smaller ones, the waters from which supply the *band* (dam) built by Anandhena Coomana and repaired by Ghuman II. to the north of Feroz-Pore in the *band-kut* built in 1706 by Nurgash II.; to the north of Naghro-Kot is the ancient and the modern *band* of Sultan Mahmud I. built in 1731 and restored by 'Abd al-Khalid I in 1784 and the *band* of the Wabla, built by Mahmud's mother

Dist-band, "hand on the fore-arm" is a bracelet; *gordun-band* is exactly equivalent to the English "wrist-let".

Redwood "furchend" is the veil worn by Per-
mian women, of white cotton plaited with holes
like a stove and held behind the head above the
luder which covers the whole body.

Boat's Shanty is a nautical melody. — For further particulars see the diatonics.

Hilfsschriften. Edm. G. Henne, *4 Years among the Armenians*, p. 180; R. Wulff, *Peygah in Persia*, trad. Braugale, p. 16 (carte des provinces); Ch. (Cf. HUGAL.)

BANDÁ, a town and district of India, in Bundelkhand. United Provinces. Area of district: 3,600 sq. m.; pop. (1901): 531,058, of whom only 6½% are Muhammadans. The town ~~near~~ the Kan district, has a pop. (1901) of 22,565. At the beginning of the 19th cent., it was the capital of Shams-ü Daulah, grandson of Badli Khan, the Mughals' friend, by a Muhammadan woman. The late Nawab of Banda, 'Ali Bahadur, rebelled in the Marhwa of 1857, and the family now receives a pension from the British Government.

(J. S. Cotton.)

BANDA ISLANDS. This group of islands is formed by the peaks of a submarine volcanic mountain which rises up from the bottom of the sea (which is here about 2200 fathoms in depth) south of the island of Ceram in the east of the Malay Archipelago; it consists of three inhabited islands: Lintang, Banda Neira, and the volcano of Gunung Api (2000 feet high) with seven not so sparsely inhabited islands: Pulo Kun, P. Ai, P. Pisang, P. Bantikapal, P. Krakab, P. Manukan and P. Kiseigoin. Since the middle ages these islands have attracted the attention of Europeans, not by their size (about 15 square miles), but by their chief product, the nutmeg, immediately after their occupation of Malacca in 1511, the Portuguese sent out under Antonio d'Almeida to the Banda Islands and began commercial relations which still existed when the Dutch arrived there under J. van Heemskerck and W. van Warwijck in 1599 and the English soon afterwards. The population, mainly Mohammedan, of Banda Islands then numbered about 15,000 souls, who were living in independent settlements and organized on a patriarchal basis. The enemy of the Europeans, competing with one another in commerce, who mixed themselves up with the interminable feuds of the Bandanese were fatal to the latter for in order to secure for themselves the monopoly of the nutmeg trade, the Dutch made themselves masters of Banda Islands in 1620. During those years the natives of the islands, much decreased in number, had taken refuge in the neighbouring islands; those who remained were ultimately transported to Batavia, only a portion of them being afterwards brought back. The two islands on which the nutmeg is cultivated, Lintang and Banda Neira, were divided into farms (Perken) and these were allotted to immigrants (Kempnans) who were to grow this spice with the help of slaves from the adjacent islands: it could however only be sold at a fixed price to the "Nederlandsche Oostindische Compagnie". This monopoly remained under one firm or another till 1864, although the nutmeg tree had also been cultivated in other islands of the Archipelago since the end of the XVII century: after that year the occupiers (Perkeniers) were allowed to acquire their plantations from the government free from restrictions and this transference was completed in 1873.

These Christian descendants of mixed blood from early European immigrants form, with the Dutch officials, the aristocracy of the country and live in the capital Neira (Europeans 627, Chinese 99, Arabs 300, natives 3651) in the magnificent residence which belongs to the residency of Ambon. The Chinese unscrupulous families, many of whom have been settled on the islands for a long time, and enterprising Arab merchants (often contractors for Japanese labourers) belong to the lower level of society. The most prosperous inhabitants form the "burgers" and are some Christian and some Mohammedan, who have been settled there for centuries: the "burgers" therefore have arisen out of immigrant elements. In their daily life the "burgers" are all dressed in similar fashion, only the Mohammedans shave the hair of their heads and wear a local cloth, at festivals the Christians are dressed in European fashion and the Mohammedans in Malay.

The lowest stratum of society consists of Mohammedans and pagans, the latter immigrants from

the neighbouring islands (e.g. Timor), the former descendants of the slaves who were set free in 1830, of political exiles etc. The Mohammedan population is being considerably increased by the Javanese who work on the nutmeg plantations as contract-labourers. The number of inhabitants is about 6500. The chief export is nutmeg; the products such as rice, sugar, coffee, cattle and European luxuries and wearing apparel are imported. There is no industry worthy of mention. In earlier years these glorious islands were very unhealthy for Europeans but through better hygienic they are now among the healthiest in the Archipelago.

BANDAR. [See BANDA.]

BANDJARMASIN is at the present day the name of a town on the right of the river Barito in the south of the island of Borneo; in early times however the name was better known as that of a Mohammedan kingdom which stretched along the west, north, and east coasts. The district east of the mouth of the Barito was its centre. According to a Malay Ma, Javanese Hindu settled in the Nagara valley at the end of the XIV century and to later Malay the Sultans claimed descent from Maharriz, Suria Nata, a prince of Medjapatt. In the vicinity of Samarang and in Kotel (on the east coast), there have been found numerous Hindu remains of the same age as those of Western Java i.e. the fifth century of our era. In Book 23 of the history of the Ming Dynasty (1368-1644) a comparatively detailed account is given of Bandjarmasin as a commercial centre and of the neighbouring Kesudjrah. With the help of the Mohammedan kingdom of Hanoi in Central Java, Sultan Suria Nata ascended the throne as first Mohammedan Sultan in the beginning of the XVII century and removed the capital from Nagara to Marapaur, both of which lie on tributaries of the same course of the Barito. Tribute was paid by the coast countries; the Kesudjrah and other Nagara tribes in the interior asserted their independence and remained pagan. From the latter the Bandjarese obtained war, cotton, honey-stones

rise to a height of 2200 feet in the south and like the alluvial plains are almost entirely covered with thick bush and underwood of modern growth though the primordial forest still survives in a few parts. The hills and lowland agree with those of Malacca and Sumatra: large mammals like the tiger, elephant and orang utan are not found however. Its history begins with the discovery of tin and it is to this metal that the island owes its whole importance. After the beginning of the 17th century the Sultan of Palembang, ex-owners of Banka, began to work the tin-mines with natives and Chinese they are now worked by the Dutch government.

With a few small islands Banka forms a residency with Munak as capital. The administrative division into nine districts is based on the working of the mines. Under the Dutch resident, settled in Munak, the administrators are the chief of a district; under these there stands a *asisten* (to Munak and Blingg) or *beantun* as head of the Chinese and a *asisten* as head of the Mohammedans.

The population of Banka is about 115,000 souls, in addition to the Dutch officials (17 souls) and military consists of 7000 aboriginal elements: the native Malay population (120,000) and the foreigners (Chinese 145,225, Arabs 261 etc.). The Malays are Mohammedans with the exception of a few pagans, who live in the interior, and the majority of the Orang Batak, a higher people who live on the coasts or in their islands. Islam is continuously spreading among the latter, Christian missions have been unable to make headway on Banka either among the Chinese or the natives.

The Malay population (Orang Batak) consists of a little developed, mild, unassuming racial men, who were formerly not sedentary but were forced by the Dutch government, in the middle of the 17th century, to settle in villages on the roads connecting the chief towns of the districts. Here they derive a miserable livelihood from agriculture on dry fields (*ladang*); in recent years the government has again been trying to teach them cattle-rearing and the cultivation of tropical fruits (cocoa). Each village has a Mohammedan house of prayer and a *pasia*, the mosque Mohammedan customs as to marriages and deaths, in consequence of their poverty the annual number of Mohammedans however very small (8—50) it has been especially noted of the Bantamans, in how high a degree they are still guided by antique beliefs in their daily life in accordance with their primitive Indonesian development their village constitution is patriarchal, trade among them is quite insignificant; their industries are only confined to their own needs and their trading alone is worthy of mention. They spend much time in fishing and hunting wild cats and deer.

The Arabs, being merchants and seafarers, are chiefly settled in Munak, which is the centre of foreign trade though they are also to be found in Blingg and the chief towns of other districts.

The Chinese population consists of the few place of Hakka and other Chinese who are connected with the mines as labourers, traders or contractors, and ultimately return home again. They work the mines allotted to them by the Dutch engineers in Pangai, who have to deliver the tin up to the Dutch government at a fixed price. Secondly there is a large number of Chinese

of mixed blood, born of native women, who are settled in Banka and live by trading, industry, mining, pig-breeding and a little agriculture. Their children are educated in 20 Chinese schools. As the natives it must only supply their own requirements in the necessities of life, rice, fish, cattle, and weaving materials also must be imported; the total imports amount to £ 120,000 and the exports to £ 26,000 of which £ 23,500 is pepper.

BANKIPUR, the western suburb of the city of Patna, situated to 25° 37' N. and 85° 9' E., on the right bank of the Ganges. The Public Library of this town contains one of the largest collections of Arabic and Persian MSS. in India, to the number of upwards of 8000; it owes its origin to Mansur Mohammad Bahadur Khan (died 1876), who was a diligent collector of rare manuscripts.

Bibliography: *Catalogue of the Arabic and Persian Manuscripts in the Oriental Public Library at Bankipur* (Calcutta, 1908).

BANNU, a town and district of India, in the N. W. Frontier Province. Area of district 1870 sq. mi.; pop. (1901) 226,770, of whom nearly 90% are Mohammedans. It consists of a basin, watered by the Korran and Tockil rivers, and clothed above in by mountains. More than half of the inhabitants are Pathans, speaking Pushtu, the chief tribes being Marwatis, Hanakis, and Wazirs. The crops are wheat, grain, maize, and millet, grown by irrigation from poly tanks. Procu for frontier roads, the district has never been disturbed since British occupation. The town of Bannu, formerly called Edwardesabad, was founded by Sir Herbert Edwards in 1848; pop. 1901 including cantonment, 14,291. It is the centre of an important medical mission for the frontier tribes.

Bibliography: G. S. Thomson, *Bannu, or our Afghan Frontier* (1874); *Bannu Gazetteer* (Rawalpindi, 1907); T. L. Vassell, *Among the Wild Tribes of the Afghan Frontier* (J. S. Cotton).

BANTAM or BANTEN is the name of the eastern residence of Java; it was also the name of an earlier Mohammedan kingdom in this district, the capital of which Bantam still retains on the north coast, being in fact the capital of the province which covers an area of 143 peng. square miles and is divided into five municipal municipalities, Merang, Anger, Pandeglang, Loranjan and Tockil and in 1901 had a population of 89,500 souls including 597 Europeans, 3155 Chinese, 82 Arabs, 75 other foreigners from outside Java, and 491,542 Sundanese and Javanese. The northern half is mainly low country,

the southern covered by the chalk hills of T. Kramong. In the center are the volcanoes Karang and Pulosan, on the eastern border the Blatim. The smelter are but except the northwest and the west and the east of the south coast. In the north the deep bay of Marau, opening to inland, used to form a good harbor. Little was known of Marau before the beginning of 19th century. It then belonged to the Hindu kingdom of Padjadjaran in West Java in which the most important harbor was Sunda Kelapa. After the Javanese and Malaya. The Hindu kingdom of Mataram Sleu and Mataram found in Central Marau on the volcanoes of Karang and Pulosan afford ample evidence of the widespread influence of Hinduism. Soon after 1525 Marau was conquered by the Muslim rulers of Mataram in Central Java and Sunda Kelapa soon after. Marau then became the great commercial port of West Java whither Chinese and other merchants of the Indies, since Malacca had become a Portuguese possession in 1511, brought the wares of the archipelago. Marau was also the first harbor in the archipelago to be visited by the Dutch in 1606.

At about 1400 A.D. the Sultan of Malacca, Hassan-Uddin, a son of the Sumatran King of Chelbon, is said to have been the first Muhammadan prince; he conquered South Sumatra, and was succeeded by the middle of the 15th century by Mangrai Yasa, whose son Muhammad built the great Mosque of Malacca. On the decline of the Muhammadan kingdom of Demak, Batavia became independent early in the XVIIth century and its prince, the title of Sultan, to West Java (his power was gradually extended to the north and east and in the process they came in contact with the Kingdom of Mataram in Central Java which had subdued Pionak. The consequence was the spread of Islam in West Java and the establishment of Javaise from North Mataram under the Sundanese there; West Borneo also was for a time subject to Mataram.

In 1619 the Dutch Governor General J. P. Kouck conquered Jakatra, and Batavia was founded there as a commercial emporium and centre of the colonial possessions of the Dutch East India Company. This insured the warfare among the neighbouring states which was practically continuous except ~~for~~ brief intervals after treaties of peace. The boundaries of the present district were defined in 1699; Sultan Abu Nuh had to ~~cede~~ cede it, for him very disadvantageous, treaty in 1684 and the power of the ~~Dutch~~ Kingdom ~~was~~ steadily declined from that day forward till it disappeared because a dependency of the Netherlands. The main provinces were that certain quantity of pepper had to be delivered to the Dutch trading Company at a definite price and all claims had to be abandoned in certain districts. The successfull of the Company had to be recognised in 1752, and in 1813, when the English ruled in Java, they abolished the Salukato altogether. But it was not until soon after the establishment of the Salukato's faculty in 1832 and the introduction of a regular government whereby some restrictions could be placed on the exploitation of the people by the nobles and priesthood that peace was finally restored among this relatively feudal people (especially the Javanese section).

In consequence of these events the Soudanese
leave the population of Abyssinia; in the north

However they are largely mixed with Japanese, whose language is predominant there and there are also settlements of Laponians from South Sumatra. At the present day the only adherents to Hinduism are the Bidjawa, a small tribe in the desert Highlands of Latak; the remaining inhabitants of this residency are all zealous Mohammedans, whose customs, especially family law, have been more strongly influenced by the regulations of Islam than has been the case in Central Java for example. They engage only in agriculture (growing rice). Commerce and industry are very little developed and the trade with other ships from Suva and Batavia in South Sumatra is of very little importance. Copra and Arechee hyppocis are exported. As the land does not provide sufficient subsistence for its thick population, many men find temporary employment in Batavia and other places.

The town of Bantam is now only a small trading-place with a native population without foreigners. Most of the larger buildings of earlier times have fallen to pieces or quite disappeared. The former mosque alone, with detached minaret is in a good state of preservation (there is also a mosque in Kapani and in Kamanjatan). A baly well which is said to be connected with the Samudra well in Moora, is beside it. The steady decline in the depth of the bay of Bantam causes great inconvenience in navigation. The town of Kamanjatan which has risen at the northeast has therefore attracted much of the traffic to itself. A railway connects it with Serang and Anger in the west and through to the coast.

BANU 'I-ASFAH, (See Asfah).
BANU ISRA'IL, the children of Israel, title
of Suf. viii.

BÄRM, the only Mohammedan State in Bundelkhand, Central India, lying between 25° 34' and 26° 10' N. and 79° 45' and 80° 3' E., with an area of about 122 square miles. The population in 1901 was 10,730, of whom only 2,413 were Mohammedans. The state is descended from Ibrāhīm al-Mulk (Shah al-Din, the grandson of Nizam al-Mulk, sultan of the Sultanid, 1730-1781). He obtained a grant of 52 (Hindoo) villages, hence the name of the State; villages from the Marathas Peshwa in 1784. During the Mutiny of 1857, Nawab Mohammed Hamid al-Daula

and his son were instrumental in saving the lives of several Europeans at great risk to themselves.

al-BARĀ' a. 'Ain, a Muslim general. With his contemporary 'Abd Allāh b. 'Umar b. al-Khaṭṭāb and several others he was returned back by Muhammad on the departure for Meccah because he was too young; he took part however in many other battles under the Prophet. When the latter sent Khulad b. al-Walid into Yaman to demand the adoption of Islam by an Arab tribe, al-Barā' also took part in the expedition during the reign of 'Umar; he was sent by the governor of Kufa, al-Mughirah b. Shu'bah with Muqatil b. Zayd against Ḳarīm. The district of al-Barā' was first conquered. The people of Ḳarīm called in the help of the Ḥabash, but had to give in soon after and the Ḥabash were forced to pay tribute. al-Barā' then advanced against Gilān, al-Habsh and al-Jailman and conquered Zandīyah. He also fought in the Battle of the Camel, at Shiffin and at Makkawan under 'Alī. al-Barā', after being some time in Kufa, went to Medina and died there in the time of Mu'awiyah b. al-Zuhayr.

[K. V. ZETTERSTROM]

AL-BARA, in Arabic, a companion of Muhammad. Among the seventy-five personalities appeared at the 'Hajjat' in the summer of 632 at the pilgrims' festival to enter into the 'Umrah' with the Prophet, the aged al-BARA b. MA'RUZ of KHAZIM was one of the most important and when Muhammad declared he wished to make a compact with them that they should protect him as they would their wives and children, al-BARA raised his hand, promised him protection in the name of all present and sealed the compact. In the same assembly, the so-called second 'Alyha, twelve men were chosen as preliminary representatives ('Ukaba') of the new community in Yathrib, and on this occasion al-BARA was appointed chief of the 'Ukaba Salimiyah. He is also famous in the history of Islam, for having changed the direction of praying from before Muhammad's turning towards the sanctuary at Mecca. When Muhammad reproved him, saying that Jerusalem was the true Kaba, he obeyed him, but was afterwards ordered that his corpse should be turned towards Mecca. He died in Medina in 638, a month before Muhammad's arrival there, after bequeathing to the Prophet one third of his estate.

BĀRĀ WAFĀT is the Indian name of the 12th day of the Rabi' al-awwal. It is a compound word of *bārā*, "twelve", and *Wafāt*, "death". It is observed as a holy day in commemo-

ception of the death of the prophet Mohammed, his life and teachings are on that day generally observed in private houses and mosques throughout India, and is a great day of rejoicing in the Moslems of the whole world, who consider it as the ~~same~~ time as the day of his birth. For more details see Art. Moslems.

(31. Нислук: Немају.)

BARA'A (a.) means "discharge", "discretion", "confession", etc. In Syrian Arabic it means "privilege, passport" or "diploma"; thus the bishop approved by the Ottoman Government receives a *bara'a* of investiture, that is permission to exercise his office.

The word appears in an important passage of the Koran, at the beginning of Surah ii, where the Prophet commands his followers to make pilgrimages and proclaims that a hajj should be observed during the holy months. This passage is not expounded with absolute clearness and its interpretation gives some trouble. On a first reading the most simple explanation appears to be that Mohammedans should give one another information during the sacred months devoted to the pilgrimage to Mecca. This is not however the meaning intended by the most authoritative commentators. Zamakhshari explains that a hajj had been made with the pagans of Mecca and other Arabs and that they broke it with the exception of the Kindi Druze and the Hajar Kinnan; the Prophet then announced to the believers the following revelation from God "You are free from any obligation to the heathen who have broken this pledge". Mas'udi (*Conte de Charlemagne*, p. 360) ~~also~~ paraphrases this important passage: "Abu Bakr al-Siddiq was entrusted to him (Muhammad) with the command of the pilgrimage and Sam. ~~was~~ was revealed on the Prophet at the same time. He did the first seven years consecrated by Ali b. Abi Talib, ordering him to proclaim them before the Moslems when they would be assembled at Mecca. "Let them know", he said, "that no infidelities shall ~~be~~ be pardoned, that after this year an infidel shall make the pilgrimage, that no one shall again be asked round the Ka'ba, and that whoever has a compact with the Prophet shall take note of the period named ~~to~~ it, allow four months from the day of ~~making~~ making for each man to return to reality, after which there shall be no obligation ~~making~~ with the idolaters nor any compact made with them." These events are referred by tradition to the ninth year of the Hijra.

BARABA, a steppe in Western Siberia, between 52° and 57° N. lat., is bounded on the west and east by the ranges of hills on the headwaters of the Irtysh and Ob (544). The impact of the numerous ~~small~~ ^{small} rivers of this steppe is the East. The ground is as a rule marshy, so that traffic is rendered very difficult in the wet season, but not generally unfeasible; the Russian villages on the border districts of the steppe are described as being particularly prosperous. The native Tatar (Turkic) population is called Barabatai by the

Russians; in the 17th century they were driven into the inferior parts of the steppes; since then their numbers have been decreasing. According to statistics collected by Radloff in 1865, there were then only 4633 "Baraba-Tatars". In the most part Tatars was not adopted by them till the 18th century. Radloff saw some old ones who remembered their fathers' the Altians offered heathen sacrifices; they did not like the Muhammadans. Specimens of the popular literature of the Baraba-Tatars have been collected by Radloff. Hunting and fishing as well as agriculture are practised by both Russians and Tatars. The yield from the fisheries and from the fur trade has considerably increased in the last century, the latter in particular, in the time of Mikhailovskiy's command and the wolf were only fur-yielding animal to be found here.

The Turkish population emigrated into the lands probably in the Mongol period in connection with the foundation of the "Siberian Kingdom". From the conquest of this kingdom in the time of Peter the Great this steppe formed the boundary between Russia and the Calmucks. The frontier territory between the Calmucks of Tatars (the Turkish) and Tatars (some of them) was then known as "District of Baraba" (*Barabinskaya pokh.*); the native population spoke Calmuck in addition to their native Turk and paid tribute to the Russians and Calmucks and later to the Russians only. In the 18th century a considerable number of settlers from European Russia were settled in Baraba.

BARABRA (*Barabara*) is the plural of *Baraba* and in Egypt denotes the Nubians or as they are now usually called, Bebera. Their home is the upper valley of the Nile from the neighbourhood of Assuan to Dongola. The visitor in any portion of this district is struck by the small number of men met with; and were only women, children and old men. The fertile area is not large but the population is numerous, as men go to Egypt where they find employment as domestic servants, cooks, coachmen, doorknopers, running footmen, and in suchlike posts. After a few years they return home with their savings. The Bebera are a goodly race of men, versatile and reliable and soon master Arabic as a European language also; in speaking Arabic however they cannot conceal their origin and this explains their name *Barabara* i.e. *Barbariana*, particularly in their pronunciation of Arabic. Their mother tongue is Nubian, the connection of which with the languages of the Sudan has now been proved. It is at present the object of scientific investigation. In Cairo and Alexandria the Bebera make up a guildlike organization according to their callings and are in general very clean. Their religion is Islam; as to Magdian they are Muslims. Their complexion is also shown in the fact that

they, for the most part, belong to a certain branch of the Farah al-Khamisa, a branch of the Egyptian Agnathia, their present head is the Sheikh al-Mirghani, after which the order in Cairo is also called Mirghaniya. As their tendency for company is strong, they live together as a rule; whence the Egyptian proverb, said of a heavy rainfall: *maghrir al-mirghani 'kharid al-mirghani*. On their food and capacious history see the article *MIRGHANI*.

Bibliography: A. von Kremer, *Ägypten*, 100 ff. esp.; Schwelbitch in *Reisener, Egypt*, 6th edition, p. 211; Sacrele Spira, *As Arabie Anglaise*, *Vocabulaire*, with voc.; see also the article *ARABY*. (H. LAMBERT.)

BARADÂ, a famous river of Damascus, often mentioned in modern poetry; the older poets, even those of the Umayyad period, mention it more rarely. Its real source, as the Arab geographers well know, is in Antilebanon, immediately below the watershed, west of Zahlan; it traverses with many windings the fertile plain to the south of this district, forms the watershed of Tekhaya and plunges into the deep ravine of Sah West Qunada, the ancient Abila. The waters of the abundant spring 'Am Fida double its volume and support luxuriant orchards on its banks. Then an entering the plain of Damascus it breaks through a wall for itself which has been artificially enlarged. Then it is divided into five arms or main channels — they are called *quadr* — 1. on the right, uppermost, *Yard* (probably widened by the Caliph Yaqub II. Thawar, on the left *Hariga* or *Harig* (in form affected by poetry) and *Harawat*, the middle arm preserving the name *Baradâ*. Aqueduct (about 670) only mentions "ancient IV. *Rumina*", the *Nahr Yard* having been made after his death.

After this division into five branches the *Baradâ* takes a magnificent delta form and around Damascus, spreading fertility and freshness everywhere. The rich oasis of Ghiza owes its existence to it; in Damascus it fills the tanks which are found on every house. Below the town it collects its forces again and about 24 miles below Damascus is lost in the lake of 'Ataria, on the verge of the Syrian desert. A double confusion with the *Arwad* and with one of the tributaries of the *Yarmuk* has probably led the usually so careful *Maqaddasi* to say that one of the arms of the *Baradâ* flows into the *Jordan*, a mistake easily arising from the fact that *Baradâ* is the name both of the source of the *Jordan* and of one of the canals of the *Baradâ*. A village named *Baradâ* is mentioned by *Yaqub* in the east of Aleppo; it is probably the *Baradâ* in the *Diwan al-Sim'ani*.

(H. LAMBERT.)
BARADÂN, a town in the Taurus. According to the Arab geographers it was situated 4 parasangs (= about 16 miles) north of Hama on the main road to Hama and at some distance from the east bank of the Tigris, a little above the confluence of the *Nahr al-Khali* and the

alive reading, retentive memory and the charm of his conversation, he became a favourite companion of Sultan Mahmud Tughlak (725-752 = 1324-1351). He was an intimate friend of the poets Amir Khusrau and Husayn Dihlavi, and like them built a spiritual disciple of the saint Nizam al-Din Awliya (q. v.). Barani did not commence the writing of his history until he was upwards of 70 years old and completed only 12 out of the 101 sections that he proposed to devote to the reign of Firoz Shah. Though he writes in terms of high praise of this prince, he does not appear to have enjoyed his favour, as he died in great poverty, — probably shortly after the date (758) to which he brought his history. He was buried near the shrine of Nizam al-Din Awliya, though local legend indicates a tomb in Feroz (the modern Bulandshahr) as being his.

BARANTA. A Central Asian Turki word of uncertain etymology (it does not seem to appear in other dialects), which is applied to the predatory raids of Turkish nomads. The importance of this peculiar feature of nomad life as well as the conditions of warfare (*Yuzas*) necessitated thereby has been most fully described by W. Radloff (*Das Sibirien*, 2nd ed., Leipzig, 1893, I, 309 sq. and *Asiatische Ethik*, Part I, St. Petersburg, 1894, p. 111 sq.). As long as there was no strong governing authority in the steppes, as long as the force of legal decisions depended only on the personal authority of the judge and the goodwill of the parties concerned, the nomads had frequently no other means of redress than carrying out the law themselves. The whole tribe held responsible for the trespasses of an individual or group of members of the tribe, the tribe whose rights have been infringed, revenge itself out on the guilty ones themselves but on other members of the same tribe were accountable to it; the victims of such a "Baranta" consider themselves justified in retaliating on whatever section of the "Barantachi" they please and so on. Such feuds may last for decades without the general prosperity of the tribe being prejudiced by these continual "Aktendzism". Radloff observes that it is just "in the most troubled times that the nomads increase in numbers and riches". As a regular system of administering justice finds no place in nomadic life and there can be no organized provision against unforeseen natural calamities, the *Yuzas* is often the only means whereby "a cattle-breeding people entirely dependent on nature can compensate for winter calamities". Under the rule of a regular system of government like the Russian, where individuals are not allowed to take the law into their own hands, it is becoming more and more difficult for the Turki tribes to remain faithful to their nomadic life, and to retain their prosperity. (W. RADLOFF.)

BARATHA. The name of a place prominent in pre-Islamic times within the area covered in later times by Baghdad, with which it was not only later almost entirely absorbed (see also the

article *Baghdad*). It lay a short distance from the little town of Muhawwah (to the southeast of it), just below the point where the Salih Khalidaya, the small canal which waters the commercial quarter of Karkh, left the great navigable Tigris Canal. This suburb was only separated from Baghdad proper, on the southern part of the western half of the town, by a cemetery and palm-gardens. The mosque of Barath was long celebrated as a Shi'a sanctuary, because according to a tradition, which is not corroborated elsewhere, the Caliph 'Ali prayed on its site and bathed near it, when he was on the campaign against the Khazars (37 = 658). Another account places the place where he bathed in the old market quarter of the town (*al-Basaj*) which lay between the *Barath* gate of the Round Town of al-Mansur and the bank of the Tigris. A place where 'Ali prayed was also pointed out there. Under pressure from the orthodox party, the Caliph al-Mansur (206-933) had the Shi'a sanctuary to Barath razed to the ground and a Sunni mosque was built on its place during the reign of his son-at-law, Hafi and al-Mu'izz. In al-Buhārī's time (the middle of the 4th = 10th century) the latter was one of the three great Friday-mosques of the caliph's quarter of the town. When Yāqūt wrote (623 = 1206), Barath, like most of the west side of Baghdad, was already deserted and only a few fragments of the walls remained of the mosque there. The main Barath is *Armanī* (Baranī) and means "the outer", cf. *Armanī* Kinnel, *Die Arab. Fremdwörter im Arab.*, p. 12.

Wustenfeld), I, 532; le Strange, *Topographical Dictionary of the East*, 2nd ed. (Oxford, 1900), p. 153-156, 320; Sieck, *Baghdad* (ed. de Goeje), p. 190.

(M. STRONG.)

BARBA, more correctly *Bara*, the Arab name for the ruins of Egyptian temples. Every pagan temple and every ancient building is called *Bara* (*Kull al-batn wa al-batn qadim* *qadim* *huwa al-Bara*, *Kitāb al-Baghdād*, 61, 3). The word is borrowed from Coptic in which *Bara* means temple. Among travellers and geographers the temples of Akhimm and the Barba (the plural form *Barab* also appears) for example, Mayet, the Lybians and others use the word while describing Akhimm. It is next applied to all temples and even to pagodas. The word has survived in Egypt in a series of place-names. We find it three times in Upper Egypt in the form al-Bara, four times in Nubia in the form al-Barab, but the same word is found (Nubia Bay, *Diogenes*, *Géographie*, p. 121) Collection of passages in Drey, *Supplément*; Glossary to *Kitāb al-Baghdād*, 61, 3, with translation, p. 54, note 1; the *Dubāb*, 9, 25.

(C. IL BUCKER.)

BARBAROSSA. [See *KHAIR AL-DIN*.]

BARBARY STATES. Ever since the 16th of the middle ages been the name applied to the various piratical States of North Africa, mostly inhabited by Berbers. [See the article *BARBERS*.]

BARCELONA. The Old Catalan Barcino (cf. Russian whence *Варшав*), which has however nothing to do with Hamlet's Barren, an ancient town of the Locusts, gradually took the place of

Tarraco = Tarragona, the capital of the Roman
north-east Spain (Hispania Tarraconensis) which
lay in the southwest of it. It was captured by the
Arabs as early as 713 in their first invasion under
Musa b. Nugeis. The Arabic name = *Tarrakus*
and (more frequently) *Barrakus* (whence the modern
Barcelona) from the late Latin *Barcelonia*
(*Barcelona* is found in *Oronius*, *Barcelona* in the geo-
grapher of Ravenna, &c. *Hubert* in *Poetry of Spain*,
v. 1.) *Barcelona* is more rarely found, from
which ~~name~~ the ~~name~~ *al-Barrakus* by which the
king of Aragon-Castile in his later times fre-
quently briefly described (cf. *General History*,
1902, II. 270 ff. 275). In 185 = 801 it was cap-
tured by Louis, III. of Charlemagne, & Victor
of Aquitaine and thenceforth was the chief town
of the Spanish marches of the kingdom of the
Franks and from 900 of the independent mar-
grave of Barcelona or Catalonia. In 930 = 890
Barcelona was temporarily occupied by the Arabs
(*al-Haydar al-Magribi* II. 98), and in 985 it was
returned by them for the last time by the great
Alfonso but soon afterwards regained by 'Sam-
surrel I. in 987 (*Ung. Histories of the Monarchs*
of Spain, III. 199). In the 10th century (1037)
it was incorporated in the kingdom of Aragon.
The ecclesiastical subordination of the Moslem
bishopric of the ~~islands~~ Islands (q. v.), and of
Denia and Mahon to the (Arch)bishopric of
Barcelona by the Mahomedan king 'Ali b.
Muhammad al-Ahmar of Denia by a decree in 450 =
1058 is worthy of mention (*Sánchez, Historia*
de los Reyes de España = *Memoria de los*

BARDASIR [See **HIRMAY.**]

BARDHA A. Armanian Paray, since the largest town in the Caucasus, was a village and thence ~~was~~ on the Terek, about 14 miles from the confluence of the river and the Kura. A strong fortress was built ~~here~~ under the Samanid Kaliph 1 (448-431 A.D.) and Paray (Bardha) gradually supplanted the ancient capital of the land of Albandi (Arsh) Kowalak (Arsh Katala). In 628 the inhabitants of Paray had to leave their town but returned to their town on the withdrawal of their enemies. Captured in the reign of the Calif al-Muwahhid, destroyed soon afterwards, and rebuilt under 'Aid al-Malik, Bardha was during the Seljuk and 'Albaid period the ~~capital~~ of most of the Arab governors of Armenia. Hasan b. Salih, governor for the Calif al-Muwahhid had a garden laid out there, which he with a some estates (in the surrounding district) bore the name of this governor as late as the thirteenth century (Hakobian, ed. de Goeje, p. 210). Ibn Khaldun (ed. de Goeje, p. 182) says that the town was about a Persian day's ride (in length and breadth); there was no longer town between 'Irak and Khorman except Ray and Lybka. The Friday-mosque with the treasury and the palace of the governor were in the town itself, the houses in

789 suburbs. The Russian bazaar at the "Kunde-
gate" (*Shi al-ahad*) was especially popular. There
were numerous fruit gardens in the neighbour-
hood; silk was exported thence to Alexandria and
Vina. Most of the buildings were of baked brick,
the pillars of the chief mosque partly of the same
material and partly of wood. Ibn al-Athir (ed.
Tutcher, iii 308) payment of the *haraj* (tax) of
this town by the Russians in 332 (194-1945) is
well known; it is also mentioned by the Arme-
nian *Muhammed Kalanbulak* (11th century A.D.) The
Russians had to leave the town in haste after
they had taken it because of a pestilence which
broke out in their army. Hurdth's name seems to
have occurred from this blow, owing, Ibn Hawkal
(ed. de Goeje, p. 341, 18) says, to the "enlighten-
ing" of its rulers and the (strange) place of the
funerals. *Muhammad* (ed. de Goeje, p. 375, 21)
still describes Hurdth as the "strongest of this
country", but points out that at this time the
walls of ~~the~~ town were in ruins, the surrounding
country abandoned and desolate. In *Yakut's* (p. 359
time, Hurdth as at the present day was a vil-
lage surrounded by numerous ruins. In the period
of Mongol suzerainty the town appears to have
retained somewhat; "a high circular tower with
many bastillions" which even in 1861, during
H. Dorn's stay there, were unrecognizable, although
in this period and still survives; Khanikoff thirty
years previously, was quite able to read the date
732 (1322). The final destruction of the town is
ascribed to Nadir Shah.

(W. BARNHILL.)

BARDO, seashore at the N. of Tunis, lying 1½ miles to the northwest of it. The site of Barro, famous for its ~~ancient~~ ^{ancient} in summer, appears to have been early visited by Arab citizens who had gardens and country houses here. There was the park of Abd Malik laid out by the Hafsid Emir al-Mu'tazz (1249-1277) with its groves of cypress, its lake watered by the aqueduct of Zaghwan, which ~~was~~ large enough to be sailed on by the ladies of the harem in boats, its summer-house inland with mosaic and decorated with woodcarvings (see Ibn Khaldun, *History of Berbers*, transl. de Slane, ii. 339) in the 13th century, the palace often sequestered here. The Turks continued the tradition of their predecessors. The historian al-*Hariri* describes with details the "house of the Bards or of Bari" built by Mehmet Bek, in which the treaty relative to the establishment of a French factory at Cape Sgar was signed, 1604. *Al-Arriuz, Al-motez*, i. p. 477. "The Bey of the Husni dynasty chose Barro as their favorite residence; Ahmad b. 'Ali (1703-1730) built a mosque and a palace there. Persons who visited Tabe in 1724, thus describes their residences: "It is a great mass of building, almost square, enclosed by walls and flanked by several square towers. — The area covered by the

rain distances along all the principal highways of his kingdom. Still, however, the post was only used for the government service and the expediting of officials and couriers; besides it for the sending of news, the government pigeon post and signalling by fire were also of great importance. A new institution was that of a regular post twice weekly from the provinces to Cairo. The courier rode from Cairo to Damascus in four, sometimes even in three, and in Hama in as little as five days. It is worthy of note that in the Mamluk period special arrangements were made to ensure the convenience of those from Damascus to the coast. By the building of ghazis, the digging of wells and the security of the roads, private traffic also received a great impetus. But the later Mamluk regime as well as other Oriental empires did not neglect the postal service. It is shown by the ghazis which still may be seen on the old roads e.g. on the famous one from Damascus to the west. From Hama to Hama's *Qasr al-Nasr* it may be concluded that the Ottomans also devoted attention to public traffic.

On the modern postal service in the land of the Arabs cf. *ibid.*

(R. HACHMAN.)

AL-DARID. This tribe was born by three brothers, Abu Abd Allah Ahmad, Abu Yusuf Ya'qub and Abu 'Umar, who played an important part in the period of the decline of the 'Abbasid Caliphate under al-Muhtadir and his successors. The head of this family was the first mentioned Abu 'Abd Allah. He was connected with the confidential office, which the Caliph's vizier 'Ali b. 'Isa had given him and his brothers, obtained from his mother-in-law Hilda (q. v.) the government of the province of al-Ahwas and other important offices for his brothers in return for a present of 200,000 dirhams (316 = 938). They managed to make such good use of their opportunities that when they were involved in the fall of the vizier scarcely two years later the ransom of 400,000 dirhams demanded for their freedom by Muhtadir was paid without difficulty. After the assassination of al-Muhtadir in 320 (932), Abu 'Abd Allah was able to do as he pleased and by means of caravans and deeds of valour to enrich himself, while his brothers were elevated to high offices and to the Marwan. This continued in the reign of the Caliph al-Ra'iq (320—329 = 932—940) because their old friend, the Vizier Ibn Buhār, had again gained power in this period, instead of giving the revenues of the provinces governed by them, to the Caliph's treasury, they kept them in themselves by false accounts and bribery. This state of affairs could not go on for ever and when Ibn Ra'iq (q. v.) under the title of Amir al-Ahwas had gained control of the Caliphate (329 = 940), the Caliph advanced with an army against Abu 'Abd Allah, after all

the advantages conferred by that cunning man to gain the favour of Ibn Ra'iq had failed. But Abu 'Abd Allah knew what course to take; he escaped to the Rawyidh 'Imid al-Dawla in Fars and persecuted him without much trouble to conquer al-Ahwas and al-Fars. Nevertheless he declined the help which had asked from him Mu'izz al-Dawla, when the latter took the field against the Caliph, as he much preferred to have to deal with the weak rule of the Caliph than with the new rulers. When an opponent to Ibn Ra'iq rose in the Turk Baghram (q. v.), Abu 'Abd Allah took the side first of one then of the other according to circumstances and after Baghram's victory in 326 (938) he was appointed by him Vizier of the Caliph. He was deposed soon afterwards, however, but as Baghram had perished only in the reign of al-Muhtadir (329 = 941), he retired Baghram for a brief period but after a few weeks was forced by the victorious troops in return to Wāsi. In the following year 330 (942) he sent his brother Abu 'Umar with troops against Baghram so that the Caliph and Ibn Ra'iq had to seek refuge with the Hamdanids of Mosul. Abu 'Umar made himself so detested by his oppressions there that the Hamdanids had no difficulty in driving him from Baghram and even from Wāsi. The brothers were able to assert themselves in Fars although they had to wage a costly war with the lord of Haman, who had come against them with a fleet and had already taken Haman (331 = 943). Fortunately for them, the fleet was blown off and the enemy was forced to retreat. These and other wars continued Abu 'Abd Allah's wealth and although he did not hesitate to murder his brother Abu 'Umar murdered to gain his accumulated treasures, they enabled him to live in himself till the same year 332 (944). His third brother Abu 'Umar soon came into conflict with his own followers who recognised Abu 'Umar, the son of Abu 'Abd Allah as their master, and escaped with great difficulty to the Hamdanid prince of al-Bahrein. With the latter's help he laid siege to his nephew in Fars, till he came to terms with him. Soon afterwards he again began intriguing and went to Baghram to try to obtain the governorship of Fars and as far as being successful, he was executed there in 333 (945) after a trial. His nephew Abu 'Umar in the following year made peace with the Buyid Mu'izz al-Dawla, though only for a brief period, for in 335 the latter sent troops against him and in 336 (947) advanced to person against Fars and forced him to flee to the Hamdanids of al-Bahrein. He then ceased to play any active part in politics though he was ultimately pardoned by Mu'izz al-Dawla and did not die till 340 (950).

Bibliography: Ibn al-Akbar (ed. Tornberg) 101.

DAVID SHAHI. A dynasty founded in 1492 by Kaim Shah, the minister of Mahmud Shah (1452—1458), fourteenth king of the Lodi dynasty (q. v.). Mahmud Shah was a cruel and voluptuary, and left to his minister the administration of his kingdom, which the revolts of provincial governors had reduced to the narrow limits of the capital city, Agra (q. v.) and the adjacent districts; though he was succeeded by sons of his descendants, the sovereignty of the Bahmans was from that time merely nominal, and the last of them, Kaim Allah Shah, died in

Arabs brought devastation everywhere and by their ruthless plundering caused the cultivated areas to become smaller and smaller. . . . "All the arts and trades which provide for man's subsistence ceased to be exercised; civilization was destroyed there and the country became a desert" (The *Sanhida, Hist. du Soud.*, translation of Stead, l. p. 184). Of the invading Arab tribes, the Beni Kura and the Halls, a branch of the Soudan, settled in the conquered district and the population has been so affected by the admixture that it is impossible at the present day to distinguish the descendants of the invaders from those of the original inhabitants. With the exception of the inhabitants of the towns (Benghazi, Derna and Marsa) the population is entirely composed of nomads. According to Pacha they bear the general name of Hamar and are divided into a large number of tribes. The most important are the *Awaghar*, whose land lies to south and east of Benghazi, the *Darna* in the neighbourhood of Marsa, the *Hamas* around the ruins of Cyrene, the *Beasas* of the Jebel Akhdar, the *Abakant* in the neighbourhood of Derna, etc. Reclus estimates their total number at not more than 250,000 on an area of 25,000 square miles so that there are only 10 inhabitants to the square mile. Minutoli, who had 30 his disposal the Italian consular reports, estimates the population of Libya at as high as 350,000. All these tribes seem to be quite independent of Turkish authority; owing to the spread of Senussi doctrine since the middle of the 19th century they are very hostile to European influence. The Libyan country, so long neglected, has nevertheless been the object of several European explorations in the last century. The journeys of della Cella, 1812; Pacha, Boveley, Barth (1842), Hamilton (1853), Kohl, Campredo and Lehmann etc. may be mentioned.

The town Berke, which has given its name to the whole province, replaced in the Arab epoch the town of Berke which was founded in 551 A.C. by colonists from Cyprus. Towards the end of the year 31 A.H. (648 A.D.) Berke was occupied by 'Amr ibn al-'As who made peace with the inhabitants on a payment of 12,000 dinars of gold. Soon afterwards the conquerors chose this place as the capital of a district the government of which was entrusted to Kowala, one of the companions of the Prophet, whose tomb still existed in al-Bahr's time. Being in communication with foreign countries through its port, Falmakke, (the ancient Plutamus) being on the main road from Mecca to Kairuan and connected by caravan routes with the oases of the Sahara, Berke enjoyed considerable prosperity for four centuries. Ibn Hawkal (*Description d'Afrique*, transl. de Slane in the *Journ. A.*, 1843) praises its commercial activity. "There are few towns in the Maghrib", he writes, "where the traffic is so busy; silver are brought there to be weighed, the dates of Aoudja are exported, in 300 bazars there is a continual market for wool, pepper, honey, wax and commodities of every kind and sort". Al-Bahr supports the opinion of the surrounding provinces from which the people of Egypt obtained the greater part of 300 animals necessary for their food-supply (al-Bahr, *Maghrib*, transl. de Slane p. 15) (Ibnat mentions plantations yielding cotton of superior quality (*Maghrib*, transl. de Caecé, p. 159).

The British invasion brought about the total ruin of Harke. Its place is now occupied by the market town of Manjra lying at the foot of a hill surrounded by a Turkish Kayle in a hollow 30 miles long by 5 broad. The population of Manjra including the Turkish garrison is not more than 1000 souls.

II. Tripoli and the Cyrenaica. (Al. Puga.)

BARSAID, a town in the Mastra (Moorish) on the caravan route from Nayibin (Nisibis) to Mosul; according to the statements of the Arab geographers which vary only in a trifling degree, it was 17-19 parasangs (of 4-5 miles each) or 2 day's journey (c. 80-100) distant from the latter town; Nayibin was reckoned to be 4 parasangs from here. According to Yaqut, Barsaid was once the chief town of the circle of Hakk (probably = *Hakk* "plain") belonging to the province of Mosul ~~the~~ comprising the district between Mosul and Nayibin. In consequence of the great number of ~~the~~ passing through it the town became an important place, flourishing especially in the 10th (11th) century. Yaqut notes its walls, flanked by three gateways, the numerous springs of fresh water and the remarkably large almshouse (saw) ~~and~~ wine drops there. The inhabitants were nevertheless so numerous as to show and highway robbers that a "Barsaid robbery" (*hadd Barsaidi*) had become proverbial. The evil reputation of the town naturally resulted in the caravans gradually keeping away from it and going instead to the Harrazan and on somewhat to the ~~the~~ The latter place has now—in importance while Barsaid's declined more and more. The site of Barsaid is perhaps now marked, as v. Oppenheim and others have suggested, by the considerable mound of ruins at Tell Ruzbihan and that of Harrazan by Chagha. The positions of these two places in Kupper's map (in v. Oppenheim, *op. cit.*) are 42° 1' long E. and 36° 55' N. lat. and 41° 50', 36° 55' respectively.

According to a communication by Homes, which requires no examination on this spot (see Tuck, op. cit.) Harkness still exists in the present day, though now in ruins.

BARKIVÂRUX, **ADRIAN** **LEONARDO** **KUNZ** **AL-**
DR. a **Soviet** **Soljevo**, **elder** **son** **of** **Matth**
Shah. The date of his birth is variously given:

a broad), or somewhat more than the principalities of Lippe and Schaumburg-Lippe together. These states or part of them remained the property of the Bakmakhs at a later period; Yakhi (II 942) says of the "large and rich" village of Nawan, east of Balikh that it was in the possession of Yahya b. Khalid. As the *manuscript* shows (Sanskrit: *वह्मि* = new monastery) this temple was a Buddhist monastery; it is described as such in the 11th century A. D. by the Chinese pilgrim Hsuan Tsang: *Altanwara sur les contrées occidentales*, trad. par St. Julien, I. 30 et seq., and the *Histoire de la 12e de l'Empire-Tchang*, p. 643; it was even known to some of the Arab geographers, like Ibn al-Fakih (ed. de Goeje, p. 321) that the Nawan-bahit was devoted to the worship of *the Buddha* (ed. de Goeje, p. 321) and not of *him*, and setting aside some exaggerations, the description given by Ibn al-Fakih exactly fits a Buddhist shrine. For centuries the Persians wished to bring this famous family of Persian origin into connection with the traditions of the Sassanian Empire; the Buddhist character was transformed into a fire temple (cf. e. g. Yakhi, II. 319 et seq.), its foundation was attributed to the Persian kings of antiquity, and its chief priest, declared to be descendant of the ministers of the Sassanian kingdom (Syllabi-Musaw, ed. Schöfer, p. 151). These notions, which spread in the later literature, which have influenced not only local tradition (Koyul-Bahit in Schöfer's *Chrestomathie persane*, II 71) but also modern scholarship (Browne, *A Literary History of Persia*, p. 257) may not have arisen before the reign of Hürn al-Rasid. It is not impossible that the al-Bakmakhs, being a Persian, had put forth similar statements. The contemporary Khalid of *manuscript* did not possess any such power under Abu 'l-Abbas and Mansur b. Yahya afterwards under Harun, but his position, from which through his generosity, his whole house derived benefits (Ibn al-Fakih, p. 317), was nevertheless sufficient enough to bring about a preservation of national traditions in favour of the Bakmakhs.

According to Baladhor (ed. de Goeje, p. 469) Nawanbahi was destroyed in the reign of al-Muwahhid probably soon after the year 420-464 (cf. Marquart, *Konjunktur*, p. 691). Tabari however makes the native prince Nizak pray to Nawanbahi as late as the year 90 (708-709). On the fate of the Bakmakhs, the tales of Khalid, and his predecessors we have only legendary accounts. Even Ibn Khalikar was no longer able to decide whether Nizak ever adopted Islam. According to Ibn al-Fakih (p. 324) Khalid was the son of Nizak and of a daughter of the prince of Sagghinayen. Tabari (II 183) gives an account of a campaign by Zutalla b. Muslim against rebels in Balikh in the year 80 (703); the wife of this chief priest is said to have been among the prisoners and to have spent a night with Abd Allah brother of Zutalla and to have become pregnant with Khalid on that night. She was set free with the other prisoners the next day. What Tabari adds on the origin of this story shows that it was invented by 'Abd Allah's son, not, as has been supposed to honour the Persian with an Arab genealogy but to obtain for the Arab family the advantages of relationship to the influential dynasty of the Caliphs. It is not impossible however that in this story we have an approximately correct date for Khalid's birth, the

year of his death is given as 165 (781-782); he must then have been about 75 years old. This father Bakmak was skilled in astronomy and philosophy as well as in medicine and cured the prince Marwan b. 'Abd al-Malik of an illness (Tabari, I. 10). This last statement shows that Bakmak had gone from his home to the Caliph's court according to later accounts this took place in the reign of 'Abd al-Malik (c. 80, 705), the year of the latter's death. He appears to have afterwards remained in the capital until 743 by the order of the governor 'Abd al-Malik he rebuilt Balikh which had been destroyed (Tabari, II 449).

We know almost nothing about Khalid's birth and education; even so to know and how he was the favour of the Caliph Abu 'l-Abbas nothing is told us. He was on such intimate terms with the Caliph that his daughter was united by the Caliph's wife and the latter's daughter by Khalid's wife (Tabari, II 840). After 233 (750-751) we find him at the head of the Huzari al-Bakmakhs; in some instances he is also called *shah* (Mansur, *Kitab al-Futuh*, p. 349 and 342; *Konjunktur*, ed. de Goeje, p. 225 and 268). Khalid appears to have been the first writer (Khalid) in whose tenure of office the ladder attained the rank of minister. Abd Salama, the last writer of the house of Muhammad is not mentioned among the "writers" and a *shah* rather in the sense in which this word is used in the Koran (xx 30 et seq.) and placed in the mouth of e. g. the Caliph Abu Bakr in historical works (cf. e. g. Tabari, I. 187, II 2140, 11). Even Khalid was not a writer in the later sense of the word and distinguished himself not only by able government and war expeditions but also by warlike deeds. Under the leadership of Abd Muslim and his general al-Fakih b. Shabib he took the side of the house of the Prophet in the wars against the Omayyads; between 121 (763) and 131 (769) as governor of Tabaristan he destroyed the principality of Maymurgan at Mount Demawend (cf. Marquart, *Konjunktur*, p. 126). After this victory the people of Tabaristan are said to have appointed Khalid and the siege-artillery sent by him to the siege on their child al-Fakih (p. 315). Even in his old age in the year 163 (779-780) he distinguished himself at the expense of the Qasbi fortress of Samarkand (Tabari II 447).

We first find Khalid mentioned as the adviser of the Caliph Mansur in the studies of the foundation of Baghdad (146-763-764) and the alleged abolition of the heir to the throne (cf. e. g. Marquart, *Konjunktur*, p. 126). Under the leadership of Khalid, the foundation of the town of Mansura (Tabaristan) is attributed to him during his governorship. Shortly before the death of the Caliph Mansur he was appointed governor of Maswah (Mawla) after the Caliph had asked him for 2,000,000 *dirhams*, and for 100,000 *dirhams* governor of al-Bakmakhs. It is related that the inhabitants of Maswah had never requested any governor so much as Khalid although he never received *the* *manuscript* *manuscript* ascending to Maswah (Marquart, II 301, note of the *manuscript* *manuscript* in noble qualities.

He was Yahya, according to Ibn Khalikar, died on the 3rd Muharram 190 = 20th November 803 at the age of 70 or 75 so that he must have been born in 120 (735) or some years earlier.

Unlike his father he was distinguished only as a governor and minister, no meritorious exploits are related of him; of his numerous public works the *Sihab-nama* at Hama (Tabari, iii. 633; *Tabakhar*, p. 363) is specially noted. In the reign of al-Mu'izz the young prince Ibrāhīm was entrusted to his care in 191 (777-778). After 183 (779-780), he was at the head of the chancery (*shurāṭ al-amr*) of the palace, who was then appointed governor of the west half the province west of the Euphrates with Armenia and Adharbāydjan. During the brief reign of the Caliph al-Mu'izz, Yahya as an adherent of the young prince whom they wished to force to renounce the succession, was in danger of his life; after the accession of al-Mu'izz al-Raḡhānī, Yahya the Barmakid, whom the Caliph still always called "father", was appointed *ra'īs* with unrestricted powers and with the help of his sons Fuṣl and Mu'izz (his two other sons, Mūsā and Muḥammad are more rarely mentioned) ruled the kingdom for seventeen years (780-803).

Of the two sons mentioned, Fuṣl, who was born in 148 (765-766) was the older and also the more important. From 120 (792-793) till 170 (796-797) he was at the head of a governorship which comprised the provinces of Ḥamān, Tabaristan, Diarbekir, and Kirmān and for a short time also Armenia and Adharbāydjan; from 178 (794-795) till 179 (795-796) he was also governor of Khuzistan. Ya'qūb (Hama, ii. 576) says that he was unfortunate in his fighting in Armenia (chiefly in Daghestān), on the other hand he is credited with such deeds in Khuzistan as he could actually have performed in the brief period of his governorship. He is said to have ~~had~~ an army of 500,000 (?) ~~men~~ from the native population for the Caliph of whom 20,000 were sent to Baghdad and the others retained in Khuzistan (Tabari, iii. 632) and to have also won several great victories and built many mosques and Ḳubās. He dug a new canal in Ḥamān (Schöfer, *Geographische Annalen*, i. 71 and 88) and built a new Friday-mosque in Bagdad; he was the first to have lamps brought into the mosque in Ḥamān (Nurshahī ed. Schöfer, p. 48). Mas'ūdī (*Tarikh*, vi. 363) also tells us that in the earlier days of his governorship, Fuṣl was only occupied with hunting and frivolous pleasures and only reformed after receiving a letter from his father.

Al-Faṣl who later became more renowned in popular story (he was 37 years old at his death, ~~about~~ 800-801) only his beautiful writing, his eloquence and his knowledge of astronomy are praised; he is also mentioned as a leader of fashion and introduced the custom of wearing ~~exotic~~ ~~as he~~ rather a long neck (*Ḥabshī*, *Bayān*, ii. 154). His intimacy with the Caliph, which did not at all please Yahya, is attributed to a fortunate Oriental story (Tabari, iii. 636). Except for a short journey to Syria in the year 180 (796-797) where he ~~was~~ to make peace among Arab tribes who were fighting among themselves, he had ~~no~~ brother Mūsā four years earlier, he appears never to have been separated from the Caliph and even on this occasion he gave vent to his sorrow and his desire for reunion in extravagant language (Tabari, iii. 641). He was several times appointed governor of large provinces by his princely patron, but these were always ruled by his deputies. It cannot be ascertained from the authorities whether he ever ac-

tually conducted the business of state as a minister or what buildings or other works were executed by him; the only trace of his influence is the fact that his name appears on the coins of the Caliph.

Even his father does not seem to have been at all as powerful during his seventeen years' rule as is stated. In the first years of his tenure of office he had to give an account of his government to Khazirān (died 173 = 780-790), daughter of the Caliph. Immediately after the death of his mother the Caliph deposed the young Mu'izz of the seat which he coveted and entrusted a great part of the business to Fuṣl b. Rabā'ī, later the appointed and successful governor of the Hamadānids; the same Fuṣl was appointed head chamberlain (*ḥajjib*) in 179 (795-796). In place of the Barmakid Muḥammad b. Ḥabībī. This appointment of Abū Ḥabīb Muḥammad as governor of Khuzistan was also made against the will of the vizier (Tabari, iii. 702). On the pilgrimage of the year 181 (beginning of 798) Yahya obtained leave to resign and to remain in Mecca (Tabari, iii. 690), but returned in the following year to Bagdad and again began to have taken over the reins of government.

From these statements it is clear that the fall of the Barmakids had long been promediated and was not due to any sudden impulse of the Caliph. In the first night of Safar 187 (29th January 803) Mu'izz was deposed by command of the Caliph and immediately after, Yahya and his other three sons were thrown into prison and their goods confiscated. The relatives of the minister were allowed their freedom; Muḥammad b. Ḥabībī (brother of Yahya) and his family were in no way harmed. ~~He~~ had the head of ~~the~~ dead Mu'izz placed on the "widow's" bridge of Baghdad and the two halves of his body impaled on the other two bridges. The minister and his sons remained under supervision in the town of Raqqa. Both Yahya and Fuṣl died before the Caliph; of the fate of Mūsā and Muḥammad nothing is known. Mūsā b. Mūsā seems to have been the only grandson of the vizier to distinguish himself. In the year 196 (811-812) he is mentioned as defending the eastern Badkhan town of al-Badkhan against Mawānī's army (Tabari, iii. 859 et seq.) and he again appears in 216 (831) as deputy governor of the province of Sam (ibid., iii. 1103). Abū Ḥabībī (Abū Ḥabīb b. Muḥammad) is mentioned as one of the last viziers of the Hamadānids (Nurshahī, *Tarikh* i. 278, following Gardizi); whether this "Barmakid" belonged to the same family is not related. Again in the 10th century we find a Muḥammad b. Mūsā (Nurshahī mentioned going several times as envoy from the Ghaznavids to the court of the Caliph (Balkhī, ed. Mas'ūdī, p. 441 et seq.). The famous tradition of the *Asnād-Nāma*, Muḥammad b. Ḥabībī al-Barmakid was probably only a distant of the family, as has been suggested, and so was the *Asnād-Nāma* mentioned by Tabari (iii. 497 et seq.) in his account of the events of the year 183 (779-780).

In the present state of our knowledge it is hardly possible to give a fair appreciation of the part played by the Barmakids or of their virtues and faults. They are traditionally represented as pious Muhammadans, famed for their piety, and buildings; on the other hand they are accused by their opponents of indifference to Islam and

its teaching. In a poem quoted by Lubbāq (*Bayān*, ii. 130) from an unnamed author and ascribed by the *Kitāb al-Faṣl al-Mawḥib*, p. 71, ed. Hasekīmī, to the philologist Ḥayyūṣ of Ḥ. 400: "When in assembly any thing beautiful is said, the face of the Hamaḥīd lights up, but when a verse from the *Koṣṣa* is quoted in their presence, they tell stories from the book of Hamaḥīd" (in this book of Hamaḥīd, ed. Gottwaldt, p. 41). Another poet (*Bayān* and *ʿAṣṣā*, iio. 417) says of himself that he builds mosques only as a pastime and at least for *ḥadīṣ* as little for such things as *Yahyā b. Kābil*. Hamaḥīd is said to have acquired his manner *ḥadīṣ* of sympathy with Persian national feeling (*Yahyā*, iii. 300); *Yahyā* is said by Tabarī (ii. 372 et seq.) to have been accused by al-Hadī of infidelity (*ḥadīṣ*); probably Hamaḥīd would have justified his decision by such accusations, though nothing is said by the authorities on this point; that the fall of the Hamaḥīd is connected with a return to the traditions of the *ḥadīṣ* is proved by the fact that after 187 the *ḥadīṣ* do not bear the name of the Caliph or his heir as had been usual since the reign of al-Mahdī.

That the Hamaḥīd consisted not only the state but also the clients of their house is not doubted by their partisans. For reasons that are quite comprehensible historians have always been favourably inclined to the "people of the quill" (*ḥadīṣ al-ḥadīṣ*); history, therefore, even apart from the accounts of particular Persian writers, has lavished much extravagant praise on the Hamaḥīd, who are frequently regarded as the founders of this class, and have silent on many of their misdeeds. We should not place too much reliance on the statement that the reign of Hamaḥīd al-Mahdī is regarded as the "golden period" of the Caliphate (*Yahyā*, ii. 377 et seq.) or that Hamaḥīd only surpassed well so long as he had the Hamaḥīd around him, as some historians further inform us (*Yahyā*, *Yahyā*, p. 346; *Yahyā*, *Yahyā*, p. 309). Yet in both instances the verities of the historians is confirmed by popular tradition: and it is weighty testimony to the noble qualities of these Persians that they should be extolled by an Arab poet of the old school like the author of the *Kitāb al-ḥadīṣ* and that they should have been able to create order in a province so thoroughly Arab as Syria.

Etymology: *Yahyā al-Dīn Hamīd, al-Hamīd al-Hamīdī*, in Schefer's *Christianisme persan*, ii. p. 2—34; *Hamīd, al-Hamīd al-Hamīdī*, ii. 301 et seq., 385 et seq.; in Khallīkī, *transl. de Hamaḥīd*, i. 301 et seq., ii. 430 et seq., iii. 103 et seq., iv. 103; also Tabarī (see Index) and the other authorities quoted above. (W. Hamaḥīdī.)

BARNIS (Barnis). (See *Barnis*.)

BARODA, a native state of India, in Guzerat, consisting of four detached portions within the Bombay Presidency; the ruler is a Maratha, bearing the family name of Gaikwad. Area, 1,000 sq. m.; pop. (1901), 1,932,602, of whom 103,014 were Muhammadans; revenue, Rs. 1,64,16,000. The city of Baroda, on the Vindhya river — pop. (1901), 103,790 — was of Muhammadan foundation, as shown by its walls. The Gaikwads always had in their service Muhammadan soldiers and Arab and Rohilla mercenaries, whose descendants are reported by the state to this day. The Gaikwads have also kept

up the custom of attending the Muhammadan festival in state; and there is preserved a *ḥadīṣ* made by the order of Shāh Rū (Gaikwad 1856—1870), and intended for the town of Muhammad in Medina, valued at £400,000. "The Gaikwad is in state," the arabesque designs in gold and red being worked out in English glass beads with nicholson and traces of diamonds rubies, emeralds, freely dispersed" (Sir George Wall, *India, Art and Archaeology*, p. 444).

Etymology: *Baroda Gaikwad* (Calcutta 1906).

BARR (Ar. "from" "good"; with the article, one of the 99 names of Allah: the "gracious"; for other meanings of the word see the dictionary).

al-BARRĀDĪ (Ar. al-BARRĀDĪ, al-BARRĀDĪ, al-BARRĀDĪ) belonged to Hammar on the Euphrates and lived some time there; he afterwards settled in Syria, where he died. His biography gives no date but as al-Barrādī had, among other teachers, Abū Ḥalīm Amr al-Dumālī who died in 721 (1301) it is probable that he flourished at the end of the VIIIth and beginning of the IXth century A. H. His chief work is the *Kitāb al-Barrādī al-Mawḥib* a supplement to the *Yahyā al-Mawḥib* of Abū Ḥalīm Amr al-Dumālī; in which he recounts, under the title of *al-Barrādī*, the history of the early period of Islam down to the reign of the Rostamid ruler of Persia (Yahyā) Muhammad I. Abū Ḥalīm. He closes his work with a catalogue of the books of the work, which has been edited and translated by A. de Mouton (*Les livres de la bibliothèque de Hammar*, Algiers 1880, p. 1—20). The *Kitāb al-Barrādī* has been illustrated in Calcutta in 1801 A. H.

Etymology: *al-Barrādī*, *al-Barrādī*, *al-Barrādī* (Calcutta 1906), p. 274—275; de Mouton (*Les livres de la bibliothèque de Hammar*, Algiers 1880, p. 33—36).

PARSBY, AL-MASIK AL-AḤMĀR HAD AL-DĪN, Sulṭān of Egypt, was entitled among the Muslims of Sulṭān Bārka, under Maḥmūd Shāhī (1413—1421 = 825—834) Governor of Tripoli; on the latter's death he was imprisoned, but was soon released by Sulṭān Tājir and appointed Qawḥir and tutor of his son Tājir and soon afterwards, having previously appointed Marḥūf and Marḥūf al-Dīn, regent for his son who was still a minor. After disposing of Marḥūf — he was thrown into prison in Alexandria — Marḥūf deposed Tājir's son Maḥmūd and ascended the throne in 1422 (825). At first he was very popular for he deprived the nobles of their offices and laid down strict regulations as to their dress to distinguish them from the poor. He abolished the custom of kissing the ground in front of him at his audience. Marḥūf escaped from Alexandria and his partisans were severely dealt with; revolts in Syria were put down with the sword and by force. After overcoming the rebels, the Sulṭān resolved to put down the pasha and to depose them of their law, the island of Cyprus. After two successful expeditions he vigorously prosecuted his efforts to obtain a permanent hold on the island. A strong force landed in Cyprus and the Egyptian troops defeated the army of King Janus and against them in 1423 (826) and captured him while the Cypriot fleet did not dare attack Egyptian

ships to save the king's life Janin was brought to Cairo heavily fettered and carried through the streets in triumph to Barsby. But afterwards released through the intercession of the Venetian consul, for a high ransom and a promise to recognize the Sultan as overlord. The Sultan also made a treaty of peace with the Knights of St. John in Rhodes.

The Sheriff of Mecca who had declined to recognize the Sultan's sovereignty was conquered in 1224 (827) and had to pay tribute, as had his successor Hamdan in 1226 (829) and to hand over the revenues of the harbor of Djidda to the Sultan. In order to increase these the Sultan's officers were well treated so that the Sultan of Aden suffered heavy losses. Barsby induced his Egyptian merchants to bring Egyptian or European wares to Djidda and thus forced the merchants to buy these wares from his officials at prices arbitrarily fixed by himself. All merchants wherever they came from, thus had to pay custom duties to Egypt in their wares. He also levied an export duty on Indian wares which had been brought by merchants from Syria or Egypt. The Sultan, always in want of money through his unbounded extravagance, tried all sorts of means of making money. He was constantly altering the rate of exchange of gold and silver to his own advantage, prohibiting the currency of foreign coins so that he might buy them cheaply and then resell them at a surer profit again. He forbade the importation of Indian spices and bought them cheaply so as to sell them again at a great profit as there was an oligopoly. The Venetians however would not put up with this monopoly of the spice trade; they made a demonstration with their fleet and forced him to grant a more favorable treaty of commerce, only the pepper monopoly being left in his hands. The kings of Castile and Aragon whose remonstrances were of no avail, captured an Mohammedan ship. Barsby also monopolized the manufacture of sugar and even forbade the planting of sugar cane for a period. The unbounded prices of this product by the Sultan was felt all the more, because it was used as a remedy against the plague. The Sultan gradually brought all trade to a standstill by prohibiting the sale of private individuals of Syrian manufactured products, wood and gold; the free sale of cattle was forbidden so that famine arose even in years of plenty. Egypt became in many parts almost depopulated by Barsby's selfish rule as well as by the plague. Women were humiliated; treated by the standards so that the Sultan had to forbid them to go out on festive occasions (see article *Calcutta*): the prisoners were deprived of their names by the inspectors of the War Office and enormous charges laid upon them. The plague which devastated the land was regarded by the Sultan as a punishment from Allah and he therefore harassed the Christians and Jews and prohibited women from going out of doors so that they could not discharge their domestic duties.

In Syria since 1229 (832) military operations had practically never ceased. In the background was Shih Rukh, Timur's son, empowered by the ignominious treatment of his envoys in Cairo as well as by the refusal of the Sultan to allow him to share in the decoration of the Ka'ba. He therefore supported Kart Velok, a prince of the Tur-

kumans of the White Sheep against whom Barsby had to fight continually. The prince of the Ka'ba again quarrelled with the Sultan and his different enemy was Lajin who appeared again in 1235 (839) and completely incited the wrath of his opponents against Barsby. In the end however Barsby was victorious. Kart Velok lost his life in battle and the prince of Karaman who was protected by Barsby made peace with the Ottoman Sultan Murad so that Barsby was easily able to suppress the prince of the Ka'ba. Barsby was slain by a son of Kart Velok and the other sons submitted to the Sultan. Barsby did not long survive his success. An illness carried him off in 1238 (842) after he had appointed his son Yusuf as his successor and the Emir Lajin as regent.

BARSIQA. The story of Barsby is always connected with Karim, his 16, ... "like the devil when he led to the moon (or to man)" (Abul-husn), then, when he had disbelieved, he said, "Yes, I am close of thee, for I am Allah, the Lord of the Worlds." This is explained by the commentators in three ways: — of men in general, of the story of how the devil misled Adam (Dahl at the battle of Badr (cf. Karim, vii, 30) *Al-Bihar*, p. 474); of a certain man, or dynasty. The following commentators give the explanation only: Zamakhshari (d. 538); Razi (d. 606), *Al-Bihar*, viii, 132 of 'Adri ad, of 1508; Nakhshab (d. ad. 710), margin of *Isfahani*, *Tarikh*, xxviii, 37 — he follows Razi closely; Abu Salim (d. 982), margin of *Razi*, viii, 258. But the older exegetical tradition prefers the third explanation, which is some form, shorter or longer, of the following story. There was a devotee (*Wahid*, *Wahid*, *Wahid*, of the children of Israel or otherwise) living in his cell, who had long (many years, etc.) without seen. At length he fell with a woman who is brought in comes to him (she is a shepherdess, a neighbor's daughter, a prisoner, sister of one of three brothers, ill, possessed, led in his charge) still becomes pregnant, and, to conceal his sin, he kills and buries her in his house under a tree. The story ends in how far back the muslination of Satan reached. Some tell that the woman that the man brought to be buried. Others tell that he tempted the devotee with her also. He has been struggling with her, that he only points out the escape by killing her. Then Satan reveals the crime, as a dream or otherwise; this is verified by finding the body and the muslination; the devotee is then and led away to death; Satan reveals himself to the devotee as his tempter and offers deliverance if he will worship him. The devotee does so, and Satan attains, uttering the words of the Koran. Four versions of this are given by Tabriz (d. 310) *Tafsis*, xxviii, 37 et seq. going back to 'Ali, to the Abbasids, to the Abbasids to the 'Abbasids to the 'Abbasids.

Goebl, p. 109; in Sarnig, *The Land of the Eastern Caspian* (1905), p. 175-176; Wolf, *Gesch. der Chasenen*, II, 298, Note 2 (reads strongly Herandi).

(M. STRACK.)

BARZU-NĀMAH = Persian epic poem, an imitation and continuation of Ferdowsi's *Shahnameh*; the author is unknown (but probably dates from the 10th or the beginning of the 11th century). It belongs to the Rustam and Shikāh epics and describes the adventures of Barzu, son of Bahār and grandson of Rustam; as these are merely variants of the adventures of Schahā and Eshāq, Nöldeke has suggested that the poem is purely an invention of the poet and is not based on popular tradition. It treats of great length of the wars against the Slavs who are represented as *Der* (their king is the *Der Shāh*). The episode of the Turanian singer Susan, who by a ruse, captures the principal hero and sends them in chains to the king of Afrāsiyāb has often been regarded as a separate work. Some fragments of the text have been published by Timur Iscan (*Shikāhnamah*, II, 2166-2298), Kuvo-ganin (*Alfons de Pörsch*, I, 309) and Vullers (*Chrest. Schahnamah*, p. 57 et seq.).

al-BASĀSIRI, Abu 'l-*Hasan* *Abū 'l-Hasan*, *Abū 'l-Hasan*, a Turkish general under the last Daylā and military governor of Baghdad. When the vizier of the Caliph al-Kā'im al-Amin al-Mu'tasim, the Ibn al-Mu'tasim known by the title of *Kā'im al-Kā'im* was seeking to call in the help of the Seljuks against the Daylīs, he mutually came into conflict with al-Basāsi. The latter left Baghdad when Toghril Beg entered it in 447 (1055) but he found an opportunity to return some years later in 450 (end of 1058) and to revenge himself on the 'Abbasid Caliph and on his hated enemy, the Muslimīn. He had in the interval collected around him a number of mercenaries and openly declared himself in favour of the Fatimid Caliph al-Mu'tasim and thus succeeded in taking the capital with the help of the 'Abbasid Kā'im al-Kā'im (q. v.). The Caliph and his sister took refuge with the Seljuks who guaranteed the safety of the former but under pressure from al-Basāsi handed over the sister to him. The latter was executed with the greatest cruelty by orders of al-Basāsi. The latter could not hold out however when Toghril Beg again advanced on Baghdad and was overtaken on his flight by troops sent after him and slain in 451 (1059). The *waṭa* al-Basāsi is irregularly formed from the famous Persian town of *Bas* or *Bas*, cf. *Bas*, *Bas* (ed. W. Wattenfeld), II, 82.

Bibliography: Ibn al-Athir (ed. Tom-boni), II, 297 et seq.; Ibn al-Kā'im, *Maṣā'ir*, I, v. *Bas*; Abū al-Mu'tasim (ed. Kupper), I, 171 et seq. 225.

BASHKIRT, also written *Bashkiria*, *Bashkiria*, *Bashkiria*, *Bashkiria* (in Bashkir), the Arabic name for the Bashkirs and Magyars. The Bashkirs whose territory corresponds roughly to the modern borders of Ufa and Chuvash are first briefly mentioned by Isakhar (ed. de Goebl, p. 225 and 227) and a more detailed account of

them is given by Ibn Khaldūn (ed. de Goebl, p. 227). The land of the Bashkirs was then, as it still is in part, covered with forest and their numbers very small (according to Isakhar only 2000 men). They were subject to the Bulgars but unlike them had remained heathen; the distance between the territories of the two peoples is estimated at 25 days' journey. Ibn Khaldūn says that every one had to make an idol of wood to carry it with him always and pray to it in the hour of need or danger. Even in the 11th century the Bashkirs had not yet all become Muhammadans: the traveller Ibn Battuta (ed. de Goebl, p. 227) notes that they had been subject to the Bulgars till the arrival of the Tatars when many of them had adopted Islam. It is only in the 12th century that, when the Bashkirs became acquainted with Islam, they had lost the Bashkirs a completely Muhammadan people.

From monks of Hungarian origin (cf. the account of this mission in O. Wolf, *Geschichte der Mongolen unter Tschingis*, Berlin 1872, p. 263 et seq.), who had been there before the coming of the Tatars, the Hungarians heard the language of the Bashkirs (Pascator) and the name as that of the Hungarians. The dialect is present spoken by them belongs in spite of some peculiarities of inflection to the Turkish, not like the Hungarian to the Finnish family of languages; even the name itself is popularly explained as composed of *Bash* "hand" and *kir* "wolf" (or also *kir* "arrow" "tree"). Whether it was otherwise in the 11th century is doubtful. Marquand (*Ungarische und magyarische Sprachkunde*, 1907, p. 49), suggests that the connecting the Bashkirs with the Hungarians as well as the description of the land of the Bashkirs as "magyar Hungary" can only be explained by the Arabic usage. It is remarkable that even Russian Cossacks are said to have called the Magyars Bashkirs during the campaign of 1849.

After the conquest of Kazan the Bashkirs had to submit to Russia. In the 17th century there were frequently fights between the Bashkirs and the Cossacks and in the 18th between the Bashkirs and the Kirgiz. Besides, the Bashkirs have often risen against Russian rule, eight times in the 17th century, and four times in the 18th, sometimes in conjunction with the Kirgiz Tatars and sometimes in the resistance of native preachers against the rule of the infidel; in former movements like the revolt of Pugachev (1773-1774) the Bashkirs are mentioned among the rebels. The Russian Government then adopted the plan of settling one turbulent nomadic people to the other (the last independent chief of the Bashkirs (1755) was put down almost entirely by Kirgiz bands who made the cruellest havoc among the conquered people).

Having been reduced to the servile service since 1759 so irregular, the Bashkirs took part in the campaigns in Western Europe (1813-1814), though still armed only with the bow and arrow; it was not till later that they adopted European equipment. In 1874 on the introduction of compulsory service a squadron, in 1878 a regiment of cavalry was raised from the Bashkirs but it was disbanded again in 1880.

The war of the 18th century have been fatal to the prosperity of the people; besides, then and later a great part of the land has passed into the hands of Russian officials at unfairly low prices.

This acquisition of the "Dachlya lands" has become proverbial in Russia. A great portion of these lands has been bought again from the ex-owners by the government and given back to the Dachlyas as inalienable property. Now each Dachlyin is allotted 15 desyatins (317 acres) of land which is not sufficient for the people; therefore a greater part of the people has gone over to a settled life. The number of Dachlyins at the present day is estimated at a million.

Arinow, *Sozdaniye odnoimennogo raznoimennogo i raznoimennogo slovaria* (St. Petersburg, 1897), p. 131 et seq. A small *Blahlybi dictionary* (*Slovaritsko-slovochny slovar*) was published by W. Ermlanski in Orenburg 1880.

We see the appellation *al-muqaddas* applied to the Magyars as early as Ibn Isḥāq *ṭabāʾat* de Goeje, p. 142 et seq.; the word *muqaddas* or *Baḥādī* however is used in the same sense not only by Yāqūt p. 604 et seq. but also in the accounts of Magyar campaigns of J. C. S. *Historia de Hungaria*, p. 120. The true names of the Hungarians are naturally given with accuracy, the heathen Magyars are always regarded as "idol-worshippers"; it is to this that the statements of R. *Ḥaṣḥīd al-Ḥimāṣ al-shamsiyya*, concern the history of the Franks, undoubtedly refer; that Abu I. covered many idol-worshippers (*ḥaḥāḥ*) in Christianity. What is the significance of the story of the Mahamudan Hungarians, whom Yāqūt (*op. cit.*) saw in Haleb, sufficient to say

BĀSHĀ. [See PĀSHĀ.]

BASH-BOZUK (x), "one whose hand is turned", is applied in Turkey to the irregular volunteers, chiefly recruited from the Albanians, Kurds and Circassians, and raised when there is a great war; a militia of undoubted bravery but quite undisciplined whose savagery and love of pillage have earned them an unenviable notoriety. The name appears to have been first used in 1864 during the war with Russia.

(C. Host.)

BASHIR (A.), brother of good sister (Hidja A. Sughra); among Christians an evangelist. When in a Persian town some important news (e.g. change of reign, appointment of a governor etc.) is to be announced, individuals having some connection with the authorities go through the streets from door to door, announcing the event; they receive in return a small fee. These people are called in Turkish *Baschir*. — *Al-Basir* is the title of a weekly paper published by the Jesuits in Beirut since 1862.

BASHIR was a man, a companion of Muhammad. Bashir was born in Meccah and was one of the few Arabs of the pre-Muhammadian period who could write. In the year 622 he took part in the second conference at 'Aqaba and in the following years took part in several battles under Muhammad. By command of the prophet he undertook in March (December 629) an expedition with 50 men to Fadak against the Banu Murr. When he came upon them, his sword took to flight but Bashir deflected himself with the greatest valour till he was severely wounded in the foot. He was at first thought to be dead but in the evening he was brought to Fadak and tended here for several days by a Jew till he was able to return to Medina. In the month of Shawwal of the same year (February 630), the prophet was told that a body of the tribe of Uhayna was encamped at Yathrib (Yasbër) and Yama between Fadak and Wadi 'Ahsa under the command of Uthayn b. Uthn and intended to advance on Medina. Bashir was at once put at the head of 300 men; he set out, the Uhayna fled, and he captured a large number of sheep and camels. After the capture of Ytre in the year 631 (632) Bashir was, according to the usual tradition, sent by Muhammad to al-Wadî against Harith, though others say that on this occasion Muhammad himself took command. In any case in the battle with the Fozara cavalry under Furak (Harith) the Arabs were victorious but Bashir was severely wounded and died at the age of 40 in June in the same year.

BASHIR SHIHAB. One of the Tahanaw district from 1780-1840, really the ancestor of the name, the another Bashir of the same family had previously been governor of Tahanaw and died in 1780. The Shihabs were Karamathas on both the male and female line and were governors of Tahanaw till the time of Mir al-Tah when they left their ancestral home and settled under the leadership of Mansur al the first of Berman where the Shihabs became their settlement. When the last Berman chief of the male line died in 1803 (1258) the tribe of Shihab took its place and moved to Jann al-Kamar. The first name of this locality was the above-mentioned Bashir Shihab. He was succeeded as First of Tahanaw by Mansur Shihab till 1720, Mellur II till 1740; they were followed by the brother

Ahmad and Mungir and his son Yūsuf till 1728. During the latter's reign, Bashīr Shīshī II was born in 1767. His early years under his father and as first played a subordinate part, as his elder brother Ghāsim was in better favour with the Pasha than he was. But when Bashīr grew up he was able to gain the governorship of Lebanon from the Pasha of Akkâ, Dīyāddī Pasha (q. v.), in place of his uncle Yūsuf who was slain on his way to Akkâ (1790).

Bashīr, whose father had been a convert to Christianity relied mainly on the Maronites and was able to hold his own after the retreat of the French, even although Buonaparte's Syrian campaign had placed him in a difficult position by rousing him against his patron Dīyāddī Pasha. The sons of his predecessor took the field against him as rivals for the governorship and Bashīr found himself forced to retire to Egypt; he here won the friendship of the powerful Muhammad 'Alī and after his return to Syria had both his coarctates slain (1807). He then transferred his seat to Hama where he built a sumptuous house (palace). When after the death of Sulaymān Pasha (1819) 'Abd Allāh Pasha the Turkish governor of Akkâ fell into conflict with his colleague Ibrahim Pasha in Damascus, Bashīr was involved in the struggle and again forced to go to Egypt, leaving his brother 'Aḥmad as his representative. Muhammad 'Alī was able to influence the Sublime Porte in favour of Bashīr and 'Abd Allāh Pasha so that the former was able to return to Syria and to overthrow his same brothers and former friends of the powerful family of the Qāhmalī who had in the meanwhile taken the governorship of Lebanon into their own hands.

Muhammad 'Alī was really influenced by motives of policy in his friendship for Bashīr, for he required the Pasha's help in the proposed conquest of Syria, for which he thought the time had come in 1831. He then sent his son Ibrahim Pasha with troops to lay siege to Akkâ, and was assisted by Bashīr, who however did not openly take the side of the Egyptian army till Akkâ surrendered in 1832. From this time he always acted in concert with Ibrahim Pasha and had great territories allotted to him which he was able to rule almost as he liked. But Ibrahim Pasha's wars required much money and many men and the Syrians were forced to supply these new Egyptian masters with both. This caused great discontent all round, especially among the now practically independent population of Lebanon, so that Ibrahim Pasha, to avoid a dangerous revolt in Lebanon, ordered Bashīr to disarm his people. Bashīr obeyed this command and with the help of the French first forced the Maronites to hand over their weapons and then disarmed the former with the help of Egyptian troops. He was not however able to prevent the Hawrān Druze from openly resisting Ibrahim Pasha's commands and last finally to look on while the French again joined the Turks when the European Powers intervened in the quarrel between Muhammad 'Alī and the Sultan. The withdrawal of the Egyptians brought about Bashīr's fall, for the hope that France would interest herself on his behalf remained unfulfilled. He went on board an English ship in October 1840, to Sanak, that took him to Malta. There he remained about a year; he then went to Constantinople and spent the last years of his life here and in various parts

of Asia Minor, till his death in Constantinople in 1851. He was buried in the Church of the Armenian Catholics in Cilicia.

BĀSHMĀK (v. Basūdā, shoe (Arab. *naʿl*). The Bashmāki Sharīf are famous relics of the Prophet, mentioned as early as the 14th century A. H. The Egyptian Sultan al-Ashraf (d. 635 = 1237) possessed one of them which he gave to the Aḥmadiya, founded by him in Damascus. At a later period was turned up in Yez and we have a detailed account of it in a treatise by al-Makḥān entitled *Fiṣṣ al-mawṣūf fī ḥayāt al-Nabī*, Cf. also the Turkish work: *Haḡmāshā ḡurā*, *ḡorūretlil hīk* (Konya, 1848). As is well known the *Bashmāki Sharīf* is also to be found among the relics of the Prophet preserved in Istanbul.

BASHMAKLĪK, also **PAZMAKLĪK**, — shoe-tax. It was applied to the revenues allotted to the sultans and princes. In general there were the same limitations for the BashmaklĪk as for the ArpalĪk (q. v.) viz. that no amount had should be given as BashmaklĪk or ArpalĪk and that the highest contribution should be 10,000 Akke (not given as given by Hammer, *Recherches des Osman. Archives*, ii. 668 and Kati Hec, *Constat*, 1303, p. 17 = *Zeitschrift der Deutsch. Morgenl. Gesell.* vi. 378). These restrictions were however lost sight of as quite as early date.

(F. GIESSE.)

BASIJSHĀR n. Bunn, a poet of the early 'Alid period who lived in Bagra and Baghdad. Of Persian descent and thoroughly Persian in his patriotic sentiment the poet delighted in lashing in his satires the national arrogance of the Arabs in whose language he also wrote. His relations with the Mo'tazila, his public intervention for the Zoroastrian religion and his private life, so full of amorous adventures were whirled as for his prodigies on the Caliph al-Mahdī, until his family was rich enough to attract the minister Yūzḡlīh. Dā'ūd. For this he was put to death in the year 167 (783), the great influence and popularity is evidenced by the very numerous anecdotes which were still current about him in the third century A. H. and were admitted into the *Siḡat al-Aḡḡān*.

(J. HELL.)

AL-BĀSĪR the "All-seeing" one of the *ḡurā* of Allāh (q. v. p. 303).

AL-BĀSĪR, and **AL-FARĪD** n. **QAYYAS** n. **AL-FARĪD** n. **YAYYAS**, poet and letter-writer of the first half of the third century; although the

new town in 10 (637) or 17 (638) by order of the caliph 'Umar. The place was designed to be a depot for the Arab army. A site was chosen to the west of the river on the borders of the steppe and the arable valley were water and grazing land. The town received the name of al-Basra 'pale, white stone' from the nature of the ground on which it was built, or from the settlement consisted solely of primitive reed-huts. Abū Mūsā 'Ash'arī built the mosque of scattered bricks but it was soon replaced by a building of baked bricks. Even in 'Umar's time the settlement was connected with the river by *ḥammām*. The town grew with astonishing rapidity. Its turbulent populace early take a prominent part in the history of Islam. It was from Basra that 'Aḥmad, 'Ishāq and Zubair set out against 'Alī, who defeated them to the "battle of the camel" at Kharrāb in 36 (656); the name of Zubair, who fell there is still attached to a place in the neighbourhood which may well indicate his grave and the site of the ancient Basra (about a hour's journey from the modern town). The importance of the town in the Umayyad period is evident from the fact that Kharrāb was governed from here. The tribal differences among the Arabs which became so fatal to the kingdom, early broke out in Basra, when in the last years of Mu'awiyah the Arab emigrated hither and allied themselves with the Rabi' against the Fātimid and Kays. The most energetic officials of the Umayyad kingdom were constantly required to keep order in the populous town, in the Arab of which numerous Mawālī were attached themselves (even about the year 50 the total population was estimated at 300,000). In addition to the tribal feuds the intrigues of the Kharrābites contributed to make the situation complex. Like its sister town of Kufa, Basra was a favourable soil for civil wars. The most important claims against Umayyad rule had their roots in and around Basra. Basra however withheld from the victorious advance of the Omayyads longer than did Kufa which had always been strongly 'Alid.

It was under the 'Abbāsids that the town reached its highest level. It was — with its suburb al-Obolā — the centre of the Arab sea-trade, the transshipment of which extended even to China. The great canals, which connected it with the river, namely the *ḥammām* and the *ḥammām al-Muḥallab*, branched off into numerous channels most of them navigable, in the woods and gardens of Basra. The quarter of the West Gate where the caravans had their quarters on the *ḥammām*, developed into the business quarter. In the *ḥammām* the "1000 Nights" we have the gay life pictured which was to be found in the canals and markets of the commercial town. With economic prosperity intellectual culture also flourished; mosques and libraries supplied the highest interests of life. In Kufa and Basra the new Arabic philology developed. Among the theologians, in addition to Ḥusayn al-Basri who fell within the Umayyad period, may be mentioned as born in Basra, al-Ash'arī the founder of the later orthodox system. Free-thinking men held their meetings here, by the 10th = 11th century the *ḥammām al-Sayyid* [q.v.] lived here. Even in the 11th = 12th century Basra gave to Arabic literature one of its greatest figures, al-Buhārī.

The gradual decline of the central authority

put an end to the prosperity of Basra. The rebel Zayd, [q.v.] wrought great havoc in the town in 257 (871). After the beginning of the 10th = 11th century the Kharrābites [q.v.] were a constant danger to Basra; in 311 (923) Basra was plundered by them. This is not the place to detail the vicissitudes of the town under rebel governors of the 'Abbāsids, during the era of the Buyid, Mazydīd and Sulaymīd periods and through occasional raids of neighbouring Arab tribes like the Kharrābites.

The Mongol invasion in 656 (1258) caused a gap in the history. It appears that the continued neglect of the canal-system in the Ilkhanid period naturally resulted in the description of the town. Ibn Baṭṭūṭa found the greater part of Basra deserted, the ancient walls and mosques everywhere miles distant from the parts inhabited in his time. He describes the town as lying on the river. The traveller probes the date-groves of Basra and laments the decline, not only of its economic prosperity but also of its intellectual culture. The population was then small, although the famous mosque in the centre of the town bore the name of 'Alī. In the centuries following, Basra practically shared the fate of Baghdad that of Iraq. In a Tavernier *travels* the town before the Turkish occupation belonged to the Arabs of the neighbourhood, this probably means that the then existence of Baghdad did not trouble much about it. After the conquest of Baghdad by Sulaimān I (945 = 1534) Basra also fell into the hands of the Turks. Early in the 10th century a powerful eunuch, Afrāziyāh succeeded in founding a practically independent dynasty in Basra, under whose protection the harbour was opened to European vessels (first to the Portuguese, then to the Dutch and English). The last independent ruler of Basra, Ḥusayn had to take refuge in Basra from the Turks whom he had provoked by his arrogance. At this point begins a long period of struggles for the town which ended in 1779 by the Persians vacating Basra in favour of the Turks. It has since remained in their hands except for its occupation by Muhammad 'Alī in 1832-1840.

The modern Basra, centred in palm-groves, is reached from the Gulf of Arab by a canal, the *ḥammām al-Muḥallab*, which has been called the "canal, granary of the Arabian Venice". The town, the population of which had shrunk in the first half of the 19th century to a few thousands in consequence of the continual wars and epidemics, has since then recovered. The estimates of the number of its inhabitants vary from 18,000 to 60,000 of which the smaller number is probably the more correct. Since 1884 Basra has been the seat of a Wali. The economic importance of the town is based on its commerce. The value of the exports, of which dates are most important was according to the English consular reports for the years 1907-1909 about £ 1,500,000 to £ 2,000,000 and the imports about £ 1,500,000 to £ 2,400,000. The town is expected to receive a great impetus from the completion of the Baghdad railway.

distinguished from Batanea the Arabic mention also Hawran and Hawran with al-Bathaniya.

The identity of Batanea and al-Bathaniya is besides confirmed by the fact that Adma (Adhmal, q. v.) which is mentioned by Eusebius as a Batanean town, was also considered by the Arabs to belong to al-Bathaniya. When the Arabs penetrated into these regions in the year 15 A.H. Adhmal was the capital of the district of al-Bathaniya, for the latter was given over to the Muslims by the *Shah* of Adhmal as Kharij land. The Arabs here as frequently elsewhere retained the internal organization of the district, for the geographers and historians always mention Adhmal as the capital of al-Bathaniya. It is a little possible to give the exact boundaries of the district for the Islamic period as for the Greek; but it may at any rate have had its centre in the Nekeim and the adjoining Zupal hills on the southwest. The plain west of al-Lah (Tibet) is mentioned as a town in Bathaniya. Towards the northeast it stretched to Hawran with its capital Bayr (q. v.), on the northwest to al-Qadisiya, in the west of which al-Bathaniya stretches along the upper Jordan and the Sea of Tiberias. The Arabs, like the writers of the Greek period, employ some of those names of districts in a wider sense. Thus "Bathaniya and Hawran" often stand for the whole northern half of the eastern Jordan district, while others, like Vagel, extend the name Hawran to include the other districts and the southern as far as Yarmuk. The modern Bathaniya, which is applied only to the northwest slope of these mountains and the plain to the north of them, is to be distinguished from al-Bathaniya, its original form having been Bathaniya.

The extraordinary fertility of the districts of Bathaniya and Hawran, where tradition places the estates of Job, is emphasized by the Arab geographers.

Ges.*, XLII. 431. (F. Buhl.)

AL-BATHA = "the Marshland": the name applied to a meadowlike depression with a channel bottom, which is exposed to more or less regular inundations and is therefore often swampy. In particular it is the name of two districts:

1. the small plain bounded in by mountains on the northeast coast of the Sea of Tiberias (*Shahar: Tiberias*) in Palestine, south of al-Lah (the Philistia Bethsaida, Galilee) which is watered by the Jordan and reaches perennial rain (the *Shahar*); at the present day it is inhabited by Ghawr (Ghur) Arabs, the agawarin, agriculturists, who keep large herds of the Indian *hadda* horse

as well as in the swampy plain to the north of Lake Hula. The modern name Batha (popularly al-Bath, which may be traced to the primitive form) does not appear, so far as I know, in the Arab geographers of the middle ages, but first appears in modern European travellers (Seetzen, Borchardt etc.).

Landes* (1865), p. 257; F. Buhl, *Geogr. d. alt. Palästina* (1890), p. 56, 211; Seetzen, *Reisen durch Syrien etc.*, I. (1854), p. 345.

2. In Arab authors the name of the very extensive swampy area on the lower course of the Euphrates and the Tigris, between Wail in the north and Bagra in the south, also frequently called al-Bath (plus, of al-Bath) and occasionally from the two adjoining towns, the Batha (Bath) of Wail or of Bagra.

The Arabs are of the erroneous opinion that these marshes were first formed in the Seleucid period, in the place of a fertile and cultivated land covered with villages and fields. This is only so far correct as that during the last centuries of Seleucid rule the marshy area was considerably increased in consequence of several unusually severe inundations, and the burning of the dams caused by them and the partial neglect to repair them promptly and energetically. But the existence of considerable swamps in South Babylonia generally, stretches back to a great antiquity. The continual raising of the banks of the Euphrates and the Tigris by great deposits of mud gradually prevented the water, which overflowed during inundations, from returning to the river and raised the swamps, which would have soon disappeared but for the annual overflow to times of flood. Even in the cuneiform inscriptions the *agawin* (swamps) and *agawin* (reedlands) was often mentioned; cf. the quotations in *Reichardt, Aegypt. Handwörterb.*, p. 17. 115. At that period the whole district of Mesopotamia to the south to above Kassa (Gaza) and eastwards as far as the other side of the river Euphrates must have been filled by a large swampy lake, into which the Euphrates and the Tigris (both had then separate mouths), Karkar and Karun poured their waters. A narrow tongue of land separated it from the Persian Gulf. From Kuyuklik comes an interesting inscription which represents the Semitic fighting with the inhabitants of these marshes and high jungle. Cf. the reproduction in Layard, *Monuments of Nineveh*, II. 25-28.

The Assyrians usually call this swampy lake (*al-Bath*) = "bitter water" or *al-Bath* = "sea of the land of Kalla", and also "swamp" (*qakkatu*) of *al-Bath* = "of the Tigrisland"; on the latter name, cf. *Reichardt, op. cit.* p. 637. The Greek and Roman writers are likewise acquainted with it. *Agawin* = *Chok* (*Chok*); Neard's account is precisely instructive for he crossed this area of water and gives its breadth as 600 stadia (80 miles). The Talmudic Pentateuch also defines the *Bath* as swamps; in it, besides *qakkatu*, is mentioned the name *Qakkatu*, probably to be emended to *Qakkatu* = *Bath*. On the names to cuneiform inscriptions and classical authors cf. Andreas in *Paul-Wissowa, Realencycl. d. class. Altertumsw.*

Wies., l. 736, 815, 1878 et seq.; 2312, Weissbach, 1872, iii. 2044; vi. 1201 et seq.; Streck, v. 1147 (s. v. Dischid).

Since ancient times the great marshy lake has been gradually filled up by the depositing of sediment brought down by the river, except in a few places, and the modern delta has arisen. A isolated remnant of the original lake may be mentioned the Khôr (= swamp) Abn Kêlân, (S. of Numa), the Khôr Ab-Jâm is on the west bank of the upper Shatt al-'Arab as well as the marshes in the neighbourhood of Himsa (the *Waddan* (Hawter) called the Khôr al-'Aqwa = "the great Khôr"; the latter is apparently identical with the *Agwad rabad* (Armaic) = "the great swamp" (a reminiscence of former conditions, mentioned by al-Belâdhuri (203), and Kudama (215).

The Sakkians or a ruler devoted a good deal of attention to draining the swamps of Babylonia. They instituted drainage and canal works to a great extent and transformed the ground regained from the water into gardens. Under the later kings of this dynasty however, large areas of flourishing country were swallowed up by the floods and the region of swamps grew to such an extent that the Arabs, as has already been mentioned, wrongly date the beginning of the Baths to this period. The notices of the Arab authors, (cf. especially *Madhkur*, *Kutāma*, *Maṣṣūd* and *Yāqūt*) which are on the whole quite in agreement, give the following account of the alteration in the hydrographic conditions brought about by the forces of nature. During the reign of *Ḫalād ibn ʿAdnā* (Pers., 457—484), a large dam burst in the lowlying country *between* of Iraq and a large area of cultivated land was inundated. It was not till the reign of *Ḫusraw I Anushirvān* (531—578), that the damage was made good; this king soon after his accession was successful after using *many* various efforts in reclaiming the land for agriculture. His institution of new administrative districts in the area, mentioned by *Dinawarī*, is no doubt connected with this, cf. *Nöldeke, Gesch. der Perser u. Araber vom Zeitf. Sassaniden* (1879), p. 164. But in the last year of the reign of *Ḫusraw II Anērsh* (Pers., 627 = 3 or 7 A. D.) the waters of the Euphrates and the Tigris overflowed at the same time to such an unusual height that the dams burst and a large area was again transformed into lake and swamp. All *Persian* efforts to drive back the devastating elements proved in vain. During the confusion that followed during the Arab invasion the swamps continued to gain ground. In the first period after their occupation of the 'Irak, the Arabs likewise paid no attention to the Baths. It was only in the Caliphate of *Maʿāwīya* and more particularly in that of *Walīd I* and *Ḫishām* that they began to take an interest in the work of reclamation. *Maʿāwīya* sent his client, 'Abd Allāh b. *Ḍarrād* as administrator of Iraq to the 'Irak and he made 3,000,000 dīnars out of the swampy lands by cutting down the reeds and drying considerable portions of land, by making little channels through which the water could be drained off: these portions of land, reclaimed for cultivation again, were called *al-ḡaymāt* (Sag. *al-Bāḡiyya*) = 'the dry strips'. *Al-Ḥajjāj*, the rigorous governor of Babylonia under 'Abd al-Malik and *Walīd I* brought about a decided turn for the better.

Haidarabad built just above the Dacca the "central" town of Wagh (=the middle), which, built to command the Dacca as a new linkwork of Arab power in these lands, was one in prosperity. The reversion of the neglected system of canals, on the proper working of which alone the fertility of the lowlying plain on the lower Euphrates and Tigris depended, and the ~~canals~~ of dams and sluices were carefully attended to by him. He dug the two canals of 300 and 350, to lead away part of the superfluous water of these two large rivers before they flowed into the Dacca, and at the same time to water and fertilise dry tracts of Sindh, *Bahawalpur*, &c. 29-32. p. 303-304. The engineer who carried out these works under Haidarabad and thus rendered great service to Irak was a native Aramæan (Sabaï) named *Uzza*. Haidarabad also rebuilt in the marches the Zang (q.v.), an Indian people with their buffalo herds numbering thousands, who had been sent him by Muhammad b. al-Kasim the conqueror of India; his limited means prevented Haidarabad from doing all more for the civilisation of the Dacca. The sum of 3,000,000 dirhems, asked by him for the rebuilding of all the dams etc. was thought too high by Wazir, Malama, the Caliph's brother then offered to undertake the task at his own expense, and made it quite a good business humbly. To lead away the water he made two new canals called *Sir C.* in particular *Kudura*, 240-243. Wellhausen, *Das arab. Reich u. sein Sturz* (1904) p. 156-158.

Of the immediate successors of Hatfield in the post of governor of Iraq, Tahir al-Kasbi was the most prominent in his zeal for agriculture. He energetically continued the work of drainage begun by Hatfield, the engineering operations being still under the direction of the above mentioned Umm al-Kutbi and obtained for himself considerable estates from the drained areas, from which he ~~derived~~ enormous revenues; he showed great discontent in the province however by his arbitrary expropriation of large tracts of virgin soil. Cf. Wellhausen, *op. cit.*, p. 207.

The area of the Babylon on the conclusion of these great drainage works by the Arabs is calculated by Ibn Rusta (c. 900-905) at 30 parasangs (each of 4 miles) in length and 10 similar squares (total 310 = 422) square of 40 arsa or more than 80 Arab miles (each 1 1/2 English miles) which taken as square measure (although Kossow says nothing about this) would give 5,184 square miles. In any case Messrs' estimate of the swampy lands at 2,300 square parasangs used by A. Sprenger (*Babylonien*, *Der Deutsche Orient der Gegenwart*, Heidelberg, 1886, p. 47 et seq.) in his estimate, based on false premises, of the area of the cultivated land of Babylonia, is much too large and may be simply explained, as by H. Wagner (*op. cit.*, p. 239, see *ibid.*) by substituting miles for parasangs; for according to Messrs the swampy land have measured in. less than 33,000 square miles while the whole of Babylonia only measured 45,000 square miles.

In the northwest the Naqfa stretched nearly to Kufa and Misar, while it began farther to the east at a considerable distance from Wabst and then extended to the southeast as far as the district of Nagra. The banks of the modern course of the Euphrates as well as the greater part of the district between it and the modern (as well

so pre-Islamic) chief mouth of the Tigris as well as the land for a considerable distance farther over were in the middle ages more or less marshes. The Euphrates, the principal branch of which then flowed past Kufa and was much used for irrigation purposes in North and Central Babylonia, discharged the remainder of its volume into the Basra area miles below the above-mentioned town. The Tigris from about the end of the Sassanian period to the first half of the eight century flowed in the western bed, the modern Shatt al-Hay, past Wasit (site of the modern Kut al-Hay) and then, Vaght tells us, flowed into the Basra through the area, which reached again to Basra, a day's journey from Basra. According to the older and more reliable accounts of the Sasanians (beginning of the 7th-8th century) the Tigris (Shatt al-Hay) reached the swampy area at the village of al-Hajr. It then took its course through four lakes, formed by inundations (Bahr, also Bahr and Bahr, the modern Bahr) which were connected with one another by navigable canals. The waters of the Tigris, the Nahr Abu al-Asad and the "one-eyed Tigris" (al-Bayda al-'Asad) flowing from Marjha (the al-'Uzair) entered it from one large river near Kufa.

The following lines may be given of the modern divisions of the swamplands of Central and South Babylonia:

Of the two swampy lakes south of Kufa on both sides of the former bed of the Euphrates, only the longer on the west side now survives, the Bahr Najaf, while the Bahr Abu Najd (the ruins of Kufa has been almost entirely transformed into arable land (rice-fields), West of Najaf the Bahr 'Asad (Fahs) and south of it extending towards Lamiya is the Bahr Khazir, both called after the Arab tribes of the same name. The extensive marshes which lie along the Euphrates from Lamiya to beyond Samarra and stretch eastwards to the Shatt al-Hay are usually referred to collectively as the Lamiya swamps. In the angle formed by the Euphrates and the Tigris before their junction, west of Kufa, lie the swamps of Abu Bakr and on the west bank of the upper Shatt al-'Arab the Bahr al-Jazir (it is the Bahr of the islands). The banks of the Shatt al-Kar (Khar) a branch of the Euphrates (between it and the Shatt al-Hay) are also, according to Lamiya (p. 147, p. 148) known to be by almost impassable reed-beds.

On the Tigris, even below Kufa, 'Ab al-Qasbi, all the land on either side, particularly on the west, is full of stagnant water and swamps. The swamps increase as one goes down the river and on the east side have engulfed the whole country as far as beyond Kerkuk and up as the outlying spurs of the Persian Kuf. The whole district is nothing but a mass of swamps stretching farther than the eye can reach, out of which there rise here and there only a few date groves and isolated reed-beds on small islands. The northern part of these marshes of the Eastern Tigris is called the Swamp of Samarra and the much larger southern part, the district habitable to the south by the Arabs is known as al-Bahr al-'Asad (= the great or chief Bahr, cf. above) along with the Samarra marshes in the centre.

Generally speaking the whole land of the Basra, particularly the district between the Euphrates, Tigris and Shatt al-Hay has been as yet but little

explored; only the banks of the two large rivers are tolerably well known.

Seen from a distance, the marshes present the appearance of an immeasurable green plain, which owes its grass-like appearance not to grass but to vast masses of reeds and rushes. These frequently form thickets, several feet in height pierced by labyrinthine and larger and smaller channels, in which the stranger is lost without a native guide. The watercourses themselves are usually so shallow that they can only be traversed by boats of very slight draught (sawabiyah and sawabiyah) which are propelled by reed poles (mura, plur. murat; cf. Abu al-Fida 240, 22; Melzer, op. cit. p. 9, 10). This style of locomotion (sawabiyah) is described in A. Deutsch, *Musical. Ges.*, vol. 224, as very ancient on the above mentioned Assyrian reed boats (cf. e.g. Layard, *Mesopotamia*, II, 27, and *Oriental. Liter. Zeit.*, II, 190).

On account of this inaccessibility, the Basra has always been a welcome hiding-place for all sorts of robbers and vagabonds, as well as for rebels. For the protection of travellers caravans were therefore posted in the period of the Caliphate at various points here, who had to guarantee safe passage through the channels.

Most of the tribes at the present day still have the reputation of being feared as highwaymen; at an earlier period the Banu Liza and the Abu al-Muhammed had a particularly bad name. They still are in their small boats on the larger boats which use the main waterways, plunder them and conceal themselves in the innumerable small channels which are impassable in the larger canals.

The above mentioned Hadjijah, in the reign of 'Abd al-Malik, translated Bithar is the name, the Bithar (Arab. Zuff, q. v.) an Indian people, with their east bends of buffalo. These Zuff repeatedly attracted attention in the early Abbasid period, by making themselves a nuisance to the Bithar by robbing and plundering and it was only after strenuous efforts that the Caliph Ma'mun succeeded in forcing them to capitulate.

Far more dangerous however proved the great rising of the Zanbil (q. v.), another people settled on the edge of the Bithar. These were negroes, chiefly from the east coast of Africa (Arab. Zanj, name of the Zanzibar coast, Greek Zingia) who were employed on the hard task of obtaining salt-petre from the salt-marsh ground, east of Basra. Under the leadership of 'Ali b. Muhammad (q. v.), presumably an Arab, they stirred up a formidable rebellion, culminated by all sorts of low characters (855-870 = 859-883). The Arab historians (Tabari, Ibn al-Athir, Ibn Khaldun) give detailed accounts of this terrible war, which afford much valuable material for the study of the topography of the Basra (cf. also Nöldeke, *Mus. Arab. Forsch. Hist.*, p. 146-155). In the century following, the Fara Samarra (see the article under FARA) and after them the family of al-Muwaffaq (q. v.), founded a more or less independent kingdom in the swamp lands, which they shared at a later period with the Maryamites (q. v.), who ruled from 803 till 858 in al-Basra. After the decline of the Maryamites, the Banu Munabbih (see below) began to play their part, although the Caliph al-Nasir succeeded in destroying their leaders, the Banu Munabbih, in 657 (1250). The late history of these districts under the Mongols and Turks is not known in its details.

In the barren region of the Baghja, portions of the originally Aramaic (and Christian) population of Babylonia (the Nabataeans of Arab writers) found a temporary asylum after the Arab invasion, and their numbers must have been still so considerable there in the later middle ages that (Abn 'l-Fida tells us) the "Swamps of the Nabataeans" were occasionally talked of as their remnants the Mandaeans (Aramaic Sabians, the so-called Christians of St. John the Baptist) still survive in a few places in the marshes, particularly around the Khir al-A'jam, where the very wretched town of Hawraza (the modern Hawra, q.v.) is one of their chief centres.

The greater part of the ~~Swamp~~ inhabitants is composed of wild, barbaric, Arab tribes who lead a half amphibious life and according to the accounts of travellers are among the rudest people in the whole East. As to religion they have almost entirely adopted the ~~Islam~~ and are acquainted with some of the laws of the Bedouins but on the other hand they lack many of the virtues of the latter. Only their great hospitality is favourably emphasized.

The most important of these Arab tribes, which are themselves divided into a large number of subdivisions, are:

1. The Banu Lham, east of the Tigris, between Kūt al-'Amara in the north and 'Amara in the south. They wander eastwards as far as the outer spurs of the Pusht-i ~~Qand~~ and thence into the environs of Baghdad. Kūt al-'Amara was the residence of their Shaikh in the early decades of the sixth century. A von Krumm has given an account of this tribe in the *Sitz. Ber. der Wiener Akad.*, 1850, p. 251-254 (with specimens of their poetry).

2. The ~~Swamp~~ Muhammed, also called Albu (= Al Atma, family of Abu) Muhammad, likewise east of the Tigris. They are the southern neighbours of the Banu Lham and their territory consists of the swamps south of 'Amara (Samarqand-~~Swamp~~, Khir al-A'jam).

3. The Zubaid (Zubaid), west of the Tigris. Their lands lie between Baghdad on the north and Kūt al-'Amara on the south-east. In the south they adjoin the land of the Khaz'it.

4. The Khaz'it (Khaz'it), south of the Zubaid. They dwell in the district between Kūt and the ruins of Nisibis (and to the south-east of it). They extend along the Euphrates from Dinanisa to ~~Baghdad~~ where they border on the Mandae. The wild 'Atak ('Afud, 'Afud) are a subdivision of them according to the *Zeitschr. d. Deutsch. Morgenl. Ges.*, viii. 224, and dwell in the swamps that bear their name. Their chief place, the centre for the products of their numerous buffalo herds, is Sub al-'Afud (south of Nisibis, in Niebuhr's ~~Swamp~~ the middle of the seventh century) the residence of the chief of the Khaz'it was in Lamsa.

5. The Mu'tasib (Mu'tasib, q.v.), are by far the most powerful tribe in Southern Babylonia, ~~Swamp~~ exercises a sort of suzerainty over the smaller confederacies there. They are (according to Meissner, *op. cit.*, p. 200) not so much a tribe in the proper sense of the word, as rather the very numerous followers of a powerful chief's family. Their lands lie below Lamsa and comprise the banks of the Euphrates, thence down to Karna (with Sub al-Shaykh as their centre). In the east they extend beyond the Shaj al-Hay

neatly to the Tigris and thus comprise the greater part of the Baghja proper.

6. The Ma'daw (Ma'daw, sing. Ma'di), who pitch their tents between Shajra and Karna, are ~~Swamp~~ on the lowest level of culture of all ~~Swamp~~ of Babylonia. The chief authority on ~~Swamp~~ is Lamsa, *op. cit.*, p. 220 ff. 47.

There must also be mentioned the Khaz'it-Arabs (cf. e.g. Well, *Geogr. d. Chaldäer*, iii. 22), who are known to have existed in mediæval times and in the Ilkhan's time commanded the road from Kūt to Bagdad; see the Baghja (cf. *Baghja*, ii. 4, 23). At the present day no account of altered conditions of relationship or dependence they, like the above-mentioned Abu Muhammad, sometimes appear as a family of the Banu Lham (cf. v. Krumm, *op. cit.*, 1850, p. 253) and sometimes as a branch of the Mandae (cf. *op. cit.*, p. 241).

On the Arab tribes of the portions of South and Central Babylonia dealt with in this article, cf. besides the travellers' accounts in Krumm, *op. cit.*, Vol. vi, Layard and Lamsa, *op. cit.*, the list published by Sprenger, from an Arab MS. in the British Museum, in the *Zeitschr. d. Deutsch. Morgenl. Ges.*, viii. 223 ff. 175, as well as the list given by Freilager von Alvensleben, *Vom Mittelmeer zum Persischen Golf*, ii. 67-76 and in *China, La province de Sogdiane* (Paris, 1905), p. 239, 245 ff. 27.

The settlements of the inhabitants of the swamps are usually on terraces and islands, which are not widely submerged by the annual inundations, and are sometimes collected in villages. They consist of long low walls of reeds and reed matting (*qir'at*, *qir'at*); we find these reed houses mentioned in the same name as early as the Babylonian Talmud (cf. Noldke in the *Wiss. Zeitschr. f. die Kunde des Morgenl.*, viii. 198, note 1).

Reeds alone are cultivated. A not uncommon source of revenue is the reed which is used for all household purposes and from ancient times has been much used for building implements (see *Oriens, Lit. Zeit.*, ix. 189); the reed pith which may be made of this material in Wady and are ~~Swamp~~ manufactured in ~~Swamp~~ are considered the best in the east; cf. Cl. Hunt, *Les calligraphes et les scribes de l'Orient Arabe*, (1903), p. 12; H. Petersmann, *Reisen im Orient* (1861), ii. 134; Stolte-Audius in *Petersmann's Mittheilungen*, Erg. Heft 27, p. 19. In addition there is a great abundance of fishes which not only afford a continuous food supply to the natives but are sold and sent to the surrounding countries. Even in mediæval times Ibn Sina (*op. cit.*) says the Baghja as a producer of reeds and fish ~~Swamp~~ a real treasury for the people of Bagdad.

The chief wealth of the modern inhabitants of the marshes consists in their enormous herds of buffalo which yield great quantities of milk and butter; the latter is exported (particularly to Baghdad) and is an important article of commerce which brings in much profit. The buffalo, though originally imported from India (cf. above) thrive exceedingly in this land so suited to their requirements; some districts literally swarm with them. Sheep are also reared to a moderate extent. Camels naturally are not found at all.

As to the remaining fauna of the Baghja, water-

kind of all sorts are of course innumerable: zebu, wild-buck, gazelle, swans etc.; there are flocks of cranes, quail, partridges, ducks, bustards and bitterns. There is also no lack of carnivorous animals. The lion is still very frequently to be met with in the reed-beds, according to the accounts of modern travellers, just as it was in antiquity (cf. e.g. Streck, *Die Inschriften Assurs*, p. 213; K. 2867, Ka. 3 et seq.); cf. Ritter, *op. cit.* xi. 940, 942; Layard, *op. cit.* 366, 367; Loftus, *op. cit.* 242 et seq., 259 et seq.; Porter, *op. cit.* p. 191. In addition, large numbers of leopard, jackal, wolves, lynxes and wild cats have their lairs here. Wild swine wallow in large herds in the marshes. The countless swarms of mosquitoes and midges form a terrible plague on the land. Some insects like that of Unni al-Bakki (= "mother of bugs") south of Koi al-Amara on the Shatt al-Dijl (cf. Ritter, x. 190; xi. 935, 1045) have an unenviable reputation far and wide for their insupportable numbers of these obnoxious little pests.

In conclusion we need hardly emphasize the fact that, chiefly on account of the dangerous fevers which are epidemic everywhere, the climatic conditions of the swampy areas of Babylonia are exceedingly unhealthy.

Meunier, *Die Babylonien und die Städte von Uruk und Uruk* (Leipzig, 1901).

BATIN (A.) name, in the esoteric sense in opposition to *Zāhir*, obvious, outer. In esoteric these conceptions play an important part, cf. the stricter *Ḥadīṣ* and *Zāhir*. — With the article: *al-Batīn*, the "Hidden One" one of the names of God (Sura 57, 1).

BATINIYA. As the name, derived from *Batīn*, inner, indicates, the Batinīs are those who seek the inner or hidden meaning of the Scriptures. Instead of taking the literal meaning of the revealed word, they interpret it; this interpretation is called *ta'wīl*.

The name *Batiniya* has been applied by Arab authors to several quite distinct sects, almost all of which have played a prominent part in history. The most important of these sects are the Khwārizmīya, the Karmāṭiya and the Ismāʿīliya (see those articles). The application of the name has been extended beyond Islam; for among the Mithrāists are reckoned the Mithrāites, a Manichæan sect founded by Mani, who appeared in the reign of the Sassanid king Kābān, son of Firz (Kawāb, son of Pēdāz). Shahrastānī says that in the *Irāq*, the Batinīs are called Karmāṭiya and Mithrāites, while in Khwārizm they are called Tāḥīṭiya and Mithrāites. The epithet *Batiniya* is also applied to certain Sufīs.

There is then no general doctrine corresponding to this name, but each sect has a doctrine of its own. Shahrastānī however gives us under the title *Batiniya* an exposition of a certain system which is fairly closely connected with that of the Ismāʿīliya. He points out rightly that this system borrows many features from that of the philosophers in the strict sense of the word. The following are some of the ideas which belong to it.

Every external has an internal; every revelation (*waḥy*) has an interpretation (*ta'wīl*). — One cannot speak of the qualities of God as one speaks of those of man; one cannot say that he is wise or that he is ignorant, that he is, or that he is not, for that would be to fall into the error of likening him to his creatures (*maḥall*). This doctrine like the system of Avicenna and other philosophers admits of the procession of celestial spheres, distinction between the intelligence and the soul, the latter being inferior to the former, the existence in the upper world of a general or universal intelligence (*ʿaql*) of a sort equally universal. These two principles are represented in mankind by the *Nāṣir* and the *Arāḥ*, the prophet and his assistant who are entrusted with the duty of guiding the intelligences and the souls of men in the ascent of the world. The end of this motion is to guide the soul to a degree of perfection where it attains the level of the intelligence and is confounded with it. At this end of time all creatures are to be called upon to give an account of themselves.

All that proceeds from truth will be united in the universal soul and all that partakes of the nature of evil will return to Satan, that is to nothingness. This is what sectarians call the Resurrection. Here we have an example of the interpretation or investigation of the inner meaning of a dogma.

(B. CAHILL DE VABY.)

BĀTĪYA (A.), the gubler (crater), the name of a constellation in the southern heavens, also called *al-Batīya*; cf. Kāṣṣat (ed. Wasmuth), i. 40; Meunier, *Recherches sur les étoiles*, v. d. *Revue de Géographie*, p. 271.

BATJAN, a fertile, volcanic island 50 square miles in area, in the Moluccas and the centre of the Sultanate of Batjan; it is a mountainous land rising to a height of about 5000 feet. The Sultanate with those of Ternate and Tidore belongs to the Dutch residency of Ternate.

the whole army, however, naturally was under the supreme command of BUKU. The army is said to have reached the head of the Volga Bulgarians on the morning of the same year; the destruction of this important commercial town of Bulgaria is mentioned by Djurain and also in the Russian annals but according to Russian accounts it did not take place till the autumn of 1237. The campaigns of the following years are only known to us from the accounts by the historians of Russia and western Europe incidentally treated by a Welsh, *Gruffydd, Ior Mongolion ym Eiddawen*, London, 1871; the Mongolian chronicles give but the scantiest accounts of all these, *Histoire des Mongols*, II 813 et seq. and Hammer-Purgstall, *Geogr. Anst. der Kaiserl. Akad.* p. 100 et seq. From 1237 till November of this year the Tatars crossed the ice-covered Volga till 1240 Russia, and in 1241-1242 Poland, Hungary and Slavonia were ravaged. Batu himself on Christmas Day 1241 crossed the frozen which was frozen on account of the unusually cold winter and soon afterwards took the town of Olmütz, entered in the spring of 1242 against Bulgaria and went from there to the winter of 1242-3 through Wallachia and Moldavia back to the Volga country again. His army was never defeated anywhere in Russia or Western Europe; the retreat of the Mongols was brought about partly by differences in their own camp (Genghis son of Ogodei and Batu, grandson of Chagatai had rebelled against Batu and on this account are said to have been recalled by Ogodei) and partly the news of the death of the Great Khan which took place in December 1241.

After 1243 Batu took no further part in warlike campaigns. Of the lands ravaged in the years 1237-1243 only Russia remained subject to the Tatars; even in 1243 the Grand Prince Jaroslav presented himself in Batu's camp and was confirmed by him in the rank of "Sultan over all princes of the Russian people"; in 1250 the independent prince Mong after 1250 Daniel of Galicia had to be confirmed in the same way and do homage to the Khan.

By the events of these years Batu's attention was drawn to the west. Ogodei's eldest son Gengis, a personal enemy of Batu, had been chosen to succeed his father and raised to the throne by the Kurultai of 1240. Five brothers of Batu had also appeared at this ceremony; Batu himself had stayed away, pleading his physical infirmities (*ferd-i-pa* = pain in the foot, probably gonorrhea) as his excuse. In the next year the new Great Khan announced his intention of going to his ancestral estates on the Kull (a river in the modern district of Tardaguan on the frontier between Russia and China) the climate of which was more beneficial to his health. Batu had been informed that the Great Khan had hostile designs against him and therefore advanced against the latter at the head of an army. While still in Mongolia, etc. on his day's journey (apparently in a northerly direction) from Kighalik (the modern Geden) at a place which is called Kamsatsh (by Abu'l-Faraj) (ed. Focke, p. 492), Samarqand by Djurain and the writer who follows him (and, of course, identical with the famous town on the Zaratshian), and by the Chinese, Hong-shang-yi-tshih (apparently on the Ural), Genghis died suddenly (according to Abu'l-Faraj on the 9th Rabi' II 647 = 22nd July 1240, according to the Chinese in the third month i.e. the spring of

1240). Batu received this intelligence in Alb-Khanik, seven days' journey from the town of Kighalik (the Capital of Rukhagala not far from the modern town of Kopal), probably at the mountain of Alas-est south of the M.

Although his elder brother Orda was still alive, Batu was looked upon as senior member of the ruling house; all the princes are said to have therefore paid homage to him and declared their readiness to submit the succession to his decision. The assembly which was to settle this question was summoned by Batu to Alb-Khanik; homage was there paid to prince Mongke (Tishi Mongol), the eldest son of Tului, as Great Khan, on Batu's proposal. The sons and grandsons of Chagatai and Ogodei either did not appear at all or had left *Alas-est* before the settlement of the question; when they heard what result had been come to, they resolutely declined to recognize the decision. The coronation ceremony had to take place at a Kurultai held in Mongolia; it was not till 1251 that Berke, brother of Batu, at his brother's request, succeeded in assembling the Kurultai at which the ceremony was completed on the 9th Rabi' II 649 = 30th July 1251.

The princes of the houses of Chagatai and Ogodei did not attend the coronation but appeared soon after it to pay homage to the new sovereign. The Great Khan was told that they had made preparations to take his camp by surprise and cut down him and his adherents; on this accusation they were arrested and on trial found guilty, whereupon a fearful punishment was meted out to them, their families and all their adherents. Almost all the grown-up members of the two houses were either put to death or condemned to banishment; the prince Batu was also handed over to Batu, whom he had injured, and executed by his orders.

After this event, the Mongol empire was practically divided between Mongke and Batu although only the name of the Great Khan appeared on the coins throughout the whole empire and in Bulgaria also. The Frankish historian Ruyghus (Ruybroek) says that he heard the following words from Mongke in 1254: "As the sun sends its rays everywhere, so extend my power and the power of Batu over all lands." The boundary between the lands of Mongke and Batu was, according to the same Ruyghus, in the steppes between the rivers Talar and Is. According to the same traveller's account, more respect was shown to Batu's people in the Great Khan's kingdom than vice versa. It is certain that Batu who was regarded as eldest member of the ruling house and to whom the Great Khan owed his throne, then enjoyed considerable prestige. Even in such lands as, like Ma-wan al-shar, did not belong to the ancestral territory of Batu and his descendants, he exercised some sovereign rights; thus for example, according to Djurain (cf. the Persian text in Schofer, *Chirashakhs Persans*, II, 177) he confirmed the aim of Timur-Malik, the famous defender of Khogdani, as heir in the goods and estates of his father.

Ruyghus tells us that Batu had twenty-six wives and Ruygh al-Din that he had four sons. According to the Russian annals the homage of the Russian princes was usually received after 1249 by his eldest son Sarik, to whom his father appears to have handed over a share of his power in his life time. The year 650 (March 1252-1253)

is given by Rashid al-Din as the year of Batu's death (he is said to have then been 48 years old), but this date cannot be correct: for Rukn-al-Din was received by Batu at Sarai in August 1255, on the same traveller's return journey (October–November 1254) when the Khán was still alive. We must therefore prefer Chavoin's story according to which Sarai was sent to Mongolia by Batu in the year 653 (101) February 1255–291 January 1256, to the fact that Batu had received news of his father's death while on the way thither, from Rukn-al-Din's narrative is to explain that Batu lived during the latter years of his life on the left (southern) bank of the Volga, going on the summer months so far up the river as Lat 52° north, and spending the winter near the mouth of the river, where the town of Sarai was founded by him on the Aethiops during this period.

Batu, whom the Russians only know as a cruel conqueror, received the epithet of *Sarai-Agha* "the good Khán" from his contemporaries of his own people. He is praised as a just, mild, and wise ruler even by such historians as the Persian Iqbalid (Iqbalid Nāma, transl. Ryssky, p. 127, 128, 129) and the Armenian Maghbiya (Russian translation by Palkaev, p. 18) who are by no means prejudiced in favour of the Mongols; according to the narrative of the Frenchman Johannes de Plano Carpino he was terrible to war but a gracious ruler to his subjects. According to a report, given by Iqbalid, he was said to have recently adopted Islam; Wagnel (Hilgen edition, p. 579) says he was a Christian (his story may well have arisen through confusion with his son Sartai); it is much more probable that, as Iqbalid tells us, he gave no preference to any one of the (revealed) religions and adhered to the universal faith of "knowledge of God" (*Ilm al-Haqq*) i. e. to the worship of heaven.

Bibliography: The portions concerned of the most important original authorities viz. the *Tārīkh-i Lashkar-i Khān* of Iqbalid and the *Qutb al-Masūd* of Rashid al-Din, are still only accessible in manuscript; of the first of the original sources in al-Othman, *Hishtori de Mongols*, II, 120 et seq., and (not always reliable) in Hammer-Purgstall, *Geschichte der Weltkaiser*, II, p. 92 et seq. The Oriental sources were not directly accessible to the authors of the later works among which may be mentioned Howarth, *History of the Mongols*, II, 36–37. The Russian annals (*Letopisi po Letopisemskomu spisku*) were published in 1872 by the Archaeographische Commission in St. Petersburg and the narratives of the two Franciscans Johannes de Plano Carpino and Rukn-al-Din in the *Monastère de Paris et de la Sorbonne, publiés par la Société de géographie* (Vol. IV). The Mongol epic of the year 1241 has as yet only been published in a Russian translation from the Chinese; *Pravil'noye izdaniye drevnei khitai i tatarskoi*, I, 14. Cf. also R. Palkaev, *Itogi mongolov vostochno-Mongolii*, III, 174. St. Petersburg, 1872.

(W. BASTIEN.)

AL-BATUL (A.) "the Virgin"; cf. the articles *PATRA* and *WARYAN*.

BĀWĀND, an Indian dynasty which reigned in Tukharistan from 45 (605) to 350 (1349); it traced its origin from Bāw son of Shāh, son of Kayā, a contemporary of Khurrah Barzā (Chosroes II) and called by him *Isphand*, it comprised

three branches, the first of which had thirty princes (45–397 = 605–1006), the second, eight (406–600 = 1073–1210) and the third, eight also (635–750 = 1237–1349).

(C. LUETZ.)

BĀWĀNDJ, "musket bearer", the name of the bodyguard composed of freemen and nomads, armed with flintlocks, of the Great Shah of Persia; cf. C. Simek Hurgonje, *Mémoires*, I, 197, note 3.

BĀWĀZIDJ, or *BĀWĀZIDJ* al-Malik, a former town in the province of Mawwāl on the west i. e. the right bank of the Nile 24th, not far from its mouth.

The name is the Syriac Beth Wawā, "the house of the 60th collector". As the *Itinerary* there appears occasionally *Shamān-Sāh* "Shepherd's way" after the usual style of the postical names of towns common in the Seleucid period. In the older geographers and historians the place is only briefly mentioned along with Tadmor, Tishon and Sinn. Some one with an extensive knowledge of the town has, however, interpreted a detailed description in the text of Bar Hebraeus (ed. de Goeje, p. 169, note 9). The place was notorious for the muldies in the shade of the *Shamān* — the inhabitants say they are descended from the troops of 'Abū l. Amr Jāh — and as a result of robbery. The Jews lived by receiving goods stolen by the *Shamān* from the *Shamān* (Vāh) however also mentions some scholars who were born in Bawāzidj. A portion of its inhabitants must have been Christian; the miracle-working bones of a Syrian martyr Babbe were found there was occasionally a Jacobite bishop of Beth Remmā (like the village of Barmā) and Beth Wawā, or a Nestorian of Bethān (i. e. Beth) and Beth Wawā.

The ruins of the town have not yet been discovered. On my journey from its neighbourhood on the Tigris, in the winter of 1907–1908, a place called *Shamān* was mentioned to me, in which the name Bawāzidj is possibly preserved. Another Bawāzidj was at Anān-Fārsābād on the Euphrates, 1000 = Bawāzidj in Dīyar Rūdīl in South Arabia.

Persische Märtyrer*, p. 189; cf. also note in de Goeje, Ibn Khunūdī, translation, p. 68; E. Herzfeld, *Untersuchungen zur historischen Topographie* etc. in *Memoirs*, I, 1907, 1 and 2; P. Sarras and E. Herzfeld, *Archäologische Notizen im Euphrat und Tigris-Gebiet* (1901–1911), chap. III; U. le Strange, *The Lands of the Eastern Caliphate*, p. 91 and 92, cf. Herzfeld.

BĀWĪAN, = Kurd village of Baw or al-Baw, with the larger village of Hīnā, half a mile distant in the district of Māshayā-Kurd, between the district of Nawār in the Syriac district near Mawwāl and the district of 'Amāliya, in the Assyrian sculptures which are found in the adjoining ravine of the Khān. The

rock reliefs were first visited by M. Roux, the French consul, Roux's predecessor, then by Mr. Koss, an English merchant in Mosul, a friend of the Maronite Levantines from the well known M. D. Roux, whose account is given by Layard in his *Nineveh and its Remains*, ii. 142. They were afterwards drawn by V. Place, the excavator of Khorsabad and by Layard himself. Layard's companion, Mr. Hill was directed whilst bathing there in 1841. Photographs and engravings are still wanting; the inscription of the reliefs made by Sachse (1705—681) contains the so-called Babylonian date of the statement that Sardanapallus brought back the images of the gods of the town of Ekallat, which had been carried off by Merodachbaladan of Akkad (Babylon) in the time of Tiglath-pileser (I), from Babylon to their ancient resting-place after 415 years. This statement contains an important specimen of Assyrian chronology.

(E. HERZFELD.)

BAYAN (A.), Lacidity, explanation. *Ala al-Rayan* is often used synonymously with *Ala al-Hafiz* (see *PAKAWA*) although usually it only denotes a subsection of it.

(A. SCHAEFER.)

BAYAN (A. *BAWKA al-Tawil*, *Shi'a* sectarian, who was burned along with al-Hafiz in Sold (p. v.) and a few adherents by command of Khalid b. 'Abd Allah al-Kari, governor of Kufa in 119 (737). He believed that the words of the Koran (Surah 3, 14): "This is an explanation (*bayān*) for mankind etc." — referred to him and was therefore regarded by his followers as a prophet and incarnation of the divine. He taught by a false explanation of Surah 55, 4—7 and 28, 28, that the King of Light (*Qad*) is subject to dissolution with the exception of his face and revealed himself in the Prophet and afterwards in the 'Abd Imām (down to 'Abd al-Hakim b. Muhammad Ibn al-Kananiya) and again in his himself. His doctrine was apparently based on older conceptions such as we already find among the Manichaeans.

Bibliographie: Tabari (ed. de Goetze), ii. 1619 et seq.; al-Shahrastāni, ed. Caron, 113 (Hartbrocker, 171); al-Hafiz (ed. Mahdawi), 327 et seq.; Friedländer in the *Journal of the Asiatic Society*, Ser., xxix. 88.

BAYAS, usually written **BAIYAS**, also **BAVAS**, the modern Bayas, the ancient Bataz, a coast village on the Gulf of Issa at the foot of the (Khet) al-Jabbar, a station on the road from al-Basra to al-Bahramiya. In the 'Abbasid period, Bayas belonged to the Syrian Tughrak (see *AWA-PIK*), it shared the vicissitudes of that land, so often fought for, without itself playing any important part. After the revival of the town in the beginning of the 12th century, it was still dominated by recent travellers as a miserable village inhabited by Turks; nevertheless Sems-Sey gives the number of its inhabitants at about 5000 and Caussin de Perceval at 6545. It is the centre of a *kaza* in the Wilayet of Adana.

Hartmann in the *Leitfaden für die Reise in Asien*, xii. 174; Caussin de Perceval, *Asiat.*, ii. 105 et seq.

(R. HARTMANN.)

BAYAZID, a town in Turkey in Asia, capital of a *Sandjak* of the province of Erzerum, 225 miles from (the town) and 17 from the Persian frontier, at the foot of Mount Ararat; it has about 2000 inhabitants mostly Armenians. Founded by Sultan Bayazid I. Yıldırım to serve as a place of observation against Timur's designs, it has an old fortress dating from this period, enclosing a beautiful mosque built by Beddül Paşa in the 17th century. In 1805 Ibrahim Pasha, captured by Napoleon with a secret mission, spent his winter here in confinement (*Foyage en Asie*, p. 29 et seq.). The town which commenced the road to Adjukschah, was taken by the Russians in 1828 (the inhabitants were taken to Erzurum and Alexandropolis which rebuilt it), 1854 and 1877. The *kaza* of which it is the largest place comprises 110 villages of which 78 belong to the town, regarded as *marza* of a *kady*; the total population is 7,755 inhabitants. It manufactures Karabakir carpets and cattle are reared on the prairies.

(G. HARTMANN.)

BAYAZID (Turkish pronunciation of the Arabic *Bayand*, i. e. *al-Bayand*, "the lightning", Ottoman Sultan, son and successor of Balaq I. al-Bahramshah, married the daughter of the prince of Georgia who brought him as her dowry the town of Kütahya and three other smaller towns and succeeded his father, who was assassinated on the battlefield of Koyun (791 = 1387); his first act was to order the execution of his only brother Yâkub whose popularity he feared, a crime which was regularly exacted by the Ottoman Sultans down to the period of reform. He completed the conquest of Serbia and concluded a treaty with Bulgaria, was of course which placed this prince under the viceroyalty of Turkey. He placed John VII. son of the sons of Andronicus IV. on the throne of Constantinople in place of the Emperor John V. Palaeologus, and then determined him to replace him by Manuel II. son of John V. as *co-emperor* (1394). The Greek syndicates furnished him Manuel conquered for him Rita Elydes (Philadelphus) which its commander had refused to surrender; the prince of Adia submitted; the principalities of Strabula and Meirina were incorporated in the empire; Ala al-Din, of the dynasty of Karakum, concealed Ak-Shehr, Nigla and Ak-Seri (793 = 1391) to him. He sent razza to ravage the island of Chios, Euboea and Attica, and blockaded Constantinople which John Palaeologus had hurriedly fortified and Manuel had again entered secretly for seven years. The prince of Karakum having rebelled, was defeated and the towns of Kütahya and Izenda, again incorporated

in the capture; Tuzat, Sivas and Karaman passed over to offer themselves to him rather than be given back to the son of the Kadî Barbân al-Dîn (795 = 1392). Karaman Bayazîd, of the dynasty of the Usak-lifemlîkîs at Sinope, leaving taken to flight, all the province of Karamanîl fell into his hands.

Bayezîd, king of Hungary, disturbed by the progress of Bayazîd on his frontier declared war against him, after interesting the sovereigns of Europe in his cause, including Charles VI, king of France, who sent him a body of troops commanded by the Comte de Sancerre, son of the Duc de Bourgogne, who afterwards was called Jean-sans-Peur, the Grand Prior of the Teutonic Order, Frederick, Count of Hohenollern and Willibrod de Naillac, Grand Master of the Chevaliers of Rhodes all joined in the crusade. The allies besieged Nicopolis but were completely defeated before its walls (798 = 1396). Following up this victory the Ottomans wrested Syria, Smyrna and Satalon; in Asia, their territories were increased by the addition of Korymbi, Tarsus, Belorus, Malatya and Karaman; in Europe by Yeni-Shehr (Laziza) and Tzibida; their successes brought them as far as Athens and into the Peloponnese.

Bayazîd was returning in his conquests at Brusa when the capture of Eriç and Sivas by Timur turned his attention from Constantinople, the conquest of which he was planning, and forced him to march against the invaders, several whose gathered the princes dispossessed of their territories by the Ottomans. The siege of Angora by Timur brought him up to the walls of this town; the battle took place to the northeast in the plain of Çibek Akâk. The auxiliary troops, formed of contingents levied from the nearest principalities of Semerkand, Menteche and Tiernyân, went over to the enemy with whom were their former masters; the Serbs remained faithful and Bayazîd fought till nightfall surrounded by his followers almost all of whom were slain. The Sultan attempted to escape but his horse fell and he was taken prisoner (19th Dhu'l-Hijja 804 = 20th July 1402). Bayazîd was treated with consideration by the victor, nevertheless as he attempted to escape, they took the precaution of putting him in chains during the night and making him travel in a litter surrounded by a grille (*Kafas*) carried by two horses. It is this word *Kafas* which has given rise to the belief, supported by a misinterpretation of the passage in Ibn 'Arifshah that Bayazîd was shut up in an iron cage, as well as the word *Kafas* used by Pline (l. 26). While accompanying Timur who returned to Samarkand after the capture of Smyrna from the Chevaliers of Rhodes, Bayazîd died at Al-Shehr from an attack of gout (14th Sha'ban 805 = 28th March 1403); he was buried at Bursa by his son Mûsâ. The Ottoman Empire was no longer in existence; it was not reconstituted till ten years later by the energy of Sulhân Muhammed I.

(C. HUART.)

BAYAZID II, Ottoman Sultan, son of Muhammad II, was governor of Amasia at the

time of his father's death; a revolt of the Janissaries excited him also, the theme by selling the intelligence of the Grand Viceroy Nigârî Mehmedî to the forces of the Grand Viceroy, his younger brother, he rewarded their services by making them a gift of his succession which became a regular custom after him (21st Rabi' I 865 = 20th May 1461). Timur seized Brusa but during his absence on the field at Yeni-Shehr (26th Rabi' II = 20th June) he fled to Konia and then to Syria and Egypt, after a pilgrimage to the holy towns he returned to Amasia again and advanced from Aleppo on Konia and Angora where, abandoned by his troops he had to flee for refuge to the heights of Khorâs. Bayazîd induced Pope Alexander VI Borgia to put out of the way his unfortunate brother, whom he caused to be buried after his death (29th Rabi' II 900 = 24th February 1475), in the tomb of Murâd II at Brusa. In Italy Khat al-Dîn the Governor of Ormus had to capitulate (10th September 1481); the cities into Serbia, Dalmatia and Hungary were conquered; Managorian was entirely subdued. Bayazîd directed the Moldavian campaign in person and took Kilia and Al-Kumân with the help of the Tatars of the Crimea (Rabi' II 880 = July 1484). In Asia Herakleia and Paphos was captured by him, with the direction of the campaign against the Egyptian Mamlûks; on this general's defeat Bayazîd lost Adana and Tarsus (891 = 1486), which were regained two years later only to be lost again after the battle with the Egyptians on the field of Agha Çân (898 Rabi' II 893 = 17th August 1488); peace was not brought about till 1491. Having given up the siege of Belgrade in consequence of the Hungarian victories, Bayazîd turned his attention to Albania, invaded Syria, Armenia and Carmania; the Turks were defeated near Vellach and their leader Mûshâk Oghlu 'Alî Pasha slain; the Hungarians in their turn were defeated at Adana (9th September 1493). Khat al-Dîn (Naupactus, Lepanto) abandoned by the Venetian fleet had to capitulate (16th August 1499) and because the Ottoman emperor for that neighbourhood. In the following year the Sultan conquered Modoni, Navarino and Corin but failed before Nauplia. A coalition of the Venetian, Papal and Hungarian forces, with the addition of the French and Spanish fleets swept the Archipelago and threatened the islands; Santa Maura (Lencadia) surrendered to the allies but was restored on the conclusion of peace (14th December 1522).

To all these troubles almost civil war was added. Bayazîd had nominated his son Alâuddin as his successor. Selim, supported by the Janissaries, left his governorship in Asia and fought against his father at Corin, where he was totally defeated (3rd Rabi' II 917 = 3rd August 1511) and had to take refuge with his father-in-law, the Khan of the Crimea, but he was restrained to favour the following year, went to Constantinople and with the support of the army constrained his father to abdicate in his favour (2nd Safar 918 = 25th April 1512). The latter wished to retire to Dimotika, his native town, but died three days later on the way, at Aya near Halka (10th Rabi' I = 26th May).

Bayazîd was a mystic, devoted to Sûfî doctrine, which earned him the title of Wabî (saint). He built a mosque in Constantinople in which he is buried, with an *imaret* (soup-kitchen for the poor), another in Adrianople, and various derriahs, mosques, in the capital and in the provinces at

is for example the *Bedja* built by the minister Mîrîz Teftî-âhân in the sixteenth century. There are also smaller markets in the various quarters of the town called *bedja*. Villers spend hours talking in the hammam, they are called *bedja* and *bedja*-gard.

Bibliography: J. E. Polak, *Perse, I* (St. Petersburg, 1861).

BEDEL-I 'ASKEWÎ (the tremendous form *bedel-i 'askewî* is also often used) means in Turkey the taxes which are paid by non-Muslims for exemption from military service and have taken the place of the ancient *âzârâg*. The latter appellation survived into the middle of last century. Under pressure from foreign powers, particularly England, after the abolition of the *âzârâg* and the enrolment of non-Muslims as soldiers in the Turkish army, a decree was promulgated on the 10th May 1835, after long resistance by the government, which promised non-Muslim conscription and the abolition of the *âzârâg*. In the *Khât-i humâyûn* of the year 1256, the decree was confirmed but at the same time exemption was allowed by providing a substitute or paying oneself off. As the commitment at this inscription was equally great among Muslims and non-Muslims and the latter were not inclined to serve, the practical result was that the only difference was the change of the name from *âzârâg* to *bedel-i 'askewî*. The amount paid also was the same as the *âzârâg* (cf. Moravitz, *Les Juifs de la Turquie*, p. 78 note 1). The taxes were paid on the one by the communities and shared by them among the individual members according to their means and income. At first the payment was 5000 piastres (about £45) for 150 persons and later for 125. The total revenue to the state from this source is given by Moravitz (p. 76) as 2,500,000 Turkish in round numbers. Clergymen, women, children under 15, old men over 75, the poor and the inhabitants of the privileged districts and of Constantinople were exempted from the tax. The collection was first made by officers of the state, after the reform of 1257 (1841) by the spiritual heads of the communities, and again since 1902 by the government tax-collectors. (The Turkish text of the law is given in *L'Empire Ottoman*, II, 347, and the French in Young, *Corps de droit ottoman*, t. 276).

After the revolution of 1905 the *bedel-i 'askewî* was abolished by a provisional law of the 20th Radjab 1327 (23rd Jan. 1325, published in the *Shi'âr al-Nahâr* of the 2nd Shaban 1327 = 16th Aug. 1905 and also in the *Almanîk-i Kuvvât-i Milliye* 'Osmanîye, Const. 1327 Vol. I.) and in its place universal military service for non-Muslims also introduced.

(F. GIESSE.)

BEDEL-I NÂZÎ a tax paid by Muhammadan *hâble* to bear arms, who wish to buy exemption for the rest of their period of service after serving three months. It amounts to 500 Turkish and is allowed on condition the *hâble* can pay it without having to sell his agricultural implements. For further information see the article *NAZAR* above.

(F. GIESSE.)

BEDJA. The name *Begja* or *Bogja* — more correctly pronounced *Begja* or *Bogja* — is applied to a group of Hamitic tribes, who live between the Nile and the Red Sea, and whose influence was formerly felt from as far north as Cairo to the Abyssinian frontier. The name *Begja* is met with in pre-Muhammadan times in the Arabian inscriptions (E. Littmann and D. Bruckner, *Verzeichn. der Drucken Aksum-Inschriften*, Berlin, 1906, p. 6 et seq.) between 500 and 600 A.D. In the Greek text king of the *Begja* corresponds to the "King of the Baga" (H. H. Müller, *Ägyptische Denkmäler in Bruckner, Ak. Wien, phil. Abt. 47. Vol. 45, Wien, 1894, p. 161*, both of which are here titles of the prince of Aksum. To the *Begja* of the Arab geographers corresponds the name, still in use at the present day, applied collectively to these tribes 'Bogjae, Bogjae', from which their language is called 'Bogjae' (F. Reichelt, *Wörterbuch der Bogjae-Sprache*, Vienna, 1895).

The *Begja* have often been identified with the *Blemmyes*. The latter however certainly did not belong to this group of tribes; the ancient name has survived not in the *Begja* but in the *Bahyun* whom de Goeje (Ednat, p. 26, note 3) has already identified with the *Blemmyes*. In the beginnings of Islam the *Begja* were considered by the Muslims as rude heathen uncivilized of a tribe. It was not till the beginning of the second century that negotiations were entered into when 'Abdallah b. al-Habib made an agreement with them, which was renewed under the Caliph Mu'awna. Their land offered great attractions to the Arabs by its rich stores of gold (al-'Alsh) and jewels (emeralds). The *Begja* and the *Bahyun*, once particularly the former, settled in *Bedjaland* had gradually blended with the natives. From ancient times the names of two subdivisions of the *Begja* have been known. According to *Maqrîsî* the *Habshî* are the ruling part of the nation and the *Farashî* or *Farashî* a sort of slaves. Ibn Khallikân (I, 110) that the king of 'Adhrib was called 'al-Habshî'. The relationship is and has been formerly been the opposite. The *Habshî* early became converts to Islam, most probably direct from paganism and not from Christianity as some authorities state. As to their habits, we can only add to the full account given by Volz (see the article 'Adhrib') that daughters among them did not inherit (Ibn Khallikân, I, 110) and that therefore contrary to ancient popular law the prescription of the *Shari'a* on this point could not be put into force. In spite of the strong influx of Arab blood the *Begja* have preserved their individuality to the present day. Their chief divisions are the *Adhrib* (q. v.) and the *Bahyun* (q. v.).

ROBERT.)

BEDJEM an Amir al-Umara'. Bedjem was a prominent slave of Turkish origin. He first attacked himself to the prince of Galla, Mandawil in Zlyar, and then deserted him because his countrymen had been slighted by Mandawil. In 323 (933) the latter was slain and, as Bedjem had been the leader of the assassins, he had to flee from fear of vengeance. He then betook himself to the Caliph, was appointed commander of the troops accompanying him by the Amir al-Umara' al-Harithi in Kark and received the name al-Kark'i. In 323 (936-937) he twice defeated an army of the rebel governor al-Alwazi, Abi 'Abd Allah al-Buridi, whom the latter sought help at the King, his kinsman. Bedjem was put to flight and had to come to Wasit. Here he began to execute the plan of making himself Amir al-Umara'. The vizier Abi 'Ali b. Mukla wished to hurry about the fall of the Kark'i and to this end entered into negotiations with Bedjem. When the chief Bedi heard of this he had the Kark'i thrown into prison. The enforcement of this was done. The Kark'i then sought to come owing his exile to the enemy al-Buridi but the latter was defeated by Bedjem and forced to take his exile. All the Kark'i's efforts were of no avail. In the Kark'i 326 (September 938) Bedjem entered the capital and was appointed Amir al-Umara' in place of the Kark'i by the Caliph. His first task now was to bring the rebellious Hamdanids to a fulfilment of their pledges. These refusing to pay the tribute due, but whom Bedjem had gone to Marid against the Hamdanid Hasan, the Kark'i suddenly appeared to Bedjem at the head of ten thousand men. Bedjem had to make peace with Hasan in 327 (938) and to return to the capital. A practical settlement was soon reached with the Kark'i by the terms of which the latter received the governorship of Hama, Hama and Hama with the Hamdanids in the Upper Euphrates and the frontier fortresses. Only the Diyala now remained to be dealt with. Al-Buridi therefore sent an army corps against him. Ma'ni al-Dawla, the Kark'i lieutenant, was not able to defeat it but his brother Rukn al-Dawla came to his assistance, advanced against Wasit and occupied a part of the town. Bedjem arrived with reinforcements however, and Rukn al-Dawla had to retire. While Bedjem and al-Buridi were devising a common plan for the prosecution of the campaign, the latter began to intrigue with a view to securing power for himself and was therefore deprived of his office. The Caliph al-Radi died soon afterwards. His successor al-Mutawakkil confirmed Bedjem as Amir al-Umara'. The latter now sent an army against al-Buridi. The lieutenant was defeated however and Bedjem had to take the field himself. Before he reached the scene of operations however, al-Buridi was completely defeated and soon afterwards in Kark 329 (April 941), Bedjem was surprised and slain in an expedition by some Kurds. The highest praise is bestowed on him by Oriental historians not only for his military ability but also for his talents in other directions.

Bedjem (p. 17) Ibn al-Athir, *Chronicl* (ed. Tornberg), viii. 225 et seq.; Ibn Khaldun, *Iber*, iv. 432 et seq.; Abu 'Uthman (ed. Hefele), i. 400 et seq.; Weil, *Gesch. d. Chalifen*, ii. 664 et seq.; Müller, *Der Islam im Morgen- und Abendland*, ii. 566.

(H. V. ZETTERBERG.)

BEDE. (See *NABU*, p. 559.)

BEG. (See *ARABIA*, p. 372 et seq.)

BEG, a Turkish title, German *Herzog*, English *Prince* or *Duke*. The various meanings, which are given in the dictionaries (cf. in particular *Sprache der Türken* in *Wörterb. d. türk. Sprache*, i. 261 et seq. and *W. Reddick, Turkish and Persian* in *The Turkish Language*, iv. 1568 and 1569), may be traced back to three fundamental notions. 1) a *beg* is any noble, in opposition to the common people, and usually also to the prince of the ruling house (the *beg* is however also occasionally applied to the latter); 2) the "prince" of a small state or community is called *beg* in opposition to the *hakan* or *shah*, the ruler of a larger domain; 3) finally the word *beg* is applied to any "position of authority" in the widest sense whether it has been obtained from a ruler, by election or by usurpation: the commanders of divisions of armies from the largest to the smallest (cf. in particular the expressions *chirag-beg*, *shir-beg*, *mir-beg*, *paşa-beg* and *amir-beg* in the sources for the history of the "Golden Horde"), the holders of administrative offices from the headman of a village to the governor of a province, civil officers and judges. The word appears to be found in all three meanings in the very earliest monuments of the Turkish language, the inscriptions of the 11th century A.D. *Beg* is there the noble in opposition to the people (*hakan*); the prince of the Kingdom, *Baran-beg* is given the title of *hakan* by the ruler of the Turkic Kingdom; the "war and valiant" *hakan* who rules the kingdom with the *hakan* are in places distinguished from the body of the people as well as from the nobles; the expression *hakan-beg* after the manner of *hakan*. Cf. the glossary to the inscriptions in W. Reddick, *Die türkischen Inschriften der Mongolen*, St. Petersburg, 1895, p. 138 and 143. In the medieval glossary published by Müller (ed. *Arab. Lexikon* in *Wörterb. d. türk. Sprache*, St. Petersburg, 1900, no index) the word *beg* is translated by the Arabic *Amir*.

(W. BARTHELEMY.)

Among the Ottoman Turks every son of a *Paşa* is entitled to bear the title *beg*; in addition the title is granted to military officers of the 5th and 6th rank (*Alif Paşa*, *Edim Paşa*) as well as by courtesy to the possessors of important diplomatic positions (whence *Beg* *oghlu*, the Turkish name of Persia where the Ambassadors resided). In former times the chief governors of Romania, Austria and Syria bore the title *beg* (*Beg* *oghlu* = Arabic *Amir al-Umara'*, Persian *Amir*, but now these are merely titles of honour. — *Beg* *oghlu* (p.) hence means in general a distinguished man or noble rank. — Further derivatives: *Beg* the rank of a *beg*, any office or position which holds the rank of *beg*. — *Beg* *oghlu*, prime minister, president of the Sultan's chancery (*Divan* *Amir*). Cf. S. Kalka, *Özer Türk, Amir, Beg, Paşa und Amlak in der offiziellen amtlichen Sprache*.

BEGA. (See *ARABIA*.)

BECTEGINIDS, the name of a dynasty in Arabia (Hijaz), founded by Zaid b. 'Uthman al-Khalbi. The latter was one of Zayd's (p. 17) Emirs and was sent by him (539 = 1144) as governor to al-Mawrit in Zayd's name. He retained not only this office but also became lord of Makkah, Hekkar, Teker, Sunkar, Hama etc. The real seat of the family however was Irbid; 'Al had his harem and his treasures there.

and he retained this town for himself when in 565 (1167) on account of advancing years he abandoned his other lands and towns in favour of Kuth al-Din Mawdud (q. v.). After his death in the same year, Irbil fell to his son Zulu al-Din Yusuf, who was still very young, while an elder son, Majd al-Din Kokhali (q. v.) afterwards received the town of Hama from the then lord of al-Hawli, 'Ira al-Din Mas'ud, son of Mas'ud. In the struggle which took place some years later between Salih al-Din and the Zangids, both took the side of Salih al-Din. On the death of Yusuf in 586 (1167) his brother Kokhali became lord of Irbil also and bequeathed his lands to the 'Abbasid Caliph when he died childless in 630 (1242).

Bibliography: Ibn al-Athir (ed. Tornberg), i. and ii.

BEGTIMUR, lord of Khilat from 581—589 (1181—1193). Begtimur Saif al-Din was originally a slave of Shahi Arman Salih al-Din and played a prominent part in the reign of his son Sukman II. As the latter, as Ibn al-Athir states, was childless, the neighbouring princes hoped to be able to seize Khilat on his death. Sukman therefore in his lifetime ordered the chief men of his domain to pay homage to Kuth al-Din Ughlan, Ustajid of Manbil, who was his sister's son, and as the latter died before him in 580 (1182) and his successor was still a child, there was no one to succeed him. On Sukman's death, which took place soon after, who had a legitimate claim to the throne, Begtimur took advantage of the situation to make himself lord of Khilat, after putting Shahi Arman's sister Majid al-Din Ibn Rashid out of the way. He did not meet without opposition however, for at this time the renowned Salih al-Din was preparing to subdue Khilat and other towns in that district. Taji al-Din 'Umar, a nephew of Salih al-Din, put Begtimur's troops to flight, released the Rashids from his imprisonment and was on the point of taking Khilat when death carried him off and left Begtimur master of the field. When his dangerous enemy Salih al-Din died at the beginning of 589 (1193) Begtimur showed an almost insane joy. He took the title from this period of al-Salim al-Mu'azzan Salih al-Din 'Aid al-Ash, and was planning the siege of Majd al-Din when his son-in-law Nasir 'Umar had him murdered. The latter thereupon seized the throne of Khilat, but some years later we again find a son of Begtimur mentioned as lord of the town.

BEHAR. [See *BEHAR*.]

BEHAR-I DANEH. [See *BAHAR-I DANEH*, p. 575.]

BEHARISTAN. [See *BAHARISTAN*, p. 575.]

BEHESNI, derived from the Syriac *Be'nesa*, the *Be'nesa* of the Arabs, a *Kass* and town in the Sandjak Malazgirt of the Wilayet of Mardin al-Ash. The population of the whole *Kass* amounts according to Guizot to 45,120, including 23,600 Muhammadans, 5500 Kurds, 13,071 Kizilbashs, 2829 Gregorian Armenians and the town itself — again following Guizot — has 1500

inhabitants. This figure is probably an error. Balhassanoglu (see below), apparently following Sait's *Kass* gives the number at 22,000 of whom 1500 are Armenians. This would rather agree with the statement of Balhassanoglu and Ainsworth, who estimate the number of houses at 2500 of which 250 were Armenians. The town has a few relics of the past, among them a fortress which was once famed for its strength. Under the Mamluks of Egypt, it was one of the chief frontier-fortresses against the *Sultans al-Bahar*, the kind of the great power, through the Taurus. It was taken as early as 1396 by Timur Shah for the *Umayyad* Mamluk, but it was not till the reign of Selim I in 1517 that it finally became a permanent Ottoman possession, when by the occupation of Hama all the other Syrian border fortresses of the Mamluks fell into the hands of the Turks. After the battle of Nablus (1839) in which Haddi Pasha was defeated by Ibrahim, son of Mahmud Ali, the Ottoman army after its flight reassembled here before its retreat over the Taurus.

Balhassanoglu gives some specimens of the Turkish dialect spoken there in *Kasbi Sami*, 1903, p. 125. (He is wrongly called Balhassanoglu here; Naşib 'Asim is meant).

BEI OGLU. [See *BEI*.]

BEILAN (BAHAN, BEILAN, BEILAN), a village in the Amanus Mountains (Alma-Dagh, see above, p. 312) in North Syria situated in 36° 16' East Long. (Greenw.) and 36° 30' N. Lat. It is the capital of a *Kass* (and therefore the residence of a *Kassim*) belonging to the Wilayet of Hama (Aleppo) with an area of 600 square miles and 10,800 inhabitants; cf. Kusan in *Petermann's Geogr. Mitth.*, Erg. Heft 135 (1901), p. 15. Beilan possesses a picturesque situation and an excellent climate. It fills a deep valley, stretching from east to west between the Kara-Dagh and Djebel Mus ranges, so that its houses of wood stand partly on the banks of the Nahr Beilan (also called *Yerehghadaba*) and partly due to terraces up the northern face of the hill. The fact that Beilan is situated on a slope accounts to a certain extent for the difference in the estimates of the height above sea-level: Schaller and Heudeker (400 feet; cf. Hartmann and Janket: 580 feet; Guizot: 1630 feet; Ainsworth: 1760 feet; *Überhumer-Kimmerer*: 2325 feet). The vegetation (including many fruit-trees and vines) is somewhat here as the land is well watered by numerous mountain streams; the air is very healthy on account of the high situation, and the high cliffs running along the sides of the valley protect it from the oppressive heat; Beilan is therefore a favourite country resort of the fever-stricken merchants of Alexandria (Iskenderia) and is also much visited by the inhabitants of the

Koziya of the Wilayet of the same name. The place at the present day has 2000 inhabitants, who are all Muslims, and is situated on the lake of the same name. According to Ramsay, *Historical Geography of Asia Minor*, p. 590 the town is built on the site of the ancient Karalis. The lake is the Karalis of the ancients and not the Trogitis as Hammer (*Gesch. des orientalis. Lat. Arab.*, t. 1. 400) supposes. The Turkish town was founded by the Seljukids, apparently by 'Ala al-Din I. and was one of the six chief towns of Ispah in the 13th century. It was acquired in 1361 by purchase by Murad I. when his son Bayazit was married to the daughter of the prince of Karakoyun, and it ~~remained~~ definitely an Ottoman possession in 1443 under Mehmed I. Even at the present day the town enjoys a certain importance for the surrounding country on account of its fertile soil and the richness of the lake in fish, which are sent to Koziya and Nigde, as well as for its weekly market on the Saturday. The population suffers much from fever.

BEKTAŠH, an Islamic saint who has given his name to the Bektāshī order of the Bektāshīya. The accounts of Najdī Bektāsh Wali are quite legendary. He is said to have belonged to Nishapur and to have been a pupil of Ahmad Yasawi. The date 733 A.H. (1337 A.D.) given as the year of his death is merely the numerical value of the word Bektāshīya. On the *Maqāṣid* (sayings) ascribed to **BEKTAŠH** Bektāsh and **SHAYKH** *Ṣayyāḥ-nūmā* which relate his miracles cf. Jacob, *Bektāshījī*, p. 4, 7 *et seq.* The tradition that Bektāsh learned the Janissaries under Orghān appears to be a story based on the later connection of the Bektāshīya with the Janissaries.

The story that Bekhtish himself founded the Herak order which bears his name is equally unworthy of credence. Jucob (*Nikushijic*, p. 24) has advanced the supposition that the real founder was the Sultan Baka (died 922 A.H. = 1516 A.D.) mentioned in the list of Great Masters as "second" Pir, and that he has been connected with a mythical Bekhtish Wali. At any rate we can certainly prove the existence of the Bekhtish order under this name only from the beginning of the 17th century. The religious movements which have

been organized by the order in the west of Turkey, is however older and even after the foundation of the order has spread far and wide beyond its limits. The Bektaşî (‘Red-heads’) in the east of Asia Minor and in Kurdistan and the ‘Alî-shîhî (those who dwell ‘Ali’ in Persia agree in their main doctrines with the Bektaşî; they lack only the right organization of the order. In some districts, particularly in Albania and in the Sandjak Tekke in Lycia (Jacobs, *Türkische Zeit.*, 14, 13 et seq. has shown that the Tekkîcîs discussed by Leuchow in the *Archiv f. Anthropologie*, 11a are Bektaşîs) the Bektaşîs are a sect rather than an order, for almost the whole population belongs to them.

In the doctrines of the Betanians the Sufi ideas of the original equality of all religions and of the worthlessness of external ceremonies play an important part. Many Christian, Gnostic and pagan elements have remained incorporated to Swedish doctrines.

Although they for the most part profess to be Snnis some few indeed possess Snnal characteristics, as their liturgical attitude to Ali b. Abi, of Jacobi, *Bektashijja*, p. 20), the Bektashis are, as far as one may reckon them adherents to Islam, extreme Shi'ites and revere 'Ali, while the names of the first three Caliphs are tabooed. They recognise twelve Imams and among them particularly revere 'Ali b. al-Sadiq. The fourteen *Murshids* ("the pure, innocent children"), namely 'Ali and twelve others, enjoy the highest esteem. Graves of saints are held in such honour that prayers offered at them may take the place of ritual worship. The Bektashis have often settled at old and famous places of pilgrimage and thereby made them their own.

The important Christian elements which are found among the Bektašs, give rise to the hypothesis that they were originally Christians who have only adapted the external ceremonies of Islam. They have the doctrine of the Trinity, in which 'All has taken the place of Jesus (Allah-Muhammad*All). At their meetings in ~~the~~ *Makdan aşya*, the hall of assembly in the monastery (*Fekkiye*); these correspond to the *Zide* of other *Isma'ili* orders, although the Bektašs themselves deny that they have *Zide*; they celebrate a sort of communion with the sharing of wine, bread and cheese. This particularly recalls the *Arizistiles* who are connected with the *Manichæans* (cf. Jacob, *Festliche von arabischen Mysterien und Alev-Christenthum im Islam: Der Islam*, II. p. 232 et seq.). They also confess their aim to their *Beğs* (*whisks*) and receive absolution. The drinking of wine is not forbidden on account of the importance of the wine in the cult. Their ~~order~~ also do ~~not~~ ~~not~~ ~~not~~ tell. One section of the Bektašs lives in a ~~state~~ of celibacy. This was probably originally the rule; a particularly strong testimony to the non-Islamic origin of the sect. The occult tendencies were chiefly manifested in the *Khal-Beli Sulhan Monastery*, at *Amnigöla* which was very powerful in the most flourishing period of the order and was broken up in 1876.

The *Bektaşî* have adapted the mystic doctrine of numbers (for the most part Pythagorean) from *Khalîlî*, whose *Değişim* in the Persian text and the Turkish edition by Farukioğlu, *Değişim* is held in high esteem by them, particularly the cult of the number ten.

and they have further developed the system independently. They also believe in the transmigration of souls.

The whole order is governed by the Grand Master (*Çelebi*) who resides in the mother-monastery (*Avrânî*) at *Hasâdî* Bektaşîh (between Kirsehir and Kütahya; cf. the picture in Jacob's *Bektaşîh*) and the description in Edmund Neumann's *Der Goldenen Horn zu den Quellen des Euphrat*, p. 193 et seq.). This office is not necessarily hereditary but it has been transmitted from father to son for the last 150 years. The narrower circle of celibate Derwishes has since the middle of the 18th century had a head of its own, the *Müftüvân-ı Bektaşî*, who also resides in the mother-monastery. The head of a single monastery (*Tekkiye*) is called *Müşî*, the ordinary Derwish *Mürîd*, a layman attached to the *Tekkiye*, *Münâzîk*.

The dress of the order of Bektaşîh consists of a white cloak and a white cap (*sikke*), composed of several, usually twelve triangular pieces (corresponding to the number of the *İsmâs*), around which the Bektaş wear the green turban (cf. the pictures in Jacob, *Bektaşîh*, and *Türk. Bild.*, ix.). The symbol of stone called *Taş-ı Taş* is usually worn round the neck. The double ear and long staff complete the full dress. Those Bektaşîh who practice celibacy wear earrings as a distinguishing mark.

The political importance of the Bektaşîh depended on their close connection with the Janissaries, whose chaplains they were. The Janissaries are often actually called Bektaşîh or sons of *U. R. (U. R. Bektaşîh oğulları)*. An official representative (*mukîm*) of *Hasâdî* Bektaşîh lived to the barracks of the 4th *Orta*. The Bektaşîh were accessory to many of the Janissary revolts. Therefore when Mahmud II annihilated the Janissaries in 1826, this blow also fell on the order allied to them. Many monasteries, especially those in the neighbourhood of Constantinople, were destroyed and their occupants for the most part hounded, although some of their heads, e.g. of the monastery of *Menlikli* (cf. *Enâl Eşrefi, Üstî Zâfer, Constantinople 1223*).

Although the order has never regained its former powerful position, it has again become more and more flourishing and at the present day is much stronger and more widely diffused than is generally supposed. On the monasteries in the neighbourhood of Constantinople see the appendix in Jacob's *Bektaşîh*. In Asia Minor besides the "mother monastery", *Özmenlik* in the north and in the west the *Tekkiye* at the grave of *Hasâdî* as *Bektaşîh* are important centres. There are a few isolated monasteries outside of Turkey e.g. on the Caucasus in Celso.

Bibliography. The chief work is Georg Jacob, *Die Bektaşîh in ihrem Verhältnis zu vornehmsten Brüdern. Abhandl. der K. Bayer. Akad. der Wissensch.*, 2. Kl., 21. v. Part III. (München, 1900) — cf. the authorities given there p. 4—12; do. *Beitrag zur Kenntnis der Derwischorden der Bektaşîh: Türkische Bibliothek*, 12. (Berlin, 1908). To the Oriental literature given by Jacob, loc. cit., should be added the recent apologetic work *Bektaşîh Sîri* by Rifî (Constantinople, 1326 = 1910).

BEL (T.), the "middle of a mountain", "pass". Occasionally appears in place-names.

41. BELADHORI [See 41. BALAHOR, p. 611.]

BELSIS. [See BELSIS.]

BEFORT [See KALAT AL-MANIKIF.]

BELGRADE (Slov.: "white town"), the capital of Serbia. The possession of Belgrade was often fought for by the Ottomans and the Holy Roman Empire. It was first besieged in 1456 (1457) in the reign of Sultan Murad II by 'Alî Bey, son of Ewrenak, and hemmed in by land and water but supported by the Hungarians and defended by Pál Zrinski of Ragusa. It was able to hold out for six months, till it was relieved by the intervention of Vladislav, king of Poland. Murad II (1460—1482) made great preparations for the capture of the town; he had collected over 300 cannon. Nevertheless the attempt to storm the town, led by the Sultan himself, was brought to naught by the bravery of Hunyadi and Capistrano (21st July). — The fortress was not won for the Turks till the reign of Sultan Selim I on the 25th Ramadan 937 (29th August 1521). Belgrade had to surrender, for its supplies were exhausted. The Bulgarians who belonged to the garrison were allowed to found a village in the forest to the south of Constantinople; they called it Belgrade and it bears this name to the present day. The older Belgrade was besieged in 1699 (1698) by the Imperial troops and given up by the Ottoman governor Yegem Ökmen without a fight. Two years later the Grand Visier Köprülü Mehmed Paşa regained it. Jajić who was present on the occasion jokingly calls the town *Şîr al-Ağâk*: "spring of bad intentions" (Seyfiddin, *Türker Arak, Handwritten*, p. 70 et seq.). The Imperial forces attempted in vain to recapture it in 1695 (1693). Five years later, Belgrade was destroyed by a great conflagration (5th Jumada I, 1100 = 22nd November 1695). After Prince Eugene had won the battle of Peterwardein (5th August 1704), the Imperial troops appeared before the town to attempt by the Turks to blockade them led to a great battle under the walls of the town in which they were utterly routed (16th August, 1717). On the second day after this battle the fortress surrendered on being granted honourable terms. On the Peace of Passarowitz (21st July 1718) it passed to Austria. In 1739 (1739) the Ottomans again undertook a siege of the town and by the Treaty which bears its name, it was ceded to them (27th Jumada I, = 1st September). In the beginning of the reign of Selim III, the Austrians recaptured Belgrade after the battle of Fakhani (1803 = 1789) and held it till the Treaty of Tilsit (6th August 1807). The unity of the Janissaries of the garrison (1803) facilitated the revolt of the Serbians (1806). They made Belgrade, which had been captured by Kara-George, their capital, till they were defeated in 1813, by Radetzky, Pasha of Wallachia. Belgrade received a Turkish garrison, which only vacated the citadel in 1867, after bombarding the town (which had again been the capital since 1832) in 1862.

Bibliography. Hammer-Purgstall, *Gesch. des Osman. Reichs*, 2. Aufl.; Johann, *Turkei*, p. 352, 366, 390. (L. HUART.)

BELIG, the name of two Turkish poets, who are often — even by Turks — confused or mistaken for one another, viz:

1. İsmail BELIG of Bursa. Little is known of his life. Like his father he was an *İsmâ* in Bursa, where he was born and died. Accounts differ as

in the year of his death. Shams given 1140, Hajjili Khalifa, 1143, and once by 1133, with the biography at the end of his printed works (see below), 1142 or 1143 A.H. The latter = 1730 or 1731 A.D. is the most likely. Of his poetical works which are said to be in Persia, are there mentioned: 1. *Gulshān*, a commentary on a hundred *Madhūba*; 2. *Sargamāsh-tān*; 3. *Shāfi-ā-nāma*, according to Hajjili Khalifa composed about 1125. A *Shāh-nāma* is attributed to him by *Shams*, but this is probably a confusion with the other Helig. He is said in addition to have written a biography of poets. His chief work however is the *Shāh-nāma* *riyāzi* 'Irfān wa-ṣafāyat-i *Shāh-nāma* *shāh-nāma*, printed in Russia in 1302. It consists of five parts (*qutub*) in which the most prominent people of Russia (Sulajans, princes, nobles, poets, courtiers etc.), are dealt with. At the end of the printed work is a biography of the poet.

Bibliography: Hajjili Khalifa; *Shams*, *Shams* and the above mentioned biography.

2. **Muhammad Emin** Baka of Larissa (Turkish Venizhehr). Little is known of his life either he belonged to the 'Mens and on his death in 1774 = 1758-1759 held the office of *Kāsh* in Eski Zaghra. He was not a great celebrity, and the verbiage of Turkish *Shams* on him rather. Hammer does not mention him, but Gibb rightly emphasizes his importance. His *Kasidas*, *Qasidas* and *Shams* are of mediocre quality. His most original work is his four poems: *Hamam-nāma*, *Asfāgh-nāma*, *Shāh-nāma* and *Shāh-nāma*. In these, influenced by Mevlevi's *Shāh-nāma*, he describes the beautiful youths engaged in the trades mentioned in the *Shams* and the same time gives us very interesting glimpses of the life of the time. In these he writes relatively pure Turkish. Unfortunately his fondness for exclusive expressions renders his style cumbersome.

Bibliography: Gibb, *A History of Ottoman Turkey*, iv. 117 et seq. In the index he is confused with the preceding. (P. OSMAN.)

BELVOIR, a fortress of the Crusaders in South East Galilee, high above the valley of the Jordan, called Kawwan by the Arabs, the modern Kawwan al-HAWA. The castle, built by King Fulk about 1140, passed in 1188 into the possession of the order of Knights-Hospitalar. In 1264 (1265) it fell into the hands of Salāh al-Dīn after a long resistance. Al-Muḥammadī of Damascus demolished the fortress in 1215 = 1214, as he did not feel strong enough to hold it against the Franks. It thus ceased to play an active part in history although it is still occasionally mentioned in later documents. In its considerable ruins *Shams* is a village at the present day.

(K. HARTMANN.)

BENARES, or BANARAS (also called KĀSH), a holy city of the Hindus, United Provinces, on the r. bank of the Ganges: pop. (1901) 209,331, including 53,566 Muhammadans, of whom many belong to the Mughal or weaving class. Some descendants of the Mughal Emperors of Delhi reside here. Benares is not prominent in Muham-

madan history, except for Awrangzeb, who raised to the ground the most sacred Hindu temple and built on its site a mosque, whose white domes and minarets are still the most conspicuous object from the river. He also changed the name of the city to Muhammadabad, in which style it appears on his coins. There are other mosques and *darshanas*, constructed from Hindu or Buddhist materials, which date back to the 14th cent.

Bibliography: M. A. Sherring, *The Sacred City of the Hindus* (1808); E. B. Havell, *Benares* (Calcutta, 1906); *Benares Gazetteer* (Allahabad, 1906). (J. S. CUTTON.)

BENDE, the Persian word for slave. The number of slaves still in existence in Persia is gradually decreasing. The black slaves come from Africa and are introduced while still young, usually via Mekeş and Shiraz, more rarely via Arabia and Baghdad. A distinction is made between Abyssinians (*Yahudi*) and negroes (*Zangji*); the former are preferred for their beauty and intelligence. The few white slaves are Turkomans or Baluchs. Some Kurdish tribes sell their daughters to Persian families, but these girls are usually afterwards married to a member of the family and therefore cease to be slaves. This formerly was also the case with Christians. The Russian occupation of the Caucasus and the English cruisers in the Indian Ocean have now put an end to this trade. Besides, the climate of Persia is not suited for negroes, who cannot rear their children there and certain illnesses carry off half-breeds in the second or third generation. — The eunuchs also are slaves or freedmen. They are all black, the few white eunuchs, who had been taken to the Caucasus war, having died in 1856. — The word *bende* has having taken the meaning of "servant" and is used as a polite way of referring to oneself: *bende* = "your servant", i.e. "I", similarly in Turkish *bende* *bende*.

Bende is also the *Takht* or penname adopted by Mirza Muhammad Baki of Tabriz, a Persian poet who was employed as calligrapher and secretary in the government *Shams* in the reign of Fakh 'Ali *Shams*. He died in 1222 (1807) and was buried at Nedjef. He has left poems in Arabic, Persian and Turkish, as well as some writings in prose (*Zinat al-ma'arif*) dedicated to the *Shams*.

Bibliography: J. E. Polak, *Persien*, Vol. I, p. 247. — *Rijā-Kull-Khān*, *Madīnat al-Burj*, Vol. II, p. 80. (CL. HUERT.)

BENDER, the chief town is Bessarabia, on the right bank of the Dniester. This town was built on the site of a Genoese fortress dating back to the 15th century. It belonged to the princes of Moldavia, then to the Turks, who changed its old name of Tigiu to its present one. The Swedish king Charles XII (called *Demir-bash*, "Iron Head" by the Turks) fell *Shams* here after the battle of Poltava (8th July 1709). He had a house built outside the walls and it was in it that he was besieged and taken prisoner (21st February 1713, when he declined to leave Bender. It was taken by assault after a two months' siege by the Russians on the 27th September 1710; occupied again in 1739 and in 1806, it was definitely ceded to *Shams* by the treaty of Bucharest (28th May 1812).

Bibliography: J. de Hammer, *Histoire de l'Empire ottoman*, xii. 208, 248; 261, 266; *Immanin et Van Ozer*, *Parguir*, p. 323, 363; *Wāṣil*, *Madīnat al-Shāh*, Vol. II, p. 60.

(CL. HUERT.)

BENDER, in Persia, a harbour on the sea or on a large river, it has passed into the Arabic of Syria and Egypt with the sense of place of trade or exchange of money (Bazaar, Vallah) and even workshop (Cochet). *Bendir* is the Syriac of the merchants, the *Bendim* are the word to designate their consuls abroad. *Bender-Ges* is the name of the harbour of Amvridia on the Caspian Sea. (CL. HUANT.)

BENDER-ABBÄS, a Persian seaport situated in 36° 20' East L. (Greenw.) and about 37° North Lat. in the west-end of the province of Fars, near the Persian frontier. From its geographical position it is the most advantageous point on the whole Persian coast: for, built on the southern bend of the strait of Hormuz (Ormuz) the town with the islands in front of it, commands the entrance to the Persian Gulf as well as to the Gulf of Oman. Just opposite is the long island of Kishm (Arabic Faris = the "long") which is only separated from the continent by a narrow channel, called Clarence Strait on the maps. To the east of Kishm are two small islands, the southern of which is called Larak and the northern Hormuz (q. v.).

In antiquity and during the greater part of the middle ages, the capital of this district was the town of Hormuz (in the dialect: *Armoz*, *Armoz* etc.; Arabic Hormuz) half a day's journey distant from the shore. On account of the constant raids of robber nomadic tribes, the then prince of the town transported the inhabitants in the beginning of the 15th (15th) century to the adjacent island of Hürm, which has since then generally been known by the name of Hormuz (Ormuz). The abandoned settlement on the mainland (Old-Hormuz) soon fell into decay (its ruins still exist at the modern Minah), while the newly founded town on the island (New-Hormuz) quickly attained considerable importance and became the chief emporium on the Persian Gulf and an international harbour for the waters of the Orient. When at the close of the decline of the rule of the Aq-Qoyunlu (see above, p. 225, 441) and the rise of the Safavids, there was no strong authority in South Persia, the Portuguese under Albuquerque seized the island of Hormuz in 1502 (1504) and were left in undisturbed possession of this valuable island for over a century. When the English appeared in the Indian Ocean, they, being jealous of the influence of Portugal, supported the efforts of Shah 'Abbas I. to whom this flourishing European colony at the gates of his kingdom was a thorn in the flesh. With the help of a fleet of the East India Company he took the island from the Portuguese and utterly destroyed the town in 1701 = 1622; cf. above p. 82. The successor of New Hormuz was the already very old settlement of Gombroon (Gomron), directly opposite the island which had been used by the Portuguese as an occasional landing-place on the mainland, where English, French and Dutch factories had recently been built.

The older Arab geographers mention a fishing village on this site, called *Sard* (Sard) whose inhabitants, as *Maqdisi* tells us, carried on commerce with the opposite coast of 'Oman. *Muawiz* in 740 / 1340 calls this place *Thar* (?). As to the name Gombroon or Gomron, which with many variants (Gambroon, Nombroon, Combraro etc.) was the usual one among Portuguese and European travellers of the 15th and 17th

centuries, it can hardly be explained, as has often been done, as derived from the Turkish meaning Custom House (corruption of the Turkish *gömrük* = toll) but is rather connected with the earlier name of the island of Hormuz, *Hürm* or perhaps better *Hürmān*; according to the latter reading of the name, *Gombroon* (Gombrōn) would have to be regarded as a form of the name in which assimilation has taken place in compensation for the loss of the double consonant (a phonetic change for which other examples could be quoted), just as the name of the Hormuz on the mainland had been transferred to the island of Hürm, the latter older name seems to have been transferred to the town on the neighbouring coast.

Shah 'Abbas gave to the village of Gombroon which soon became prosperous on the fall of New Hormuz, the name of Bender-Abbās = "Harbour of 'Abbās", which it still bears. But the plan of the Persian king to make his foundation the centre of a foreign trade which was to be gradually developed, could not be fulfilled on account of the disinclination of his subjects for nautical affairs. As the successor of Hormuz, Bender-Abbās inherited and filled for over a century its role of a maritime commercial centre, though in a much more modest degree. A dangerous rival arose to it in the harbour of Bushir (Būshīr, q. v.) called into being by Nadir Shah, which soon obtained the commercial supremacy of the Persian Gulf.

In 1795 Sayyid Sultan, the ruler (Imam) of Makhar (in Oman) received Bender-Abbās with the adjoining lands along the coast (from Lingah to Yashk) on lease, and it was retained till 1854 when the Persians again occupied the town. Sayyid Sa'īd, the then prince of Makhar was able in 1856 to obtain an extension of the terms of the lease for a further 20 years but under much less favourable conditions. The town and district is now ruled by a Persian governor of his own. The importance of Bender-Abbās has increased again considerably in the last decades so that it now ranks as the second commercial town on the Persian Gulf immediately next to Bushir. The revival of Yazd and Kirman and the cultivation of quinine, which is being constantly extended, has contributed much to the continual increase in the volume of trade there. The commerce is almost entirely in the hands of native and Indian merchants. On the amount and development of exports and imports cf. the statistical tables given in *Schlegel-Andreasen, op. cit.*, p. 76, 77 and *M. v. Oppenheim, op. cit.*, p. 321, note 2, which are based on material from English official sources. Almost all the eastern provinces of Persia as well as eastern Persia send their products to Bender-Abbās; traffic by land is rendered possible by three roads of which two run in a north-westerly direction from Shiraz (the one via Lar and the other via Kirman) while the other runs north in a fairly straight line to Kirman.

The harbour of Bender-Abbās is the next best to that of Bushir; it is on the whole well sheltered, being only open to the winds from the south-east; but the flatness of the coast makes the landing of large ships difficult. The passage through the above mentioned Clarence Strait is rendered difficult by shoals and by the mangrove islands which are submerged at flood-tide. The anchorage at 3 fathoms deep is one mile from land and at 4 or 5 fathoms, two miles.

As to the modern town, its appearance, with its low mud houses, many of them in ruins, suggests a village rather than a town. Only fragments remain of the earlier fort and the European factories. The custom house (*adwakh*) dates from the Portuguese period. The Serai, the residence of the governor is a modern building of one story. Gardens surround the town on both sides; the coast is in part overgrown with mangrove bushes which afford a welcome supply. In the background rises a high mountain wall with peaks rising to about 10,000 feet.

The climate of Bender-Abbas is usually described as very unfavourable. The heat of the sun in summer is terrific; to ~~some~~ the burning heat, the population for the most part migrate in the hot season to Minab lying just at the foot of the mountains (near the ruins of Old Hamak) or to other high lying places in the neighbourhood. For purposes of ventilation the houses are usually furnished with towers. The supply of drinking water is also bad; the large cisterns built by Shah Abbas I are still pointed out.

The inhabitants are for the most part Arabs. They have a reputation for being unruly, and in conjunction with the Arab tribes of the hinterland, give much trouble to the Persian governments by their taxes. Under Abbas I the population is said to have risen to 20,000 souls; even in 1674 Chardin numbered the houses at 1400—1500, which would give 15,000—20,000 inhabitants. Since the middle of the eighteenth century the number has declined, a fact which is partly to be explained by the dangerous competition of Bushir, which began at that time. Dupré's estimate 20,000 (in 1808) is certainly much too high, Fraser (1870) estimated the number at 3000—4000, Kelly (1864) 500 ~~houses~~ (about 4000—5000 inhabitants), Stoliczka-Andreas: 8000 inhabitants; the latest figures of Loyd (7000 inhabitants) and Curzon (5000 inhabitants) seem to show a recent increase in the population there; so the last two estimates seem correct in *Petersmann's Geogr. Mittheil.*, Erg. Heft, Nr. 35 (1901), p. 10. The already mentioned unhealthy condition of the town forms a serious obstacle to its even attaining any great prosperity.

~~Benar~~ (Sanskrit. *Abhaya*, Avest. *Abaya*, Pahl. *may*, Beng. *benap*), strictly the name of various

kinds of hemp (*Hyoscyamus niger*), is in Persia however the popular name for the *flax* (*Corallie Indica*). It is sold in the form of leaves or pills (*ben*). Such pills are also pounded up and placed in fresh milk from which "Beng-butter" (*ben-gan-i tang*) is prepared. A tea-like infusion (*ben-ab*) is also prepared from the flax (1—3 grammes a dose), which is regarded as an excellent remedy for acute urethritis. — The Arabs have borrowed the word in the form *benji*.

Browne, *Literary History of Persia*, II. 205; *A Chapter from the History of Cananah India* (St. Bartholomew's Hospital Journal, March 1897); E. Quatremère, *Harat et Afghani*, I. p. 226 n.; Schlimmer, *Terminologie pharmacologique*, p. 102. (C. HUXLEY.)

BENGAL, the largest and most populous province of British India, comprising the lower courses of the Ganges and Brahmaputra rivers, together with their joint delta. The name does not appear in any Muhammadan writer before the end of the 13th cent. As a Muhammadan province, its area and limits were practically the same (though there were frequent changes on the frontier, especially on the W. and the N. E.), from that period until the end of the 16th cent., when it was regularly absorbed by the orders of the Emperor Akbar. On the south the province was bounded by the swamps of the Sundarbans and by the Jasse ~~river~~ which then made Orissa practically inaccessible; the eastern frontier followed the river Megna northward, and then turned eastward to include Silhet thence it passed along the lower slopes of the hill country of southern Assam to a point on the Brahmaputra near Dimal. The northern boundary extended from this point westward along the south of the Kac Bihar state, and thence along the Terai to the river Kool. To the ~~west~~ and north-west the frontier extended little beyond that river, but under some of the earlier Sultans the kingdom of Bengal included North ~~India~~ as far as the river Gaudak. South Bihar belonged to Bengal only for a short time, and the more permanent boundary line of Bengal to the south of the Ganges started from Calcutta, including Rajmahal, passed to the confluence of the Jharkar and Damodar rivers, and then followed the western boundaries of the modern districts of Hughli and Howrah down to the point where the Rupnarayan river runs into the Hughli. Speaking generally, therefore, the dominions of the Sultans of Bengal included most of the present districts of the Burdwan, Presidency, Dhaka, Rajshahi, Bhagalpur and Patna (north) divisions, and embraced an area of about 75,000 square miles." (H. N. Wright, *Catalogue of Coins in the Indian Museum*, Calcutta, iv. 140).

In English official usage the word Bengal has borne many significations. At first it was applied to the area ceded in 1765 by the *dund* grant of Bengal, Bihar, and Orissa, forming the original Bengal Presidency. Then it was extended to the acquisitions gradually made in Northern India, until it came to be coextensive with all British territory that was not included in one of the other two Presidencies of Madras and Bombay. This signification lasted until quite recent times for the Bengal army and the Bengal civil service. In 1854 a lieutenant-governor was appointed to the province of Bengal in its original sense, which

hitherto been administered by the Governor-General in person, or in his absence by a deputy governor. Finally, in 1895, the eastern portion with ~~which~~ was constituted a ~~new~~ Lieutenant-governorship, leaving the old name for the portion round Calcutta, together with the sub-province of Bihar, Orissa, and Chota Nagpur. In this official sense, the area of Bengal is 148,592 sq. m.: pop. (1901) 54,662,524. But, for the purposes of the present article, Eastern Bengal may be included, ~~making~~ 50,000 sq. m. to the area and 25 millions to the population.

At the time of the Muhammadian conquest, the greater part of Bengal was ruled by a Hindu dynasty of the Sen family, with its capital at Nadia, while Bihar was under a Hindu dynasty of the Pal family, who had been driven from Bengal by the Sens. The Muhammadian conquest of Bengal was almost contemporary with their conquest of Hindustan, being accomplished during the lifetime of Mu'iz al-Din Muhammad Ghori. About 1197, one of his generals, Muhammad Bakhtiyar Khilji, conquered Bihar, and two years later advanced into Bengal with a small body of horse. The last Sen king, named Lakshman, fled ignominiously from his capital, and thenceforth all Hindu resistance ~~ceased~~ to have ceased. For more than a century (1202—1339) Bengal was ruled by a succession of 25 Muhammadian governors, ~~some~~ or ~~less~~ subordinate to the Delhi emperors, with their local capital at Gaur (or Lakhnauli), while for the later portion of this period Eastern Bengal revolted against Delhi; and for a second period of two centuries (1338—1537) there are reckoned 24 independent Muhammadian kings, who usually also had their capital at Gaur, or at the neighbouring cities of Pandua and Tānda, now all alike in ruins. In 1537 Humāyūn conquered Bengal, only to be driven out shortly afterwards by his rival, ~~Shah~~ Shāh. In 1576 Bengal was finally annexed to the Mughal empire by Akbar, and then follows a third period of nearly two centuries (1576—1757) during which about 30 governors each acknowledged his appointment from Delhi, though lately such recognition was only nominal and the office tended to become hereditary. Akbar's Rajput governor, Man Singh, fixed the capital at Rajmahal on the Ganges, not far from Gaur, whence it was soon removed to Dacca (then on the Arakanaputra), for convenience in dealing with Portuguese and Arakanese pirates. In 1704, Murshid Kuli Khān transferred it ~~again~~ to Murshidabad, on a branch of the Ganges then frequented by European traders. After the battle of Plassey (1757) the Nawabs of Bengal became dependent on the British, without any express surrender of sovereignty other than contained in the *Amrit* given to ~~Shah~~ Shāh 'Alam. Their descendants now took as the first nobleman of Bengal, with the title of Nawab Bahadur of Murshidabad.

In 1901, before the division of the province, the number of Muhammadians in Bengal was 25½ millions, being two-fifths of the number in all India. The proportion to the total population was 33%, though in some districts of eastern and northern Bengal the proportion rises above 75%, and in the new province of Eastern Bengal and Assam the proportion is 56%, compared with 10% in Western Bengal and only 1% in South Bihar. This irregular distribution can best be ex-

plained by assuming that the inhabitants of the delta belong to aboriginal races, who were never admitted into the higher castes of Hinduism and therefore received Islam readily from their conquerors. It has been proved by anthropometric evidence that the vast majority of the Muhammadians in Eastern Bengal cannot be distinguished physically from their Hindu fellows; and it is also true that they preserve to this day many Hindu observances and superstitions. It may be added that, apart from some slight amount of conversion, they certainly increase at a quicker rate than the Hindus, which is attributed to their occupation of a more fertile region, their use of a more nourishing diet, and their permission of widow marriage. Almost without exception they belong to the Sunnī sect, and describe themselves as Shāfi'is, which is the usual name throughout India for the descendants of converts. The number of Saiyids in 1901 was 236,468, of Pathāns or Afghāns 423,740, and of Mughals only 18,678. The doctrines of the Wahhābī sect were introduced into Bengal early in the 19th cent. by two separate movements. One of them, derived from Salyid Ahmad Shāh of Rāt Durrā and subsequently headed by Mawlānā Karīm al-Dīn (q. v.) of Dhaka, had its headquarters at Patna. The other, which was mainly local in Eastern Bengal and confined to the lower classes, is associated with the name of Undīy Mīrān, a seaver of Fardus district. Their followers are generally known as Farāqī (q. v.) or followers of the *farāq* or obligatory ordinances of the religious law. Apart from Hindu superstitions, certain forms of worship not based on the Korān are common among the Muhammadians of Bengal. Such are the adoration paid to departed *pirs*, often of local origin, and the homage of certain mystical *puer*ages, among whom Khwāja Khwān stands pre-eminent as the originator of seamen from shipwreck.

(J. S. CORRIE.)

BENGHĀZĪ (so called after a Marabout whose grave is farther to the north on the sea shore) is the economic capital of Cyrenaica and the seat of the government of the Turkish province of Benghazi. It lies at the north end of a bay open to the west, not more than 10 feet deep and badly protected by a dilapidated breakwater (the

larger vessels have to anchor at a considerable distance out and in winter cannot unload in rough seas; and is enclosed on the east by a salt bed dry in summer, on the westward by a sand-flat which is often inundated, so that it is only on the north that there is good ground communicating with the continent through a palm-grove. The surrounding country is very fertile, but is not yet cultivated very intensively and so appears desolate and dreary. There are no ancient ruins, with the possible exception of some foundations of a quay but the soil is rich in sculptures, vases, inscriptions and coins. The deeply built mosques, synagogues, churches and one or two storied dwelling houses call for remark. In the west of the town is a large Ka'ba, in which the Mithras lives and the military also are quartered. There are Turkish and Italian Post Offices, an Italian school, and branches of the Banco di Roma. From its situation — although the harbour which year by year becomes more silted up and the lack of drinking water which has to be brought in from the country, are grave disadvantages — Benghazi commends on the one side the trade of the eastern part of the Gulf of Sidra and the northern coast, on the other the commerce of the western two thirds of Cyrenaica and the caravan routes by the Awjila where the south branch, s. to Kufra, the middle south east to Tilsat and Waddi, s. to Murzuk. Through political changes in the central Sudan it temporarily attained (to the detriment of Tripoli) a larger sphere of commerce but soon gradually sank again to its former insignificant position so that at the present day its inhabitants may be estimated at from 12,000—15,000, of whom the greater part are Muhammedan. There are also, strongly mixed with negro blood, 1200 Maltese, Greek and Italian as well as a few other Europeans and 2500 Jews. The imports comprise cotton stuffs, linen, olive oil, soap, candles, petroleum, sugar, coffee, rice, tea, wood, and charcoal; the exports consist mainly of cattle and corn to Malta and Crete, wool to Marseilles, and apricots. Large quantities of salt have been obtained by the government from the *Salghar*. The exports averaged for the years 1903—1904: £ 455,700 in value annually and the imports only £ 214,000. There is a regular fortnightly service of steamboats from Malta via Tripoli to Alexandria and from Alexandria to Malta four times a month. The settlement of Euhesperides founded about 500 B. C. by the king's (Archelaus IV) party, probably on an older native site, was called Berentee after the occupation of Cyrenaica by the Romans of Egypt in honour of the wife of Ptolemy III. Its temporary prosperity, largely due to the large number of Jews there, gradually declined as the land became desert, and did not revive till the middle ages during the period of Genoa's supremacy in the Mediterranean, when it was known by the name of Berail (*Yāsil, Berailion*, l. 593, *ibid.*, col. Dux and de Goeje, l. 122 et seq.). With the decline of the Italian republics, Benghazi also began to sink from its prosperity; the stirring times of the Corsica did not help it either and in 1820 the town now called Benghazi had only 2000 inhabitants.

BENIKA, the government offices of the Mahdian in Morocco. The Benika are large rooms in one of the courts of the Dar al-Mahzen in Fez (Fez) or wherever the Sultan is for the time. The officials reside there with their secretaries and so that Benika is the palace. The following are the officials: each entitled to a "bonika" the *Wazir* (Minister for the Interior), the *Wazir al-Hajj* (Foreign Minister), the *Amin al-Din* (Minister of Finance), the *Amin al-Hajj* (in charge of the revenues), the *Amin al-Shikha* (connected with the expenditure), the *Amin al-Hisab* (Accountant-General), the *Wazir al-Shikha* (Minister of Justice) and the *Shaykh* (Chamberlain, who has control of the Sultan's household). Each Benika therefore has a minister in the European sense of the word at its head (*Aslin, La Marn d'empire d'Al, Chap. 11*).

BENJAMIN. [See *MARATHAS*.]

BERAR, a province in India, lying between 19° 35' and 21° 47' N. and 75° 50' and 29° 11' E., bounded on the north by the Salpur hills, on the east by the river Wardha and on the south by the river Penganga. The population (in 1901) was 2,554,016, of whom 222,010 were Musalmans. Berar was first invaded by the Muhammedans in 1296 but was not permanently occupied until 1318, when it became part of the Bahli empire. It formed one of the provinces of the kingdom of the Bahmani Shāh (q. v.), and constituted the dominions of the 'Imād Shāh (q. v.) when 'Imād al-Mulk, governor of Berar, proclaimed his independence in 1490, in the reign of the Bahmani king Muhammad III. When the 'Imād Shāh dynasty came to an end in 1575, Berar passed under the sway of the Nizām Shāh kings of Ahmadnagar, and in 1598 was annexed to the Mughal empire. When in 1724 Asaf Jihā, who had been appointed viceroy of the Bahli with the title of Nizām al-Mulk, made himself independent, Berar ceased to be a province of the Mughal empire and from that time has been nominally subject to the Nizām of Hyderabad. By the treaty of 1853 Berar, together with some other districts, was assigned to the East India Company, its revenues being employed partly in the payment of debts contracted by the Nizāmshah State and partly in maintaining the Nizāmshah contingent. In 1902 the British Government entered into a fresh agreement with the Nizām, whereby the rights of the Nizām over Berar were reaffirmed and the province was leased to the Government of India at an annual rental of 25 lakhs of rupees (£66,666).

BERĀT. [See **BALEĀ**, p. 691.]

BERBER, a town in the Anglo-Egyptian Sudan, lying on the Nile in 13° 1' North Lat. and 33° 59' East Long. (Greenw.). The town which as "the key of the Sudan" formed the starting point for the roads to Assuan and Sawdikh, was the seat of a *Mah* nominally dependent on the Fung kingdom of Senkile, till it was forced to recognise the suzerainty of Egypt in 1821. In 1884 it fell into the hands of the Mahdi Muhammad Almahdi and Gordon became completely invested. In 1897 it was abandoned by the Mahdists and occupied by Kitchener. It became the centre of the *Mudiriya* of the same name. In 1903 however the seat of government was transferred to al-Damer. The railway from 'Athara to Fort Sudān and Sawdikh (Senkile), opened in 1906 seriously affected the caravan traffic from Berber and destroyed the importance of the town.

Bibliography: J. L. Burckhardt, *Travels in Nubia* (London, 1822), p. 193—228; E. A. W. Budge, *The Egyptian Sudan*, ii. 403; Gleichen, *Handbook of the Sudan*, i. 335; Roddeker, *Egypt*, 4th edition, p. 409—410. (R. HARTMANN.)

BERBERĀ, the chief town and harbour of British Somaliland, lying in 10° 26' North Lat. and 45° 4' East Long. (Greenw.). The *Periphi mari: Erythraei*, as well as Ptolemy and Cosmas give the name *Βερβερε* *ἢ Βερβε*; or *Βερβερε* to the coast of the Land of Frankincense; the town itself is probably identical with *Mada Berber*. The older Arab geographers know only a land of the name of Berber, after which the Gulf of 'Aden is called *Bayr Berber* or *al-Bahri al-Berber*. The land owes its name to the natives who are called *Βερβεροι*, *Berberi* or *Berberi*. The people whom Yāqūt (iv. 601), describes as being between the *Land* and the *Habash* are apparently the ancestors of the modern Somalis. Whether the Berbers ever were Christians is doubtful, although the Christian Abyssinians extended their power for a period over a part of the Berbers' coast. In Yāqūt's time Islam had already penetrated among them, although he describes the Berbers as negroes with barbarous customs (poisoned arrows, contrition of prisoners). Ibn Sa'ūd (viii. 1286) says that they had adopted Islam for the most part and Ibn Battuta describes them as *Shāfi'is* which they are to-day.

Ibn Sa'ūd seems to be the first to mention the town of Berber. Little is known of its history. Native tradition tells of numerous attacks of missionaries of Islam. The stories are to be connected with the great advance of Islam which had been going on since the sixth century and the striving for independence in the upper Abyssinian provinces. Berbers must have been a part of the kingdom of Adal-Zaila [q. v.] in the sixth century. Varthema who travelled in the beginning of the sixteenth century speaks of a Muhammadan prince of the "Island" of Berber. Presumably the reference is to the kingdom of Harar under Ahmed Gazi, who fought against the Abyssinians, who were supported by the Portuguese with the help of the Turks, who had been ruling in Yaman since the time of Selim I. The claims of the Turks as lords of South Arabia to seriously scarcely appear to have affected the independence of the Somali coast in later times. The town of Berber, which on account of internal dissension gradually declined, acquired an evil reputation through the

murders of the crew of the *Mary Ann* in 1835 and the attack on Berber in 1855. In 1855 the Egyptians occupied Berber but they had to retire in 1884 on account of the Mahdist rising whereupon England occupied Zaila and Berber. In recent times, particularly in 1902, the hinterland of Berber has been disturbed by the "Mad Mulla".

Travellers in the middle of the sixteenth century describe Berber as a poverty-stricken settlement of miserable huts, the population of which was considerably multiplied however during the period of the great markets from November to April. Ships from the Arabian coasts, the Persian Gulf, and from India trafficked in slaves and cattle. In the Egyptian period a new town was founded at a little distance from the native one; it was burnt down however in 1888 and rebuilt by the English in European fashion. The market, which had sunk into insignificance, is beginning to regain its importance and the town the ordinary population of which is from 10,000—20,000, numbers 30,000 inhabitants during the market. The not inconsiderable foreign trade (the chief exports are hides) is chiefly carried on by English steamers.

BERBERS.

HISTORY.

The Berbers have been settled in North Africa since remote antiquity. The ancient historians and geographers mention them under various names; the *Namumani* and *Payli* in Cyrenaica and Tripolitania; the *Garamantes* leading a nomadic life to the Sahara; the *Makyli* and *Mazini* in the Tunisian Sahel, the *Mazili* and the *Namili* to the eastern Maghrib, the *Gastili* on the borders of the desert and the high tablelands and lastly the *Mauri* occupying central and western Maghrib. The establishment of foreign colonies, Phoenician, Carthaginian, and Greek exercised but a slight influence on all these peoples except perhaps in the immediate neighbourhood of Carthage. Divided into numerous rival tribes, although sometimes capable of uniting at once against a foreign foe, they were never able to form powerful or permanent states. At the period of the Punic wars, although the east remained in a state of anarchy, in the centre and the west the beginnings of political organisation may be traced in the formation of the *Mazili*, *Mazili*, and of *Mazili*. The genius of *Mazili*, aided by the support of Rome, enabled this prince to reunite under his sway all *Namili*, and in the space of a few years to create a kingdom comprising all the Berber tribes from the *Mazili* to the Gulf of Syria. This kingdom had but an ephemeral duration however. It disappeared in 46 A. C. and Eastern *Namili* became a Roman province. When reconstituted some years later, the kingdom of *Namili* was merely a Roman protectorate. The dominion of the *Mazili* kingdom created by Augustus in 17 A. C. for Julius II was still brief, for it became a Roman province again in 42 A. D.

The domination of Rome in Africa lasted till the 6th century of our era. During this period the Berbers were assimilated in the provinces of Africa and in Numidia but they were hardly affected in the great mountains and high tablelands on the borders of the Sahara and in Mauretania. The Romans were at most satisfied with compelling the Berbers to pay tribute and furnish auxiliaries and left the government of the tribes to the local chiefs (*reguli*). The spirit of independence among the Berbers was not killed however. It manifested itself sometimes in rebellions, led by natives more or less Romanized such as Tacfarinas (17-20 A.D.) and sometimes in insurrections by the peoples of the desert or the hardly civilized tribes of the interior. Such were the tribes led by the Nasamones and Garamantes in the reigns of Augustus and Trajan; the insurrections of the Mauri in the reigns of Hadrian, Antoninus and Commodus; the factious during the period of military anarchy; the rising of the *independentes* (Kisili) of the *Hydruntina* at the end of the third century A.D. The gradual weakening of Roman authority is marked by a more and more energetic reaction on the part of the Berbers. The natives asserted their individuality by the adoption of heterodox doctrines such as Gnosticism, so that the religious disputes which desolated Africa in the 4th century are in many respects a war of races. The rising of the "Circumcelliones" appears to have been a kind of Berber "Jacobinism". Results like those of Firmus (372-375) and of Gildon (398) give another example of the hot-bloodedness of the Berbers. But the Berbers were no more able now than they had been in ancient times to unite against the common enemy and displace him. Their hostility to the Romans only facilitated the Vandal conquest. The Germanic conquerors, like the Romans, had to reckon with the Berbers. Although Geiseric succeeded in restraining them by enrolling them in his armies, his successor had to carry on a perpetual warfare with them. Mauretania, Kabylia, the Awraja, and Tripolitania remained independent. The Byzantines who held Africa for over a century (533-542) after their conquest of the Vandals, were not more fortunate. Native chiefs, Antalas in Byzacene, Yubba in the Awraja, Masinus in Mauretania, resisted Solomon, the governor sent by Justinian and he had great difficulty in overcoming them. After the death of this general, who was slain in an expedition against the Levates (Luwata in Tripolitania), the situation in Byzantine Africa became very critical. It was only with the assistance of the Berbers of the Awraja that John Troglita was able to repel the invasion of the Luwata. But Byzantine authority was not recognized by all the native peoples. With the exception of Byzacene, the former province of Africa (Tunisia), and the northern part of the modern province of Constantina, the towns on the coast and some strongholds in the interior, the Berbers were everywhere independent. At this time they formed three main groups: 1. in the east, the Luwata (Hawata, Awraja, Nefusa, Awraja) occupying Tripolitania, Cyrenaica, the Djerd and the Awraja; 2. in the west the Sanhadja scattered through central and western Maghrib (Kisili in Kabylia, Zewwa in great Kabylia), Zenata on the Algerian coast between Kabylia and Shell, Bend Nita from Shell to Melilla, *Ubanu* in the Rif, Berghawata, Masnala on the Atlantic coast of Morocco, Gzala on

the Great Atlas, Landa in the south of Morocco, Sanhadja "western of the *Hydruntina*", nomads in the Eastern Sahara; 3. the Zenata in parallel divisions on the borders of the plateau from Tripolitania to the Libyan Desert and gradually advancing towards central and western Maghrib.

The arrival of the Arabs scarcely affected this state of affairs. Their first expeditions were merely raids and left no trace other than the devastation caused by marauding bands of Mahammadans. The foundation of Kairouan (670) gave the Mahammadans a permanent base for operations but 'Okba's expeditions through the Maghrib were merely raids rather than a real conquest. The towns still occupied by the Byzantines did not fall to the Moslem leader, nor did the mountain fastnesses, the natives of which he could not overcome. The latter were so far from being subdued that one of their chiefs, Kowala, was able to surprise and kill 'Okba at Tébessa, to drive the Arabs out of Kislyys and found a Berber kingdom comprising the Awraja, the south of the department of Constantine, and the greater part of Tunisia (687-690). Kowala could not hold out for long, however, and in spite of the resistance offered by the Berbers in the Awraja, who have been embodied in the legendary figure of *Ashina*, the Moslems were finally victorious by the end of the first century A.D. The conversion of the Berbers to Islam, begun with no great success by 'Okba, was carried out in the century following. It was effected less by conviction than by self-interest, as the Arab generals led on the plea of enlisting the Berbers in their armies and thus winning them to their religion by the hope of booty. The Berbers formed the nucleus of the *Umayyad* which, under the leadership of Arab generals or even Berbers (farly), completed the conquest of the Maghrib in a few years and in less than half a century effected the conquest of Spain.

These friendly relations did not long subsist however between the Arabs and the Berbers. The latter complained that their services were poorly recompensed and that, although Muslims, they were treated more like inferiors than equals. They also left the paths of orthodoxy and adopted Khariji (Abadi, and Sufi) doctrines, which indeed appealed more to their democratic sentiments; then they rose in revolt against the Arabs. The movement began in the west, led by Habisara a water-carrier in Tangier, in 223 (740). In spite of a victory by the Emir Khalid over the rebels and the death of their leader they swept through the whole of the Maghrib and even crossed into Spain. The Arabs suffered momentous defeats such as that of Kalfidra at Bagdara in 223 (741). They were driven out of Kairouan which was plundered by the Warfadjites, who were followers of Sufi doctrines, in 239 (756). The Abnaji-Hawata under Abu 'I-Khattab (q. v.) were victorious over the Warfadjites and became masters of Tunisia and Tripolitania. The authority of the 'Abbasid Caliph was for the moment of no avail in Africa.

But the Berbers, divided against themselves, were not capable of taking advantage of the situation and following up their success. The destruction of Abu 'I-Khattab's army by Syrian troops, gave Kislyys back to the Arabs in 244 (761). Forty years of bloody fighting and numberless battles (300 according to Ibn Khaldun) were required before they could again assert their sway in the

western Maghrib. The remaining lands were quite lost to them; states with a Berber population under leaders of Arab descent were set up in various places, quite independent of the Abshid Caliph; for example, the kingdom of Tahart (Tagdant) founded by the son-in-law of the survivors of the Abshid, who had fled from the eastern to the central Maghrib; that of Sijilmassa under the Banu Nifra, that of Tlemcen, founded by Abu Karna, the leader of the Banu Ifra, that of Nakhir in the Rif; that of the Barghawata on the shores of the Atlantic Ocean and lastly the kingdom of Fes founded at the beginning of the 10th century by the 'Alid Idris II with the help of Berber tribes, the Miknasa, Sedrata and Zwaygha. Only the semi-independent dynasty of the Aghlabids (800-908) recognised the suzerainty of the 'Abbasids. They raised from the Berbers their troops and the conquest of Sicily, but they had, on the other hand, to put down frequent rebellions by the natives in Tripolitania, Southern Tunisia and in the Zab and Hodna territory.

The resistance of the Berbers to the Arabs really was quite as keen as before. It was strong enough to assure the supremacy of Shafite doctrine in the Maghrib, although these were radically opposed to the Shafite doctrines adopted by the Berbers only the century previous. The Kairouan furnished the 'Abbasid 'Abd Allah with the troops who fought the Aghlabids and laid the basis of the Fatimid power for the Mahdi 'Uthman al-Fatimid. The Fatimids were never able however to subdue all the Berbers. Although they succeeded in suppressing the immediate of Tahart, they could not prevent the Idrisids from retaining their power in the Maghrib; they were unable to make vassals of the Maghrawa and Zanata, who out of hatred for the Fatimids placed themselves under the Omayyads of Spain; and lastly they had to put down the revolt of the Ghazis led by Abu Yaqub 'Abd al-Malik (942-944), a revolt which endangered their power and from which they only emerged victorious with the help of the Sanhaja of Central Maghrib. Besides, the Fatimids soon turned their attention to the east and as soon as the Caliph al-Mu'izz was firmly established in Egypt they lost interest in the Maghrib. North Africa again fell a prey to various Berber tribes, no one of which was able to overcome the others. In the east the Sanhaja displaced the Kairouan and supported the Zirids, who were governors of Ifriqiya and Tripolitania. In the west, when the Idrisids had fallen, the power passed into the hands of the Zanata, who were first only governors for the Banu 'Omalya but became independent princes. In the beginning of the 11th century the Zirid kingdom broke up; the Hammudid kingdom was formed in the centre of the Maghrib; rulers of which recognised the authority of the Caliph of Baghdad and first made their capital at Ka'la, then at Bidjaya (Bougie). The state of anarchy, resulting from the quarrels of the Berbers among themselves, was complicated in the middle of the 11th century by the invasion of the Hilal tribes, the immediate results of which were the domination of Ifriqiya and a part of the Maghrib and the ultimate consequence a radical modification of the ethnography of Northern Africa.

Just when the confusion had reached its height, two Berber dynasties, the Almoravids and

Almoravids, each proclaiming different reformed religious doctrines, succeeded in establishing their preponderance in a time in Northern Africa. The triumph of the Almoravids was that of the Imam, who had up till then led a nomadic life between Southern Morocco and the banks of the Senegal and Niger. Though converted to Islam in the third century of the Hijra, they had for long been Muhammadans only in name. They were taught the true doctrine and orthodox practices by the Marabout Ibn Yassin and resolved to carry the true faith to the negroes of the Sudan and the antislavery peoples of Southern Morocco. Their conquests were stretched beyond these limits. Their chief Yusuf I. Tashfin founded Marrakech in 1062, subdued all Morocco and central Maghrib up to the Hammudid frontier in a few years, drove back the advancing Christians in the Iberian peninsula by the victory of Zaliqua in 1086, disposed of the Andalusian Emirs and became independent master of Muhammadan Spain. The decline of the Almoravids was as rapid as their rise. Exhausted by their own victories and visited by contact with a superior civilisation, these Berbers from the Sahara rapidly disappeared. In their place the Caliphs had to employ Christian mercenaries, while they themselves, holders of orthodoxy, scandalised good Muhammadans by their conduct. The Marinids of Morocco, converted to Christianity (Zanata), whence the name Almoravids) by the preaching of Ibn Tamiq, rose against them. Led by a Kairouan Berber, of great ability, named 'Abd al-Mu'izz they soon put an end to the Almoravid rule, without much difficulty. The empire founded by the Almoravids was even larger than that of their predecessors. Although 'Abd al-Mu'izz was not actually able to conquer all Spain, he destroyed the Hammudid kingdom of Bidjaya, the Zirid kingdom of Ifriqiya, drove the Christians out of the parts they had seized and made himself lord of all the country between the Gulf of Sidra and the Atlantic. A great Berber empire thus extended over the whole of northern Africa, though it was likewise won to crumble away. The Almoravid Caliphs were no more able than the Almoravids to keep to the paths of orthodoxy; one of them, Abu al-Mu'izz, went so far as openly to curse the Qur'an. Ibn Tamiq and sagged against true believers. The rivalry of the African Berber factions also hastened the break up of the empire founded by al-Mu'izz. The quarrels of the Marinids and the Kairouan bled the Moroccan court in blood; the tribes of the Maghrib favoured the efforts of the Banu Ghazis or attempted to make themselves independent. A century after the death of 'Abd al-Mu'izz, the last of his descendants, Abu Dabbas came to an inglorious end as leader of a soldier band in 1279. By this time the Maghrib was partitioned among new powers, the Marinids at Fes, the 'Abd al-Wadids at Tlemcen, and the Idrisids in Tunis. None of these dynasties was able to impose its authority on the others, nor even to make itself respected by its own subjects. In Morocco the tribes of the mountain regions were in a constant state of revolt against the Marinids; in central Maghrib, the Wargata (Wargata), the Zanata of the Ghazis, the Kabyla of the province of Constantine, the peoples of the Zab and the Ujand threw off the yoke of the princes of Constantine, Bidjaya and Tunis. The same thing happened at

the oases of the Djebel Nefusa and the Aurès. The inability of the Berbers to unite to form a great empire was once more clearly demonstrated. The only way to trace their history from this period is to write the history of the various tribes. The task is still further complicated by the changes brought about by the Hildal invasion. In the plains and plateaus the Berber population has been mingled with the Arabs; they have gradually abandoned their language and customs; they have even lost their ancient names which has been replaced by that of some individual from whom they trace their descent; they have become quite assimilated. Other groups have escaped this transformation, owing to the difficulty of access to their abodes such as those of the Aurès, of Kabylia and the Rif; they have been augmented by fugitives of all sorts, who have taken refuge with them; some have even gone down to the Sahara so that since the sixth century the Berbers form a cordon on the frontier of the land of the negroes parallel to that formed by the Arabs on the borders of the two Maghrib and Irtiya" (the Khaldun, *History of the Berbers*, trans. de Slane, II, p. 104). This disintegration was accompanied by the retreat of African civilization. It is an exaggeration to say that many Berber groups returned to a semi-savage state and only retained the most rudimentary notions of Islam. Their reconversion to Islam was the work of Marabouts in the eighth and ninth century, who very often claimed to come from the south of Morocco, from the legendary Sidiya al-Jamra, which popular imagination believed to be a regular nursery of missionaries and saints. The influence of these pious individuals was so great that whole tribes in the present day regard them as their ancestors. Some few groups escaped their attention; such perhaps are the *Zenaga* whose religious customs and beliefs, so different from those of the Islam of the Maghrib, have given rise to the strongest and most far-fetched hypotheses.

GEOGRAPHICAL DIVISIONS.

At the present day the Berbers are no more a homogeneous mass than they were in the first centuries of the Hijra. Their descendants still form the basis of the population of North Africa but they have been so greatly modified by the Arab element that it is often impossible to recognize them. They have lost the memory of their real origin, as well as their language and customs. Some considerable groups have however persisted in the mountains and in the desert, that is to say, in those regions into which the Arabs could not penetrate or which they did not succeed in retaining. They are linked up by smaller groups more or less related which are rapidly disappearing and survive as evidence of the ancient ethnographic conditions. It is besides, very difficult to give an exact list of these tribes. The retention of Berber dialect appears to be the most reliable criterion, although some tribes which claim to be of higher origin have ceased to speak the language of their ancestors.

Speaking generally, it may be said that the density of the Berber communities increases from east to west and from north to south. They are scattered over an immense area, bounded on the east by the oases of Siwah, the limits of Libya, and the mountains of Tibesti, on the west by the

Atlantic, on the south by the Hausa countries, the middle course of the Niger and the Senegal.

Tripolitania and Cyrenaica. There are some Berber tribes in the mountains of the land of Berber, in the Gharyan and the Djebel Irti and in the Djebel Nefusa, the religious stronghold of the Alids. They are also met with in the oases of Siwah, Awjila, Salma, Timi and in the Fezzan. We may mention the Mojahids of Awjila and the Ufaifa of the environs of Tripoli who, although they speak Arabic, say they are of Berber stock.

Tanzania. Berber dialects are spoken among the *Ighrid* (Island of Ighrid), who, like the Nefusi, belong to the Abayid sect, among the Troglodytes of the Matmaja and amongst some of the inhabitants of the Djebel (Sened). The other Berber tribes of the protectorate, such as the Khadmi have been assimilated.

Algeria. Kabylia in the north, the Aurès in the south-east have been the great centres of resistance of the Berbers. Although Little Kabylia was more affected by the Arabs than Great Kabylia, Berber dialects are still spoken in the neighbourhood of Bordj to *Azazif*, in the *Dahirs* and among the *Telaghma*, *Ain el-Mur* and the *Zwagha* of the district of Sefi. In the *Chenoua* Kabylia the *Kawwa* have preserved a dialect which is regarded as the purest of all those in the north; they are connected with the tribes of the *Wad Sahil* (West Sahel) in the east, the *Hann Ghallou* in the west. In the south and east of the department of Constantine, the *Uad Khar* (Sahel Aurès), the *Karakis* (*Ain Balgha*), the *Nememcha* (*Tebessa*) are allied to the *Shawya* of the Aurès. In the Tell of Algiers and Oran, some insignificant groups, which are rapidly disappearing, found in parallel lines from east to west, such as the *Uara*, the *Za'at*, the *Hann bu Ya'qub*, and the *Merghula* of the Middle Atlas. The *Ben Mennager* between Miliana, Cherchell and Tenez; the *Harat* of Tenzet al-Had (*Chenoua al-Ahad*), the *Hann bu Khannou* of the Warradja, the *A'chacha* of the *Uakra*, the *Bu Maluma* of *Frenda*, the *Dauy Soud* and the *Hann bu Said* of the Algero-Moroccan frontier. In the Algerian Sahara, the oases of *Wad High* and *Wargla*, the oases of the *Mash* peopled by *Abayid* Berbers, the *Khar* of *Minghar*, of the *Senghar* of *Ain Saida* mark the road between South Constantine and South-Morocco.

Morocco. Of all the parts of North Africa Morocco is the one in which the Berber element is the most important. It predominates in the Rif, in the various ranges of the Atlas, to the S. in the valleys of the *Wad Nila* and of the *Dra'a* and in the oases. All the Berber tribes are yet known however. A certain number of principal groups may nevertheless be distinguished.

1. The peoples of the lower Mulsay territory (the *Hann bu Zegga* and *Hann* leaders, who form a connecting link between the Berbers of Algeria and those of Morocco). 2. The tribes of the Rif (*Gacis* [*Gacis*], *Temsaman*, *Ma'awa*, *Bani Uraghen*, R. *Said*). 3. The *Reisher*, occupying, in the centre of Morocco, the lands round the oases of the *Mulsay*, the *Selul*, the *Wad Dra'a* (*Ma'awa*) and scattered between *Fra* and *Alkouda* to the north and the *Tafich* to the south-east, with a few outposts as far away as the Atlantic coast area near *Rbat* and *Slaf* (*Sale*). The *Zayan*, *Hann*

Alta, Beni Mgila, Ait Sherroghen, the Ait and Ait Yafelman (a confederacy of the Berbers) also belong to this group. 4. The Shilha, occupying the land to the south of Moghul and Marrakech, the valleys of the Great Atlas Range and of the Anti-Atlas, the Atlantic coast, the valleys of the Sûr, and Wad Nûr and the upper course of the Wad Tassilt and the Wad Dra'a (Dra'a). (To this group otherwise but little known, belong the tribes of the (Hija country, the Gumbûr, the Gumbûr, Gumbûr of the Great Atlas, the Humber, Ait Sûr of the Sûr, the Shilha, Ait Illal, Ait Lûmâ of the Sûr etc.). 5. The inhabitants of the coast (Tadila, Kigiz and Tuda) in these coasts, alongside of a Berber population in the desert value of the world, there lives a dark skinned people, the Harata, whose origin has given rise to controversies, some writers regarding them as black Berbers, and others as a cross between Berbers and negroes, analogous to the Melanogastri of the ancients, while others again say they are the last representatives of a negroid race called the "Gorilla". 6. The Berbers of the Sahara. The ancient tribes of the Zenata and Zenaga who ruled in the western Sahara in early centuries of the Muslim, were overcome by and made tributary to the Arab element so that the word Zenaga has become almost a synonym for "slave". Some tribes have nevertheless retained their independence; the Uad Dalim, descendants of the Almoravids, the Dugh (Ida U 'Alah) and the Meskal of Tagant. Lastly a certain number of nomads of the large tribe of Tifza in the north of Senegal, notably the Uad Daimin and the Toudagha still speak Berber. In the Central Sahara, the Tuareg preserve one of the most characteristic Berber types. They class themselves into two great groups; the Northern Tuareg (the Azder of Tassilt and Ahaggar, occupying the massive mountains of the same name), and the Southern Tuareg (Awilhal, Kel Wi (Kel Wi) of the Ati); the latter are already mixed with negro elements.

MANNERS AND CUSTOMS

Their manners and customs are with their language the distinguishing marks of the Berber tribes. Although we possess but scanty notices of Berber groups which have as yet been little studied, such as those of Morocco, the information available is sufficient to prove the identity of their customs with those of groups which are well known such as the Kabila, the Shawia of the Aures and the Tuareg. The most striking characteristic is the part played by custom in legislation. Among the Berbers the source of their laws is not, as with the Arabs, the Koran. Although they have adopted Islam, they have sharply separated dogma from law. The Koran is the undisputed authority as all that pertains to faith or religious hygiene but only civil and criminal law in so far as it does not come into contact with the law of custom. The proportion in which the two elements combine varies according as the tribes have been more or less deeply affected by Arab influence. The statement of Ibn Khaldun's with reference to Kabylie law, is apparently true for other Berber groups also. The result of the profound origin of Berber law is that it may be modified, while Muhammadan law, taken from the Koran, a divine and immutable book, is essen-

tially unalterable. As to the customs themselves, they fall into two classes, a) those of general origin transmitted from generation to generation by oral tradition; it is applied in Kabylie to all that concerns individual rights and the transference of property, and b) the law of local origin. The modification of principles consecrated by the law requires the consent of the tribes; the alteration of prescriptions sanctioned by the law requires only the approval of the village assembly. The Moroccan Berbers likewise have a particular code (law) for each tribe at each locality, whose prescriptions, almost always in accord with current tradition, are settled by the *amfa* or assembly of the elders. Instructions of civil and criminal law have given rise to a regular system of laws called *qasas*, which varies in the different villages; it is sometimes written down but as a rule is committed to memory by the elders. Traits of the same kind appear to exist among some of the Berber tribes of Morocco, the Ait Ait and the Ait ha Zid, for example. Many ordinances consecrated by custom, go back to a very ancient period, anterior even to Islam, for example the application of the *tal* in *qasas* law, the right of *qasas* as private vengeance allowed to the family of a murdered man, the institution of the *qasas*, which is the safeguard granted to an individual or body of strangers; and that of the *qasas*, the immunity, sometimes hereditary, of an individual or body of people. There is however one Berber group whose laws present striking differences to those we have just mentioned, that is the Ait Ait group of the Mash, whose laws are of religious origin and are distinguished from the orthodox law by their exceeding severity.

The social life of the Berbers likewise differs in many respects from that of the Arabs. One of the most striking features is the place of women amongst them. She enjoys greater consideration and influence than among the Arabs; for example, she is not forced to wear the veil; monogamy is the rule among Berber families; and lastly among the tribes which have best preserved the original such as the Tuareg traces are found of an organization of the family based on patriarchy.

The political organization of the Berbers in the various districts. Two principal types are distinguished however: 1. The aristocratic type: a noble and warrior class makes whom is a class of vassals and serfs, sometimes with a marabout class intermediary. 2. The democratic type: a municipal republic making its own laws and governing itself, for example the villages in Kabylie, the Aures and the Moroccan Atlas. In these latter public business is carried on and magistrates elected by the general assembly of the people (*qasas*, *qasas*). This form of government however looks more democratic than it really is for the influence in the assembly is in the hands of the old men and powerful individuals. In the Mash country power was in the hands of a clerical aristocracy (*qasas*). Each of these little republics, divided by the rivalries of its *qasas* (*qasas*), or parties grouped round an important individual is very jealous of its independence. In former times in Kabylie there was a practically permanent state of war between the various villages and tribes; in Morocco this is still the case. The individualistic spirit of the Berbers prevents them at the present day as in the past

from forming political groups of any importance; although they are capable of forming temporary or permanent confederacies they never rise to the conception of any more complete organizations. (G. Yvonne)

RELIGION.

In ancient times the religion of the Berbers appears to have consisted of a number of local cults corresponding in the division into tribes. The objects of their worship, about which we have only sparse and incomplete details were undoubtedly natural objects: caves, rocks, springs, rivers and mountains (e.g. the Atlas) to which should be added the celestial bodies, at least the sun, the moon and certain stars. The veneration in which these objects were held may still be traced in certain superstitions. It is certain that since the Punic epoch, there has not only been a borrowing of foreign divinities but also an assimilation of the latter to the native deities. Judaism also made numerous converts and if it did not play the role which some have tried to credit it with, it was certainly disseminated throughout the whole of North Africa; indeed with the exception of the descendants of the Jews, who were banished from Spain in the xth century, the greater part of the indigenous followers of Judaism, as descended from converts made before the introduction of Islam. Judaism paved the way for Christianity which soon, or elsewhere broke off from it, and flourished in spite of the strenuous struggle it had to wage with paganism, and the internal dissensions which rent it within. This is not the place to write its history (cf. Dom Leclercq, *L'Afrique chrétienne*, Paris, 1904, 3 Vols.; Muncey, *Histoire littéraire de l'Afrique chrétienne*, Paris, 1901—1909, 3 Vols., in course of publication); it will be sufficient to note that it gave the Berbers an opportunity to unite against Roman rule and that they eagerly adopted the heresies opposed to the doctrine of the Church of Rome. The same thing happened after Mohammedan conquest, only the name of their adversaries was changed. We do not exactly know the details of the conversion of the Berbers to Islam; we only know that they renounced it twelve times and that had they found stronger support than the Byzantine or the ephemeral Vandalic kingdom, their resistance would have had quite another result. Islam did not finally triumph till the sixth century of our era; it was at this date that the last of the native Christians disappeared.

At the beginning of the conquest, the Berbers professed the orthodox doctrine, the only one they knew; but their spirit of independence soon showed itself in the adoption of Kharijite doctrines, which laid the main emphasis on the conception of universal equality. That at least they were really little concerned with religious dogma, is clearly shown by the fact that not a section of them took the side of the Khalifa, nor only on behalf of the Muslims of Des but of those who, steeped in Pagan doctrines, saw in the Islam an incarnation of the Dely. This also explains why we have the Fatimids beside the Kharijites, Sufis and Abadites and the Kadhana, principal supporters of the Mahdi 'Ubad Allah. A reaction brought the triumph of Sunni doctrines with the Idrisids (Almeravides) of the 9th century who had only been converted in the 8th century; it was

further emphasized by the Mahadids of the Atlas who founded the Almohad empire and exterminated those who still professed other faiths. Christians and Shi'ites except a few Kharijite communities who were protected by the mountains, desert or sea (See the articles KHARAJITES, SUFIS, ABAIDITES, KADHANAS, NAJIDIS, ADRARITES.)

From the point of view of religion, the Berbers, without distinction of sects, have only produced theologians with a fondness for disputation; they have produced no great original thinkers, whether orthodox or heterodox. It was the narrowest and least liberal of the four Mohammedan sects (next to that of the Hanbalis) that of Maliki in Azas that became the most wide spread amongst them; this has remained the case to the present day. Sunni doctrines now reign supreme, more or less mixed with local superstitions, in particular the cult of marabouts, many of whom have replaced obscure indigenous divinities, except in a few Abadite communities which have persisted in the Maliki, in Gherna, and in the Lybels Nefusa and who keep up a connection with their overhightiness in Zanata. In addition to official Islam, two attempts to found in Morocco a religion which was to bear the same relation to Islam as the latter professes to bear to Christianity, must be mentioned: is the Rif the attempt of Ha-Mu al-Mohari (the "forger", q. v.) in the 16th century A. D. and in Tamesna, the modern Shantya, the religion founded by a former Kharijite, Shidi the Farid, among the Barghawata (q. v.) which lasted from the second to the fifth centuries A. D.

LANGUAGE AND LITERATURE.

In spite of the impossibility of proving their common origin, there is a linguistic unity among the Berber languages and although we know but little of the ancient language it may be presumed that its dialects did not differ from one another more than the modern dialects. Inscriptions alone could give us the key; but unfortunately they have not yet yielded up their secrets and the attempts that have been made to decipher them have not given satisfactory results. They were collected by Fakherte in 1870 (*Collection complète des inscriptions numides*, Lille, 1870; cf. also J. Halévy, *Essai d'épigraphie libyque*, Paris, 1879); since then however not a year has passed without new ones being discovered (see the collections in the *Revue de la numismatique archéologique de Constantinople*, in the *Revue africaine*, in the *Comptes de l'Académie des inscriptions* etc.). The Lybian alphabet has hitherto been thought to be of Phoenician origin (cf. Halévy, *op. cit.*, p. 13—16); an attempt to connect it with one of the South Semitic alphabets, more particularly the Thamnoudian has not been successful (E. Lippman, *L'origine de l'alphabet libyque*, Journ. As., 2. Series, 19, p. 422—443) but the proposal to connect it with the Aegrean alphabet and requires to be examined (cf. also P. Berger, *Histoire de l'écriture antique*, Paris, 1891, p. 324—332). It ceased to be used to the north after the Arab conquest and it is represented at the present day only by the Tasserg alphabet. Besides the inscriptions the only materials we have for the study of ancient Berber language are a certain number of words preserved in a more or less corrupt form by the writers of antiquity, they are only of importance from the lexicographic point of view.

(3 parts, unfinished): *Lamoral, Châouen Kabyles de Senid Aïchou, Algiers, 1899*; *Benila, Rouel de la police Kabyle, Algiers, 1904*; for the dialect of Wadi Sahil: R. Hassel, *L'immigration algérienne de 1871 dans les châteaux populaires Kabyles*, Louvain, 1892; for the Shawiya: G. Mercier, *Cinq textes berbères en dialecte chaoui*, extract from the *Journ. A.* 1900; for the Hecail: Stumme, *Strecken der Berber von Tlemcen*, Leipzig, 1900; for the Talaok: Mauguey, *Observations grammaticales et notes de la tribu des Talak*, Paris, 1897.

We may also mention the *Andalus* or collections on customary law, which are still used among certain Berber tribes. These only exist in oral tradition but some of those of Great Kabyle have been taken down and published; by Hippoteau (*États de province Kabyle, Alger, n. 4, p. 313—324*); *Les Kabyles et les coutumes Kabyles*, Paris, 1873, Vol. III, Appendix, p. 327—443; translation only, imprinted partly in *Algerian, Formation des cités chez les populations indigènes de l'Algérie*, Paris, 1886, p. 263—324, translation only; by Ben Sedira (*Œuvre de langue Kabyle, p. 305—355 text only*); Bouilla (*Le Kanan d'Adon: Recueil de monuments et de textes publiés en l'honneur du 25^e Congrès des Orientalistes, par les professeurs de l'École Supérieure des Lettres, Algiers, 1905, p. 152—178*). It is not necessary to enumerate the various translations of the old and New Testaments which have been made by Catholic and Protestant missionaries.

History, etc.: The most important materials have been collected by Ponsard, *Les Berbers* (Paris, 1877—1881, 2 vols.) but he stops with the departure of Mu'izz ad-Din Altun for Egypt. As to the Arab historians: Ibn Khaldun, *Kutub al-Mur* (Hull, 1284 7 vol.), vols. vi and vii, the French translation by de Slane, *Histoire des Berbères* (Algiers, 1852—1856, 4 vols.); S. Lane-Poole, *The Mohammedan Dynasties*, p. 33—83 (London, 1894); Ibn Abi Zar, *Harat al-Bihar*, ed. Vambary (Uppsala, 1845—1846; 2 v. in 4^e); Ibn 'Adhar, *al-Majma' al-Muhtasir*, ed. Dory (2 v., Leyden, 1848—1850); al-Mas'udi, *History of the Maghrib*, ed. Dory (Leyden, 1847); al-Bukari, *Description de l'Afrique septentrionale*, ed. de Slane (Algiers, 1857); named by de Slane (Paris, 1859); de Guise, *Description géographique* (Leyden, 1860; extract from al-Ya'qubi); Mauguey, *Chronique d'Alon Zaharia* (Algiers, 1878); al-Hazadi, *Kutub al-Muhtasir* (Constantinople, 1903); R. Hassel, *Les Sanusiyyes du Djebel Nefusa* (Paris, 1899); Quadenfeldt, *Entstehung und Verbreitung der Berberpopulation im Marokko, Zeitschr. für Ethnologie*, 1888, 1889; Daumet, *La Grande Kabylie* (Paris, 1847); Carelle, *Étude sur la Kabylie préhistorique* (Paris, 1848, 2 v.); Barth, *Travels and Discoveries in North and Central Africa* (London, 1847); Loret, *Les Tombeaux du Nord* (Paris, 1864); Maunel, *Les Tombeaux de l'Ouest* (Algiers, 1888); Jann, *Les Tombeaux du Sud-Est de l'Algérie* (Paris, 1908); Hamet et Lecomte, *La Kabylie et les coutumes Kabyles* (Paris, 3 v., 1872—1873); Renon, *La Société berbère in the Mitlenegh-Afrique et de l'Algérie* (Paris, 1876), p. 319—352; le P. Lingua, *La Kabylie* (Lyon, 1877); Mauguey, *Formation des cités chez les populations indigènes*

de l'Algérie (Paris, 1886); Mirand, *Les Kammars du Nord in the Études de droit musulman algérien* (Algiers, 1910), p. 429—437; T. W. Arnold, *Franching of Islam* (London, 1896), p. 258—262; R. Hassel, *Kabyle et la religion des Berbères* (Paris, 1910) authors quoted; de Slane, *Appendice à l'histoire des Berbères*, Vol. IV, p. 438—584; R. Hassel, *Étude sur les dialectes berbères* (Paris, 1894); A. Lyautey, *Berbers* (Paris, 1890), and the papers presented to various Oriental congresses (London, 1891; Paris, 1897; Hamburg, 1902; Copenhagen 1908). (R. Hassel.)

BEREIDA or BURADA (the diminutive of *Burak*), a large village in the Kaptan province of Nodid, situated 26° 17' N., 43° 55' E. It lies on the left bank of the Wadi Kamma, about ten miles from Oran and on the opposite bank. The names of *Bereida* and *Anaya* are from *berga* to them (Doughty). *Bereida* probably occupies the site of the ancient *Regda* (Springer, *Die alt Geographia Arabica*). The present town is said to have been founded three or four hundred years ago, by people of the Hami Tamim. After the fall of the Wahhah state it became independent under chiefs of the family of 'Alu'ayn (Palgrave). When *Kalpal*, the representative of the Ibn Sa'ud or Wahhah dynasty, had recovered some of the lost ground, he crushed *Buraida* by treachery, and placed it under a native of al-Rijal named *Mohanna*, who was governor at the time of Palgrave's visit (1862). His son (Jassan was governor when Doughty stayed there (1878). The former estimated the population at 25,000, the latter at 5,000 or, counting the surrounding hamlets, 6,000. The people are merchants and cultivators. The town is built of clay and surrounded by a wall only two feet thick. The gardens form a ring round the town outside the wall. The palm and tiled land extends for three miles on the side next the Wadi. They are irrigated from wells, made by digging in the sand. The water is raised by means of a wheel set over a frame of *ash wood*, which grows plentifully here. At the time of Palgrave's visit there was a busy market, rock-salt from western Kaptan being a common article of sale. The streets were fairly broad and regular. The height of the mountain proves the houses to have been built before the time of the Wahhahs (7 v.). It is probably about 600 years old. The castle *Palgrave* considered to be in part older, some of it being of stone. It had no architectural features, and there appear to be no ancient inscriptions in the town.

Geography: Palgrave, *Central and Eastern Arabia*; Doughty, *Arabia Deserta*; Ritter, *Reise nach Arabien*, iii. 436 et seq. (T. H. Weir.)

BERGAMA, the name of a district (*sanj*) and its capital in the *Sandjak* of Lemniz in the Wilayet of Adana (Syria). The town, which is situated in 34° 55' east Long. and 39° 5' north Lat., is the ancient Pergamon, as has been ascertained from the excavations of Hamann, Conze etc. This is not the place to discuss the history of Pergamon and the excavations; the reader may be referred to the brilliant excellent account in Haedeker's *Constantinople and Western Asia Minor*, p. 246—254.

In the beginning of the 19th century the town fell into the hands of the Turkish dynasty of the Karat and with *Balkans* was the most important

he is also said to have ordered the Christians of Samarkand to be severely punished and their church destroyed, as they had taken some liberties with their Muslim brethren fellow-citizens. When the news of the death of the Great Khān arrived (1259) it is said that the Friday prayer (Khutba) was read for Berke, not only in the West at Nishapur but also in Khorezm and the provinces of Persia (*Zakariya Nizami*, transl. Rieu, p. 1292).

During the next four years (1260-1264), two brothers of the dead Great Khān, Shubutai and Arigh-Bugha, engaged in a struggle for the throne of Eastern Asia. As the roads struck in Hulagū's show, the younger chieftain Arigh-Bugha (who was ultimately overcome by his opponent), was recognised as the rightful heir to the throne by Berke. Prince Arigh, a grandson of Genghis, appeared in Asia Minor some time, at first in the name of Arigh-Bugha and afterwards in open revolt against him; he succeeded in bringing under his sway not only the whole western territory of his grandfather but also Khwarezm, which had always belonged to the kingdom of Hōgh and his successors. The governors of the officials appointed by Berke were driven out of all their towns. The massacre mentioned by Wāsiṭ (Indian edition, p. 31), of a division of Berke's army, 5,000 strong, in Bokhara must have been carried out, not, as Wāsiṭ himself says by Shubutai, nor as d'Osson supposes (*Histoire de Mongolie*, III, 381 et seq.) by Hulagū, but by Arigh. The war between Berke and Arigh lasted till the death of the latter, even to the last years of his life, after the final victory over Arigh-Bugha, Arigh's troops occupied and destroyed the commercial town of Istar. Berke, whose forces were required to the South and West, could do nothing against his enemies in the East but did not however yield his claim. Prince Khidr, grandson of Ögedei, who was in Arigh-Bugha's army, continued the war against Arigh on the overthrow of Arigh-Bugha and was supported by Berke.

The campaign in the West against the Poles and against King Daniel of Galicia, who, out content with declaring himself independent in 1257, was bold enough to attack the Tatars, was of no great importance and were successfully carried by the troops, whose duty it was to guard the frontier districts, without it being necessary for Berke to take the field in person. King Daniel had to destroy at the bidding of the Tatar General most of the fortresses which he had built in his kingdom. The war between Berke and his cousin Hulagū, the conqueror of Persia, was more important and prosecuted with less success. The course of the war are variously given, as was previously the case in the story of the rivalry between Berke and Sütbē, Berke is here pictured by some authorities as the defender of Islam. He is said to have bitterly reproached Hulagū for his domination of in many Muslim countries and particularly for the execution of Caliph Musta'ṣim. Those authorities who say that the princes of the house of Iḡḡḡ felt their rights endangered by the foundation of a new Mongol kingdom in Persia are probably more trustworthy; some of the territories such as Arrān and Adshahdān which were incorporated in the new kingdom, had already been used by the "House of the Mongol house" in the reign of

Önggī-Khān and therefore according to the conqueror's directions ought to have belonged to the ancestral territory of Iḡḡḡ (cf. above in the article Iḡḡḡ Khān); the right in these lands was also constantly claimed but without success by the chiefs of the Golden Horde.

Berke twice made war on his Persian relatives. In the first war, Hulagū was at first victorious, advanced as far as over the Terek (in November and December 1262), but was there defeated by Berke's troops (the Khān himself was not present with his army) and lost a great part of his army on his retreat; many perished in the Terek, the ice on which was broken by the hoofs of the horses. After this war Hulagū massacred all merchants from Berke's kingdom who could be found in his domain. Berke retaliated by a massacre of those from Hulagū's land; no further attempts were made on either side to continue the war, however, during the next few years. Even before war broke out between these two princes, the Egyptian Sulṭān Balbān (q. v.) had decided to get into communication with Berke and to make an alliance against their common enemy Hulagū. A message to this effect had been sent from Cairo as early as the year 660 (24th November 1261-12th November 1262) to Berke; in March 661 (15th November-12th December 1262) an embassy was equipped for the same object. Before the ambassadors had returned, there appeared in Cairo in the spring of 1263, an embassy from the kingdom of Berke; when these envoys set out on their return journey the Sulṭān sent a second embassy to accompany them to the country of the Mongol prince. It is scarcely possible to reconcile the various statements given by the authorities on these transactions; apparently the accounts of the two embassies have been confused by the Egyptian historians. The accounts brought back by the envoys of the country of the Khān and his appearance (thin beard, yellow complexion, the hair bound behind each ear, apparently in plaits, a gold ring set with a jewel in one ear, a high turban on the head, a girdle of green Bulgarian leather, set with gold and jewels, around his waist, and shoes of red leather) are worthy of note; he is said to have then been 36 years of age; like Balbān he was afflicted with gout. In connection with these embassies, mention is made of a Mongol campaign against the Byzantine emperor, who had detained one of the two Egyptian embassies, probably the second, in his territory. In the year 1260 the Balkan Peninsula to the Aegean Sea was ravaged by a Mongol army (Berke took no part in this campaign either) and the Seljuḡ Sulṭān 'Isa al-Dīn Kai-Kāwūs, who had been driven out of Asia Minor and placed in custody in the fortress of Etes (on the Aegean Sea) was set free and brought to the Crimea.

In the year 1266 war was renewed by Berke against Persia where Hulagū's successor Abū Bakr now ruled, but it led to nothing. The two armies lay for a considerable time inactive on the banks of the Kura opposite one another; Berke, who was on this occasion at the head of his army (at least so the Persian authorities tell us), wished to ascend the Kura to Tiflis and there cross the river, but died on his way thither whereupon his army returned home to the Egyptian sources. The date of Berke's death is given as 665 (2nd October 1266-21st September 1267). In *Salat* (1267

Oct.—19 Nov. 1267) a message of sympathy was sent from Egypt to his nephew Mingke-Timur. The Russian annals say that Berke died in the year 674 of the Creation of the World (1st Sept. 1262—5th September 1263).

Berke left no family, so that the throne passed to Batu's grandson, Möngge-Timir. During the last years of his reign he was no longer, as Batu had been, second to the Great Khān in the Mongol Empire, but the ruler of an independent state, although this evolution was not completed till the reign of his successor who was the first to strike coins in his own name. It is difficult to estimate how much he did as a Muhammadan, so far as the culture of Islam among his Mongols. The Egyptian accounts speak of schools, in which the youth was instructed in the Korān; not only the Khān himself but each of his sons and family also had an Imam and a Mu'addhin attached to their establishments; yet we learn from the same sources that all sorts of heathen customs were preserved at the court of the Khān with the same strictness as in Mongolia. How little education the Khān himself had, may be gathered from the question which he asked the ambassadors, whether it was true that an enormous human bone was used as a bridge across the Nile. Not only the Khān himself but several of his brothers are said to have adopted Islam, nevertheless half a century was still to elapse after his death before Islam definitely became predominant in his kingdom. Most of the later authorities make the foundation of the capital Samarkand on the Oxus (in Berke's *Ilm* *Naqsh* in his journal, ed. Delandus, ii. 447, therefore calls this town *Sark-Berke*) the town as we know ~~from~~ the narrative of Ruhraquīs was already ~~known~~ by Batu; perhaps it was only under Berke that it came to be a town in the strict sense of the word.

Bibliography: For the Persian see above authorities and the editions of them see the Bibliography to the article BAHĀ' ULLĀH W. These editions collect the Arab materials for the history of the Golden Horde (*Sbornik materialov o zolotoordinskoi i arabskoi literatury*, Vol. I, St. Petersburg, 1882, Arabic text and Russian Translation); of special importance are the notices in the *al-Nakhsh al-ard* of al-Buhārī (*ibid.*, p. 181 et passim 193 et seq.; see the work itself see Brockelmann, I, 348); Quatremere quotes the same authorities; in *Makhlūf, Histoire des Sultans Mamelouks*, I, Part I, p. 213 et seq.; Patkounov has published Kirak's work (*Zbirnitsa materialov po arabskim istochnikam*, vol. II, St. Petersburg, 1874); Howorth, *History of the Mongols*, Vol. II (London, 1880), p. 103—123; Guichard de Rubruquis, *Journey in the Eastern Part of the World*, transl. by W. W. Rockhill (London, Hakluyt Society, 1903). (W. Barthold).

BASHKIRASH, a suburb of Constantinople, 2 1/4 miles from the bridge of Galata on the European shore of the Bosphorus. It was called *Shiplashium* by the Byzantines after a double column erected here by the elder Constantine. It was from here that Sultan Mahmud II, the conqueror of Constantinople but his feet dragged across the hills of Pera into the Golden Horn, the entrance to which from the Bosphorus was barred by a chain drawn across it. In the XVII and XVIII centuries the summer palaces of the sultans were situated

here, which were more than once burned down. The place is now surrounded by the picturesque castle of Dolmabahçe, which has also been burned down, and by the Yildiz palace. Among the buildings of historical interest dating from the Turkish period may be mentioned the tomb of Şahkâhânî Harâzemî, the great Turkîsh corsair (died 953 = 1540). The place now forms the *Yıldız Parkı* or *Garden* of Constantinople (F. GUCKE).

BESHLIK, a Turkish coin, which was introduced with the currency reforms of Sultan Süleimân II (1099-1102 = 1687-1691). It was based on the *ghurgh*, the common *ghurgh* of European countries, the foreign *ghurgh* had previously been current in Turkey but it was not till now that they were actually struck by the government. The smaller coins were called *para*. Five paras were a *beshlik*. How many paras originally made a *ghurgh*, we do not know. Lane Poole approximates twenty. With the gradual debasement of the coin the relationship was continually changing. As a rule a *ghurgh* was to be equal to 40 paras. The oldest *beshlik*, that we have, are of the reign of Ahmed III (1115-1143 = 1403-1450). The *beshlik*, also called *fiat* — from *fiat yek* = $\frac{1}{2}$ — was retained in the new currency instituted in Maharram 1250 = February 1834 during the reign of 'Abd al-Medjid. It is a quarter of the *shirgird* or 5 paras, which are now called *ghurgh*. It is about the equivalent of the franc at the present day.

Bibliography: Stanley Lane-Poole: *Catalogue of Oriental Coins in the British Museum*, Vol. viii, *The Coins of the Turke斯坦* (London, 1883); also *On the Weights and Measurements of Turkish Coins in the Numismatic Chamber* (1882); *Numal-Gali-Hakim, Tarih-i-mevkiffat-ı Lomani* (Constant, 1307), also in French under the title: *Essai de numismatique ottomane* (Constant, 1890); Belli, *Essai sur l'histoire numismatique de la Turquie in the Journ. asiat.*, viii Ser., Vol. xl. t. iv. (U. GUZ.)

BESHUPARMAK (= five fingers) denotes the cinquefoil in combination with *Dag*. It frequently appears as the name of a mountain. The best known Beshuparimak-dag is the mountain range in the central Gobi on the left bank of the *Blakchir*, the ancient *Lan-nu*. Its highest summit of five steep peaks about 5000 feet high has given its name to the whole range. [V. GUER.]

BESIKABAY, called *Besik* against the Turks is a bay on the western coast of Asia Minor opposite Tenedos. Although it is open, it affords a good anchorage sheltered from the north and north east winds, which give secure protection in summer when the south and ~~west~~ winds do ~~not~~ blow. In 1853 the English and French fleets established here before proceeding to the Crimea. The ships of foreign powers have also cast anchor here when they wished to bring pressure to bear on the Porte. (F. GILCHRIST.)

BESSARABIA. [See BUCHAK.]

BEST (+.), hand, place of refuge; hence *best*, one who claims the status of refugee.

BETEIGUZE. This is the name given by the earliest astronomers of the west to the star of the first magnitude in Orion. The γ has arisen from the careless writing of an ϵ and the better form is therefore *Beteiguse*. This star has three names among Arab astronomers. The first is *Munkib al-Dhau* (= Shoulder of Orion). The second

dants will receive a small pension from the British Government.

Hist. Geography: *British Gazetteer* (Bombay, 1877). (J. S. Cotton.)

BHATTI, or BHATI, a Kājipai tribe settled on the borders of the Panjab and Rajpootana, who have given their name to the towns of Bhataer and Bhatinda and a former British district of Bhatisa. The majority of them have long been converts to Islam. The mother of the fifth emperor Feroz Shah is said to have been a Bhatti, while the Pathan Sikh chiefs of the Panjab claim a similar ancestry.

(J. S. Cotton.)

BHOPAL, a feudatory Native State in Central India, lying between 22° 29' and 23° 54' N. lat. and 75° 28' and 78° 51' E. long. — near to Hindostan the most important Mohammadan State in India. Population (1901) 663,961, of whom 83,988 are Mussulmans.

History. This state was founded by Daulat Muhammad Khan, an Afghan soldier of fortune, who at an early age had entered the service of the Emperor Aurangzeb. He took advantage of the anarchy that prevailed after the death of Aurangzeb in 1707, to set himself up as an independent ruler with the title of Nawab, over the territory he had acquired, partly as a reward for services rendered, and partly by conquest. He died about 1740, at the age of sixty-six. His two sons and three grandsons who succeeded him, were either children or incompetent rulers, and the conduct of affairs was left in the hands of their Hindu ministers, men distinguished alike for honesty and ability. In 1778, at the reign of Hayat Muhammad Khan (the third grandson of Daulat Muhammad), the state of Bhopal first entered into relations with the British, and the foundations were laid of a friendship that has remained unbroken ever since. Towards the close of the 18th cent. the territories of Bhopal were overrun by hordes of Pindaris (the marauders who spread desolation throughout Central India during this period) and was invaded by the Marathas, who were called in to expel the Pindaris. In this crisis, Bhopal was saved from destruction by a young cousin of the Nawab, Wazir Muhammad Khan, who assumed the sole direction of affairs and succeeded in reconquering most of the territories that had been lost to his country. But his endeavours on behalf of the state were constantly thwarted by the jealousy of the heir apparent, Ghawath Muhammad Khan, who called in, first the Pindaris, and afterwards the Marathas, in order to compel Wazir Muhammad to retire from Bhopal. Despite the want of confidence shown in him, Wazir Muhammad seems to have magnanimously avoided any act of gross brutality to the recognized ruler of his country, but when Ghawath Muhammad had reduced himself to the condition of a puppet in the hands of the Marathas, he took advantage of a favourable opportunity to return to Bhopal and drive the Marathas out of the city (1807). (Nawab Hayat Muhammad, who had long withdrawn from all active participation in public life, died in the same year.) From this time Wazir Muhammad was the real ruler of the state, though Ghawath Muhammad still enjoyed

the Hindu dignity of Nawab. In 1812 a combination was made between the Maratha chiefs of Gwalior and Nagpur to crush him, and Bhopal was besieged by their united armies towards the close of the following year. Wazir Muhammad made a gallant defence during a siege of eight months and the Marathas were obliged to retire unsuccessful. They made active efforts to renew the siege in the following year, and would probably have effected the destruction of Bhopal as an independent principality but for the intervention of the British Government. Wazir Muhammad died in 1816, at the age of fifty-two, after having ruled Bhopal for nine years. He was succeeded by his son Nazir Muhammad Khan, who had married Kambayah Begum, the daughter of Ghawath Muhammad, who though still called Nawab had sunk into obscurity and made an objection to the elevation of his son-in-law. The first efforts of Nazir Muhammad were directed to forming a treaty of alliance with the British Government, whereby Bhopal was guaranteed to him and his descendants, on condition of his assisting the British with a contingent of troops and co-operating in suppressing the Pindari freebooters. He died after a reign of 3½ years, during which the state had entered upon a new era of prosperity and the revenues had increased tenfold. As he left but one child, an infant daughter, Sikandar Begum, it was arranged that the regency should be in the hands of his widow, Kambayah Begum. The regent, wishing to retain the power in her own hands, delayed the marriage of her daughter until 1835, but as she was even then unwilling to resign, a civil war broke out, in the course of which her son-in-law, Hashimji Muhammad, a nephew of Nazir Muhammad, was besieged and besieged in a fort by the troops of his wife and mother-in-law. Through the mediation of the British Government, the administration of the state was in 1837 entrusted to Hashimji Muhammad, and Kambayah Begum retired on a pension. On the death in 1844 of her son succeeded by his widow, Sikandar Begum, who ruled Bhopal until her death in 1865. This remarkable woman displayed in all departments of the state an energy, an activity, and an administrative ability such as would have done credit to a trained statesman. In six years she paid off the entire public debt; she abolished the system of farming the revenues, and made her own arrangements directly with the heads of villages; she put a stop to monopolies of trades and handicrafts; she reorganised the police, and made many other improvements. Throwing aside the restrictions of the purdah, she appeared in public unveiled and in masculine attire. During the Sepoy Mutiny of 1857, she distinguished herself by her unflinching fidelity to the British Government; when her nobles were urging her to proclaim a Jihad, and the contingent raised in Bhopal and commanded by British officers had embarked and was commencing to be led to join the rebels in Delhi, she never faltered; she caused the British officers to be conducted in safety into British territory, allowed the contingent with a strong hand, and finally restored order in every part of the Bhopal territory. Further, she liberally rewarded the British troops in every way that lay in her power. In return for their services, the Begum received various honours

(individualism and independence, going to the point of heresy although not of actual unbelief (*kufr*). In modern Arabic it can mean "paradox" (Noy and Badger).

In this development two broad parties showed themselves. One, conservative but gradually vanishing, in the past mostly Hanbalite and now practically Wahhabite only, taught that the duty of the believer was "following" (*ittika*) — the *Sunnah* understood — and not "innovating" (*bid'ah*). The other accepted the facts of change of environment and condition, and taught, in varying degrees and ways, that there were good and even necessary innovations. According to al-Shafi'i, suggesting that to new and contradictory *Kur'ān*, *Sunnah*, Agreement or Tradition (*ahad*) is a *bid'ah* which leads astray. But a good novelty which does not so contradict is a permissible *bid'ah*. A more elaborate classification divides innovations under the five *ahad* (*ahād*) of canon law. Innovations which are also in accordance with the Muslim community (*umma kulliyah*) are valid of Arabic philology in order to understand the *Kur'ān* etc.; accepting and rejecting legal witnesses (*shahād*), distinguishing sound from corrupt traditions; codifying canon law (*fiqh*); confuting heretics. Forbidden are all heretical systems (*mujtama'at*) opposed to orthodox Islam. Recommended (*ma'mūnat*) are such things as founding of religious houses for devotees (*riyāṣat*) and schools. Disliked (*munkar*) is such as the decorating of mosques and *Kur'ān*. Permitted (*halal*) is such as expenditure in eating, drinking etc.

Finally, the distinction between *bid'ah*, heresy, and *kufr*, unbelief, is said to lie in the origin of *bid'ah* being only a confusion (*ghabṣah*) as to a sound proof, while that of *kufr* is deliberate opposition (*mu'āmalah*).

BIDAR, an ancient Hindu city, situated in 17° 55' N. and 77° 32' E., first occupied by the Muhammadans in 1322; it became the capital of the Bahmani Kings [v. c.] in 1429, and of the Barid Shāhi dynasty [v. c.] that followed them. It contains many monuments of the grandeur of these dynasties; among them are the massive tombs of the last two Kings of the Bahmani dynasty; the tombs of the Barid Shāhi Kings are of a more graceful type, the most beautiful being that of 'Alī Barid Shāhi, adorned with fine coloured tiles. The Barid Shāhi Kings are said to have deliberately destroyed the palaces of their predecessors, the Bahmanis, which is now entirely in ruins; but some remains of their own palaces remain, among which may be mentioned the Rangin Mahall, with its beautiful Inlaid work of mother-of-pearl. Of the great madrasah, built in 1478—1479 by Mahmūd Gawāh [v. c.], not only survive, richly decorated with enameled tiles.

Bibliography: *Report on the Antiquities in the Bidar and Aurangabad Districts*, by James Burgess, p. 42. ut sup. (*Archæological Survey of Western India*, Vol. iii, 1873); T. W. Haig, *Historic Landmarks of the Deccan* (Allahabad, 1907), pp. 95—104.

BIDIL [v. c. "unfortunate, distressed"] the name of several Persian poets:

1. MIZĀ 'Aḥī al-Kāsim Bidil, a Persian poet

of India, born 1054 (1644) at Akbarabad, died 1111 (1703) at Bidil, wrote many other works a poetical handbook of mysticism called *'Arf* (knowledge), an allegorical *Mathnawī* *Talīm al-Hayāt* (Taleim of Amusement) and he gave a collection of letters (mostly to his patron Shāh Allāh and his two sons) entitled *ṣafar al-ḥayāt*. His collected works (*Kutub al-Bidil*) were lithographed at Lucknow in 1287.

2. (BIDIL) MIZĀH BAYTĀ Bidil, a poet of Bidil, a descendant of a family of scholars, which had given the Bahawils a number of physicians. His father MIZĀH Bayhamūd Tabib had gone from Hyderabad to Bidil at the request of the Wāḥid Karīm al-Dīn Zand (died 1779), he himself was physician to Faṭṭḥ 'Alī Bidil and died at Kānna while returning from a pilgrimage to Mecca, in the beginning of the reign of Mahamūd Bidil (about 1780).

3. MUHAMMAD Aḥī Bidil, a poet of Bidil.

Bibliography: 1. *Guide to the Grandeur of Bidil*, *Philos.* Vol. II, p. 300, 310, 337; *Riḥlat al-Bidil*, *Majma' al-Furūd*, Vol. II, p. 82. (C. L. Husayn.)

BIDJĀN, Aḥmad, the son of a certain Shāh al-Dīn al-Kātib, wherefore he is sometimes like his brother Mahamūd, called Bīdījī Ogildā (son of the clerk), a Turkish author, who lived in the first half of the 17th (17th) century. Both the authors were pupils of the famous Hājjī Bahrām, the founder of the Jur'ish order of the Bahmaniya [see above, p. 595] and led an ascetic life whereby Aḥmad is said to have become so emaciated that he appeared to be lifeless (whence the epithet *Bidjān*). His literary activity was therefore mainly devoted to *ghazal*. He translated into Turkish the *Maḥfūz al-Dīn* composed by his brother in Arabic and gave the translation the title *Amr al-Aḥdī* (Constantinople, 1667, 1291; Kasan, 1861; Bōlak, 1300 etc.). Another Turkish treatise, a kind of history of the prophets bears the title *Maḥfūz al-Aḥdī* the author busied himself with cosmography, especially in the sense of a description of the world. In creation after the pattern of the Arab author al-Kāsim was the *Maḥfūz al-Aḥdī* is an extract from the latter's work (cf. *Kim, Cat. Turk. Mus. of Berlin, Mus.*, 106 of 1873); a similar work entitled *Ḥurr al-Maknūn* is more original. The first mentioned work was written in the year of the conquest of Constantinople 897 (1453) so that the author must have been still alive at that date, cf. the article *MAḤFŪZ* OGIL.

BIDJANAGAR. [See VIDJANAGAR.]

BIDJĀPUR, or VIDJANAGAR, (= "city of victory"), a town and district of India, in the Bombay presidency. Area 80 districts: 5,669 sq. m. pop. (1901): 235,435, of whom only 124, are Muhammadans. It consists for the most part of a barren upland tract, very liable to drought. The language of the great majority is Kānaree, and many belong to the Lingayat sect. The town has been the head quarters of the district (formerly called Kāḍg) since 1885; pop. (1901): 23,611. It was the capital of the "Kāḍ"

Shah dynasty (q. v.) which established its independence of the Mughals in 1498, and was finally conquered by Aurangzeb in 1680. Magnificent palaces, mosques, tombs, and other buildings still remain in a fair state of preservation, together with the city walls, enclosing an immense area. Conspicuous among them are the Rawza in Ibrahim Adil Shah's (ob. 1626); the Gul-i-Nasim of Muhammad Adil Shah (ob. 1680) said to be the second largest dome in the world; and the Djami Masjid of 'Ali Adil Shah (ob. 1673). All of them have recently been the subject of useful restoration by the British government.

(J. S. GORTON.)

BIDJAYA (see BOURGAS)

BIDJAWAR or **BIDJON**, a town and district of India, in Kachikhand, United Provinces Area of District: 1,791 sq. m.; pop. (1901): 779,951, of whom as many as 35% are Muhammadans. The town — pop. (1901) 17,583 — is of little importance, but the district is prominent in Rohilla history. It contains the town of Najibabad, founded about 1730 by Najib al-Daula, who was to be Wazir of Delhi, and whose son was Zafar Khan. In the Month of 1857, a grandson of Zafar Khan, with the title of Nawab of Najibabad, was one of the most formidable opponents of the British. He finally fell in prison, his property was confiscated, and his palace razed to the ground.

Bibliography: *Bombay Gazetteer* (Allahabad, 1903).

(J. S. GORTON.)

BIDLIS or **HULIS**, a town in Turkish Armenia, capital of the district of Kurdistan, situated in 42° 1' East long. (Greenw.) and 38° 23' North lat., 14 miles from the western shore of the Sea of Van, and 25 miles north-east of Sivas (Sefid); according to Koutas (*Bibl. géogr. arab.*, vi, 229), it was four post-stations (*biḥār*) from Akhlat (q. v. p. 235 et seq.). Bidlis (as *Hulid*; in the Turkish pronunciation of the name) *Bidlis* and Armenian *Hulis*.

The appearance of the town is described as very striking and most picturesque. It is built on the bottom of a deep valley and in two narrower ravines which run into it. The *Hulidai* river flows north to south through the town. The stream, which takes its name from *Hulid* more about 16 miles to the south and flows into the *Hizboḡ-su*, the so-called Eastern Tigris, near *Urmia*, about 10 miles northwest of Sivas. In the centre of the town the *Hulidai* receives a tributary from the west; another from the north-east joins it at the south end of Bidlis. The town is divided by this system of rivers or ravines into four separate quarters, the inhabitants of which often took one party after during hostilities and blockaded one another. The houses, usually surrounded by beautiful gardens rise up the steep cliffs all around; many dangerously steep and twisting little streets, which however are always paved, contrary to the usual custom of the east, communicate with one another. Immense bridges span the river. The remarkably solid style of architecture of most of the dwelling houses makes a very pleasant impression on the visitor. Excellent building material is furnished by the red-brown volcanic rocks of the district.

The whole town is surrounded by a strong circuit, now partly in ruins, perched on the top of a steep cliff. The date of its foundation is unknown: the walls bear a series of Arabic inscriptions. It may be assumed that the fortification of this dominant height was contemporaneous to the foundation of the town. Oriental legend ascribes the latter to Alexander the Great. The citadel of Bidlis played an important role in the military point of view throughout the vicissitudes of Armenian history. Since about the end of the middle ages Kurdish Chiefs (*begs*) had resided here, who, as elsewhere, exercised unlimited power, quite independent of the Porte; only on one occasion had Bidlis to submit to its nominal suzerain, viz. in 1638 when Selim Murad IV. set out for the conquest of Baghdad with a vast host. It was not till 1842 that after severe fighting the Turks succeeded in breaking the power of the Kurdish princes ruling in Bidlis and Van and raising the town and district directly. The ancient Kurdish castle is now used as the residence of the principal Turkish officials.

The climate of Bidlis is on account of the high altitude (5180 feet; stated 5310 feet) raw and damp. As everywhere on the Armenian plateau, a long winter is followed by a short relatively hot summer; snow often lies on the roads from November to May, conditions are very favourable for the cultivation of fruits however; vegetables and excellent fruit flourish in abundance.

The industries of Bidlis are on the whole not important. The many channels of waters drive numerous mills. The textile industry may be particularly mentioned. The tastefully decorated carpets woven in the Bidlis district are famous throughout Turkey. Colouring with madder is a speciality here. The principal exports are: red and dyed stuffs (cotton and linen), carpets, goat and ant skins, hides, and large flocks of sheep; of special importance is the exportation of gallapples collected in the mountains of Kurdistan and of white and red gum (tragacanth) which find their way to Europe.

Bidlis is a most important town commercially and indeed must be regarded as one of the chief centres in Armenia, for it is one of the chief places through which passes the caravan traffic between Armenia and Georgia on the one side and the basins of the Euphrates and Tigris and Syria on the other. According to Layard there are three routes from Bidlis to the *Urmia*, two over the mountains to Sivas, which are usually traversed by caravans but are steep and difficult; a third (which was taken by Layard) makes a detour through the valleys of the eastern arm of the Tigris. Of the two roads mentioned by Layard connecting Bidlis and Sivas, the first Arab town in Mesopotamia proper, and of which nothing further is known, must be a mere footpath. We know more about the road which is more frequented from Bidlis via *Uchlik* to Sivas (2 days' journey); the *Hulid* pass proper, which has several times been traversed and described by European travellers. This narrow pass is already mentioned in the Byzantine (George Cypr.: *Historia Byzantina*) and Arab sources (Hakibson, *op. cit.* et seq.) and more often in Armenian literature. Cf. Geogr. Congr. Cypri. (Nicosia, 1890), p. 165; H. Hirschman, *op. cit.*, p. 317, 318.

The main route from Bidlis into the interior

of Armenia were immediately in a north-westerly direction towards Mugh, and before crossing the Nimend-dagh, 7000 feet high, would cross a water road which goes directly north-east towards the Sea of Van (or Ladakh). All these passes are often quite snowed up during the long severe winters and they are exceedingly difficult to traverse.

Before the last Russo-Turkish war the district of Bidlis was under the Governor-General of Erzerum. It was then placed as the rank of a separate district (vilayet) by the Porte, chiefly in order to put a check on the individualistic tendencies and quarrels of its citizens. The modern Vilayet of Bidlis comprises 4 *kazas* (Bidlis, Mush, *Siirt* and *Gimlik*) with 40 *kazas* and 13,500 sq. miles in area. The population numbers 254,000 Muhammadans, 140,000 Christians, 3,000 Jews etc., in all 398,700 souls. The *Sancak* of Bidlis (with 4 *kazas*) comprises 2800 sq. miles with 108,227 inhabitants including 70,000 Muhammadans, 32,000 Armenians, 663 Yezidis and 3740 Syrian Jacobites. As to the town of Bidlis itself the older estimate of Klosser (1814) gives 12,000 inhabitants, Southgate (1837) and Ham (1838) give 3000 families, which would give about 13,000—15,000 inhabitants. Müller-Schwan and Hyernat estimated the population in (1888) at 30,000 inhabitants in 1888 houses (of which 5000 were Kurds and 1000 Armenians); Nolde (in 1893) 36,000 inhabitants. The last, more accurate estimate by Consul, *et cetera*, whose statistics on the Vilayet of Bidlis have also been used by Supan in *Volkskunde, Völkergeschichte, Völk. Hoch* 135 (1901), p. 5, 14—15, 20 gives the present population as 20,000 Muhammadans (about 3000 Kurds), 16,086 Gregorian Armenians, 200 Protestant Armenians, 1800 Jacobites, a total 36,286 souls in 3300 houses; there are 13 mosques and 4 Tekkys (Dervish monasteries). The Gregorian Armenians, who live exclusively in the small quarter are governed by a *Mashay* and have 4 Churches; there is another church for the Jacobites.

Bidlis is still the typical Kurdish metropolis, and was their political centre during the last great revolts of the Kurds in the sixteenth century. It is too wonderful therefore that it has repeatedly been the scene of awful massacres of Christians, during the Armenian troubles of the last two decades, cf. above p. 443.

BIDLISI, MAHMOUD İBRAHİM, a Turkish General and historian, son of the mystic Husam al-Din, who belonged to the school of Shakh Umar, was first of all, an official in the chancellery of Yaghut, son of Uzun Hasan, Sultan of the Tatars of the White Sheep (died 1466—1490—1491). His reply to the Ottoman Sultan Bayezid II on the latter's message announcing his victory, induced the Sultan to invite Bidlisi to his court where he remained in the service of Selim I. He accompanied the latter on his campaign against Herat and took possession of Kandahar for Selim. At the head of a Kurdish army he defeated the Persians, conquered Merv, played an active part in the suppression of al-Khat (Feroz) and Mas'ud and consolidated the internal affairs of the land.

In the name of the Sultan he granted *Shah-Khan* to the Ayubid Khali, II, who took part in the conquest of Egypt and celebrated Selim in a pamphlet, in which he took the opportunity to give him some advice on the government of Egypt. He died in 1520 (1540) the year in which Selim also died and left a history in Persian verse (20,000 *baits*) of the first eight Ottoman Sultans, called the *Hafte-behi* "the eight Pearls".

(where a more late is given). (M. STARK.)

BIDLISI, SHAHIN KHAN, a Persian historian, eldest son of the Emir Shams al-Din, prince of Bidlis, born 1004 (1214) 24th February 1543, at Karchakil near Sam, was brought up with the family of Shih Tahmasp I (1533—1577). At the age of 12, he was appointed as *Amir* of the Kurds, an office which he held for three years. He carried out with him the task of subduing the province of Gilan, with which he was entrusted. He was afterwards summoned by the court of Shah Ismail II (1577—1578) and was governor of Nakhchivan when Shah Murad III placed him on the throne of his ancestors in Bidlis. In 1605 (1590—1597) he dedicated in favour of his son Shams al-Din in order to complete his Persian history of the Kurds, entitled the *Shahzadeh*; it was translated into Turkish by Muhammad Bey b. Ahmad Bey Khan in 1078 (1667—1668) and by Shams' shortly after 1095 (1684). There is an autograph in the Bodleian (Bibl. 334); the text has been edited by Vekhtinov-Zernov (St. Petersburg, 1860—1862) and a French version by Clermont (1865—1867).

BIDPAL, BIDPAH or BIDPAT is the form used

in the west, at the name of the author of the *Kalila wa-Dimna*; this form may be traced to the Arabic *Maqal* or *Maqala*. The Syriac version of the book (compiled from the Pahlavi) has the name *Maqal* or *Maqala*. This form is said by Bentley to be derived from the Sanskrit *vidyāpuri* which means "land of knowledge".

All that we know of this (legendary) personage is given in the preface by Richard D. Salomon, alias 'Ali b. al-Shih al-Farisi, to the Arabic version of the *Kalila wa-Dimna*. This may only be briefly given here since the reader may be referred for other points to the article *KALILA WA-DIMNA*.

After the prince who had been set over India by Alexander the Great had been driven out, King Dabshalin, a scion of the native ruling family, was placed on the throne by the people. He soon began to conduct himself in an arbitrary fashion and to neglect the interests of his subjects. This grieved a wise Brahmin, Wadda by name, who after a fruitless consultation with his people reproached the king at an audience with his misgovernment. The latter drew him into prison, where he lay for a time forgotten by everyone. One evening the king was disturbed in the study of the starry heavens and was reminded of Wadda, whom he ordered to be brought to him. He pardoned him his bold speech, appointed him vizier, and showed him great honour. The king henceforth devoted himself entirely to the arts of peace and expressed a wish to have his name, like those of his ancestors, go down to posterity associated with some great work, which would give deep wisdom in a popular form. Wadda then retired from the world with a supply of writing-materials and food, and attended by one pupil, to whom he dictated the *Kalila wa-Dimna*.

When the work was completed, the king invited all the people of his kingdom to hear it read, which was done by Wadda in the presence of the king.

HIDRI WARE, an alloy metal work, so called from *hidra* (H. 4.) where it is said to have been first manufactured: it is made of a composite alloy of copper and tin (the proportions of which vary in different localities), to which tin, lead or steel powder is sometimes added: the surface is laid in silver or gold, and finally polished and coloured to a dark green or black colour by means of a composition of sal ammoniac, saltpetre and other ingredients; the patterns are generally of a floral description, one of the oldest and most prevalent being the poppy pattern. The chief centres of manufacture are Bidar, Farukh, Lucknow, Dacca and Murshidabad; in the three towns the trade is almost entirely in the hands of Muhammadans.

N. Mukherji, *Bidri Ware* (*Journal of Indian Art*

(N. 6, 1885); Sir George Wall, *Indian Art of Bidri*, 1903, pp. 46—47 (London, 1903). **BIGHA**: a measure of land in India, $\frac{1}{16}$ of an acre or 3025 square yards. This is the standard bigha as used by the Emperor Akbar, but at different times and in different parts of India it has varied considerably.

Bibliography: Abu T. Fazl, *Ain-i-Akbari*, usual form, li. 61—62; H. H. Wilson, *Glossary*, 191.

BIGHA (Greek *Βίγη*), a town in Asia Minor on the Troad (Turkish Canon or Canak), a tributary of the Kadya (Euxine) about 14 miles distant from the Sea of Marmora, capital of a kaza with about 5000 inhabitants (Census, see below, iii. 763, gives 10,000). The whole north-western province of Asia Minor (Mysia) is also called after Bigha although it is not the capital, which is Katakai Salmaz or Canak Katakai (Katakai). The harbour (Katakai) of the town at the mouth of the Kadya is Katakai Bigha or Katakai Katakai.

BIGHAFRID n. MAHARAJA, a Parsi sovereign, who appeared at Kharat in the district of Nishapur in the last years of the Qanayat Shah and was slain with many of his supporters by Abd Mullin at the instigation of the Maheds. He is said to have spent seven years in China early in his career and to have suddenly appeared to the people on his return pretending he had been dead and in heaven during this period. According to one writer he actually simulated death and spent a year in a tomb, which he had built for himself. His teaching, which he claimed to have learned in heaven, was contained in a Persian work. In it he abolished certain ceremonies and customs of Magism e.g. the mother-in-law (maharaj), the worship of fire, the marriage of near relatives, the drinking of wine and the eating of animals that had died etc., while he substituted in their place new rites, for example, the repetition of certain prescribed prayers seven times daily and turning towards the sun while repeating them.

BIGHAR, or BIGHAR, a town and historic tract of India, in the province of Bengal. The town — pop. (1901) 83,063 — derives its name from *bigha* = a Buddhist monastery, and is surrounded by Buddhist remains. It is believed to have been the provincial capital under the Muhammadans from early in the 13th cent. until the time of Akbar, when the seat of government was removed to Dhaka. The province was never an independent kingdom, being on the borderland between Bengal proper and Hindustan. Under the Mughals it formed a *suba*, divided into eight *sarkats*, which was always subordinate to the *suba* of Bengal, and on such it passed to the British in 1765, with the grant of the *diwans* of Bengal, Bihar, and Orissa. Bighar, however, differs from Bengal proper in almost every respect — in climate and

agriculture, in population and language. Only 18% of the inhabitants are Muhammadans, compared with 54% in Bengal. Their language, known as Bihari, is directly derived from the ancient Magadhi Prakrit, and may be described as intermediate between Eastern Hindi and Bengali. It comprises three dialects, Maithili, Magadhi, and Bhojpuri. In 1901, it was found to be spoken by 34½ millions, showing that the language has spread beyond the administrative province, which contained only 24,241,305 persons.

al-BIHARI (Mujibb Allāh al-ʿArab al-Shirāʿi al-Biharī), born in a village in Bihar, India, one of the most eminent 'Ulamā' of his time. 'Alamgir appointed him *Kāẓib* of Lucknow, and afterwards of Faizabad, Dakhnā. For a time he fell under the displeasure of the Emperor, but was restored to favour and appointed *mufti* to 'Alamgir's grandson, Rāṣ al-Khān, son of Muḥammad Muʿizz. On the death of the Emperor 'Alamgir, Muḥammad Muʿizz succeeded him under the title of Shāh 'Alam I and bestowed upon Muḥibb Allāh the title of "Faqīh Khān". He made him *Kāẓib al-Sharʿi* (chief justice) of the entire Mughal Empire, but he did not live long to enjoy this post, as he died a few months after in A. H. 1119 (A. D. 1707). He is the author of the following works: 1. *al-Furūq al-Fard*, a treatise on the individual items, (Lah., 12d. 417. No. 581, 1s.); 2. *Sharḥ al-Zuhūr*, on the principles of Muslim jurisprudence, according to the Hanafī school, (printed at Algor, 1297; *Tabl.* 1311); 3. *Sulḥ al-Hisn*, on logic, (this has long been a favourite textbook in India, it has frequently been printed, and numerous *taḥṣīl* and *taʿrīf* commentaries have been written upon it).

(M. HUSSEIN HOSAIN.)

BIHIST. [See *MAHIST*, p. 600.]

BIHṢṢADH, the medieval name of three districts (Pers. *astān* = *Arabī* *āṣṣā*) of Sāwād or 'Irāq (Mesopotamia). The division is this: 1. In Saʿdīn times, adopted by the Arabs, was as follows: 1. Upper Bihṣṣadh with six divisions (*parṣṣ*), including Babil, Khuzistān, Upper- and Lower-Fallūjja, 'Ain al-Tamr; 2. Central-Bihṣṣadh with four divisions including Sāra and Naḥr al-Malik; 3. Lower Bihṣṣadh with five divisions, among them Furs Bihṣṣadh and Nāṣir. All three districts are occasionally comprised under the plural form Bihṣṣadhiyāt. In general the term is applied to *parṣṣ* lands along the banks of the Euphrates in its course south-west of Baghdād as far as the district of Fūḥā. The name Bihṣṣadh means: "Good (or "better", modern Persian *khā* = middle Persian *arā*)-habitation"; analogous appellations may be quoted elsewhere; cf. Masquati, *op. cit.*, p. 41. The Bihṣṣadh referred to is the first king of *parṣṣ* name (reigned 488 to 496-531): a number of other districts and town-names may be traced to him; cf. e.g. the articles *ABARḤUN* [above, p. 5] and *ABARḤAN* [p. 600].

In the geography of Pseudo-Masʿūdī the name of the Bihṣṣadh province appears in the form *Korā*; cf. Masquati, *op. cit.*, p. 141.

BIHRŪZ, al-Djārid al-Dīn, was prefect of Baghdād about intervals for more than 30 years from 504-536 (1108-1141) and for a period of all 'Irāq for the Seljuq Sultans. After being finally deposed in 536 he retired to his private property, the town of Takrit, and spent the remainder of his life there till his death in 540 (1145-1146). During his government he earned the gratitude of his contemporaries by the many useful public works which he had undertaken for the improvement of the general welfare.

Bibliography: *al-ʿArab* (ed. Tarnberg), I, 330 et seq.

BIHZĀD, Kāwāl al-Dīn, the most famous of Persian miniature painters, born in Herat, a pupil of Fīr Sāyid Ahmad of Tabriz and favourite of the Timurid Rūmī al-Dīn and the Sultan Shāh Bahlūl Baber. (M. Streck, I, 422) praises his delicate talent but criticises him for making the lines of the cloths too thick on bearded faces. He was still alive when Khondemir completed his *Ṣafat al-Shāh* (930-1522). Among the manuscripts illustrated by him may be mentioned a *Yusuf-Zuleykā* written by Sultan 'Alī Mashhādī, which belonged to the library of the *Shāh* al-Mughl Humayūn, when it was plundered and afterwards found a place in Akbar's library (perhaps the identical example, now in the Schultz collection, *Orientalische Arabien*, I, Pl. VI, 9). He also illustrated a *Ḥikāyat al-Sāʿid* (893-1488) in Cairo and the *Diwān* of Ḥamīd al-Dīn in Paris. There are seven sketches by him in Vienna. His pupils were Shāh-e-Ḥusaynī, Mīr Muḥammad of Samarkand, Aḥmad Shāh of Tabriz, who decorated the public buildings of Herat with inscriptions, and Muḥammad 'Alī, who constructed the Chihil Sāṭik palace at Ispahān. His nephew Rūmī al-Dīn was an excellent calligrapher.

BIKĀ. [See *BIKĀ*, p. 600.]

BIKĀ (A.), first born, virgin.

BILĀD (A.), plural of *bilād* (q. v.) "district", "province", appears in the names of countries, e.g. *Bilād al-ʿArab*, Arabia; *Bilād al-Rūm*, land of the Romans, Asia Minor; *Bilād al-Djazīra*, lands of the Taurus passes; *Bilād al-Djazīra*, below.

BILĀD al-DJARID (Land of Palms), or as it is popularly called al-Djārid, a district in central Tunisia. The name is now given to a group of four oases, viz. Tūzov, Neḥa, al-Wādīn and al-Hammā (cf. the articles *Tūzov* and *Neḥa*). The Djarid is a rocky stretch of land bounded on the north by the Shāh al-Gharb and on the south by the Shāh al-Qarīd. The latter forms with its continuation the Shāh al-Fedjān an almost

mistaken depression from the shores of the Gulf of Oued to the Algerian frontier. Shut in by mountains and sand hills against which incursions have had to be taken to prevent the invasion of the oases by the winds of the desert, the Djardj furnishes a kind of natural live-house, where the average temperature throughout the year is 70°, with, however, a maximum of 120° and a minimum of 25° Fahr. The rainfall is small, — 5 inches annually — but the springs provide a plentiful supply of water. They are skilfully utilised by the inhabitants. By a system of irrigation which has been described by al-Hakri, and nourish to the masses a luxurious crop of fruit-trees, mainly date-palms, which shade the cornfields as their feet. Historians constitute the principal wealth of Djardj, which contains about a million of them, producing annually from 38,000—40,000 tons of dates. The inhabitants derive a portion of their income from the manufacture of silk and cotton stuffs and carpets, which are much esteemed in Tunisia. The Djardj was besides, in the middle ages as at the present day, the starting-place and destination of *caravans*. Nefza was once known as the "port of the Sahara" but this traffic, once much diminished since the suppression of slavery under the governorship of Ahmad Bey, has lost almost all its former importance. The population, which is scattered through the various oases, numbers 30,000 of which 10,000 are in Nefza, 9000 in Tizer, 1400 in al-Hamma and 8000 in al-Ghlyin.

The modern Djardj does not quite correspond to the region mentioned by the Arab historians and geographers under the name of Bilal al-Hajari or land of Kaqiliya. Ibn Khalkal (*Description de l'Afrique*; Paris, 1848, p. 143) regards the name Kaqiliya as being applicable only to the town of Tizer. Al-Bakri (*Description de l'Afrique*, trad. de Slane, p. 111, et seq.) extends it to the adjoining country. "The land of Kaqiliya," he writes, "contains several towns such as Tizer, al-Hamma and Nefza". Ibn Khalkal (*Description de l'Afrique*, trad. de Slane, p. 143) regards the two names as identical and mentions both Tizer and Nefza on the north, and Nefza on the south, in the Djardj. "The towns with the date-palms are situated to the south of Tunis; they include Nefza, Tizer, Gafsa and the towns of the Nefzawa country. All this area is called the land of Kaqiliya and supports a large population". Leo Africanus uses the name Djardj in a much wider sense; the limits he gives, are, on the one side (Libya) and on the other the Mediterranean shores near Ugher (*Description de l'Afrique*, ed. Schimper, iii. Chap. et. 2, 196).

Inhabited originally by Nefzawa Berbers and colonised by the Romans, the Djardj had to bear the brunt of the Muhammadian invasion. In 647 A.D. it was ravaged by the army of the Zubair, in 649 by that of Oqba, who deprived the Christians of the towns they occupied in this region and forced them to adopt Islam. Their conversion to Islam was neither general nor permanent, however, for there were Christian communities in Kaqiliya down to the time of the Almohads. Incorporated for administrative purposes with Bilad, the Djardj enjoyed the authority of the Emirs of Kaqiliya with a very high grade. The Emirs of the Djardj repeatedly rose against the Aghlabids, notably in 137, 209 and 224 A.H. At the beginning of the Fatimid rising, the 238

A.H. and Allah had no difficulty in conquering the country of Kaqiliya. The inhabitants had readily adopted the heterodox doctrines of the Almohads in the 11th century (Ibn Hawqal, p. 268); they possessed, as al-Hakri particularly mentions (p. 143, p. 144) as a peculiarity of this land, the habit of eating dogs' flesh, which he, it is said, still practised by the barons of Tizer and the Maib. At this period, the Djardj was enjoying remarkable prosperity, for according to al-Hakri, the taxes produced an annual sum of 200,000 dinars (£280,000).

Protected by its isolation, the Djardj succeeded in preserving a practical autonomy, while nominally recognising the suzerainty of the various dynasties that succeeded one another in Maghrib. The towns formed little republics, governed by councils of the more prominent men, or ruled by powerful families, such as the Beni Harkon, and later the Beni Warid at Tizer. The Almohads, to whom the tribes of the Djardj paid their homage after casting off the authority of the Zirids, treated these local councils with deference. The Almohads suppressed them. As 1000, therefore, as the Almohads began to break up, the Djardj, which had fallen to the Hafsiys, tried to regain its independence. The civil war, which broke out between the rulers of Tunis and of Baqila (Baqila), gave them an opportunity. Taking advantage of the weakness of Tunis, the towns of the Djardj again organised themselves into republics. Under the leadership of powerful families, the Beni Yacoub at Tizer, Beni Harkon at Nefza, the Beni Abu Bakr at al-Hamma, with the aid of Hilali tribes and in alliance with the Beni Mawla of Maken (see the article Mawla) they fought throughout the 13th century against the Hafsiys, supported by Sultan Abu Bakr, who entrusted the government to his son, the Djardj rose again on the latter's death in 1346. It regained its actual authority, then after the destruction of Abu Tahir's army at Selwan, and regained its independence. The successes gained by the Djardj in this period do not appear to have had any enduring results. During the 14th and 15th centuries the Djardj was practically independent and always has a strong nucleus under Turkish suzerainty. The Turks had to send an expedition every winter into the desert to collect the taxes.

Etymology: to posterior Ibn Khalkal, *loc. cit.*, p. 143, especially p. 144-145 — *Etymology*: *loc. cit.*, trad. de Slane, iii. 241-257.

BILAL a. BAKAR, the first Mu'awwidiya, a slave of Abyssinian origin, who belonged to a man of the tribe of Qinnah in 'Amir, was easily attracted by Muhammad's preaching and joined his small band of followers. For this he was persecuted by the Prophetic enemies, but remained steadfast in his belief in the one God, which induced Abu Bakr to purchase him and give him his freedom. He fled with Muhammad to Medina where he immediately found a welcome from Sa'd b. al-Bakri. He afterwards dwelled in the house of Abu Bakr, where he like the other members of the household was attacked by the fever that raged in Medina. According to Ibn Is'hak, Muhammad established a bond of brotherhood between him and the Khazraj Abu Bakr, so that he — one of

Siddiqi Firahwar Bilgrami, *Shah Wali 'Ullah*, *Quarterly of the Province of Oudh*, I. 311 et seq. (Lucknow, 1877).

BILKIS is the name among Muhammadans for the Queen of Sheba. The story, given in I Kings x, 1-10, of how the Queen of Sheba (Saba) came to Solomon to prove him with hard questions, early gave rise to the formation of further legends.

Muhammad in the Koran xvii, 31-33, relates how the heathen Queen of Sheba, who worshipped the sun, received a letter, borne by a hoopoe, from Solomon demanding that she should worship the true God. The Queen in terror sent presents to Solomon which were not well received. When she herself came to Solomon, the latter had her throne taken away by an 'ifrit' so that she would recognise it again. He afterwards led her to a room paved with glass. As Solomon expected — according to the commentators — she to see if she really had 'gnats' feet — she took the glittering floor for water and raised her garments. Finally she became converted.

The very fragmentary story in the Koran presupposes a considerable development of the legend. Its main features the Targum II in Esther agrees with it but this may possibly have been influenced by the Muslim tradition. The story, which certainly reached Muhammad through Jewish sources, appears even by that time to have been subjected to Iranian influence.

The name Bilkis is not found in the Koran. It has been variously explained: as the Greek *βασιλίσκη*, which would point to the story of the marriage of Solomon and the Queen of Sheba, which was wide spread among the Jews at quite an early period, or as a corruption — quite even permissible in the Arabic script — of Nankalis, as Josephus calls his Queen of Sheba, whom he regards as ruler of Egypt and Ethiopia. The later Muslim legend, the development of which is not yet quite clear, places Bilkis in the dynastic line of Southern Arabia. It is possible that the Biblical figure may yet be identified with some South Arabian princess whose name was not unknown to inscriptions. Cf. A. van Kremer, *Die Sudarabische Sage*, p. 63 et seq.; M. Hartmann, *Die Arabische Frage*, p. 478. The elaborate Muslim legend given by Haunee-Parguall in *Rasul* and G. Well, *Nilische Legenden der Muselmänner*, p. 247 et seq., would only have attained its final form under Indian and Persian influence. The story appears elsewhere in different forms. The Persian extract from Tabari (transl. by Zolotarev, I. 443 et seq.) for example, contains a pretty tale of the birth of Bilkis, according to which she was the daughter of a Chinese king Aun Shari and a Peri. Zolotarev wished to recognize the Hinduistic Jolly Manush in the name of her mother Balkanush — according to the Arabs she was called Talimha, Balkanah or Yalkana — for the connection of these names see also G. Nielsen, *Der Sittliche Gott Manush*. Ab-Biruni, *Chronology*, p. 49, only says that, like Abu T-hamdan, she was the offspring of a demon, while according to Zolotarev she belonged to the family of the Hinduistic Talika, son of Sharrabi and lived in the palace of Malik. As may be seen it appears that the Muslims were long aware of the fact that she did not properly belong to Islam; we therefore have occasional polemics

against individual portions of the story such as her super-human origin.

In Christian Abyssinia the legend of the Queen of Sheba has become naturalized in a form which traces the descent of the ruling house from the marriage of Solomon and the Queen of Sheba who is here *Menen* Menen.

(H. CAUSA in VAURA.)

BILLAWR, Bārāṭ — whether from the Greek *βίλλω* is a disputed point, cf. Dury, *Supplement*, I. 180 — the rock-crystal. According to the *Petrology of Asia* it is a kind of glass but harder and more compact. It is the finest, purest and most translucent of natural glasses, and is mentioned as one of the 'colours' of the *Yajur*; by the dust coloured rock-crystal is meant the musky topaz. It may also be artificially coloured; it concentrates the sun's rays so that a black tag or piece of cotton or wool may be set on fire by it; valuable vessels for kings are made of rock-crystal. A commoner kind which is harder and looks like salt — i.e. quartz — gives out sparks when struck by steel and is used for striking fire by kings' servants. No account of its crystalline formation, which Pliny gives, is given nor is the general distribution of quartz known. Tiffner says that at 23 days' journey from Kashmir are two mountains the interior of which consist entirely of beautiful rock-crystal, it is worked in the night time as the collection of the sun's rays render work by day impossible. Mallet (publ. in *At-Mashriq*, 1908) gives the fullest account of the places in which it is found; according to him it comes from Ethiopia (Fard), Adakhabah, Armenia, Caylon, the land of the Franks and Maghrib al-Akbar.

BILLITON or Biliton on the south-east coast of Sumatra, with an adjoining lagoon, an area of 88 square miles and with regard to its situation, formation, greatest height (1700 feet) flora and fauna, population (332 per square mile) products (tin), agriculture and trade, it is exactly similar to Banka. Tandjung Pandan is the capital of this independent sultanate-territory. The original population (34,181 souls in 1905) consists of Muhammadan Malays (agriculturists) and heathen Sekaks (about 1600) who are fisherman, living on their boats and workers in the bush of whom one tribe (*rukak*) has however become Muhammadan and is sedentary. In Tandjung Pandan (about 3300 inhabitants) live the foreign merchants (Chinese and Arab) and the European officials (46 of 1113 on the whole island).

Before 1850 Billiton was a worthless desert of places but since 1861 the exploitation of the valuable tin mines by the British (Messerschmidt), which employs 1800 Chinese coolies, has altered the economic conditions.

BILDER KÖRKE, "Abaya Palace" is the title of a collection of 12 Turkish Fairy tales, collected from the first of them, printed in Constantinople, U. S. C. G. Jacob, *Türkische Volksliteratur* (Berlin, 1901), p. 3-5, 9 et seq.

BILMA, an oasis of the Sahara on the eastern route from the Lake of Chad to Tripoli at a height of 1016 feet, belongs to the group of oases, called Kowar by the Arabs, and Hammam Tughe by the Tébén (= Rocky Valley according to Nachtigal). Kowar occupies the center of a sandstone basin of the cretaceous period beneath which imperishable schists collect, not far from the surface, the water which flows down from the mountains of Tibesti. It is a valley running from north to south, about 60 miles long and according to Barth and Nachtigal 5-7 miles, according to more recent travelers (Mouton, Chudeau, Gudel), 3-4 miles in breadth. A wall of rock about 100 feet high protects it on the east from the winds from the desert. The population, which is called Tébén-Dikar appears to represent a mixture of the Tébén proper with groups from Bornu. These natives are of medium height, hairy but not so powerful or warlike as the Tébén of Tibesti. They are ruled by a chief called *Mar* or *Dar* who is elected by the more important men, and live in about twelve villages, in which they have adopted various ways of living according to their origin; the Tébén build their houses on the rocks while the Bornuans build clay houses separated from one another by streets and surrounded by a wall. The most important of their villages are Amay, Dikar founded by a Bornuan colony, perhaps in the 17th century A. D., Ashennou, Shennoua, the site of a Senegal-Senega, Kala or Kolo and Tieda.

Chad is the chief place of the district of Bilma, and the most important in all Kowar. The population of this little town, according to Nachtigal, is about 2000. In this district the Bornu element predominates, and the Kanuri language is more used than the Tébén. The district of Bilma, like the other oases of Kowar possesses some unimportant palm groves (there are about 200,000 palm trees in the Kowar) and a small area devoted to cereals but no real importance lies in the fact that it is a halting place on the routes from Bornu to Fezzan and in the salt deposits in its neighborhood. The salt, which is melted into pillars (the blocks or "dams" of which two form a canal) is carried by the women into the oasis of the Sahara and to the Sudan. The Sahel trade in it to Tripoli, and the Dica to Kowar and Bornu. The Kowar of Air (q. v.) retains the monopoly of the trade towards the north and westward. They organize annually a caravan called the *air* for this purpose, which has been described by Barth. These caravans have for long exercised a sort of monopoly over Bilma, even going so far as to forbid the inhabitants of the oasis to grow cereals so as to have them more dependent on them. The value of this trade has been seriously

estimated. Barth estimates it at 3000 camel loads annually, Chudeau at 4000, Gudel at 5,000, and he says it may be as much as 10,000. As to the through trade, which has been much affected by the suppression of the slave trade which formed its staple and by the ruin of Bornu under the domination of Kala (see above), it is now almost insignificant. The limitation in the number of caravans has now forced the inhabitants of Kowar and Bilma to seek new sources of income and to devote more attention to agriculture. The occupation of Bilma by the French (1906) by assuring the inhabitants of an efficient protection against the nomads will no doubt contribute to accelerate this change in their manner of living.

(C. VERN.)

BIMBASHI, properly *bin-bashi*, "Chief of a thousand", has been the name of the commander of a battalion in Turkey since the introduction of the reforms. (C. HUNTER.)

SINÁ (A.), properly "building" or "structure", hence comes in grammar to mean "form" (e.g. *Sinawali*, ed. Derenbourg, 1, 2, *sinawali* and particularly the indefiniteness of the vowel or consonantal) termination (the opposite to *Fezzan*). It must however be noted that words like *sinaw* "black" according to the Arab view have a virtually deathable ending and are therefore not regarded as *sinaw*. The *sinaw* moreover appears in all three classes of words (nouns, verbs and particles).

Bibliography: *Sinawali* (ed. Derenbourg), 1, 2, 3, 4, 5, 6, 7, 8; Ibn Vahid, p. 400-405 and elsewhere; Ibn Agh, *Commentary on Ibn Malik's Alfya*, verses 15-17.

(A. SUTHERLAND.)

BINGOLDAGH, one of the most important elevations of the Armenian highlands on the borders of the Wilayets of Erzerum and Ruz (q. v.); the geographical position of the highest peak is about 41° 20' East Long. (Greenw.) and 39° 20' N. Lat. Streckner and Radde describe the Bingoldagh as a gigantic, extinct volcano, the edges of the crater of which have for the most part fallen in. According to the most recent geological investigations of Oswald, it is not however really a volcano, but only a dome, the material of which has been poured forth through a system of fissures, and is faulted on the south with a downthrow from N.W. to S.W. (the so called Bingöl Cliffs on which there are precipices 3700 feet high). The greatest heights are found on a ridge 1/2 miles long running from east to west, two parallel ridges running north and south one at each end of this range form with it a triangle. The middle culminates in the eastern Dzir or Tinn-kul'a (= Iron Fort), 10,150 feet in height. This is the highest height given by Oswald in Stübel's *Handbuch*, no. 59, 1910: Radde estimates the height at 12,087 feet which is much too high; H. and R. Kiepert's figure of 11,378 feet, given in the *Fremde Erde naturg.*, Pl. v, 1910, is also too high; followed by me above p. 435¹. It is also too high; Streckner's estimate of 10,285 feet is much nearer the truth. The western peak Bingöl-kul'a or Toprak-

As a matter of fact, we have here an actual campaign, as may be seen from the book of the *Maqāṣid*, and may be rendered certain by a comparative study of the *Ṣaḥīḥ* 70 *Ḥadīṣ* mentioned necessary to reach the *Ḥarām* and indeed at that time Medina had not passed 70 number. On each occasion Muhammad went out to send one or two *Kurī'* (cf. *Agḥāṣi*, v. 19, etc.). The story is introduced by the Traditionists, to erect an unfortunate campaign and also to prove the large number and great utility of the *Ḥarām* and to give sanctity to the body Muhammad had been asked by the Banu Lihyān, Kifl, *Ḥabashā* etc., divisions of the Banu Sulaym, for help against their relatives, possibly also by Abū *Ḥabshah* for support against a rival, 'Amir al-*Ḥarām*. This Prophet's policy required him to interfere in such various quarrels. A division of 30 horsemen, all Anṣār sent by him, was surprised in the neighbourhood of Kifl Maṣūba by the Banu Sulaym and cut to pieces. 'Amir al-*Ḥarām* was leader of the enemy and his name last year after he had been accused by Traditionists. This happened in the year 4 or in the 5th month of the Hijra, in the 14th month after the battle of *Ḥaṭṭ*. To atlay the great excitement in Medina another *ḥarām*, besides *Ḥarām al-Ḥijā*, is said to have been revealed but was afterwards forgotten or omitted from the *Ḥarām*. "Announce from us to our people that we have met our Lord and be in contact with us, even as he has made us contact." Abū *Ḥabshah* himself appears to have played a double part in this affair. The Prophet continually cursed the authors of this calamity, which was the greatest blow he had suffered next to the disaster of *Ḥaṭṭ*.

(H. Lammie.)

AL-BIRA, the name of several places, generally in districts where Aramaic was spoken, for al-Bira is a translation of the Aramaic *brā* = "festival", "scholal". The best known is al-Bira on the east bank of the Euphrates in North-west Mesopotamia, the modern *Brugga* (q. v.); on other places, bearing the same Bira, cf. *Vägård, Mesopotamien* (ed. Westenholz), I. 767; *Göttinger in the Nachr. der Götting. Ges. der Wiss.*, 1836, p. 11—12 and in the *Götting. Bibl. angez. arch.*, 1836, p. 11; p. 447; Le Saux, *Palatins under the Mesopotamians* (1890), p. 423. (H. STROUD.)

BİRADER, popularly *bisader*, Turkish pronunciation of **brother** *fratër* "brother"; is a form of address used only between Muslims who speak Turkish, and is never applied to one who is not a Mohammedan. (E. L. BAKER)

BIRDJAND. A town in Persia, situated in 59° 10' East Long. (Greenw.) and just below 30° North Lat. on a plateau 4440 feet high. The older Arab geographers do not mention it. Yuhat (c. 643 = 1225) is the first to note it and describe it as one of the finest towns in the district of Khorasan, which is the throne of the Caliphate and a dependency of the province of Khorasan. At the present day Birdjand is regarded as the chief town of Khorasan, while in the middle ages this honour fell to Herat which is about 70 miles

further north. Westcott (1840-1840) describes Birdland as an important town, the surroundings of which were not very favourable for the cultivation of corn but produced large quantities of grapes and other fruits; the cotton, so at the present day, was then extensively cultivated; with the above mentioned flax, Birdland produces the greatest quantity of this plant and dye of any town in Persia. The district of Birdland has long been famed for its carpets which almost all come from the village of Derakhsh (50 miles north-east of Birdland) and sometimes fetch very high prices. The *sericks*, which are manufactured in Birdland of camel's hair are also highly esteemed and are used in *ser-carpets*, *stuffs*, as well as cloth. Birdland at the present day is one of the busiest commercial towns in Persia for there the caravan routes from Samarra, Meshed, Herat, Selekta, Kirman and Vard run.

Blairland is built on the slope of a hill and makes a pretty picture with its houses all of which are surmounted by domes and from the distance look like beehives. Fear underground agencies (*lests*) provide the town with a plentiful supply of water. When the springs in the surrounding country dry up in summer, the country people therefore flock into the town and the number of inhabitants is for a period doubled. Guthrie estimated the number in 1873 at 15,000. Stewart in 1896 at 14,000. Local quite recently at 12,000; on the latter estimate of, Supan in *Petersen's Gogr. Mittail.* Erg. Bd. 27. 1895, p. 125.

Since the middle of the sixteenth century England has been better known; Ritter (see *Erkenntnis*, viii. 263) ~~has~~ ^{gives} very definite information about the idiom. The name of ~~the~~ town often appears on maps in the centuries from Bishop (Ritter, *op. cit.*; Brückmann).

(H. STANGE.)

BİREDJİK, a town in Mesopotamia, on the left bank of the Euphrates, situated to 38° East Long (Greenw.) and 37° 2' North Lat. The name *Biredjik*, popularly *Beldjik*, in the Hittite dialect (according to Sachau) *Biradik*, means "little town", i.e. *BİREDJİK* "Fou" (Arabia Des. with the Turkish diminutive suffix); the etymology given by Ritter, i. 951, 955 and Müllke, *op. cit.*, p. 314, are wrong.

Birzili (1170 feet above sea-level), is the centre
 of a plain which is surrounded by a semi-circle of
 mountains sloping down to the Ephraïmites. The
 place ~~is~~ is overlooked by an isolated cone
 of rock rising sheer out of the river, which has
 been fortified from the remotest times, to guard
 the passage. It is therefore naturally possession
 one of the ~~most~~ important positions in eastern
 Asia. The Ephraïmites have leaves the narrow con-
 fines of the steep mountain walls and enter the
 Syrian-Mesopotamian plain, through which it flows
 to reach the sea. It is here too that the

river first becomes navigable, leaving behind it the dangerous rapids formed where it breaks through the Taurus, and traffic may proceed up to this spot with the greatest ease.

There can hardly be any doubt that on the site of the modern *Birejik* we must locate the ancient *Til* (= *til*) *Barsip* or *Hamip* of the Assyrian inscriptions. In the 12th century B.C. the position of this town as the capital of the *Amurru* Aramaic state of *Bit-Adini* in North Syria and Mesopotamia was by no means an unimportant one. Seleucus II (359–324 B.C.) always crossed the Euphrates here on his campaigns into North Syria; he repeatedly mentions the fortress taken by him there (apparently the modern castle) to which he gave the new name of *Ad-Selma-ahad* = “Seleucus’s citadel”; which we find again in the 11th inscription of his successor *Shamshadad V.* When Seleucus required ships to cross the Persian Gulf, he had them built at *Til-hamip* taken down the Euphrates. On the references to cuneiform inscriptions of E. Selma-ahad, *Kleinarch. u. Grächtkefisch.* (Gießen, 1878), 143 et seq., 219 et seq., and V. Halm, *Die Inschriften der Perser* (Leipzig, 1881), 4, 141, 263. It is not improbable that the old name *Barsip* is preserved in Ptolemy (v, 18, 3) in the corrupt form *Boresia* (for *Boresia*).

In the Assyrian period, the passage over the river was usually made on inclined sleds (the modern *belike*), as is expressly mentioned. After the beginning of the Seleucid period there were two bridges of boats over the Tigris, just at its exit from the Taurus, both called *Zangina* and often mentioned; the northern one, apparently the less used, was *Sannuata* (Arabic, *Sumabat*) in Commagene and the southern of *Bit-dijla*. Each of the towns which arose at these bridges had a suburb on the Mesopotamian side; that of the southern *Zangina*, was founded by Seleucus I and called after his first wife, *Apamea*. The *Zangina* are often confused with their eastern suburbs (for example by Ritter, Furbiger, Munster and Chapot). Cf. thereon, particularly H. & R. Kiepert, *Asien und Afrika Antiqu.* Heft v. 1910, p. 1–2, 3, et. also on this area where the Euphrates could be crossed, Munster, *Geogr. d. Griech. u. Röm.*, VI, 1, (Leipzig, 1831), p. 389 et seq.; Ritter, *Asien und Afrika*, x, 339–400; Nöldeke in the *Nachr. der Götting. Ges.*, L, 1876, p. 1 et seq.; Strack in *Pauli Winkler, Realencycl. d. class. Altertumswiss.*, Suppl. I, 99 (Apamea), 274 (Cappadocia, Cappadocia); V. Chapot, *La frontière de l'Euphrate* (Paris, 1907), p. 272 et seq. We have evidence of the existence of a bridge in the southern *Zangina* down to the second half of the 17th century (cf. Khalil al-Zahid). By the possession of the fortress on the dominating rock, the eastern town was gained an advantage over the western; the latter quite disappeared in the middle ages, while the former gradually increased in importance. The official name *Apamea*, which possibly never became generally current, also disappeared and was succeeded by the indigenous name used by the Aramaic population of the district, *Martha* = “fortress”. *Martha* after appears as a place-name in areas where Aramaic was spoken (cf. the article *al-Martha*); the modern *Mar* ca-20 on the right bank of the Euphrates, 40° 8' East Long. (Greenw.), also denotes the site of another *Martha*, which is mentioned by Ptolemy, *ibid.* *Chama*, the *Nofa*. *Nigrit*,

Microbi, *Geogr. Cypr.* (Norden) and the Syrian Chronicle of Joshua Stylites. This Mesopotamian *Martha* has often wrongly been identified with *Birejik*; this identification has been combated by C. Ritter, *Geogr. Anst. Mit.*, I, 243; Kiepert, *ibid.*, 187; and R. Kiepert, *ibid.*, p. 30.

The Arabs adopted the name *Martha* in the 7th century, which appears in the later Syrian writers (cf. e. g. Barhebraeus, *Chron. Syriac.*, ed. Pacht, p. 403) in the form *Martha*. In historical literature *Bire* appears to be first found in the Crusading period. In 1099 Baldwin, Count of Flanders, took possession of it, and it remained well up half a century in the hands of the Franks. In 539 (1144) they delisted themselves valiantly in the attack of *Bira*, under the command of the then Lord of Edessa, against the assaults of the troops of Zangid, Emir of Mosul; but the town surrendered soon after of its own accord to the Turkish prince of Maridhi out of fear of Zangid, *cf. Wall, Geschichte der Christen.*, III, 388–389. Since then, it has always remained in Muhammadan hands except for a brief period when the Syrians held it (cf. Ritter, x, 936, 950, 965). During the Tatar invasions of the 13th century the impregnable citadel of *Birejik* remained a stronghold of Islam (cf. Abu 'I-Ida, *ibid.*, 137).

The older geographical works of the Arabs never mention *Bire*; nor does Yaqut. It is not till the middle of the 17th century that it appears, for example to Khalil al-Zahid, the *Maridhi*, and Khalil al-Zahid. After Syria and Mesopotamia had passed under the power of the Crescent and Turks had gradually attained a numerical preponderance in the population of *Bira*, the Arab name was gradually supplanted by the Turkish *Birejik*. This is first given among European travellers by Niebuhr (1766) while all travellers before him with the name *Mar* or *Mar* (C. Kiepert, 1563; L. Kiepert, 1574; Tavernier, 1638 and 1644; Mandell, 1699; Dier and Pouchet, both in 1737).

In the history of modern warfare, *Birejik* is famous for the decisive battle which took place quite near it (at *Mar*, 10 miles west of the Euphrates) in the war between Turkey and Egypt in 1839. The Turkish army under the command of Serasker Hüsri Pasha had taken up a position on the heights on the right bank of the Euphrates, two hours' journey from *Birejik*. In the Turkish camp was v. Moltke, afterwards General Field-marshal, but his advice was, unfortunately for the Turks, not taken. The encounter between the two armies took place on the 24th June and ended in a brilliant victory for the Egyptian troops, who had an experienced leader in the Crown Prince Ibrahim Pasha. The retreat of the Turks soon degenerated into a headlong flight and ended in the total dispersion of their army.

According to the accounts of all travellers *Birejik* forms a pretty picture. The houses are built in terraces along the river bank for over a mile up the slopes of four connected hills and form a sort of amphitheatre around the highest mass of rock which is crowned by a fortress. The numerous cypress trees and orchards which rise above the houses, enhance the beauty of the situation. A ruined wall with four gateways, built by Sultan Kâ'im-bai in 887 (1482) (cf. v. Hirsch, *ibid.*, p. 1065), and flanked by four towers,

over Buddhist temples at P'ai-ting in his time, which had been built in 637. The inhabitants were only engaged in gardening but also manufactured articles of gold, silver, copper and iron.

There appears to be only one notice of Bishbalik in Muhammadan literature before the Mongol period viz., in the anonymous *Fiṣṣat al-Aḥām* (377 = 982-983), the town of Bishbalik (Five Towers, apparently a Persian translation of the name Bishbalik) is mentioned to the north of the Farkha (Tien-Shan) mountains as the summer residence of the Princes of Tughughghaz, in the sentence it was said not to be so warm there, as in the towns to the south of these mountains. Even in the description of the road from the land of Tughughghaz to the mountains of Koghan (the Salan mountains) to Kandah (in Barthold, *Orbis antiquus et modernus Asiae*, p. 86) Bishbalik (Bishbalik) is never mentioned, although the writers of the Mongol period show that Bishbalik, like the modern Gulistan, was of great importance as the starting place of a caravan route through the desert to Mongolia; for this reason the district of Bishbalik was one of the first of the settled areas of Central Asia to be reached by the tribes fleeing out of Mongolia before Chinggis Khan in the thirteenth century and later by the hordes of the Conqueror himself.

At that time Bishbalik was with Kara-Khondja (near the modern Turfan) the chief town of a Uighur prince, who bore the title of Idikut and was a vassal of the Qarakhan of the Kara-Khitan. In the year 1200 the Idikut took advantage of the weakness of Chinggis Khan's arms to cast off his allegiance to his overlord and to place himself under Mongol protection. In the course of the following decade the ravages of the bands sent out by Muhammad Khwarizmshah are said to have extended as far as Bishbalik, to follow a not very trustworthy historian. The historian Shihab al-Din (Barthold, *Orbis antiquus et modernus Asiae*, p. 115). It is also Shihab al-Din who gives us most of our information regarding the relations of the subjects of the Idikut with the representatives of Muhammadanism during the earlier years of Mongol rule. The land of the Uighurs had been united into a political whole with the Muhammadan countries of Central Asia by the victorious campaigns of Mongolia to the West, in which the Idikut had taken part as the head of 10,000 men and could not in the long run resist the advance of Islam, particularly as Muhammadanism by their wealth and education had attained influential positions in all the lands of the Mongol Empire, even in China, and had gradually superseded the Uighurs, the first teachers of the Mongols. A bitter feud thus arose between the Uighurs and the Muhammadans. Under Mongke-Khan (1251-1259) the governorship of all the lands of Khwarizm up to the Chinese frontier was entrusted to Mas'ud Beg, son of Mahmud Yalwagh, a native of Khwarizm. Mas'ud-Beg is mentioned by the Chinese as governor of Bishbalik. About the same time, 630 (1252-1253) the Idikut was accused by Saif al-Din, living in Bishbalik (probably as representative of Mas'ud-Beg) of having given secret orders for the massacre of all Muhammadans in his land: the court, appointed by the Mongols to try him, found the prince guilty and he was executed in Bishbalik. Shihab himself made a journey

to Mongolia (649-651) in the retinue of the Mongol governor of Farkha, Arghun-Agha and at least on his return journey visited Bishbalik but he only gives his readers a glimpse of it from Uighur sources, including one about the foundation of Bishbalik (cf. especially W. Radloff, *Asienatische Introduction*, p. 1111 seq.). He tells us nothing about the town itself, its extent etc. The other travellers who visited Bishbalik in the thirteenth century, such as the Chinese Chang-chün (1221 cf. Struchowider, *Medieval Researches*, I. 65) and Iltis, the King of Little Armenia (1255), tell us so little about the town. Bishbalik is never mentioned at all by travellers from western Europe in the Mongol period, although the road from Amul (Amul, near Kishik) to Samarkand (Bishbalik, i.e. Peking), mentioned by Pegolotti (cf. Yule, *Cathay*, p. 283; Mangunli, *ibid.*, p. 338) and others must apparently have passed Bishbalik; according to Wassaf (ed. Hammer, p. 20, Indian edition, p. 22) it took two weeks to go from Amul to Bishbalik.

We know still less of the later history and destruction of the town. After the break up of the empire founded by Chinggis Khan, the Idikut retained for a period in Bishbalik an independent position between the kingdom of the Great Khan (China) and the Mongol Empire in Central Asia; about 1275 an invasion from Central Asia was successfully repelled (cf. Al-Hamidi, *Historie des Mongols*, II. 451 et seq.).

According to the Chinese map of the year 1334 (Struchowider, *Medieval Researches*, II. frontispiece) both parts of what had earlier been the Uighur Kingdom, i.e. Bishbalik as well as Kara-Khondja, belonged to the dominions of the son of Chagatai (q. v.). During the time between the latter country and the great Khan's, the dynasty of the Idikut had perished. These wars as well as the struggle between the sons of Chagatai were fatal to the existence of the town. According to Muhammad Haider, the author of the *Tarikh-i-Rashidi* (xix-xviii century) the land of Bishbalik belonged to Moghulistan, which stretched from the Lake of Balkhash (q. v.) to Farkha (the modern Farkha) on the Chinese frontier (*Tarikh-i-Rashidi*, English trans., London, 1895, p. 363); like the other towns of this area, which are mentioned in the thirteenth and sixteenth centuries (Bishbalik, Amul, etc.), Bishbalik had apparently by that time long disappeared. The Chinese also appear to have used the name Bishbalik in the xviii century only as the name of a district. In the same century Buddhism appears to have been finally superseded by Islam in these lands.

Even in the xviii century mention is made of the first branches of the Kalmaṣha on the lands of the descendants of Chagatai; all the lands of the eastern half of Central Asia were afterwards incorporated in the great nomad kingdom founded by the Kalmaṣha, which was not conquered by the Chinese till the year 1735-1755. This period was naturally not favourable to the development of cities and civic life; there was nevertheless, according to the map prepared by the Swedish lieutenant Remat during his residence among the Kalmaṣha (1715-1731, *Carte de la Mongolie, servie par le Suédois Remat*, St. Petersburg, 1891), in the district of the modern Gulistan, a town 'Bishbalik', about which nothing else appears to be known. Gulistan (China, Kachang, Turk. Kachang)

was only founded after the establishment of Christian rule.

(W. BISHR.)

BISHR, a mountain in Syria, famous as the site of a "memorable battle" of the ancient Arabs, probably the modern *Qinnas Bishr*, a long chain running in a southeasterly direction from Palmyra to the Euphrates. R. Kiepert's map shows a place named *Rehsh* in the centre of the *Khel*. The battle of Bishr was known by this name and this corroborates the identification of Bishr with the *Khel* Bishr. An aqueduct below the water runs this range to Ormus. Akhbal describes as a place on the outermost western border of the inhabited by the Taghlibes. Khalid b. al-Walid is said to have surprised them there on his march from the 'Irak into Syria. If, as can hardly be doubted, Akhbal was a native of Syria, we may locate his home in the district of Bishr. It was here that he was suddenly overwhelmed by the last outbreak of the long and bitter feud, between the *Kais* and *Taghlib*, the "day" of Bishr.

While with 'Abd al-Malik, Akhbal had been unbowed in the presence of his fellow tribesmen on the expense of the *Kais*, he had specially directed his efforts against *Udhayl* b. *Hakab*, a *Sakamite* chief, celebrated for his boisterous courage, an provocation. Although *Udhayl* had been early dragged into the feud between *Kais* and *Taghlib*, he appears to have remained neutral at first. He now seems to be revenged four years later. With 1000 *Kais* he fell under cover of night upon the *Taghlib* camp at Bishr; the men were put to the sword; even pregnant women were ripped open.

A son of Akhbal, named *Abd al-Hayy*, lost his life there. The poet himself owed his safety to his presence of mind alone; he pretended to bid a slave and was allowed to go. Akhbal learned from Bishr to Damascus to claim vengeance. *Udhayl* had to take refuge on Greek territory, but returned some years later on promising to pay the price of blood.

Al-Hakim), p. 238; *Yashar*, 1, 531; *Isma*, 1, 2068, 2072 et seq.; *Isma*, *Nasab* (ed. Herab), 401 et seq., 507 et seq.

(H. LAMOTTE.)

BISHR a. *Abd al-Kaym* (or *al-Kaym*), a poet of the *Ignorance* (*Jahiliyya*) belonging to the tribe of *Asad* b. *Qusayy* (*Kaniz*, ed. Wright, 479; 1337; the *Kaniz*, *Qasab*, ed. de Goeje, 145 et seq.). He it was who carried to *Udhayl* b. *Umayyad* and the other *Qasabite* chiefs assembled at the fair of *Udhayl* warning that *al-Barrak*, the ally of *Udhayl*, had killed *Udhayl* b. *Umayyad* of *Udhayl*. This enabled them to receive their arms from 'Abd al-Hakim b. *Udhayl* and leave *Udhayl* before they were attacked by *Udhayl* in 585 of the *Islamic* *Udhayl*, which lasted during the years 585—589. A. D. Bishr was on friendly terms with *Udhayl* b. *Umayyad*. On one occasion *al-Nahikha* b. *Udhayl*, *Udhayl* b. *Umayyad*, *al-Asad* and *Bishr*, journeying to visit *al-Nahikha* b. *Udhayl*, fell in with an Arab banding some camels and asked for hospitality. The Arab, who was *Udhayl*, killed for each a slave-camel, because, he explained, he saw them as belonging to *Udhayl*.

their tribes, and he wished his generosity to be known to each. According to this explanation Bishr could not have been of *Asad*, but was of *Kaniz*. When *Asad* b. *Udhayl* was surprised by *al-Nahikha* to be more excellent than his fellow tribesmen *Udhayl*, Bishr criticized the former. Afterwards he was captured by some of the *Udhayl*, but was rescued from their hands by *Asad*, in consequence of which Bishr wrote for every tribe a *panegyric*. Bishr's poetry was not free from defects. He and *al-Nahikha* are bracketed as being two poets of the first rank who admitted the fault called *shu'* (or a *minichym* in the final vowel of the line) into their verses. When the fault was pointed out to them they did not return to it. Bishr is also said to have been not always accurate in his descriptive phrase, as when he gives a horse two cories (*Udhayl*, p. 146). His verses are frequently cited in illustration of common uses of words (*Isma*, p. 227). Some of his poems are in praise of *al-Barrak* b. *Udhayl* (*Kaniz* *al-Aghani*, 11, 57). He took part in the war between *Asad* and *Tar* and was present with his son *Nasir* at the conclusion of the peace; and he mentions in his verses the day of *al-Nahikha*, on which *Asad* and *Udhayl* defeated *Udhayl* b. *Umayyad*. His verses are included among the *Udhayl* and in the *Udhayl* *al-Aghani*. His poetry contains many original ideas and curious figures, for example in his ode ending in *Udhayl* Bishr was killed as he was riding the *Udhayl*, one of whose shot hit him with an arrow in the breast, which caused him to fall from his horse. As he lay on the ground he composed some verses, announcing to his daughter his death.

Bibliography: In addition to the books referred to above, see Freytag, *Arabum Proverbia* and Caussin de Perceval's *Index*.

(T. H. WRIGHT.)

BISHR a. *Abd al-Hakim*, one of Muhammad's Companions. In the year 622, Bishr took part in the second *Yahya* where his father, *al-Hakim* b. *Udhayl* took part.

He was famous for his skill as a bowman and took part in the battles of *Udhayl* and *Udhayl*, the "Battle of the Ditch", the campaign to *Udhayl* and the conquest of *Udhayl*. After the capitulation of the Jewish population of *Udhayl* in the year 9 (628), Bishr was poisoned by a Jewish woman *Udhayl* b. *Udhayl*, because she had lost all her male relatives in the war and wished to avenge their deaths. For this purpose she brought to the Prophet a slaughtered sheep which she had steeped in poison. Shu'ayman accepted it and invited some guests, including Bishr to share it with him. At the meal the Prophet at once saw what had happened from the vapours that rose and spat out the poison, but Bishr would not count such a breach of good breeding and swallowed his portion. According to some authorities he died on the spot, while others say, not till a year later.

(K. V. LAMOTTE.)

BISHR a. *Udhayl* a. *Abd al-Hakim* and *Abd al-Kaym* a. *Abd al-Hakim*, son of the chief *Udhayl* teachers of his time. He was the son of a *Udhayl*.

and Jew and was embraced by Zaid b. al-Khalaf. He studied jurisprudence with the Kāfi Abū Yūsuf and soon became in several branches of knowledge. He then devoted himself to the science of *Kāfi* and adopted the opinion that the Korān was created, for which he was persecuted. He was a pious man but found no adherents among good Muslims on account of his too public profession of the science of *Kāfi*, which was then looked upon with suspicion. Abū Zayd al-Rāzi says that he was a heretic, (*ẓāhir*) He died in 218 A. H. (833).

It was in the reign of al-Rāshid, that the Mu'tazilites first ventured to express openly their doctrine of the creation of the Korān, which they had up till then only held in secret. The Caliph, learning of this, said "I have been told that Muḥib al-Muḥibī holds that the Korān was created; by Allah, if Prolegomena causes him to fall into my hands, I shall put him to death as I have done put any one to death." He therefore kept in concealment throughout the reign of al-Rāshid, that is to say, for about 20 years. After the death of this Caliph the situation remained the same during the reign of his son Amīn. It was only under the latter's successor al-Ma'mūn that the Mu'tazilite doctrine found favour with those in authority.

Shahrastānī says that the theological views of Bishr b. Ghālib were closely connected with those of Husayn al-Ma'ālī. In opposition to other Mu'tazilites, they both held that Allah wills for eternity, good or evil, belief or unbelief, which then must become manifest.

Bishr did not believe in an eternity of punishment for believers, guilty of grave sins; the eternity of punishment is, according to him, shunned and contrary to justice. He teaches that faith presupposes affirmation both with the heart and with the tongue; to worship an idol is not to itself impiety; but it is a sign of impiety. — In jurisprudence, Bishr was a follower of Abū Hūnīf and adhered to the systems of *ḥanafī*.

Bibliography: M. Th. Houtsma, *De Strijf van het Dogma*, p. 79; W. Cantow, *Abū al-Muḥib and the Mu'tazilites*, p. 48; Shahrastānī (ed. Careton), p. 63, 106, 307, 361; Ibn al-Ma'mūn (ed. Jaydell), i. 642 and note; Ibn Khallikān, (Cairo ed. Vāz), (Cairo ed. Vāz).

BISHR • MA'WĀN U. AL-HĀSĀS, third son of the Caliph Ma'wān and a Berber woman of the Banū Kilāb, from whom his son inherited his partiality for the Kalabites. Ma'wān had placed him under the tutelage of his elder brother 'Abd al-'Azīz, but Bishr fell out to live with 'Abd al-Malik, when the latter became Caliph. In his early youth he bore a banner at the battle of Marj Rahit. On the death of Marjūb b. Zubair, 'Abd al-Malik appointed him governor of Kōfa. He was fond of wine, musicians, and poets and was an athletic prince, famed only by deserters, whom he sent to the pillory; his generosity and liberality earned him the warmest praises of the poets. He was famous of them, such as Qasbiy: 'Abd Allah b. Zuhayr and Amīn b. al-Jayṣan do not mention the third Abū al-Faraj, and Ḥafṣ, among his patrons at this epoch of the *ḥanafī* of literature. 'Abd al-Malik had given him, in addition to the famous *Fahāṣṣ* b. Kāfi, one of his best and most faithful ministers, Rawḥ b. Zuhayr, but Bishr was not long in freeing him-

self from their tutelage. After the deposition of 'Abd al-'Azīz, Bishr, who was by this time in both faith, received the governorship of Kōfa in addition to that of Kōfa, which he already held. Meanwhile the Arabians had again taken the field. Bishr hated the able general Muḥallab, who was ordered to suppress the rebels, and went so far as to order Muḥallab's chief lieutenant to cause his plans to miscarry. Thus hampered in his movements, the commander-in-chief lay in camp for several weeks opposite the enemy till Bishr died unexpectedly in the prime of life (74-75 = 694). The news of his death was the signal for the soldiers to desert en masse. To suppress the grave situation 'Abd al-Malik had to entrust the supreme command in the whole of Iraq to the energetic Ḥaṣṣan.

Lammens, *Chrétiens de l'Orient*, p. 225; *Fatāwā*, *Ḥafṣ* (ed. Douhaire), 113, 166, 185. (H. Lammens).

BISHR • AL-MU'AMMIL, a Mu'tazilite teacher, and Shāikh of the Baghdad school, flourished in the caliphate of al-Rāshid (Ma'ālī, *Ḥafṣ*, p. 373). Shahrastānī (loc. cit. p. 44) enumerates six points on which this theologian differed from other Mu'tazilites. It was he who first raised the question of *taḥṣīl*, also called *taḥṣīl* (*Taḥṣīl*); there is a *taḥṣīl* when an action results from an agent acting through an intermediary, as in the case of a key which is held in the hand, the movement of the key results from the will of the agent through the intermediary of the hand. Some physicists, as Shahrastānī professes, had previously studied intermediate causes, but Bishr brought this point of view into the study of morals. He showed how the intermediary agent could modify or remove and diminish the responsibility of the agent. Numerous discussions took place on this point and are given in the *Ma'ālī* (pp. 116-125).

Bishr also discussed the will of God, which he considered as a quality of his being, not a quality of his action. He also studied important questions of theology; the justice of God as regards children; his providence regarding people who have had no knowledge of the revelation; the problem of optimism. Bishr did not agree that God could damn infants, for that would mean that they are capable of deserving rewards or punishment, which is absurd. He believed that people, who had some hint of the revelation, could guide their lives by the light of natural law. He also taught that this world of ours is not the best possible, that God was not bound to create the best but only to reveal himself to man at such time as he should think fit.

(Cairo ed. Vāz). **BISHR** • AL-WALID B. 'ABD AL-MALIK, son of the Caliph Walid I, and an *Umayyad*. His knowledge earned him the title of *Ḥafṣ* and *Ma'ālī* "the scholar of the Marwānī dynasty", a title which a false rumour sometimes gives to his brother Rawḥ b. al-Walid. He was leader of the pilgrimage in 93 A. H. and took part in several expeditions of Asia Minor. An admirer of the Egyptian poet, he landed in Thessaly and dis-

vanced as far as Adrianople. The date of his death is not known. He married Saida, a divorced wife of Walid II, took part in the rising against this Caliph and was still alive after his execution.

Bibliography: A short notice of Bishr b. al-Walid is given by Ibn 'Asakir (Vol. II, of the MSS. in Damascus); Ibn Kutilah, *Ma'ad* (Egypt, edn.) p. 153; Mas'udi, *Pearls*, v. 362; Ibn 'Abd Rabbih, *Ma'ad*, III, 335; de Goeje, *Fragm. Arab. ant.*, p. 12—14; Tabari, II, 470, 1787; *Arabia*, vi. 137. (H. LAMARCA.)

BISHR al-JARĪ (the "Wandering") a famous Sufi, born 150 (767) in Makra, a village in the district of Marw. He bore the name Abu Naze and the name of his father was al-Jarī. His own home was in Baghād, where he gathered round him a number of pious ascetics to whom he taught his doctrines. He died there in 226-27 (841) and his tomb on the Hill Jarh was for long a popular place of pilgrimage.

Bibliography: Ibn Khallikan (ed. Majma' 1299), I, 154; Shams, *Tadhkirat al-Awā'id*, I, 57 et seq.; Fird al-Din 'Azzar, *Tadhkirat al-Shaykh* (ed. Nicholson), I, 106 et seq.; al-Buhārī, *Kashf al-Masabih* (transl. by Nicholson), 105 et seq.

BISKRA, a town and oasis in Southern Algeria in the department of Constantine; 5° 42' East Long. (Greenwich) and 39° 27' North Lat. The **oasis** of Biskra, lying at the foot of the Azzila, at a height of 428 feet above sea-level is the principal **oasis** of the Zibāh (cf. this article 725). It extends for 3 miles along the Wad Biskra, has an area of 3200 acres and contains 150,000 palm trees. The native population is distributed over the villages of Majd and Uds al-Jarh on the east, Ras al-Guerria, Sidi Larkān, Medjenah and Galdraha on the west, which together make up "Old Biskra". The smaller palm-groves of Beni Mors on the west, Mors to the north, al-Ahys and Elhyagh to the south-east are merely outlying portions of the main oasis. The modern town of Biskra lies above the oases around the fort, which has been built by the French since their occupation. Biskra has attained a certain importance as a winter resort **oasis** it has been connected by railway with Constantine (180 miles distant). It is the capital of an autonomous commune with 7357 inhabitants, including 661 Europeans, (census of 1906) attached to which is the military territory of Tougert **oasis** 63,436 inhabitants, of whom only 2000 Europeans, and an area of 340 square miles.

Biskra appears to occupy the site of the Roman town of Vectera, one of the military stations for the defence of the Zibāh. The name Biskra itself, first appears in Arabic authors, where it is mentioned in connection with the suppression of a revolt of the population of the Zibāh against the Aghlabid Emir Abu 'Abdallah Muhammad, called Abu 'Abdallah, in 805 A.D. Biskra surrendered without resistance to the general Abu Khafaja, sent to put down the insurrection. In the time of the Hammadids, Biskra was ruled by a council of prominent men, among whom the Beni Kammān, a family belonging to the town and deriving its influence from the number of its members and the possession of almost all the neighbouring lands (Ibn Khallikan, *loc. cit.*, transl. by de Slane II, 125), were the most powerful. One of them, who far tried to make himself independent. At his

instigation, Biskra rose against Buluggin bin Muhammad. This revolt was barely suppressed, Biskra was taken by assault, Buluggin taken prisoner and put to death in the Ka'ba of the Beni Hammad, whether he had been taken with his accomplices. The government of the town then passed into the hands of the Beni Sidi, who succeeded in keeping the Hilāl **oasis** in check and at the same time remaining faithful to the Hammadids till the overthrow of this dynasty by the Almohads.

Biskra was then at the height of its prosperity; al-Bakr (*Description de l'Afrique*, transl. by de Slane, pp. 129 et seq.) describes it as a large and beautiful **oasis**. It possessed a chert ("ghani") mosque, and several smaller mosques and baths, and was surrounded by a wall and a ditch beyond which were extensive suburbs. The inhabitants, who were for the most part Mulikites, were of a mixed race (*Almohads*) resulting from the fusion of Berbers with descendants of the Romans, while around the town lived people of Berber stock of the tribes of Sedrata, Maghawa etc. The pursuit of knowledge was held in great esteem there. Al-Bakr concludes by praising the fertility of the soil, the beauty of the palm-groves and the quality of the dates of which certain kinds in the Fatim period were reserved for the exclusive use of the sovereign.

On the fall of the Hammadid dynasty, Biskra passed under the sway of the Almohads. Yaqub b. Qhamis, however, succeeded in taking it in 1201 (1508). We again find him in possession of it 23 years later (1224—1225) but he evacuated it on the approach of an Almohad army, which occupied and plundered the town. On the break-up of the Almohad Empire, Biskra fell to the Hafsids of Tunis. The real masters of the town in the 13th and 14th centuries were the Mami, the chiefs of an Arab family of the tribe of Lami, who had come to the Zibāh at the Hilāl invasion. Settling at first around Biskra, the Mami soon entered the town, forced their way on to the council and entered into competition with the Beni Kammān. The quarrels which broke out among the princes of the Hilāl house gave the Mami an opportunity to overthrow their rivals. Faḍl b. Mors took the side of the Emir Abu Isḥāq, who had rebelled against his brother, the Caliph al-Mustansir, and opened the gates of Biskra to him. Forced to flee, he followed Abu Isḥāq to Spain, where this prince had taken refuge on being deposed. Becoming sovereign of Tunis on the death of al-Mustansir, Abu Isḥāq recompensed the fidelity of Faḍl by giving him the governorship of the Zibāh. Ruined at the triumph of their enemy, the Beni Kammān caused him to be assassinated (1284 = 683). His son Manṣūr, who was then in Tunis, was thrown into prison where he remained for seven years. The revolt of Abu Zakariya, who proclaimed himself lord of Constantine and Bougie (Bijaya), turned the fortunes of the Mami Manṣūr, who had managed to make his escape, received the governorship of the Zibāh, brought his region again under the rule of the king of Bougie (Bijaya) and drove the Beni Kammān out of Biskra. He overcame the "Murabūḥa", who rose in the Zibāh at the instigation of the Sheriff Sufi and was the real master not only of the Zibāh, but also of Kouda, the Azzila and Wargila. He quarrelled with Abu T-Rahā, king of Bougie, and taking up arms against him besieged Constantine, but came

to terms with him against to soon quarrelled with the Hafsids again and fought with them till his death in 725 (1333). His son and successor 'Abd al-Wahid, was assassinated by his brother 'Uthf. The latter started up a new rising of the Marinids and succeeded in turning towards the West. A Hafsif army went to enforce the authority of the Sultan of Tunis in the Zib.

Hostile to the Hafsids, he showed a lively sympathy with the Marinids and cordially welcomed Abu 'l-Hasan when the latter undertook his campaign against the Hafsids in 1347 (748). He supplied assistance to Abu 'l-Hasan at the siege of Constantine but on the final defeat of the Marinids he again went over to the Hafsids. His successor Ahmad was likewise very powerful, although he had to reckon with the enmity of the Arab chiefs settled in the Zib.

From this period to the sixteenth century we have no information regarding the history of Biskra, but it is probable that the towns which bound the Zib to the kingdom of Tunis were gradually loosened. At the beginning of the sixteenth century Biskra appears to have been completely freed from Hafsif authority and to have remained independent for thirty years. In 1541 the Turks made their appearance in the oasis. Hamu-Agha took Biskra, placed a garrison and built a fortress there. The real representative of Turkish authority however was the Shaikh al-'Arab chosen from the Bu-'Akkaf, one of the more important families of the district. The influence of this family ultimately assumed the supremacy of the Turks and in the eighteenth century Sulah, the Bey of Constantine, set up a rival family, the Ben Ganah. Exposed to the capacity of the Turks and the raids of the Arab tribes, Biskra rapidly declined. Early in the eighteenth century, Leo Africanus (ed. Schefer Vol. III, pt. 353) notes the poverty of its inhabitants. Biskra, according to the accounts of the Arab traveller al-'Asyuti (1662) and Mully Ahmad (1740), continued to retain some of its importance owing to the richness of the oasis and its position as a commercial emporium. In the second half of the eighteenth century the town was abandoned; the inhabitants dispersed over the oasis and built the villages which we now find. Down to the time of the French occupation there still survived a remnant of the ancient town but at the present day there are only some shapeless ruins left.

From 1830—1840 the possession of Biskra was disputed between Farhat b. Sa'id representing the Bu-'Akkaf, and the Ben Ganah, supported by Ahmad, the Bey of Constantine. After having tried from 1831—1837 to get the French to interfere on his behalf, Farhat decided to call in 'Abd al-Kadir. The Emir took advantage of the occasion to set up a Caliph, al-Huqiu b. 'Asma, at Biskra. But in 1838, the Ben Ganah, seeing that Ahmad Bey's cause was definitely lost, submitted to the French. On the 2nd March 1840 they put the caliph appointed by 'Abd al-Kadir to flight at Salina and in the following year rid themselves of Farhat. Asma'iy however only ceased with French rule. On the 21st March 1844, the Bey al-'Asma'iy occupied the town; on the 13rd May of the same year, in consequence of the massacre of the little body of soldiers which he had left there, he installed a permanent garrison and built a fort. Biskra then became chief place in a

circle under the command of a superior officer, entrusted with the task of administering the country with the aid of native chiefs, and thus became the base of military operations to the south of Constantine.

(G. VIER.)

BISMILLAH (See *ISMA'ILIA*, p. 692).

BISTĀM (also *BASTĀM*, now usually pronounced *Berzām*) a town in the Persian province of Khuzistan (on the slopes of the Alburz), at the northern extremity of the great desert, long 55° East (Greenw.) and lat. 36° 30' north. During the caliphate, Bistām was the most important place in the district of Kūmā, next to Hamaghān (the capital). Bistām was apparently named by Bistām, a maternal uncle of the Sāsānian king, Khosrō II. Parwiz who was appointed governor of Khuziān, Kūmā, Djujān and Tabaristān, after the overthrow of the rebel Bahram Chobin, assumed the regal title and reigned for about six years (590—595) till he was overthrown. The newly founded town received its name from Bistām (Middle Persian *Bistāma*, modern Persian *Bisrām*). On this Bistām cf. in particular Nöldeke, *Gesch. der Araber und Perser zur Zeit der Sāsāniden* (Leiden, 1879), p. 96², 478—487; A. v. Gutschmid in *Zeitschr. d. Deutsch. Morgenz. Ges.*, xvi, 748; Marquart, *Erkenntnis des Islāms*, d. Götting. Ges. d. Wiss., N. F., III, Nr. 3 (1901), p. 31.

Bistām lies in a valley surrounded by hills through which flows a river from the Alburz mountains and brings a plentiful supply of water to irrigate the surrounding land with its numerous gardens. In the middle ages, the fine apples which grew here were particularly famous and these, known as the Bistāmi variety, as Yāqūt tells us, were exported in large quantities to the Irak. Yāqūt further describes Bistām as a large town with numerous market-places; he specially mentions the very extensive palace crowning a hill, said to have been built by the Persian king Shāhpūr (Sapor) II. as well as the famous tomb of the great Sāfi Abu Yūsuf al-Bistāmi (See *ISMA'ILIA*, p. 636). The present mosque with the shrine of the saint dates from the beginning of the eighteenth century; on this sanctuary cf. Houtum-Schindler in the *Journ. of Roy. Asiat. Soc.*, 1909, p. 161—192. Same gives an illustration in the *Zeitschr. der Ges. für Ethn.*, 1902, p. 110.

Bistām also possesses some other graves of saints as well as several mosques; a well fortified with many round towers surrounds the town. The number of inhabitants at the present day is estimated at 7000. In the middle ages, Bistām held an important position as junction for the South Persian caravan traffic. It has for several centuries yielded wide of place in this respect to Shāhrūd, situated two hours' journey to the south-west (which is never mentioned by the medieval Arab geographers), where the important routes to Fehārd, Nishāpūr and Astarābād now cross one another. The decline of Bistām through the change in trade routes has been accompanied by a corresponding revival of Shāhrūd (which now has about 3000 inhabitants).

Bistānography: *Recht. geogr. Arab.* (ed. de Goebe), *passim*; Yāqūt, *Mu'jam* (ed. Wüstenfeld), i. 523 and Wüstenfeld, translation in the *Zeitschr. d. Deutsch. Morgenz. (M. STRACK.)

AL-BISTĀMĪ, *ʿAbū al-Raḥmān b. Muḥammad* *ibn* *ʿAlī al-Aḥmad al-Jāḥaḥ al-Hirzī* of Antioch, a mystic, who, in addition to numerous mystical works, also wrote on history and biography. The most important of the great encyclopaedia *al-Furūḡ* is *al-Miftāḥ* *fī Farḡih al-Makhlūḥ*. He lived in Cairo and Damascus where he died in 538 = 1154. Cf. Brockelmann, *Gesch. der Arab. Litt.*, II, 231 ff. 164.

AL-BISTĀMĪ, *ʿAlī* *al-Dīn* *ʿAlī b. Muḥammad*, called *Muḥammīd*, "the little author", on account of his early *diḥs* in the field of literature, born in 303 (1400-1401) in Bistām, sealed in Turkey in 348 (1444-1445) where he died in 373 (1470-1471). At the request of Sulṭān Muḥammad II, he issued a *Farḡ*, which annulled the capitulation granted to the king of Barmia by the Grand Vizier Mahmut and, either out of servility or religious fanaticism, offered to execute the sentence of death on the king with his own hands and actually cut his head off. — *al-Bistāmī* composed numerous works in Arabic and Persian, including a commentary on Zamakhsharī's *Kashshaf*. He was a descendant of Fakhr *al-Dīn* *al-Rāzī*.

Bibliography: Hammer, *Gesch. des Osmanl. Reichs*, 2. Ind.; Sa'd *al-Dīn*, *Tadh al-Furūḡ*, I, 496. (CL. ROBERT.)

AL-BISTĀMĪ, *ḤAYAT*, [See *ḤAYAT*, p. 686.]

AL-BISTĀNĪ, [See *AL-BISTĀNĪ*.]

BISTĪ (r.) "Twenty-piece", a small Persian coin (according to Vulliamy's *Lexicon Persico-Latinum* = viginti denarii) of the value of $\frac{1}{2}$ Mahmūdī. In the modern coinage to Dīnār make a *ḥāḥ* and 1000 *ḥāḥ* a *Tuman*, the *ḥāḥ* is therefore about equal in value to the tenth of a penny.

BISUTŪN, a mountain about 20 miles east of Kirmānshāh, on the road from Baghdad to Hamān.

The name occurs in Greek sources (Ktesias quoted by Theophrastus *Simplicius* and Isidore *Charax*) as *βισυτρων* *ἔσος* and in the earlier Arab writers, such as *Ḥamza al-Jāḥaḥ* and *al-Khwarizmi*, as *Bishtān* (or *Bishtān*). This form goes back to an old Persian *Bagastān*, i.e. "Place of the Gods" and as *Baga* was particularly Mithras, it may be presumed that this mountain, one of the most beautiful in North Western Iran, was in ancient times the site of a cult of Mithras. The early medieval form (*Bahistān*, *Bishtān*) and the modern *Bishtān* (*Bishtān*) have regularly developed from the ancient name. Even the medieval Arabs and Persians no longer understood its etymology. As the place lay on the great military road to Khurāsān it is repeatedly mentioned in itineraries. High up the mountain in a ravine, is the great monument of the victory of Darius the Great, and at the foot a relief commemorating a victory of the Arsakid Artabanus, one of the very few Arsakid rock-reliefs, which has however been almost destroyed by a modern niche with a Persian inscription. These sculptures caused the Muhammadans to regard the mountain as one of the wonders of the world. Those writers, who follow *Abū Zahr* *al-Balḥī*, give a short description of

the sculptures, which is however not very clear and is confused with a description of the neighbouring Sassanian sculptures of Takī Bistān (*Khurāsān* II *Parwez* with his horse *Shāhī*, the work of Kaḥḥ b. Shāhī). In the *Maḥḥal* *al-Furūḡ* a curious explanation of the Darius relief and the name "Kings of falsehood" as a teacher and his pupils, the bow of Darius being taken for a whip in the hand of the teacher. The great bilingual inscription of Bistān, in Babylonian, Elamite and Old Persian, gave the key to the decipherment of the Babylonian cuneiform to Sir Henry Rawlinson and laid the foundations for the study of Assyriology.

(KARL HANZLICH.)

BITEKČI, an Eastern Turkic word for "writer" from the verb *bitmek* "to write". The root is derived by Shintori (*Siurologische Beiträge zur Geschichte der Türkischen*, II, St. Petersburg, 1903 p. 26) and more recently by Radloff (*Alt-türkische Studien in der Halle des P. Armin, 1912*) from the Chinese *pi* "a paint-brush". Like the Japanese and Koreans many peoples of Central Asia have learned the art of writing under Chinese influence; among the linguistic evidence in confirmation of this fact, Shintori adduces the Hungarian *biti*. The Chinese notices quoted by this scholar show that in Eastern Asia even in the time of the dynasty of Tsin Wei (356-558 A. D.) the words *pi-ti* (apparently for *biti*, script) and *pi-ti-ti*, the name of an office (probably for *biti-ti*) were known. The words *biti* "to write" and *biti* (etc) "writing" are already found in the Orkhon inscriptions, while the title *biti-ti* (according to Radloff, *Wörterbuch*, IV, 1346 *biti-ti*) first appears in the *Alt-türkische Studien*. The Mongols, in later times (13th century) took over this title from their teachers the Uighurs, in the historical sources and docu-

al-Kabir or indeed the Wād al-Kabir, as it is now called). A group of disciples settled around him; next came Andalusian refugees who had been driven out of their original settlements in Tipasa by the attacks of the Kabyle of Shenas and forced to seek refuge at the foot of the Atlas. At the request of the Marabout, the tribe of Wād Sultan granted the new-comers the land required to build their dwellings on the high-banks of Algiers, *Kharr al-Dia*, who had come to see Sidi Ahmad al-Kabir while these things were going on, decided to build a mosque, a bath, and a public bath-house, around which the Andalusians grouped their dwellings. This agglomeration of buildings received the name of Blida at "little town" (942 A. H.). The town flourished rapidly and the surrounding land was soon covered with gardens, mainly owing to the efforts of the Andalusians who introduced the cultivation of orange-trees into this country and taught the natives the methods of irrigation practised in Spain.

Under Turkish rule, Blida became part of the *Der al-Sultan*, that is to say, of the territory administered directly by the Dey of Algiers, who was represented in it by a governor of African or Turkish origin. A detachment of Janissaries formed a garrison there. The population, composed of Andalusians, Moors, Jews and Muslims was famous for its easy-going and pleasure-loving disposition. Sidi Ahmad bin Vahid, in one of his epigrams which are attributed to him, says that Blida ought not to be called *Blida* ("little town") but *Wāḍa* ("little rose"). Several camps headed it with the name *Gahda*, ("prostituted") on account of the license which prevailed there. The caravan-trade of the south for whom Blida was the centre for the exchange of merchandise between the Tell and the Sahara, found good facilities for enjoyment there; the *Tafas*, enriched by the proceeds of their piratical expeditions and the great Algerian officials had country-jamies here and brought large retinues to the town. Officials who had fallen into disfavor were interned here and led quite an endurable exile. The prosperity of Blida was affected only by visitations of nature; the plague swept through it on several occasions in the 17th and 18th centuries and earthquakes wrought great havoc in it. The great disaster was that of 1827, which almost entirely destroyed the town. The inhabitants at first thought they would rebuild it some distance away but they gave up this project and rebuilt it on the original site.

After the occupation of Algiers by the French (1830) Blida remained for some years independent, administered by its *flinkas*. Bourmont appeared before the town in July 1830 but went no further. Mautel entered it, after a fiercely contested battle on the 16th November of the same year but evacuated it a few days later; the Duc de Rovigo entered it in 1832 but did not stay any time there. As a result of the treaty of the Tafna, which recognised France's occupation of the *Mitidja*, Marmelade Valte, to put a stop to the intrigues of 'Abd al-Kabir, placed his troops around the town and there, in 1839, decided on its effective occupation. Since then Blida has remained peacefully under French rule. It was severely affected by another earthquake in 1865, and only a few fragments of its Mahommedan buildings have survived. There has however been but little change in the life of the natives and many traditions and ways of living

have been preserved, which are now being studied and collected.

Bibliography: Teuetelet, *Blida* (Algiers, 1887, 2 vol.); Despermet, *La police populaire établie à Blida* (Ann. du Xth Congrès International des Orientalistes, Part II, (Paris, 1907); de, *Contes populaires sur les Oger, ou ruelles à Blida* (2 vol. Paris, 1909).

(G. VERA.)

BOABDIL = *Abuabdillah* = *Abu 'Abdallah* Muhammad XI, the last king of Granada (887-897 = 1482-1492), son of 'Abd al-Haqq (= *Abd al-Haqq* = *Mulhacen*: 866-887 = 1461-1482), was called *El Rey Chico* ("The Little King") by the Spaniards and by the people of Granada *el-Zogayfi* ("the Poor Devil" of Dozy, *Supplément au Zogayfi*) while his nickname *Pretender* Muhammad XII b. Sā'id (890-899 = 1485-1487) was called *el-Zogay* = *el-Zogayfi* ("the Valiant"; cf. Dozy, *ibid.*). Boabdil dethroned his father in 887 (1482) but the latter regained it from 888-890 (1483-1485). M. J. Müller (*Die letzten Zeiten von Granada*) was the first to write the true history of the last days of Granada, which has been so much interwoven with legend, from contemporary Arabic and Spanish documents (even August Müller, *Der Islam*, II, 378, follows too closely the legend *el último infante de Granada*). More recently M. Caspar Reinle has carefully sifted fact from fiction, cf. his *Erzählungen aus der Geschichte von Granada* (*Revue de Archéologie, Bibliographie et Muséologie*, 1910); *Illustres hechos y acontecimientos durante entre los Reyes Católicos y Boabdil sobre la entrada en Granada* (Granada, 1910); *Entrada de los Reyes Católicos en Granada al tiempo de su rendición* (in his recent *Revisión del Centro de estudios Arqueológicos de Granada y de su reino* (Granada, 1911, 7-24). Hargreaves erroneously believed he had found Boabdil's grave in Tetuan, while he really died in exile in Morocco.

(C. F. SEYMOUR.)

BOBASTRO, a ruined mountain fortress in Andalusia. After Carri and Conde Bobastro had been confused with the Bobastro in Aragon and also with Būstān in the extreme south east of the province of Granada Dozy thought (*Archéologie*, 3, 323-327 and *Histoire de Mohammed*, II, 333), that it ought to be identical with the ruins of the ancient Municipium Singillione Barbastrone (Singilla Barba), the modern of Cañalón near Toba, west of Antequera in the upper Guadalquivir valley. Simonet more correctly seeks to connect it with Estébanes Calahorra between Antequera, Ardales and Comares in Las Mesas de Villavieja, 1½ leagues south east of the modern Comares, at an almost inaccessible height, above the Middle Guadalquivir. After 267 (880-881) this rocky retreat was the impregnable refuge of the rebel 'Umar ibn al-Haqq (q. v.).

Bibliography: Cf. in particular Simonet, *Historia de los Morabitos de España*, p. 173 et seq. (where however we should read N.E. [= N.O.] instead of N.O. [= N.W.]).

(C. F. SEYMOUR.)

BOGHA al-Kabir, Bogha, the elder, a Turkish general under al-Mu'tasim and his successors, won a name for himself in various expeditions, in which he held the supreme command, against the Bulgars around *al-Medina* in 230 (845-846), against the Armenians in 237 (851-852), against the Byzantines in 244 (856) etc. At the time of the assassination of the Caliph al-Muta-

wakkil in 147 (861) he was away from court, but returned immediately to the palace and after the death, which took place very soon after, of the Caliph al-Muntazir raised al-Mutawakkil to the throne in 148 (862). He died in the same year.

Bibliography: Tabari (ed. de Goeje), II, 1174 et seq.; Ibn al-Athir (ed. Toubert), VI, 317 et seq.; Weil, *Geschichte der Chalifen*, II, 799 et seq.; Thopischnia in *Mittell. des Sem. Oriental. für Arab. Sprachen* 8, 2, p. 123 et seq.

BOGHA (بوغه), also called Bogha al-Saghir (Bogha the younger), likewise a skilful general, defeated the rebels in Adjarbakhjan in the reign of al-Mutawakkil. It was he who led the conspiracy against this Caliph and brought about his assassination. During the brief reigns of al-Muntazir and al-Muwattah, all authority really was in the hands of Bogha and his confederate Wasif. When al-Muwattah was forced to abdicate in 252 (866), Bogha was to receive the guardianship of al-Ishraq, but the new Caliph al-Mutazz tried to deprive him of it and finally succeeded. In 254 (868) Bogha was taken prisoner and beheaded.

Bibliography: Tabari (ed. de Goeje), II, 1148 et seq.; Ibn al-Athir (ed. Toubert), VI, 318 et seq.; Weil, *Geschichte der Chalifen*, II, 356 et seq.

BOGHAR (بوغار = أبو بغار), a small town in Algeria (department of Algiers) about 50 miles from Modès (Lamadhya) on the left bank of the Shelif, at a height of 2800 feet above sea-level; the population is 3586 of whom 2021 are natives. The situation of Boghar, the "Bailey of the South" on the borders of the plateau, on the natural road, formed by the Shelif where it enters the Tell, which is followed by the nomads on their migrations, has always been of the highest strategic importance. The Romans had a military station here. 'Abd al-Kadîr built a fortress which was destroyed by General Bugeaud d'Hilliers on the 23rd May 1841. The French have built a fort and other extensive buildings for military purposes.

Boghar is a place of modern origin. Five miles to the east on the right bank of the Shelif at a height of 3700 feet is the ancient village of Boghar (incorrectly called Boghari), a market for the natives of the plateau, the native quarter of which begins to resemble the Sahara. Kfir (cf. the descriptions of Toumanin, *En l'île de Sahara* [1872] p. 25—35, and Maugham, *An island in Sahara* p. 31—33). According to the legend, Boghar was founded by a saint of the same name. About 1830 a Marabout of the Madaniya order, named Si Mûsa b. Hassan, won a great following in this district and even attempted some years later to use his influence to supplant 'Abd al-Kadîr. He was defeated by the Emir however and after the defeat of his subordinate Si Kaidar by the French, the power of the Madaniya was at an end. The Shadhaliya-Barkawa took its place, owing mainly to the influence of Sidi 'Adda b. Ghulam Allah and the activity of Sheikh al-Muqam (1835—1883). The latter founded an important *zawiya* at Boghar which is now however in a state of decay (cf. A. Joly, *Amis et les Châleuliyas: Kruie Africain*, 1906 and 1907).

Boghar is the chief place of an autonomous community with 4299 inhabitants (of whom 3387 are natives) and of a "mixed community" of 1079 square miles with 33,587 inhabitants of whom 32,405 are natives.

(G. VYRA.)

BOGHÂZ (باز) "Ravine", "gully" (literally "strangling" from the root *bagh*) hence in geographical names "pass" or "strait". It is particularly applied to the Turkish Bosphorus (*Bahçe-i Ammanîyeh*), a strait 15 miles long and from 600 to 3,500 yards broad with 7 bays and 7 promontories. The various parts into which it is broken up, together form the *Boğaziçi*, "the interior of the Bosphorus". This runs from the heights of the Serai espi and Scutari up to the Black Sea. It separates the European coast from the Asiatic and is traversed by two lines of steamers which start from the bridge of boats at Kaza-Köy between Stambul and Galata. A third service crosses and increases the Bosphorus in zigzag and links up the two shores (*delimidi vapur* "steamerboat for picking up", sometimes translated wrongly as "beggars' boat"). Passengers land from the steamers by wooden piers at the various stations of which the following is a list (from south to north). On the European coast: Kaba-Taş, Beşik-Taş, Çıra-Köy, Kaza-Köy, Armut-Köy, Bebek, Rumeli-Hisar, Emirgan (Nir-Gân), Sazlık, Vefa-Köy, Yurupia, Boyuk-Isra, Marmaristan, Vefi-Mahalle; on the Asiatic coast: Beşik (special service) Kuzguncuk, Beşikbey, Çengel-Köy, Weni-Köy, Kandıra, Aşaklı-Hisar, Nizliye, Fıstık-Hisar, Kuzguncuk mahalles, Beşik Armut-Köy. Several lines the European coast. The villages above these lines are not served by steamboats. Rumeli-Köy, and the two Bazaraki. The ruins of the fortresses on the European and Asiatic sides: Rumeli-Anadoluhisar) recall the siege of Constantinople; the former, built by Sultan Muhammad II (1452), who wished the plan of the building to represent his name, the same as that of the Prophet, in Arabic letters; it was built in less than three months by six thousand workmen and received the name of Boghar-Keser, "strangler"; the second was built earlier by Bayezid I. Victory on the ruins of a temple of Jupiter Luna (Guzeldir-Hisar). It is at this point that the current which carries the water of the Black Sea into the Sea of Marmara is at its strongest, whence its name of *Boğaziçi* "The Devil's Stream". The Bosphorus is a favourite resort during the heat of summer for the people of Constantinople; its shores therefore present a continuous succession of houses and palaces built up the very edge of the sea (Fitz, *Silke-Akdeniz* as far as Marmar-Burnu and Nispeti; there are numerous beautiful walks here. Çok-Su (Sweet waters of Asia) Kuzguncuk-Lake, Kestane-Suyu (Valley of Pines) Nispeti).

Bibliography: Hacı-Bekir, *Boğaziçi* (map) p. 664 (map, p. 672); 'Abd al-Jinn, *Tarih al-Furûs*, Vol. I, p. 148; Hoeber, *Geograph. Jahrb.*, pp. 130—137. (C. HEART.)

BOGHÂZ-KÖY, a village in Asia Minor near Boğharin, formerly the capital of a Kaiz (in the Wilayet of Angora, Sandjak of Çorum). The ruins of Pterion "the City of the Medes" were found here by Teuer in the 28th July 1834. It has little monuments. Since the summer of 1904, important excavations have been carried on there by H. Winckler.

Bibliography: J. Garang, *The Lands of the Euphrates* (1910), Chap. IV; V. Calvert, *La Turquie d'Asie*, I, 302; *Mitteilungen der Deutschen Orientgesellschaft*, 35.

(C. HEART.)

BOGHÂN, the Turkish name for Mol-

slavia, borrowed from that of its founder Boghida (Dragosh) (1332). Stephen the Great had gained a victory over the Turks at Rucova (1475) but in the following year he was in turn defeated in the White Valley (*Finta Albu*). In alliance with the Turks he had made a part of Poland in 1498; but a year later he threw off the suzerainty of the Ottomans. In alliance with the Poles and Hungarians, he repelled another invasion in 1499. On his death-bed (2nd July 1504) he ordered his son Boghida to submit to Turkey (Treaty of 1512). During the siege of Vienna in 1529, Peter Kariak offered the suzerainty of Moldavia to Sultan Sulaiman and went to Sofia to take the oath of allegiance; as he was accused of intriguing with Ferdinand, king of Hungary, and of having taken part in the assassination of Abulais Girai, Sulaiman decided to make him an enemy. He left his capital on the 11th Safar 945 (February 9th July 1538), was joined at Jassy by Suleiman, Khan of the Crimea, during the town and was put in pursuit of Kariak who had taken refuge in Transylvania. After the surrender of Suceava the Sultan announced an assembly of boyards who elected Stephen, brother of Kariak to his place. Stephen embraced Islam and considered Boghida at the mouth of the Danube in the Tuzla. Peter Kariak, who had been living in Varna, obtained a *hukm* for himself, which blinded him to power. His son Elias II, accused of having brought about the defeat of the Ottomans by Murad III in 1548, was deposed and his place was taken by his brother Stephen, who was soon afterwards assassinated (1552). He was the last of the Boghida line. The Turkish garrison of Jassy was massacred in a popular rising on the 13th November 1594. Mahomet III made the province a *Paishalik* and gave it to Mustafa, but by the treaty of Carlsburg (1595), it became a dependency of Hungary; it was conquered in 1600 by Michael the Wallachian. Moldavia which hitherto been governed by native princes, now fell a prey to the caprices of foreigners who continued the government which was sold to the highest bidder: the Saxon Jaskul (1580), the Croatian Gration (1619), the Pole Hrusowaki (1626), the Greek Alexander Mita (1630). This state of things lasted till 1715 (1703) when Sultan Ahmed III allowed the boyards to choose one of their number as *Hospodar*; they unanimously elected Michael Rakovitz, son-in-law of Constantine Cantemir (governor from 1685 to 1693 and father of the historian) who was invested by the Porte on the 22nd *Djuma* 1111 = 3rd October. From 1716 on, it was the Greek *Hospodars* of Phanar who supplied princes to Moldavia as well as to Wallachia: Chyka, Maurogordalo, Callimak, Murari, Voulant, Alexander Voulant obtained a *ferman* from the Porte in 1774, which abolished a portion of the charges of the *raia* and regulated the taxes. In 1785 Russia installed a Cossack General at Jassy as "Censor of the conduct of the Prince" and fixed the tribute to be paid at 115,000 *plustins*. The fruitless intervention led by another Alexander Voulant, son of Constantine, in 1821, led the Ottomans to occupy Moldavia with a military force and to establish there a native *Hospodar*, *Abdullah* (19th October 1822). The treaty of Adrianople (14th September 1829) between Russia and Turkey established the independence of Moldavia and Wallachia under Hos-

podars elected for life, who had only to pay tribute (Michael Sturdza 1834—1843, Gregory Chyka 1849—1856). The two provinces (*Basma-Basina*) were reunited to form the principality, (Carm 1861; *Basma* of Hohensollern elected by plebiscite 8th April 1866), then the kingdom of Roumania and were definitely recognised as independent by the Treaty of Berlin (Article 43). (Cf. *Howat*.)

BOGRA, a district of India, in Eastern Bengal: area 1,359 sq. m.; pop. (1901) 854,533, of whom no less than 82% are Muhammadans, being the highest proportion in the province.

Bibliography: *Imperial Gazetteer of India*. (J. S. Gurnea.)

BOHORAS (BOURAS, BURATH), a Muhammadan sect in Western India, (mostly of Hindu descent), for the most part *Shi'a* of the Imam's sect, and belonging to that branch of it which upholds the claim of al-Muwallid (487—495 = 1094—1101) to succeed his father al-Muwallid, in the *Aljihad* Caliphate of Egypt, in opposition to his brother Nizar, whose adherents (the ancient Assassins) are represented in India by the modern Khudjahis (q. v.). The name Bohoras denotes "followers" (from the Gujarati *bolhara* to trade), and records the occupation of the earliest converts to Islam, the appellation, however, is not confined to Muhammadans, and in the census of 1901, 862 Hindus and 35 *Dharmis* returned themselves as Bohoras. The number of Muhammadan Bohoras was 116,255, of whom 118,307 resided in the Bombay Presidency. They fall into two main groups the larger of which, belonging to the mercantile class, is *Shi'a* (with the exception of the *Wahabi* Bohoras, who are *Sunni*); the other, composed of peasants and cultivators of the soil, is *Sunni*.

Some of the *Shi'a* Bohoras claim to be descended from refugees from Arabia and Egypt, but the majority are of Hindu origin, their ancestors having been converted by *Imam's* missionaries. The first of these it commonly stated to have been called 'Abd Allah and to have been sent from Yaman by the Imam of the *Imam's* Imam's sect, to have landed in Cutch in 460 (1067), and there to have initiated an active propaganda. But other accounts give Muhammad 'Ali, whose tomb is still revered in Cutch, as the name of the first missionary to India, (c. 532 = 1137). The *Calukya* Dynasty of Aghilavada was then ruling over Gujerat and the *Imam's* missionaries seem to have been allowed by the Hindu government to carry on their propaganda without interruption and with considerable success. In 1227 the Hindu kingdom came to an end and for a century Gujerat remained more or less in subjection to *Dilip*. Under the independent kings of Gujerat (1396—1572) who favoured the spread of *Sunni* doctrines, the Bohoras were on several occasions exposed to severe persecution.

Up to 946 (1539) the head of the sect resided in Yaman and the Bohoras made pilgrimages to him there, paid tithes, and received their disputes for settlement; but in 946 Yusuf bin Sulaiman migrated from Yaman to India and settled in Solapur (a town now in the *British* States). About fifty years later, a schism occurred after the death in 1588, of *Abdullah*, 'Adil Shah, the then head of the sect. The Bohoras of Gujerat

destroyed) estimated the number of towns and villages at 300, which would give a population of about 40,000. M. Hartmann gives a list of 269 place-names of which about 250 may be claimed for Bohtân with certainty. The most important towns have naturally always been on the banks of the main rivers, e. g. Hâzârî (the modern Hamat ibn 'Imar), Fînik and Sîfîr ('Seret'), which is now the largest town is Bohtân-îl. Lehmann, op. cit. I. p. 332, although strictly speaking it lies outside of it. The Arab geographers mention also amongst others: Arâmush, Akî, the famous mountain fastness of Lîragûl, etc. The inhabitants at the present day are mainly Kurds, who, according to Lehmann, belong to 10 different tribes, of whom the chief of Sûlwa-Kurds bears the title of Bohtân-Agha, i. e. Lord of Bohtân. There are also Armenians and Nestorians.

Bohtân is as yet comparatively unexplored; the accounts of most of the travellers of the sixteenth century (among whom may be mentioned: J. Rich, Lazard, Sandrocki, Socin, Cornik, Seckus, Müller-Simonis, Lehmann-Haupt and Fick) are as a rule very scanty; their accounts also deal almost exclusively with the banks of the Tigris and the Bohtân-ya, the river joined by them. Wanssch (1883), Maxmull and H. Humboldt (1894) alone have penetrated into the interior of the country. Except for a not very extensive plain between the Tigris and the Hâzârî, the whole of Bohtân is covered by wild and lofty mountains, this enormous mountain system was, however, till lately a terra incognita and was usually represented on maps by Hebel Elûdî [4-5] (12,000 feet high), the mountain on which the ark rested according to primitive Mesopotamian and later Muhammadan traditions.

Regarded from the purely geographical standpoint, Bohtân belongs to Armenia in history, however, this district, inhabited from the earliest times by nomads, has always been a sort of connecting link between the Semitic south and the Indo-Germanic north, and has been loosely attached sometimes to the one and sometimes to the other, as a sort of frontier province, while it has often been completely independent. Turkish authority in Bohtân was not at first rightly refused. Even after the battle of Faldûra (1254) the Kurdish chiefs enjoyed almost unlimited authority in their inaccessible mountain castles; it was not till the middle of last century that the Persians began gradually to put a check on the independence of the Kurdish princes and to bring their lands directly under the sway of the Sultân.

M. Hartmann has given a valuable topographical and historical study of Bohtân (see Bibliography). What he gives is not exactly a systematic account, but rather the materials for the preparation of one, combining mainly of lists of places compiled from 1. the Kurdish-Arabic dictionary of al-Ḥalîdî (Sambut, 1510), 2. the Arab geographers, chiefly Yâqûṭ; 3. the Kurdish chronicle (*Şîraf-nâme*) of Şîraf al-Dîn (died 533 = 1157) edited by Vâsîmî-î-Karîm (St. Petersburg, 1860-1862); 4. the official Turkish year books; 5. the accounts of European travellers. In a supplement he also gives a fairly important list of Arabic inscriptions in modern Syriac published in 1832, by two Syriac priests of Urmia. There is still much valuable and little explored material for the history of Bohtân in Armenian and Syriac literature.

BOËTOR (BOCHTHOS), ELIAS, an Arabic philologist, born of Christian parents on the 24th April 1784 in Sîrî, served as a dragoon in the French army during the Napoleonic expedition and accompanied it to France on its retreat, was appointed Professor of Modern Arabic at the Bibliothèque du Roy in 1815 and died on the 16th September 1821. He compiled a *Dictionnaire Français-Arabe*, published by Caussin de Perceval, 2 vols., Paris, 1827-1829, 2nd edition, ib. 1848.

BOLÂN, a mountain-pass in Baluchistan, see above p. 625.

BOLÎ, a town in Asia Minor on the Bollî-ya, a tributary of the Tilyasak (Dihlaka), capital of a Sandjak in the Wilâyet Kastamonu with 10,796 inhabitants. The name appears to be an abbreviation of Claudopolis, the ancient Bithynium. The site of the latter town is to be sought for in Eski Hissar about one hour's journey to the east of Bolî.

BOLOR DACH, see the article FAMIR.

BÖLÜK. A Turkish word, properly meaning "division" (*böl* to separate), group or troop. Since the reforms, it has been the name applied to a company of infantry (about a hundred men) commanded by a captain (*baş-bölük*), and to a squadron of cavalry. The *baş-bölük* is the farrier-sergeant. It was also the name of one of the three divisions of the corps of Janissaries, composed of sixty-one *ayets* ("regiments"), of which thirty were distributed throughout the provinces, while the others were quartered, as a garrison, in Constantinople. Those who composed it were called *bölük-bashi* or *Mülk-bashi*. The register for the year 1035 (1624) gives 12,768 men as the effective strength of this division. *Bölük-bashi* "the top squadrons" was the name given to four companies attached to the corps of *ayets* and *silâskars* which were themselves subdivided into *bölük*, the leaders of which were called *bölük-bashi*. These *bölük-bashi* were the oldest body of cavalry in the Empire; they were originally raised by Orkhan and at first numbered 2,400 men but the number gradually rose to 16,000. This corps having become notorious for its unruly conduct, was reduced to

its original number by Muhammad IV and incorporated in the *shāhī* and *chāhī*. From its institution this body has always been entrusted with the duty of guarding the Standard of the Prophet (*amāl-i shahī*).

(CL. HEART.)

BOMBAY PRESIDENCY, a province in western India, with its capital at Bombay city [q. v.]. It stretches from Sind, through Gujrat, to the Konkan, with a landward extension across the Ghāt into the Dekhan and the Carnatic. Comprised within its limits are the Portuguese possessions of Goa, Damão, and Diu, and also the state of Baroda. The settlement of Achen at the mouth of the Red Sea is politically a part of Bombay. It differs from other provinces in that more than one third consists of native states. Including these, the total area is 188,745 sq. m.; total pop. (1901), 25,424,235. In history under Muhammadan rule, see the separate articles GUJARAT, PAKISTAN and ARAB. The more important Muhammadan states at the present time are Khairpur [q. v.] in Sind, Dharwar [q. v.] in Kathiawar, Cambay [q. v.], Palanpur [q. v.] and Bhilwarpur [q. v.] in Gujrat, and Dharwar [q. v.] in the Konkan. Though the whole of the province was at one time under Muhammadan rule, it was from the thirteenth that the British acquired it, with the exception of Sind [q. v.]. Of the total population in 1901, Muhammadans numbered 4,567,295, or 18%; but if Sind be excluded, the number falls to less than 2 millions, and the proportion to 7%. While in Sind the proportion of Muhammadans is as high as 76%, elsewhere it exceeds 10% only in Bombay city, in two districts of Gujrat and two districts of the Carnatic. This uneven distribution shows that Islam never made much way among the Marathas of the Dekhan, though they were for nearly four centuries under Muhammadan rule. As throughout India, the vast majority are Sunnis, estimated at 87%. The Shī'a sect is represented by the Khojās [q. v.] (50,837) and the Bohorās [q. v.] (118,307). The latter belong to two distinct classes; a wealthy commercial community in Bombay city and other trading centres, and a group of agriculturists in Gujrat, who are Sunnis and not Shī'as. The sect of Ahmadiyah, [q. v.] founded in the Panjab by the late Ghulam Ahmad of Rāwal, is said to have made 10,000 converts in Bombay. Of other communities or castes, Alvars numbered 27,000, Balōts 543,000 (mostly in Sind), Arāls 262,000, Pathāns or Afghāns 170,000, and Mughals only 28,000. Apart from the prosperity of Sind, there is no reason for thinking that the Muhammadans increase faster than the rest of the population.

Bibliography: *Census Reports* for 1872, 1881, 1891, and 1901; Sir J. M. Campbell, *Bombay District Gazetteer* (Bombay, 1877-1901); *Imperial Gazetteer of India, Provincial Series, Bombay Presidency* (Calcutta, 1909). (J. S. COTTON.)

BOMBAY CITY, an island on the W. coast of India, now connected by causeways with the mainland, capital of the presidency of the same name, chief sea port of India, and center of cotton trade and manufacture. Area, 22 sq. m.; pop. (1901), 776,006. The census was taken in time of plague, and a special enumeration in 1906 gave a total of 977,822. The name is undoubtedly derived from *Mombadevi*, a Hindu goddess whose shrine is still worshipped. The island, though commanding the only safe harbor for large ships in all India, hardly figures in history until 1661, when it was ceded to Charles I. by the Portuguese as part of the dowry of Catherine of Braganza. In 1668 it was granted by the king to the East India Company, and in 1687 the headquarters of the company were transferred to Bombay from Surat.

Of the total population in 1901, Muhammadans numbered 155,347, or 20%. They include representatives of all the races that have embraced Islam: Arabs, Persians, Turks, Afghans, Malays, and Africans. Three classes of traders are especially numerous and influential — Memons, Bohorās, and Khojās. Their dealings are chiefly with the Persian Gulf and Zanzibar, but they do not shrink from visiting Europe and the British colonies for trade purposes. They are scarcely less prominent in finance, in industrial enterprise, in charitable work, and in the municipal administration. Other special classes are Nawabs from the Konkan, descendants of Hindu women by Arab fathers, originally sailors but now a wealthy community; Arab horse-dealers, conspicuous by their national dress; Siddi or Africans, some of whom have been long settled on the west coast; and Djalāzās, who come to the cotton mills from as far as northern India. The Djalāzī Mughal dates only from 1802, but the oldest Muhammadan monument is the tomb of Shāhkh 'Alī Farū, built about 1431 and repaired in 1674, which is the scene of an important annual fair. The celebration of the Muharram festival in Bombay not seldom results in riots between Sunnis and Shī'as.

(J. S. COTTON.)

BÖNA (French *Bône*), a town on the Algerian coast in the department of Constantine, situated at the mouth of the Sobus on the western shore of the gulf of the same name, which lies between Cape Gardi in the west and Cape Rous in the east. The town is built between the sea and the wooded heights, which form the outer buttresses of the mass of the Edough (q. v.). It is called *Bēna* by the Arab geographers and *ANNARA* by the natives.

The population (1906) is 47,934 of whom 16,457 are French, 11,880 foreigners, 1662 Jews and 12,935 natives.

The modern town of Bona is about 1½ miles from the site of Hippo (Mizy regis). Founded by the Phoenicians, conquered by the Carthaginians, and then held by the kings of Numidia, Hippo was attached to the Roman province of Africa on the defeat of Jugurtha. Under the Empire it attained a high degree of prosperity and after the spread of Christianity became one of the religious centres of the country. Constantine resided here in 393, 395 and 426 A. D.; Saint Augustine was Bishop of it. Taken by the Vandals in 450, it was ~~destroyed~~ in the 5th century following by the Byzantines, in whose power it remained till the Arab conquest. It passed into the hands of the Mohammedans probably at the same time to Carthage, that is to say, in the last years of the 7th or early in the 8th century A. D., during the governorship of Hassan b. al-Nu'man.

During the centuries following, the district of Bona, inhabited by a Berber population of the tribes of Awartha and Maghila (al-Bakr, *Description de l'Afrique*, *Journal de Saint*, p. 134) was successively ruled by Arab governors of Kairouan, Aglabides, Fiqhides, Zirids and lastly by the Hammadides. During this period, a new town was built close to the sea, at some distance from the ancient Hippo, perhaps to protect the coast from the attacks of the Christians. "The governor of the town," we read in Ibn Hawkal (*Description de l'Afrique*, *Journal de Saint*, p. 134) "is independent and keeps a body of Berbers always ready for service, as are the *compagnons* quartered in the *ribats*". Al-Bakr (*op. cit.*, p. 134) clearly distinguishes between an ancient and a modern town. The former, the seat of the *ribat* of *al-Madinet* (St. Augustine) built on a hill and difficult of access, was called *Madinet Zawi*, particularly, as de Saut suggests, because it had been granted by al-Mutiz b. Hammad, fourth ruler of the Zirid dynasty, to his relative Zawi b. Ziri. The second, built three miles away, was called New Bona, and had been surrounded by walls some time after 430 A. D. (1058 A. H.). The date of the disappearance of *Madinet Zawi* is not known. At the present day there is nothing on the site of Hippo but a few traces of Roman buildings. Both geographers agree in exalting the prosperity of the town, and the richness of the neighbourhood in fruits, cereals, and cattle. There was a great trade here in hides and wool, and merchants visited the town in large numbers, particularly from Antiochia. In the time of Ibn Hawkal, besides the men levied for public purposes, Bona supplied 2000 dinars annually in the privy purse of the Hammadid Sultan. At this period and in the century following, it still numbered among its inhabitants some native Christians and was the see of a Bishop, as a letter from Pope Gregory VII to the Sultan al-Nasir in 1076 shows (M. Lottin, *Traité sur le Christianisme en Afrique*, *et Moyen Age*, *Introd.*, *ibid.*, p. 22).

The piratical expeditions to which the people of Bona devoted themselves, brought down upon them the wrath of the Christians. In 1034, a naval expedition of Pisa and Genoa sacked the town. A century later, Roger II of Sicily, taking advantage of the destruction of the kingdom of Hagg by the Almohads sent his Admiral, Philippe de Mahy, to occupy Bona and set up a prince of the Hammadid house as his representative there. In 1153, Bona remained but

a brief time in Christian hands and by 1260 it was regained by the Almohads. In the 13th century, they lost it temporarily and for two years (597-600 A. H. = 1200-1205 A. D.) it recognised the authority of Yahya b. Ghannayn on the break-up of the Almohad empire. Bona fell in the list of the *Madinet* of Tunis and later became a bone of contention between the parties reigning at Tunis, Bougie, and Constantine. It was (1358-1360) the capital of a little kingdom founded by the Hafsid prince *al-Nasir*. In 1360, it was given by Abū 'l-ʿAbbās, King of Bougie, to his nephew Abū 'l-ʿAbbās *al-Nasir*. It still continued to be an important port, visited not only by Mohammedan but also by Christian merchants. The *Flora*, *Commerce*, *Manufactures*, and *Industries* all had flourishing here. As the increase in piracy gradually interfered with maritime trade, Bona began to decline. At the beginning of the 16th century, it was only a small town with 300 houses (*Les Africains*, ed. Schefer, Vol. II, p. 107).

The settlement of the Turks in Algeria induced the people of Bona to throw off Hafsid authority. In 1533, they rose against Sultan Miftah Hasan and expelled to Khir al-Din. The latter went to Bona and there completed his preparations for the expedition by which he became master of Tunis in 1535. But as a result of the occupation of this town by the Spaniards, Charles V obtained the cession of Bona from Miftah Hasan, and re-established on his throne. The Marquis of Moustier came to take possession of it and placed a garrison of 500 men in the *ribat*, which they evacuated after five years (1535-1540) during which they were closely blockaded by the Turks and the natives. After the departure of the Spaniards, the Turks again became masters of the town, where they established a garrison and held it till 1830. During these three centuries, in spite of the annoyance caused to commerce by the corsairs, Bona was regularly visited by French merchants. The *Compagnie du Levant*, founded in the middle of the 17th century by some merchants of Marseilles, obtained permission to have a countinghouse here. This building was destroyed in 1660 but rebuilt in 1676 as the outcome of negotiations by Sarron Napollon and remained till 1799. The various companies, which under the name of "*Compagnie d'Afrique*" were engaged in commerce with Barbary, made it the centre of their operations, particularly for the purchase of hides, wool and cereals. The importance of Bona was such that Louis XIV thought of taking it and making it a fortified station. Transferred to France in 1681, the countinghouse at Bona was again taken from them and granted under English rule to them from 1807 to 1815. It was then given back to France but evacuated in 1827 as a result of the rupture between France and the Bey of Tunis.

After the capture of Algiers, an expeditionary force was sent against Bona. General (Gardien), who commanded it, entered the town on the 2nd August 1830 and took possession of the *ribat*; on being recalled by De Bontmont, the general in chief command, he re-entered Algiers by the 15th August. The inhabitants, who had thrown off the authority of Ahmad, the Bey of Constantine, retained their independence in spite of the attacks on them by Ahmad's lieutenants. Another attempt

by the French to establish themselves in the town in 1833 failed and ended in the murder of the two officers who led it, Commandant Huder and Captain Digne Ibrahim, a former Bey of Constantine, who sought to become lord of Bona on his own account, and been the instigator of this ~~movement~~. However, a year later, the inhabitants of Bona finding themselves unable to resist any longer the attacks of Van Alama (Ibn Tadj), the *qaid* of the Bey of Constantine, had to appeal to the French as a last resource. Captain J'Arenaudy and Yusuf, attacked by a bold stroke to get a number of soldiers and ~~troops~~ into the *Kayba* and in spite of the resistance of the Turks, unfurled the French flag there on the 27th March 1832. Ibrahim fled and ~~the~~ Alas disappeared after setting fire to the town. Soon afterwards a French garrison was placed in Bona, which became the base of operations in the eastern provinces and from it the expeditions against Constantine were sent in 1836 and 1837.

Since that date the prosperity of Bona has been continually on the increase. The irrigation of ~~the~~ plain of the Sebou, now devoted to agriculture, the exportation of the products of the forests of the *Kedougha*, and ~~the~~ the beds of iron-ore (Magnetite) at *Madid* and more recently of the phosphates from the *Tellouas* district, now connected by rail with Bona, have insured its rapid development. The harbour of Bona is now the chief port in Algeria and seems destined to a still more brilliant future. A modern town, the population of which is daily increasing, has been built beside the ruins one of which there remain only a few insignificant traces and the *Kayba*, built in the sixth century by the Muslims but since completely transformed.

Bibliography: R. Bouquet, *Histoire de Bone* (Paris, 1892); *Vernaud, Documents gene raux* à l'histoire de Bone; *Revue Africaine*, 1873. (L. VVEX.)

AL-BONDARI, AL-FATH b. ALI b. MUHAMMAD AL-IBRAHIMI, with the honorific (*Lafah*) GAWAN AL-MUK, an Arab historian, compiled an epitome of Imam al-Fath's history of the Saljūqs entitled *Zubdat al-Akhbar wa Nuhbat al-'Ura* (published by M. F. Houtman in the second volume of his *Revue de Travaux relatifs à l'Histoire des Seljoukides*). He is said to have previously dealt with another work by Imam al-Fath (*al-Bihar al-Sayyid*) in a similar fashion. He also translated the *Shahnameh* of Ferdowsi into Arabic and dedicated his translation to the Ayyūbid al-Malik al-Mu'azzam, who died in 624 (1227). Nothing more definite is known regarding his date of his death or the events of his life.

Bibliography: Houtman in the preface to the second volume of the work quoted above, p. 37 ff.; Brockelmann, *Geschichte der Arab. Literatur*, I. 320.

BONDU, a country in Senegal, bounded on the north by the circle of Dakar, on the west by the Sandegu, a tributary of the Gambia which separates it from Fouta, on the south by the Fulo-dugu, on the east by the Palome, a tributary of the Senegal which separates it from Boudouk. The Bondu measures about 120 miles from east to west and 110 from north to south; it lies between 13° 12' and 14° 49' north lat. and 16° 40' and 18° 10' west long. (Greenw.) and covers an area of about 15,000 square miles.

It usually presents the appearance of a level plain

over which are scattered isolated mounds from 150 to 200 feet high. It rises towards the south ~~to~~ ranges of hills, which rarely exceed 300 feet in height, separate the basin of the Palome from that of the Gambia. The waters of this area are thus carried off in two directions, either to the north by the Palome, which forms the boundary of Bondu for 100 miles of its course, or towards the south by the tributaries of the Gambia, of which the largest, the Niande, is nearly 200 miles long. Besides these rivers, a number of small lakes, most of which never dry up and a subterranean sheet of water from 6 to 10 feet below the surface, assure a plentiful supply of water to nourish the soil. Rain falls in abundance from June to November but is usually rare in the dry season from November to June.

The soil, usually composed of ferruginous laterite, is not of the same fertility everywhere. The western district, near Fouta, is covered with *steppes* which are almost bare in the dry season but are ~~covered~~ with a green mantle of vegetation after the first rains. In the centre, *steppes* and cultivated lands are found adjacent to one another. In the south appear tropical growths, *tamarisks*, *acacia*-trees, *baobabs*, *figs*, etc., but too far apart to constitute regular forests. The cultivated plants are *sorghum*, *millet* in the districts with clay soils, ~~and~~ under the perennial *marches*, but agriculture has been much retarded by the want of which ~~lands~~ has been the theatre and by the ignorance of the inhabitants of such matters. In spite of the large numbers of domestic animals, horses, cattle and ~~sheep~~ but little attention is devoted to breeding them. The mineral resources of the country are small. The gold, obtained by washing the sands of the Palome is not abundant enough to justify the introduction of a more remunerative method of obtaining it; the deposits of iron are inconsiderable. Industry is confined to the manufacture of the most necessary articles of domestic life, with the exception of weaving; strips of cloth are made which are ~~used~~ as money in commercial transactions.

The population consists of very different elements. To the peoples of the Fouta river, Malinkes, Soninkes, and Bambaras who constitute the main stock, have been added *Wolofs*, *Fulbas* and lately *Fels*, who came from Futa Djallon, few in number, but forming a kind of aristocracy.

Bondu is governed by an *eloum*, residing at *Boudouk*, in the south of *Dakar*. He is not only the military but also the religious head of the state and exercises absolute authority, although according to Kalléval, he is bound to consult the principal chiefs before he can declare war. His power is hereditary but is transmitted not to the son of the late *eloum* but to the son of his eldest brother. The villages are ruled by hereditary chiefs; alongside of them the *Mamunta* hold an important position. These are divided into three classes: *imams*, whose duty is to divide substance and arrange *ceremonies*, *qadis*, judges intermediary in rank between the village chiefs and the *eloum*, and *Tallies* who attend to education and public worship.

According to tradition, *Wundu* was founded by the *Siallas* of Futa. Driven out of their country by political troubles, these fugitives came to seek refuge with the chief or *Imam* of *Dakar*. The latter received them kindly and allowed their chief

to choose a residence for himself. The frontier of the two states was then fixed at the point where the two chiefs setting out at the same time from their respective capitals should meet. In the time of Raffet, certain symbolic ceremonies still recalled the indebtedness of Bondu to Gadam. At first very limited, the territory of Bondu increased as a result of victorious wars against neighbouring tribes and the population was increased by refugees from Fata, Fata Djallon, and by numerous colonies of Sarrakoles.

The inhabitants, in spite of the Muhammadan propaganda carried on by Soinkhe merchants, remained pagans for a long time. They were converted to Islam in the second half of the eighteenth century by the Fula of Fata Lyallon, who, under the leadership of the *almamy* 'Abd al-Kâfir, invaded Bondu and imposed on them the religion which they had only recently adopted themselves. As a result, incessant wars broke out between the Fula and the people of Bondu, in the course of which the *almamy* 'Abd al-Kâfir was slain by Sogo, the *almamy* of Bondu, whose brother he had caused to be assassinated. In the sixteenth century the rulers of Bondu broke off their alliance with the French. The *almamy* 'Abd al-Kâfir remained faithful to the French cause till his death. He especially refused to join the *Mahdi* (1884-1885) 'Omur (q.v.), whose hordes were ravaging Bondu. After his death, a party, hostile to his successor 'Omur Pacha, enhanced the cause of the *almamy* Mahamud Leulu. From 1885 to 1887, Bondu was again under the rule of the *almamy* and remained master of the country up till the time when he was driven out by Colonel Ferry's troops. In our own times a notable change has taken place in the attitude of the people of Bondu, who for long rejected the doctrines of the Tijlaniya and were rather lukewarm Muhammadans; they now appear disposed to adopt the doctrines of this brotherhood, which is hostile to European influence.

AL-BONI. [See AL-BONI.]

BONNEVAL, CLAUDE ALEXANDRE COMTE DE, a French adventurer, who served first in the French army, afterwards in the Anatolian, and finally entered the Turkish service after becoming a convert to Islam and adopting the name of Ali-pasha Bonneval. Bonneval was born in 1675, took part in Prince Eugene's campaign against the Turks in 1716 and became a Muhammadan in 1730. He was appointed governor of Karaman and endeavoured to bring about an alliance between France and Turkey, at the same time trying to reform the Turkish army, particularly the artillery. In 1738 he lost the favour of the Grand Vizier Yezid Muhammad Pasha and was banished to Karaman, but recalled when the vizier was deposed in 1739. He died on the 23rd May 1747. His adopted son Salaman, likewise a renegade,

succeeded him as commander of the bombardiers. *Bibliography*: von Hammer, *Geschichte des Osmanischen Reiches*, vol. Index, *Leben und Regierungen der Kaiser von Constantin* (Wien, 1737); de Ligne, *Mémoires sur le Comte de Bonneval*; Vandel, *Les Pasha de Constantin*.

BORAX, BAWAG, BAWAG, BORAX. The description in Karwin shows that the most different salts are confused under the general name of borax; he mentions natron as a kind of borax, i.e. the Armenian borax, the borax of the metal-founders, which is brought from India, bakara borax, the borax of Zenswand and of Kirman. Even in the *Pétreologie* of Amstade the peculiar property of borax is said to be that it melts all bodies, hastens smelting and facilitates casting. Natron is particularly mentioned in this connection as a kind of borax; bakara is said to be specially useful in connection with the smelting of gold. It has also numerous applications in medicine.

(J. REBER.)

BORNEO, the largest island in the Malay Archipelago and next to New Guinea in the whole world (332,000 square miles), lies under the equator and is covered with luxuriant tropical forests up to its highest mountain tops. The mountain ranges running from west to east give the island its massive form, which is most pronounced in the mountains of the Upper Kapuas which run right through Borneo from west (Cape Natu) to east (Cape Mughalliat). It consists of crystalline schists and varies greatly in height (from 500-6000 feet). To the north separated by parallel depressions are plateaus of tertiary sandstone, viz. the Malak Manan to the north and the Schwaner Mountains to the south of the River Malak. These ranges continue westwards in the China Sea and eastwards through a region the geology of which has as yet been little studied. South of the area to which the Kapuas rises they are crossed by a soft formation, the Muller Range, more than 3000 feet thick and much excavated by water. To the north of the Upper Kapuas range also the west-easterly direction of the mountains is very marked. These sedimentary formations have been broken through by masses of granite and andesite, which now rise as isolated mountains above the surrounding country as a result of great erosion. In the north Kinabalu (12,000 feet) in the centre of the Gunung Mulu (6,500 feet) in the highest eminence among the mountains which have been thus formed.

The great rainfalls (on the west coast about 160 inches and in Sandjumanin 90 inches annually) supply numerous large rivers which rise in the centre of the island. The Sambar and the Kapuas, which is in places as much as 1500 yards broad, flow to the west coast; the Kahayan, the Kapuas-Murung and the Sarawak (about 600 miles long) to the north; the Mahakam of the same length and the Kajah to the east; the River Hagan, the Baran Kelang and the Bawang (up to the north. These and numerous smaller rivers have all filled their valleys which are of older formation with masses of debris, sand and mud. The alluvial plains which have thus arisen are still mainly on the north, west and south coasts, gradually advancing and regaining ground from the surrounding shallow seas. The coasts are thus

low and marshy and covered with rhizophora. Only along the east coast is there a low range of hills which has apparently arisen and separated the interior of the modern Kato from the lavus of the sea. This was gradually filled up by the deposits from the rivers running into it and is now a very flat country in which a few lakes have been left. Borneo has from ancient times been famous for producing precious metals and diamonds. These however have not been found in sufficient quantities to repay working by Europeans either in the alluvial deposits which are of general distribution, or in rock veins. The natives however, as were in former times the Chinese on the west coast, are still able to obtain a sufficient recompense for their labour. It has been mainly through its deposits of antimony and quicksilver that Sarawak has been able to develop into a principality. The Tertiary deposits of coal, which are found in many places, only exceptionally pay Europeans for working them (on Tulu Laut on the south-east coast) and the natives are successful workings in various places (the middle course of the Kapuas and Barito). The petroleum industry has become of great importance in 1882 years (the main centres are at the mouth of the Mahakam and at Balikpapan).

To its tropical forests, the island of Borneo owes its exports of guttapercha (*Gutta sericea*), camotehuu, rotan, camphor etc. Agriculture and cattle rearing have been but little developed by the natives so that copra, pepper and sago are exported in relatively small quantities. In the north-east and north tobacco of good quality is grown by Europeans for export to Europe and America.

The basin of the river on the west, south and east coasts (250,000 square miles) belong to the Netherlands, the watershed of the northern rivers (88,000 square miles) belongs indirectly to England by the contract of the 20th July 1891; the island consists of the kingdom of Sarawak in the west and the territory of the British North Borneo Company in the east with the smaller English possessions, the island Labuan, the town of Brunei and a small stretch in the centre.

The Dutch territory is divided into two residencies, that of the Western Division of Borneo with the capital Pontianak, from the centre to the west coast and the Southern and Eastern division of Borneo with its capital Bandjarmasin.

In the first residency are the Malay kingdoms of Samudra, Mempawa, Pontianak, Kuba, Kumpang and Matan; along the Kapuas, Landak, Tapan-Mellau, Sanggau, Sekudat, Singau, Sialit, Subah, Sallimban, Pless, Djongkong and Barau. Their chiefs bear titles like Sultan, Puanmahajan, Pangéran etc. and are quite subject to the Dutch government. Although frequently possessing only a small territory and little power, they are all despots; each has a vice-regent and a council consisting of members of the ruling family and the most important feudal lords. The great mass of the population which consists of Muljammedan Malays also, appears only to exist to assure a lay life for the chiefs and nobles by paying taxes, which are regularly and arbitrarily levied.

Borneo became known later than the other islands of the Archipelago. Although Ptolemy (Chap. III. 2, 3) describes the land of the Orang Uian and

the Kinalu (1) and the many Visuula islands singularities in Kuzi argue intimate relations with further India, and on the Kapuas and Barito with Hindu Java, the earliest definite accounts are found in the Chinese annals. These refer to the west coast, from which according to the *History of the Sung Dynasty* (Book 489) camphor was brought as tribute in 977 A.D.; in the *History of the Ming Dynasty* there is a similar entry for the years 1370 and 1405. In this period the Chinese had commercial relations with the important state of Brunei on the north coast, with Bandjarmasin and the Karimata islands. In 1602 notices we find descriptions of the natives which agree in many points with present conditions; important kingdoms on the coast are also mentioned. These were founded either by Malays from Juhor (e.g. Menak and Sambas on the west coast) or by Javanese (Sabudatu on the west coast, Rotuwatiglu and Bandjarmasin on the south coast and Kato on the east coast). The rulers of many smaller kingdoms on the Kapuas are descended from the Hindu chiefs of Sukadana, who settled there in the 12th century.

In the middle of the 17th century Islam was preached in Sukadana and Matan from Palembang; in the year 1590 Gie Karama ascended the throne there as the first Muljammedan prince. During his reign Europeans first began to visit the west coast (van Waerwijck in 1602), while the Portuguese and Spaniards had been visiting Huanan on the north since 1518 (de Gomez) or 1528 (de Meneses) or 1531 (Pignatta in Magellan's ship).

The kingdoms on the coast of Borneo were able to retain their independence longer than those on many other islands of the archipelago. For nearly 300 years, the Portuguese, Spaniards, Dutch, English, and other Europeans successively visited their capitals to trade and build counting-houses there but made no permanent settlements. Bandjarmasin (q. v.) was the first to surrender a part of its independence to the Netherlands in the middle of the 17th century. Sukadana on the west coast was for a short time conquered by Huanan (q. v.) on West Java in 1609, but regained its independence about 1723 with the help of Buginese from Celebes. From that time many Buginese began to settle on the west coast and became themselves rulers of separate kingdoms (Mempawa). The kingdom of Sukadana was first overthrown by the Dutch and the Sultan of Pontianak in 1786. His king hereafter ruled only Matan. The Sultans of Pontianak owed its foundation to an Arab adventurer, Sharif 'Abd al-Rahman, son of Sharif Husain bin Ahmad al-Kafer, whose tomb in Mempawa is still visited by pilgrims, and a Dyak woman. In his youth he endeavoured to satisfy his thirst for adventure and lust for gold by trading voyages and piracy but was therefore cursed by his pious father and, leaving Mempawa, settled with his following of robbers in 1772 at the confluence of the river Landak and the Kapuas. By his ability and energy he succeeded in making himself master of this favourably situated position and founding an important trading centre, the modern Pontianak. By the year 1779 he was able to get himself recognised as Sultan of Pontianak by the Dutch East India Company and to make a treaty with them. His descendants still reign in Pontianak although they are very much under the control of the Dutch government.

The Sultanate of Sambas (capital Sambas) was founded by Malays from Johor, the sovereignty of which was recognised at first; as early as 1600, it entered into a trading agreement with the Dutch East India Company. In the first half of the eighteenth century the ruling house was driven out by Radjo Salsidana, a son of Radjo Tengguh, prince of Brunei and a princess of Salsidana, who lived in Sambas, the latter reigned under the name of Muhammad Saif al-Din. He was the first Sultan of the present dynasty. In the eighteenth century Sambas was notorious as a seat of pirates; in the year 1811, an English expedition had to be sent to destroy it. The practice of piracy, by introducing foreign elements, exercised a great influence on the kingdom on the north and west coast of Borneo, as did the goldwashing industry in the hands of the Chinese, which had been developing since the middle of the eighteenth century. The first relations of the Chinese with Borneo certainly date from as early as the middle of the eighteenth century as we know from their records; in later centuries they traded chiefly with Brunei and settled in the neighbourhood. It was not till later, when the Malay chiefs began to plunder them more and more, that these trading voyages ceased. Numerous descendants of their marriages with Borneo women are however still to be found in the towns of Borneo and some Dyak tribes of the north coast are thought to show an admixture of Chinese blood.

The Malay chiefs of Mempawa and Sambas brought the first Chinese goldwashers from Brunei to their territories about the year 1760. They obtained such good results that soon hundreds of their countrymen began to pour in; according to their custom they formed numerous, secretly organised, mining companies (*tanjars*) which however changed very much in the course of time. They were soon able to make themselves independent of their Malay and Dyak neighbours. In the year 1774, fierce feuds broke out among these companies, which have been constantly renewed. The consequence was that the Chinese spread themselves more and more over the land and occupied not only the districts of Larah and Lantak but also Montrado and Bander. It was not till the second half of the sixteenth century that the Dutch succeeded in quite subduing them. The goldwashing industry has almost ceased and the Chinese still settled there live by agriculture.

The origin and development of the kingdom of Serawak (capital Kuching) affords us a unique and highly interesting opportunity of seeing the beneficial effect which a firm but not harsh application of European ideas may have on the political and economic conditions of a native population. When its founder James Brooke, an English naval officer, landed in 1838 in the west of the kingdom of Brunei with a ship which he had equipped himself, he found the country in a dreadful condition, brought about by the plundering of the people, piracy, slavery, bloodshed and the horridness of the Malay chiefs. With his help the well-meaning but weak prince Radja Muda Hassan was able to restore order to some extent and in 1842 Brooke was recognised as Radja of the country of Serawak by the Sultan of Brunei. Relying mainly on the oppressed headmen Dyaks and the proceeds of the anti-slavery duties he was able to restore order and suppress the

rebellion of the Chinese and Malays who formed the hostile element to the population. It was only for the suppression of the Arab chiefs, who with the Malays and Dyaks in the east, lived by piracy, that he required English help (1845). With the help of only a few Europeans besides the prince of the native populace who all enjoyed equal rights. Sir James Brooke ruled his domain with great success so that it prospered economically and extended its boundaries. In 1863 he left to his widow Charles Brooke an orderly kingdom which now stretches to the lands on the Iridang river. Serawak has placed itself under the suzerainty of England. The Sultanate of Kutei on the east coast with its capital Tenggarong and the fort of Samarinda occupies the lower reaches of the Mahakam river. Extensive Hindu remains, which are found along this river, point to a lengthy period of colonisation in the Hindu period of the Archipelago (till about 1500). Kutei was one of the lands dependent on the kingdom of Majapahit in Java; afterwards it belonged to the kingdom of Bhadramara. During the sixteenth century the Sultans made several treaties with the Dutch government, whereby this kingdom also yielded its independence.

In the year 1905 the statistics of the Dutch territory gave the following figures: 1,382 Europeans, 55,522 Chinese, 3,141 Arabs, 748 foreigners from the Archipelago, and 1,172,864 natives. The last figure is partly based on a rough estimate. The population of the island of Borneo consists of native Dyaks in the interior and a Muhammadan population on the coast which is Malay. It is small in number, estimated at from 1-3 every two square miles, i. e. about 2,000,000 in all. The Dyaks are agriculturists and grow rice, tobacco, plantains, maize etc.; they hunt and fish in the forests around the sources of the large rivers whence various separate tribes of hunters, known by the names of Ol, Poman, Nekkian etc. The agricultural Dyaks are divided into numerous small tribes which are organised on a patriarchal basis, speak many different dialects, are hostile to one another and are thus able to offer little resistance to the more closely united Malays. The Dyak tribes belong to the older stratum of the Malay peoples of the Archipelago but differ markedly from another, probably through admixture with other stocks. The independent Dyaks, who live in the centre, are well advanced, some of their achievements in the field of art and industry, for example, being really wonderful. As they are little developed they are helpless against the injurious influences of their environment and make but poor use of the material at hand for food, clothing and dwelling. Neither do their numbers increase nor does their culture make much advance. They have had no evil reputation for their head-hunting from the earliest times. They are driven to this practice rather by their animistic ideas than by their character, for they are described as mild in temperament. Where the Dyaks are more or less subject to the Malay chiefs, a greater or less degeneration may be observed amongst them. This is a result of the harsh way the Muhammadan chiefs have exploited the local tribes; the less the latter were able to retaliate the more cruelly were they treated.

The Malay tribes on the coast differ very much in physique, intellect and customs according to

Bornu, strictly speaking, is an almost level plain. The ground only rises on its outskirts, in the Marou and Zinder country on the N. W., where ~~the~~ ^{the} ~~highest~~ ^{highest} ~~points~~ ^{points} reach a height of 3000 feet and towards the S. E. in the Marghi and Mandara country. The nature ~~of~~ ^{of} the soil varies ~~in~~ ⁱⁿ different districts. Around Lake Chad, it is very permeable, while towards the south stretch great expanses of impermeable clay which becomes baked and cracked during the dry ~~season~~ ^{season} and after the rainy season, forms ~~beds~~ ^{beds} ~~of~~ ^{of} which muddy pools form and stagnate. The streams are carried to the Chad by the Yô and the Ye-s, wrongly called Komadugu Waube by birth, the word Komadugu meaning an expanse of water and being applied to the marches and the lake itself as well as to actual rivers. The Ye-s flows from S. W. to N. E. It receives numerous tributaries of which the most considerable are the Chaka on the left, and the Koko on the right, and flows into the Chad 12 miles north of Kala after a course of about 450 miles. The lake itself ~~forms~~ ^{forms} the frontier of Bornu, from the village of Ngilgat at its N. W. corner to the delta of the Shari its banks are very undefined elsewhere. Sometimes immense stretches of the lake dry up; this is particularly the case with the N. E. part which at the present day is nothing ~~but~~ ^{but} a pebbly flat marsh; sometimes on the other hand it suddenly inundates the surrounding country. It would even appear, from the most recent explorations that the N. W. shore ~~is~~ ^{is} being carried away by the waters while on the south considerable deposits of soil are constantly being ~~laid~~ ^{laid} down. Thus Kana, the harbour of Kala in the time of Barth is now 14 miles from the lake.

Intermediate between the tropical ~~and~~ ^{and} the equatorial, Bornu presents all the characteristics of a transitional region in flora, fauna and climate. The ~~seasons~~ ^{seasons} instead of being reduced to one as on the Congo, or to two as in the western Sûdan, are three in number. The cold and dry season, from November to March, during which the temperature never rises above 77° Fahr. and falls as low as 50°, the hot and dry season, from March to June, during which the thermometer remains at about 104°; the rainy season from June to October, characterized by abundant downpours and storms of great violence; it is also the season of illnesses, malarial fever, dysentery etc. which attack the natives as well as Europeans. The flora becomes gradually richer as one goes from north to south. Near the Sahara is a region of prairies covered by scanty green vegetation over which are scattered a few shrubs; this zone, desolate and arid during the dry season, is transformed after the rains into verdant plains "pleasant to the eye". Then in Bornu, in the stricter limitation of the word, the number and variety of the trees increase, acacias give place to the ~~shea~~ ^{shea} ~~palms~~ ^{palms}, the tamarisks, the baobabs, the butter-tree, the cotton-tree, growing in clumps but not dense enough to constitute forests. It is only in the southern part of Bornu, particularly in the regions bordering ~~on~~ ^{on} the tropics, that ~~one~~ ^{one} ~~finds~~ ^{finds} ~~forests~~ ^{forests}. Besides the natural flora, plants that have been cultivated by man are also much grown here. The Bornu ~~is~~ ^{is} excellent agricultural and grain millet, ~~and~~ ^{and} corn, which is reserved exclusively for the Sûdân, tobacco and luxury rice in those areas which are periodically flooded or in the stretches of water which stand for a while after the rains.

Little attention is paid to trees, though around the towns may be found gardens in which are planted cotton and pomogranate trees. Dates, which form part of the subsistence of the people, are imported from Kâsem, and the camel of the Sahara. The fauna is very rich, particularly in the steppes adjoining the deserts where antelopes, gazelles, giraffes, lions, hyenas as well as numerous varieties of birds (ostriches, storks, pigeons etc.) literally swarm. The banks of the rivers and marshes are frequented by herds of elephants and hippopotamuses. Crocodiles and reptiles abound, as well as insects, of which some kinds such as termites and ants, are perhaps more anxious to man than the larger animals. The domestic animals are the horse, ass, cow, sheep and pig. The camel alone is not fitted for the soil or climate of Bornu.

Population. The population of Bornu, to which the general name of Bornu is applied, is composed of very diverse elements: Kanuri, Negroes, Arabs, Berbers and Fulbe.

1. The Kanuri are the preponderant element both in point of view of number (1,500,000 out of a total of 5,000,000, according to Barth and Nachtigal, as well as in political influence. Their name has not yet been explained. According to Nachtigal, the natives derive it from the Arabic word ~~kan~~ ^{kan} and the prefix ~~ri~~ ^{ri}; it would thus mean "the bearers of light", in allusion to Islam, which the Kanuri have long professed and have propagated among the indigenous tribes. According to another hypothesis, the word Kanuri of which the primitive form would have been Kânenri, is to be connected with Kânem, the home of the invaders who came in the sixth century A. D. and settled in Bornu proper. In any case, the word Kanuri is not applied to any particular race nor even to a definite tribe; it is applied to a mixture of peoples of diverse origins in opposition to the original elements themselves, which combined to form this group and some portions of which still preserve an independent existence. The ancestors of the present Kanuri came from Kânem in the sixth century. These invaders numbered in their ranks representatives of tribes who had long been settled in Kânem and claimed Arab origin, as well as of the Kânenbas, Tubu and other elements, traces of whom may still be found in the population of Bornu. To the first category for example belong the Magumi who are scattered in small groups in the provinces of Marou and Zinder and the Ngulma-Dukko. The Tubu are represented by the Kal-Duka, who form the greater part of the population of Koyun, the Ngulma scattered throughout the whole length of Bornu, the Turâ etc. On the other hand the invaders have themselves intermarried with black peoples and groups of half-breeds have thus arisen such as the Ngoma, who inhabit the country between Dika and Ngoma.

In physique, the Kanuri present a type intermediate between the Tubu and the negro; they have not the slight build of the former and their limbs are better proportioned than those of the latter. The profile approaches the European rather than the negro type but like the latter they have curly hair, prominent maxillae and thick lips. The colour of the skin varies from reddish-brown to dark grey. In their social relations and manner of living the Kanuri are likewise readily

distinguishable from their neighbours. They are not inclined to drunkenness and their industry contrasts with the indifference and laziness with which the negro is usually reproached. Men and women work together at agriculture and weaving. The men prepare the strips of cloth for the manufacture of "toben", a garment peculiar to the country; the women practice the art of embroidery. The Kanuri engage in numerous trades, e. g. the making of pottery, basketwork, and working in iron. They are indisputably the most industrious of black peoples. Their clothes alone look down upon manual labour and physical fatigue even think themselves disgraced if by chance they are compelled to walk.

The position of women among the Kanuri is relatively better than among the majority of African peoples. In girlhood she enjoys great liberty and is allowed to associate with young men; when married she is not forced to work. Polygamy is only practised by princes, and great nobles who keep large harems in imitation of them. Family life, according to travellers, is well developed. The influence of the wife is considerable in all classes of society; the Sultan's mother or *Megera* enjoys very great privileges, notably the right to dispose of the government of various districts as she pleases; the first wife of the Sultan possesses similar privileges. The genealogy of the princes and high officials is given by their bearing the names of their mothers and of their fathers.

It is possible that in these peculiarities we may trace the Berber origin of some of the elements which have gone to form the Kanuri. Among the Berbers also, hospitality is largely cultivated among the Kanuri although Barth and Nachtigal have perhaps exaggerated their disposition to welcome strangers. It may easily be that the cordiality of the Bornan is really inspired by cupidity and the desire to receive presents and gratuities from the guest.

2. Native tribes, distinct from the Kanuri in language and customs. Amongst these may be mentioned:

The Makkei or Kotoko, who live in the south of Bornu in the province of Kotoko and the small kingdom of Logon. They appear to have come from Central Sahel and to have subdued the SS, the original inhabitants before being themselves overthrown by the Kanuri. Of a darker skin and stouter build than the former, they devote themselves to agriculture and fishing.

The Keribina live in the same region. They appear to be the last representatives of the SS. The Mosher live on the left bank of the Yeu, three days' journey from Kuka.

The Manga are found over an area of 120 miles from the north of the Yeu. Barth regards them as a mixture between the Kanuri and Nachtigal, as the survivors of an aboriginal conquered race.

The Wedde and the Netrikerr, to the south of the Manga.

The Fika and the Bable, neighbours of the Adama.

The Marghi, in the S.E. of the Sahel.

The Gomeru.

The Mandem or Wandala, to the S and E. of the Gomeru.

The Meogo between the country of the Mandara and the Logona.

According to Nachtigal the total number of these various tribes amounts to about 1,500,000 people.

3. Arabs. — The Arabs settled in Bornu are known by the name of *Shos* or *Shwa*, in opposition to the Arab merchants, who make brief stays, called "Wassili". They have preserved more or less their complexion, according to their degree of admixture with the natives. Some of their tribes, such as the Aarfa, the *Lijima*, the *Selamti*, came, according to Barth, from the east about the beginning of the 15th century A.D.; others like the *Bhouisa* and the *Uad Hamet* only left Kroom to settle in Bornu, early in the 18th century. They are found scattered throughout the provinces of Kooku, Mandara and Logon. They have settlements there in which they live during the rainy season, while they lead a nomadic life with their flocks during the dry season. Some of their subdivisions, whose flocks have been decimated by epidemics have given up their nomadic life and become quite sedentary. Their numbers estimated by Barth at 250,000, have much diminished since that time, according to Nachtigal the figure does not exceed 150,000.

4. Various tribes. To the tribes mentioned above should be added a few Turkeys, known by the name of *Kindia*, who have been settled for centuries on the northern frontier in the district of Datsi and around Zinder; the *Fellata* (Fellah, Fula) who have formed colonies in various places since the 15th century A.D.; the *Hassani*, who, mixed with Kanuri, Fellata and Turkeys, inhabit the provinces of Zinder and Gamaru.

The population of Bornu is, on the whole, sedentary. The inhabitants live in villages and towns of which some are of considerable size. The most important at the end of the 18th century was the capital Kuka. Founded in 1814 by Muhammad al-Kanemi in a plain 10 miles from Lake Chad, it grew rapidly. Barth estimated the number of inhabitants at 120,000, Nachtigal at 60,000, Montell, the last European to visit it before Rabah's conquest of Bornu, at 50,000. It was divided into two parts, separated from one another by a surrounding wall and by a wide open space, used as a market. The western town was inhabited by the lower classes and the merchants, particularly by the Turawa who came originally from Tripolitania and were often related to the chief families of the land. A large street called *Doudal* ran through it from side to side and opened out on the market-place. The eastern town enclosed the palaces of the sovereign and the dwellings of the great dignitaries. Barth, Roloff and Nachtigal found at some length in the picturesque appearance of the agglomeration of huts or cottages of clay, in the centre of the green country and on the commercial activity of this great city, the real metropolis for commerce between Central and Northern Africa. The products of Europe, brought from Tripoli to caravan, are here exchanged for hides, ostrich plumes, ivory and slaves. As many as 15,000 or 20,000 people sometimes assembled here. Only the memory of this period of prosperity now remains. Kuka was utterly destroyed by Rabah and has not recovered from this disaster.

Among the other places in Bornu, may be mentioned: Ngornu (20,000 inhabitants according to Roloff) 20 miles S.E. of Kuka; Barawa (1500

inhabitants) on the banks of Lake Chad. Ngigud (1500) at the N.W. corner of the lake, on the border of the province—in the basin of the Yem, Ngurawa (the "village of the hippopotamus"), which has about 10,000 inhabitants, situated not far from the ancient capital Kari-Kigumo; Bantari (7500); Mashema (12,000); — in Damogru the royal town of Zinder (10,000 inhabitants); — in the country of the Kerkiri, Magomari; Gadjia (12,000 inh.); — to the South of Chad Yeddi Ngala (7000 inh.); — in the basin of the Sher, Gufet, Karmak (15,000 inh.) on the Logone. Dikou (25,000 inh.); Dekai, Capital of the Mandara country (30,000 inh.).

Various languages are spoken in Borné. The most widespread is the "Kouari". This language presents analogies to the language of the Tubu and also to certain Saharan languages like the *Hagratma*. It offers a great wealth of forms, which according to Koelle renders it capable of expressing with precision the most delicate shades of thought. There is no written literature, but stories, traditions and historical narratives have been told on the lips of the natives. The Kandi language is still spreading. It has been imposed on a number of native tribes, like the Mangas, and it is now tending more and more to take the place of Arabic as the official language. — Arabic, outside the language of the Sultan, is spoken by the Shou. The dialects spoken by them differ appreciably from those of northern Africa and approach the dialects of the Nijala, from which they claim to have come. These tribes cling to their own language and, even in the neighbourhood of Kuka, have not allowed it to be ousted by Kandi.

Islam is the dominant religion, introduced in the middle ages by invaders from Kairouan, who had already practised it for several centuries. It is professed by the sovereign, the nobles and the inhabitants of the principal towns; it is daily gaining ground among the fetish-worshipping tribes of the west and north. The Marghi and the Mandara are at the present day Muhammadans and the chiefs of the Mangas have adopted Islam, although their subjects are still pagan. Islam has not however yet penetrated deeply among the mass of the people. The Kandi language for example, does not have a word to express the monotheistic idea, *Allah* which is used as the equivalent of *Allah* merely signifies "lord" or "master". Of Muhammadan belief, only the external ceremonies and a few more or less fanatic notions about Paradise and Hell are known to the main body of the people. They have forgotten their ancient divinities, *Kétyoum*, the spirit of the forests and *Ngoumou*, the spirit of the waters, but they still preserved numerous superstitions. The Muhammadan festivals are regarded as corresponding to the periodical manifestations of natural phenomena, phases of the moon, the return of the rainy season etc. The faith of the Bornians is thus much degraded; it is likewise rather lukewarm. Travellers are agreed in noting the tolerance of the inhabitants and their little enthusiasm for proselytising. Religious brotherhoods play an insignificant part. The most extensive is that of the Tidjawa, to which the sovereign belongs. The *Kadriya* numbers a few adherents while the *Saadiya* has only a few scattered members. These remarks do not apply

to the tribes who along with their language, have preserved their religious fanaticism. For example, they left Kandi in great numbers to follow to Mecca the Fatma pilgrim, Shari al-Uin, who caused a regular emigration of Bornian Muhammadans about 1850. Nevertheless Islam has been a civilising influence in Borné as in all the negro countries and has raised it well above the level of the adjoining countries. Borné is however far from justifying the reputation which some travellers have given it. Intellectual life has always been at a low stage of development there. At the beginning of the sixteenth century Muhammad al-Kaumi was regarded as a learned man because he was able to write Arabic correctly. At the present day, schools, which are for boys only, are few in number and are only found in the large towns. There was in Kuka a kind of university attended by 2,000 or 3,000 students who lived on alms or on the liberality of the nobles whose children they taught, but instruction was limited to the teaching of the Arabic script and to the learning of a few Suras of the Koran by heart. "The professors," says Kallie (op. cit. p. 342) "were hardly more learned than the students, intellectual development is non-existent".

The existence of a political organisation singularly more complex than that of the other negro countries and recalling in many ways that of Europe in the middle ages made a deep impression on the early travellers who visited Borné. Only a few traces remain at the present day of this constitution as the Bornian empire disappeared at the end of the sixteenth century. To study it, one must go back to the years 1850—1852 when Barth, Rohlfs, and Nachtigal were able to study its inner workings.

The empire of Borné then comprised two distinct groups of countries: Borné proper or *Med* (*Alind*) *Kuka*, administered directly by the sovereign; and vassal sultanates governed by native chiefs. To this second category belong Ingawa (capital Nijala) Mandi, Zinder, the land of the Bedde, that of the Kerkiri, Mashema, Gummel, Mandara, Kotoko, Logone, Gadjia. The chiefs of these vassal countries had to render a tribute in kind and in slaves, whom they procured by raiding neighbouring tribes. Some of them like the Sultan of Kotoko and Logone were practically almost independent.

The Sultan of Borné until the middle of the sixteenth century bore the title of *Ma* or *Sultan*. After the death, in 1545, of the last representative of the *Baitya* dynasty, the sovereigns content with the title of *Ma* (*Ma*), borne by Muhammad al-Kaumi, the founder of the new dynasty. The ruler exercised despotic authority and combined in his person both spiritual and temporal power; he disposed at will of the lives or goods of his subjects. He is however surrounded by a council or *adama* whose members are called *adama* and which Nachtigal regards as a survival of the ancient aristocratic constitution of Borné, but it has no real power. This council includes the heir presumptive (*gerin*), the sons and brothers of the Sultan, his relatives or *adama*, the great nobles and captains commanding the troops. The sovereign lives surrounded by a splendid court. He had in his service several officers, of whom in the sixteenth century there were twelve, according to Barth, but the number has varied since that time.

The chief ~~was~~ the *Sepitama* or Lord High Captain, the *Ahinta* or Lord High Steward and the *Ahmatatama*, who has charge of the slaves. *Banacha*, as at all Muhammedan courts are numerous and sometimes play a very important part in politics. One of them, *Sellwa* 'Abul al-Kasim, has been the real master of Borné for half-a-century, during the reigns of Sheikh 'Omar and his ~~successors~~.

Next to the dignitaries attached to the personal service of the Sultan are the officials entrusted with administration (*Kingana*, *Akanama*), some of whom are free-born and others of servile origin. They receive no salary ~~and~~ are given lands as governorships, out of which they make as much as possible, though they have to give presents to the Sultan every year. Such, for example, are the *Digma* or *Dugwa*, a kind of minister for Foreign Affairs; the *Angawa*, executioner and at the same time governor of the town of Ngura; the *Kasawa*, governor of the district of Ya, the *Gahidina*, an important feudatory, entrusted with the administration of the ~~western~~ district of Borné. As a rule the aboriginal villages have retained their own chiefs under the superintendence of Bornéan officials. This is the case with the *Maikani*, whose towns are governed by chiefs who are controlled by a Bornéan ~~official~~ called *Alisa*, and with the *Shwa*, who are allowed to retain their *Shadhi* and *Kach-shadhi*, on condition that they remit to a representative of the Sultan a quarter of their regular incomes.

The Sultan has at his disposal an army ~~amounting~~ about 1000 footsoldiers, 2000 horsemen armed with muskets, and 2000 men armed with lances and bows. He also possesses 20 military battalions of a score of cannon, a body guard of a thousand archers ~~and~~ 1000 javelin-throwers, mounted on horses, protected by thick padded covers. The officers, recruited from among the slaves ~~and~~ the *Kachshila* *Blak* or *Kaigama*, chief of the archers and lancers, the *Kachshila* *Shura*, commanding the mounted rifle-men, and lastly the *Ashshila* each of whom commands a company of one hundred men. In addition to these regular troops there are the contingents furnished by the *Shwa* whose tribes have to do military service in time of war, and the bands raised by the *Kachshila* or *Kaigama*. The regular soldiers are not paid but receive lands on the cultivation of which they subsist. Borné can put in the field a total of from 25 to 30 thousand men. Its cavalry and firearms give it an advantage over the negro tribes who are not so well equipped.

History. The history of Borné has been sketched by Barth who, in addition to the traditions collected by him in the country, has made use of several written documents: 1. an anonymous chronicle, giving a list of the Sultans from the earliest times to Ibrahim, in whose reign Denham and Clapperton visited Kuka; 2. two other lists of sovereigns; 3. the chronicle of the first twelve years of the reign of 1833 Alakama, compiled by the Imam Ahmad. Besides these chronicles, the Bornéans told Barth of another, called the *Chronicle of Masfara* which neither he nor Nachtigal was able to procure. Nachtigal, however, mentioned in a few points the statements of Barth; for example he reduces the number of sovereigns, who had reigned in Borné during the period

sketch above, from 67 to 62; he has also altered the dates of several reigns. On the whole, however, he has added nothing to the work of his predecessor. The information derived from these chronicles may be supplemented by that given by Leo Africanus, and by the accounts collected by Roettig, of which the most interesting refer to the coming of the Wasmud family.

Borné was ruled till the middle of the sixteenth century by the Sultans (Sulayman) dynasty, which, after reigning for several centuries in Kano, transferred its seat to the western shores of Lake Chad. The name of the dynasty is derived from Sali, son of Isha-Yasa. This legendary hero of Islam, one of the last king of Vannu, according to tradition, founded a kingdom in Kano, by subjecting to his authority various tribes (Tubi, Wadai and Kanem) living in that country. As a matter of fact, it appears that the Muhammedan kingdom of Kano was founded by invaders who ~~came~~, about 1100, from the country of the Haros, a tribe who led a nomadic life in the eastern Sahara. According to the Imam Ahmad, the capital of this kingdom was Nijimi. The accounts handed down to us of the early Sultans are quite legendary; two of them, Isha and Kano, are, for example, credited with reigns of 350 years. The direct line from Sali became extinct at the end of the VII century A.D. in the person of Sulaim. According to legend, the power then passed to another branch of the same family that of the Band Murat or Murat. The founder of this dynasty, Hami, (479-490 A.D. = 1088-1097 A.D.) perhaps the Muhammad b. Ahmad (read 'Abd al-Jahid) b. 'Abd Allah of Masfara, is probably the first historical personage in the history of Kano (see Becker, *Der Sudan*, Vol. I, p. 171). He adopted Islam and died in Egypt while on a pilgrimage to Mecca. The adoption of the new religion was followed by a rapid growth in the power of the rulers. Dikka (491-545 A.D. = 1098-1150 A.D.) extended his kingdom by ~~conquest~~ conquest wars. He organised an ~~army~~ in which the cavalry ~~was~~ the principal force. He thence made the pilgrimage to Mecca but was thwarted in the Gulf of Suez by the Egyptians, who were disturbed by his ambition and the success of his arms. His son then acquired a great reputation as a jurist and scholar.

All these princes were of white race; they had, the chronicle tells us, a complexion as fair as that of ~~the~~ Arabs. After the sixteenth century A.D. they were supplanted by negro sovereigns, Salimuna, the first of these (590-617 A.D. = 1193-1220 A.D.) was held in great esteem and was victorious ~~over~~ the neighbouring tribes. He entered into friendly relations with the Hafids of Tunis, which continued under his successors. He was succeeded by Dikka (618-657 A.D. = 1221-1257 A.D.) who triumphed over the Tubi after a seven years' war, forced the people of Fara to recognise his authority and extended his empire from the southern shores of Lake Chad to the Nile and the Niger. After his death the kingdom passed through a critical period. The Sultans had to wage long wars against the So, a people living between the Ye-u and Lake Chad, who, after being conquered by the princes of Kano, had taken up arms against them. Within four years, the So fought and killed four Sultans. It was not till the ~~middle~~ of the sixteenth century A.D. that King Idia

(754—778 A. D. = 1353—1378 A. D.) finally overcame them. Then the kingdom was attacked by a new enemy, the Bulūla, whose chiefs, descended from a branch of the royal family of Kānem, ruled in the country around Lake Fitri. Sulṭān Da'ūd, driven from his capital Nijmī, perished in an encounter with the invaders [788 A. D. = 1386 A. D.]. Several of his successors met a similar fate in trying to keep back the Bulūla. 'Umar, son of Idris (796—800 A. D. = 1394—1398 A. D.) was finally forced to abandon Kānem and move his capital to Kaḡh, between Udj and Qadīla. The Bulūla did not cease to harass the Salliya and the latter had finally to seek refuge in the marshy districts of the S. country, constantly changing their place of residence to escape the enemy. This state of affairs, aggravated still further by civil wars, epidemics, and famines, continued for several years.

Order was only restored in the reign of 'Alī Dinnama (877—909 A. D. = 1478—1505 A. D.). This prince, called 'Alī Ghadhīdī by the Bornians, put an end to the civil wars, forced the great officials, who were in rebellion to obey his authority, particularly the *Kaigoma* who had tried to make himself independent. He built a capital, Kaḡg Eggomo or Birni on the Ye-u, three days' journey to the east of the modern town of Kūka. He waged several successful campaigns and thus earned the title al-*ḡhāṣṭ*. Thus restored, the power of Borné still further increased in the reign of Idris Katakamāḡi (910—933 A. D. = 1504—1526 A. D.) who brought about the ruin of the Bulūla and recaptured the town of Nijmī, out of which the ancestors had been driven 123 years before, and during the rule of his son Muḥammad and 'Alī Dinnama (Jhamarāni, son of Muḥammad, suppressed a revolt in the Bulūla, fortified Kaḡg Eggomo and concluded a treaty of alliance with Dargut (Durguth, Paḡa of Tripoli), Idīs Amdānī, also named Amdān, from the place of

his burial, Alao (Alī), appears to have been still more powerful (979—1011 A. D. = 1571—1603 A. D.).

He succeeded the throne after the brief regency of his mother and undertook to subdue the heterogeneous elements in his kingdom. He was successful owing to the superiority of his army which included a body of mercenaries and well mounted cavalry. The Ss, although a tributary state, harassed Borné very much by frequent raids. Idīs conquered them, deprived them of the strongholds they possessed, and dispersed them or reduced them to slavery. The Kanuwa lost all their fortresses with the exception of the rock of Dala, at the foot of which the town of Kanuwa afterwards built. The Tūzreg in the N. W. and the Barbers of the Air, who were ravaging the northern lands of the kingdom were defeated, as well as the pagan tribes of the east and south (Marghī, Mandara, etc.).

Five expeditions were sent against Kānem, where a usurper had dethroned the legitimate Sulṭān Muḥammad, whose father had declared himself a vassal of Borné. At the same time, important buildings were being erected in the various towns, notably a mosque at Kaḡg Eggomo. All these details refer to the first twelve years of the reign of Idīs. We know nothing, however, of the events which took place in the second part of his reign; he perhaps died in the course of an

expedition against the neighbouring pagan tribes of Baghām.

The 17th century was the most brilliant period in the history of Borné. In the 17th century, however, the decline began, perhaps in consequence of the weakness of the sovereigns who no longer took an interest in public affairs. 'Alī, son of Māḡḡl 'Omur and fourth in succession from Idīs (1055—1096 A. D. = 1645—1685 A. D.) alone took any active part in politics. He had to wage a momentous war against the Sulṭān of Agadez. Begged to his own capital by the Tūzreg and the Kōana, he succeeded in setting his adversaries against one another and ultimately drove the Tūzreg into the desert. But his successors lived in luxury and indolence, allowing their neighbours to attack the country while its unfortunate inhabitants, exposed to the constant depredations of robber bands, gave up cultivating the soil and were decimated by disease and famine. At the beginning of the 18th century, Borné was quite unfit to resist the redoubtable enemies who began to attack it: the Fula and Fulle.

The invasion of the Fulle took place in the reign of Ahmad I. 'Alī (1108—1223 A. D. = 1793—1810 A. D.), an educated and generous prince but utterly devoid of energy. The Fulle, after subduing the Kanuwa provinces tributary to Borné, made an alliance with their compatriots, who had been settled since the 17th century at various points in Borné and invaded the country. Ahmad attempted to resist them but saw his army cut to pieces near Kaḡg Eggomo. He himself only escaped with difficulty through one of the gates of the town, while his enemies were entering by the other, and transported his head quarters to Kurnawa (1224 A. D. = 1808 A. D.). On becoming masters of Kaḡg Eggomo, the Fulle destroyed it.

At this critical juncture, Borné was saved by the intervention of an outsider, Muḥammad al-Amin al-Kānemi (Shaykh Lamin). Born in Verda, but married to a daughter of the prince of Ngalla in Kānem and already renowned for his wisdom and piety, Muḥammad had refused to leave the country on the approach of the Fulle. He organised a small body of Kānembu, opposed the progress of the invaders at the east of Lake Chad and was in the end successful in freeing the whole of the eastern part of Borné from the invaders after a decisive victory at Ngurnū. Ahmad called him to his assistance, placed him in command of the army and was restored to his capital by him. Ahmad died soon after in 1810.

Dinnama, son of Ahmad, at first tried to continue the combat, single-handed, against the Fulle. He was defeated however and forced to wander from town to town, had in his turn to appeal to Muḥammad al-Kānemi. As a reward for his services, the latter received half the provinces retaken from the enemy. From this time there were two rulers in Borné: Muḥammad, who exercised the real power, continued himself with the title of Shaykh, and lived in Ngornū, while Ahmad reduced to the role of nominal sovereign, resided with his court at Berberū. To escape from his humiliating situation and to free himself from the tutelage of the Shaykh, the Sulṭān, abandoning Berberū, installed his court at Wūdj, to the N. W. of Lake Chad. But he could not regain his independence.

Muhammad brought him by force back to Bornu, then deposed him and put one of his sons on the throne. This new Sultan also declined to comply with the wishes of the Shaikh and when he began to build a new residence at Bini al-Jadid, two miles to the S. E. of Ngala, Muhammad deprived him of his power and restored it to Alima, who retained the title of Sultan till his death in 1800.

At the same time, on Alima in order to expedite his independence of the older dynasty, Muhammad resolved to build himself a capital. In 1814 he began the building of Kuka, situated after a fashion (in Kanari Lake) which grew in the plain at the place chosen by the Shaikh at the site of his palace. At the same time he tried to restore the fallen fortunes of Bornu by regaining from the Fula a part of the provinces conquered by them and sent expeditions against the tribes of the East. In alliance with 'Abd al-Karim Salim, Sultan of the Wadai, he declared war on 'Abdallah Birmamida, Sultan of Baghirmi (see *Wadai* and *Wagha*). The Sultan after ravaging Baghirmi, concluded a treaty which placed that country under his sway. To make up for this loss, Muhammad made an alliance with the Shaikh of Faccin, ravaged the northern part of Baghirmi, and advanced to Alima, but could not gain a decisive victory over the army who were strongly entrenched behind the Shari. The war continued till 1824 and was ended by a decisive victory of the Bornuans at Ngala. As peace in this direction, Muhammad turned his attention to the west, and recovered the province of Hanchi but had to make peace with the Fula in 1826, after a defeat at the hands of Sultan Bello. He also made several attempts to conquer Kano, he died in 1834, leaving the succession to his second son 'Omar, the eldest of his sons having been killed in 1817 during the war with Baghirmi.

Shaikh 'Omar (1835-1881) was a first cousin to govern in the name of the Sultan Ibrahim (1833-1863 A. H. = 1848-1848 A. D.), brother of Alima. He was a peace-loving disposition and concluded on good terms with the Fula and the Baghirmi, but he had much difficulty in keeping down the governors of the various provinces, who were constantly trying to make themselves independent. Taking advantage of these divisions, the partisans of the Saifu attempted, with the help of the Sultan of Wadai, to restore the ancient dynasty to its former power and overthrow the Kanemba influence. Muhammad-Saifu, Sultan of Wadai, acting in arrangement with the discontented, took advantage of the absence of the Shaikh's troops on an expedition into the Zinder country to invade Bornu. On hearing of this, 'Omar threw his troops into prison, and, collecting all the soldiers at his disposal, marched against the Wadai army. He was finally defeated at Kumbi in an encounter in which his viceroy Tiri was slain and his brother 'Ali taken prisoner and had to take refuge in the western provinces after expelling Sultan Ibrahim. The Wadaians ravaged Bornu, and burned Kuka, but retired on the approach of a Bornuan army from Zinder. Before departing, Muhammad-Saifu had installed 'Ali, the son of Ibrahim as Sultan at Bini al-Jadid. Left to his own resources, this prince was unable to resist Shaikh 'Omar successfully and was defeated at Minkara, perishing in the battle.

With him disappeared the last representative of the ancient Saifu dynasty. The rebels were crushed at all points, the partisans of the Saifu equally punished and Bini al-Jadid destroyed. Another revolt broke out in 1853, started up by 'Abd al-Kalim, brother of 'Omar, jealous of the influence of the viceroy 'Abd al-Kalim over the Shaikh. The rebels were victorious, 'Abd al-Kalim was put to death and 'Omar forced to abdicate; but on being threatened with exile to Dikwa, the Shaikh gathered some supporters, defeated 'Abd al-Kalim and had him executed in 1854.

Henceforth 'Omar was allowed to rule undisturbed till his death in 1881. He could have claimed the title of Sultan but like his father, was content with that of Shaikh. He was a just and peace-loving ruler well disposed to Europeans, he gave a hearty welcome to Barth and Nachtigal. He unfortunately lacked energy and allowed himself to be dominated by those around him. After the death of his viceroy 'Abd al-Kalim, he fell under the influence of the cunning Setlhor who in the name of the Shaikh was the real master of Bornu. He carried out the wishes of 'Omar, who wished the throne to pass to his sons and decided the order in which they were to succeed him.

The eldest, 'Abd al-Karim, renowned for his generosity and military skill, reigned only three years (1881-1884). He died while preparing an expedition against Wadai. He was succeeded by his brother Ibrahim (1884-1885), who was followed by Shaikh 'Abd al-Karim (1885-1894) another of 'Omar's sons. 'Abd al-Karim visited this prince describes him as a gentleman and an ardent and educated Muhammadan. He took little interest in the affairs of state and lived in his palace surrounded by his 450 wives and 350 children. Ruled by his favorite, Mahadani, he was not at all popular. The decline of Bornu, already apparent during the last years of Shaikh 'Omar became more manifest every day. The population had devoted themselves to agriculture and gradually lost all military qualities and in consequence of the tendency of the sovereigns to entrust the most important offices to individuals of servile origin, no one any longer took an interest in public affairs. Symptoms of disorganisation multiplied rapidly. The tributary princes and the great officials acted as they pleased. The Sultan of Kordofan refused to pay tribute, the Galla had declared himself independent; the Sultan of Wadai made continual incursions and plundered and murdered with impunity in the very market-places of Kuka. The Sultanate of Bornu was a tottering edifice, which the slightest blow might overthrow. It collapsed under the attacks of Rabah (q. v.).

In 1897, Rabah, after having won Baghirmi, entered Bornu. He seized Kumbi Logun where he was rejoined by his ally Hayatu, the claimant to the throne of Sokoto. The Bornuan army, sent to meet them, was defeated at Killa near Kumbi and at Hamda between Dikwa and Ngala. Shaikh 'Abd al-Karim, having himself taken command of the troops, was likewise defeated at Hamda on the shores of Lake Chad. This victory opened the gates of Kuka to Rabah and he was able to enter it without striking a blow. 'Abd al-Karim then tried to come to terms with him; he was assassinated in 1894 by his nephew 'Abd al-Karim who attempted to continue the struggle but was defeated and slain near Kuka. Rabah then destroyed Kuka and chose

Dikos as his capital. Some of the sons of Ifféhim stayed with the conquerors but others retired to Zinder where they were afterwards joined by the heir presumptive 'Omar Sanda, who had fled of all sought refuge with the Sultan of Mandara.

The rule of Rahah in Borné was brief. On the 22nd February 1900, the conquering African was slain near Koussé by the French troops under Commandant Lamy. 'Omar Sanda, whom Faureau, the explorer, had discovered in Zinder, was restored as Sultan of Borné but soon afterwards deposed in favour of his brother Djérah, who appeared more capable of facing the difficulties of the situation. Fadi Allah, son of Rahah, prepared to regain the throne by force. Djérah attempted to check him but was defeated and driven into Kénem. French troops had again to intervene to aid Fadi Allah, who took refuge in Nigeria on being routed on the 2nd February 1901. From there he attempted another invasion of Borné but came in contact with the French troops on the 13rd August 1901 at Gadjéba and perished in the battle.

The death of Fadi Allah has assured the re-establishment of the Kénemid family in Borné. The Sultanate itself however was but much of its importance. The Sultanate which composes it, are practically divided among the three European Powers whose spheres of influence extend up to Lake Chad: England, France and Germany. Kénem and Dancergé were now part of the French possessions; Dancergé proper with Kéba which is being rebuilt has fallen to England. The southern districts, with Okeah, the most populous town at the present day are among the possessions of Germany.

BOROLLOE. [See BORULLU.]

BOSNA-SARAI (Slav Sarajevo), the capital of Bosnia, built at a height of 1500 feet at the confluence of the Vrljaska (Vrljčka) and Bosna. In the 14th century there was a town called Vrhbosna on the site of the modern Sarajevo. The town did not become important till it became the residence of the Turkish governors. It is to the

greatest W. of Bosnia, (Slav Sarajewo) the Bosna-Sarai were some of its buildings and foundations. On the 24th August 1872 it was taken by General Baron Philippovich, occupied by Austria in terms of the treaty of Berlin. Sarajevo was finally annexed in 1908. The town, in which twelve towers of the ancient fortress still stand as witnesses of its history, has over 40,000 inhabitants and 100 mosques. See BOSNIA.

(CL. HART.)

BOSNIA AND HERZEGOVINA.

I. STATISTICS.

The area of Bosnia and Herzegovina is 19,702 square miles; Bosnia alone being 16,173 sq. m. and Herzegovina 3529 sq. m. According to the census taken by the Turkish authorities in 1875, when these lands were still under their rule, the population was approximately 1,051,000 souls.

According to the census of 1910 the total population of B. H. was 1,898,044 of whom

612,000	were Mohammedans
825,338	• Serbians Orthodox
434,190	• Roman Catholics
8,136	• Greek Catholics
5,847	• Augsburg Confession
488	• Swiss Confession
\$202	• Sephardic (Spanish) Jews
3,658	• other Jews
96	• various other creeds

The greater part of the population is engaged in agriculture. There are (reckoning by heads of families): 144,742 landowners; 136,854 free peasants; 72,701 knights; free peasants who are also knights 31,416; other individuals connected with agriculture 204,350; 1,608,587 persons in all with their families. The remainder of the population is chiefly engaged in trade and manufactures.

II. HISTORY.

The north-western corner of the Balkan Peninsula may be compared to the entrance to a bridge over which various peoples have passed from the earliest times on their migrations from the South-East to the West and from North to South. Before Roman times, Bosnia and Herzegovina were occupied by various Illyrian tribes. The only sources of our knowledge of pre-Roman conditions are the prehistoric remains. The oldest known deposit in Bosnia is the site of Blatnik at Sarajevo; it dates from the Stone Age. The Illyrians were divided into numerous smaller tribes. Those who lived on the sea coast are described as gauls by the writers of antiquity and those who lived in the mountains are branded as robbers. The Illyrian tribes lived in the modern Bosnia and Herzegovina. It was only after much fighting that the Romans succeeded in subduing them (6 B. C. — 9 A. D.). For four centuries Bosnia and Herzegovina were Roman provinces. At first they formed a part of the province of Illyricum but were later united with the territory along the Adriatic coast to form the province of Dalmatia. In the first and second centuries A. D. the mines of Bosnia were worked with great energy. To transport more easily the products of the mines and to be able to defend more readily the area between the Save and the Danube and the lands to the north of the Danube (Pannonia), roads were made which ran from Salona (the modern Spalato) to the modern Sijek and Wino-

vica and were thence further extended. In 1186 near Samarra, there was a beautiful battle, and very fine mosaic pavements have been found in Stolin (Herzegovina). The second and third centuries A.D. furnish numerous examples of Hunno-Roman and Illyrian soldiers who came to the Emperor. The greatest Illyrian Emperor was Diocletian who did a great deal for his favourite province and native land of Dalmatia. In his division of the Empire, Bosnia and Herzegovina remained with Italy and the Roman. It was from there that the Christian religion first spread among the towns of the coast and thence into the highlands of Bosnia. After the division of the Empire in 395, the influence of the new Imperial city of Constantinople began to make itself felt in this area.

The Tataro-Slav migration of Avars and Slavs in the fifth century destroyed the remains of Roman civilisation and brought about the modern ethnographic conditions in the region along the Banat and the coast of Herzegovina, which was then called Ham (Chim). The Slav tribes, among whom the word of origin was a loose one, were led by chiefs, called Voivods and until the defeat of the Avars at the attack of Constantinople (626) were under their rule. Between 626 and 640 some of the larger tribes, known collectively as Sclaveni and Serbs threw off the Avar yoke and penetrated into the north-western part of the Balkan Peninsula where they conquered Dalmatia, Bosnia and Herzegovina, Montenegro, North Albania and the territory of Novi-Bazar. The Slav tribes, who occupied the modern Dalmatian, Slavonian and part of modern Bosnia approximately up to the River Udrava, were known as Croats. At the head of these tribes was the Great Zupan whose vassals were called Zupani. The original stock of the Serbs settled in Montenegro and the surrounding country, in Zeta and the land of Raska called after the river of the same name. The Croats later adopted Roman Catholicism while the Serbs from the beginning were adherents of the Orthodox Greek Church. In the midst of these Croats and Serb tribes, those divided into two nations, arose Bosnians, inhabited by tribes speaking the same language. Bosnia and Herzegovina was divided into Banats. The rank of Ban is probably of Avar origin and the name certainly is.

From the sixth to the eighth century the people of Bosnia and Herzegovina were the lot of the Croats and Serbs. They recognised the Byzantine Emperor as suzerain, although not directly, till Hungarian power incorporated in its Empire at least its sphere of influence, first Croatia, then advancing southward in the beginning of the ninth century, the territory around the confluence of the Sava and the Neretva. Under the Hungarian king Koloman (1096—1125) whose rule extended not only over the whole of the ancient Croat kingdom but also down to the Dalmatian coast, the partial occupation of towns took place. In the year 1137, Bosnia submitted to King Bela II, who appointed his 5 year-old son Ladislav, "Duke of Udbola". The Hungarian supremacy did not, however, destroy the power of the native chieftains. The ancient laws and customs remained intact and the country continued to develop on its own lines. In Bosnia, neither the Roman Catholic nor the Orthodox faith was able to become supreme. The New Slav inhabitants of the Illyrian Alps retained for long their pagan

beliefs and were thus inclined to be neutral in religious matters. The position of this people between two different religions prepared the way for a new faith, Bogomism, which in spite of the persecutions of the Pope, the Hungarian and Serbian Kings, gradually became more powerful and has left its mark on the history of Bosnia. Thousands of more or less safely executed monuments arose in the present day the more general dissemination of this faith. The splendid tombs at Stalac and Rahat-Banac may be specially mentioned. The rulers of Bosnia and Herzegovina, the Voivods and Knezes, early became converts to this faith and even the Lord of the land, the Banat, for a period professed the new religion.

The history of Bosnia from 1137 to 1878 may be divided into six periods. I. Bosnia under Rascians who ruled the whole land (1137—1231), II. Bosnia under Rascians who ruled various parts contemporaneously (1231—1514), III. the period of the two Rascians (1514—1577), IV. the Bosnian kingdom and the Duchy of St. Sava (1577—1693), V. the division of the land between Hungary and the Ottoman Empire (1693—1878) and VI. Bosnia as a province of the Turkish Empire (1878—1898).

The first period of the rule of the Rascians in Bosnia covers the reigns of four Rascians of whom the most important was the Ban Kulin. At the end of the twelfth century the Bogomist sect began to spread and the Papal court took energetic steps to suppress them. In the year 1180 Ban Kulin appears as ruler of the land. It is related of him that he did much for the material prosperity of the country. The Eulenspiegel, a prominent Muhammadan family in Bosnia, believe they are descended from him though there is no documentary evidence on this point. The period after the death of Kulin-Ban, is a gloomy one in the history of Bosnia. The Catholic party regarded Prijedor of the Banal family of Kulin as ruler, while the Bogomist national party, who were in the majority, looked round Mate Ninoslav. During his long reign, Bosnia sometimes made peace with the king of Hungary and sometimes called in the help of the Pope against him and was always able to extricate himself cleverly from the most difficult complications and embarrassments. Fortunately for Ninoslav, the Palatins came, struggling with one another fully occupied the forces of the Hungarian king.

After the death of Ninoslav, however, in the fifth decade of the thirteenth century the power of Bosnia began to waver. The Hungarian king Bela IV had given the western part of the modern Serbia with the fortress of Mastra to the Russian Duke Rostislav, who had married his daughter Anna. At this period the leading Croat-Dalmatian vassal-families, who had come to the king's help against the Tatars, particularly the Gubins the co-owners of the Zlaty, began to come to the front. For these families Bela created Banats in some districts such as the Banate of Soli (Foca) and of Udrava (Osor). Bosnia thus became a land divided up into numerous little divisions, while in Herzegovina the feudal tenure was in the hands of a few of the chief families. The confusion, which arose on the extinction of the Arpad dynasty of Hungary, further favoured this partitioning of the country.

In 1314 arose a dynasty in Bosnia: the family of Kotromanic which was descended from Prijedor.

Stefan Kotromanić (died 1353) reigned 30 years. He also was a Hognail although surrounded by Catholic clergy. His wife was certainly a Catholic. Naturally he appeared strongly attached to the alliance with Hungary and claimed the protection but in secret when it suited his interests he intrigued against this power. His daughter Elizabeth came to the Hungarian court at Ofen where the young and widowed King Louis the Great fell in love with and married her.

After the death of Kotromanić his nephew Tvrtko succeeded him as King. At the beginning of his reign during his minority he was under the guardianship of his mother. He had to defend himself against many raids of his vassals, and not only acknowledge the suzerainty of his uncle (as the rock-inscription at Drobnič shows) but also feel it. But all this adversity only served to steel the character of this prince whose keen eye quickly saw the weaknesses of his enemies and who at last was the most prominent figure in the history of his country. In the year 1377 he took the title of king, had himself crowned by the Church and founded the Kingdom of Bosnia which was destined however to but a brief existence. King Louis of Hungary made no objection to his elevation to the regal title. The exact details of this procedure are unknown. The most important part of the reign of Tvrtko falls into the epoch (1383—1392) of the confusion which arose on the death of Louis the Great. He took advantage of the rebellions in South Hungary and Croatia against the queen Elizabeth and extended his territory at the expense of the Hungarian power which had been broken in these areas. One after the other the Dalmatian towns with the exception of Zara submitted to him. He fought on the side of the Serbians in the sanguinary battle of Kosovo (15 June 1389) and entered into possession of the Serbian lands on the coast. Whether by his adoption of the Serbian royal title he is to be regarded as the champion of the downtrodden Serbian national spirit, is uncertain. It is certain that he made himself independent on all sides and he is to be regarded as the founder of the kingdom. Tvrtko I was succeeded by his younger brother Stephen Dabiša (died 1395) who was followed by Tvrtko's natural son Stephen Ostoja I (died 1418), on the latter's death, the rule was shared by his legitimate son Stephen Ostoja II (1418—1441) and Stephen Tvrtko II (1404—1443) son of Stephen Tvrtko I. From 1444—1461 reigned Stephen Tomašević, natural son of Ostoja, whose son Stephen Tomašević was the last male heir of the Kotromanićs.

The great results of Tvrtko's reign disappeared under Stephen Dabiša. He became the victim, in the medieval sense of the word, of King Sigismund of Hungary, an which account the Dalmatian towns lost their confidence and interest in the King of Bosnia. The reign of Sigismund of Hungary was unpopular; the disastrous battle of Kosovo was followed by the victory of the Turks at Nikopolis in 1396. The opponents of the King of Hungary made alliances with the Turks; as did the Christian princes of the Balkan Peninsula. The kings of Bosnia in this period were overthrown in hands of their "Magnates". Affairs were managed by two real autocrats: in Bosnia, Hrengja, Duke of Spalato (died 1416) a scion of the family of Hrvatski and in the south Sandalj Hranić (died 1435) one of the Voivods of the Vuković

from whose family sprang the later independent princes of Herzegovina. In the year 1408 the fortress of Dubrov was taken after much fighting by Sigismund's generals, Nicolas Gory and John Maróthy and King Tvrtko II taken prisoner.

The Ottomans profited by this struggle. Herzegovina became the governor for the Hungarian king but in the year 1405 with the help of the Turks he annihilated a Hungarian army. He made his headquarters in the fortress of Jajce which he had built, but the Turks remained, although in a small part of the country (in the south-east of the modern district of Sarajevu), nevertheless permanently within Bosnian territory. Bosnia henceforth was in the sphere of influence of the Turks, Hungarians and Venetians. A further blow to the unity of Bosnia was that Sandalj's nephew, Stephen Vukčić, the chief Voivod of Bosnia by the grace of God in 1448 adopted the title of Duke of Saint-Sava and moved towards to conquer it. From this time on, his land was called "Herzegovina". Till the year 1463 the devoted country offers a melancholy picture. Even the victories of John Hunyadi could not inspire the kings of Bosnia to throw off the Turkish influence under which they had so completely fallen. After the fall of Constantinople in 1453, it was only a question of time when the advancing tide of Ottoman power would attain like success in the north and west. Turkey ultimately took possession of Bosnia. The last king Stephen Tomašević fell a victim to his double dealing. His contemporaries accused him of the murder of his own father; he was suspected of having sold the fortress of Semendria to the Turks and the powers that might have protected him finally sold no heed to his promises and left him to his fate. He took refuge in the strong fortress of Jajce and made it his residence as he no longer felt secure in the northern parts of his country. The Turkish border occupied Dubrovnik, Jajce and Ključ in rapid succession and the king himself was taken prisoner. The end of this unfortunate monarch is variously given; it is certain that the Sultan had him beheaded to make sure of keeping his lands. (A head found in the skeleton is still shown as that of Stephen Tomašević).

Bosnia did not yet pass totally under Turkish rule however. King Mathias of Hungary captured the north from the Ottomans and in 1461 went to assist for the possession of Jajce which he also took and returned in spite of the valiant defence of the fortress. Naturally he preserved the independence of the conquered district until and gave it a titular king in the person of Nicolas Vukčić, a rich magnate, in 1471. This district comprised the ancient County of Bosna (the lands on the Save as far as Srebrenica, the modern district of Tuzla with the addition of Tešanj (near Zemunik). The House of Jajce remained under military occupation and was in close relations with the lower-Slavonic counties. Nicolas Vukčić's rule soon came to an end. His son John became Regent of Bosnia in 1491 and Hungarians never withstood the Turks even after the disastrous battle of Mohács in Bosnia. Till 1528 only part of Herzegovina and the southern part of Bosnia were in the hands of the Turks.

It was only after the break-up of the Hungarian kingdom in 1526 that the lands which still retained their independence, surrounded, and the continuous exertions of the great conqueror Su-

Islam and finally made all Bosnia a Turkish province. The richer and more intelligent classes of the population, the greater part of the landowners, adopted Islam; they proved zealous professors of the faith of Muhammad, since their ancient privileges were confirmed. The history of Bosnia and Herzegovina after the Turkish conquest is that of the Ottoman Empire. The century of the 15th and 16th century are full of fights with Hungary under the Hapsburgs. "The lords, formerly Bosnian, brought up amid the turmoil of constant warfare, born to command natives of the country, well acquainted with the affairs of Hungary and the Hungarians, filled with a fanatical hatred of the Royal Court, were qualified to play a prominent part in the war against Hungary". As long as the power of Turkey was still at its zenith, and the army of the German Emperor was unable to free a period to Hungary from the Ottoman yoke, the Christian population of Bosnia took no active part in the struggle. The ruling element was the native Mohammedans who made their influence felt in the Turkish part of Hungary also. From their ranks came the heads of the civil and military ~~ministries~~. Between 1544-1611 nine ~~governors~~ born in Bosnia held the office of Grand Vizier, the highest in Turkey; among them were three of the family of Sokolović (of Gerasida). The Mohammedans of Bosnia undertook the defence of the northwestern frontier of the kingdom alone. The number of Walls of Bosnia is variously given, according to the date which is taken as authoritative for the first appointment of a governor, and whether an individual who held the office of Wali on several occasions is counted once or several times. The Mohammedan historians of Bosnia and Herzegovina call Ishak-beg, appointed in 1483, the first Wali. From 1483-1878 264 Walls were appointed. The most famous Wali of Bosnia and particularly celebrated by the Moslems of the country was Ghazi Khansari-beg (1506-1512 and 1520-1523). The value of the ~~Walls~~ which he devoted to useful and humanitarian purposes was several millions of crowns in the modern reckoning. A part of his endowments and of the library still exists. The Mosque, Madrese and Khansika which he founded in Sarajevo are still the objects of pious devotion. Till 1583 Bosnia was a Beglik and after that date a Pashalik. The Pasha was Ferhad Pasha Sokolović. The Sultan's governor resided first in Sarajevo, later, when all Bosnia passed under Turkish sway, in Banjaluka and after 1686 (according to some even earlier) in Travnik. Turkish Bosnia comprised: the interior of Bosnia (Bosnia Parva) with Blagaj, which was conquered at the close of the 17th century; Slavonia of Novi-Bazar, and Herzegovina with Travnik and Zeta. The feudal troops, under their hereditary captains, remained faithful to the provincial government as long as the Turkish power was unshaken, and Bosnia was a bulwark of the Ottoman Empire. In the 18th century the fortress of war changed. Uzun fell; in 1697 Count Eugen of Savoy burnt the suburbs of Sarajevo and Bosnia's reputation as impregnable was lost. After the peace of Passarova (1718) the Sultan surrendered a part of Bosnia on the lower course of the Save to the Emperor and King Charles III. This district had, however, to be given back to Turkey after the unfortunate campaign of 1739.

As the policy of the Hapsburgs was mainly concerned with the west, Bosnia remained unprotected under Turkish rule in the 18th century, the Eastern policy of the Emperor of Vienna now being to preserve the integrity of the Turkish kingdom, in agreement with Western Powers. This principle was adhered to in spite of the beginning of the decline of Turkey and the loss of Serbia (1804-1813), Egypt and Greece. In Bosnia, nevertheless, affairs began to be more and more unsatisfactory early in the 18th century. The "European" reforms of government in Constantinople met with little favour in Bosnia and the Slav Mohammedans took up arms to resist them under the leadership of Hasko, captain of Gradiska (1830). The Vizier Mehmed Wafiski Pasha wished to introduce in 1840 the modern administration which had been introduced in 1839 through the Khairi Sherif of Gili-Khan and began to replace the native captains of each district by Mohammedans, who had been appointed in Constantinople. The Bosnian autocracy felt this to be a heavy blow to them and therefore the Mohammedans of Sarajevo rose against the Vizier. They were put to flight by the Sultan's troops at Vitez (in the district of Travnik). In the years 1843 and 1846, revolts broke out in Kraljevo (Turkish Crnaja) because the Turkish government demanded the payment of the legal dues by the Mohammedans (those who would not pay their taxes). The rebels were scattered on both occasions. A fertile source of unrest was the undervalued relationship of the Mohammedan landlord (~~reza~~, ~~beg~~ again) and the peasant (~~chirak~~).

The knuts complained that they were at the mercy of the will of the landlords. The Wali Tahir Pasha decreed in 1848 that the forced labour of the knuts on the private estates (~~chirak~~) of the landowners should cease, while the knuts were to give the landlord one third (the so called ~~Prokina~~) of the corn, fruit and vegetables produced on their own holdings and the half of the hay. Neither the knuts nor the landowners were satisfied with this arrangement. Therefore, when Tahir demanded that every Mohammedan and Christian household should give 44 piculars half yearly and each Christian 7 piculars ~~Khazari~~ in addition and that the legal share was to be paid on all holdings, the Mohammedans in Kraljevo rose in revolt and besieged the fortress of Ribnik. The rising was secretly favoured by Ali Pasha Rizvanbegović, the then Vizier of Herzegovina, and soon spread over almost the whole of Bosnia till the Senlik Omar Pasha defeated the rebels in the winter of 1850-1851. In the spring of 1851 he had Ali Pasha Rizvanbegović arrested in Buzac (near Mostar) and led away, a prisoner. It was given out that Ali Pasha had been decidedly shot while being ~~chirak~~ away. Some of the remaining prisoners were executed, some banished and the ancient political institutions reorganised. The resistance of the ~~knuts~~ was moved from Travnik to Sarajevo again and the power of the Bosnian aristocracy broken. Parallel with the unrest among the Mohammedans of Bosnia, discontent developed among the Christians who complained that the reforms promised in 1839 and 1846 by the Khairi Humayun had not been carried out. In some districts the Christian peasants rose against the Mohammedan landlords and as the Turks took harsh measures in reprisal, numerous Christians fled to Austria and brought the government at

Vienna to interpose (1888). They also presented to the Turkish Ambassador a petition to the Sultan, in which they asked to be protected against their landlords. The Porte sent a commission to Bosnia to settle the point in dispute. In 1859, the ordinance of the (4th) Sâlis 1276 A. H. (17th September 1859) regarding the Bosnia-Herzegovina Ciflik came into force, which regulated the payments of the kmeti to their landlords and other rights and obligations, on both sides. The enforcement of the decree of Sâlis was defective however and gave cause for new disputes. In spring 1875 a riot of Christians took place in Herzegovina, which proved fatal to Turkey and spread into Bosnia also among the Serbian Orthodox Christians and really only came to an end on the occupation of the two provinces by Austria-Hungary as a result of the Berlin Congress of 1878. The last Wali of Bosnia was Ahmed Daghlar Pasha (1878).

On the 5th October 1908, the annexation of Bosnia and Herzegovina was proposed and the European powers and finally Turkey also agreed. On this day the Emperor Franz Josef I published through his Foreign Minister, Count von Aehrenth, an encyclical decree in which he extended the rights of his sovereignty to Bosnia and Herzegovina and decreed that the order of succession in the ruling house was to apply to these lands.

III. LEGISLATION.

In the proclamation of the annexation of the Austria-Hungarian troops into Bosnia and Herzegovina it was announced that the old laws were to remain in force in so far as they were not incompatible with new ones. The first thing necessary therefore on the occupation was to collect the Turkish laws then in operation and translate them. These were published in the Collection of Laws and Ordinances of Bosnia and Herzegovina in 1878-1880 and deal with various branches of law particularly the land laws, the various kinds of landed property and its conveyance, commercial law and the commercial and Sharia courts etc.

Till the proclamation of the new constitution in 1910, legislative power in Bosnia and Herzegovina belonged to the Crown and the right of bringing in bills proposing legislation to the Provincial Government of it. By the new constitution a Parliament (Sabor) has been constituted to co-operate in the legislation of the country. The Parliament consists of nominated and elected members and elected deputies. The 22 elected members are: the Râis ul-Mulk, the Director of the War Ministry; the Mufti of Sarajevo and Minister and in addition the Mufti who has held his office longest, the four Orthodox Serbian Metropolitans and the Vice-President of the Grand Administrative and Educational Council of the Orthodox Serbian Church, the Roman Catholic Archbishop and two Roman Catholic Bishops, the two Provincial Chiefs of the Franciscan Order, The Sephardic Chief Rabbi, the President of the Chamber of Advocates, the Mayor of the capital, Sarajevo, and the President of the Chamber of Commerce and Industry in Sarajevo. The number of elected deputies is 72. The period of office of the members of Parliament is fixed at five years. A re-election is only valid if more than half the members are present and those present must be absolutely unanimous.

For a resolution which concerns legislation in religious matters, the presence of at least two-thirds of all members and a majority of at least two-thirds of those present is required. All bills within the province of the Parliament require the approval of the government of Austria and Hungary before being brought into the House. Bills approved by the Parliament have to be approved by both states of the monarchy and require the sanction of the Crown. The sphere of legislation of the Parliament of Bosnia and Hungary is confined exclusively to domestic affairs. A provincial council of nine of its members is chosen by the Parliament to represent its interests and give assistance to its action in such public matters as Bosnia and Herzegovina is interested in. Each designation in Parliament elects representatives to the provincial council in proportion to its numbers in the country.

The most important matters, thus left to be dealt with by the Parliament are: the enactment of the annual Budgets, the borrowing of new loans and the conversion of those already existing; the sale or mortgage of the property of the state; criminal law, civil law with the provision that the application of Islamic law is dealings of Mohammedans with one another as regards marriages, inheritances or family affairs, shall be guaranteed; sanitation; industrial conditions; matters affecting the general prosperity of the people, educational matters relative to all educational institutions; religious questions, concerning the relations of the denominations to one another or to the government is so far as the enjoyment of equal rights, the internal organisation and the public exercise of worship of the several denominations recognised by law is not interfered with; agrarian laws; the introduction of new taxes and the remission of those existing in the making of special additions to a tax already being levied; the building of railways, for which proposals are made by the government, the making of roads, rivers and other means of communication; the organisation of the municipalities; the examination and approval of accounts etc. The estimates of the provincial income and expenditure have to be placed before Parliament annually and regularly by the provincial government, and Parliament may proceed without delay to discuss them so that they may be passed before the beginning of the next year. If the estimates are not dealt with punctually by Parliament the Budget of the coming year remains in force until the new one is passed in the ordinary fashion to replace it.

The members of Parliament are elected by the people on a denominational basis. All male citizens of Bosnia and Herzegovina, over 24 years of age, who have had a fixed abode in the country for at least a year, are entitled to vote, as also are similarly qualified citizens of Austria-Hungary who are engaged in the Civil Service of Bosnia and Herzegovina as civil servants or townsmen. All males over 30 years of age, who are qualified to vote, and are in full enjoyment of civil rights are eligible for election to Parliament, with the exception of officials in the Civil Service of Bosnia and Herzegovina, officials and employees in active service on the national railways, and also teachers and other officials in the public schools. The electorate is divided into Circles. Of the 72 deputies to be elected, 28 are allotted to the first Circle, 20 to

the second and 34 to the third. While the first Curia and in the second and third Curia taken together, the seats are divided in proportion to the numbers of the three chief denominations of the population, so that in the first Curia the Catholics have four seats, the Muslims 6, the Serbian Orthodox Church 8, in the second and third Curia, Catholics have 12, the Muslims 18, the Serbian Orthodox Church 23. In addition the Jews in the second Curia have one seat. In the first Curia the following are eligible to vote: a) in the first class of voters: all Mohammedan landowners who pay a land tax of at least 140 Kr. (£ 5-10-8). Landowners of other denominations, who pay a tax of not less than 140 Kr. are allowed to vote either in this class or in the division of the second class into which they would fall by their religion; b) in the second class of voters: all persons who pay not less than 100 Kr. (£ 3-6-8) in direct taxes excluding houses; persons who have completed their studies in all High Schools and other similar educational institutions within the Austro-Hungarian monarchy; the clergy of all denominations recognized by the law; c) officials and teachers employed in the Austro-Hungarian Service of Bosnia and Herzegovina as well as officials on the railway or officers in the army; and lastly d) all the citizens of the Second Curia consists of all inhabitants of towns who are not already in the First Curia. Eligible voters living in the country and in the first Curia form the Third Curia. In the election of representatives of the first class of voters in the First Curia, the whole country forms one Mohammedan electoral district, while for the election of representatives of the second class of voters in the First Curia, the whole country forms an electoral district for each of the two religions. Each voter in the First Curia has one vote for as many candidates as there are seats allotted to the electoral district he is voting in. For the election of representatives of the Second and Third Curia, the whole land is divided into denominational electoral districts each of which elects a deputy. Each voter is also entitled to vote for candidates in another Curia than that to which he himself belongs. The members of these denominations which are too small to have a separate vote allotted to them, e.g. the Protestants, are entitled to vote at the elections in one of the denominational electoral bodies of the Curia according to the particular Curia to which they belong.

The first ceremonial opening of the Parliament took place on the 15th June 1910 in Sarajevo. The new provincial constitution has in the first session of Parliament answered the expectations placed on it in a most satisfactory manner and proved a most useful instrument for the harmonious co-operation of the people and the government in the administration of the country. The new Parliament has already instituted, within the brief period for which it has existed, numerous reforms in all branches of public life.

IV. ADMINISTRATION.

Bosnia and Herzegovina forms a single province, which, in accordance with the Austrian statute of the 22nd February 1860 and article VI of the Hungarian statute of 1850, is under the responsible government and supervision of the

common ministry of the Empire and Kingdom. The Common Minister of Finance attends in the above mentioned class of business on behalf of the common ministry. The administration of the country and the carrying out and enforcing of the laws is the duty of the provincial government of a. n. in Sarajevo, which is under the common ministry and is responsible to it for its administration. The head of the provincial government is as a rule, a military officer of high rank (the Commandant of an Army Corps or an Army Inspector) who is assisted in the civil administration of the country by the civil Assistant. The provincial government consists of four divisions, viz. the administrative department and the departments of Justice, Finance and Commerce. At the head of the administrative department is a Chief Secretary. The division of the country as it was under Turkish rule has been taken over by the new government with a few unimportant alterations. The country is divided into six districts, viz. Banjaluka, Bihac, Mostar, Sarajevo, Travnik and Tuzla. The number of counties is 53. The counties in the district of Banjaluka are: Banjaluka (the town and the county round it forming two separate counties), Duvanci, Duvanci Dubica, Bosnian Gradiska, Bosnian Novi, Kotor-Vahok, Pejeter, Pofajet and Tuzla; in the district of Bihac: Bihac, Cazin, Kijac, Krupa, Bosnian Petrovac, Sanski most; in the district of Mostar: Bihac, Gacko, Konjice, Ljubanjski, Ljubanjski, Mostar (the town and the county round it forming two separate counties), Neretva, Srebrenica and Travnik; in the district of Sarajevo: Cagatica, Voca, Pofajet, Rogatica, Sarajevo (the capital Sarajevo has its own organization) Vlasenica and Visoko; in the district of Travnik: Rogatica, Gacko, Srebrenica, Travnik, Voca-Vahok, Zepce and Zupanje; in the district of Tuzla: Bihac, Bihac, Gradiska, Gradiska, Kijac, Kijac, Srebrenica, Tuzla (the town with the immediate area forming one county and the county district another), Vlasenica and Zvanjski. The number of civil servants and other officials in the service of Bosnia and Herzegovina was in 1909, 10,944. Of these 3,846 were Austrian, 3,057 Hungarian citizens, 4,021 citizens of Bosnia and Herzegovina and 17 citizens of foreign nations. The estimates approved by the government for 1910 were:

Expenditure 3,182,880 Kr. (£ 125,954)
Income 5,349,370 Kr. (£ 222,438)

In regard to Public Health it may be noted that in 1909 there were a provincial public hospital in Sarajevo, 9 county and 14 local hospitals, 1 private hospital and 55 dispensaries. Steps have been taken in 34 counties to eradicate the syphilis which is very prevalent among the people. To counteract the dangers to which pilgrims are liable on their journey to Mecca, suitable steps have been taken. In the year 1909-1910 56 individuals made the pilgrimage.

V. RELIGION.

Before the Austrian occupation Islam as a denomination did not have a particular organization in Bosnia and Herzegovina any more than in the other districts of Turkey. The Orthodox Serbs, who were officially considered to belong to the Greek Church, the Catholics and Jews (Spaniards) were regarded as *Millet*. The Greek Catholics and the Evangelical Church only appeared after the

occupation through the immigration of adherents. The organisation of the Evangelical Church in the country is at present being carried out. The Serv. Orth. Church was recognised in 1905 and was granted permission to regulate and govern its ecclesiastical and educational affairs independently and free from State supervision provided the laws of the country were not infringed. There is a special statute of the same year settling the work and sphere of influence of the autonomous Serv. Orth. Church in ecclesiastical and educational matters.

The Muslims had, as early as 1881, expressed the wish to have a head of their own (Kadi or *Kaim*) who, supported by a committee of men learned in the law, could govern their religious affairs. In 1882 this wish was granted and the committee mentioned, consisting of the Kadi as President and four other members, was constituted. In 1883 a provisional Waqf Commission was appointed, whose duty it was to ascertain details of all Waqfs in the land, to control their expenditure and to carry out any new regulations regarding the administration of the Waqfs. In 1884, provisional Waqf committees were instituted in all the districts: these were presided over by the Kadi of the district and had to enquire what Waqf property existed, to look after mosques and Waqf buildings and particularly to supervise the imams (*Muezzins*) and officials, to lay their reports before the Provincial Waqf Commission and to carry out the directions of the latter. In 1894 the Waqf administration was reorganised. In place of the provisional Waqf Commission, a Provincial Waqf Commission, a deliberative and administrative body, and a Provincial Waqf Board as an executive body were introduced. The Provincial Waqf Commission is composed of the President, Inspector (*Muezzin*), Secretary (*Kadi*), five members of the *Majlis* (*Ulema*), two judges of the Chief Sharia Court and two prominent Mohammedans from each of the six districts of a. r. who hold office for 5 years and are nominated by the Ministry. The Provincial Waqf Board consists of the President of the Provincial Waqf Commission, the Inspector, Secretary and the necessary clerical staff and accountants.

This was the state of affairs till 1909, when the Mohammedans received the right which had already been granted to the Servian Orthodox Church in 1905, of managing their religious affairs themselves. The main provisions of the Statute are as follows: The duties of the Waqf-Ma'arif committee of management are: the foundation and maintenance of mosques and other Mohammedan buildings, religious, educational or charitable; the education and payment of the required number of clergy and teachers; the education of the Mohammedan youth in the belief and spirit of Islam; and as far as possible the propagation and consolidation of a knowledge of their religion among Mohammedans. The administrative machinery of the Waqf-Ma'arif consists of: the *Majlis* (*Ulema*); the *Muezzins*; the Provincial Assembly and the Committee of the Provincial Assembly. There are also certain specially elected bodies; the district assemblies and the county committees. All the above mentioned bodies are elected by the Mohammedan populace in accordance with the provisions of the Statute. The autonomous Waqf-Ma'arif and religious

authorities discharge all business falling within their province according to the provisions of the Statute absolutely, so that there is no appeal in the civil courts against the decisions of these boards as long as they are not contrary to the common law of the land. In case the law should be broken by a legal decision of one of these autonomous boards, the government has only the right to annul the decision and to refer the matter to the autonomous board concerned for reconsideration with a view to coming to a new decision.

The provincial government may demand that the *Majlis*, the provincial assembly and its committee shall give it particulars of its own proceedings and of the managing body of the Waqf-Ma'arif and these committees are bound to supply the desired information.

All the Mohammedans in a community with at least 100 Mohammedan dwellers form a Waqf-Ma'arif *Imaret*. The *Majlis* is elected for 3 years. The representatives of all the *Imarets* in a district form the district assembly. The work of the district commission consists mainly in acquiring information on all the movable and immovable property of the Waqf-Ma'arif, the supervision of religious and Waqf-Ma'arif buildings; supervising the work of the *Muezzins* as well as of all individuals in the district, who are paid out of the funds of the Waqf-Ma'arif; seeing that the curriculum of the *Madrassa*, *Mektebs* and other Waqf-Ma'arif institutions is properly carried out and making a report to the *Majlis*, the *Majlis* or to the political officials in cases where it comes to the knowledge of the commission that the curriculum for teaching in the Muslim colleges is not being adhered to in public schools or institutions.

The Waqf-Ma'arif Provincial Assembly is the chief autonomous governing and supervising body for all the Waqf-Ma'arif property in Bosnia and Herzegovina. Its meeting place is in the capital Sarajevo. Its members are the Kadi of the *Ulema*, the *Majlis* of Banjaluka, Bihac, Mostar, Travnik, Tuzla and Sarajevo, the Waqf-Ma'arif Director and twenty members elected by the district commissions. The statutory President of the national assembly is the Kadi of the *Ulema*, while the Vice-President is elected by the members themselves from their number. The special duties of the Provincial Assembly are the supervision of all that is done by the various branches of the Waqf-Ma'arif and of all the officials of the Waqf-Ma'arif and their subordinates; deciding on the erection of mosques, madrasas, *mektebs* and the refectories connected with them; deciding on the erection of schools, educational and charitable institutions of all sorts and on the purchase, exchange or mortgaging of all the movable or immovable property of the Waqf-Ma'arif, as far as it is in accordance with Sharia law; the settlement of the annual estimates of the individual Waqfs and the funds of the Central Waqf-Ma'arif; the alteration of existing and the passing of new regulations regarding the management and supervision of the property of the Waqf-Ma'arif.

The committee of the Provincial Assembly is its governing and executive body. It consists of the Waqf-Ma'arif Director who is president, the *Majlis* of Sarajevo and six other members elected from its midst by the Assembly. The committee of the National Assembly is particularly concerned

with the routine business of the Waqf-Ma'arif property, the supervision and direction of the activities of the district committees; the supervision of individual Waqfs as regards the management of the property and the fulfillment of the object for which they were founded; the collecting of the revenues of the Waqf-Ma'arif and the application of them in accordance with the decisions of the Provincial Assembly; the approval of the foundation of Waqfs for pious or useful purposes and the acceptance of presents and legacies; the appointment of Muftawalls and other administrative officials of the Waqf-Ma'arif; the appointment of secular teachers at the Waqf-Ma'arif schools; of officials and servants at the district committees; the exercise of disciplinary authority over these individuals; the making of proposals to the 'Ulama-Madжлиs, regarding the appointment of ecclesiastical or educational officials paid out of Waqf-Ma'arif funds.

Each independent Waqf is managed by a Muftawall, appointed by the committee, according to their regulations. The Muftawall represents the Waqf managed by him before a court or other authority.

The resources of the Central Waqf-Ma'arif consist of the movable and immovable property which has been collected in the past in the National Waqf Fund or may be accumulated in the future. The object of the Central Waqf Fund is: the defrayal of all the expenses of administration of the machinery of the Waqf-Ma'arif; the settlement of the expenses of maintenance and of the public contributions to the Waqf Funds; the granting of subsidies for the repair and building of mosques, the maintenance of the staff of mosques, religious institutions and schools for which there are no or only insufficient Waqfs etc.

The 'Ulama-Madжлиs, which has its seat in Sarajevo, is entrusted with the supreme direction of Mohammedan ecclesiastical affairs in Bosnia and Herzegovina. The 'Ulama-Madжлиs consists of: the Rahn al-Ulama as president, four members. The Rahn al-Ulama and the members of the 'Ulama-Madжлиs are appointed by a separate Curia at a secret sitting. This Curia is composed of 30 persons of the rank of Ghudis viz. the Muftis of Sarajevo, Banjaluka, Mostar, Travnik and Tuzla as ex officio members and 24 elected members. The King-Empereur appoints as Rahn al-Ulama one of three candidates who are selected by the Curia. When there is a vacancy in the membership of the 'Ulama-Madжлиs the Imperial and Royal Common Ministry appoints one of two candidates selected by the Curia. The Curia applies to the Rahn al-Islam in Constantinople to grant powers to take up the religious duties of his office to the individual appointed Rahn al-Ulama by the King-Empereur. His request is transmitted to the Shakh al-Islam through the Royal and Imperial Embassy in Constantinople. The 'Ulama-Madжлиs is empowered to govern, supervise and direct all the affairs of Islam; to note any necessity for building mosques or other religious buildings such as Mektebs, Madreses and other denominational educational and charitable institutions and to lay proposals with regard to them before the administrative of the Waqf-Ma'arif; to see that the laws of Islam are not broken in the Muslim denominational schools, nor in the public schools and institutions as well as generally;

to co-operate with the Waqf-Ma'arif Provincial Commission to prepare a curriculum for all the education in the Mektebs and Madreses as well as for the religious instruction in the other institutions of the Waqf-Ma'arif; to define the course of Mohammedan religious instruction in the state schools and institutions in co-operation with the provincial government; to appoint the Mudarrises and other religious and educational officials of the Waqf-Ma'arif on the proposal of the committee of the Assembly, to choose instructors in the Muslim religion in the state schools and other public institutions and to lay their appointments before the Provincial Government for confirmation; to examine candidates for the office of Sharfat judge and positions in the Waqf educational institutions and issue certificates to them; to propose candidates for vacancies in the office of Mufti to the Provincial Government. The Rahn al-Ulama has the following special privileges: the appointment of Muftawalls to the Sharfat judges; the appointment of Imams and Shakhis; the supervision of the Sharfat Law College in Sarajevo. The 'Ulama-Madжлиs is bound to apply to the Shakh al-Islam in Constantinople for a decision on points in doubtful or contested points of dogmatics or Sharfat Law. The documents containing the question to be settled have to be conveyed through diplomatic channels on behalf of the Provincial Government and the reply comes by the same route.

In each chief town of each district of a. n. there is a Mufti. The Muftis are appointed by the Provincial Government on the nomination of the 'Ulama-Madжлиs. For this purpose the 'Ulama-Madжлиs proposes the names of two candidates for the vacancy, who possess the requisite qualifications. The Government appoints one of them Mufti. The main duties of the Mufti are as follows: to issue fatwas when necessary, to visit the mosques and other places of worship to see that the ceremonies, proposed by the 'Ulama-Madжлиs for Muslim religious instruction in the state and denominational schools and other institutions, is adhered to; to preside at the examination of the pupils in the Madreses etc.

The Provincial Government is empowered to erect and maintain institutions in Bosnia and Herzegovina for the advancement of education in the religion of Islam in co-operation with the 'Ulama-Madжлиs. The most important Waqf-Ma'arif schools are the Mektebs and the Madreses. The Provincial Assembly may also found other institutions for the education of the Mohammedan youth but the approval of the Provincial Government is necessary. Secular education in Waqf-Ma'arif schools can only be imparted by persons qualified for the purpose. The Mektebs are elementary schools for instruction in the Muslim religious education is free. The curriculum, the appointment of the subjects and the timetable for the Mektebs are all planned by the 'Ulama-Madжлиs. Every Muslim is bound to send his children to a Mekteb, the boys before they are eight and the girls before they are seven years old. The Madreses are more advanced schools for religious instruction and their aim is to educate a sufficient number of Khodjas for the religious requirements of the country. These institutes are under the supreme direction and supervision of the 'Ulama-Madжлиs. The subjects of instruction in the Madreses are taught by Madreses who are appointed by the 'Ulama-

binding on the proposal of the committee of the
Provincial Assembly.

The Provincial Assembly ~~has~~ the prerogative right to collect a tax for religious purposes to defray all the expenses of public worship ~~and~~ the administration of the Waqf-Madani and to cover the requirements of education and religion generally. This tax is levied and collected as a percentage in addition on all direct taxes. For the last ten years during which the statute was in force, the amount of this tax was fixed at 10% of all direct taxes. The total Waqf budget of 1909 showed an expenditure of 761,114 Kr. (£ 51,713) and an income 766,227 Kr. (£ 52,011), giving a credit balance of 7,163 Kr. (£ 3,944). The ~~total~~ and immovable Waqf property was estimated in the same year at 9,931,061 Kr. (£ 423,793). The number of individual Waqfs was 1030.

V1. Education

The Turkish ~~was~~ of the year 1985 A. D. (1986) which however ~~was~~ never put into force ~~was~~ not ~~the~~ the altered conditions in North and Kosovo after the occupation and sweeping reforms were introduced in the educational system by the ~~the~~ government.

In the year 1909 there were 434 elementary schools in Bosnia and Herzegovina of which 389 were undenominational, 234 denominational and 41 private with a total attendance of 38,950 pupils. To make allowance for the peculiar social and religious requirements of the Muhammadans, special elementary schools (*Makhtefs*) were instituted in the capitals of the six districts of the country and also in Brčko, which is the chief town of a county. These schools have the same educational objects and curriculum as the ordinary elementary schools except that Arabic and Turkish are additional subjects taught in them. Attention was also devoted as far as possible to the education of Muhammadan girls. The largest institution of this kind is the Muhammadan Girls' School in Sarajevo, which is supported by the State, which has four elementary classes and a three years' course of secondary instruction, the object of which is to prepare Muhammadan women as teachers of the preparatory classes in elementary schools. In 1909 there were also in Bosnia and Herzegovina, 9 commercial schools, 1 military boarding-school for boys, the object of which is to prepare native boys for entrance to the military academies; 5 undenominational and 7 denominational girls' schools; 2 industrial schools, 12 industrial continuation courses, 1 technical school, 1 school of forestry, 1 training college for male teachers, 1 denominational training college for women teachers, 3 public gymnasia, 2 denominational gymnasia, 1 Protestant seminary and 1 State conservatory.

In all these institutions provision has been made for religious instruction by appointing teachers of all denominations. Mohammedan pupils at the ~~girls~~ ^{girls} ~~gymnasiums~~ ^{gymnasiums} run learn Arabic instead of Greek. The educational institutions supported by the Mohammedan community are the Makhtas, the Medreses and the ~~girls~~ ^{girls} al-Madrasah in Sarajevo. Before Mohammedan children go to the conventional elementary schools, they have as a rule to attend the Makhtas where they receive their first religious instruction. These subjects are rarely taught in the Medreses. As the methods of

the Khodjas in these districts produced but poor results, a movement was set on foot in the villages by the Wolf Commission with the support of the government to reform the districts. In 1900 there were nearly 1000 of the old-faithfuls and Maktels (Sikh) and no reformist Maktels (Maktels) of which 25 were in town and a far greater

The Medreses in Bosnia and Herzegovina are organized on the same lines as those in Turkey and need to be reformed. In 1909 there were 21 with 1612 pupils (*scholars*). The best known are the *Enverhadi* and *Elhamidi* Medreses in Sarajevo which are supported by the *Osmanli* Khosrowbeg Waks. The *Der el-Muallimin*, founded in 1893 in Sarajevo, provides a kind of supplementary course to the Medreses and gives the scholars in addition to the subjects of the Medreses, which are mainly Turkish and Arabic, instruction in the mother tongue as well as in such useful subjects as history, geography, arithmetic and pedagogy, and qualifies them for posts as teachers (*muallims*) in the Medreses, or as religious instructors etc. The course lasts three years. In the session 1900-1901, 60 scholars attended the *Der el-Muallimin*.

In the Special Law College in Sarajevo founded in 1887 which is supported by the state and the main object of which is to educate suitable candidates for posts in the Sharia Court the Mohammedans have an institution which supplies most of the requirements of Islam. Admission to this college is obtained by nomination from the ~~Mosque~~ ul-Ulama through the government. In the session 1908-1909 the college was attended by 14 students of whom 25 lived in the college and received full board and clothing. The course of instruction lasts five years. The curriculum includes the following subjects Arabic, English (*manzil*), modern law (*dawon*, *adabid*, Shariat Law (*qafih*), *aqid el-shah*; *sakk*, *fardid*, *ngh al-muwazib*, *shara*, European Jurisprudence, the vernacular, mathematics, geography, history, and Arabic calligraphy. In the year 1908-1909 there were 1 teachers on the staff of the College.

The National ~~Library~~ ^{Library} in Sarajewo which was founded in 1885 and taken over by the government in 1888, may also be closed with the educational institutions of the country. Its literary organ is the: *Glasnik zemaljske biblioteke u Bosni i Hercegovini*, which has appeared quarterly since 1889. A selection of the articles published in it are inserted annually in a German version under the title: *Wissenschaftliche Mittheilungen aus Bosnien*.

33 newspapers appeared in 1909, which may be classed according to their political or religious tendencies as 6 Front, 6 Serbian, 13 non-party, 4 Mohammedan, 4 Roman Catholic and 2 Serbian Orthodox.

The Muhammadans of Arabia and Herazevina, who before the occupation shared the intellectual life of Turkey and wrote in Arabic and Turkish are now using their Syrian vernacular more and more for literary as well as scientific purposes. They usually write in the Fatha alphabet. Of late years, particularly among the *Bedawis*, a movement has sprung up to write at least literary works of a religious nature with a Syac text in Arabic characters. The Arabic alphabet has therefore been adapted to the requirements of the Syac language. The organ of the National Society of Maronites and *Elkisas* in Samjevo, the *Bedawis*, are among this movement.

VII. ADMINISTRATION OF JUSTICE.

The right of having their subjects tried by their respective consuls, which had been obtained from the Turkish government by various consuls, was abolished in 1878—1881, with the approval of the government concerned, not only as regards Austria-Hungary but also for the other consulates. After the occupation, the organization of the courts was adjusted to the organization of the government authorities. In Sarajevo there is a High Court which is the chief court of the country; there are District courts at the headquarters of the district and county courts in the chief towns of each county. In addition there are county courts in some of the more important towns.

The Shar'at courts, which have been incorporated in the above mentioned courts are organized on special lines. The county Shar'at court consists of the Shar'at judge (*qadi*), a Muhammadan who has been educated for this profession and has graduated in the Shar'at Law College in Sarajevo (see above) and the assistant and clerical staff assigned to him. The Shar'at High Court consists of the President of the High Court, two judges of the High Court and two Shar'at Chief Magistrates. The sphere of jurisdiction of the Shar'at Courts was defined by the Government of Bosnia and Herzegovina in 1883. They are to deal specially with: a) questions arising out of the Muhammadan law of marriage, when both husband and wife are Muhammadan, whether the question be one of the law of the property or any other point; b) disputes, concerning the Muhammadan law of parent and child; they have also to deal with the Muhammadan law of inheritance and the division of estates in so far as they consist of estates of property known as *Mit'a*.

The Shar'at court deals with the first class of cases by itself but with the second in a joint court. Before coming to a decision, the High Court may ask the opinion of the Ulama-Majlis on any point, which requires further elucidation. As regards the decisions of the Shar'at courts, a clause is attached to them by the Shar'at judge stating that the sentence is to be carried out, but the actual enforcement is done through the medium of the ordinary courts.

In 1909, 3229 lawsuits were dealt with by the Shar'at courts and 17,467 transactions regarding inheritances, 7312 marriages were registered and 809 divorces granted. The payment of the judges of the Shar'at court is on the same scale as those of other officials of the same rank.

Regarding the criminal statistics it may be noted that the number of individuals sentenced for crimes or misdemeanours was 3072, of whom 1032 were Muhammadans, 1504 Orthodox Greeks, 517 Catholics, 10 Jews and 9 belonging to other faiths.

VIII. FINANCE.

According to the Austrian and Hungarian acts of 1880 the administration of Bosnia and Herzegovina is to be so arranged that the expenses of government can be met out of the revenues of the country itself. The Budget of Bosnia and Herzegovina shows a great increase since the occupation, proportionate to the development of the country, of communication and the improvement in economic conditions generally. The first Budget of

the civil government in 1879 showed an income of 9,321,000 K. (£388,696) and an expenditure of 8,942,224 K. (£374,592) giving a surplus of 378,776 K. (£15,749). In the year 1890 the expenditure was 19,378,552 K. (£807,220) in 1900 it was 41,526,365 K. (£1,730,263) according to the estimates for the year 1910, the total expenditure was estimated at 74,251,000 K. (£3,053,832) and the income at 74,376,409 K. (£3,060,217) yielding a surplus of 125,409 K. (£5185).

The revenue department is based on the laws and methods which were in operation under Turkish rule. The Turkish laws have practically been retained almost unaltered. The most important direct tax is the tithe (*haraj* pl. *ahlat*) which in its essence, is the taking by the state of one tenth of each agricultural product from the owners. This tax, which was originally paid in kind, was in most places farmed out under Turkish rule. As the payment in kind was the farming out of the tax had the disadvantages both for the government and the populace, the government retained in 1879 that henceforth payment should be made in cash according to the prevailing market price. The inconvenience caused by the annual variation in the amount of the tithe induced the government to do it in 1906 at a regular figure, based on an average. By this provision it was not the nature of the tax which was altered but only the way of collecting it; in place of a tithe which varied annually an average rate was introduced. The amount raised in 1909 by tax was 9,308,000 K. (£387,833).

IX. ECONOMIC STATISTICS.

As soon after occupation as ordinary economic conditions were restored in the country the government took various measures to improve the condition of the country particularly with regard to agriculture.

The yields of various products for the years 1905-1909:

	1907	1908	1909
		Metric tons.	
Wheat . . .	506,318	752,315	743,777
Barley . . .	518,312	530,150	765,540
Millet . . .	1,678,189	2,240,350	2,787,016
Corn . . .	376,187	518,500	706,508
Potatoes . .	802,647	633,667	1,439,702
Hay . . .	4,780,351	3,241,850	7,016,190
Phosphorus .	433,623	1,302,423	122,338

Of tobacco which is a government monopoly 52,267,37 metric cwt. were taken out of bond of the value of 5,152,700 K. (£214,700).

The ground available for agriculture is either the freehold property of the landowner or certain rights of the peasant (*haker*) are attached to it. The tenant holding (*chiftlik*) so long as he is able to cultivate it properly, must remain in his tenure. In other matters the landlord can deal with the holding as he pleases. The tenant has to pay the landlord a certain portion of the produce annually in kind. There are government provisions for the eviction of the tenant when he neglects to cultivate his holding. The relation between the landlord and tenant was defined by the Ottoman decree of the 14th Safar 1276 (12th September 1859) which has been retained in force by the Austro-Hungarian government. The tenant may buy his *chiftlik* by agreement with the ground

BOSPORUS. [See *HECATEUS*, p. 137.]

BOSRA (Bosra), at the present day also called *Ḥaṣṣā* (Hassana), the centre of a Najila, is a wretched village in Hawran, with imposing ruins recalling its past splendour. The existence of the town can first be definitely proved in the Seleucid period (i. *Mac.* v. 25) but in the period following, it is much more frequently mentioned and in Roman times under the name of Nova Trajana Bosra it was expanded and fortified; after Diocletian it was the capital of the province of Arabia. It does not seem to have belonged to the Lihyanites but to have been ruled directly by the Byzantines. In the year 613 or 614 it was destroyed, like Ajlūn (q. v., p. 635) by the Persians and never afterwards regained its former greatness. According to the legend, Muhammad visited Bosra as a boy with his uncle Abū Tālib and was recognised as a future prophet by Bahāz (q. v., p. 576 *et seq.*) a monk, who lived there. At a later period in his career, he sent a messenger, who was killed on the way, to the *Ḥāṣṣā* or "King" of Bosra, probably the Governor. Bosra was the first town in Syria to be captured by the Arabs, for it surrendered to Khalid in 634 and remained in *ḡaz Diyar*. Under Arab rule it retained its importance as the chief town in the district of Hawran. In the year 906 it suffered much at the hands of the Karmanians and Kalbitas led by Abū Ḥabib, as did the whole of the northern part of the country east

of Jordan. During the period of the Crusades, the Frankish commander handed over the town to Balduin III, but Nur al-Dīn prevented the Christians from taking possession of it. Salāḥ al-Dīn and his successors fortified it strongly, so that the Christians were unable to take it at a later period. After the Mongols had laid it waste, the ruler Ḥusayn fortifies it was rebuilt by Bahāz after his victory in 1261. It remained the capital of an administrative district under Damascus during the Mamlūk period. Most of the ruins date from Roman times but some of the inscriptions show, belong to the Byzantine period. The once splendid Ḥaym al-Aḥdā is rapidly falling into ruin.

Abū Ḥabib describes Bosra as a very old town inhabited by the Banu Ḥusayn and Murra, the houses in which (as at other places in Hawran) were built of black stone which was also used for the roofs: he also mentions the mosque, the fortress, which reminded him of Damascus, and the market held there. Mujāhid mentions the vine-culture of Bosra which is also referred to by Naṭṭāḥ (27,0) and speaks with admiration of the Bosra there, traditionally covered with bakhra, for which special taxes were annually collected by order of the Sultan.

BOSTAN (r. *Bostān*, "place of perfume"; properly a "garden of sweet-smelling flowers"; also Bostān "enclosed"). As a loanword it appears in Turkish with the meaning of "vegetable-garden", in which melons, water-melons and vegetables are grown; in Arabic (plur. *Baṣāt*) its meaning varies in different districts; in Beirut, for example, *Bostān* means a piece of ground (Cachin) planted with mulberry trees and surrounded by a hedge, in Aleppo it means also "cypress" (*Baṣāṭ*). — Bosān is also the title of a Persian didactic poem by Sa'īd, English translation by Fakhri Falconer (*Scriptions*, London, 1835), German, (metrical) by Graf (*Schiller's Gesammelte Werke*, Jena 1850) and by Schlechter-Wieschid (Vienna, 1852) and French by Harriet de Meynard (Paris, 1850).

(H. A. B.)

BOSTANJIL (r. *Bostānjil*), the gardeners of the Imperial palace of Constantinople who form a regular body of troops. This organisation dates from Sultan Murād II, who, on taking command of the army in 1407 (1405), formed three regiments each of 1000 men with a particular uniform, out of 3000 *Bostanjil*, half of whom were drawn from

the palaces of Adenople and Constantinople their dress consisted of a long red lion dress (*herzer*) peculiar to the corps, red jacket and blue trousers for the first regiment, blue jacket and red trousers for the second, green dolman and blue trousers for the third. In their capacity as guards of the garden they were divided into nine sections, distinguished by the colour of their girdles. Like the Janissaries, they were recruited from the *ayami* *eghbir* [q. v., p. 140]. They were also privileged to row the barges of the Sultan and all the palace officials when they walked abroad. Mustafa III built a place of worship for them in the Sarai and founded near it a library for the use of the officers of the corps.

BOSTANDJI-BAGHI, chief of the gardeners, a high official in the Sultan's palace in Constantinople under the old regime, who commanded the *heratdagi*. Under him were the *ahaghi-oglu*, his representative, and chief of the *ahaghi* (subordinate officers chosen from the *ahaghi* and serving as bodyguard), the *ahaghi-ahmedagi*, the lieutenant-colonel, the *ahaghi-ahmedagi*, inspector of the forests under the care of the *heratdagi*, the *ahaghi-ahmedagi*, who collected the duties exacted for this office and the revenues of the imperial estates, the *ahaghi-ahmedagi*, his agent with the government, who lived in the palace of the Grand Vizier, the *ahaghi-ahmedagi*, the intermediary between the Sultan and his Vizier, and the *ahaghi-ahmedagi*, who watched for fires from the tower of the palace of the Agha of the Janissaries and had to report immediately to the Sultan any dangerous warnings of fire. The *ahaghi-ahmedagi* had to inspect the shores of the Bosphorus and the Sea of Marmara from the Black Sea to the Dardanelles. His jurisdiction was necessary to build or repair a house or building, of any kind, and for this he charged arbitrary and extortionate dues. When the Sultan went for a trip by water, it was he who held the rudder of the imperial barge. He also exercised the functions of a provost-marshal and supervised the executions of people of high rank when these took place in the palace; he also had charge of the *ahaghi* prison (so called because it was near the *ahaghi*), where torture was inflicted on officials to make them confess their crimes or give up property which had been confiscated as suspected. General of the waters and forests around the town, he had charge of the hunting and fishing, and through his agents controlled the trade in wine and lime. The Governor of Adenople, who commanded a body of 1500 *heratdagi* here the same title.

BOUGIE (Arabic: *buḡiya*, Kabylean *Boumiz*), a town on the coast of Algeria (department Constantine), long 5° 9' (Greenwich), Lat. 36° 49' N., Population in 1906: 5528.

The town is built in an amphitheatre formed by the numerous spurs of the Djebel Girsya (2000 feet) around a bay, well sheltered from the winds from the open sea by high cliffs. The temperature is remarkably mild in winter and as the rainfall is very abundant, the vegetation is luxuriant (olives,holm-oaks, cork-trees etc.).

Of the history of Bougie for the first three centuries after the Mohammedan invasion we know very little. We do not even know at what period the Roman town of Solitas disappeared, which name occupied the site of the present town. It appears probable that the anchorage never ceased to be frequented by ships and that there was always a town of some importance at the foot of the Djebel Girsya. Al-Bakri (*Description de l'Afrique*, transl. de Slane, p. 192) actually describes Bougie as a very ancient town inhabited by Andalusians and having a good harbour suitable for wintering in. According to Ibn Khaldun (*Gen. des Berberes*, transl. de Slane, li, p. 32) the site of the town was formerly inhabited by a Berber tribe called *Majja* or according to the native pronunciation, *Majja*, in Kabylean *Begait*. Bougie did not however begin to play any important part in the history of Bougie till the time of the Hammudid dynasty (see HAMMUDID) when the Sultans of Kal'a, threatened by the invasions of the Hilal Arabs, decided to move towards the *ahaghi* in 453 A.D. (1062-1063 A.D.) al-Bakri to Ghomra, the fourth in succession from Hammud took possession of the hill of Bougie and built a town to which he gave the name of al-Najirya, but which the natives continued to call *Majja*. Its town attracted a large population thither, by exempting all the new colonists from taxes and also, the story goes, by forcing all his subjects to build a house there and making every one who entered it bring a stone or pay a piece of gold. In 461 (1068-1069) he himself settled there, built a palace, the *hazn al-din* ("Castle of Wealth"), a mosque, an arsenal, equestrian and a wall flanked with bastions around the town. His son and successor, al-Bakri, transferred the capital of his kingdom from Kal'a to Bougie in 483 (1090-1091). He built the *hazn al-din*, erected a mosque adorned with a minaret sixty cubits high, and a fountain with 17 fountains and finally constructed an aqueduct to bring to the town the waters of the Djebel Tadjia. Bougie then became one of the most prosperous towns of the Maghrib. It was divided into 24 quarters and contained 72 mosques. Travellers praised its wealth, magnificence and commercial activity. "Majja" wrote Idrisi "is the capital of the Hamudid. Ships unload there, caravans come to it by land and it is a depot for merchandise. Its inhabitants are rich and have more skill in various arts and trades than those of other towns so that commerce is in a flourishing condition. The merchants of this town trade with those of western Africa as well as with those of the Sahara and the east; merchandise of all sorts may be found everywhere here. Around the town are cultivated plains on which grow wheat, oats and fruit in abundance. The surrounding mountains and valleys are well wooded and produce resin and oil of excellent quality so that large ships for war and commerce are built here" (Idrisi, transl. by de Goeje and Dozy, p. 104). The inhabitants work the iron mines which yield very good ore. To sum up, the town is a busy centre of industry. Learning was held in honour as well as the pursuit of industry and commerce. The historian al-Bakri himself a native of Bougie, gives the biographies of 140 persons famous for their knowledge or piety who lived in this town in the fifth century A.H. Among them may be

mentioned the Yalīyah 'Omārah b. Yalīyah b. Jūzayn, 'Abd al-Hakīm b. Rāḥ' and 'Abd al-Hakīm b. 'Omār al-Bakrī; the historians 'Abd Allāh b. Muḥammad b. 'Isā, Muḥammad b. al-Ḥasan b. 'Alī, al-Ḥasan, al-Ḥakīm b. 'Isā b. 'Omār, Abu 'l-Ḥasan b. Abd Nūr, Naṣr Falaḥ b. 'Abd Allāh (the physician) Ahmad b. 'Alī, al-Ḥakīm, Muḥammad b. Ahmad al-Ḥamadī, Abu 'l-'Abbās Ahmad, a Persian by birth who settled in Hengia after travelling in China, India and Armenia, 'Alī al-Dīn of Mosul, 'Abd al-Hakīm b. 'Isārah b. ~~al-Ḥakīm~~ etc.; the poet Ibn 'Abd al-Ḥakīm who has left an account in verse of a journey to Morocco and his rival, the poetess 'Aḥlā, the daughter of the Faṭh al-Jūzaynī, Ibn Tūmāt appeared in Hengia as a preacher in the reign of 'Abd al-Azīz and Ḥakīm Abū Maḥyān taught there for many years (see Ibn Tūmāt, and see Maḥyān, p. 95).

des the Haffida the harbour of Bagge (mentioned in certain texts in the former Empire, Suria, Bagge and Huma) ~~was~~ regularly visited by Catalans, Portuguese and Venetians "Christian merchants but *fora* there and came to buy wool, oil, hides and wax" This state of affairs was however changed at the end of the XIVth and beginning of the XVth century, in consequence of the revival of piracy, which had never really disappeared. The inhabitants of Bungo soon took their place among the corsairs most devoted by Christian culture.

BOZANTI, the **BOGHANDUN** (or **BOGHANDIN**, **BOGHANDUN**) of the Arab geographers and the Greek **BOGHANDON**, the name of a river and a town of great strategic importance situated on it, at the *dar al-ghazima*, the *Pylos Cilicia*, south of Latakia (Latakia). The place is famous in history, because the 'Al-Bahā al-Ghali, al-Mu'izz (d. 1143) died suddenly there on a campaign against the Greeks, after incessantly drinking cold water. He was buried in Tarsus in the Gate of Boghandun. The modern Bozanti is a wretched village with 500 inhabitants.

BRUSA, Turkish Bursa, the ancient Prusa, situated in 26° 40' East Long. and 40° 31' N. lat. at the foot of Olympus (Kashshaghlik). The number of inhabitants in 1907 was 60,131; railway connects the town with the harbours of Mudrossa. The principal occupation of the population is the rearing of silk-worms, but wine, olive-oil, cotton and fruit are also exported. Near the town and the village of Cakirga, some distance off, are the well known and much frequented warm sulphur and chalybeate baths. Among the sights of the town are the mosques built by the early Ottoman Sultans, i. e. the Yeşil (Green) built by Mehmed II, the (Nu'mani' the mosque of Murad II with the tombs of the Sultans and the Yıldırım Mosque. Bursa first attained importance for the history of Islam, when its conqueror, by Orkhan, son of Ghazan in 726 (1326). — He made it his residence after his time it remained capital and imperial residence till the conquest of Constantinople. Bursa is now the capital of the Vilayet of Rhodavendik ac.

BHARRA or, according to the modern pronunciation, **Bharran**, one of the most ancient villages in Northern Lebanon. In the Arab geographical the district of Bharran usually bears the name *Liḥat Nabariya* or *Bharran*, which it has preserved in the present day; under the Mamluks, the district belonged to the *Miḥal* of Tripoli.

and appears always to have been governed by Christian Mahaddans. Near Nijhorra grow the famous cedars of Lebanon, which are nowhere equaled by Mohammedan writers. The great market town of Nijhorra (3000 inhabitants) belongs to the Kāthmāghānāt of Kāstān. The whole district is Mahadd.

41. I AMPLITUDE

STEDDIN (abbreviated from **SAIT AL-BAYT**), a small town in Lebanon (with about 400 inhabitants), 500 yds. from **SAIT AL-KAMR**, from which it is separated by a deep ravine. About 1832 the Emir Bashir Shihab (q.v.) began to build a palace here with rooms and gardens planned on a splendid scale. It is now used as the residence of the governor of Lebanon. Besides the palace there are several other places in Steddin, one of which the Kaimumkhan of the **Kafr al-Shuf** resides for a time. The place consists mainly of government buildings and the houses of officials with a few shops and hotels. For administrative purposes, it belongs to the district of **SAIT AL-KAMR**, which, although situated in the centre of **Kafr al-Shuf**, does not form part of it, but is administered directly by the governor.

MURATH, a place near Medina famous for the battle fought there between the related tribes of the Aws and Khazraj, some years before the Migration of Muhammad and his adherents to that town. It belonged to the Jewish tribe of the Quraysh, and according to Samhudi, was two miles east (it is more accurate south-east) of Medina. Above it was a castle called **Kha'k**. A few traditional traditions of the place in the traditions help to locate it more accurately. Muhammad's enemies who slew Ka'ab b. Ashraf, went past the place Quraysh, thence past Murath, and then reached Hira'at al-'A'raf and from there went to Hah' al-'A'raf to the east of the town. At the attack on the Quraysh, Khawwat b. Djalal slipped past the 'Abd al-'Ashid, not Zukhr and thence past Bo'ath and thence came up to the Quraysh. The battle, which was the climax of a series of petty feuds, at first went against the Aws, but ended by the final defeat of the Khazrajites. It gave rise to a number of songs which became very popular.

BUCAK is the Turkish name of the steppes, which form the southern part of the Russian province of Bessarabia, roughly equivalent to the name of Akkerman and is sometimes used as a name for the whole of Bessarabia. This district passed under Turkish rule during the reign of Bayazid II. in 889 (1484) and was not finally ceded to Russia till the treaty of Bucharest in 1812, although it had been several times previously occupied by the Russians during the wars with Turkey. On the Turco-Tatar elements in the population see the article **Ukraine**.

BUCHAREST, Turkish **Bucuresti**, the capital of Roumania, [see **IREAX**]. The Peace between Russia and Turkey was signed here on the 28th May 1812, by which the Pruthi to its confluence with the Danube and thence along the left bank of the latter till its entrance to the Black Sea became the frontier.

BUDAIL n. WAKKAS, chief of the Banu Khazim, a tribe living near Mecca, who served Muhammad as a spy, kept him informed of the enterprises of the Quraysh and after the agreement at Hudaibiya (6—628) was his ally. Budail appears for the first time in 630 camp at Hudaibiya to tell Muhammad that the Meccans were ready to receive him. On his return he carried the Prophet's offer to Mecca, where he held a *dar*. The Banu Khazim's chief Bilhar during that was with the Banu Hakeem, when the Quraysh took the side of the latter, their clients, against the former. This was a breach of the treaty of Hudaibiya, by which the Banu Khazim had been recognized as allies of Muhammad and thus gave him an opportunity to attack his native town. Budail hurried to Medina to make an arrangement with Muhammad and on the way met Abu Sufyan (q. v., p. 107) who was on the way to Medina on a similar errand. Apparently they both came to an arrangement with Muhammad in Medina regarding the terms of a peaceful surrender of Mecca for which they offered their services. Muhammad advanced against Mecca at the head of 10,000 men under the pretence of avenging the Banu Khazim. On the day before his arrival in Makkah al-Nabawiyya (the middle of Ramadan 8—beginning of June 630) Budail went out with Abu Sufyan to reconnoitre. If the two had not been secretly in agreement the Quraysh could not have been able to persuade the chief of the Khazim, who was the enemy of the campaign, to go with him at such a critical moment. After they entered the Prophet's tent, they were both able to have paid him homage and adopted Islam. The conversion of Budail cannot have taken place earlier, because he is mentioned in the "Muhammad of the conquest (*fath*)" of Mecca. It was granted him that his house in Mecca, though he was recognized as a place of asylum for the belligerents. After the capitulation of Mecca, Budail accompanied Muhammad with his adherents to Medina. He was not present at the siege of Tabuk because he had to guard the booty taken at Hudaibiya, the camp of Dhir'ana. He is not again mentioned and must have died before the Prophet, i. e. between the years 8 and 11 (630 and 632).

BUDALA' (A.), *Mar. of India*, above under **INDIA**.

BUDAN, **INDIA**, the eponymous saint of the Bata Budan mountains, the highest range on the Mysore table-land, India, situated between 13° 33' and 13° 35' N. lat. and 75° 37' and 75° 52' E. long. Bata Budan is said to have introduced the cultivation of coffee into India in the 17th century, on his return from a pilgrimage to Mecca. His tomb is located by the Muhammadans in a cave, which the Hindus, on the other hand, venerate as the place from which the sage Narayana vanished and out of which he is expected to re-appear as a prophetic sign of the last avatar of Vishnu; the spot is thus a place of pilgrimage for the adherents of both creeds.

BUDAPEST, the capital and chief town of Hungary, which arose in 1872 through the union of the towns of Buda (Budin) and Pest, is only of importance in the history of Islam at an earlier period, when the town of Buda (Budin, Budun) was under Turkish rule (1541—1686). Suleiman entered Buda on the 10th Sept. 1541, after his victory at the battle of Mohacs and three years later the fortress was occupied by him. The Emperor Ferdinand's attempts to regain the town (1550 and 1540) failed and provoked a third campaign (1551) Hungary, Suleiman thereupon appointed a Pasha governor of Buda and by various other means endeavoured to make the town quite Muhammadan. In the years 1598 and 1602, the town was unsuccessfully besieged by the Archduke Matthias and again in 1684 by the Duke of Lothringen who finally succeeded in taking the town in 1686. The only relic of the Muhammadan occupation is the tomb of the saint Qalibek (q. v.) which is still sometimes visited by Turkish pilgrims.

BUDD. The word *Budd* or *buddhi* is used with various meanings. It is applied either to a pagoda, to Buddha himself, or to his statue, not necessarily figures of Buddha. The word means *pagoda*, for example in a passage in the "Sutta-nikaya" (see *Merrett's* *de India*, ed. and translated by Max Muller, p. 5), where it is said that a town in the island of Ceylon possesses six hundred large Budd. This meaning is the common.

Budd or *Budda* sometimes means Buddha in authors like Mas'udi, al-Biruni and Shahrastani. For example, Mas'udi, speaking of the temple in Multan known as the "House of Gold", says that he is the Indians preserve their archives from the date of the coming of the first Buddha amongst them, i. e. 10,000 times 30,000 years ago (*At-Tamim*, *Ust al-Qasba*, transl. by Carr de Vaux, p. 201; cf. al-Biruni, *India*, transl. Sachau, i. 368; ii. 18). — Al-Biruni, though possessing such a good knowledge of Brahmanism, knows very little of Buddhism. The reverse holds true of Shahrastani whose article on Buddhism is of some interest. This writer defines a *budd* as a person in this world, who is not born, does not marry, neither eats nor drinks and never grows old or dies: this definition obviously refers to immortal

and ~~was~~ confused with the root *شحن* (*Shahn*, *sh*).
p. 483 and *شحن*. Other standing in Arabic it
does not have. Further, when *Buddh* is associated
with a particular planet, it is with Saturn (*Zudah*)
and its metal is lead (*Mafadiah*, above, p. 170),
not copper as Varro would require. Hardly worthy
of mention is Von Hammer's story that *Buddh*
one of the names of Allah (*Journ. As.*, 1830,
p. 72) though it may have a Turkish basis (not
yet, too, de Sacy below), and his derivation be
suggested by the story told by Michel Sabbagh to
de Sacy (*Christi. ar.*, iii. 364 *et seq.*) that it was
the name of a pious merchant whose packages
and letters never went astray, though that may
well be a popular Syrian explanation. In magical
books there are few cases even of personifying
the word (e.g. *Ed Buddh* in *Al-fayd al-rahmani*
by Elwajli Baklan, p. 31) but for the popular
name *Buddh* has become a *dhinn* whose services
can be secured by writing his name either in
letters or numbers (*Journ. As.*, Ser. 4, xii. 521 *et seq.*;
Spreo, *Marabout of Collog. Egyptien*, p. 36;
Doutté, *Magie et Religion*, p. 296, with *Kalim*
as though a name of Allah; Klunzinger, *Upper
Egypt*, p. 387). The uses of this word are most
various, to invoke both good and bad forces.
Thus, to Doutté (*op. cit.*), against sorcery
(p. 254), against pains in the stomach (p. 229),
to render one's self inviolable (p. 275), against
temporary impotence (p. 295). Lane's *Cabin* ma-
gician also used it with his luk-misrur (*Modern
Egyptian*, chap. 65), and so in several magical
troutises. It is also engraved upon jewels and
metal plates or rings which are carried as per-
manent talismans, and it is inscribed at the be-
ginning of books (like *Kashshaf*) as a preser-
vative, e.g. in *Surat al-Jahid*, Tunis, 1290. Not
only for the most common use is to ~~prevent~~
the arrival of letters and packages. Besides the refo-
~~rm~~ above, see also Reinard, *Monuments égypti-
ennes*, ii. pp. 243 *et seq.*, 251 *et seq.* and 256.
(H. L. Macdonald.)

BUGRA, in Eastern Turkic areas a dromedary (cf. *bağır*), generally a single one; it was also the name of several rulers in Central Asia (cf. *bugra kagan*), after whom a certain dish is named, a kind of pastry called in Ottoman Turkish *şirvan şakırtı* "Persian wafer" and *şirvan şakırtı* "wafer".

ball), p. 173.
(Cf. IVARZ.)

BUGRA-KHAN, the name of several rulers of the Turkoman dynasty of Ishak Khana at Kerdzhanida (in Central Asia). The most famous was t. Satuk-Bugra-Khan 'Abd al-Karim, said to be the first member of this dynasty to adopt Islam and propagate it in his kingdom. He is called Satuk (so Siphak is to be understood) Kara-Khalko by Ibn al-Athir (ed. Tornberg, II, 54). We have no reliable information either regarding his reign in general or his conversion unless the account given by Ibn al-Athir (VII, 396) of the adoption of Islam by a numerous Turk people in Jan (1060) refers to the subjects of this prince. According to Djamil al-Kurashi (in Barthold, *Turkistan in the eleventh century*),

magister, no. 1. 130) he was dead by 1344 = 955-956; his tomb in Anshu (the modern Anshu) near Kashgar is still a place of pilgrimage. The account of his life known as the *Tughlak-Namaj-i-Dhul*, which has been edited by F. Grenard (*Journ. asiat.*, 1^{re} Serie, xv. 1779) is certainly legendary. Some portions of the saga are to be found in the oldest document that has survived to us in *Quaral-i-Kurachi*, and others have been added at later periods; it cannot be proved that there is any real historic basis for these traditions.

2. Bughra-Khan (Bāghrān b. Māsā (in the al-Akhṣr, p. 68; Hārūn b. Sulaimān), grandson of the preceding, the first of this dynasty to conquer Māwarā' al-Nahr. The power of the Samanids had been shaken by internal dissensions during the reign of Nāsir b. Manṣūr (365—387 = 977—999), when the conqueror went from his capital of Nisābis (q. v., p. 614) and appeared before Safījāb (the modern Suzm near Chimkent), the frontier town of the Samanid kingdom on the northwest, he met with an great opposition everywhere. The nobles, who were hostilely disposed to the Samanids, are even said to have called in the 'Turks themselves; Bughra-Khan was able to enter Bukhārā, the capital of the Samanids in 387, 388 = 7th May—5th June 994, but soon afterwards he became very ill through overindulgence in fruit and had to vacate the conquered land again. By the middle of Jumādā II. of the same year, on a Wednesday (the 17th August) Nāsir returned to his capital; Bughra-Khan died on the way to Kashghar in Kochar-dagh, perhaps not far from the source of the Og, which is still called Kochar. Ibn al-Aṭhīr (a. 388 et seq.) who could not find any exact details in his chief authority, the Tarikh-i Muṣṭafī of 'Uṭī, makes Bughra-Khan first conquer Bukhārā in 383 (993-994; but this statement is definitely disproved by the accounts of Geddes (in Marshall, Turkistan etc. i. 127) and Doctak (cf. Marlay, p. 334) which are quite to the contrary.

3. **Hughar-Khan** Muhammed b. Yüner, grandson of the preceding. In the lifetime of his father **Kutub-Khan** Yüner, who ruled at Kandahar, he saw the **ills** **Vighan-Tegin**; in 423 = 1032, after the death of his older brother **Arslan-Khan** Salaiman, he received the title of **Bughra-Khan** and was granted **Tashk**, the modern **Ashkharat** and **Jaffar**, both as pincer and tail, he entertained relations with the **Umayyads** and begged their help to drive his opponent 'Alī Tegin (q. v. p. 297), out of **Maswand** **al-Nahr**; this plan was never carried out; nor was his marriage with **Zaima**, daughter of **Salim** **Mahmūd** **son** **of** **Salim** **Mahmūd**, ever celebrated, although the prince himself came to **Balkh** in 416 (1025) in the reign of **Mahmūd** to fetch his bride (cf. **Wahid**, cf. **Morisy**, p. 635 et seq.). When the consummation of this alliance was again postponed in the reign of **Mahmūd**, **Hughar-Khan** made an alliance with the **Saffids** and became the enemy not only of the **Umayyads** but also of his own brother **Arslan-Khan**; **Abū** **Saddik** **Tahmān**, the **emir** sent by **Mahmūd**, who left **Qazvin** on the 7th **Shw** **1242** = 25th August 1037 and spent 18 **months** in the land of the **Tashk**, succeeded in appeasing **Hughar-Khan**, however, and in reconciling him to his brother. During these years coins were struck in the name of **Hughar**

the whole reign of al-Rashid, whom he used to exhort and whose gifts he rejected. *Shi'at* (l. 973) gives, in his *Yasafat* (p. 30), an account of such an interview and exhortation. In *Yasafat* (l. 708) *Al-Rashid* there are two anecdotes (pp. 33 and 45 ed. of 1315) of a *Bahlul*, but one of them describes a conversation with *Shihab* who in 338. *Shihab* meets him riding on a cane with a stick in his hand, and going to present himself before *Al-Rashid*. The conversation is similar to those above. The account is an interview at *Bagra* reported by *Bahlul* himself, with a pious boy, a descendant of *Humayy*. *Al-Rashid* is different in that the exhorting is done by the boy.

His grave was shown in *Nisabur* at *Bagda* where he is described in an inscription dated 501. as the son of the *madhshah* (scholar) directed to *Al-Rashid* and the *shahid* (martyr) *al-murshid*. To *Nisabur* he was called *Bahlul-dhah*, "wine fool", and was described as a relative of al-Rashid and as his court fool. Stories of his wit and ingenuity were told in the coffee-houses, and he had evidently been transformed entirely from the pious idiot of the earlier legend (*Shi'at*, l. 301 et seq.; *Le Strange, Baghdad*, p. 350). The extreme of this last development of the legend is reached when *Bahlul* became the hero of erotic stories, as in the *Al-Rashid al-Yasafat* of *Al-Rashid* (l. 31 *Tunisi* early 17th cent. p. 14 of Cairo ed. and p. 9 of ed. of 1315) who makes *Bahlul* a contemporary of *Al-Rashid* Son, too, the stories in *Makharat al-Rashid* *Gharib*, pp. 4, and 73-83. From the above it is plain that the *Shihab* (l. 208) distinction of *Bahlul* (*Shihab*), whose name (*Shihab*) alone failed, but whose logical and *al-Rashid* until *Shihab* and whose name, therefore, capable of enthusiasm, and the *Shihab* (l. 208) to whom the logical soul was corrupted, were quite late, after *Shihab* had become a common name (*Proleg.* ed. Quatremère, l. 201 et seq.; *de Sion's* *Yasafat*, l. 229 et seq. and *Mas'ud*, *Reliq. Ant.* in *Yasafat*, p. 103). *Al-Rashid* (l. 208) had one of his very many *Shihab* (l. 208) (l. 208). The later and modern development of this, especially in the *Shihab*, can be read at length in *Le Strange's* *Le Mas'ud*, pp. 75 et seq. where it should be noticed that the *Shihab* was characterized by *Shihab* bursts of laughter. There are also *Shihab* The curious persistence of the original meaning of *Shihab* suggests that the word itself, equally with the existence of the historical *Bahlul* may have led to this application. To judge by *Redhouse's* *Turkish and English Lexicon* (p. 416) *Bahlul* still means "great laughter" in Turkish. *Dozy* (*Suppl.*, v. 4) quotes a similar Arabic usage from *Dozy*. For references to stories about *Bahlul*, mostly of the court-fool type, see *Chauvin, Rikhsat*, vii, p. 106 et seq. *Selected* poems by him and stories about him are catalogued in *Dozy*, *Cat. vol. iii*, p. 251, No. 3437; *vol. vii*, p. 170, No. 3091; p. 233, No. 8193; p. 670, No. 8784; *vol. viii*, p. 51, No. 9065; in *Cat. of Biblin*, No. 1, p. 623, No. 3653. (l. 11. *Mas'ud*.)

AL-BUHTURI, **Abū** **al-Walīd** **ibn** **Umayy**, Arabic poet and anthologist of the third century (302—383 approximately). His *shihab* (number of the *Bulgar* clan of the tribe *Tar*, whose glories he frequently celebrates. His birthplace was *Manbidh* (or, according to one account a village near *Manbidh*) called *Zandura*,

and of *Manbidh* he often speaks as his home; here he ultimately acquired property, which seems to have been inherited by his son *Thabit*, who was living there in *Thabit*'s time. The woman who forms the subject of his erotic pastimes in the greater number of cases was one *Aina* of *Haris* near *Haris*, daughter of *Yasafat*, in a poem addressed to al-Fayl *ibn* *Thabit* (l. 44) he speaks of her "outside the pastime" as "the friend and the joy of his heart" whom he had left in *Haris*; and in another (l. 109) she is obviously *al-Fayl* there is no doubt then that she is historical, which is probably not the case with the other *al-Fayl* mentioned in the pastime. What appears to be authentic traditions bring him into connection with the other great *Tar* poet *Abū* *Tammam*, though the accounts of their meeting are inconsistent; *Abū* *Tammam* is said to have recommended him as poet to the people of *Manbidh* al-Rashid, who engaged him at a salary of 4,000 *dirhams*. If this be true, the poems belonging to this period appear to be included in the *diwan*, where "the village of *Nasir*" is mentioned in connection with *Thabit* (l. 17), who *Thabit* here came into the poet's *diwan* much later. The earliest poems included in the *diwan* appear to be addressed to prominent families belonging to the poet's tribe, *Abū* *Yasafat* *ibn* *Thabit*, three brothers *Abū* *Nahhal* (mentioned in *Al-Rashid*, ix, 102), *Abū* *Muhammad*, and *Abū* *Yasafat* (this last can scarcely be identical with the victim of *Thabit*, *ibn* 214), and the family of *Abū* *Sa'd* *Muhammad* *ibn* *Yasafat* (l. 256), at whose house he is said to have met *Abū* *Tammam*; a poem in which this poem is composed for the death of *Thabit* (l. 109, probably of the year 327) is perhaps the earliest in the collection. An early patron of the poet was the elder *Muhammad* *ibn* *Abū* *al-Malik* *ibn* *al-Zayyat*, whom he eulogized in the reign of *Walid* (l. 104). Another family to which he addressed epigrams was that of *Abū* *al-Fayl* *ibn* *Thabit*, whose son *Muhammad* was made vicar of *Haris* in the year 337; a poem which is perhaps not much later congratulates him on his appointment (l. 105); two other sons, *Thabit* and *Thabit* *ibn* *Thabit*, also form subjects of epigrams, as well as more distant connections. He appears to have become court-poet in the reign of *Mutawakkil*, when he enjoyed the patronage of al-Fayl *ibn* *Thabit*, to whom his *diwan* is dedicated; to him he addressed a large number of epigrams, though his relations with al-Fayl appear at times to have been strained. From the year 335, when *Mutawakkil* proclaimed his three sons heirs to the throne, these epigrams follow the events of the reign, such as the Armenian revolt (337), the Caliph's temporary residence in *Haris* (343), his restoration of the *Nasir* (349), his holding of *Manbidh* (345-346). *Mas'ud* has preserved a narrative in which *Bulgar* records as an eyewitness the murder of his two patrons; and indeed he confesses in his *diwan* on *Mutawakkil* (l. 28), that he was present, and excuses himself for failing to defend his patrons effectively on the ground that he was unarmed; he did however what he could with his hands. These two he continued to regard as his chief patrons (l. 107, l. 112). After the catastrophe he retired to *Manbidh*, but speedily came forward with a eulogy on *Mutawakkil*, and he continued to officiate as court poet under the succeeding Caliph, *Muhammad*,

Mu'tazz, Mu'tadī and Mu'tamid. He appears to have been in especial favour with Mu'tazz, to whom he addressed numerous odes, and whom he even employed as mediator between himself and 'Alid Aḥmad b. Mu'tazz. It would seem that his powers failed before the end of Mu'tamid's reign.

His success as court-poet naturally brought him into connection with all the leading men of the empire, and of the large number of persons mentioned in his poems the greater number are otherwise known. These include statesmen, such as the viziers 'Uṭayy al-Aḥmad b. Yahya b. Khayyān, Ḥasan b. Muḥammad, Sulaymān b. Wāḥid, and Ism'īl b. Ḥabīb; generals and governors, etc., such as Ibn al-Aḥmad and Aḥmad son of al-Mudabbir; Aḥmad b. Ḥabīb, Malik b. 'Iṣṣāq, and his brother Muḥammad; representatives of state such as Ibn Ḥanān, Abū Nuḥ 'Isa b. Ḥarūth, etc.; the courtiers 'Alī b. al-Muḥallabī and Ibn al-Ḥaṣṣīn; the grammarian al-Muḥallab; the geographer Ibn Khurādādhbih; the historian Abū 'Alī al-Ḥusaynī. The diwan thus forms a welcome supplement to the chronicles of the time, in which it not infrequently adds details, sometimes by giving us the full names of the personages, or others by recording events which the historians appear to have overlooked.

The poems addressed to the Caliphs contain numerous references to the controversy between the 'Abbasids and the 'Alids on the one hand, the Umayyads on the other; only on one occasion, when a Muslim official had been delivered over to a Christian to torture, does the poet wish Umayyad days back. Ordinarily he insists on the claim of the 'Alids to the succession, on the merits of 'Abū al-Aḥmad and his privilege of *al-shay'a*, which the poet seems to interpret quite correctly as the right of obtaining rank (l. 22, 23), the services to Islam of the Parthians, whom he calls *Afrāsiyā*, and their equality with the Arabs, and the services of the 'Abbasids to the 'Alids, which he exaggerates somewhat in the same style as al-Ma'mūn (l. 83). He dwells in detailing palaces, e.g. the ship-palace called *al-Bahār*, three halls by Muṣawwaki, the library of Mu'tazz, those of Mu'tamid called *Ma'ḥall* and *Maḥall*, and the ruined town of the Qasr Fārisīyā, which he visited in the company of his son Abū 'Iṣṣāq, and on which he has an interesting ode (l. 1083); somewhat similar to his description of a workshop (l. 257) and the aqueduct constructed for the benefit of the pilgrims by the mother of Mu'tazz (l. 146). As might be expected, the battles of Mardāsh and his capture with the rebel Zayd are frequent subjects of allusion.

The poems of the diwan show Buḥārī was constantly begging, either for assistance towards his *sharḥ* (l. 108, 127, 189), or for help in the matter of his estates (l. 130, n. 132), or against officials who were attempting to defraud him (ll. 153), and complaining that his remuneration was insufficient (l. 257) or that promises made him had not been fulfilled (l. 222). In the *Agḥān* a singularly ingenious device is explained whereby he raised money, which was to induce friends to purchase his slave-boy Nāṣir, and then complain so bitterly of the pining that the purchaser gave him back; a series of poems addressed to Ḥarūth b. al-Muḥallab illustrate this process (l. 179—181).

Buḥārī is said to have given dying injunctions to the effect that his works should be destroyed, and the author of the *Agḥān* thinks that the best

may have perished; nevertheless a considerable number remain, and it is clear that he employed the common plan of extorting remuneration for his catalogues by threatening to destroy those who refused it; in consequence there are numerous cases in which the diwan contains eulogies and satires on the same personage; at other times (e.g. in the case of Ibn Ṭalāḥ) his attitude varied with political and not only personal considerations. Of his fellow-poets 'Alī b. al-Muḥallab (ll. 38, 90, 107) and al-Ḥasan b. Kadija (ll. 207) form the subject of satires; on the other hand he seems to have been on friendly terms with Ḥabīb (n. 177). He attacks the grammarians in one of his odes (ll. 132) and Christians more than once (l. 90, 113).

Native criticism classifies him with Abū Tammām and Mu'tamid as one of the three chief poets of the 'Abbasid period; and comparison between him and Tammām is a favourite subject of odes. In his own opinion his best was below Abū Tammām's best, and his worst above Abū Tammām's worst; Mu'tamid devoted some pages to the consideration of his subject, and it is treated at length in the *Kitaḥ al-Mawāḥish* by Tammām *ma-l-Buḥārī* of al-Ḥasan b. Naḥr al-Aḥmad, who however is charged with gross favoritism towards Buḥārī. Probably most European writers would find Buḥārī less brilliant than Mu'tamid, yet far more poetical than Abū Tammām.

The *Agḥān* attributes to Buḥārī besides the diwan a work on "poetic places" and a *Ḥamān*, which is preserved in a Leyden MS., and was both familiar and edited in 1904 (see HAMĀN). The diwan was published in Constantinople, 1300, evidently from a MS. of the year 434; the odes are roughly grouped by the persons and families to whom they are addressed, but this arrangement is not consistently observed. A similar copy is in the Vienna Library (Catal. l. 436). The poems were arranged in alphabetical order by Ḥabīb, and part of such a copy exists in the Munich Library (no. 508). 'Alī b. Ḥasan al-Muḥallab (Yaqūt, *Diwan* of *Ennabī*, v. 200) is said to have arranged them excellently in order of subjects (*Fiḥr*, 165). The diwan sometimes bears the title *al-Faḥḥ al-Aḥmad*. Of Abū 'Alī's commentary upon it called *al-Faḥḥ al-Aḥmad* some extracts have been printed in the *Agḥān*. This author (Abū 'Alī) in his *Rasā'ir* (ed. Deane, p. 90) records the curious detail that Buḥārī had 4 "pockets" (n.).

Hisṭoryography: *Agḥān*, xlii, 167—173; *al-Aḥḥān*, (transl. de Blau), li, 657—666.

(D. S. MAXWELL).

BUḤĀ (also written *BUQA*), a Turkish chief of the tribe of Ghuz (Turkmen) is mentioned in Ibn al-Aḥmad (ca. 507 = 1116, and 343) and Naḥḥāḥ (ed. Moḥyī p. 71). Buḥā belonged to that section of this people which had separated from the rest of the tribe in the war of al-Nahī in 420 = 1029 and crossed the border into Khorāsān (see Naḥḥāḥ above, p. 695). By command of Salḥān Shāh who had taken them into his service, these Ghuz were attached to the army of Tāsh-Farrāsh who was sent against 'Alī al-Dawla b. Kākuya (422 = 1031, cf. *al-Mawḥish*); Tāsh had more than 50 of their leaders seized and executed, on account of the robberies which they committed in Khorāsān; on this occasion as in the reign of Maḥmūd, Mu'tad's predecessor, one section of them was massacred; the

others moved to the west and passed through various provinces of Khuzistan in the next few years to Diyar-Bakr, owing allegiance to no one, till they suffered an annihilating defeat from the Arabs of Diyar-Bakr under Kuraish b. Muḥallab (a prince of the Banu 'Uthayl) on the 20th Ramaḡ-jūn 435 = 21st April 1044. During those years they wrought terrible havoc on many towns from Nangūnā to Mawad; the harm done by these nomads however was not permanent, the Ghuzz came and went "like a summer storm"; see Ibn al-Athīr (l.c. 197). BUKA is several times mentioned in the accounts of these marauding central Asia, nomadic chief of a division which returned to Italy from Adherbaldis and plundered it for a second time, and afterwards took part in the siege and plunder of Hamaḡshan. His name is also found in the list of the chiefs who rejected the abrupt offer of Salḡan Taghār-beg, who belonged to the same stock as they did, when he wished to take them into his service. BUKA was also present at the last battle against Kīrghīz, whether he was slain in this battle or was one of those who survived, is not related.

(W. HAMMANN.)

BUKA or **BUKA** (both forms are found), a place first mentioned in connection with the invasions of the Hammadīyah-Mardaites into Syria. The name is again found in the history of the conquests under the Umayyad Caliph Hishām. After its first destruction it was rebuilt and BUKA is mentioned in the 10th century, also the Kurās of Antioch and Thānī; it must have been still in existence in the time of the geographer Yāqūt; we know that it lay not far from Antioch and from the ḡhūd al-Jazīrah (southern Amman); its site therefore is to be sought in 'Amḡ or in that part of the plain of Antioch, to which the name of Dīwān is applied. Its neighbourhood must have been swampy, for in the reign of Walid I. the Zuhī with their huddles were sent from Syria by Hishām and settled here. This description suits the district in which we noticed the little village of Uḡrdjān, the name of which resembles an old Hamaḡshan. It also agrees with the very probable Syriac etymology *buqa* "swamp", which is further testimony to the marshy nature of the district. The population of BUKA was possibly Mardaites.

(H. LAMME.)

BUKA also **BUKA** (A.), according to the lexicon, means a strip of land which is in some way distinguished from its surroundings and is particularly applied to a place where water lies and stagnates. The word, with its diminutive al-Bukā, often appears in the names of places. — The plural al-Bukā is the name of the long plateau, with an average height of 3000 feet, which forms the central part of the great Syrian depression between the mountain masses of Lebanon on the one side and Hermon and Anti-Lebanon on the other which, according to a theory now rejected, put forth by Th. Nöldeke in *Hermon*, v. 167, had given its name to the *Kafir Syria* "Holme Syria". The word al-Bukā has often been connected with the Hebrew *ḡuf*, "Cham,

valley" and even with the name Baḡbak (l.c. 7.), the largest town in the district. For the explanation of the name — in accordance with the meaning of the Arabic — one might rather point to the marshy district situated between Karak Nuh and 'Alī al-Jazīr (the modern Amḡ), which was drained and settled by Trajan, governor of Damascus about 1350 — al-Bukā belonged to the *ḡhūd* of Damascus from quite early times. In the Hamaḡ period, the district was divided into two administrative districts, al-Bukā al-Baḡbakī in the north and al-Bukā al-'Asīr, with its administrative centre at Karak Nuh, in the south which belonged to the northern frontier province (*ḡḡḡḡ*) of the *ḡḡḡḡ* of the *ḡḡḡḡ*. Arab authors derive the name al-Bukā al-'Asīr from al-'Asīr (l.c. 7., p. 540) son of ḡḡḡ al-Dīn but modern scholars from the name of the God 'Alī (see Pauly-Wissowa, v. 7.). The numerous sanctuaries, such as the *ḡḡḡḡ* of Nuh, ḡḡḡ Nuh, and Nuh ḡḡḡ may perhaps justify the conclusion that the place once had a peculiarly sacred character. According to the modern Turkish administrative division, Baḡbak and BUKA al-'Asīr (with its seat of administrations in ḡḡḡ ḡḡḡ) are two ḡḡḡ of the Sanjak of Damascus.

(H. HAMMANN.)

BUKAR or **MAHAR** ABBAS, one of the most zealous propagandists of the 'Abbasids. Bukar was originally employed as secretary or interpreter with Hishām Abī al-Mahmūd, governor of India when the latter was dismissed. Bukar went to Kufa in 105 (723-724) where he was man over to the 'Abbasid faction and placed his great wealth at their disposal. After the death of the 'Abbasid emir al-Mahmūd, he was entrusted by Muḡammad b. 'Alī, the leader of the 'Abbasids, with charge of the propaganda in Iraq. He displayed particular ability and energy in his efforts to win over the people of Khuzistan to the 'Abbasid party. In 107 (725-726) he sent several agents to this province; they were seized and executed, however, by the governor 'Asad b. 'Abd Allāh, only one, 'Amr al-'Abbasī, being able to escape by flight and return to Bukar. In the following year he is said to have made another attempt which ended in the execution of 'Amr and the flight of those accompanying him; but he appears to be merely another version of the preceding story. In 108 (726) Bukar appointed 'Amr b. Yāzīd to take charge of the 'Abbasid propaganda in Khuzistan; the latter added to Marw, took the name of Khidāsh and eagerly threw himself into the task of winning adherents for Muḡammad b. 'Alī. At first he met with great success, but when he adopted the doctrine of the Khuzistan and preached the coarsest immorality and irreligion, he was seized by 'Asad and executed with the cruellest tortures. Another consequence of his agitation was that Muḡammad b. 'Alī was incited against the followers of Khidāsh and broke off relations with them. To appease him the latter sent Sulaymān b. Kaḡhīr to him in 120 (738) when he returned, Muḡammad gave

him a letter to take with him which only contained the words *Allah* *Lahu* *Tawakkul* *Urahim*. He also sent Bukair to Khurasan openly to deny the doctrine of Khidshah. Bukair, however, was received with suspicion and had to return with his object unaccomplished. Muhammad then sent him again to Khurasan, and gave him with him a number of letters, some of which were shed with iron and others with copper. When Bukair divided the sticks among the leaders of the factions, they saw their mistake and were converted. In 124 (741-742) Bukair was seized and imprisoned; meetings were being held in a house in Kufa and he the chief agent of the Abbassid propaganda. Bukair was held mainly responsible. Even while in prison he worked for the Abbassids and succeeded in winning 'Abd al-Malik to their cause. The latter had a slave named Abd Muslim, the future general and governor of Khurasan. According to some accounts Bukair taught him from his and gave him to Ibrahim, son of Muhammad b. 'Ali; but the exact details of the emancipation of Abd Muslim are not certainly known. In 126 (743-744) Bukair was commissioned by Ibrahim to go to Khurasan to announce the death of Muhammad to the adherents of the Abbassids and proclaim Ibrahim as his successor. After receiving the homage of the people of Khurasan on behalf of Ibrahim, Bukair returned, bringing with him the money that had been collected in Khurasan for the Abbassid cause. Bukair died in 127 (744-745). On his deathbed he recommended 'Abd Salama Hafsi b. Salama as his successor. This was confirmed by Ibrahim and Abd Salama was recognized as his plenipotentiary.

(K. V. ZETTERSTEDT.)

BUKAIK a. *Wazir*, Governor of Khurasan. In the war between 'Abd Allah b. Khalaf governor of Khurasan and the Tammimite, Bukair is often mentioned. Ibn Khuraym was a supporter of the rival Caliph 'Abd Allah b. al-Zuhri and rose against the Umayyads. As he had made his position secure, he began to oppress the Tammimite, who were scattered throughout Khurasan. When the latter appealed to 'Abd al-Muhammad in Herat, whose mother was a Tammimite, Ibn Khuraym wrote to Shammuk b. Dihaz and Bukair b. Wazir, his lieutenants in Herat and ordered them to drive back the Tammimite. Shammuk, however, went further also, while Bukair sought to carry out the order but as the end could not prevent the Tammimite from entering the town and slaying Muhammad b. 'Abd Allah b. Khalaf. In 72 (691-692) when Ibn Khuraym refused to take the oath of fealty to 'Abd al-Malik, Bukair was appointed governor of Khurasan by the Caliph. Ibn Khuraym then advanced against Marv, but was challenged by Bakir b. Wazir and a battle ensued in which the former was slain. Bukair now wished to take the credit for the death of Ibn Khuraym and threw Bukair into prison. As the population of Khurasan was afraid of renewed anarchy, they refused to have a Kharajite governor and Bukair was therefore deposed in 74 (693-694) and Umayya b. 'Abd

Allah b. Khalaf, appointed his successor. Bukair was then set free and became reconciled with Bukair. In 77 (696-697) Umayya equipped an expedition against Bukair and placed Bukair in command of it. As he had, however, been warned against Bukair by Dihaz, he took the fight himself, taking Bukair with him and leaving his son behind in Marv. As soon as Umayya had crossed the Oxus, Bukair set the boats on fire to make his return impossible and hurrying back to Marv, declared himself independent and threw Umayya's son into prison. Umayya was thus forced to make peace with the people of Bukhara and advance against Bukair. According to another account, the latter never went with Umayya, but remained in Marv during the campaign. In any case, his rebellion ended in Umayya's having to grant him honorable terms of surrender. Among other points he promised no longer to pay attention to the defamatory statements of Dihaz. Nevertheless Bukair was accused of treason at the inauguration of Ishaq and executed in the same year.

BUKALAMUN. (See also *GASAMUN*, p. 96.)

BUKHARA, a city in FURKHAN, on the lower course of the Zarafshan. We have only the scantiest notices of the history of the city in pre-Mohammadan times. There can be little doubt, however, that the Iranians had settlements and even towns on the Zarafshan at a very early period; even in the time of Alexander the Great of Macedon there was another town in Sogdiana besides Marakanda (Samarkand) on the lower course of the river; but whether this town corresponded to the modern Bukhara may be questioned. Local tradition in the early centuries of the Muslim domination counts other settlements in the neighbourhood as "older than Bukhara"; one of these, the village of Ramiyan, Ramiyan, or Ariamitthan (the modern *Qashgharia* or *Samarkand*) is regarded by Moqaddasi (ed. de Goeje, p. 282) as the "ancient Bukhara" (*Bukhara* *al-Badamiya*).

In any case a city was founded on the site of the modern Bukhara several centuries before Islam. From the 6th century A. D. onwards, this town is known to Chinese writers as *Na-na*, which corresponds to the ancient name *Namniyaka* which survived into Mohammedan times. The name *Bukhara* (Chinese *Pu-ho*) seems to be first given by the Chinese pilgrim Hsuan-tsang (about 630). That the name, as has been suggested, is identical with *Baktra*, the Greek-Bactrian form of the Sanskrit word "monastery" is not impossible, the same explanation is given in the 11th century by Li-shwan (ed. de Goeje, in Schlegel, *Chinois*, p. 122). In any case there was a Buddhist monastery at Bukhara as at Balkh and Samarkand; indeed the notices on the topography of the town in the 12th (13th) century which are quoted below enable us to fix its size approximately.

Of the native (or possibly Turk) dynasty of the Bukhara-Khanda (or Bukhara-Khanda), princes of Bukhara which ruled here before the Arabs, we only know from Chinese sources that one of these princes reigned about 627 A. D. that his ancestors

had been ruling the land for 22 generations. The remainder of our information about the Bukhar-Khuda is obtained from historians of the Muhammadan period. Besides the information contained in works on universal history or in the literature of the conquests, we also possess, although only in later recensions, a separate history of the town, composed in the year 332 = 943-944 by Muhammad Narsakhli, this work contains much valuable information and is especially valuable for the historical topography of the town; nevertheless what Narsakhli tells us about the pre-Muhammadan history of Bukhara obviously rests on no very reliable tradition. It is, for example, more than doubtful whether Narsakhli had any evidence for his statement that the Bukhar-Khuda who first struck coins in Bukhara was a contemporary of the Caliph Abd al-Malik (i. e. 632-634 A. D.).

The ~~history~~ of the first Arab conquests in the Transoxiana are also partly legendary and still require critical examination. The first Arab army is said to have appeared before Bukhara in 34 = 674 under 'Uthman Allah b. Ziyad. The ruler of Bukhara at that time was a woman, the widow of the late prince, who is usually called Khatun (Turk. = "Woman"); in Tabari, ii. 269 in place of her, Khatun is mentioned, not as a widowed princess of Bukhara but as the wife of the reigning king of the Turks. According to Narsakhli (cf. Schiefel, p. 7) she ruled 15 years as regent for her infant son Tughlakh (in Tabari, iii. 1693 Tughlakh; but this Bukhar-Khuda appears again in Tabari as still a youth in 91 = 710, when Khatun b. Muslim after overthrowing his ~~son~~ ~~son-in-law~~ installed him as prince of Bukhara. The rule of Islam in Bukhara was first placed on a firm footing by Khatun. Even Tughlakh, adopted Islam as at least pretended to and ruled for 30 years afterwards in Bukhara. In Ramadan 121 (11th Aug. - 9th Sept. 739) he was murdered by two nobles in the camp of the governor Naq b. Sa'ayr al-Samarkandi. During the long reign several rebellions against the Arab authority took place and the Turks invaded the country several times; in 110 = 728-729 the town of Bukhara itself was lost to the Arabs and they had to besiege it but regained it next year (Tabari, ii. 1554 and 1559). What attitude Tughlakh took up during these wars, is unknown.

His son and successor, called "Khatun" in honour of his conqueror, behaved at first like a good Muslim and earned the gratitude of the House of the Prophet; when in 133 = 750-751 the Arab Malik b. Shihab raised a revolt in Bukhara against the new dynasty of Caliphs, the rebellion was put down by Ziyad b. Salih who had been sent thither by Abd Muslim, with the help of the Bukhar-Khuda. Nevertheless the Bukhar-Khuda was at a later period accused of apostasy from Islam and put to death by order of Abd Muslim. His brother and successor Husayf (the reading is not certain) met the same fate during the reign of the Caliph al-Mahdi (159 = 775-785) but the Caliph had him put to death as a follower of the heretic al-Muhammadi. After this period the Bukhar-Khuda appear to have been of little importance in the government of the country but they held an influential position on account of the great estates in their possession. In the early years of the reign of the Samanid Isma'il, while his brother Naq was still alive,

mention is made of the Bukhar-Khuda. Abu Isma'il Isma'il deprived the latter of his lands but he was to be allowed the same income (200,000 dirhams) from the ~~land~~ treasury, as he had previously derived from his estates. How long the government fulfilled this obligation to the Bukhar-Khuda or his successors is not related.

Besides the native prince, the Bukhar-Khuda, there ~~was~~ of course, in Bukhara from the first years of the conquest (at least from the time of Khatun b. Muslim) an Arab Emir or 'Amir who was subordinate to the Emir of Khwarizm, whose headquarters were in Maw. The account of his geographical situation, Bukhara was much ~~more~~ closely connected with Maw than with Samarkand and the other towns of Ma wara' al-Nahr; the Bukhar-Khuda had even a palace of his own in Maw (Tabari, ii. 1888. 145 1087; 1092 113 in the 11th century is ¹⁴) also when the Emir of Khwarizm transferred their ~~seat~~ to Nishapur, the administration of Bukhara remained separate from that of the other parts of Ma wara' al-Nahr; till 260 = 874, Bukhara did not belong to the Samanid territory but was under a separate governor, immediately responsible to the Tahirids; the successors of these governors at a later period also had their palaces in Maw (Ispahani, ed. de Goeje, p. 280). After the fall of the Tahirids (290 = 873) the answer Ya'qub b. Laith was recognized only for a brief period in Bukhara as Emir al-Shirvan; the clergy and the populace applied to the Samanid Naq b. Ahmad, who was ruling in Samarkand and he appointed his younger brother Isma'il governor of Bukhara. Bukhara henceforth was ruled by Isma'il and his successors till the fall of the Samanids. Isma'il continued to live in Bukhara, after the death of his brother, Naq in 279 (892) when the wife of Ma wara' al-Nahr passed under his sway and also after his victory over 'Amir b. Laith in 287 (900) when he was confirmed by the Caliph in the rank of Emir al-Khwarizm. The city thus ~~remained~~ the seat of a mighty ruling house and the capital of a great kingdom (the officials also had their residences in Bukhara) although it never equalled Samarkand, the ancient capital of Ma wara' al-Nahr in size or wealth during this period.

The Bukhara of the Samanid period is described in detail by the Arab geographers of the 9th (10th) century; we also own much information in Narsakhli and later editions of his works. A comparison of these accounts with the descriptions of the modern town (particularly through in Khankhan, *Opisaniye Bukharskogo gosudarstva*, St. Petersburg, 1843, p. 29 et seq.), shows clearly that in Bukhara, unlike Maw, Samarkand etc., only an expansion of the area of the town and not a shifting of the town from one place to another, may be traced. Although Bukhara has been at little spared by fire and sword as the other cities of Central Asia, it ~~has~~ always been rebuilt on the same site and on ~~the~~ same plan as in the 10th (11th) century. It is thus much easier to understand the original conditions in the city. We can rarely trace the development and the topography of a medieval town so distinctly as here.

As to most Iranian towns, the Arab geographers distinguish three main divisions of Bukhara: the khuda (Pers. *khandah* = "ancient fortress", usually written *khandah* in Arabic and afterwards contracted to *khand* or *khandu*); the original ~~town~~ ~~city~~ (Arab. *madina*, Pers. *dashiristan*)

and the suburb (in Persian works also only the Arabic name *rahiy* is applied to it) lying between the original town and the new wall which has been built in Muhammadan times. The citadel from the earliest times has been on the same site as at the present day, east of the square still known as in the Samanid period, as "Rahman": two gates led into the fortress at the present day there is only one, from the Raghistan side, the "Rahman Gate" on the west and the "Friday Gate" or "Gate of the Friday-Mosque" on the east; a street led from the one gate to the other. As the area of the citadel was naturally limited by the river on which it was built, probably no alterations have been made to it from the earliest times; it is now about 1 mile in circumference and has an area of 22 acres. Within the fortress, probably on the site that is now occupied by the palace of the Emir of Bukhara, was the palace of the Rukhsh-Khan. This building is said to have been erected in the 11th century A.D. before the conquest; it was supported by seven stone columns, which represented the constellation of the Great Bear (*Qutb al-Arṣ*). Above the gate of the palace was fastened an iron plate with the builder's inscription. According to an old popular belief no prince has ever fled out of this palace before an enemy or has ever died within its walls; death overtook them all while without it. The translator of the *Tarikh-i Rukhsh*, Ahmad al-Khawarizmi (wrote in *Ummat* I 322 = May 1878) says that the palace was first destroyed in his lifetime and the plate with the founder's inscription perished also. An *Iskhat* shows (p. 306 above) it was however still being used by the Samanids; the later Samanids did not inhabit it; according to *Maqbulat* (p. 289, v) they had only their treasures and their prisons there besides the palace there was in the citadel the oldest Friday Mosque, erected by Kutulba; a temple of idols (*Atiq al-Hind*) is said to have occupied the site previously. When the ancient mosque was replaced by a larger one, the old building was used as a revenue office (*Ummat al-Kharaj*). The citadel was several times destroyed in the 14th (13th) and 15th (14th) centuries and rebuilt; the last remains of the ancient buildings destroyed in 1360 = 1164-1165 and used as building material to repair the town-walls.

Unlike most other towns, the citadel of Bukhara was not within the Shahristan but outside it; between them, to the east of the citadel, was an open space where the Friday Mosque stood from the second half of the second (7th) century to the 14th (13th) century. What part of the modern town corresponds to the Shahristan may be exactly determined, for, according to *Iskhat* (p. 307), there was no running water on the surface either in the citadel or in the Shahristan on account of their high situation. According to the plan given by Khunlikhan in his book, this high-lying portion of the town is about twice as large as the citadel; it is of course long since it was surrounded by the separate wall which encompassed it in ancient times. This wall had seven gates, the names of which are given by *Narshakhi* and the Arab geographers. As was the rule in Central Asia the market place in pre-Muhammadan times was without the city walls, before the gate which in later times was called the "Spice Gate", but which *Narshakhi* still calls "The Gate of the Spice-

Merchants" (*dar al-Tijarat*); while the Arabs called it the "Iron Gate" (*dar al-Hadid*); it is probably to be sought for on the east side of the town.

We have the express testimony of *Narshakhi* (p. 29) that at the time of the conquest the whole town (*shahr*) consisted of the Shahristan alone, there were a few separate palaces and small settlements outside but these had not yet been linked up, as they were later. *Narshakhi* gives us a fairly exact account of the topographical details of the Shahristan and it would probably be possible to determine which of the streets of the modern town correspond to the streets mentioned by him; we are as yet, however, investigating this point. Unlike most other towns, the Shahristan of Bukhara partly retained its earlier importance as a later period after the extension of the boundaries of the town. A new Friday Mosque was built by Ahmad Khan Muhammad b. Sulaiman in the year 313 (1121-1122) in the Shahristan, probably in the southern part of it where the chief mosque with the Madrasa Mir-i Arab built in the 12th (11th) century and the great Madrasa still stands.

It was not till the Muhammadan period that the Shahristan was linked up with the suburbs to form one town and surrounded by a wall, according to *Narshakhi* in 233 (849-850). By the 14th (13th) century another wall had been built close to the old one, enclosing a greater area. Each of these walls had, like the wall of the present town, 21 gates; the distance between the gates of the inner and outer walls is, unfortunately, not given, otherwise we might be able to determine how far the development of the town had been furthered by its elevation to be capital. The question how far the names given by the Arabs to the city-gates correspond to the modern names, can be readily answered with certainty. One gate, the "Samarkand Gate", the gate on the north, bears the same name at the present day as did the corresponding gate in the Samanid period; the other names may be easily identified. The gates of both walls are given by *Iskhat* in their proper order on the outer wall to be begun with the "Gate of the Square" (*dar al-Madina*) on the southwest, through which one came on to the road leading to Kharkand (the modern Karkand Gate); thence passed on to the Dar al-Hind, immediately to the east (the modern Gate of *Shakh* (*Shah*)) and round by the south-east, north, and west sides. In detailing the inner gates he begins with the Samarkand Gate on the north but does not state in which direction the next mentioned gate lies from this one so that the order of succession cannot be determined with the same accuracy from the Arabic text. *Narshakhi* (p. 93 = 127), however, in his account of the configuration of the year 345 (952) gives us the clue, as to which of the gates mentioned by *Iskhat* were north of the main canal and which to the south. Since the canal, as is clear from *Maqbulat* (p. 339) corresponds to the canal which flows through the town at the present day (the Kellabad Gate corresponds to the modern Karkand Gate on the east side of the town), the task of locating the sites of these gates is considerably lightened by this statement of *Narshakhi*: it is clear that *Iskhat*, in the case of the inner wall also, went to the east from the Samarkand Gate and given the names of the remaining gates of the inner wall in the order of

accession of the east, south and west sides.

The identification of some of these basins is also of importance for the understanding of the accounts of the early history of the town. The "Nawbahār" from which a gate on the outer wall (the modern "Maḥṣār Gate") had taken its name was apparently a Buddhist monastery; it is a remarkable coincidence that at the present day, the way to the most important Muhammadan Sanctuary in the neighbourhood of Bakhār, the tomb of Bakā' al-Dīn Naqshband, who died in the VIIIth (eighth) century, lies through the same gate (whence its name also). It cannot quite be determined what connection the places called Nawbahār, which, according to Iyāḥūtī, were in the Shāhristān as well as in the suburbs, had with this monastery.

The gates on the inner walls, in the south-east part of the town, were called after the "Mosque of Maḥṣār" so that we can approximately determine the site of this sanctuary also. As Nārshakhi (p. 49) tells us, the mosque was built on a site which had first been dedicated to the worship of idols (probably some Buddhist cult or manna) and later the worship of fire; whether, as Christensen (*Oriens. Litt. Zeit.*, vol. 48 of 1894) supposes, the word Maḥṣār is to be taken as a dialectic form for Maḥṣār "moon" or the cult was originally connected with the worship of the moon is doubtful. Nārshakhi (born 1286 = 699) says that even in his lifetime "idols" were offered for sale here on two fixed days of the year. Probably these were little clay figures of the kind that are frequently dug up in Samarkand; in the 13th (thirteenth) century they must have been merely regarded as toys.

Of the other gates of the inner wall, the "Gate on the Road of the Magi" (*Abd al-Rahmān*) in the north-west of the town, ought to be mentioned. This was probably the quarter of the town which as late as the Samanid period still bore the name of "Palace of the Magi" (*Maḥṣār al-Magī*). According to Nārshakhi (p. 28 of 1894) after the conquest the rich merchants, the Kaḥṣ-Kaḥṣ, settled in this part of the town. According to the agreement with Kutāiba the inhabitants had to give up half of their houses and estates (*ḥiṣṣa*) to the Arabs; this treaty appears, however, only to have referred to the town proper, the Shāhristān. The Kaḥṣ-Kaḥṣ preferred to leave their houses in the Shāhristān entirely, leave them to the Arabs, and to build 300 palaces in the neighbourhood for themselves. Before every palace there was a garden, and the servants' houses; in the time of Abū Maḥmūd, this settlement had a population more numerous than the town itself (Nārshakhi, p. 62). These palaces are said to have been destroyed in a popular rising; their gates which the owners had depicted their "idols" were used in the buildings erected to extend the Friday Mosque. The above mentioned Abū Maḥmūd says that one of these gates was still to be seen in his time (VIIth = eighth century, Nārshakhi p. 47 of 1894).

Besides the palace to the citadel the princes of Bakhār in pre-Muhammadan times had their palaces in the Rīgīstān also. In later times the Samanid Nārshakhi (301—331 = 914—943) built a palace there; accommodation for the ten state chamberlains (*ḥakīmān*) the names of which are given by Nārshakhi (p. 24) was provided for in the buildings before the palace gate. During the

early years of the reign of Maḥmūd b. Nūh (350—365 = 961—976) this palace is said to have been entirely destroyed by fire and over afterwards rebuilt; Maḥmūd, however, tells us that the al-Bukhārī was still standing on the Rīgīstān opposite the citadel; he had never seen such a fine building in any other part of the Muhammadan world; till the year 360 (971) the Rīgīstān was also used as a *maḥṣār* (Pers. *maḥṣār*).

During the Samanid period, there appears to have been another royal palace on the Rīgīstān Maḥmūd Canal lying not far from the Citadel and the Rīgīstān on the north side. This palace was built by Maḥmūd b. Ahmad and fell into ruins after the fall of the dynasty.

In the reign of Maḥmūd b. Nūh a new *maḥṣār* had to be prepared as the Rīgīstān could not contain the multitude of believers on these occasions. The new place of prayer was built in 360 (971) at a distance of $\frac{1}{2}$ (farsakh) ($\frac{1}{2}$ —2 miles) from the citadel on the road to the village of Samarkand; unfortunately we know nothing further about the situation of this village. According to ancient custom, the people attended such assemblies armed, as the custom of carrying arms still prevails in the *maḥṣār* al-Nah in the Samanid period (Iḥṣār al-Ḥadīth, ed. Amelroz, p. 402).

Between the citadel and the Shāhristān close to the Friday Mosque was a large weaving establishment (*ḥarṣā* also called *ḥall al-ḥarṣā*) the products of which (carpets etc.) were exported as far as Syria, Egypt and Rome according to Nārshakhi, p. 28. What Maḥmūd, p. 324, tells us about the exports from Bakhār, testifies to a great development in trade and industry; even the term (*ḥarṣā al-ḥarṣā*) manufactured in the prisons (*al-Jawāḥir*) was exported.

Even in the 13th (thirteenth) century the town was thought to be overcrowded and unhealthy, with bad water, foul air etc. The streets were broad yet there was not sufficient room. Considering the large number of inhabitants in the town, Maḥmūd and some of the poets (Fāḥmūd al-Dārī, iv. 8 of 1894) describe the defects of the town in the most scathing fashion; in Maḥmūd Bakhār is the "cesspool of the district". Among the defects of the town enumerated by Maḥmūd, the danger from fire is emphasized. Apparently in his time much more of the town was built of wood than is now the case; even the upper part of the minaret on the chief mosque was built of wood as in 460 (1068), when two pretenders to the throne were fighting for the possession of the citadel, the tower was set on fire and the flames spread to the chief mosque which also perished. When the tower was rebuilt after this calamity, it was built entirely of brick for the first time in its history (Nārshakhi p. 49).

Nārshakhi and the Arab geographers give us full particulars of the country (*ḥawṣa*, plur. *ḥawṣāt*) round Bakhār. In Iyāḥūtī, (p. 30) the names of the canals which led from the Zamīnshāh to water the fields are given; according to Nārshakhi, some of these canals were first formed in the Muhammadan period. Many of these names have survived to the present day as Stojakowski has shown (in the *Geograph. Anzeiger*, 1910, Vol. II, part. I, p. 136 of 1894). It would be of importance for the investigation of the surface conditions of Central Asia and the

changes which have taken place in historic times, if we could prove that the citadel, which date from pre-Muhammadan times, now is markedly deeper beds than those of a later date; this point has however, not yet been investigated.

It is to Stankowski also that we owe the establishment of the fact that traces still survive of the long walls which were built to protect the town and its suburbs from the incursions of the Turks in the 'Abbasid period. According to Narshakhi (p. 202 et seq.) these walls were begun in the year 166 (782-783) and only completed in 225 (830); whether, as Stankowski (*Taukhis*, p. 65) tells us, it was rather the renovation of an old wall that was carried out in this period, is doubtful, although similar edifices had been erected in quite early times in Central Asia, as the description of Margiana (in the district of the modern Mary) to Strabo (Chap. 516) shows. The town itself was not in the centre but in the western half of the new enclosures within the walls; the village *Taukhis*, for example, 7 farsakh from Bukhara on the road to Samarkand was within the walls (Iqbal, p. 313); while on the road to Khwarizm the gate of the wall was only 3 farsakh from Bukhara (the Khwarizmshah, ed. de Sluze, p. 25 and *Taukhis*, loc. cit.). Of the villages lying south of Bukhara, *Zandana* (4 farsakh from the city) and *Mughana* (3 farsakh, cf. Iqbal, p. 313 and 315) were within the walls. We are nowhere told how far the walls extended to the south of the town; it is not even certain whether the district on this side had to be protected by such defences. After the time of Isma'il b. Ahmad, who is said to have declared: "As long as there is life in me, I shall myself be a rampart for the defence of Bukhara", the walls were no longer kept in proper repair. At a later period the ruined walls were given the name *Kanjarak* (probably to be read *Kanjarak* "old woman"; remains of these ancient fortification, still bearing the name *Kanjar-Durrah* (Wall of Old Woman) have survived in the present day in the north-east, on the borders of the steppe between the cultivated areas of Bukhara and Katmina (Pentakht *Turk*, *brutka* *trub*, *avskodaga*, III 89 et seq.).

The entrance of the *Nasr* b. 'Ali into Bukhara (1001) Abu 'Ubayd 387 = 2311 (Oct. 999) put an end to the Samanid kingdom, although the conquerors had still to struggle for the mastery with Isma'il al-Musafir, the last representative of the dynasty, for the next few years (1001-395 = 1004-1005) and were even driven out again for a brief period from the former capital of the kingdom. On the fall of the Samanids, the town lost much of its earlier political importance; it was henceforth usually governed by princes or governors and did not again become capital of a kingdom in the 11th (xith) century. Only a few of the *Ukayyir* or *Karakhanids* lived in Bukhara and erected buildings there. In the second half of the 11th (xith) century, the *Khaw* *Shams* al-Mulk *Nasr* b. *Musha* built a palace for himself to the south of the city and prepared a hunting-ground; this "*Shamsabad*" was allowed to fall into ruin after the death of his successor *Khaw* *Shams*; in the reign of *Arslan* *Khaw* *Mahmud* b. *Safidin* a *uzbaki* was made of the hunting-ground in 513 (1119-1120); it is still used for this purpose in the present day. Many

other buildings in Bukhara are ascribed to the same prince (cf. Narshakhi, p. 23 and 26) and also what is stated above about the chief mosque. We are also told that *Khaw* *Shams* *Khaw* *Mahmud* repaired the walls in the year 300 = 1165.

Even during the period of its political decline, the town retained its reputation as a stronghold of Islam and centres of religious sciences. Already in the 10th (xth) century famous scholars like the author of the *Kitab al-Furugh* had arrived in Bukhara and the neighbourhood in the 11th (xith) century, a prominent family of scholars afterwards known as the *Ukayyir* (see above), succeeded in founding a kind of hierarchy in Bukhara and making the town and the lands adjoining it, for a time at least, quite independent of its enemies. When, after the battle of *Kajwan* (310 = 923 Sept. 1121) the Turks had had for the first time since the Muhammadan conquest, to submit to the rule of a non-Muslim power, the *Kar* *Khilaf*, the *Sade* *Khilaf*, *Sade* of Bukhara succeeded in maintaining his influence in spite of this enemy also. *Sade* *Khilaf* al-Tan *Qutub* b. *Ali* al-Aziz had been slain at the taking of the town; nevertheless *Sade* *Khilaf* al-Aziz, apparently a brother of the preceding, was made adviser to the governor appointed by the conquerors (*Kitab al-Furugh*, p. 278, and *Kitab al-Furugh*, ed. *de Sluze*, p. 25). *Khilaf* al-Aziz (3205) makes the son of the daughter of *Mahmud* b. *Qutub* in 359 (1165-1166) prince in no mean fashion the moderation of the victors. The *Khilaf* had to seek refuge with their conquerors when they were driven out of Bukhara in the early years of the 12th (xiith) century by a popular rising and their goods were confiscated (*Kitab al-Furugh*, ed. *de Sluze*, II 385).

At the head of the revolt was, *Khilaf* tells us, a man of the *ar* *Khilaf*, son of a ruler of *Khilaf*, *Khilaf* *Khilaf* who caused to be shamefully handled the prominent men of the town (*Kitab al-Furugh*). The leader of the movement ruled the town as an independent prince for a time under the title of "*Khilaf* *Khilaf*"; *Khilaf* however soon (364 = 1271) passed under the rule of *Mahmud* b. *Tahiri*, *Khilaf* of *Khilaf*. The town which had been since already held for a brief period by *Mahmud*'s predecessors, remained during the following years, probably with some interruptions (during the last efforts and *Khilaf* of the leader of the *Khilaf* *Khilaf*) under the rule of the *Khilaf* of *Khilaf*, who renovated the citadel and carried out other building operations.

When the kingdom founded by *Mahmud* was overthrown by the *Khilaf*, Bukhara was one of the first towns to have to submit to *Khilaf* *Khilaf*, according to the *Kitab al-Furugh* (ed. 239) on the 4th *Khilaf* *Khilaf* 516 = 10th Febr. 1220; the citadel was not taken till 12 days later. While the town was being sacked by orders of the victor, a conflagration broke out and the whole town with the exception of the Friday Mosque and a few palaces, built of brick, perished in the flames. Bukhara was recovered from this calamity and is mentioned in the reign of *Ugdel*, *Khilaf* *Khilaf*'s successor, as a large and populous town and seat of learning. In the year 516 (1220-1221) the town was exposed to a new danger by a popular rising, which was directed as much against the well-to-do classes

against the Mongols; Mahmud Vainakh, the governor who lived in Khankhad, was obliged to withdraw the victors from the town on the impression of the revolt. According to the account of Juvaini (cf. the text in Defrémery, *Jour. asiat.*, 1848 Ser. 3, p. 392, and in Schefler, *Chrestomathie Persane*, II. 127 ff. 1893) our only authority for this happening, this rebellion was not as had happened 30 years previously, among the artisans but among the country people.

We have no reliable particulars as to how the town and its lands were governed during the early years of Mongol rule. In Juvaini's account of the life of the Highar Khakha (cf. Juvaini, *Histoire des Mongols*, II. 107 ff. 1893) Sayin-Balikha is mentioned as prince of Khakha, but nothing further is known about him. According to Wajsf (cf. Hammer, p. 25, Indian edition, p. 19), in addition to the Mongol Khakha, a certain Chongga-Tash, apparently a Chinese, is mentioned as commander in Samarkand and Khakha since the time of Genghis; this probably explains the fact that during this period, copper coins were struck in Khakha with Chinese inscriptions. At the same time, Mahmud Vainakh and later his son Mas'ud-Beg (see *Shih-King*, p. 729) both Muhammadans of Khakha, had also a share in the government of Ma-wan al-Nah. Although the Muhammadan clergy had taken a prominent part in the defence of the land against the Mongols, and even in a later period remained hostile to their conquerors, Shites and Sanyals, like the priests of other religions were exempted from all taxation in the Mongol kingdom. Even more remarkable is Juvaini's statement (cf. also Juvaini, *Histoire des Mongols*, II. 207) that Siyackkent, a Christian, and another of the great Khans, Mongke and Khubilai, built a Madrasa called the *Kadhiya* in Khakha at her own expense, the famous scholar Saif al-Din Na-khat (died *Shih-King* 659 = 27th Sept. - 26th Oct. 1295) was appointed its mudarris and master, while Mas'ud-Beg also built a Madrasa, which was called after him, Mas'udiyah, in the "square" of Khakha, probably the Highgate; these two institutions nearly 500 students were maintained.

On the 2nd Rajab 671 (26th January 1273) Khakha was taken by the Mongols of Persia under Nikpal-Bahadur, Ulugh Atabak's general (p. 4, v. 4), and plundered for seven days in which almost the whole town was destroyed by fire and sword and the population almost exterminated; three years later, the remaining inhabitants of the little that was still left them taken by the Chagatai chief Chah and Kayan. Such a calamity had never before visited the town; as Wajsf (cf. Hammer, p. 148, Indian edition, p. 78) says, there was no living soul in Khakha for the next seven years; it was not till about 1283 that measures were taken by Mas'ud-Beg by command of the Khakha to rebuild the town and bring back its inhabitants. The Mas'udiyah, which had been destroyed in 671 (1273) was rebuilt and its founder was buried in it (Shahwal 686 = 13th Oct. - 15th Nov. 1289) (Juvaini, *Shih-King* in Barthold, *Turkistan v. asien central*, 1893, p. 139). The town was again ravaged in Rajab 716 (19th Sept. - 18th Oct. 1316) by the Mongols of Persia and their ally the Chagatai prince Yeskwar; many of the inhabitants of Khakha and other towns were carried off by force

and sent to the lands to the south of the Oxus (cf. Juvaini, *Histoire des Mongols*, II. 567 et seq.).

Khakha seems otherwise to have been of no importance in the political life of Ma-wan al-Nah under the rule of the house of Chagatai (p. 4, v. 4) or later under Timur and the Timurids. There is much information on the busy political and religious life of the town, before and after this period, in the *Kitab al-Makharid*, which is practically unknown in Western Europe while numerous manuscripts of it exist in Russia; it is the work of Ahmad b. Muhammad, called Ma'in al-Fakhar (wrote probably in the 12th - 20th century, cf. the extracts in Barthold, *Turkistan* etc., I. 266 et seq.); on Ma'in al-Fakhar Nakhshband (died 791 = 1389), his teachers and pupils and the Nakhshbandi order of Dervishes founded by him cf. especially the *Khawass* (see al-Bihar of Hamid al-Khalifi (cf. *Shih* in the *Shih-King*, *Shih-King* 685) (died 853 = 1449) famed as a patron of learning also built a Madrasa in Khakha on the (left) side of the town).

Towards the end of the year 905 (in the summer of 1500) Khakha was taken by the Uzbeks under Shaitan Khan and has since remained in their power except for a brief period after the disastrous defeat of the Uzbeks at Maru (918 = 1510). As in all other kingdoms the dominions of the Uzbeks were regarded as the property of the whole ruling family and divided into a number of small principalities; Samarkand still remained the capital and residence of the Khan (usually the oldest member of the ruling house); but the prince who was elected Khan always retained his hereditary principality. Usually lived in his former capital and actually paid more attention to the town he resided in than the official capital of the kingdom. The most important places of the house of the Khakha: Ishaq Allah b. Mahmud (in Khakha from 918 = 1512, died 946 = 1539) and 'Abd Allah b. Iskandar (in Khakha from 954 = 1557, died 1000 = 1593) had their capital in Khakha.

Both princes for long allowed older members of the ruling house to bear the title of Khan but they also practically held all the rights of sovereignty; through their prominence their capital Khakha became a real centre of political and intellectual life. The princes of the next dynasty of Uzbeks or Ashkharshahs also ruled their kingdom from Khakha, while the old capital Samarkand lost almost all its importance, mainly in the last half of the 16th (16th) century.

The materials for the history of Khakha during the 16th period are still only accessible in manuscripts, as the history of Central Asia during the last two centuries has not been fully investigated. Much information about the buildings of the 16th (16th) and 17th (17th) century are given in the chronological compendium known as the *Tarikh-i Mir Sayyid Sharif Razi* (compiled in 1113 = 1701-1702) cf. Hamid v. Rosen in *Collection Scientifique de l'Institut des langues orientales de l'Université de Saint-Petersbourg*, II. 115 et seq.; the chief authority on the intellectual life of the town under 'Abd Allah b. his contemporary Wajsf, author of the *Kitab al-Makharid* (cf. C. Salomon in the *Moslems of Samarkand*, VII. 400) on the sources of the history of 'Abd Allah b. Iskandar, see the article on him, p. 25 (there is, *inter alia*, a description of Khakha in the *Kitab al-Makharid*, which

shows that the author was acquainted with a fuller version of the *Ta'rikh-i-Nawvā'is* than the one which has arrived to us). On the Bukhārī of the 15th (16th) century cf. particularly *Maḥmūd b. Anar Wālī, Naḥr al-ḥayr fī maḥāṣir al-ḥikmāt*, Coul. Inst. Offic., n°. 525.

From the 15th (16th) century there was constant intercourse between the Uzbek kingdom and the Court of Moscow, so that the capital Bukhārā became better known in Russia and Western Europe previously. In the 17th and 18th century all merchants and emigrants from Central Asia whose settlements were to be found as far as Tobolsk, were known to the Russians as "Bukharas" (Bukharin); the same name was also extended to the inhabitants of the modern Chinese Turkestan which began to be called "Little Bukhara".

The reign of Khān 'Abd al-Ahī (1055—1091 = 1045—1080) was regarded by later native historians as the last great period in their history; the later rulers could no longer hold the kingdom together; princes (Bēgas) of Uzbek tribes made themselves independent in many parts, the Khān who lived in Bukhārā ruled only a small portion of the former kingdom and even there, the authority was not in the hands of the Khān himself, but of a Bēg or Atākī ruling in his name.

In 1133 (1740) Bukhārā had to submit to Nāḥir Bāgh and did not regain its independence till his death. About the same time a new dynasty was founded in Bukhārā. The Arshīk Maḥmūd b. Ḥabīb of the tribe of Bāghīst had himself proclaimed Khān; his career has been written by his contemporary Muḥammad Wālī Kamālī under the title *Ta'rikh-i-Nawvā'is*; his immediate successor Muḥyī-ud-Dag was content with the title of Atākī and allowed a ruler of the house of Chingiz-Khān to bear the sovereignty; his son Muḥd or Mir Maḥmūd, however, again claimed the kingly title for himself after the year 1199 (1783); he and his successors did not take the title of Khān but of Emir.

The observation of religious ordinances was much more harshly enforced by Muḥd and particularly by his successor Ḥakīm (1215—1241 = 1800—1836) than had been the case for example, in the 17th century by 'Abd al-Ahī "Nohā Bukhārā" (*Bukhārā Shāh*) who was more and more to attain the glory of a city of Islam and of the *Shāh al-ḥayr*; the daily life of the ruler had to conform to the demands of the strictest orthodoxy. Ḥakīm himself lectured on the audience connected with religion and had as many as 500 of an audience; he was however reproached with being too fond of the pleasures of the harem, of continually changing his legal wives and making a new acquisition in his harem every month. He was the last prince of Bukhārā to strike coins in his own name; since his death the coins have been struck in the name of the *Ḥakīm* (*muḥḥam*) Emir Ḥakīm, even to the present day.

His successor Naḥr Allāh (1242—1277 = 1827—1860) succeeded in strengthening the power of the throne against the Uzbek nobles and extending the boundaries of his kingdom. As was at the same time the case in Khiva and Khokand, the power of the nobles, which had been increasing since the break-up of the kingdom, was broken in the 19th century; the native chroniclers agree with European travellers in describing Naḥr Allāh as a bloodthirsty tyrant, instead of the

seen on the Uzbek tribes, a standing army was created and officials of humble origin promoted to the government of the kingdom; the Naḥr-Bēg, usually a Persian by birth, was at the head of the government.

The dominions of the Muḥd at first comprised only the valley of the Zhetysay and the territory to the south as far as the 40th, the southern almost to the Syr-Darya, while, a little, a few stretches of land south of the Oxus like Marw and Balkh. The remaining portions of the ancient *Mā warā' al-Nahr* were ruled by the chiefs of Khokand. Many wars were waged between these two kingdoms, mainly for the possession of Balkh and Tashkent, in which the Emir of Bukhārā was usually successful; in 1238 (1843) Khokand itself was taken and the whole of *Mā warā' al-Nahr* united under the sway of the Emir; but these conquests could not be permanently retained.

When Naḥr Allāh's successor Maḥmūd al-Ḥakīm (1260—1283) ascended the throne, the Russians had already secured a firm footing on the lower course of the Syr-Darya from which they gradually advanced on the remaining portions of the ancient *Mā warā' al-Nahr*. After being repeatedly defeated, the Emir had to submit to Russia, give up all claims to the valley of the Syr-Darya which had been conquered by the Russians and cede a great part of his own kingdom, with the towns of Dzhirgatala, Samarkand and Katta-Kurgan (1866), though his capital, Balkh, Khiva and Khokand, to the present has been spared the shame of being besieged or taken by the enemy. The territory lost in the war with Russia was more than made good by the conquests of the next decade, made to a certain extent with Russian help. Lands, which, like Shahr-i-Sabz and Hwāz, had been politically separated from Bukhārā for more than a century, or, like Karakum and Kerkent had never really been permanently in the hands of the rulers of Bukhārā, had now to submit to the Emir; in 1273, the Empire was increased in the west at the expense of Khiva which had been taken by the Russians. It was therefore only under Russian suzerainty that this Empire attained its present dimensions. In the reign of the following Emir 'Abd al-Ahī (1285—1310) the boundary between Bukhārā and Afghanistan was defined; by the agreement come to between England and Russia in 1285 the Panj was to be the boundary between the two kingdoms, so that the Emir had to give up a part of the province of Dzhirgatala to the Afghans while he received in return the province of Rūshan and Shughnan.

The relationship of Bukhārā to Russia was also defined during the same reign. Since 1887 a Russian railway has run through the Emir's dominions; the more important towns including the capital itself, are not touched by the railway; a Russian settlement called "New Bukhārā" arose 10 miles from "Old Bukhārā" on the railway, now known as the railway station of Nukhān. It was not till later that this settlement, the residence of a Russian "political agent" was connected with the ancient capital by a branch line, built at the expense of the Emir. The whole kingdom is within the Russian customs area; Russian custom-houses have been built on the Afghan frontier and Russian military stations also like Karki and Termez on the Amu-Darya and Khoreg in Shughnan. Commerce between Termez and the Russian towns of

The Arab authors place the date of Hippocrates about 100 years before Alexander. According to the *Ta'rikh al-Hukama'* he lived in Samos and afterwards at Damascus and lectured in one of the gardens of the latter town in a place still called *Jayd al-Hakim*, the "orchard of Hippocrates".

As this great physician had descendants who bore the name *Hakim* and practiced the same art, a certain confusion has arisen in the minds of the Arab writers, who number in many as four Hippocrates. They have even formed a place, *al-Hakimiyah*, from the name Hippocrates. *Uthub b. Kura* was the first to settle the question of the number of the Hippocrates (*Ta'rikh al-Hukama'*). He says: "the first is the one who was of the family of Aesculapius and the second was the son of Heracleides; there were nine generations between the first and the second, as many as between Aesculapius and the first. The second Hippocrates left three children: *Talib*, *Uthub* and a daughter named *Mahmud* who became more famous than her brothers. The two latter each had a son called Hippocrates". — According to the same authority, there were eight generations of medicine in ancient times, who succeeded one another at almost regular intervals from Aesculapius to Galen. We can trace in this arrangement the tendency of Eastern scholars and particularly of the Sabaeans to regard the ages of antiquity as a species of pyramid; the idea of this line of great physicians, originating in a demi-god, Aesculapius, is analogous to that of the prophetic succession. (See also the *Shahid* and *Uthub al-Hakim*, l. 24 et seq.).

(H. GARNIER DE VAUL.)

BULAK (See CAIRO).

BULANDESHAHR (or "high town"), a town and district of India, in the North-Western Provinces. Area of district, 1,800 sq. mi.; pop. (1901), 1,138,101, of whom 19% are Muhammadans. The town, built on a bank above the Ravi Nadi, was originally called *Uttar*, whence the name of the district, *Uttar al-Hind* (q. v.), who was born here: pop. (1901) 18,559, of whom just half are Muhammadans. Most of them are converted Rajputs and Pathans, both of which classes own considerable estates in the district.

Bulandshahr: F. S. Groom, *Bulandshahr* (Benares, 1884); *Bulandshahr Gazetteer* (Allahabad, 1903).

(J. S. GORDON.)

BULBUL (v. and r.), the nightingale. In Persian and Turkish poetry, the nightingale plays a great part usually in conjunction with the rose. Oriental fancy has conceived that the nightingale is consumed with love for the rose and therefore sings in numberless ways (whence its epithet, *Ma'at al-Hayat*) of its love but her love is unrequited. It is typically conceived as the image of the human soul which is consumed with love for God. Cf. Ellis in the *Grundriss der Iranischen Philologie*, II. 250, 1; Gibb, *History of Ottoman Turkey*, III. 110 et seq.

BULDUR or *Burdur*, the ancient *Polycronia*, capital of a Sandak in the Wilayet of Konia, lies in a pleasant, fertile district in the Buldnogol (the *Armenia* of the Byzantine writers). The population lives by cattle-rearing and agriculture; Buldur is also famous for its weaving establishments and tineries.

Buldnogol: 'Ali Dimsiz, *Waghrat* (Istanbul, 200 et seq.; Collet, *La Turquie d'Asie*, I. 345; Ritter, *Asien*, III. 707.

BULGARIA, a country lying between the Balkans and the lower course of the Danube; it owes its name to a branch of the Bulghar people; it was born, after the fall of the great Hun empire, by the remnant of the invaders who were driven back from the lower Danube into the steppes of South Russia (see the article *AVARIA*) and to particular by the leader which crossed the Danube in 779 under Kharlek, son of Khatat and founded a powerful kingdom by conquering the provinces inhabited by the Slavs. Although small in numbers, this tribe was able to impose its name on the country and its inhabitants; in the 12th century it adopted the Slav language and became finally merged in the population. Even by the second half of this century, Muslim influence had begun to make themselves felt among the Bulgarians. They must have been even older and already very deep if we adopt the view put forth by Hury (*Byzantin. Zeitschr.*, VII. 130 and 141) that the Bulgarians had borrowed the name from the Arabs by the 10th century; Marquart has, however, raised objections (*Ung. Rev.*, VI. 678). In any case Islam did not become the state religion but Christianity, which was introduced by Boris in 864. The Bulgarian Church recognised the supremacy of the patriarchate in Constantinople but had adopted the Slavonic liturgy.

When the Ottoman Turks first set foot in Europe, Bulgaria formed an independent state under the national dynasty of Asenids, on the right bank of the Danube; it was bounded on the north by the Danube, on the south by the Balkans, on the east by the Black Sea and on the west by Serbia. Eight passes (doorways) through the mountain chain led into the interior of the country: Sam, Kapulu (Brest, Trojan's Gate), Suli, Kazanlyk, Uzun-Kaput, two passes leading to Rostuk and Silistra, and Nadir. The inhabitants were divided into factions by the divisions of the boyars. On the death of the Czar Alexander in 1364, the country was divided between Shishman III, his son by a Jewish woman, who reigned at Sofia, and Trajan who occupied Vidin. During the progress of the Ottomans under Murad I. Shishman and Trajan, although he was the brother-in-law of the Sultan, entered the coalition of Serbs and Bosnians; so army of 20,000 men under the command of Lashkhar was totally defeated and almost entirely massacred. At Pasha, son of Kara-Khalil Bey, at the head of 30,000 men, crossed the pass of Nadir and advanced on Shumla (Shumen) and Tirmova; the first encounter was soon as it heard of the fall of the second; the Kral, who up to Nicopolis on the Danube, obtained peace on abandoning Silistra and paying the tribute due; but instead of handing over the place he strengthened its fortifications; the war was therefore renewed. After the capture of the fortress of Oridissa and the town of Hingowa, the Kral again besieged in Nicopolis was forced to surrender at discretion. The Sultan granted him his life and gave him an income suitable to his rank, but incorporated Bulgaria in his empire after the capture of Tirmova in 1395 (1393).

Under its former organisation, Bulgaria formed the Eyalet of Silistra, divided into eight Sandjaks: *Shumla*, *Semoude*, *Wize*, *Ibrail*, *Körk-Kiliss*, *Nigebull*, *Widdin* and *Sermen*; it therefore included the cantons to the south of the Balkans and took the place of the former Eyalet of Qui (Dumkew).

when this town was ceded to Russia. After the division into Wilayets, Bulgaria formed the Wilayet of the Danube (Tuna). The Treaty of Berlin had constituted Bulgaria as an autonomous and tributary principality, under the suzerainty of the Sultan and with practically the same boundaries as at the Turkish conquest; after securing Eastern Rumelia, it was quite naturally formed into an independent kingdom (22nd Sept. = 5th October 1908).

Under Turkish rule, large numbers of Bulgarians became converts to Islam; nevertheless the majority of the population remained Christian. The political union with Constantinople allowed the Greek Patriarch to work at bringing the people over to the Greek Church and to reject the Slav rite liturgy. It was not till 1870 and 1872 that a national movement obtained the creation of an Exarchate and in consequence the establishment of an independent Bulgarian Church.

According to the census of 1901, the total population amounted to 3 3/4 millions of whom 2,489,219 were Bulgarians and 531,240 Turks (principally in the north-east of the kingdom); as to religion, 3,000,000 are Greek Orthodox and 623,300 Muhammadans. Some groups of the inhabitants present remarkable features; such are the Gypsies, Christians whose language is Turkish, on the banks of the Black Sea, and the Pomaks, Muhammadan Bulgarians, in the mountains of Rhodope and near Lovec and Plevena.

BULGHAR, a people of uncertain origin, by whom two states, one on the Volga the other on the Danube, were founded in the early middle ages. The name is first found in the 6th century A.D. In the so-called *Easternmost Chronicle* of Zachariah the Rhetor (about 555) the Bulgars are mentioned among the nomadic peoples of the Caucasus who "dwelled in tents and lived on the flesh of cattle and fish" (*Ante dea Syriae*, ed. Lant, II, p. 337; *The Syriac Chronicle*, trans. by J. Hamilton and E. W. Brooks (London, 1899), p. 328). John of Epiphanius (about 385) gives a story, in which Bulgarians and Khazars, the ancestors of the Bulgars and the Khazars respectively, appear as brothers, which points either to a blood-relationship or a close alliance between these peoples. Centuries later, when this bond had long been broken and the lands of these peoples nowhere bordered on one another, Isidore (ed. de Goeje, p. 235) tells us that the language of the Bulgars of the Volga resembled the speech of the Khazars, a statement, which is all the more important as the same geographer expressly emphasizes the close linguistic unity of all the Turkish tribes from the Khazars and Turgurians in the East to the Gsars in the West (ibid., p. 9; cf. *Yafkama Bulgharum San Bidia*, as well as the Turkish origin of the Uygurs or Pechenegs (p. 10). The language of the Khazar and Bulghar, cannot have been identical with Turkish or Russian, even the people known as Kurgas, who were certainly Finnish, and then occupied the lands

between the Khazar and the Bulghar must have spoken a different language.

In the 7th century A.D. the peoples of Eastern Europe with the basin of the Volga belonged to the same great Turkic nomadic kingdom as the Central Asian steppes up to the Chinese frontier on the point of the reports of the Byzantine Ambassadors, which have been most recently collected by E. Chavannes in his *Documents sur les Turcs Khazars*, St. Petersburg, 1903, p. 433 et seq.). Here and when the dominion of these Turks in Eastern Europe was destroyed is not now known. According to the Arabs as well as the Russian sources the leader of the Khazars here the Turkic ruler Baghar (in Arabic Khagan). The account given by the Arabs of the ceremonies observed at the accession of such new Khagan (*Ishtikh*, p. 224, obviously corrupted in the Arabic, p. 254), agrees perfectly with the Chinese notions of the Turkic rulers of the 6th century (cf. e.g. *Le Gougen, Histoire de l'Asie*, Vol. I, p. 460). It may be concluded therefrom that the kingdom of the Khazars was immediately out of the Turkic principality mentioned by the Byzantine writers, which formed a portion of the great nomadic kingdom in the 6th century, just as in the 11th century the kingdom of the Golden Horde arose out of the great Mongol Empire. In this case also, the conquerors must soon have adopted the language of their more numerous allies or subjected peoples.

The Khazar kingdom is first mentioned in the year 627 as a powerful ally of the Byzantine Empire in the war against Persia. There was not then a capital on the Volga nor had there been in the Turkic kingdom of the preceding century; it was only after their luckless struggle with the Arabs in the beginning of the second century A.D. (after 720 A.D.) that the Khazar princes moved their residence from the northern slopes of the Caucasus to the lower course of the Volga.

Still less do we know when and why the Bulgars separated from their Khazar brethren. If the explanation of the puzzling *Amir*, proposed by J. Marquart, be the correct one, then the Bulgars are mentioned by Tabari (p. 845 et seq.) as the enemies of the Sassanid Khumud Adgharwan. The Bulgars also, mentioned by Yafkama (*Ishtikh*, ed. Houtsma, p. 203) the Bulgars of the Caucasus are also sometimes called by this name, cf. e.g. *Fragmenta Histor. Arab.*, ed. de Goeje, p. 26 et seq.) would, according to Marquart, be identical with the "North Caucasian Bulgars", although the reading *Bulgars* in this case assured by the verse quoted of Yafkama (i. 548). After the 6th century A.D. we have many notices of these branches of the Bulgars, who settled on the Black Sea and the Danube and came into contact with the Byzantine Empire (cf. the article *MACEDONIA*). Another branch of the same people had migrated to the central course of the Volga, apparently under pressure from its enemies, where they afterwards adopted Islam and for long formed the eastern outpost of Muhammadanism to the north till the foundation of the Siberian kingdom on the Irisk and the Tobol.

We have only one first-hand account in the 10th (10th) century of these Bulgars, namely, the *mir* of the embassy of the English, preserved by Yafkama; this embassy, sent by the Caliph Muhammad, left Baghdad on the 11th Safar 309 (21st June

921) and reached the capital of the Bulgars on the Volga on Sunday the 13th Muharram 310 (13th May 922). It is very difficult to determine the problems of the relationship of the report of this embassy to the accounts of the Arab (Ibn Rusta, al-Bakri, Isfahani, Mas'udi etc.) and Persian (Gardizi) writers on the Bulgars. Margquart tries to show that the common source of the accounts of Ibn Rusta, al-Bakri, and Gardizi, which practically agree word for word, ~~must~~ be the last geographical work of Qashtani, and that this latter was not written till after the return of Ibn Fadlan, i.e. after 310 A.H. (922 A.D.). Even Westberg, although he ~~sees~~ no connection between the accounts of Ibn Fadlan and Ibn Rusta agrees with the view that the account of the Bulgars in Ibn Rusta cannot have been written before 310. Neither Margquart nor Westberg try to explain how Ibn Rusta, as de Goeje points out, nowhere else in his work mentions any event of a later date than 903) and enters the formula *afala Hukm al-Bakri* to the ~~beginning~~ of the Caliph, al-Muwahhid who died in 289 (Monday, the 22nd Rabi' I 289 = 5th April 903) so that at the date of the composition of ~~the~~ book he did ~~not~~ know ~~of~~ the Caliph's death; it might therefore be concluded ~~that~~ the work ~~was~~ completed very soon after the pilgrimage of the year ago (mentioned on p. 22 and 73). If the account of these northern peoples given by Ibn Rusta, al-Bakri, and Gardizi dates from a later period, it must be an interpolation in the unique manuscript of Ibn Rusta's work that has been preserved to us, which is not suggested by either Margquart or Westberg. On the contrary, Margquart himself shows that the author of the original account was only acquainted with the Pechenegs as their nearest neighbours on the Volga and that the groundwork of the account must therefore belong to the first half of the 10th century.

If the account preserved in Ibn Rusta, al-Bakri, and Gardizi cannot then be traced to Qashtani, there only remains the Khuradadbehi's work, copied by Qashtani himself, and quoted by Ibn Rusta and Gardizi. Even Arab bibliographers have been misled by the verbal agreement between the two works (cf. the statement in the *sources* of Ibn al-Fakhr to the *Khuradadbehi*, p. 154, text confirmed by de Goeje). Khuradadbehi (cf. de Goeje, p. 3 note 1) ~~was~~ in ~~charge~~ a geographical work in seven volumes without author's name, which he himself ascribed to Qashtani but others to the Khuradadbehi. The account of the people in the north might therefore equally be referred to the Khuradadbehi. There are other difficulties to the solution of the question: 1. According to Ibn Fadlan, the Bulghar had adopted Islam a short time before his embassy. The prince then ruling, in conversation with Ibn Fadlan even described his father as an "unbeliever"; on ~~the~~ other ~~hand~~ so early a writer as Ibn Rusta describes the Bulgars as good Muslims; and even at that time there were mosques and schools, call to prayer, and ~~lighthouses~~ their dress and their ~~weapons~~ grounds were similar to those of Muhammadans; 2. The prince of the Bulghar is called Alim by Ibn Fadlan; the same name seems also to have been found in the source used by Ibn Rusta, al-Bakri, and Gardizi (in Ibn Rusta, Alim, in al-Bakri *الميم*, in Gardizi *Arman*); 3. In the Khuradadbehi's work, as edited by de Goeje, only the Khazars are mentioned

of all the peoples of the Volga area; the author does not appear to have heard of the Bulgars and to have regarded the Kim and, not like later geographers, the Kaim, as the source of the Volga.

This last objection may be neglected on the ground that we do not possess the Khuradadbehi's work in its final and complete form. It is possible that a copy of the complete work may have survived in India, perhaps in a Persian translation I have already pointed out in my edition of the text of Gardizi (cf. Barthold, *Notes persanes sur le Khuradadbehi*, St. Petersburg 1897, p. 79) that the itinerary from Bishkhan on the *Isik-kul* to the land of the *Tughrugh* otherwise only known from Gardizi (*ibid.*, p. 31 *et seq.*) is also given by Raverty (*Indo-Iranian*, p. 961, likewise in Persian but with a reference to the Khuradadbehi). The Persian translation of the Khuradadbehi used by Raverty has, as far as I am aware, not yet been made known.

The two other difficulties, also, are perhaps not as insuperable as at first sight appears. Ibn Fadlan here contradicts himself; in one place he says that the prince told him his ~~father~~ had been an unbeliever and in another he makes the prince explain some phenomena noticed in the sky as a combat between believing and unbelieving *dhimms* and say he had received this explanation from his forefathers.

The Arab embassy which had been sent at the request of the king of the Bulgars had not only a religious but also a political object, which for the prince himself was naturally the more important. The Caliph was not only to provide for the instruction of the Bulgars in their religion but also to build a fortress against their enemies. The political ~~aim~~ of the mission was entrusted to the actual ambassador Sarim al-Razi who had apparently been appointed "by the government" (*min al-hikm al-Bakri*) and to whom the honours due to the leader of the embassy were paid on the reception at the court; Ibn Fadlan had charge of the organisation of education in the precincts of Islam as the trouble he takes about the *Khayba* and the exorcism of women from men while bathing, shows. He probably overestimated the importance of his side of the mission and represents it to his readers in this light. Both prince and people had apparently been already converted to Islam, although the statement regarding the schools may be based on an over-estimate, probably on the accounts of Bulghar merchants, who had good grounds for doing so, for, as good Muhammadans, they would have to ~~pay~~ less duties and be able to sell their wares at a better advantage.

There still remains the name Alim or Alimgh. It is doubtful whether the name appeared in ~~the~~ form in the *source* or ~~due~~ to later copyists (in Yakut's time the *name* was widely disseminated in ~~many~~ copies). Ibn Fadlan says that the Bulghar prince afterwards adopted the title "Emir" in the *Khayba*; we actually possess coins which were struck in the town of *Sawka* (see below) by a contemporary of the Caliph al-Muwahhid (the name of the Caliph is given on the coins): the Bulghar prince calls himself "al-Emir al-Muwahhid" on these coins. There is a specimen of this coinage in the Coin Cabinet of the University of St. Petersburg. Fräber's statement (*Opusculum numismaticum persicum*, ed. H. Stern, Petropoli, 1877, p. 212)

that al-Kadi should be read by al-Muqaddir and that the coin was struck in Ghazni (Tashkent) by a "government for Bulgaria-Khazar" is clearly contradicted by the form of the letters, in anyone acquainted with the Kufic alphabet on coins, it is clear that an *alif* could not stand between the article and the two *hams* letters &c. It is very probable that the copyists of the *riḥla* confused this *ḥams* with the *Alim* or *Alugh* known to them from the Khordadbeh, Qajahan or other sources.

The Rusks cannot be proved to be independent of the *Paḥlān*. Even the story, so popular in Muhammadan literature, of the four summer nights and brief winter days, which made the observation of the prescribed hours of prayer impossible, are found neither in the Rusks, nor in al-Bakrī, nor in Gardiz but are first given in Isṭakhri (p. 225) in almost the same words as in the *Paḥlān* (Vāḡḡi I. 726, m. 27. 28). It is at any rate certainly not improbable that the *ḥams* on which Isṭakhri here relies, is identical with the *Paḥlān*. What Vāḡḡi (II. 236, m. 27.) tells us about the *Ḥazaras*, on the authority of Ibn Ḥalīf, agrees almost word for word with the text in Isṭakhri p. 220 at top. (cf. also F. Wattenfeld's note, Vāḡḡi, s. 77.) It is equally clear that Maḥḥad, when he says the Bulgarians adopted Islam in the reign of the Caliph al-Mahmūd after the year 320 was thinking of the *Paḥlān*'s embassy and his report although there is nothing about the "*ḥams*" mentioned by Maḥḥad, in the extract from the *riḥla* made by Vāḡḡi.

The account preserved in the Rusks, al-Bakrī, and Gardiz appears only to give the most meagre and contradictory accounts of the Bulgarians that had penetrated to the Arals before the *Paḥlān*'s embassy. Mosques and schools, but no towns are mentioned; the people dwelled in *ḥams* and lived by agriculture. *Ḥams* (or *Bards*) dwelled between the Bulgarians and the *Ḥazaras*, they were subject to the *Ḥazaras* and had been conquered by the Bulgarians. It was 25 days' journey from the land of the *Ḥazaras* to the land of the *Bards* and thence three days' journey to the land of the Bulgarians (obviously the reference here is to the capitals or most important places in these three lands). The Bulgarians were divided into three sections but the total was not very great; there were only 500 families of importance. Even then the land was of great importance for its trade in furs and was visited by the *Ḥazaras* and *Khazars* for this reason; Muhammadan trading vessels also came there and had to pay duties. Taxes were paid by the population in horses and other kind; amongst other taxes at every market the indigenous had to hand over a horse for the needs of the prince. Money of metal was not struck; the *ḥams* was the unit of currency, each being worth 2½ dirhams (about a shilling). There was also silver money current which had been imported from Muhammadan countries, this money being used to buy the goods of the *Khazars* and *Slavs*. The land was bounded on the one side by the land of the *Bards* and on the other by the country of the *Slavs*.

The picture drawn by the *Paḥlān* of the Bulgarians and their land is much more complete. It is remarkable that in his account the Bulgarians of the Volga are called "*Slavs*". The embassy crossed the road from *Ustjuzhnyia* (near the modern Konye-Urgent in *Ḥizwa*) to the capital of the

Bulgarian prince in 20 days. Vāḡḡi has unfortunately not given a description of the route: the number of days' journey suggests that the embassy came from *Khazaria* to the lower course of the Volga and from there crossed the land of the Bulgarians through the country of the *Ḥazaras* and *Bards*. According to Isṭakhri (p. 225) it took a month to go "through the desert" from the capital of the *Ḥazaras* to Bulghar, going by water it was two months' journey through the mountains and then 20 days in the valley. It was reckoned 20 days' journey from the *Ḥazaras* capital to the frontier of the *Bards* and thence 15 days to the lands of this people probably to the north-west, towards the land of the *Slavs*, not in the direction of Bulghar.

The site of the present Bulghar is defined by the ruins of the village of Bulgarkoe or Uspenskoe in the circle of Spassk in the province of Kazan. The distance between the ruined site and the left bank of the Volga is almost 3 miles; as Gardiz remarks, this agrees perfectly with Ibn Ḥalīf's statement that it was less than a farsakh from the town to the river, so that we may conclude that neither the town nor the river-bed have changed their position since the 11th century. No further description of the town is given in the *riḥla* (but in the extract made by Vāḡḡi), nor is there any information given about other towns in *Ḥams* country. Isṭakhri mentions two towns, Bulghar and Suwayr, (the ruins now existing near the village of Kuznetshko) lying near one another; there was a Friday mosque in each of them; the total population of the two towns amounted to about 10,000 in all. The inhabitants spent the winter in wooden huts, and the summer in tents. According to *ʿAḥī Ḥayyān* (p. 236, m. 27. 28) the distance between Bulghar and Suwayr was two days' journey; we do not know his authority for this statement. The notices of Bulghar and Suwayr in *Maḥḥad* (ed. de Goeje, p. 301) are probably copied on a later authority than the *Paḥlān*. According to this source, Bulghar lay on both banks of the river; the Friday mosque was in the market-place, and the houses were built of wood and reeds; the inhabitants of Suwayr lived in tents. It is probable that the suburbs of Bulghar are here included with the actual town, *Yaga* (*ḥams*) (probably *Agha-Bazar*) is mentioned by the *Ḥazaras* as the harbour of the country of Bulghar on the Volga; traces of other suburbs have survived on the right bank of the river also.

At the reception of the Arab embassy, silver coins were scattered in their honour; whether these coins were actually sent to the country itself is not stated. During the ceremonial reception the king sat on a chair, covered with Greek silk (*ḥams*), to the right of him sat the king, subject to him, to the left the ambassador and before him his sons. Whether the word *Ḥams* which appears in the name of the reigning king as well as in that of his father, is to be suggested as a dynastic name or a title, is not quite certain. *ʿAḥī* (cf. the text in *Maḥḥad*, *Zafar* *ḥams*, ed. de Goeje, II. 264) is the earliest authority who says definitely that the word is a title of the king of the Bulgarians (in the manuscript both *Bilgh* and *Bilgh* are found). The title is explained by Senkowski as the Slav *slavomir* (inter), by Marquart as the Turk *slav*

the initial of having been destroyed by enemies who supposed it to be the Arabic article, by Ashmun in the Coptic *Agathos* for the 'Tartar' *Agathos* 'of princely birth'.

The relation of the king of the Bulgarians to his people was still quite patriarchal in the Paulian time, more so than among the Khazars or Bulgarians of the Danube. The kingdom of the Bulgarians on the Volga did not, apparently, like the Khazar kingdom also call the great named kingdom of the 9th century A.D. The power of the latter cannot have extended so far north; the separation of these Bulgarians from the Khazars have been completed before the foundation of Khazar rule in Eastern Europe. Among the Bulgarians of the Volga the king used to ride through his capital alone, accompanied by a bodyguard in any kind of escort; at the sight of their ruler his subjects came from their seats and bowed their heads (in Bulgaria as in Khazaria the high caps, called *Khazars* by the Arabs, were worn). The people paid no tax to the king from the produce of their fields; no tribute was however levied on each house and the king also received a share of the booty in war.

Bulgaria at this time was visited not only by merchants but also by artists from the adjoining parts of Asia. There was a tailor from Baghdad at the king's court, from whom the Paulian received some information about the country and its people. The Bulgarians do not seem to have practised any industries on their own behalf; at a later period Bulgaria leather (the modern Russian leather, *Russ' fust*, a word probably borrowed from the Bulgarians), and the Bulgarians shoes (Persian *Awshir*, made from it) were particularly well-known.

What further information the Paulian gives about the manners and ideas of the Bulgarians of the Volga points to their still being on a very low stage of culture and in a very superficial contact with Mohammedan civilisation. Our knowledge of the life of Bulgaria in the 9th and 10th centuries justifies the conclusion that the country had made great progress in the interval; the information we now possess for this period is unfortunately too scanty for us to be able to follow the advance in detail. We do not know if the Caliph Mu'tasim fulfilled the Bulgarians' desire; for there is no mention of the building of any fortress in the Paulian intercourse with Baghdad nor of any rate of tribute. According to Mas'udi (*Musaddi*, II, 161) a son of the Bulgarian king had made the pilgrimage to Mecca in the reign of Mu'tasim, i.e. before 320 (932); he is said to have come on this occasion to Baghdad and paid his respects to the Caliph in connection with the Samanid kingdom for geographical reasons, have much built. We possess silver coins of the Bulgarian prince Tahir b. Ahmad, which were struck in Samarra in the years 338 (949-950) and 340 (951-952); on the contemporary Samanid coin, the Caliph whose name appears on these coins is Mu'tasim who had been deposed some time previously, in 931 (946) and not Mas'ud who had not yet been recognised by the Samanids. We also have coins of Mu'tasim b. Ahmad (probably the brother of Tahir) of the time of the Caliph Mu'tasim (all 303 = 974); according to Fakhri's reading these coins were not struck till 366 (979-977), that is, also after the

end of the reign of the Caliph whose name appears on them. In 366 (979-977), under the Caliph Fa'iz, Mu'tasim b. al-Fazl is the prince who exercised the prerogative of striking coins. Coins of a later period with the names of Bulgarian princes have not yet been discovered. The disappearance of silver money, for which no satisfactory explanation has as yet been given, which is noticeable in Central Asia in the 10th century, and in the other lands of the Mohammedan world also at a somewhat later period, must also have been felt in the lands of the Bulgarians. It was not long after the Mongol conquest. At the time of the Caliph Nafir (373-383 = 1180-1185) that silver coins were again struck in Bulgaria; on the one side of these coins is the name of the Caliph and on the other in a very barbaric Arabic script the name (*al-Fakhri al-Shir al-Bulgari*). The name of the king is not given.

The question has been much discussed (particularly by Westberg and Marquart), as to how far the account only given by the Paulian of the devastation of the whole Volga area by the Russians in the year 358 = November 940-941 agrees with the actual facts. The Paulian refers to this campaign in several places in his work (cf. *De Geogr.*, p. 14, 21, 28 and 286); the Russians are said to have conquered the lands of the Bulgarians, Khazars and Khazars and laid them waste; those who escaped the sword took refuge on the peninsula of Kiyah-Kuh (Mangyshlak) and Bah al-Ahwal (Apulcheron) in the Caspian Sea; these refugees were later forced to make a treaty with the Russians by which they agreed to return to their homes and live under Russian rule. It has escaped the notice of both Marquart and Westberg that, as is shown from the main passage, p. 284, 10-11, the date 358 really was the year in which the Paulian who was then in Khazaria, received the account of the Russian invasion and through some confusion on the part of the author it was transferred to the event itself. There is then an chronological disagreement between the account given to the Paulian by the people of Khazaria and repeated by him and the statements in the Russian annals on the campaign of the Archduke Svyatoslaw against the Khazars in the year 965 (according to Westberg the account in the *al-Ahwal* was 418, of an invasion of the Khazar kingdom by 'Turkish' peoples in 334 (965) also refers to this campaign). There is no ground for supposing that in addition to the invasion known from Russian annals, there was another, otherwise quite unknown, raid by Norse Vikings. The Paulian's statements about the return of these 'Russians' through the lands of Samarra and Andalus, are probably, as Marquart suggests, based on some confusion with the contemporary raids by Normans at Denmark on Spain. It is very doubtful if the Russians, as the Paulian says, really conquered on this occasion only the Khazar territory but the peoples in the lower course of the Volga also, as nothing is said about it in the Russian annals. There has probably been, as in many other Arab sources, some confusion here between the Bulgarians of the Volga and of the Danube, against whom Svyatoslaw had at this time just begun his campaign.

It is so the whole very probable that the Bulgarians gained more benefit than hurt from the

Rusian campaign against the Khazars; not only the Arabs, but the Russian accounts also clearly show that the Khazar kingdom in the 7th (7th) century was incomparably more powerful than the Bulgars and that the power of the Khazar rule stretched very far to the north-west. Not only the Arabs but the Slav Wfarik, dwelling beyond Ruma on the Oka, had to pay tribute to the Khazars; on the other hand at a later period the Russians were fighting with the Bulgars in the same district; in 1088 the Russian town of Murmu on the Oka was captured by the Bulgars. In the 11th (11th) century, the glory of the Khazar kingdom had long since passed away; but there was still a powerful body of Bulgars on the Volga and Kama, though they did not perhaps form a single united kingdom (there is no mention anywhere of a ruler of the whole area), which was to continue to struggle with the Russians with determined and varying success. In 1228 the Bulgars captured the town of Utyog situated far to the north; how far their power stretched to the south is unknown but it is probable that the commercial town of Ulak on the Volga (9 miles from Saratov) frequently mentioned in the Mongol period (first by Marco Polo) was not founded after the Mongol conquest but had previously belonged to the Bulgar kingdom. In the east, the Hungarians (q. v., p. 669) or the Kashkins were subject to the Bulgars. In the Russian annals, the names of several Bulgar towns are mentioned but without any exact details of their location. After the 11th (11th) century the town of Bilin (the name is also found on coins of the Mongol period) is frequently mentioned in Mohammedan records also. It is the present village near Biljark on the Little Don in the district of Ekaterin, about 100 miles east of Bulghar.

In the 11th (11th) century we again have an account of an eye-witness, the Arab traveller Abu Hamid al-Andalusi, who visited Bulghar in 530 (1135-1136), but unfortunately he only gives us a few worthless anecdotes (cf. the translation of his narrative in R. Lane, *Moslem Travellers*, vi. 714 et seq.). His account of his meeting with the Kadi Yaqub b. Nu'man, who is said to have composed a legendary history of his people under the title of *Kitab al-Bulghar*, is worthy of mention. Almost as strange is the narrative of another writer, the Hungarian Dominican Julian, who travelled from Hungary to "Great Bulgaria" in 1234 and returned home towards the end of 1236. According to him the capital of the kingdom could provide 50,000 fighting men (cf. O. Wolk, *Geschichte der Mongolen nach Vateren*, Moscow, p. 265 et seq.).

When the Mongols were returning to the East after their victory over the Russians on the Kalka (1224), they were enticed by the Bulgars into an ambush where they suffered heavy losses (Bin al-Akhi, xii. 234). This surprise is said to have been revenge for a most sanguinary fashion. In 1223, according to the Russian annals, the Bulgar frontier guards on the Vtyik (Ural) were put to flight; the final overthrow of the kingdom and the destruction of its capital followed in the autumn of 1236 according to the Mohammedan historians, and in the autumn of 1237, according to the Russians (cf. the article *УГАИ-КАН*, p. 681).

The land of the Bulgars of the Volga now formed a part of the kingdom of the "Golden Horde" which had been founded by the Mongols.

The capital Bulghar, appears to have risen to a flourishing condition in a relatively short time again even under the name *Khan Mangai* (1251-1259). Coins were struck on Bulghar again. The traveller Rutenikus, who had not himself been in Bulghar, although he was within five days' journey of it in 1253, regards this country, which, like his predecessor Julian, he calls "Bulgaria Major", as the last country with towns in this part of the world (*Ultima terra habitata circumiter*; *Travels of William of Rubruck*, transl. by W. W. Rockhill for the Hakluyt Society, London, 1900). It is not known when or why the town was abandoned by its inhabitants. Timur's campaign of the year 1395 does not seem to have affected the countries so far north, but Bulghar was once afterwards destroyed by the Russians. The town probably suffered more from the rise of Kazan, which is said to have been founded just before this time by *Edigü-Khan*, than from these wars, particularly as Kazan had been selected as the capital of an independent Tatar state, of which *Timur Muhammad* (Abol 1446) may be regarded as the founder. It is to this *Timur Muhammad* that the last dated coin bearing the name of the town of Bulghar belong; they were struck in 831 = 1427-1428. The importance of Bulghar as the greatest market on the central course of the Volga passed first to Kazan and then to the Russian town of Nizhni-Novgorod. The word Bulghar still remained in use in literature, though only as the name of a country, till a later period; towards the end of the 18th (18th) century (in the work itself the date 1789 (1781) is mentioned), *Sharif al-Din Husain al-Din al-Bulghari* composed a history in Turki of his native land entitled *Kitab al-Tarikh al-Bulghari*; it has survived to us but contains nothing but fabulous stories about the propagation of Islam and the lives of Mohammedan saints.

The surviving ruins of the town of Bulghar belong to the inscriptions on timber which have been found there show, to the 11th (11th) and the 12th (12th) centuries. This town bore little resemblance to the Bulghar of Ibn Fadlan. Most of the buildings were of stone, procured from the heights on the right bank of the Volga. The town had a circumference of about 6 miles, was surrounded by an earthen wall and a ditch, probably, as *Herzfeld* supposes, by a wooden wall also, and was in the shape of a long quadrilateral, the breadth of which gradually decreased from north to south; adjoining the town proper on the south, was the citadel with the royal palace, likewise surrounded by a ditch and an earthen wall. The suburbs lay to the north and west of the town. The most important buildings were to the centre of the town (two Friday mosques with a minaret beside each, not far from them a large bathing establishment, which, as *Herzfeld* tells us, would not have disappeared since the *typhoid*, *cholera*, or *dysentery*). From the site of the mosques, *Herzfeld* computed that the town must have had a population of about 50,000 souls. The care and preservation of the ruins had now been undertaken by the "Society for Archaeology, History and Ethnography" in Kazan. Previously the stones of the ancient buildings were, as usual, used for building purposes by the modern inhabitants. The inscriptions also, which were copied in 1822 by order of Peter the Great, are now for the most part no longer visible.

Besides the Muhammadan epitaphs, Armenian ones have also been found in the ruins, which probably point to the importance of the town as a commercial centre. The Muhammadan inscriptions are usually in Arabic, but they also contain Turkish; as Aghmatlu has shown, this Turkish element is related not to the Tatars but to the Cumanians. It is on this fact that the view, previously put forward by Kuntz and just on a secure basis by Aghmatlu is based, that the Old Bulghar language was a Turkic dialect similar to the Cumanian and that the Cumanian must be regarded as descendants of the Bulgars of the Volga. It has however been recently quite justly emphasised by F. Kuntz (cf. *Zürcher Studien*, xix, vii, 1—2, p. 186 and *Einiges über die*, 1910, 28, 1—2, p. 177) that this question cannot be regarded as settled until the most important material on this point, the non-Slavonic numerals in the so-called "List of Princes" of the Bulgars of the Danube have been satisfactorily explained from the Cumanian. In spite of attempts to explain them, these numerals still remain one of the unsolved riddles of philology. Against Kuntz's view, W. Tomaschek and J. Marquart urge that these are non-Slavonic but "characters for the reigns and personalities of the individual Khans" — a statement which can only be explained by the fact that its descendants must have used Jireček's Latin translation and not the original Slavonic documents. The Slavonic words "za let chom" only refer to the year of the Khan's lives.

If the view put forward by Aghmatlu cannot yet be proved correct, it cannot on the other hand be denied that the above quoted Arab accounts of the relationship of the Khazars and Bulghar language to the Turkish and Finnish (the language of the Ugrians) would be best explained by it. The Cumanian is known to be a Turkic language, but unintelligible to other Turkic-speaking peoples.

The question has hitherto been by Aghmatlu, been only treated from the point of view of the philologist; but there are other difficulties in the eyes of the historian. The Cumanian, who are mentioned as early as the year 1151, were known to the Russians to be heathen. Aghmatlu gives a form which had obviously once been borrowed from Muhammadan peoples, but have assumed quite a different meaning among the "heathen". Pagan prayers begin with the word, *gennetis* (Arab. *ghannat*); the god who rules over the universe is called *Al-Baggar* (Pers. *bagh* "creator", "protector", the soul of the dead, *farah* (Arab. *farah*, "grace, miracle"). If the Cumanians are really descended from the Bulgars of the Volga, who lived in towns, and inherited these expressions from their forefathers, we would have here such an incredible lapse to heathenism, as cannot be paralleled anywhere in the Muhammadan world. This lapse would be all the more difficult to explain as the Bulghar towns arose again immediately after their destruction by the Mongols, and did not reappear till much later, not in 1241 against barbaric conquerors but in a peaceful struggle with other, newly founded towns. The modern Cumanian obviously cannot be descended from the inhabitants of the towns on the Volga but only from such divisions of the Bulghar people as always lived in forests and were little affected by the Muhammadan culture of the cities.

BULGHAR DAGH. The Turks apply this name which should properly be *BUGRA DAGI* (Bulgar is Turkish for bull, *Taurus*) to a part of the Cilician Taurus [q. v.]

BULGHAR MADEN. the famous silver mines on the northern slopes of the Bulghar Dagh, north of the great caravan route from Bagdad (Kasim) to Adana (the Cilician passes). The mines which have been worked in an ordinary fashion since 1825, yield an ore containing silver and gold, from which much lead is obtained. Statistics are given in *Geogr. Anst. d. Reichs*, I, 537. That as this author says they were only discovered in 1825 is not correct, for even in the middle ages Ibn Faṣl speaks of the silver mines at Bulghar, which are identical with those of Bulghar Maden.

AL-BULĠĠINĪ (in the modern Egyptian pronunciation AL-BULĠĠINĪ) OMAR AL-BULĠĠINĪ, a famous jurist, born in Shaḥān 724—August 1324 at Bulḡina in Egypt, settled in Cairo in 738 (1328) and made the pilgrimage in the years 740 and 745. In the year 745 (1343) he received the office of Mufti in the Dar al-Adl and when his brother-in-law Ibn al-Aḥl became Mufti of Damascus in the year 760 (1357) he followed him thither as his deputy. After the death of al-Aḥl, he became Professor at the Makṭaba in Cairo, was afterwards transferred to the Mosque of Ibn Tūlūn and finally became Kaḥl al-Aḥl. He died in Dhū

'I-Ka'za 505 = June 1403, having a short time previously reached some of his offices in favour of his son. Besides a few commentaries he wrote the *U. al-Fatāwā* 'U. al-Fatāwā al-ḥamīd al-ḥamīd' (i. Al-Hawā, *Wassāḥih* der ar. *Maḥ* der *Kgl. Bibliothek zu Berlin*, N. 4066; *Verzeichn. der ar. Maḥ* der *Kgl. Bibliothek zu Berlin*, N. 381; *Catalogue des Oriens* qui in *Mus. Brit.*, N. 11. Codd. Ar. N. 500; *Fihrist al-Kutub* der *al-Ḥadīth*, N. 206). His son Ḥalīq wrote an appendix to it, *Tarīkh al-Fatāwā* (Al-Hawā, *Wassāḥih* der ar. *Maḥ* der *Kgl. Bibliothek zu Berlin*, N. 4067). The latter, born in 791 (1389), was Professor of Ḥadīth Exegesis in the Ḥadīthiyah of Ḥadīth at the Madrasa of Ḥadīth and from 826 (1423), *Kāfi* of Cairo, died in 848 (1463). In addition to a biography of his father, the *Tarīkh al-Fatāwā* *al-ḥamīd al-ḥamīd* (Kāfirah-Bleedre in *Stambul*, N. 1061) he wrote a *Ḥadīth* on the legal relationships of freemen and slaves, entitled *al-Ḥadīth al-Fatāwā* *al-ḥamīd al-ḥamīd* (i. *Maḥ* der *Kgl. Bibliothek zu Berlin*, N. 4067). His older son, 'Abd al-Kāfirah al-Ḥamīd al-Ḥamīd, born in Kāfirah 793 = July 1363, died in Kāfirah 824 = Oct. 1421, after being several times deposed and reinstated. He wrote a *Ḥadīth* on the Ḥadīth entitled *al-Ḥadīth al-Fatāwā* (see *Catalogue des Oriens* qui in *Mus. Brit.*, N. 11. Codd. Ar. N. 1533-1537) and a *Ḥadīth* on the requirements of a Ḥadīth entitled *al-Ḥadīth al-Fatāwā* (i. *Maḥ* der *Kgl. Bibliothek zu Berlin*, N. 4067).

Bibliography: *Ḥadīth al-Ḥamīd al-Ḥamīd*, *Kāfirah*, ed. *Wassāḥih*, N. 284, see *Al-Hawā*, *Wassāḥih*, N. 9886. *Maḥ*, 1837, 1537. 'Al-Baḥā' *Maḥ* der *Kgl. BULUKH (a.), *Masculine. According to the Shāfi' school, one's majority is attained on the completion of his fifteenth year unless he has already shown signs of puberty. Should this happen, however, before the completion of the ninth year, the minority is not terminated. According to the Ḥanafī school and some Mālikites, the completion of the fifteenth year is the whole period for the completion of the period of minority; according to most Mālikites, on the other hand, it is the completion of the eighteenth and in the personal opinion of Abū Ḥanīfa the completion of the eighteenth year for boys and of the seventeenth for girls.

A major is called *Bāḥiq* (i. e. "grown up") in opposition to the minor, who is called *Ḥalīq* ("little one") or *Ḥalīq* ("boy") in the law books. A minor who is almost grown up is called *Al-Ḥalīq*.

Bibliography: Besides the chapter on *Ḥalīq* (i. e. restraint; prohibition of testing) in the *Ḥadīth* books of the various schools (Mālikites, *Ḥadīth al-Ḥamīd al-Ḥamīd* *al-Ḥamīd* (Bulak, 1300), p. 74; E. Snobar, *Al-Hawā*, *Maḥ* der *Kgl. Bibliothek zu Berlin*, N. 26; A. von Kossow, *Culturgesch. der Orient*, I. 517, 522.

(Fu. W. JUVVALL.)

BULUKKIN (BOLUKKIN) is Zulu belonged to the great Buthe family of the Kaḥḥa who proved themselves devoted adherents to the cause of the Fula, in opposition to the Zulu, who were faithful either to the Shāfi' or to the

Umayyad of Spain. After the defeat of Abū Yazīd, when Zūl received the governorship of the Maghrib from the Umayyad al-Mawḥ, he placed his son Bulukkin over three towns, Algiers, Meḥ, and Millana, which had recently been founded or rather rebuilt. The war was continued against the Maghrebians with great carnage and when, after being at first victorious over Muhannad b. Khayr, Zūl was in his turn defeated and killed in 366 (979) and his head taken to the Caliph of Cordoba, al-Muḥ, who had decided to make his capital to Egypt, handed over the government of the Maghrib and of Tripoli with Khayr as its capital to Bulukkin. The latter immediately took steps to avenge the death of his father, recaptured the whole of the Zulu and pursued the Zulus into the desert as far as Sijilmasa. The Fatimid Caliph gave him the honorary title of Abū 'I-Ḥalīq and allowed him to take the name of *Ḥalīq* (i. e. *Ḥalīq* 361 = 4th October 979). Bulukkin proved himself worthy of his office and honour. After the deposition of his son-in-law, he recommenced the campaign against the Zulus, seized Tlemec 368 (973) and transported its inhabitants to Aḥir. As a reward, he received from the Caliph al-Niḥ, who had succeeded al-Muḥ, the province of Tripoli, which he added to his lands and continuing the war against the Zulus, who were in alliance with the Umayyad of Spain, captured Fes and Sijilmasa 369 (980). He was not, however, able to attack the Umayyad ruler, al-Mawḥ, who had disembarked at Ceuta with a large army. He therefore turned his attention to the Berberians (q. v.) and slew their king, Tū b. Abū 'I-Ḥalīq. On the return of this expedition, he died at Warakun (var. Warkun) between Sijilmasa and Tlemec on the 27th *Ḥalīq* 375 leaving his power to his son al-Mawḥ the governor of Aḥir.

(RASH RASER.)

BULUKKIN (BOLUKKIN) is *Ḥamīd al-Ḥamīd*, son of *Ḥamīd al-Ḥamīd* *Ḥamīd*, and *Ḥamīd al-Ḥamīd*, belonged, like the preceding, to the great *Ḥamīd* family, a branch of which ruled over Eastern Algeria with the Kaḥḥa of the *Ḥamīd* *Ḥamīd* as their capital. Yūḥ, brother of al-Ḥamīd and uncle of al-Mawḥ, having revolted in the Maghrib, Bulukkin was sent against him by the *Ḥamīd al-Ḥamīd* sovereign; the latter did not trust Bulukkin, however, and had asked two Arab chiefs, his lieutenants, Khalīf b. Mawḥ and Aḥmad al-Sharī, to accompany him. The latter informed Bulukkin, who revolted in his turn and in cooperation with them, seized al-Mawḥ, who had taken refuge in the Kaḥḥa and slew him in 477 (1085-1086). The latter was a brave and clever man for a rebel. The town of Māḥ, having revolted at the instigation of its governor, Ḥayr b. Abū Ḥamīd in 450, Khalīf b. Mawḥ was sent

against it and put down the revolt. The principal authors of the rising were brought to the Kala and put to death. Four years later, in 1254 (1062), Bulukkin advanced against the Almoravids, drove them back into the desert, took possession of Fez and led away its principal citizens as hostages. While occupying the same year, he was assassinated by Tawala by his cousin al-Nasir. Tawala wished to avenge the murder of his sister Tanmirt, slain by order of Bulukkin. The latter suspected her of having caused the death of her husband, al-Muzaffar, his brother.

(1959-1960)

BULWADIN, the POLYESTER of the Bysantio historians, a small town in Asia Minor, chief town of a *Kaza* in the sanjak of Aydin Kamhiyar (Wilayet Ghazwaniglar), 25 miles distant from the latter town, lying in a plain on the foot of the Emir-Dagh and Sulghen-Dagh, is surrounded by numerous gardens mixed with ancient ruins, and has 62 mosques, at least ten madrasahs, a *Makhdum* (modern) school, a monastery of Rastid dervishes and 8000 inhabitants, all Mohammedans. In the neighbourhood are the hot springs of Kili-Kiliss and the Seljuk ruins of Bulbuli and Cal.

AL-BUNI, MUHAMMAD ABU 'L-'AKRA ARMAN
 b. 'AD AL-HART (i.e. of Hama), is one of the most
 important Arab writers on occult sciences. He
 died in 621 (1225). He is the author of books
 like the *Sir al-Hikmah*, or *Secret of Sciences*,
 on the Cabala and divination, of minor works on
 the virtues of the *haruf*, on those of the mystical
 names and of the letters of the alphabet. He
 treats, the construction of magic squares, cabalistic
 letters, and other miscellaneous topics.

The works of al-Bīrūnī are those which are the most used even to the present day by Muhammadans, who deal in magic or amulets. In the west they have been of service to scholars like Reimann in his work on the *Almagest* Arabic, *Parvost et Fines du système de M. le Duc de Hesse*, 2 vols 1828, in the part where he discusses enchantment and M. Doutté in numerous passages in his book on *Mythe et Religion dans l'Afrique du Nord*.

An interesting manuscript on magic, belonging to the Bibliothèque Nationale in Paris (n^o. 2662), is in part based on the works of al-Būnī, who is there quoted — evidently by mistake — under

the name of Shams al-Din. (See CAIRI DE VALL, *Notes sur les Testaments et communications écrites*: *Tome II*, 1907, t. p. 520; and the article *Wagman* and *Amulets* (*Shahnamadan*) in the *Encyclopædia of Religion and Ethics*. — Cf. also BROCKELMANN, *Geschichte der Arabischen Literatur*, i 497.)

BUNN. (See SAHYA.)

BURAIDA, an al-Hijab, one of Muhammad's Companions, chief of the tribe of Aslam b. Adi. When the Prophet migrated from Mecca and was passing the settlement of the Aslam b. al-Hijab, Buraida became connected to Islam, with about eighty families, who were with him. He did not go to Medina till after the battle of Uhud but thereafter when he took part in all Muhammad's campaigns. In the year 4 (620) he was sent to collect taxes from the Aslam and Lhijab and he said to have accompanied 'Ali's expedition to Yaman in the following year. When the Prophet was preparing for the campaign against Tabuk, he again sent Buraida to the Aslam to call them to his aid against their enemies. After Muhammad's death, he remained in Medina till the conquest of Mecca where he built a house. In the year 51 (671), he went with al-Ra'is b. Ziyad to Khosrau and died in Mecca in the reign of Yazid b. Mu'awiyah.

BÜRAK. (Not xOHAK, p. 744.)

BURAK, this name, which is connected with *berq*, "lightning" is applied by tradition to the fabulous animal which the Prophet **SAID** ^{SAID} on the night of his ascension (*Al-Miraj*). Allusion is made in the Kor'an (Arkl. 2, 68; III. 1—48) to a vision which the Prophet **SAID** in which he seemed to be borne from Mecca to Jerusalem and thence to heaven. The animal which carried him is ~~described~~ described not mentioned by name in the Kor'an; but the commentators say that on this night Muhammad was in the *fiqir* of the Holy House, that is, in the precincts of the Ka'ba, and that the Archangel Gabriel brought Burak to him.

This legend ~~has~~ been considerably embellished and has become a favourite story with poets and minstrelsy. There are long descriptions of Burial who is represented as a mare with a woman's head and peacock's tail. On this subject see an excellent article in the *Magasin Pittoresque*, 1876, p. 364, where a reproduction of a curious Persian miniature is given; another is given in the same periodical for 1884, p. 4. ~~Another~~ miniature is taken from the celebrated *Chahar* manuscript, containing the translation of the Persian poem on the *Sight of the Azhar of the Prophet*, attributed to Parid al-Din 'Agha; (ed. Paris de Courville. See also Abu 'I-Fida, *Ishtihak* etc.). Burial was also used by Arabian on the visits he paid to his sons Ismail, Ismailid in Mecca. (See Tabart, *French Chronicle*, transl. Zornberg, i 165)

(D. CARA DE VAUL)

BURKĀ-HADJĪ (Burk in the Arabic), prince of Kermān and founder of a new dynasty in that country. He was originally one of the Kāz-Khān, a *tribe* people; according to

Qiyasî was brought to Muhammad b. Takiyâ b. Khawarizmshâh after the battle on the Tâkiz, in which the Khâz-Khâzî were defeated (Ruhî I 607 = August–September 1210) and taken into his service. According to Nasawî (ed. Houtsma, p. 95), he had come to Muhammad as an envoy from the Khâz-Khâzî (Qiyasî tells us the contrary of his position) and was there forcibly detained; according to this authority also, it was only after Muhammad's decisive victory over the Khâz-Khâzî that he entered his service. He was appointed Hâjjîh (Chamberlain); he is also said to have filled some office in the kingdom of the Khâz-Khâzî. When Muhammad died, he was sent to see before the Mongols, Buriq went with one of these princes, Qiyasî al-Dîn Irâkshâh to Persia. Towards the end of the year 618 (the winter season of 1218–1219) when Buriq was dead and Qiyasî al-Dîn, the eldest son, had fled to Isfahân and the Mongols had left the land they had laid waste, Qiyasî al-Dîn was recognised as ruler in almost all Persia and appointed Buriq governor of Isfahân. As a result of a quarrel with the ruler of that town, Buriq obtained permission to go to India in Qiyasî al-Dîn. On the way Buriq was seized by Shamsî al-Dîn, prince of Kermân, who tried to seize his wife and goods; Buriq and his retinue were not only able to resist their opponents but he a short time to conquer the whole land of Kermân, whereupon they gave up their intention of proceeding to India (629 = 1230–1231). This is Qiyasî's version; Nasawî (op. cit.) however makes Buriq appointed governor of Kermân from the beginning. When Sultan Qiyasî al-Dîn appeared at Kermân in 631 (1232), Buriq paid homage to him and was appointed as governor of the province, although some of his dealings aroused the suspicions of the Sultan. While on his campaign in Arak, Qiyasî al-Dîn received intelligence on Qiyasî II 637 = June 1276 that Buriq had risen against him and was in alliance with the Mongols. Qiyasî al-Dîn sent with 6000 men against his rebel; Qiyasî al-Dîn soon followed him with other troops but could do nothing to Buriq who was securely shut up within the walls of his fortress (Kashân, p. 124). Qiyasî al-Dîn himself does not appear to have come in person to Kermân; on the way thither he received repeated warnings from Buriq warning him of his devotion to him. He was still in the neighbourhood of Isfahân when he decided to give up the campaign against Buriq, confirm him in his office and even to send him a robe of honour (Shamsî al-Dîn, ed. Torri, II 234). Towards the end of 633 (1235), Qiyasî al-Dîn, who had quarrelled with his brother, came a fugitive to Kermân; with him was his mother who, against her own will and the will of her son, had become the wife of Buriq. Soon afterwards she and her son were accused of having sought to poison Buriq; Buriq had his wife strangled and the 500 retainers of the Sultan massacred; Qiyasî al-Dîn himself was thrown into prison and Muhammad drove away with his wife, although a rumor spread abroad that he had made a successful escape to Isfahân. As we learn from Qiyasî, Buriq informed the Caliph that he had now adopted Islam and would be a faithful subject of the Imam, unlike the dynasty of Khawarizmshâh, who had always been hostile disposed to the Abbasids, and wished

to be recognised as an independent Sultan. The Caliph granted his request and gave him the title of Kartugh Sultan (the fortunate Sultan) and the other hand Nasawî had seen with his own eyes a letter sent in the name of Buriq to Sultan Qiyasî al-Dîn's sister in which Buriq declared that he had rendered the Sultan a great service by sending him of his worst enemy, and the Sultan might confidently confide in the rank of Prince of Kermân and who like him had reached such an advanced age. He informed the Mongols, as Wogatz Indian ethnographic edition, p. 287, tells us, that he had seen Sultan Qiyasî al-Dîn as a rebel against the Great Khan and therefore according to Mongol law had a right to the estate of the dead man, including the right to marry his widow. He said to have appealed to these laws when he advanced against Qiyasî al-Dîn's Majesty, Aidgh of Yaul, with whom Qiyasî al-Dîn's widow then was. An arrangement was come to between the two princes; the Sultan's widow was handed over to the prince of Kermân, and is said to have afterwards borne a daughter to him; in return he gave the prince of Yaul his daughter to wife.

When the Mongols undertook the conquest of Saka in 632 (1235), their leader, Tâi Khâshî, demanded that Buriq should join the Mongol army as a sign of his submission to the Great Khan. Buriq accepted himself on account of his being advanced in years and sent his son Kishî al-Dîn instead to Mongolia; while on his way thither, the prince received news of the death of his father, which took place on the 20th of the 10th day 632 = 5th September 1235 (following the St. Petersburg manuscript of the *Ta'rikh-i Rûssî*; in the ethnographic edition p. 288, the date is not given).

Bibliography. The portion of Qiyasî's *Ta'rikh-i Khawarizmshâh*, which has been used here is given in Houtsma, *Revue de Textes relatifs à l'Hist. des Seljuks*, I, Preface, p. 114; cf. d'Olcum, *Histoire des Mongols*, II, 3 et seq., 10, 31 et seq., 131 et seq., and the brief notice in Houtsma-Fortall, *Geschichte der Islam*, I, 66. (W. Houtsma.)

BURAK-KHÂN. A Mongol prince in Central Asia, great-grandson of Qaghanî (q. v.) grandson of the Alghu who had fallen at Hérat in 1221 (see above, p. 644). His father Yulduz-Tawa had taken part in the events of the year 1251 (cf. the article *1251*, p. 682) and shared the fate of other rebellious princes. Like the rest of the children of Qaghanî and Qagad, Buriq and his brothers were educated in Mongolia; some years after the accession of the Great Khan Khubilai (1260–1294) they received permission to return to their home and to take possession of Qaghanî's, their father's ancestral domain. Shortly before Buriq's cousin, Mubarak Shâh (the 300th prince of his house to adopt Islam) had been recognised in Central Asia as head of the house of Qaghanî; Buriq had therefore received a *Yurgh* (written order) from the Great Khan to which he was appointed co-regent with his cousin. Without producing his *Yurgh* and without doing anything in particular openly against his predecessor, Buriq is said to have assumed his power in a short time without leaving Qaghanî; all the princes of the house of Qaghanî deserted Mubarak Shâh and rallied round

the new emperor; Mahirah Shah himself was forced to recognise Burak's sovereignty and to entrust his service as head of the *darul* (court household). The dates given for these events are uncertain and contradictory. According to *Maṣṣil Karami*, the author of our only authoritative account of Central Asia (in *Bandukh*, *Verkettion v. ghesch Mongolstogo nachskreviya*, t. 138), Mahirah Shah was raised to the throne in *Shamshad* 1166 (1016 March—7th April 1266) at *Alangasan* (dargan) and taken prisoner in *Shu* 1166 (October of the same year (13th September—1st October) at *Khorghand* by Burak; according to *Waghai*, Burak's accession took place as early as the beginning of 663 (which began on the 24th October 1264). It is certain that the brothers Nicola and Matteo Polo whose journey of three years to *Bukhara* was finished within the years 1262—1263, mention Burak-Khan as prince of the country; it is just possible, however, that Matteo Polo, who had heard of Burak-Khan and his campaign into Persia during his own journey through Persia and Afghanistan, introduced this name by mistake into his account of the first journey of his father and uncle.

During the years following, Burak-Khan had to defend himself against the Great Khan Khubilai as well as against the pretender to the throne of Central Asia, Kaidu, the grandson of the Great Khan Ögedei. Khubilai, the governor of Chinese Turkestan appointed by the Great Khan, was driven out by Burak and replaced by another governor; the Great Khan sent an army of 6000 cavalry to restore the deposed governor but the army sent in quest of him by Burak was much more numerous (30,000 men); so the Great Khan's cavalry had to retreat without striking a battle. The town of *Khoshu*, which belonged to the Great Khan's empire, was plundered by Burak's troops in his orders.

The war against Kaidu was fortunate. Burak was again successful at first, but his opponent received support from the kingdom of the Golden Horde. The prince *Uchak*, brother of the Khan Batu, and Batu appeared in Central Asia at the head of 50,000 men, so that the war took another turn. Burak was defeated and retired to *Ma* al-Nahr, to offer a desperate resistance to his enemies there; it was Kaidu himself, however, who offered to make peace. A *Kurultai* (parliament) was summoned at which a kingdom quite independent of the Great Khan was organised under Kaidu's authority. All the princes were to regard one another as kinsmen (*sanda*); the property of the people of the towns and villages was to be respected, the princes were to be content with the pastures on the mountains and steppes and to keep the herds of the nomads back from the cultivated lands. The greater part (two-thirds) of *Ma* al-Nahr was left to Burak, but there the government of the cultivated areas was placed in the hands of *Maṣṣil Beg*, a governor appointed by Kaidu. The place and date of this parliament are variously given; according to *Rashid al-Din* it was held on the Tulas in the spring of 667 (1269), according to *Waghai* in the shape of *Kajwan* north of *Samarkand*, a year or two earlier, for according to him *Maṣṣil Beg* went to *Iran* in 666 (1268) as ambassador from Kaidu and Burak and Burak's campaign against *Al-Bukhara* took place in 663 (1268-1269).

Some such campaign has been already proposed

at the *Kurultai* and had received the support of Kaidu; probably Kaidu wished to get rid of this dangerous opponent of his out of the country by this means. *Maṣṣil Beg* was sent to *Iran* ostensibly to collect the revenues, to which Kaidu and Burak had a claim (the principle still prevailed that all the princes of the ruling houses should have their share in the revenues of each country conquered); the real object of his mission was to spy out the land and its resources. Soon after the return of the envoy, Burak opened hostilities and occupied parts of *Khorghand* and *Afghanistan* but did not receive effective support from the troops sent to his help by Kaidu with the prince *Kipchak* at their head and was soon left in the lurch; *Rashid al-Din* tells us Kaidu afterwards this had been done by his orders; Kaidu and *Al-Bukhara* ever afterwards regarded one another as friends. *Al-Bukhara* suffered an annihilating defeat on his approach on the 1st of *Shu* 1166 = 22nd July 1270; Burak had to retreat across the *Ony* to *Khoshu* with only 5000 men; during the battle he had fallen from his horse, been thereby injured and had to be carried in a litter.

Various accounts are given of the last year of his life. According to *Waghai* he spent the winter in *Bukhara* where he adopted Islam and took the name of *Sultan Aliyash al-Din*; in the following year he undertook a campaign into *Shamshad*, but his plans again came to naught through the defection of several princes; he had finally with his wife to throw himself on the mercy of Kaidu and was poisoned by the latter's orders. *Rashid al-Din*'s account is more detailed and apparently more reliable. According to him the defection of the princes took place immediately after Burak's retreat over the *Ony*; Burak himself went to *Tashkent*; from there he came to Kaidu who set out with an army of 20,000 men but deliberately advanced very slowly to avail the result of the struggle between Burak and the rebellious princes and to set it to his own purposes. Burak escaped retaliation from the struggle and begged his "kinsmen" to return home as his help was no longer required; nevertheless Kaidu continued his advance. His army was obviously much stronger than Burak's; when Kaidu approached Burak's camp, he surrounded it with his troops. Burak died in the night, from fear it was said. When in the early morning, Kaidu's envoys appeared in the camp, they were received with cries of war, learned that Burak was dead and returned to their lord by Kaidu's command. Burak was buried on a high mountain, after the *Shungol* and not the *Shamshad* fashion. The princes, with *Al-Bukhara* Shah at their head, complained of his high-handed deeds; Kaidu allowed them to appropriate the property left by Burak; *Maṣṣil Beg*'s wife took the things from the same as Burak's widow with her own hands. *Maṣṣil Beg* afterwards entered *Al-Bukhara*'s service; the account given by *Rashid al-Din* was probably obtained from one of his retainers.

According to *Waghai*, Burak was dead by the end of 668 = summer of 1270, according to *Rashid al-Kurani* (op. cit.) he did not die till the beginning of 570 (began on 9th August 1271). This later date is obviously the preferable one as it alone agrees with the above quoted, apparently reliable account by *Rashid al-Din* of the battle between Burak and *Al-Bukhara*.

BURĀN, wife of the Caliph al-Ma'mūn. According to some authorities, her real name was Khadija and Burān was an added name. Born in Sakh 192 (December 807), while still a child ten years old she was betrothed to the Caliph at whose court her father Hasan b. Sahl was held in the highest esteem. The splendid wedding ceremony, which was celebrated on a state birthday, undoubtedly did not take place till Rammazān 210 (825-826) at Pam al-Sikh, near Wasit. The Arab writers delight in fulsome descriptions of the gorgeous celebrations, all the expenses of which were borne by Hasan b. Sahl. On this occasion Burān is said to have pleaded for the imprisoned pretender Ibrahim b. al-Mabrit and obtained his release; others, however, ascribe his pardon to the influence of the Wazir Ahmad b. Ali Khshid. Burān died in Rabi' I 271 (September 884) nearly 80 years of age.

BURDA is a piece of woollen cloth used since pre-Muhammadan times, which was worn as a cloak by day and used as a blanket by night. That of the Prophet has become famous. As a reward for Kā'ib, Zubair's (q. v.) poem, he made him a present of the *burda* he was wearing. It was bought from the son of the poet by Mu'awiyā and was preserved in the treasury of the Abbasid Caliph until the occupation of Bagdad by the Mongols. Haulgi caused it to be buried but it was afterwards claimed that the real *burda* of the Prophet was saved and is still preserved in Constantinople.

Bibliography: *Das. Dictionnaire des noms de vêtements chez les Arabes* (Amsterdam, 1845), p. 39-44; K. Hauer, *Die Dialecten von Algier*, 1910, p. 90-92 and the authors quoted. 2. The name of a celebrated poem by al-Buhārī (q. v.). According to the legend he composed it when he was cured of a paralytic stroke which had seized him by the Prigolot's throwing his morsel over his shoulder as he had done on a previous occasion for Kā'ib, Zubair. The fame of this miraculous cure spread and the poem which was entitled *al-burda al-sharifa fi ma'alya' al-burda* came to bear the name *burda*. Its verses are supposed to have supernatural powers. They are still employed at the present day as charms and recited at burials. No other Arabic poem has

enjoyed such success. (See also) commentaries have been written on it in Arabic, Persian, Turkish and Berber. The *burda*, the *burda* and the *burda* that have been made from it are numerous. The poem begins with the usual *burda* in the style of ancient Arabic poetry; the author then proceeds to regret his youth and confess his faults. His *burda* is contrasted with that of the Prophet, whose miracles, related according to tradition, fill the following verses. The poem concludes with a supplication to Muhammad and several verses in his honour. There is no trace of Sufism in it and this is not the least of its merits. Among the chief commentators may be mentioned the first in point of date, that of Abu Shihab 'Abd al-Rahmān b. Ismā'īl al-Dimashqi (596-665) copies of which are preserved in Paris (Bibl. Nat., n. 1630) and Munich (n. 547); that of Ibn Hariz of Tlemcen (died 843) described by Dozy as "superior to all others"; that of Khālid al-Arkan (died in 905) which has been several times printed, notably with that of Ibrahim al-Bāghī (died 241 A.H. 855-856); that of Ibn Aglū (Cairo, 1296). The text was published for the first time in English by Ud in 1761 under the title, *Carmen Mysticum Sancti Muhammed* with a Latin translation. Since then it has often been reprinted, particularly in the East and there is practically not a *Madrasa* which does not contain it. In the West, von Rosenzweig's edition may be mentioned: *Funkele's Klammer des von Lohs des Helden der Genäpfe* (Vienna, 1824), with a German translation and notes. The best edition is that of Rula, published after his death by Rahmoun, *Die Burda, ein Gedicht auf Muhammad* (Vienna, 1860), with translations into Persian, Turkish and German; it does not however contain the series of apocryphal verses given by von Rosenzweig. The *burda* has been translated into various languages; without enumerating all the translations, we may mention, in addition to those mentioned above, that of de Sacy (at the end of the *Explication de la Poësie* by the Ab. Berkwit, translated by Garcin de Tassy, Paris, 1822) and that of H. Reiser, with a commentary (Paris, 1894); that of Redhouse, *The Burda* (in W. A. Clouston, *Arabic Poetry for English Readers*, p. 322-341, Glasgow, 1881); Gabel's Italian translation, *al-Burda* (Florence, 1901), p. 30-85, with notes.

Bibliography: *Das. Dictionnaire des noms de vêtements chez les Arabes* (Amsterdam, 1845), p. 39-44; K. Hauer, *Die Dialecten von Algier*, 1910, p. 90-92 and the authors quoted. 2. The name of a celebrated poem by al-Buhārī (q. v.). According to the legend he composed it when he was cured of a paralytic stroke which had seized him by the Prigolot's throwing his morsel over his shoulder as he had done on a previous occasion for Kā'ib, Zubair. The fame of this miraculous cure spread and the poem which was entitled *al-burda al-sharifa fi ma'alya' al-burda* came to bear the name *burda*. Its verses are supposed to have supernatural powers. They are still employed at the present day as charms and recited at burials. No other Arabic poem has

BURDĪ, extracted from the Latin *burgum* through the Syriac (cf. Franke, *Die Arabischen Fremdwörter im Arab.*, i. 255) a "citadel". In astronomy *burd* means "sign of the zodiac".

BURDĪ was the name applied to the Manikhean monks of Mongols and Circassians headed by Sahān Khān and quartered in the towers of the citadel (*burg*) of 'airo. From the time of Sahān Burdī (1231-30 = 1282-1298) the Sultans were chosen from their ranks. Bahān II (q. v.) was the first Burdī allowed to occupy the throne of Egypt. Thoir, last ruler of the Burdī was executed in 1517 (122) by the Ottoman Sahān Salim.

constructed by Djidjologic in the seventeenth century have recently been repaired for modern use.

BURH (= "Wolf" in Eastern Turkish is al-Burh al-Din al-Din was born by the latter in charge of the baggage-train in Damascus at the beginning of the campaign of 518 (1823). In the same year he had command of the troops before the al-Jazirah gate at the unsuccessful siege of Hama. He died after the surrender of Aleppo from a wound received in the house from a lance during the siege (579 = 1185). Brave and magnanimous. He combined in his person the most admirable moral and physical qualities. Shortly before his death, his brother greeted him with the words: "I have taken Aleppo and will give it thee". "Yes, if I were to live, but you have paid dearly for it as losing such a man as I", was the reply.

BURI, **TAU** AL-MULKA, prince of Damascus, fought bravely and devotedly from his early youth at his father Tugheig's side, against the Crusaders. He succeeded him in 522 = 1520. The Janissaries managed to make their influence strong in Damascus through the Viceroy At-Muzaffar; their representative Abu 'I-Walid ~~was~~ almost more powerful than Buri himself. The Janissaries made an agreement with Buri to hand over Damascus to the Franks by a capitulation and receive Tyre in exchange. When Buri ~~heard~~ of the plan, he slew his vizier and had all the Janissaries, 20,000 in number, massacred. Damascus was put in a state of defence and the Frank-~~was~~ to retire. The Mamuks of the Janissaries were not long in overtaking him, however; Buri was treacherously attacked by some of their agents in 525 (1521) and died of his wounds in the following year.

BURI-BARS an Alp Arslan, the Saljuq, was son by Bakhartch against Arslan Asghar, another son of Alp Arslan, who was trying to make himself independent in Khwarezm. In the struggle between the two brothers, Buri-Bars was at first successful but in the second encounter in 488 (1095) his troops were scattered and he himself was taken prisoner and strangled by his brother's order.

BUR-TEGIN, a prince of the house of Kharshid, or Iak-Khar in the ward al-Nahr. In all manuscripts the ~~name~~ ^{name} is written Bur-Tegin or Bur-Tigin; apart from the meaning of the Turk word (*bur* = Wolf), the reading is confirmed by the name in *Minutskir* (ed. *Wörterbuch-Nachrichten*, text v. 27, *Meise* 62).

In the *Ta'rikh-i Sulayki*, Bih-Tughla is first mentioned in the narrative of the events of the year 430 = 1037-1038 (cf. Mawlay, p. 682). The text is here certainly corrupt; the correct reading probably is *Bi-Tughla* *bi-Tughla* *bi-Tughla* *bi-Tughla*.

I. e. the prince Hārī-Tegin Aḥr iškān Naḡmān was a son of Alak-Nawz, the conqueror of Sīr-wād al-Nahr and identical with Tughlakh Ḥasan Durghin I. Naḡm who afterwards became ~~Sultan~~ ^{Khan} Khan of Samarkand. Of his earlier life we only know that he was kept imprisoned by the sons of 'Alai-Tegin (*cf.* p. 207). Escaping from his captives he last went to his brother 'Ain al-Dawla in Uḡadā (in Tughlakh's) thence sent a letter to the ruler of the Ghaznavids and was recognized as Emir by Sulṭan Muḥammad; the latter in reply was so convinced that should it have fallen into their hands, even the sons of 'Alai-Tegin could have raised no protest against it. Soon afterwards Hārī-Tegin took himself to the wine-estate Kunūdhī (this is the correct reading, cf. the comparison of the variants in Barthold, *Ferdowsi's poems*, *Muscatell's edition*, v. p. 9, note 4), who lived in the mountain north of Paghanyan and the adjoining area; from there he set out at the head of 3000 men towards Bīstāmān and Wakhsh. These lands at this time belonged to the Ghaznavid kingdom, although Hārī-Tegin proclaimed himself a vassal of Sulṭan Muḥammad, he cruelly ravaged the country so if it were that of an enemy. Hārī-Tegin ran an embassy to make his excuses; nevertheless an army of 10,000 men was sent against him at the end of Muharram 430 = October 1038; he ~~was~~ forced to vacate Khitān and retire to the land of the Kunūdhī, against the advice of his counsellors Muḥammad resolved to undertake a winter campaign against him there. On Monday the 10th Rabi' I. 430 = 18th November 1038 he crossed the Oxus on the bridge of boats constructed in Alingshtān's service (*see. cit.*); on Sunday the last day of the same month (31st December) he reached the town of Paghanyan (*q. v.*); the warden Ish-Nawz, without having encountered any opposition on his march, advanced still further north from there but received despatches from his kingdom which induced him to return. At this season of the year this hurried retreat could not be effected without heavy losses; his army was now constantly harassed by Hārī-Tegin and his horsemen: the Sulṭan only succeeded in reaching the Daryā by leaving behind a portion of his baggage, camels, and horses.

Bar-Tegin's prestige was culturally valued by this audience and now historians looked to him. In *Shihabnam* 431 (23rd September – 22nd October 1039) Sulaym al-Buhārī was informed that Bar-Tegin had defeated the sons of 'Alī-Tegin and deprived them of almost all Ma warā al-Nahr; those ~~sons~~ ^{sons} must, however, have been exaggerated. When this war between the Ghaznavids and the Saljuq princes was depicted at the battle of Dandānabād in favour of the latter (Thursday the 8th Rabi'ul-Thani 431 = 23rd May 1040), the victors sent envoys to expose their success to the sons of 'Alī-Tegin as well as to Bar-Tegin (Ruhshāh, p. 288). This is the last mention we have of Bar-Tegin. In place of him we now find Faughānī-Tabrīz Ibrahim b. Kayr who is first mentioned on coins in 438 = 1046-1047 with his full title *Faughānī-Tabrīzī* was *Amīr al-Bihar* and *Amīr al-Bihar al-Hind* Faughānī-Tabrīzī. On the coins struck in Bukhara in the year 433 (1041-1042) he is only called *Tabrīzī* b. Kayr, without any title. It is nowhere expressly stated that this Ibrahim b. Kayr is identical with Bar-Tegin but there are ~~no~~ ^{no} grounds ~~for~~ ^{for} doubting the identification.

Bibliography: Besides the main source (*Tarikh-i Sulayk*) BSH-Tayin is also mentioned in Gardizi (cf. the text in Barthold, *Turkistan* etc., I, 9) and in Minubakini (*Iran*, ed. 1900, Kain-Kaziminski, text, 7, 47). Cf. the discussion of the original source in Hilarstein-Kaziminski (*Moscow*, Paris 1887, Intern. p. 122 et seq.) and Barthold (*Turkistan* etc., II, 318 et seq., 327 et seq.). (W. BARTHOLOMEW.)

BURIDS is the name given to a dynasty which ruled independently in Damascus as Atabegs (governors of the Seljuk Sultanate) 503—549 = 1109—1154. Tughtegin, the founder of the dynasty, was Atabeg from 497—503 = 1103—1109 for Tughtekin the infant son of the Seljuk prince and afterwards for Tughtekin's brother Bakhtish, the dynasty is called after Tughtegin's son (q. v.). Its last ruler was Burid's grandson Mu'izz al-Din Abul (534—549 = 1154—1154), an incapable and suspicious tyrant; he had put to death his real followers and could only rely for support on the Crusaders. To prevent Damascus falling into the hands of the Franks, Mu'izz seized the town, forced Abul to be content with Hama and later to exchange it for other towns in the distant town of Hama.

BURINT, AL-HASAN B. MUHAMMAD AL-DIMASHQI AL-SAFARI HANU AL-DIN, an Arab historian and poet, born in the middle of Ramadan 963 = July 1536, at Sohar in Galilee, came when 10 years old with his father to Damascus, where he received his education at the Madrasa al-Salfiya. After the completion of his studies, which he had to interrupt in 478 = 1067 by a four years' stay in Jerusalem on account of famine, he lectured in various madrasas. In the year 1020 = 1611 he acted as Khatib to the Syrian pilgrim caravan. He died on the 13th Rabi' al-Thani 1024 = 1611 June 1615. His chief work is the collection of biographies entitled *Tarajim al-A'yan min Akbar al-Zaman*, containing accounts of 505 individuals which he had collected at long intervals and completed in 1023 = 1614; it was edited by Fakh al-Din al-Mahdhi al-Dimashqi 1078 = 1667 and published with a supplement (cf. Abulwail, *Verzeichnis der arab. Hds. der Kgl. Bibliothek in Berlin*, No. 9889; Flügel, *Die arab. pers. und türk. Hds. der Kgl. Hofbibliothek in Wien*, No. 1190; *Fakhr al-Kutub* at al-Azhar, 1, 33); his *Diwan* is preserved in Istanbul (Kutubkh., No. 1287). There are some of his poems in Berlin (*Merakhi* on the Sufi Muhammad b. Ali b-Barakat al-Kadiri, a. Abulwail, op. cit. No. 7833, 3). Götting (poetic epistle to As'ad b. Mu'izz al-Din al-Tibbati al-Dimashqi with the latter's reply, cf. Petrus, *Die arab. Hds. der kaiserl. Bibl.*, No. 24, 23) and London (*Catalagus Cod. Or. Mus. Brit.*, II, No. 650, 2). Lastly he also wrote a commentary on the *Diwan* of 'Umar b. al-Farid, lib. Cairo, 1279; he completed the commentary on the *Taj al-Sugra* in 1002 = 1594 cf. Derenbourg, *Les Mus. — l'Encre* No. 420, 2.

BURLIN. [See *MURMUR*.]

BURMA. In 1901, the total number of Mohammedans in Burma was 339,446, of whose names there had been found in Ayah, where they form 30% of the inhabitants. In Rangoon city there are many wealthy Muhammadan merchants. The most interesting class is that called Zairabids, the offspring of Burmese Mohammedans by Muhammadan natives of India, who numbered altogether 20,423. In Upper Burma the male parents are said to be derived from three quarters: immigrants from southern India, prisoners from Arakan, and prisoners from Manipur. While adhering faithfully to Islam, the Zairabids have adopted the Burmese dress and commonly know no language but Burmese.

Bibliography: *Imperial Gazetteer of India*, (J. S. CORRIE.)

BURSA. [See *MURSA*, p. 768.]

BURSUK, the name means "badger" in Eastern Turki, companion and friend of the Seljuk Sultan Toghtekin-Beg, was the first to hold the office of chief of police (*qadim*) at Bagdad after the burning of that city in 451 (1059); he commanded a section of the advance-guard of the army sent against Aleppo by Malik-Shah in 479 (1080) and walked at the head of the procession on the occasion of the marriage of Malik-Shah's daughter with the Caliph in 480 (1087). He took the side of Berktash in his struggle with his uncle Tutugh, went with him on his defense and accompanied him to Isfahan in 487 (1094); he was murdered by an Ismaili assassin in Ramadan 490 (August 1077). He had received in full part of *Khizmat* (Tutash, *Sahib-Khatun*, between al-Alveid and Muhammad), which passed to his descendants. The latter were powerful enough to capture the rebel Mango-Bars (Mu'izz al-Din, r. 374) and send him to Sultan Muhammad. As a reward for this service, the Sultan withdrew their feet from them to give them that of Diyarbakir and the surrounding country in exchange in 499 (1106).

His son, likewise called Bursuk, was sent by Berktash against Isfahan, one of Sultan Muhammad's generals, who had asked Rai, and defeated him before the walls of that city in 497 (1103). Though he was so ill with gout that he had to be borne on a litter he succeeded in breaking up the Muhammadan troops in Syria 503 (1111-1112). He was appointed commander of the army sent by Sultan Muhammad, first against Tughtekin and Toghtekin, who had revolted and next against the Crusaders (508 = 1115) and crossing the Euphrates to Rakha with the rear-guard of this army he marched on Hama and occupied it. He was about to attack the Crusaders who were plundering the Muslim goods before Antioch when he was persuaded to retreat. He died in 510 (1116-1117). He was a man of noble and devout character, who always regretted having consented to retreat and indeed was preparing to renew the fighting when death overtook him. His grandson Bursuk took part in the revolt of the Turkish Emirs who succeeded from Sultan Mas'ud to throw in their lot with the Caliph al-Mustasim (529 = 1135) and sought an interview with the latter; he received the command of a section of the right wing at the battle of Lalman on the 10th Ramadan =

24th June. He was also among the Kurds who revolted against Mas'ud in 530 (1135) and made their peace with him in the following year.

AL-BURSUKI (See *AL-BURSUKI*, p. 226.)

BURTAS or **BURDAS** (in al-Bakir: *Furuk*), a pagan people in the Volga territory; on the relations of the Burtas to their neighbours on the north and south, the Khazars and Bulgars, see the article *BURDAS*, p. 786 *et seq.* Mas'ud also gives the name Burtas to a tributary of the Irti (Volga; *Murad*, ii, 14 and *Tawhik*, p. 68); Mas'ud (*Ostrogodskii and sarmatians Strifskii*, p. 336) considers this river to be the Sa. No adherents of Islam are mentioned among these people by any authority, unlike the Khazars and Bulgars. Vakar's statement (i, 307) on this point is based on a misunderstanding of Vakar's (ed. de Goeje, p. 225) statement regarding the Bulgars is erroneously transferred by him to the Burtas. In the source of the Rus' (ed. de Goeje, p. 149 *et seq.*), al-Bakir (Kunik and Rosen, *Historia al-Bakir* etc. i, p. 44) and Gardizi (*Barthold*, *On the geography of the eastern part of Asia*, p. 40) that is told us of the religion of the Burtas is that their beliefs were the same as those of the (Turkish) Ghuz and that one section of them turned their dead and the others buried them. The Burtas were far behind their neighbours in the state of civilisation; there was no real ruling authority in their land, only the elders of the tribes. The commercial relations of the Burtas with the Muhammadan world were only of importance for the fur trade. The fur (*fox*) of the Burtas are mentioned by Vakar (i, c.).

The Burtas are identified with the Finnish people known to the Russians as "Mordwa" (in *Kahraula Merina*). Their settlements immediately adjoined the Slav lands on the Oka and stretched a considerable distance to the north; the town of Nizhny-Novgorod was founded in their lands by the Russians in 1221. Like the other peoples of the Volga territory, the Burtas had to submit to the Mongols in the 13th century; rising by them are however mentioned as late as the 17th century; nevertheless they showed themselves much more ready to adopt Christianity and Russian culture than Muhammadan peoples or those who had been affected by Muhammadan culture. The large section of the Mordwa is now completely merged in the Russians. (W. BARTHOLOM.)

AL-BURUKI (A.) Plural of *AL-BURUKI* (q. v., p. 796.)

BURULLUS (*Bortulus*, *Burulus*), a district and lake in the Nile Delta. While the main branches of the Nile flow directly into the sea, many of its smaller streams flow into the lake which lies to the north of the fertile land of the Delta and are only separated from the Mediterranean by a narrow chain of sand hills. The large salt lake lying between the Komila and Damietta arms of the Nile, is called Lake Burullus at the present day. Throughout the year it covers an area of 180,000 acres and about twice this area in season of floods. It has an exit to the sea through which when the Nile is high, the fresh water flows out into the sea, and when it is low, the salt water rushes into the lake. The lake is

famous for its richness in fishes and the population of the northern coastlands live by fishing.

The name Burullus (*Bortulus*, *Burulus*) or more correctly Barallus (*Vakar*, ii, 143) is quite ancient. In Coptic we have Barallou, Tpatalla. In Greek *Barallou* is the name of an ancient see of a bishop, which is also called Nikedules, Nikedules; al-Kindi mentions Barallus among the fortresses of the Egyptian frontier. No town of this name now exists, but the little villages at the end of the tongue of land, which lies along the north of the lake to the east of its exit, probably represent the remains of the ancient Barallus; the name is applied at the present day to the whole area in the northeast of the lake, a district (*Barallus*) of the province of Ghariya with 15,163 inhabitants. The chief town of the district is Bahari which had supplanted the ancient Barallus even in the Bahari's time.

In the middle ages the lake was not called after Barallus, but after Naxarish or Naxarawo. This place, which has not yet been identified, probably occupied the site of the now abandoned Kom Masarut which lies on the little island, west of the exit. According to Ibn Dikmak, v, 113, the ancient Naxarawo must have occupied this site; even in his time it was quite deserted and

AL-BURZULI, *Abu 'L-Kasim b. Ahmad b. Muhammad b. al-Muttal al-Kairawani al-Mawili*, an Arab author, came as a pilgrim in 806=1403 to Cairo, became hakim at the Zaituna, mufti, presider and professor in Tunis, and died on the 15th Dhul-'Kada 841=20th Apr. 1438 (according to others 844=1440 or 847). He wrote the *Ushul al-Fiqh al-Mawili min al-Usul al-Kafaya* (*Ushul al-Fiqh al-Mawili*) (cf. *Catalogue de la Bibl. de la Faculté de Théologie de Tunis*, ii, 144—146; *Catalogue de la Bibl. de la Faculté de Théologie de Tunis*, ii, 144—146; *Catalogue de la Bibl. de la Faculté de Théologie de Tunis*, ii, 144—146; *Catalogue de la Bibl. de la Faculté de Théologie de Tunis*, ii, 144—146). A synopsis of this author is perhaps contained in *Bibl. Mus.*, No. 247. In the 2nd half of the 13th century Ahmad al-Burzuli made a selection of Mas'ud from this work; an anonymous excerpt of the year 1140=1736 is *Al-Burzuli* 2nd 1337.

BUSHAK, *Abu 'L-Kasim b. Isma'il* (usually called briefly *Bushak*), was born in Shiraz, lived chiefly at the court of Timur's grandson Iskandar in 'Omar Shaikh in Isfahan and died there in 1424 or 1427 A. D. He appears in the Persian *Shah-nama* as the authority on culinary matters. From the original *Bushak al-Afima*, "Bushak of the

Museum). The "City of the Greeks" (*Polis*) of old, of Chusar must be identical with Rishahr. (Tomachak, *op. cit.*). The modern name Rishahr, (abbreviated from *Rew Shahr*) dates from the period of the Selimians, to whom a colonisation of the town is ascribed. To distinguish it from the town of the same name in the district of Arrakjan (q. v., p. 400) this Rishahr is characterised by the Arab authors of the middle ages as that near Tawwaj; it is written by them *Rishahr* and *Rishahr* (cf. e. g. Baladhori, *ed. de Goeje*, p. 387). Until comparatively modern times it was a busy maritime town; even on Portuguese maps of the xviii and xviii centuries, Reiser or Reiser (a corruption of Rishahr) is marked with red letters as the chief emporium on the Persian coast.

According to a note in the Armenian geography of Pseudo-Moses of Chorene (see Marquart, *Erzählung*, 1901, p. 27, 126) the finest pearls procured in the Persian Gulf were brought to the market of Rishahr. The Portuguese de Barros in the xviii century estimated the size of the town at 1000 houses. Rishahr gradually declined as Bushir arose; it became the quarry pit of which the latter obtained not only for several villages in the neighbourhood, but also for the greater port of Bushir. Of the ancient town there now only remain the ruins of the former fortress (*Qasr*) forming a huge square, which in its present form probably only dates from the Portuguese period. Rishahr is used at the present day by the European colony in Bushir as a country resort: the British Resident also has a summer residence there.

Bushir seems to be first mentioned in Yāqūt (2503, line 1) in the form *Rishahr*, which is nearer the original *Abd Rishahr* — "father of the town"; perhaps however the reading should be *Rishahr*. The name was corrupted by English sailors to Bushet and Bushir. Bushir was a wretched little fishing village down to the middle of the xviii century. The foundations of its modern importance were laid by Nādir Shāh when he raised the village to the rank of a town and destined it to be the base for the whole Persian navy. Although the naval ambitions of the Persian Shāh came to naught through his early death, his interest in Bushir nevertheless had the effect of concentrating the trade of the Persian Gulf there more and more, so that Bender-'Abbas was ultimately deprived of its commercial supremacy in these waters, which it had held since the days of Shāh 'Abbas I the Great. Bushir is now the first export of Persia. Even in Nādir Shāh's time the English *Factor* had built an important factory there. Since then the trade has been mainly Anglo-Indian; England, India, and other English dependencies almost exclusively control the import trade and have about half of the export trade. The most important articles exported are: opium, especially, wooden goods, wheat and tobacco. The main imports are: cotton goods, weapons, munitions, tea and indigo. Besides the fairly regular steamboat trade, the number of sailing vessels, mostly Persian, Turkish and Arab, L. of Muscat, which call at Bushir, is by no means insignificant.

On imports, exports and shipping the best source of information is the *Administration Reports* of the British Resident at Bushir which have appeared annually since 1876 and are printed

at Calcutta in *Selections from the Records of the Government of India, Foreign Department*. The tables, covering the years 1893—1897, given by M. v. Oppenheim, *op. cit.* II, 311—314, are based on these official English returns; the statistics on exports and imports given in Stolte-Andreas (p. 69—73, for the years 1866—1869, 1878—1882) and de Murgen's notes (*op. cit.*) on trade and commercial relations on the Persian Gulf, may also be consulted.

Bushir may be regarded as the harbour of Shiraz. It is connected with this town, about 120 miles distant, the chief intermediary for trade between the Persian and the interior of Persia, by an important caravan route, which passes through some towns of importance (the principal is Kazerun). The road is difficult to traverse, as several dangerous mountain passes and five high parallel ranges have to be crossed.

The town which rises but little above the sea-level is surrounded by a wall, half in ruins, with bastions; its best defence is the shallowness of the water which allows only small boats to land; the streets consist of narrow crooked streets, the houses are fairly extensive. On account of the almost unbearable heat the dwelling houses as in Bender-'Abbas are provided with column-like erections (*ādāg*, Persian "wind-catcher") which carry the cool air from the upper strata of the atmosphere to the lower rooms.

The climate of Bushir is very hot but in the opinion of competent judges not actually unhealthy, although it can only be borne by European constitutions if great precautions are observed, on the climatic conditions of Stolte and Andreas, *op. cit.*, p. 7, 8 note 2. Locusts are a terrible plague to the district as indeed to the whole coast from Bushir to Shiraz; cf. Ritter, *vol.* p. 789.

The principal building at Bushir is the Residency, lying outside of the town proper, the immense fortified palace of the British Consul General, who superintends all Britain's political interests in the Persian Gulf. On account of its great importance the post of British Resident is maintained in a splendid fashion; gunboats and soldiers are always at his disposal.

The number of inhabitants was estimated by Major at the beginning of the sixteenth century at 10,000, by H. Petermann in 1854 at only 4000—5000. Ross reckoned it at 10,000 in 1855, and Stolte and Andreas at 12,000 at the same period. More recent estimates are as follows: M. v. Oppenheim, 20,000—30,000, Chini, 15,000, Linné (1900), 20,500; on the last two see Supas in Petermann's *Geogr. Mitteil.*, Erg. Heft n. 125 (1901), p. 26. By far the greatest part of the population is of Arab descent; there are a few hundred Jews and Armenians; the Europeans (mainly English) number not much over a score.

Anzeig.*, 1897, p. 113 et seq.; de Morgan, *Mission scientifique en Perse*, *Ann. géogr.*, Vol. li. M. Fehr, v. Oppenheim, *Vom Mittelmeer zum Persischen Golf* (Berlin, 1900), ii. p. 310—317; E. Sachau, *Am Euphrat und Tigris* (Leipzig, 1900), p. 12—14; G. N. Curzon, *Persia and the Persian Question* (London, 1892), Index s. v. Bushira. The above mentioned reports of the British Residents give also an annual chronicle and form the chief source for the recent history of Bushira and of the Persian Gulf in general. (M. STRACK.)

BUSHIR (also written **ABUSHIR** and in the new form **ABU 'L-SIRA**) the name of several localities in Egypt. The name is connected with the God Osiris, who was originally worshipped in the Delta, so that the name occurs more frequently in northern Egypt. The ruins of the ancient Taponia Magna have retained the name **Abushir**; likewise a village with 336 inhabitants in the district of Bahariya in the province of Dakahlia. Better known is a place of this name with 637 inhabitants in the district of Bahariya al-Kubra in the province of Bahariya. It was called **Bushir** in the *Tabula* agri. There is a fourth **Bushir** southwest of Cairo between Saketra and Qize (Qize). At the present day it has 2456 inhabitants, and is called **Bushir al-Sidi** to distinguish it from other places of the same name. 'Abd al-Latif gives a remarkable account of its pyramids and tombs (De Sacy, *Recherches de l'Egypte*, p. 171, 220 et seq.). Excavations have been carried out quite recently here under German auspices. Another **Bushir**, frequently mentioned, is **Bushir al-Malak** at the exit of the Falyum in the province of Bahi Sud (formerly Bahariya). This place used also to be called **Bushir Kurahin** (or **Kurahin**, **Kuridin**, **Kuridin** and many other variants) and is held to be the place where Marwan II, the last Omayyad Caliph, died in 132 (749-750). His tomb is still pointed out in **Bushir al-Malak**. Local tradition also agrees with the popular belief as that al-Khalid (ed. Guent, p. 90; Vahit, l. 670) must be mistaken when he says that Marwan died at an otherwise unknown **Bushir** in the province of Adhnamain. **Bushir al-Malak** at the present day has 3319 inhabitants. Before the division into provinces i. e. in the early Muhammadan period it was a separate *kura*. The poet of the *Burda* takes his *Nisba* from this **Bushir**. There is also a **Bushir Dafauf** (from the medieval *Dafauf*) in the Falyum, which now has 1411 inhabitants. The root of the same name at the Second Cataract is probably an Arabicised form of a Nubian word and has nothing to do with Osiris.

AL-BUSIRI, **SHAKIR AL-DIN MUHAMMAD** b. SA'ID b. ISMA'IL b. MUHAMMAD, an Arabic poet of Berber origin as his tribal name al-Sanhadi shows. He was born on the 11th Shawwal 608 = 7th March 1213 in Abushir (whence the name al-Bushiri, or according to Sayyid al-Dilay (he is also called al-Bushiri). Very little is known of his life. He lived at Bishra, was a clever calligraphist, attended the lectures of the Shaikh Abu 'l-'Abbas Ahmad al-Marsl and acquired the reputation of being learned in Tradition. The date of his death is not certain; Makrid and Ibn Shaker give the year 696 = 1296-1297, Sayyid, 695 = 1295-1296, Haddad, 694 = 1294-1295. His grave was near that of the Imam al-Shafi'i. He composed a number of poems of which the *Burda* [q. v.] is the most famous. We may also mention the *Hamziya* f. *Hamziya al-mahmudiya*, which has often been published and annotated; the *Du'at al-mahmudiya* f. *Hamziya al-mahmudiya*, in which he imitates Ka'b b. Zuhayr's celebrated poem; the *Kasida al-Bashariya* and the *Kasida al-Mahmudiya* f. *Hamziya al-mahmudiya*; al-Tamiz al-Bashari.

(KURT DAMST.)

BUSR b. **AMR** **AS'AD** b. **AS'AD** (there is authority for the latter form), an Arab general of the Umayyad clan of the *Qasbi* *Ansir*, was born in Mecca in the last decade before the Hijra. Only traditions which have been influenced by Shiite prejudices deny him the title of *Qasbi*. He came with the relief column into Syria under Khalid b. al-Walid, distinguished himself there by his bravery and afterwards took part in the conquest of Africa. His bravery earned him a *shah* and rewards from Qusayr. During the civil war he vigorously declared himself on the side of Mu'awiya for whom he won over the influential Kinn chief, Shurahbil b. al-Sim. At Hama we find him in the Syrian camp. He afterwards helped 'Amr b. al-'As to reconquer Egypt for Mu'awiya. Busr is perhaps the most striking figure among the lieutenants of this Caliph. He was a typical Beduin of the old school, utterly impatient to pity, if Shiite tradition has not exaggerated the details of the portrait of this fiery opponent of 'Ali. Sent into Arabia against the latter's partisans, Busr waged a war of extermination against them. He destroyed the dwellings of the enemies of 'Uthman in the sacred towns of the Hijaz and displayed a loyalty to the Omayyads which was only surpassed later by Mu'awiyah b. 'Uthman and Haddad. In the Yaman he put to death the two young sons of 'Ubayd Allah ibn 'Abbas. During the brief campaign, which was terminated by the abdication of Yazan, son of

'AN, he commanded the vanguard. As a reward, he received the governorship of Basra where he established a dictatorial regime. He spent little time in the 'Iraq but returned thither to settle the children of 'Uyayd b. 'Abd al-Malik and by drastic measures subdued the last armed partisans of 'Ali. We later find him leading several naval expeditions against the Byzantine Empire.

After the year 50 (670), this agent of Ma'awiya's ambition, general and admiral by turns, disappears from the field of politics. He is said however to have lived at court till the death of the sovereign. According to the Shi'ites, he went mad because he brought down 'Ali's curse upon himself. He reappears again in the reign of Walid I, when he is said to have again taken part in an expedition to Africa. Other authorities make him die at Medina in the reign of 'Abd al-Malik. He seems to have lived to a great age and fallen into his dotage.
